## **License Restrictions Warranty/Consequential Damages Disclaimer**

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure, and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

## **Warranty Disclaimer**

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

## **Restricted Rights Notice**

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

## **U.S. GOVERNMENT RIGHTS**

Oracle programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data delivered to U.S. Government end users are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data shall be subject to license terms and restrictions as mentioned in Oracle License Agreement, and to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). No other rights are granted to the U.S. Government.

## **Hazardous Applications Notice**

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

## **Third Party Content, Products, and Services Disclaimer**

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third party content, products, or services.

<b>Preface: About this Document.....</b>	<b>xli</b>
Intended Audience.....	xli
Organization of the Document.....	xli
Conventions.....	xlv
Related Documents.....	xlv
Change Log.....	xlvi
<b>Chapter I: Customer Registration.....</b>	<b>49</b>
Customer Registration (Without Approval) Status Transition.....	53
Customer Registration (With Approval) Status Transition.....	53
Customer Registration Template.....	54
Search Customer Registration Template.....	56
Customer Registration Template.....	58
Searching for a Customer Registration Template.....	59
Viewing the Customer Registration Template Details.....	60
Defining a Customer Registration Template.....	60
Editing a Customer Registration Template.....	64
Copying a Customer Registration Template.....	67
Deleting a Customer Registration Template.....	70
Customer Registration Type.....	71
Customer Registration Type List.....	71
Customer Registration Type.....	72
Searching for a Customer Registration Type.....	76
Defining a Customer Registration Type.....	77
Defining an Additional Data for a Customer Registration Type.....	79
Defining a Characteristic for a Customer Registration Type.....	82
Adding a Template in a Customer Registration Type.....	83
Configuring Attributes to Copy Customer Registration Type.....	84
Editing a Customer Registration Type.....	87
Copying a Customer Registration Type.....	89
Deleting a Customer Registration Type.....	90
Viewing the Customer Registration Type Details.....	91
Customer Registration (Used for Searching).....	91
Search Customer Registration.....	92
Searching a Customer Registration.....	100
Viewing the Customer Registration Details.....	101
Defining a Customer Registration.....	102
Adding the Names of a Person.....	104
Adding the Phone Details of a Person.....	105
Adding the Identifiers Details of a Person.....	106
Adding the Contact Details of a Person.....	107
Defining a Characteristic for a Person.....	108
Defining a Person to Person Relationship.....	109
Defining a Characteristic for a Person to Person Relationship.....	111
Adding an Account for a Person.....	112
Adding the Identifier Details of an Account.....	114
Adding Automatic Payment Details of an Account.....	115
Associating a Person to an Account.....	116

Adding Bill Routing Information for an Account.....	117
Defining a Characteristic for an Account.....	118
Adding the Credit Rating Details for an Account.....	119
Adding the Deal Information for a Person.....	120
Defining a Characteristic for Customer Registration.....	121
Viewing the Details of an Account.....	122
Editing the Account Details of a Person.....	123
Copying a Customer Registration.....	125
Customer Registration (Used for Viewing).....	127
Customer Registration - Main.....	128
Customer Registration.....	128
Account Information.....	129
Customer Registration - Account.....	132
Account Information.....	132
Customer Registration - Log.....	134
Customer Registration Log.....	135
Editing the Customer Registration Details.....	135
Deleting a Customer Registration.....	138
Submitting a Customer Registration.....	138
Approving a Customer Registration.....	139
Rejecting a Customer Registration.....	140
Requesting to Resubmit a Customer Registration for Approval.....	141
Viewing the Log of a Customer Registration.....	143
Adding a Log Entry for a Customer Registration.....	143

## **Chapter II: Customer 360° View..... 145**

Customer 360° View.....	146
360° Search.....	146
Searching for a Person.....	151
Searching for an Account.....	152
Viewing the 360° Information of a Person.....	153
Viewing the 360° Information of an Account.....	154
Viewing Price Lists Assigned to a Person.....	154
Viewing Price Lists Assigned to an Account.....	155
Viewing Price Items Assigned to a Person.....	155
Viewing Price Items Assigned to an Account.....	156
Viewing Price Items Associated to a Product.....	156
Viewing Enrollment Details of a Product.....	157
Customer 360° Information.....	157
Customer 360° Information - Person.....	158
Person Information.....	158
Person Characteristics.....	160
Linked Accounts.....	160
Person Legal Hierarchy.....	161
Customer Contacts.....	161
Enrolled Products.....	162
Product Enrollment Information.....	162
Customer 360° Information - Account.....	163
Account Information.....	163
Account Characteristics.....	166
Account Persons.....	166
Enrolled Products.....	166
Auto Pay Details.....	167
Timeline.....	167
Billing History.....	170

Payment History.....	171
Dispute Details.....	171
Hold Details.....	172
Overdue Process Details.....	172
Customer 360° Information - Product and Pricing.....	172
Product.....	173
Associated Price Items.....	173
Price List Assignments.....	174
Price List Price Items.....	174
Effective Price Assignments for Account.....	176
Effective Price Assignments for Person.....	179
Viewing Enrollment Details of a Product.....	183
Viewing the Bill Information.....	183
Viewing Price Items Associated to a Product.....	184
Bill Information.....	185
Bill Information.....	185
Settlement Activities.....	186
Hold Details.....	186
Offset Details.....	187
Bill Line Items.....	187
Garnishment Details.....	188
Refund and Write Off Details.....	188
Dispute Details.....	189

### **Chapter III: Invoicing Group.....191**

Manage Invoicing Groups.....	193
Manage Invoice Groups.....	193
Searching for a Master Account.....	195
Searching for a Member Account.....	195
Viewing the Master Account Details.....	196
Viewing the Member Account Details.....	196
Invoicing Group.....	197
Account Information.....	197
Selected Member Account.....	198
Edit Member Account Assignment.....	198
Editing the Member Account Assignment Details.....	199
Removing a Member from the Master Account.....	200
Viewing the Master Account Details.....	201
Invoicing Group Information.....	201
Invoicing Group Information.....	202
Selected Member Account.....	202
Edit Member Account Assignment.....	203
Editing the Member Account Assignment Details.....	204
Removing a Member from the Master Account.....	205
Viewing the Master Account Details.....	205

### **Chapter IV: Pricing Management..... 207**

Types of Pricing.....	209
Multi Parameter Based Pricing.....	209
Price Assignment Search Mechanism.....	213
Person Relationship Type Sequence.....	215
Pricing Eligibility.....	217
Persisting Interest Rate for Rate Type Price Items.....	218
Persisting Fee for Fee Type Price Items.....	219

Repricing.....	219
Two-Dimensional Pricing.....	224
Types of Price Item Bundle.....	224
Regular Bundle.....	224
Ratio Bundle.....	226
Phantom Bundle.....	228
Parameter.....	230
Parameter (Used for Searching).....	230
Search Parameter.....	230
Searching for a Parameter.....	233
Defining a Parameter.....	233
Editing a Parameter.....	239
Deleting a Parameter.....	245
Copying a Parameter.....	246
Viewing the Parameter Details.....	251
Parameter (Used for Viewing).....	252
Parameter.....	252
Price Item.....	254
Price Item (Used for Searching).....	255
Search Price Item.....	255
Searching for a Price Item or Price Item Bundle.....	258
Defining a Price Item or Price Item Bundle.....	258
Associating a Parameter with a Price Item or Price Item Bundle.....	262
Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle.....	264
Associating a Price Item or Price Item Bundle with a Division.....	265
Defining Division-Specific SQIs for a Price Item or Price Item Bundle.....	266
Defining Division-Specific Characteristics for a Price Item or Price Item Bundle..	267
Defining Division-Specific Accrual Type Criteria for a Price Item or Price Item Bundle.....	269
Defining a Characteristic for a Price Item or Price Item Bundle.....	270
Copying a Price Item or Price Item Bundle.....	271
Viewing the Price Item or Price Item Bundle Details.....	274
Price Item (Used for Viewing).....	275
Price Item.....	276
Parameters.....	278
Predefined Parameter Values for Price Item.....	278
Divisions.....	279
Division-Specific SQIs for Price Item.....	279
Division-Specific Characteristics for Price Item.....	280
Division-Specific Accrual Type Criteria for Price Item.....	280
Price Item Relationship.....	281
Editing a Price Item or Price Item Bundle.....	282
Price Item Relationship.....	285
Assigned Price Items.....	286
Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item.....	289
Viewing the Price Items or Price Item Bundles Added to a Price Item Bundle.....	289
Associating a Price Item or Price Item Bundle with a Parent Price Item.....	289
Adding a Price Item or Price Item Bundle to a Price Item Bundle.....	292
Setting the Parameters for a Price Item or Price Item Bundle.....	294
Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle.....	296
Disassociating a Price Item or Price Item Bundle from a Parent Price Item.....	297
Removing a Price Item or Price Item Bundle from a Price Item Bundle.....	298

Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item.....	298
Filtering the Price Items or Price Item Bundles Added to a Price Item Bundle.....	299
Price Item Assignments.....	300
Active Price Lists where Price Item is Assigned.....	300
Persons to whom Price Item is Assigned.....	300
Accounts where Price Item is Assigned.....	301
Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned.....	301
Price List.....	302
Price List (Used for Searching).....	303
Search Price List.....	303
Price List Price Items.....	306
Searching for a Price List.....	307
Viewing Price Items Assigned to a Price List.....	308
Defining a Price List.....	309
Defining the Price List Hierarchy.....	311
Defining a Characteristic for a Price List.....	312
Associating a Price List with a Division.....	314
Defining Eligibility Criteria for a Price List.....	314
Copying a Price List.....	316
Viewing the Price List Details.....	317
Price List (Used for Viewing).....	318
Price List.....	318
Eligibility Criteria.....	320
Editing a Price List.....	321
Price List Price Item Pricing.....	323
Price List Price Items.....	324
Search Price Item.....	325
Viewing Price Items Assigned to a Price List.....	330
Removing a Price Item from a Price List.....	331
Viewing a Price Item Pricing.....	331
Editing a Price Item Pricing of a Price List.....	333
Assigning a Price Item to a Price List.....	337
Defining Characteristics for a Price Item Pricing.....	341
Defining Parameters for a Price Item Pricing.....	342
Defining TFM Information in a Price Item Pricing.....	343
Price List Assignment.....	345
Price List Assignments.....	345
Price List Price Items.....	347
Search Price List for Assignment.....	348
Viewing Price Lists Assigned to an Account.....	351
Viewing Price Lists Assigned to a Person.....	352
Viewing Price Items Assigned to a Price List.....	353
Assigning a Price List to an Account.....	354
Assigning a Price List to a Person.....	357
Defining Characteristics for a Price List Assignment.....	360
Editing the Price List Assignment Details of an Account.....	361
Editing the Price List Assignment Details of a Person.....	364
Price List Assignments.....	367
Accounts where Price List is Assigned.....	367
Persons to whom Price List is Assigned.....	368
Viewing Accounts and Persons where Price List is Assigned.....	369
Persons and Accounts Eligible for Price List Assignment.....	369
Eligible Accounts.....	370
Eligible Persons.....	370
Assigning a Price List to One or More Eligible Accounts.....	371

Assigning a Price List to One or More Eligible Persons.....	373
Defining Characteristics for a Price List Assignment.....	374
Pricing (Account).....	375
Effective Price Assignments for Account.....	376
Search Price Item.....	381
Viewing Effective Price Assignments of an Account.....	386
Filtering Effective Price Assignments of an Account.....	387
Exporting Effective Price Assignments of an Account.....	388
Copying a Price Item Pricing.....	391
Viewing a Price Item Pricing.....	392
Editing a Price Item Pricing of an Account.....	394
Overriding a Price Item Pricing of an Account.....	398
Assigning a Price Item to an Account.....	402
Defining Characteristics for a Price Item Pricing.....	406
Defining Parameters for a Price Item Pricing.....	407
Defining TFM Information in a Price Item Pricing.....	408
Pricing (Person).....	409
Effective Price Assignments for Person.....	410
Search Price Item.....	415
Viewing Effective Price Assignments of a Person.....	420
Filtering Effective Price Assignments of a Person.....	421
Exporting Effective Price Assignments of a Person.....	422
Copying a Price Item Pricing.....	425
Viewing a Price Item Pricing.....	426
Editing a Price Item Pricing of a Person.....	428
Overriding a Price Item Pricing of a Person.....	432
Assigning a Price Item to a Person.....	436
Defining Characteristics for a Price Item Pricing.....	440
Defining Parameters for a Price Item Pricing.....	441
Defining TFM Information in a Price Item Pricing.....	442
Price Item Pricing (Used for Viewing).....	443
Price Item Pricing.....	444
Rate and Price Component Summary.....	447
Rate Components.....	448
Price Components.....	448
Tiering Criteria.....	450
Pricing Eligibility Criteria.....	450
Two-Dimensional Pricing.....	452
Defining a Price Item Pricing.....	452
Viewing the Price Components of a Rate Component.....	455
Viewing the Tiering Criteria of a Price Component.....	456
Viewing the Pricing Eligibility Criteria of a Price Component.....	458
Defining a Price Component for a Rate Component.....	460
Defining a Tiering Criteria for a Price Component.....	463
Defining a Pricing Eligibility Criteria for a Price Component.....	466
Editing a Price Component.....	470
Deleting a Price Component.....	473
Editing a Tiering Criteria of a Price Component.....	476
Deleting a Tiering Criteria of a Price Component.....	480
Editing a Pricing Eligibility Criteria of a Price Component.....	483
Deleting a Pricing Eligibility Criteria of a Price Component.....	490
Deleting a Price Item Pricing.....	493
Editing a Price Item Pricing.....	496
Submitting a Price Item Pricing.....	502
Overriding a Price Item Pricing.....	505
Editing the Two-Dimensional Pricing.....	506

Pricing Simulation.....	508
Search Pricing.....	508
Simulation - Effective Pricing Information.....	512
Searching Pricing Simulation for Account or Price List.....	517
Viewing Pricing Simulation.....	518
Exporting Effective Price Simulation.....	519
Eligible Price List.....	521
Search Eligible Price Lists.....	521
Rate Definition.....	523
Rate Schedule Components.....	524
Create/Edit Rate Definition.....	525
Defining Tiering Setup of a Rate Component.....	526
Editing Tiering Setup of a Rate Component.....	527
Deleting Tiering Setup of a Rate Component.....	528
Tiering Criterion.....	528
Tiering Criterion List.....	529
Edit Tiering Criterion.....	529
Create Tiering Criterion.....	530
Creating a Tiering Criterion.....	530
Editing a Tiering Criterion.....	531
Variance Parameter.....	531
Filtering the Variance Parameters.....	531
Defining a Variance Parameter.....	532
Editing a Variance Parameter.....	533
Deleting a Variance Parameter.....	533
Person to Person Relationship Type Sequence.....	534
Search Person Relationship Type Sequence for Price Item.....	535
Search Person Relationship Type Sequence for Division.....	536
Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	537
Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	538
Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	539
Deleting Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	541
Viewing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	541
Searching Relationship Type Sequence for a Division.....	542
Defining Relationship Type Sequence for a Division.....	543
Editing Relationship Type Sequence of a Division.....	544
Deleting Relationship Type Sequence of a Division.....	545
Viewing Relationship Type Sequence of a Division.....	545
Multiple Parameter Based Post-Processing Pricing.....	546

## **Chapter V: Division..... 549**

Division.....	550
Division - Main.....	552
Division - Access Groups.....	553
Division - Price Items.....	554
Division - Price Lists.....	554
Division - Languages.....	555
Division - Invoice Currencies.....	555
Division - Person Identifier Types.....	555
Division - Algorithms.....	556

Division - Characteristics.....	556
Division - Bill Messages.....	557
Division - Party Char Types.....	557
Division - Bill Cycles.....	558
Division - Account Identifier Types.....	558
Division - Price Item Characteristics.....	558
Searching for a Division.....	559
Defining a Division.....	560
Associating an Access Group with a Division.....	563
Associating a Price Item with a Division.....	564
Associating a Price List with a Division.....	566
Associating a Language with a Division.....	567
Associating an Invoice Currency with a Division.....	568
Associating a Person Identifier Type with a Division.....	570
Associating an Algorithm with a Division.....	571
Defining a Characteristic for a Division.....	577
Associating a Bill Message with a Division.....	578
Associating a Party Characteristic Type with a Division.....	580
Associating a Bill Cycle with a Division.....	581
Associating an Account Identifier Type with a Division.....	582
Defining a Division-Specific Characteristic for a Price Item.....	583
Associating a To Do Type and To Do Role with a Division.....	584

## **Chapter VI: Approval Workflow.....587**

Most Commonly Used Terms.....	589
Approval Workflow Process.....	589
Prerequisites.....	591
Approval Transaction.....	593
Search Approval Transaction.....	593
Approval Transaction Log.....	597
Searching for an Approval Transaction.....	598
Viewing the Log of an Approval Transaction.....	598
Comparison: New versus Existing.....	599
Approving an Approval Transaction.....	599
Rejecting an Approval Transaction.....	600
Canceling an Approval Transaction.....	601
Modifying an Approval Transaction.....	602
Withdrawing an Approval Transaction.....	603
Resolving an Approval Transaction.....	603
Approve Price Assignment.....	604
Search.....	604
List of Price Assignments.....	607
Approve Price Assignment - Comparison: New versus Existing.....	608
Approval Transaction Log.....	610
Approving a Price Assignment for an Account.....	611
Approving a Price Assignment for a Person.....	612
Approving a Price Assignment for a Price List.....	613
Rejecting a Price Assignment for an Account.....	614
Rejecting a Price Assignment for a Person.....	615
Rejecting a Price Assignment for a Price List.....	617
Canceling a Price Assignment for an Account.....	618
Canceling a Price Assignment for a Person.....	619
Canceling a Price Assignment for a Price List.....	621
Modify Price Assignment.....	622
Search.....	622

List of Price Assignments.....	626
Modifying a Price Assignment for an Account.....	627
Modifying a Price Assignment for a Person.....	628
Modifying a Price Assignment for a Price List.....	629
Withdrawing a Price Assignment for an Account.....	629
Withdrawing a Price Assignment for a Person.....	630
Withdrawing a Price Assignment for a Price List.....	631
Viewing the Log of an Approval Transaction.....	632
Resolve Price Assignment.....	633
Search.....	633
List of Price Assignments.....	637
Resolving a Price Assignment for an Account.....	638
Resolving a Price Assignment for a Person.....	639
Resolving a Price Assignment for a Price List.....	640
Withdrawing a Price Assignment for an Account.....	640
Withdrawing a Price Assignment for a Person.....	641
Withdrawing a Price Assignment for a Price List.....	642
Viewing the Log of an Approval Transaction.....	643
Approval Workflow Group (Used for Searching).....	644
Search Approval Workflow Group.....	644
Searching for an Approval Workflow Group.....	645
Viewing the Approval Workflow Group Details.....	646
Defining an Approval Workflow Group.....	646
Adding a Business Object.....	650
Defining a Group BO Relation.....	652
Approval Workflow Group (Used for Viewing).....	653
Approval Workflow Group.....	654
Editing an Approval Workflow Group.....	656
Deleting an Approval Workflow Group.....	656
Editing a Business Object.....	657
Deleting a Business Object.....	659
Editing a Group BO Relation.....	659
Deleting a Group BO Relation.....	661
Approval Workflow Chain (Used for Searching).....	661
Search Approval Workflow Chain.....	661
Searching for an Approval Workflow Chain.....	662
Viewing the Approval Workflow Chain Details.....	663
Defining an Approval Workflow Chain.....	663
Defining Approval Levels for an Approval Workflow Chain.....	664
Approval Workflow Chain (Used for Viewing).....	665
Approval Workflow Chain.....	665
Editing an Approval Workflow Chain.....	666
Deleting an Approval Workflow Chain.....	667
Approval Workflow Criterion Type (Used for Searching).....	668
Search Approval Workflow Criterion Type.....	668
Searching for an Approval Workflow Criterion Type.....	668
Viewing the Approval Workflow Criterion Type Details.....	669
Defining an Approval Workflow Criterion Type.....	669
Approval Workflow Criterion Type (Used for Viewing).....	671
Approval Workflow Criterion Type.....	671
Editing an Approval Workflow Criterion Type.....	672
Deleting an Approval Workflow Criterion Type.....	674
Approval Workflow Group Chain Linkage (Used for Searching).....	674
Search Approval Workflow Group Chain Linkage.....	674
Searching for an Approval Workflow Group Chain Linkage.....	675
Viewing the Approval Workflow Group Chain Linkage Details.....	676

Defining an Approval Workflow Group Chain Linkage.....	676
Defining Group Chain Linkage Criteria for an Approval Workflow.....	678
Defining a Field Approval Rule.....	678
Approval Workflow Group Chain Linkage (Used for Viewing).....	680
Approval Workflow Group Chain Linkage.....	681
Editing an Approval Workflow Group Chain Linkage.....	683
Deleting an Approval Workflow Group Chain Linkage.....	684
Approval Workflow Setting (Used for Searching).....	684
Search Approval Workflow Group.....	684
Searching for an Approval Workflow Group.....	685
Viewing the Approval Workflow Setting Details.....	686
Defining Approval Workflow Group Settings.....	686
Approval Workflow Setting (Used for Viewing).....	688
Approval Workflow Group Settings.....	688
Editing Approval Workflow Group Settings.....	690
Deleting Approval Workflow Group Settings.....	690
Regenerating Input and Display UI Maps.....	691
Approval Workflow Reason (Used for Searching).....	691
Approval Workflow Reason List.....	691
Filtering the Approval Workflow Reasons.....	692
Viewing the Approval Workflow Reason Details.....	693
Defining an Approval Workflow Reason.....	693
Approval Workflow Reason (Used for Viewing).....	694
Approval Workflow Reason.....	694
Editing an Approval Workflow Reason.....	695
Deleting an Approval Workflow Reason.....	696

## **Chapter VII: Multi-Currency Accounts.....697**

Creating Adjustments.....	699
Generating Bills.....	699
Applying Payments.....	699
Monitoring Overdue Debt.....	699
Generating History.....	699

## **Chapter VIII: Rules Engine.....701**

Rule Type (Used for Searching).....	703
Search Rule Type.....	703
Searching for a Rule Type.....	704
Defining a Rule Type.....	705
Defining Input and Output Parameters for a Rule Type.....	707
Associating a Characteristic Entity with a Rule Type.....	708
Associating an Algorithm with a Rule Type.....	709
Editing a Rule Type.....	710
Deleting a Rule Type.....	712
Copying a Rule Type.....	713
Viewing the Rule Type Details.....	715
Rule Type (Used for Viewing).....	715
Rule Type.....	715
Viewing the Rule Type Details.....	716
Editing a Rule Type.....	717
Rule.....	719
Search.....	719
Searching for a Rule.....	720
Viewing the Rule Details.....	721

Defining a Rule.....	721
Editing a Rule.....	725
Deleting a Rule.....	730
Copying a Rule.....	730
View Rule.....	731
Rule Information.....	731
Viewing the Rule Details.....	733
Rule Check.....	734
Rule Check.....	735
<b>Chapter IX: Alternate Sequential Bill Numbers.....</b>	<b>737</b>
Sequential Bill Number Generation Algorithms.....	738
C1_ALTBLLSYS.....	738
C1_ALTBLSYS1.....	738
C1_ALTBLDV.....	741
C1_ALTBLDIV1.....	741
Enabling the Alternate Sequential Bill Numbers Feature.....	744
<b>Chapter X: Currency Conversion.....</b>	<b>747</b>
Prerequisites.....	749
Bill Segment Generation.....	750
Adjustment Creation.....	751
Payment and Tender Creation.....	751
Transaction Aggregation.....	752
FT GL Creation.....	752
Currency Conversion Algorithms.....	753
C1_CURALGBS.....	754
C1_CURALGAD.....	755
C1_CURALGPY.....	757
C1_CURALGTFM.....	759
C1_EXCRTBS.....	761
C1_EXCRTAD.....	762
C1_EXCRTPY.....	764
C1_EXCRTTFM.....	766
FTFREZGLEXTN.....	769
C1_EXCRTOVRD.....	771
Exchange Rate (Used for Searching).....	772
Search Exchange Rate.....	772
Searching for an Exchange Rate.....	775
Defining an Exchange Rate.....	776
Defining Characteristics for an Exchange Rate.....	779
Editing an Exchange Rate.....	780
Deleting an Exchange Rate.....	782
Exchange Rate (Used for Viewing).....	783
Exchange Rate.....	783
Exchange Rate Log.....	785
Viewing the Exchange Rate Details.....	786
<b>Chapter XI: Transaction Feed Management.....</b>	<b>787</b>
Prerequisites.....	788
Transaction Rating Before Billing.....	788
Transaction Aggregation.....	796
Header Validation.....	797

Transaction Validation and Initial Price Item Determination.....	799
Price Item Pricing Verification.....	809
Aggregation.....	813
Clean Up.....	817
Transaction Aggregation Batch Processing.....	820
Transaction Disaggregation.....	822
Transaction Disaggregation Batch Processing.....	829
Reseeding.....	830
Transaction Cancellation.....	833
Transaction Cancellation Batch Processing.....	836
Transaction Rollback.....	837

## **Chapter XII: On Demand Billing..... 975**

Prerequisites.....	977
CSV File Format for Banking Usage Data.....	979
CSV File Format for Insurance Usage Data.....	981
Usage Record Status Transition.....	984
File Type.....	985
File Types.....	986
Defining a File Type.....	987
Editing a File Type.....	992
Deleting a File Type.....	997
On Demand Billing.....	998
Search.....	998
Group Files.....	1000
Searching for a File Group.....	1001
Defining a File Group.....	1002
Editing a File Group.....	1003
Deleting a File Group.....	1005
Closing a File Group.....	1005
Generating Adhoc Bills for a File Group.....	1006
Freezing All Bills of a File Group.....	1007
Freezing Selected Bills of a File Group.....	1008
Viewing All Bills Generated for a File Group.....	1009
Viewing Usage Data Files of a File Group.....	1011
Usage Data Processing.....	1011

Search.....	1012
Searching for a Usage Data File.....	1015
Uploading a Usage Data File.....	1016
Replacing an Existing File.....	1018
Viewing All Records of a Usage Data File.....	1021
Viewing Valid Records of a Usage Data File.....	1025
Viewing Invalid Records of a Usage Data File.....	1029
Viewing Submitted Records of a Usage Data File.....	1032
Viewing Processed Records of a Usage Data File.....	1036
Viewing Cancelled Records of a Usage Data File.....	1039
Viewing Rejected Records of a Usage Data File.....	1043
Viewing Billed Records of a Usage Data File.....	1046
Viewing Unbilled Records of a Usage Data File.....	1050
Submitting a Valid Record.....	1053
Approving a Valid Record.....	1055
Rejecting a Valid Record.....	1057
Cancelling a Usage Data File.....	1059
Revalidating a Usage Data File.....	1060
Editing a Valid, Invalid, or Rejected Usage Record.....	1061
Exporting Usage Data into CSV file.....	1062
Filtering Usage Records.....	1062

## **Chapter XIII: Upload Validated Payment Data.....1065**

Payment Upload Process.....	1066
Upload Payment Records in the Pre-Staging Area.....	1066
Move Payment Records to the Staging Area.....	1067
Create Payment Events and Payments.....	1067
Prerequisites.....	1068
CSV File Format.....	1069
Payment Data File Status Transition.....	1071
Payment Record Status Transition.....	1071
Error Messages.....	1073
Payment Upload.....	1077
Search Payment Data File.....	1078
Payment Data Records.....	1080
Payment Data File Log.....	1081
Searching for a Payment Data File.....	1082
Uploading a Payment Data File.....	1082
Replacing an Existing File.....	1084
Cancelling a Payment Data File.....	1085
Moving the Payment Records to the Staging Area.....	1085
Editing a Payment Staging Record.....	1086
Viewing the Records of a Payment Data File.....	1087
Viewing the Log of a Payment Data File.....	1087
Viewing the Error Messages.....	1088

## **Chapter XIV: Freeze Payments on Notification.....1089**

Freeze Payments on Notification Process.....	1091
Creating Automatic Payments and Refunds.....	1091
Generating a Flat File.....	1091
Uploading Response from Auto Clearing House (ACH).....	1091
Freezing or Canceling Automatic Payments.....	1092
Voiding Refund Requests and Canceling Refund Adjustments.....	1093
Generating To Do Entries.....	1093

Creating Tender Controls.....	1093
Prerequisites.....	1094
Automatic Payment or Refund Clearing Staging Record Status Transition.....	1095
EDI 824 File Format.....	1095
Sample EDI 824 File Format.....	1096
Automatic Payment and Refund Upload Reason.....	1097
Upload Reasons.....	1097
Defining an Upload Reason.....	1098
Editing an Upload Reason.....	1100
Deleting an Upload Reason.....	1102
Automatic Payment and Refund Clearing Staging.....	1102
Search Clearing Record.....	1103
Associated Clearing Staging Records.....	1105
Clearing Staging Upload Reasons.....	1106
Clearing Staging Characteristics.....	1106
Searching for a Clearing Record.....	1107
Viewing the Clearing Staging Records Associated to a Clearing Record.....	1107
Viewing the Upload Reason Specified in the Clearing Staging Record.....	1108
Viewing the Characteristics of the Clearing Staging Record.....	1108
Editing a Clearing Staging Record.....	1109
Defining Characteristics for a Clearing Staging Record.....	1110
Deleting a Clearing Staging Record.....	1111

## **Chapter XV: Construct..... 1113**

Prerequisites.....	1115
Construct Status Transition.....	1115
Template.....	1116
Search Template.....	1117
Searching for a Template.....	1118
Defining a Template.....	1119
Defining Characteristics for a Template.....	1120
Editing a Template.....	1121
Deleting a Template.....	1124
Viewing the Template Details.....	1125
Construct (Used for Searching).....	1125
Search Construct.....	1125
Searching for a Construct.....	1128
Defining a Construct.....	1129
Defining Characteristics for a Construct.....	1131
Editing a Construct.....	1132
Copying a Construct.....	1135
Viewing the Construct Details.....	1136
Construct (Used for Viewing).....	1137
Construct - Main.....	1137
Construct Information.....	1137
Include Usage/Invoice Accounts.....	1138
Include Billable Charges.....	1139
Include Adjustments.....	1140
Include Bill Segments.....	1140
Linked Accounts.....	1141
Exclude Usage/Invoice Accounts.....	1142
Construct - Log.....	1142
Construct Log.....	1142
Including Usage Accounts in a Construct.....	1143
Including Usage and Invoice Accounts in a Construct.....	1144

Excluding Usage Accounts from a Construct.....	1145
Excluding Usage and Invoice Accounts from a Construct.....	1146
Including Billable Charges in a Construct.....	1147
Including Bill Segments in a Construct.....	1148
Including Adjustments in a Construct.....	1150
Activating a Construct.....	1151
Billing and Settlement Hierarchy.....	1151
Search Hierarchy.....	1152
Linked Accounts.....	1153
Criteria.....	1154
Viewing Person Billing Hierarchy Details.....	1154
Viewing Person Settlement Hierarchy Details.....	1155
Viewing Usage Accounts Billed through an Invoice Account.....	1155
Viewing Invoice Accounts through which a Usage Account is Billed.....	1157
Viewing Settlement Accounts through which a Usage or Invoice Account is Settled.....	1158
Viewing Settlement Hierarchy of a Invoice or Usage Account.....	1159
<b>Chapter XVI: Trial Billing.....</b>	<b>1161</b>
Trial Bill (Used for Searching).....	1163
Search Trial Bill .....	1163
Searching for a Trial Bill.....	1164
Viewing the Trial Bill Details.....	1165
Trial Bill (Used for Viewing).....	1166
Trial Bill.....	1166
Trial Bill Segments.....	1167
Trial Bill Segment Calc Lines.....	1169
Trial Bill Segment SQ Details.....	1170
Trial Bill Segment Financial Details.....	1170
Printing a Trial Bill in the PDF Format.....	1171
Viewing the Segments of a Trial Bill.....	1171
Filtering the Trial Bill Segments.....	1172
Viewing the Calc Lines of a Trial Bill Segment.....	1172
Viewing the SQ Details of a Trial Bill Segment.....	1173
Viewing the Financial Details of a Trial Bill Segment.....	1174
<b>Chapter XVII: Bill Tolerance.....</b>	<b>1175</b>
Prerequisites.....	1176
<b>Chapter XVIII: GL Account Validation.....</b>	<b>1179</b>
Static GL Account Validation.....	1180
Dynamic GL Account Validation.....	1180
<b>Chapter XIX: Upload Validated Adjustment Data.....</b>	<b>1181</b>
Prerequisites.....	1183
CSV File Format.....	1183
Adjustment Upload Request (Without Approval) Status Transition.....	1184
Adjustment Upload Request (With Approval) Status Transition.....	1185
Algorithms Used in C1-ADJUPLD.....	1186
Upload Request Type.....	1189
Upload Request Type List.....	1190
Upload Request Type.....	1191
Defining an Upload Request Type.....	1194

Defining Characteristics for an Upload Request Type.....	1200
Editing an Upload Request Type.....	1201
Copying an Upload Request Type.....	1205
Mapping an Upload Request Type.....	1209
Deleting an Upload Request Type.....	1210
Viewing the Upload Request Type Details.....	1211
Adjustment Upload Request (Used for Searching).....	1212
Search Adjustment Upload Request.....	1212
Searching for an Adjustment Upload Request.....	1214
Uploading an Adjustment Data File.....	1214
Replacing an Adjustment Data File.....	1217
Viewing the Adjustment Upload Request Details.....	1219
Adjustment Upload Request (Used for Viewing).....	1220
Adjustment Upload Request - Main.....	1220
Adjustment Upload Request.....	1220
Adjustment Data Records.....	1223
Adjustment Upload Request - Log.....	1224
Adjustment Upload Request Log.....	1224
Cancelling an Adjustment Data File.....	1224
Creating Adjustments for an Adjustment Data File.....	1225
Submitting an Adjustment Data File for Approval.....	1226
Approving an Adjustment Data File.....	1227
Rejecting an Adjustment Data File.....	1228
Viewing the Log of an Adjustment Upload Request.....	1229
Adding a Log Entry for an Adjustment Upload Request.....	1230

## **Chapter XX: Foreign Exchange Gain Loss..... 1233**

Foreign Exchange Gain Loss Calculation.....	1234
Prerequisites.....	1234
Foreign Exchange Gain Loss Scenarios.....	1235
Payment Scenarios.....	1235
Credit Adjustment Scenarios.....	1239
Write Off Adjustment Scenarios.....	1240
Write Up/Down Adjustment Scenarios.....	1242

## **Chapter XXI: Payment Request..... 1245**

Prerequisites.....	1247
Payment Request (Without Approval) Status Transition.....	1248
Payment Request (With Approval) Status Transition.....	1249
Algorithms Used in C1-PaymentRequest.....	1250
Algorithms Used in C1-PaymentTransferRequest.....	1254
Payment Request Type.....	1259
Payment Request Type List.....	1259
Payment Request Type.....	1260
Defining a Payment Request Type.....	1262
Defining Characteristics for a Payment Request Type.....	1265
Editing a Payment Request Type.....	1266
Copying a Payment Request Type.....	1269
Deleting a Payment Request Type.....	1272
Viewing the Payment Request Type Details.....	1273
Payment Request (Used for Searching).....	1273
Search Payment Request.....	1274
Searching for a Payment Request.....	1276
Viewing the Payment Request Details.....	1277

Payment Request (Used for Viewing).....	1278
Payment Request.....	1278
Payment Distribution.....	1284
Creating a Payment Creation Request.....	1286
Defining Characteristics for a Payment Tender.....	1291
Editing the Payment Amount.....	1292
Editing a Payment Request.....	1294
Deleting a Payment Request.....	1297
Distributing the Tender or Payment Amount.....	1298
Distributing and Freezing the Tender or Payment Amount.....	1299
Redistributing the Tender or Payment Amount.....	1300
Editing the Payment Segment Amount.....	1301
Freezing Payments Created Through a Payment Request.....	1303
Submitting a Payment Request for Approval.....	1304
Approving a Payment Request.....	1304
Rejecting a Payment Request.....	1306
Discarding a Payment Request.....	1308
Viewing the Log of a Payment Request.....	1308
Adding a Log Entry for a Payment Request.....	1309
Payment Event Summary.....	1310
Search Payment Event.....	1310
Payments.....	1313
Payment Segments.....	1315
Searching for a Payment Event.....	1315
Creating a Payment Transfer Request.....	1316
Cancelling a Payment Event.....	1320
Deleting a Payment Event.....	1321
Viewing Payments Created Through a Payment Event.....	1322
Cancelling a Payment.....	1322
Deleting a Payment.....	1323
Viewing Payment Segments of a Payment.....	1323

## **Chapter XXII: Account Receivable Central..... 1325**

Single Offset.....	1326
Mass Offset.....	1326
Cross Currency Offset.....	1327
Hold.....	1327
Refund.....	1328
Write Off.....	1328
Dispute.....	1328
Account Receivable Central.....	1328
Search Bill .....	1328
Bill Information.....	1332
Offset Details.....	1332
Hold Details.....	1332
Garnishment Details.....	1333
Bill Line Items.....	1333
Searching for a Bill.....	1333
Viewing the Bill Details.....	1334

## **Chapter XXIII: Offset Request..... 1335**

Single Offset.....	1337
Mass Offset.....	1338
Cross Currency Offset.....	1341

Prerequisites.....	1343
Offset Request (Without Approval) Status Transition.....	1344
Offset Request (With Approval) Status Transition.....	1345
Algorithms Used in C1-OffsetRequest.....	1347
C1-OFFST-INF.....	1348

Offset Request.....	1379
Selected Bills.....	1382
Search Bill.....	1383
Offset Request Adjustments.....	1388
Offset Request - Log.....	1388
Offset Request Log.....	1388
Viewing the Debit and Credit Bills Added to an Offset Request.....	1389
Viewing the Adjustments Created Through an Offset Request.....	1389
Adding a Debit or Credit Bill to an Offset Request.....	1390
Editing an Offset Request.....	1391
Defining a Characteristic for an Offset Request.....	1393
Editing the Offset Amount of a Debit or Credit Bill.....	1394
Removing a Debit or Credit Bill from an Offset Request.....	1395
Deleting an Offset Request.....	1395
Submitting an Offset Request.....	1396
Approving an Offset Request.....	1398
Rejecting an Offset Request.....	1400
Unapplying an Offset Request.....	1402
Viewing the Log of an Offset Request.....	1403

Adding a Log Entry for an Offset Request.....	1403
---	------

## **Chapter XXIV: Funding Request..... 1405**

Prerequisites.....	1408
Funding Request (Without Approval) Status Transition.....	1408
Funding Request (With Approval) Status Transition.....	1409
Algorithms Used in C1-FundingReq.....	1410
C1-FUNDINFO.....	1411
C1-FUNDSUBMT.....	1411
C1-FUNDAPP.....	1412
C1-FUNDAPRVD.....	1412
F1-TODOCOMPL.....	1412
F1-AT-RQJ.....	1412
C1-FNDRESUBM.....	1413
C1-FUNDVAL.....	1413
C1-FUNDAPAY.....	1413
C1-FUNDADJCR.....	1413
C1-FUNDCANCL.....	1414
Funding Request Type.....	1414
Funding Request Type List.....	1414
Funding Request Type.....	1415
Defining a Funding Request Type.....	1418
Defining a Characteristic for a Funding Request Type.....	1425
Editing a Funding Request Type.....	1426
Deleting a Funding Request Type.....	1433
Copying a Funding Request Type.....	1434
Viewing the Funding Request Type Details.....	1441
Funding Request (Used for Searching).....	1442
Search Funding Request.....	1442
Searching for a Funding Request.....	1445
Creating a Funding Request.....	1446
Viewing the Funding Request Details.....	1447
Funding Request (Used for Viewing).....	1447

Searching Bills.....	1631
Adding Persons in a Hold Request.....	1632
Adding Accounts in a Hold Request.....	1632
Adding Bills in a Hold Request.....	1633
Adding Processes in a Hold Request.....	1633
Defining Characteristics for a Hold Request.....	1634
Editing a Hold Request.....	1635
Editing Hold Request Entities.....	1637
Deleting Hold Request Entities.....	1639
Deleting a Hold Request.....	1639
Submitting a Hold Request.....	1640
Approving a Hold Request.....	1641
Releasing a Hold Request.....	1642
Rejecting a Hold Request.....	1643
Resubmitting a Hold Request.....	1645
Viewing the Log of a Hold Request.....	1645
Adding a Log Entry for a Hold Request.....	1646

## **Chapter XXVII: Delinquency Central.....1649**

Prerequisites.....	1650
Delinquency Central (Used for Viewing).....	1650
Search Overdue Process.....	1650
Overdue Events.....	1655
Searching for an Overdue Process.....	1656
Viewing Events of an Overdue Process.....	1656
Viewing the Overdue Process Details.....	1657
Overdue Process Information for Account: {Account ID}.....	1657
Person Information.....	1658
Account Information.....	1658
Customer Contact Details.....	1658
Promise To Pay.....	1658
Hold Details.....	1659
Overdue Bills.....	1659
Payment Arrangement.....	1660
Search Bill.....	1660
Searching for a Bill.....	1661
Adding the Customer Contact Details.....	1662
Creating a Hold Request for an Overdue Process.....	1662
Creating a Payment Arrangement for an Overdue Process.....	1663
Defining a Promise To Pay for an Overdue Process.....	1663

## **Chapter XXVIII: Upload Request..... 1665**

Upload Request (Without Approval) Status Transition.....	1668
Upload Request (With Approval) Status Transition.....	1669
Prerequisites.....	1670
Algorithms Used in C1-BillCycleUpdateUpdReq.....	1671
Algorithms Used in C1-ContractRiderUpdateUpdReq.....	1676

Algorithms Used in C1-HoldUploadRequest.....	1681
Algorithms Used in C1-RefundUploadRequest.....	1688
Algorithms Used in C1-WriteOffUploadRequest.....	1692
Algorithms Used in C1-BillableChargeUploadRequest.....	1696
Algorithms Used in C1-ReinstatementUploadRequest.....	1700
Algorithms Used in C1-BillGrpSortUploadRequest.....	1706
C1-BLSRTUPLD.....	1707
C1-BLSRTDERV.....	1707
C1-BLSRTVALD.....	1707
F1-AT-RQJ.....	1708
C1-UPLSUBENT.....	1708
C1-DEFERUPLD.....	1708
C1-UPLAPPENT.....	1708
C1-UPLAPPEXT.....	1708
F1-TODOCOMPL.....	1708
C1-BLSRTPROC.....	1709
Algorithms Used in C1-BillLevelUploadRequest.....	1709
C1-BLVUPLDTL.....	1710
C1-BLVLDERIV.....	1710
C1-BLVLVALID.....	1710
F1-AT-RQJ.....	1711
C1-UPLSUBENT.....	1711
C1-DEFERUPLD.....	1711
C1-UPLAPPENT.....	1711
C1-UPLAPPEXT.....	1711
F1-TODOCOMPL.....	1711
C1-BLVLVPRO.....	1711
CSV File Format for Account Bill Cycle Upload Request.....	1712
CSV File Format for Contract Rider Upload Request.....	1712
CSV File Format for Billable Charge Upload.....	1713
CSV File Format for Hold Upload Request.....	1717
CSV File Format for Refund Request Upload.....	1721
CSV File Format for Write Off Request Upload.....	1722
CSV File Format for Reinstatement Upload Request.....	1723
CSV File Format for Bill Group Sorting Upload Request.....	1724
CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request.....	1725
Upload Request Type.....	1727
Upload Request Type List.....	1728
Upload Request Type.....	1729
Defining an Upload Request Type.....	1732
Defining Characteristics for an Upload Request Type.....	1738
Editing an Upload Request Type.....	1739
Deleting an Upload Request Type.....	1743
Copying an Upload Request Type.....	1743
Mapping an Upload Request Type.....	1747
Viewing the Upload Request Type Details.....	1749
Upload Request (Used for Searching).....	1749
Search Upload Request.....	1750
Searching for an Upload Request.....	1751
Viewing the Upload Request Details.....	1752
Creating an Upload Request.....	1752
Defining Characteristics for an Upload Request.....	1755
Upload Request (Used for Viewing).....	1756
Upload Request - Main.....	1756
Upload Request.....	1756
Data Records.....	1759

Upload Request - Log.....	1760
Upload Request Log.....	1760
Editing an Upload Request.....	1761
Deleting an Upload Request.....	1762
Validating an Upload Request.....	1763
Cancelling an Upload Request.....	1763
Submitting an Upload Request.....	1764
Approving an Upload Request.....	1768
Rejecting an Upload Request.....	1771
Viewing the Data Record Details.....	1772
Viewing the Log of an Upload Request.....	1773
Adding a Log Entry for an Upload Request.....	1774

## **Chapter XXIX: General Ledger (GL) Accounting Template..... 1775**

GL Accounting Template (Without Approval) Status Transition.....	1780
GL Accounting Template (With Approval) Status Transition.....	1780
Algorithms Used in C1- GLAT.....	1781
Prerequisites.....	1783
GL Accounting Template (Used for Searching).....	1783
Search GL Accounting Template.....	1784
GL Accounting Template Lines.....	1785
Searching for a GL Accounting Template.....	1786
Creating a GL Accounting Template.....	1786
Viewing the GL Accounting Template Details.....	1788
Viewing the GL Accounting Template Lines Details.....	1789
GL Accounting Template (Used for Viewing).....	1789
GL Accounting Template - Main.....	1789
GL Accounting Template.....	1789
GL Accounting Template - Log.....	1791
GL Accounting Template Log.....	1791
Editing a GL Accounting Template.....	1792
Deleting a GL Accounting Template.....	1793
Submitting a GL Accounting Template.....	1794
Approving a GL Accounting Template.....	1795
Rejecting a GL Accounting Template.....	1796
Deactivating a GL Accounting Template.....	1798
Viewing the Log of a GL Accounting Template.....	1799
Adding a Log Entry for a GL Accounting Template.....	1800

## **Chapter XXX: Accrual..... 1801**

Accrual Created through UI (Without Approval) Status Transition.....	1803
Accrual Created through UI (With Approval) Status Transition.....	1803
Accrual Created through Batch (Without Approval) Status Transition.....	1804
Accrual Created through Batch (With Approval) Status Transition.....	1805
Accrual Processes.....	1806
Account's Eligibility Check for Accrual.....	1807
Accrual Calculation.....	1807
Calculate Accrual at the Bill Level Based on Historical Data.....	1807
Calculate Accrual at the Bill Segment Level Based on Historical Data.....	1808
Calculate Accrual at the Bill Level Based on Actual Data.....	1808
Calculate Accrual at the Bill Segment Level Based on Actual Data.....	1808
Accrual Creation.....	1808
Accrual Reversal.....	1809
Accrual Cycle (Used for Searching).....	1809

Search Accrual Cycle.....	1809
Searching for an Accrual Cycle.....	1810
Viewing the Accrual Cycle Details.....	1810
Defining an Accrual Cycle.....	1811
Adding a Schedule Period in an Accrual Cycle.....	1811
Accrual Cycle (Used for Viewing).....	1812
Accrual Cycle.....	1812
Editing an Accrual Cycle.....	1813
Deleting an Accrual Cycle.....	1814
Accrual Type (Used for Searching).....	1815
Search Accrual Type.....	1815
Searching for an Accrual Type.....	1816
Viewing the Accrual Type Details.....	1817
Defining an Accrual Type.....	1817
Associating an Algorithm with an Accrual Type.....	1821
Excluding an Entity from an Accrual Type.....	1824
Associating a Division with an Accrual Type.....	1825
Accrual Type (Used for Viewing).....	1826
Accrual Type.....	1826
Editing an Accrual Type.....	1828
Deleting an Accrual Type.....	1835
Accrual (Used for Searching).....	1835
Search Accrual.....	1835
Searching for an Accrual.....	1837
Viewing the Accrual Details.....	1838
Defining an Accrual.....	1838
Defining a Characteristic for an Accrual.....	1840
Adding the Details for an Accrual.....	1841
Accrual (Used for Viewing).....	1842
Accrual - Main.....	1842
Accrual.....	1842
Accrual Details.....	1844
Accrual Calculation Lines.....	1844
Accrual - Log.....	1845
Accrual Log.....	1845
Viewing the Log of an Accrual.....	1846
Adding a Log Entry for an Accrual.....	1846
Approving an Accrual.....	1847
Rejecting an Accrual.....	1847
Resubmitting an Accrual.....	1848
Editing an Accrual.....	1849
Deleting an Accrual.....	1850

## **Chapter XXXI: Payment Agreement Request.....1853**

Payment Agreement Request (Without Approval) Status Transition.....	1856
Payment Agreement Request (With Approval) Status Transition.....	1856
Prerequisites.....	1857
Algorithms Used in CI-PaymentAgreementRequest.....	1858
Payment Agreement Request Type.....	1858
Payment Agreement Request Type List.....	1859
Payment Agreement Request Type.....	1859
Defining a Payment Agreement Request Type.....	1862
Defining Characteristics for a Payment Agreement Request Type.....	1865
Editing a Payment Agreement Request Type.....	1866
Copying a Payment Agreement Request Type.....	1868

Deleting a Payment Agreement Request Type.....	1870
Viewing the Payment Agreement Request Type Details.....	1871
Payment Agreement Request (Used for Searching).....	1872
Search Payment Agreement Request.....	1872
Bill Details.....	1875
Searching for a Payment Agreement Request.....	1876
Creating a Payment Agreement Request.....	1876
Defining Characteristics for a Payment Agreement Request.....	1877
Defining Payment Schedule for a Payment Agreement Request.....	1878
Viewing the Bills Added in the Payment Agreement Request.....	1879
Viewing the Payment Agreement Request Details.....	1880
Payment Agreement Request (Used for Viewing).....	1880
Payment Agreement Request - Main.....	1881
Payment Agreement Request.....	1881
Bill Details.....	1883
Payment Schedule.....	1884
Payment Agreement Request - Bills.....	1884
Search Bills.....	1884
Payment Agreement Request - Log.....	1886
Payment Agreement Request Log.....	1886
Editing a Payment Agreement Request.....	1886
Deleting a Payment Agreement Request.....	1889
Submitting a Payment Agreement Request.....	1890
Removing an Overdue Bill from a Payment Agreement Request.....	1891
Approving a Payment Agreement Request.....	1891
Rejecting a Payment Agreement Request.....	1893
Resubmitting a Payment Agreement Request.....	1894
Filtering Overdue Bills of an Account.....	1895
Adding an Overdue Bill in a Payment Agreement Request.....	1896
Viewing the Log of a Payment Agreement Request.....	1897
Adding a Log Entry for a Payment Agreement Request.....	1898

## **Chapter XXXII: Dispute Request..... 1901**

Dispute Request (Without Approval) Status Transition.....	1908
Dispute Request (With Approval) Status Transition.....	1908
Prerequisites.....	1909
Algorithms Used in C1-DisputeRequest.....	1910
Dispute Request Type.....	1915
Dispute Request Type List.....	1918
Dispute Request Type.....	1919
Defining a Dispute Request Type.....	1921
Defining Characteristics for a Dispute Request Type.....	1924
Editing a Dispute Request Type.....	1925
Deleting a Dispute Request Type.....	1928
Copying a Dispute Request Type.....	1929
Viewing the Dispute Request Type Details.....	1931
Dispute Request (Used for Searching).....	1932
Search Dispute Request.....	1932
Searching for a Dispute Request.....	1935
Viewing the Dispute Request Details.....	1936
Creating a Dispute Request.....	1937
Defining Characteristics for a Dispute Request.....	1939
Dispute Request (Used for Viewing).....	1940
Dispute Request - Main.....	1941
Dispute Request.....	1941

Dispute Details.....	1943
Dispute Adjustments.....	1943
Previous Dispute Requests.....	1944
Dispute Request - Bills.....	1945
Search Bills.....	1945
Bill Line Items.....	1947
Dispute Request - Log.....	1947
Dispute Request Log.....	1947
Editing a Dispute Request.....	1948
Deleting a Dispute Request.....	1949
Submitting a Dispute Request.....	1950
Approving a Dispute Request.....	1951
Rejecting a Dispute Request.....	1952
Resubmitting a Dispute Request.....	1954
Editing the Dispute Details.....	1954
Deleting a Bill from the Dispute Request.....	1956
Viewing the Bill Line Items.....	1956
Adding a Bill to the Dispute Request.....	1957
Adding a Bill Line Item to the Dispute Request.....	1958
Viewing the Log of a Dispute Request.....	1960
Adding a Log Entry for a Dispute Request.....	1961

## **Chapter XXXIII: Earnings Credit Rate ..... 1963**

Prerequisites.....	1967
Financial Transaction Distribution Object Status Transition.....	1967
Algorithms Used in C1-FTDIST.....	1968
Earnings Credit Rate Eligibility.....	1973
Earnings Credit Rate Eligibility.....	1974
Defining Earnings Credit Rate Eligibility for an Account.....	1975
Financial Transaction Distribution Type.....	1976
Financial Transaction Distribution Type List.....	1976
Financial Transaction Distribution Type.....	1978
Defining a Financial Transaction Distribution Type.....	1980
Defining Characteristics for a Financial Transaction Distribution Type.....	1983
Editing a Financial Transaction Distribution Type.....	1984
Deleting a Financial Transaction Distribution Type.....	1986
Copying a Financial Transaction Distribution Type.....	1987
Viewing the Financial Transaction Distribution Type Details.....	1990
Financial Transaction Distribution Rule.....	1990
Financial Transaction Distribution Rule List.....	1991
Financial Transaction Distribution Rule.....	1992
Financial Transaction Distribution Rule Version List.....	1993
Financial Transaction Distribution Rule Version.....	1994
Defining a Financial Transaction Distribution Rule.....	1996
Editing a Financial Transaction Distribution Rule.....	1997
Deleting a Financial Transaction Distribution Rule.....	1999
Copying a Financial Transaction Distribution Rule.....	1999
Viewing the Financial Transaction Distribution Rule Details.....	2001
Viewing the Financial Transaction Distribution Rule Version List.....	2001
Defining a Financial Transaction Distribution Rule Version.....	2002
Including Objects in a Financial Transaction Distribution Rule Version.....	2005
Excluding Objects in a Financial Transaction Distribution Rule Version.....	2006
Associating Algorithms with a Financial Transaction Distribution Rule Version.....	2007
Editing a Financial Transaction Distribution Rule Version.....	2007
Deleting a Financial Transaction Distribution Rule Version.....	2010

Copying a Financial Transaction Distribution Rule Version.....	2011
Viewing the Financial Transaction Distribution Rule Version Details.....	2014
Expiration Cycle Extendable Lookup.....	2015
Extendable Lookup Search.....	2015
Searching for an Expiration Cycle Extendable Lookup.....	2015
Extendable Lookup (Expiration Cycle).....	2016
Extendable Lookup Value List.....	2016
Extendable Lookup Value.....	2017
Defining an Expiration Cycle.....	2018
Editing an Expiration Cycle.....	2019
Deleting an Expiration Cycle.....	2020
Copying an Expiration Cycle.....	2021
Viewing the Expiration Cycle Details.....	2022
Distribution Hierarchy Extendable Lookup.....	2023
Extendable Lookup Search.....	2023
Searching for a Distribution Hierarchy Extendable Lookup.....	2024
Extendable Lookup (Distribution Hierarchy).....	2024
Extendable Lookup Value List.....	2025
Extendable Lookup Value.....	2025
Defining a Distribution Hierarchy.....	2027
Editing a Distribution Hierarchy.....	2028
Deleting a Distribution Hierarchy.....	2029
Copying a Distribution Hierarchy.....	2030
Viewing the Distribution Hierarchy Details.....	2032
Financial Transaction Distribution Object Extendable Lookup.....	2032
Extendable Lookup Search.....	2032
Extendable Lookup (Financial Transaction Distribution Object).....	2033
Extendable Lookup Value List.....	2033
Extendable Lookup Value.....	2034
Defining a Financial Transaction Distribution Object.....	2036
Editing a Financial Transaction Distribution Object.....	2037
Deleting a Financial Transaction Distribution Object.....	2038
Copying a Financial Transaction Distribution Object.....	2039
Viewing the Financial Transaction Distribution Object Details.....	2041
Financial Transaction Distribution (Used for Searching).....	2041
Financial Transaction Distribution Search.....	2041
Searching for a Financial Transaction Distribution Object.....	2043
Viewing the Financial Transaction Distribution Object Details.....	2044
Financial Transaction Distribution (Used for Viewing).....	2044
Financial Transaction Distribution - Main.....	2045
Financial Transaction Distribution.....	2045
Financial Transaction Distribution - Log.....	2047
Financial Transaction Distribution Log.....	2047
Viewing the Log of a Financial Transaction Distribution.....	2048
Adding a Log Entry for a Financial Transaction Distribution.....	2048

## **Chapter XXXIV: Deferred Revenue Recognition..... 2051**

Prerequisites.....	2053
Deferred Revenue Recognition Status Transition.....	2053
Algorithms Used in Deferred Revenue Recognition.....	2055
Deferred Revenue Recognition Template (Used for Searching).....	2060
Search Deferred Revenue Recognition Template.....	2060
Searching for a Deferred Revenue Recognition Template.....	2061
Defining a Deferred Revenue Recognition Template.....	2062
Associating Algorithms with a Deferred Revenue Recognition Template.....	2064

Associating Deferred Revenue Recognition Template With A Division.....	2065
Defining Characteristics for a Deferred Revenue Recognition Template.....	2066
Viewing the Deferred Revenue Recognition Template Details.....	2067
Deferred Revenue Recognition Template (Used for Viewing).....	2068
Deferred Revenue Recognition Template.....	2068
Editing a Deferred Revenue Recognition Template.....	2070
Deleting a Deferred Revenue Recognition Template.....	2071
Viewing the Deferred Revenue Recognition Template Details.....	2071
Deferred Revenue Recognition (Used for Searching).....	2072
Search Deferred Revenue Recognition.....	2072
Searching for a Deferred Revenue Recognition.....	2076
Viewing the Deferred Revenue Recognition Details.....	2077
Deferred Revenue Recognition (Used for Viewing).....	2078
Deferred Revenue Recognition - Main.....	2078
Deferred Revenue Recognition.....	2078
Associated Deferred Revenue Recognitions.....	2080
Recognition Schedule.....	2081
Revenue Recognition Items.....	2081
Deferred Revenue Recognition - Log.....	2081
Deferred Revenue Recognition Log.....	2081
Editing a Deferred Revenue Recognition.....	2082
Creating the Deferred Revenue Recognition Schedule.....	2083
Defining Characteristics for a Deferred Revenue Recognition.....	2083
Adding Related Deferred Revenue Recognitions.....	2084
Editing the Deferred Revenue Recognition Schedule Details.....	2085
Viewing the Log of a Deferred Revenue Recognition.....	2086
Adding a Log Entry for a Deferred Revenue Recognition.....	2087

## **Chapter XXXV: Product Lifecycle Management.....2089**

Prerequisites.....	2091
Product Status Transition through User Interface.....	2091
Product Status Transition through a Batch Process.....	2092
Product Version Status Transition.....	2093
Product Enrollment Status Transition through User Interface.....	2094
Product Enrollment Status Transition through a Batch Process.....	2095
Product Service (Used for Searching).....	2097
Search Product Service.....	2097
Associated Price Items.....	2098
Searching for a Product Service.....	2098
Viewing the Product Service Price Items.....	2099
Defining a Product Service.....	2099
Associating a Product Service with a Price Item.....	2101
Defining a Characteristics for a Product Service.....	2102
Viewing the Product Service Details.....	2103
Product Service (Used for Viewing).....	2104
Product Service.....	2104
Price Items.....	2105
Editing a Product Service.....	2105
Deleting a Product Service.....	2106
Copying a Product Service.....	2107
Product (Used for Searching).....	2108
Search Product.....	2108
Product Version List.....	2110
Searching for a Product.....	2110
Viewing the Product Versions.....	2111

Viewing the Product Details.....	2111
Viewing the Product Version Details.....	2112
Defining a Product.....	2112
Associating a Product with a Division.....	2114
Defining a Product to Product Relationship.....	2114
Defining a Characteristics for a Product.....	2115
Defining a Product Version.....	2117
Adding a Product Service to a Product Version.....	2119
Adding a Standard Product to a Product Version.....	2120
Adding Add-on Services to a Product Version.....	2122
Associating a Price List with a Product Version.....	2123
Defining Eligibility Criteria for a Product Version.....	2124
Defining Characteristics for a Product Version.....	2126
Product Version (Used for Viewing).....	2127
Product Version - Main.....	2128
Product Version.....	2128
Products.....	2130
Product Services.....	2130
Add-on Product Services.....	2131
Services.....	2131
Price List.....	2132
Eligibility Criteria.....	2132
Product Version - Log.....	2134
Product Version Log.....	2134
Editing a Product Version.....	2134
Deleting a Product Version.....	2136
Copying a Product Version.....	2136
Finalizing a Product Version.....	2138
Viewing the Log of a Product Version.....	2139
Product (Used for Viewing).....	2140
Product - Main.....	2140
Product Details.....	2140
Product Version List.....	2142
Product - Log.....	2142
Product Log.....	2143
Editing a Product.....	2143
Copying a Product.....	2144
Activating a Product.....	2145
Retiring a Product.....	2145
Viewing the Log of a Product.....	2146
Product Enrollment (Used for Searching).....	2147
Search Enrollment.....	2147
Enrolled Products.....	2149
Enrolled Services.....	2150
Enrolled Standard Products.....	2150
Enrolled Add-on Services.....	2151
Searching for a Product Enrollment.....	2151
Viewing the Enrolled Products.....	2152
Viewing the Enrolled Services.....	2152
Viewing the Standard Products Included in an Enrolled Product.....	2153
Viewing the Add-on Services Enrolled with the Product .....	2153
Enrolling an Account for One or More Products and Services.....	2154
Viewing the Product Priority of an Account.....	2157
Defining Characteristics for a Product Enrollment.....	2158
Product Enrollment (Used for Viewing).....	2158
Product Enrollment - Main.....	2159

Product Enrollment.....	2159
Enrolled Products.....	2160
Enrolled Services.....	2161
Enrolled Standard Products.....	2161
Enrolled Add-on Product Services.....	2162
Product Priority.....	2162
Product Enrollment - Log.....	2163
Enrollment Log.....	2163
Viewing the Standard Products Included in an Enrolled Product.....	2163
Editing a Product Enrollment.....	2164
Copying a Product Enrollment.....	2165
Enrolling a Product Enrollment.....	2165
Unenrolling a Product Enrollment.....	2166
Viewing the Log of a Product Enrollment.....	2167

## **Chapter XXXVI: Subscription Billing..... 2169**

Prerequisites.....	2171
Subscription Type (Used for Searching).....	2171
Search Subscription Type.....	2171
Searching for a Subscription Type.....	2172
Viewing the Subscription Type Details.....	2173
Defining a Subscription Type.....	2173
Defining Characteristics for a Subscription Type.....	2176
Subscription Type (Used for Viewing).....	2177
Subscription Type.....	2177
Editing a Subscription Type.....	2180
Copying a Subscription Type.....	2182
Deleting a Subscription Type.....	2185
Account Subscription (Used for Searching).....	2185
Search Account Subscription.....	2185
Searching for an Account Subscription.....	2187
Viewing the Account Subscription Details.....	2188
Defining an Account Subscription.....	2188
Defining Characteristics for an Account Subscription.....	2191
Account Subscription (Used for Viewing).....	2192
Account Subscription - Main.....	2192
Account Subscription.....	2192
Subscription Services.....	2194
Subscription Service Charges.....	2195
Subscription Service Charge Entities.....	2195
Account Subscription Suspension History.....	2195
Account Subscription Termination Charges.....	2196
Account Subscription - Log.....	2196
Account Subscription Log.....	2196
Adding Services and Charges in the Account Subscription.....	2197
Editing an Account Subscription.....	2198
Deleting an Account Subscription.....	2199
Activating an Account Subscription.....	2200
Canceling an Account Subscription.....	2200
Editing the Subscription Service Details.....	2201
Deleting a Service from the Account Subscription.....	2202
Viewing the Charges of a Subscription Service.....	2202
Viewing Related Entities of a Subscription Service Charge.....	2203
Viewing Suspension History of the Account Subscription.....	2203
Viewing Termination Charges of the Account Subscription.....	2204

Suspending an Account Subscription.....	2204
Terminating an Account Subscription.....	2205
Resuming an Account Subscription.....	2206
Viewing the Log of an Account Subscription.....	2207

## **Chapter XXXVII: Mass Pricing Update..... 2209**

Prerequisites.....	2211
Mass Pricing Update Request (Without Approval) Status Transition.....	2211
Mass Pricing Update Request (With Approval) Status Transition.....	2212
Algorithms Used in C1-MassPricingReq.....	2213
C1-REQST-INF.....	2214
C1-MPRIVALDN.....	2214
C1-MPRISUBMT.....	2215
C1-MPRIAPTD.....	2215
F1-TODOCOMPL.....	2215
F1-AT-RQJ.....	2215
C1-MPRIDEFER.....	2215
C1-MPRIAPRD.....	2215
C1-MPRIUPDPA.....	2215
C1-MPRIRJTD.....	2216
Request Type.....	2216
Request Type List.....	2216
Request Type.....	2217
Defining a Mass Pricing Update Request Type.....	2219
Editing a Mass Pricing Update Request Type.....	2223
Copying a Mass Pricing Update Request Type.....	2226
Deleting a Mass Pricing Update Request Type.....	2229
Viewing the Mass Pricing Update Request Type Details.....	2229
Mass Pricing Update Request (Used for Searching).....	2230
Search Mass Pricing Update Request.....	2230
Searching for a Mass Pricing Update Request.....	2232
Viewing the Mass Pricing Update Request Type Details.....	2232
Creating a Mass Pricing Update Request.....	2233
Mass Pricing Update Request (Used for Viewing).....	2237
Mass Pricing Update Request - Main.....	2237
Mass Pricing Update Request.....	2237
Price Assignments.....	2239
Mass Pricing Update Request - Log.....	2240
Mass Pricing Update Request Log.....	2240
Creating a Mass Pricing Update Request.....	2241
Editing a Mass Pricing Update Request.....	2245
Deleting a Mass Pricing Update Request.....	2247
Submitting a Mass Pricing Update Request.....	2247
Generating a Batch Job for a Mass Pricing Update Request.....	2248
Approving a Mass Pricing Update Request.....	2249
Rejecting a Mass Pricing Update Request.....	2250
Viewing the Log of a Mass Pricing Update Request.....	2251
Adding a Log Entry for a Mass Pricing Update Request.....	2251
Mass Pricing Update Request.....	2252
Search Price Assignments.....	2253
Account Agreed Price Assignments.....	2255
Customer Agreed Price Assignments.....	2256
Price List Price Assignments.....	2257
Product Price List Price Assignments.....	2257
Searching for Price Assignments on a Pricing Entity.....	2258

Viewing the Price Assignments Defined at the Account Level.....	2259
Viewing the Price Assignments Defined at the Person Level.....	2259
Viewing the Price Assignments Defined on the Price Lists.....	2260
Viewing the Price Assignments Defined on the Price Lists Associated to the Products.....	2260

## **Chapter XXXVIII: Price Item, Parameter, and SQI Upload.....2261**

Uploading a Price Item File in the XML Format.....	2263
Defining a File Request Type for Uploading Price Items in the XML Format.....	2263
Uploading a Price Item File.....	2264
Creating or Updating Price Items.....	2264
Uploading a Price Item File in the CSV Format.....	2264
Defining a File Request Type for Uploading Price Items in the CSV Format.....	2264
Uploading a Price Item File.....	2265
Creating or Updating Price Items.....	2265
XML File Format for Uploading Price Items.....	2266
Sample XML Format for Uploading Price Items.....	2276
CSV File Format for Uploading Price Items.....	2281
Sample CSV Format for Uploading Price Items.....	2289
Uploading a Parameter File in the XML Format.....	2300
Defining a File Request Type for Uploading Parameters in the XML Format.....	2301
Uploading a Parameter File.....	2301
Creating Parameters.....	2302
Uploading a Parameter File in the CSV Format.....	2302
Defining a File Request Type for Uploading Parameters in the CSV Format.....	2302
Uploading a Parameter File.....	2303
Creating Parameters.....	2303
XML File Format for Uploading Parameters.....	2303
Sample XML Format for Uploading Parameters.....	2308
CSV File Format for Uploading Parameters.....	2311
Sample CSV Format for Uploading Parameters.....	2316
Uploading an SQI File in the XML Format.....	2321
Defining a File Request Type for Uploading SQIs in the XML Format.....	2321
Uploading an SQI File.....	2322

# Preface

---

## About this Document

---

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the Financial Services domain. It describes all screens related to these features and explains how to perform various tasks through these screens.

## Intended Audience

---

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

## Organization of the Document

---

Each banking feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Customer Registration	Describes how to create a person and account through a customer registration object.
Chapter 2	Customer 360° View	Explains how to view in-depth information about the person or account in the <b>Customer 360° View</b> screen. It also explains how to view the enrolled products, effective price assignments, and effective price list assignments of a person or account. In addition, it explains how to view the detailed information about the bill.
Chapter 3	Invoicing Group	Describes the invoicing group and explains how to create a master account. It also explains how to add or remove a member from a master account.
Chapter 4	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, tiering criterion, variance parameter, and person to person relationship type sequence. It also explains how to define pricing for a price item, how to assign a price item to a person, account, or price list, and how to assign a price list to a person or account.
Chapter 5	Division	Describes the different types of division. It also explains how to define a division.

<b>Chapter Number</b>	<b>Chapter Name</b>	<b>Chapter Description</b>
Chapter 6	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 7	Multi-Currency Accounts	Lists and describes the business processes that are enhanced to implement the multi-currency accounts feature.
Chapter 8	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 9	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 10	Currency Conversion	Lists and describes the business processes where the currency conversion feature can be enabled in the system. It explains how to enable the currency conversion feature for each business process. It also explains how to create different types of exchange rates in the system.
Chapter 11	Transaction Management Feed	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 12	On Demand Billing	Explains how to generate adhoc bills using the on demand billing process. It explains how to create a file type and file group, how to upload a usage data file, how to generate adhoc bills for a file group, and how to freeze the adhoc bills of a file group.
Chapter 13	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 14	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund adjustments when the review comments are received from the auto clearing house.
Chapter 15	Construct	Describes the construct based billing and settlement feature. It explains how to create templates and different types of constructs, such as invoice construct, invoice and settlement construct, and settlement construct. It also explains how to view the billing and settlement hierarchy of a person or account.
Chapter 16	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 17	Bill Tolerance	Explains how to define the tolerance limit for the bill amount. It also describes how the system behaves when the difference between the previous and current bill amount exceeds the positive or negative tolerance limit.
Chapter 18	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 19	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 20	Foreign Exchange Gain Loss	Explains how the system calculates the foreign exchange gain loss on the payment and adjustment financial transactions.
Chapter 21	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 22	Account Receivable Central	Explains how to use the <b>Account Receivable Central</b> screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 23	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 24	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.
Chapter 25	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 26	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 27	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the <b>Delinquency Central</b> screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.

Chapter Number	Chapter Name	Chapter Description
Chapter 28	Upload Request	Explains how to do the following through an upload request: <ul style="list-style-type: none"> <li>• Update bill cycle of accounts</li> <li>• Update contract riders in contracts</li> <li>• Create hold requests, refund requests, write off requests, or billable charges</li> <li>• Reinstate the policies</li> <li>• Create sort records for bill groups</li> <li>• Create derivation and pricing parameters for bill groups</li> </ul>
Chapter 29	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the <b>GL Accounting Template</b> feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 30	Accrual	Describes how to calculate, create, and reverse accrual for accounts. It explains how to create the accrual cycles, accrual types, and accruals for the accounts in the system.
Chapter 31	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 32	Dispute Request	Describes how to track and close a dispute against a particular bill, bill segment, and/or adjustment through a dispute request. It explains how to create the dispute request types and dispute requests in the system.
Chapter 33	Earning Credit Rate	Explains how to create the financial transaction distribution (ECR) object when the adjustment and/or bill segment financial transaction created against an ECR contract is frozen. It also explains how to distribute the credit or debit amount on the financial transaction distribution object to different accounts based on the distribution hierarchy.
Chapter 34	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 35	Product Lifecycle Management	Describes the entire lifecycle of a product from inception to service and then to the retirement. It explains how to create various types of products, such as standard and packaged products. It explains how to create a product service, product, and product versions in the system. It also explains how to enroll an account for different types of products.
Chapter 36	Subscription Billing	Describes the service based billing wherein the customers pay a subscription price to have access to a product or service. It explains how to create the subscription types and subscriptions on the accounts.

Chapter Number	Chapter Name	Chapter Description
Chapter 37	Mass Pricing Update	Describes how to update multiple price assignments of a person, account, price list, or product at the same time. It explains how to increase or decrease the rate in a price assignment or forcibly end date a price assignment through a mass pricing update request. It also explains how to create the mass pricing update request types and mass pricing update requests in the system.
Chapter 38	Price Item, Parameter, and SQI Upload	Describes how to upload the price item, parameter, and SQI files through the <b>File Upload Interface</b> utility. It explains how information should be structured while uploading the price item, parameter, and SQI files in the XML or CSV format. It also explains how to define different file request types for adding or editing the price items, parameters, and SQIs in different formats.
Chapter 39	Product and Product Version Upload	Describes how to upload the product and product version files through the <b>File Upload Interface</b> utility. It explains how information should be structured while uploading the product and product version files in the XML or CSV format. It also explains how to define different file request types for adding or editing the products and product versions in different formats.
Chapter 40	Price List and Price Item Pricing Upload	Describes how to upload the price list and price assignment files through the <b>File Upload Interface</b> utility. It explains how information should be structured while uploading the price list and price assignment files in the XML or CSV format. It also explains how to define different file request types for adding or editing the price lists and price assignments in different formats.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

## Conventions

---

The following conventions are used across this document:

Convention	Meaning
<b>boldface</b>	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
<i>italic</i>	Italic indicates a document or book title.
Monospace	Monospace indicates information that an end-user needs to enter in the application.

## Related Documents

---

You can refer to the following documents:

<b>Document Name</b>	<b>Description</b>
<i>Oracle Revenue Management and Billing Version 2.8.0.0.0 Release Notes</i>	Provides a brief description about the new features, enhancements, UI and database level changes, supported platforms, framework upgrade, supported upgrades, and technology upgrade made in this release. It also highlights the discontinued features, bug fixes, and known issues in this release.
<i>ORMB - Transaction Feed Management - Batch Execution Guide</i>	Describes the sequence in which the batches must be executed while performing various tasks in the Transaction Feed Management module.
<i>Oracle Revenue Management and Billing Batch Guide</i>	Lists and describes various ORMB batches.
<i>Oracle Revenue Management and Billing Installation Guide</i>	Lists the application server pre-requisites, supported platforms, and software and hardware requirements for installing the Oracle Revenue Management and Billing application. It explains how to install the Oracle Revenue Management and Billing application.
<i>Oracle Revenue Management and Billing Quick Installation Guide</i>	Provides high-level information on how to install the Oracle Revenue Management and Billing (ORMB) application and selected additional software.
<i>Oracle Revenue Management and Billing Database Administrator's Guide</i>	Provides information about the Oracle Database Server and Client required for installing the Oracle Revenue Management and Billing database. It explains how to install database with and without demo data. It provides database configuration guidelines including recommended settings for the Oracle Exadata Database machine.
<i>Oracle Revenue Management and Billing Server Administration Guide</i>	Explains the Oracle Revenue Management and Billing (ORMB) architecture and technical know-how required for configuring and using the ORMB application. It explains how to configure and deploy web and business application servers. In addition, it explains how to monitor client machines, web and/or business application servers, and database connections.
<i>Oracle Revenue Management and Billing Security Guide</i>	Lists the security features available in the Oracle Revenue Management and Billing application. It explains how to configure security for the Oracle Revenue Management and Billing application using the default security features.

# Chapter 1

---

## Customer Registration

---

### Topics:

- [Customer Registration \(Without Approval\) Status Transition](#)
- [Customer Registration \(With Approval\) Status Transition](#)
- [Customer Registration Template](#)
- [Customer Registration Type](#)
- [Customer Registration \(Used for Searching\)](#)
- [Customer Registration \(Used for Viewing\)](#)

Until now, you were able to create person and account from the different screens. Now, ORMB provides the ability to create a person and multiple accounts for the person from the same user interface. A new object named **Customer Registration** is introduced in this release. Through a customer registration object, you can create person, accounts and contracts at the same time from the same interface. Before creating a customer registration object, you need to create the following:

- **Customer Registration Template** – A customer registration template encapsulates the following information:
  - List of pages that should appear when you create a person or account using the respective customer registration template
  - List of sections that should appear in each page
  - Field or characteristic attributes, such as:
    - Default value for a field or characteristic type
    - Default value for a person or account identifier type or phone type
    - Primary identifier type for a person or account
    - Mandatory field in each section
    - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person and account. Depending on whether you are creating a customer registration template for person or account, you can include the following pages and define field or characteristic attributes for the following sections:

Template Category	Template Page	Template Section
Person	Main	Person Main
Person	Main	Person Names
Person	Main	Person Identifiers
Person	Main	Person Phones
Person	Contact Information	Person Address
Person	Contact Information	Person Email
Person	Accounts	-

Template Category	Template Page	Template Section
Person	Person Hierarchy	Person Hierarchy – Main
Person	Person Hierarchy	Person Hierarchy – Characteristics
Person	Person Characteristics	Person Characteristics
Person	Deal Information	Deal – Main
Person	Registration Characteristics	Customer Registration Characteristics
Account	Main	Account Information
Account	Main	Account Identifiers
Account	Auto Pay	Account Autopay
Account	Persons	Main
Account	Persons	Account Address Override Information
Account	Persons	Bill Routing
Account	Account Characteristics	Account Characteristics
Account	Credit Ratings	Credit Rating

- **Customer Registration Type** - A customer registration type encapsulates the following information:
  - Users with a particular access group can only create a customer registration object using the customer registration type.
  - Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility.
  - Whether the approval is required when you create, edit, or delete a customer registration object.
  - The business objects using which the person, account, and address should be created when a customer registration object is created using the customer registration type.
  - A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, or credit rating history, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

While creating a customer registration object, you need to specify the following:

- A customer registration type using which the customer registration object should be created
- A source system from the customer information is received
- A type of person that you want to create through the customer registration object

Once you specify the above details, the **Customer Registration** screen appears with a set of pages and sections which are added in the respective person template. The default values for the fields, characteristic types, identifier types, and phone types are shown as specified in the person template. In addition, the field values, characteristic types, characteristic values, identifier types, identifier values, phone types, and phone numbers are disabled as specified in the person template. On the **Accounts** page, you can view one row for each account template which is added in the customer registration type. You can then edit the row and thereby create an account for the person. You can create multiple accounts for the person using the same or different template.

**Note:** The system creates effective dated address using the address business object which is specified in the customer registration type. By default, the account override address is effective from the date when the customer registration object is created in the system.

On clicking the **View/Edit** icon or the **Add New Account** button, the **Customer Registration - Add Account** screen appears with a set of pages and sections which are added in the respective account template. The default values for the fields, characteristic types, and identifier types are shown as specified in the account template. In addition, the field values, characteristic types, characteristic values, identifier types, and identifier values are disabled as specified in the account template.

You can save the person and account details as and when you are entering the data by clicking the **Save as Draft** button. On clicking the **Save as Draft** button, the system creates a customer registration object in the **Draft** status. Once all person and account details are specified, you can click the **Validate and Save** button. The system then validates the information. You can edit, delete, or submit a customer registration object when it is in the **Draft** status. On submitting a customer registration object, the person and accounts are created in the system. If an algorithm created using the **C1-CRECONT** algorithm type is attached to the **Post-Processing** system event of the account business object (which is specified in the customer registration type), the system creates the contracts for each account. Finally, the status of the customer registration object is changed to **Complete**.

You can optionally configure the approval process for the customer registration. If the **Approval Required** option is selected in the customer registration type, the status of the customer registration object is changed to **Approval In Progress** on submitting it. A To Do using the approval To Do type is created and assigned to the users with the approval To Do role. The approver can then review the customer registration object and accordingly approve, reject, or request the submitter to resubmit the customer registration object for approval. On approving a customer registration object, the person, accounts, and contracts (if the required algorithm is attached) are created in the system. Finally, the status of the customer registration object is changed to **Complete**.

If the approver rejects a customer registration object due to some reason, the status of the customer registration object is changed to **Rejected**. However, if the approver requests the submitter to resubmit a customer registration object for approval after making the required changes, the status of the customer

registration object is changed to **Draft**. The submitter can then make the required changes and resubmit the customer registration object for approval.

**Note:** The system enables you to create maximum 10 accounts for a person through a customer registration object from the user interface.

You can also create a customer registration object using the **File Upload Interface** utility. On creating a customer registration object using the **File Upload Interface** utility, the status of the customer registration object is set to **Draft**. You can then submit the customer registration object manually from the user interface. Note that, at present, only the XML format is supported for creating a customer registration object using the **File Upload Interface** utility.

To implement the **Customer Registration** feature, the following new screens are introduced in this release:

- Customer Registration Template
- Customer Registration Type
- Customer Registration

## Customer Registration (Without Approval) Status Transition

---

The following figure graphically indicates how a customer registration moves from one status to another when the approval process is not configured in the respective customer registration type:

## Customer Registration (With Approval) Status Transition

---

The following figure graphically indicates how a customer registration moves from one status to another when the approval process is configured in the respective customer registration type:

## Customer Registration Template

A customer registration template encapsulates the following information:

- List of pages that should appear when you create a person, account, policy, or policy plan using the respective customer registration template
- List of sections that should appear in each page
- Field or characteristic attributes, such as:
  - Default value for a field or characteristic type
  - Default value for a person or account identifier type or phone type
  - Primary identifier type for a person or account
  - Mandatory field in each section
  - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person, account, policy and policy plan. Depending on whether you are creating a customer registration template for person, account, policy or policy plan, you can include the following pages and define field or characteristic attributes for the following sections:

Template Category	Template Page	Template Section
Person	Accounts	-

Template Category	Template Page	Template Section
	Contact Information	Person Address
		Person Email
	Deal Information	Deal - Main
	Main	Person Identifiers
		Person Main
		Person Names
		Person Phones
	Person Characteristics	Person Characteristics
	Person Hierarchy	Person Hierarchy – Characteristics
		Person Hierarchy – Main
	Policies	Policies
		Parent Policies
	Registration Characteristics	Customer Registration Characteristics
Account	Auto Pay	Account Autopay
	Account Characteristics	Account Characteristics
	Main	Account Identifiers
		Account Information
	Persons	Main
		Account Address Override Information
		Bill Routing
Credit Ratings	Credit Rating	
Policy	Policy – Main	Policy Characteristics
		Policy Main
		Policy Persons
Policy Plan	Plan	Plan - Characteristics
		Plan - Main

## Search Customer Registration Template

The **Search Customer Registration Template** zone allows you to search for a customer registration template using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)						
Search By	Used to indicate whether you want to search for a customer registration template using the banking or healthcare template details. The valid values are: <ul style="list-style-type: none"> <li>• Banking Template</li> <li>• Healthcare Template</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>Banking Template</b> option is selected.</div>	Yes						
Template	Used to search customer registration template with a particular name.	No						
Description	Used to search the customer registration template with a particular description.	No						
Template Category	<table border="1" style="width: 100%;"> <thead> <tr> <th>If you search for a customer registration template using...</th> <th>Then...</th> </tr> </thead> <tbody> <tr> <td>The <b>Banking Template</b> option</td> <td>The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> </ul> </td> </tr> <tr> <td>The <b>Healthcare Template</b> option</td> <td>The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> <li>• Policy</li> <li>• Policy Plan</li> </ul> </td> </tr> </tbody> </table>	If you search for a customer registration template using...	Then...	The <b>Banking Template</b> option	The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> </ul>	The <b>Healthcare Template</b> option	The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> <li>• Policy</li> <li>• Policy Plan</li> </ul>	No
If you search for a customer registration template using...	Then...							
The <b>Banking Template</b> option	The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> </ul>							
The <b>Healthcare Template</b> option	The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> <li>• Policy</li> <li>• Policy Plan</li> </ul>							

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description						
Template	Displays the name of the customer registration template.						
Description	Displays the description of the customer registration template.						
Template Category	Displays the category of the customer registration template.						
Edit	<table border="1"> <thead> <tr> <th>If...</th> <th>Then</th> </tr> </thead> <tbody> <tr> <td>You click the <b>Edit</b> () icon when the <b>Search By</b> option is <b>Banking Template</b></td> <td>The <b>Customer Registration Template for Banking</b> screen appears where you can edit the details of the customer registration banking template.</td> </tr> <tr> <td>You click the <b>Edit</b> () icon when the <b>Search By</b> option is <b>Healthcare Template</b></td> <td>The <b>Customer Registration Template for Healthcare</b> screen appears where you can edit the details of the customer registration healthcare template.</td> </tr> </tbody> </table>	If...	Then	You click the <b>Edit</b> (  ) icon when the <b>Search By</b> option is <b>Banking Template</b>	The <b>Customer Registration Template for Banking</b> screen appears where you can edit the details of the customer registration banking template.	You click the <b>Edit</b> (  ) icon when the <b>Search By</b> option is <b>Healthcare Template</b>	The <b>Customer Registration Template for Healthcare</b> screen appears where you can edit the details of the customer registration healthcare template.
	If...	Then					
	You click the <b>Edit</b> (  ) icon when the <b>Search By</b> option is <b>Banking Template</b>	The <b>Customer Registration Template for Banking</b> screen appears where you can edit the details of the customer registration banking template.					
You click the <b>Edit</b> (  ) icon when the <b>Search By</b> option is <b>Healthcare Template</b>	The <b>Customer Registration Template for Healthcare</b> screen appears where you can edit the details of the customer registration healthcare template.						
<b>Note:</b> The <b>Edit</b> icon appears only when the customer registration template is not used while defining the customer registration type.							
Duplicate	<table border="1"> <thead> <tr> <th>If...</th> <th>Then</th> </tr> </thead> <tbody> <tr> <td>You click the <b>Duplicate</b> () icon when the <b>Search By</b> option is <b>Banking Template</b></td> <td>The <b>Customer Registration Template for Banking</b> screen appears where you can create a copy of the customer registration banking template.</td> </tr> <tr> <td>You click the <b>Duplicate</b> () icon when the <b>Search By</b> option is <b>Healthcare Template</b></td> <td>The <b>Customer Registration Template for Banking</b> screen appears where you can create a copy of the customer registration healthcare template.</td> </tr> </tbody> </table>	If...	Then	You click the <b>Duplicate</b> (  ) icon when the <b>Search By</b> option is <b>Banking Template</b>	The <b>Customer Registration Template for Banking</b> screen appears where you can create a copy of the customer registration banking template.	You click the <b>Duplicate</b> (  ) icon when the <b>Search By</b> option is <b>Healthcare Template</b>	The <b>Customer Registration Template for Banking</b> screen appears where you can create a copy of the customer registration healthcare template.
	If...	Then					
	You click the <b>Duplicate</b> (  ) icon when the <b>Search By</b> option is <b>Banking Template</b>	The <b>Customer Registration Template for Banking</b> screen appears where you can create a copy of the customer registration banking template.

## Customer Registration Template

The **Customer Registration Template** zone displays the details of the customer registration template. It contains the following sections:

- **Main** - Displays the basic information about the customer registration template. It contains the following fields:

Field Name	Field Description
Template Code	Displays the customer registration template code.
Template Category	Indicates the category of the customer registration template.
Description	Displays the description of the customer registration template.
Detailed Description	Displays additional information about the customer registration template.

- **Template Page** - The **Template Page** section lists the pages, sections and its respective fields defined for the customer registration template. It contains the following columns:

Column Name	Column Description												
Template Page	Indicates the template page.												
Template Section	Indicates the template section along with its respective fields. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The following table appears only when the template section contains fields that are defined for the customer registration template.</p> </div> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> </tr> </thead> <tbody> <tr> <td>Sequence</td> <td>Displays the sequence number of the field defined in the template section.</td> </tr> <tr> <td>Field</td> <td>Indicates the field that is defined for the customer registration template.</td> </tr> <tr> <td>Default Field Value</td> <td>Indicates the default value of the field.</td> </tr> <tr> <td>Required</td> <td>Indicates whether the field is required or not.</td> </tr> <tr> <td>Disable Field Value</td> <td>Indicates whether the value is disabled for the field or not.</td> </tr> </tbody> </table>	Field Name	Field Description	Sequence	Displays the sequence number of the field defined in the template section.	Field	Indicates the field that is defined for the customer registration template.	Default Field Value	Indicates the default value of the field.	Required	Indicates whether the field is required or not.	Disable Field Value	Indicates whether the value is disabled for the field or not.
Field Name	Field Description												
Sequence	Displays the sequence number of the field defined in the template section.												
Field	Indicates the field that is defined for the customer registration template.												
Default Field Value	Indicates the default value of the field.												
Required	Indicates whether the field is required or not.												
Disable Field Value	Indicates whether the value is disabled for the field or not.												

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration template.
Delete	Used to delete the customer registration template. <b>Note:</b> You can delete a customer registration template only when you have not created a customer registration using the customer registration template.
Duplicate	Used to create a new customer registration template using an existing customer registration template.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Customer Registration Template** zone does not appear in the **Customer Registration Template** screen. It appears only when you click the **Broadcast**  icon corresponding to the customer registration template in the **Customer Registration Template List** zone.

## Searching for a Customer Registration Template

### Prerequisites

To search for a customer registration template, you should have:

- Customer registration templates defined in the application

### Procedure

To search for a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **C** and then click **Customer Registration Template**.

A sub-menu appears.

- Click the **Search** option from the **Customer Registration Template** sub-menu.

The **Customer Registration Template** screen appears.

- Enter the search criteria in the **Customer Registration Template List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of customer registration template that meet the search criteria appears in the **Search Results** section.

## Viewing the Customer Registration Template Details

### Procedure

To view the details of a customer registration template:

- Search for the customer registration template in the **Customer Registration Template List** screen.
- In the **Customer Registration Template List** zone, click the **Broadcast**  icon corresponding to the customer registration template whose details you want to view.

The **Customer Registration Template** zone appears.

- View the details of the customer registration template in the **Customer Registration Template** zone.

## Defining a Customer Registration Template

### Prerequisites

To define a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Template categories defined in the application

### Procedure

To define a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.  
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Template** sub-menu.  
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Template Business Object	Used to indicate the business object using which you want to create the customer registration template. The valid values are: <ul style="list-style-type: none"> <li>• Customer Registration Template - Banking</li> <li>• Customer Registration Template - Healthcare</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Template** screen.

4. Select the required customer registration business object from the respective field.
5. Click **OK**.

The **Customer Registration Template - Banking** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Code	Used to specify the customer registration template.	Yes
Template Category	Used to indicate the template category using which you want to create the customer registration template. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> <li>• Policy</li> <li>• Policy Plan</li> </ul>	Yes
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Field Name	Field Description	Mandatory (Yes or No)
Template Page	<p>Used to indicate the template page using which you want to create the customer registration template.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> <li>• Persons</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Person</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Policy</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Policy Main</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Policy Plan</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Plan</li> </ul> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Section	<p>Used to indicate the template section using which you want to create the customer registration template.</p> <p><b>Note:</b> The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> and <b>Template page</b> is selected as <b>Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Account Identifiers</li> <li>• Account Information</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> and <b>Template page</b> is selected as <b>Persons</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> <li>• Bill Routing</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Person</b> and <b>Template page</b> is selected as <b>Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Person Identifiers</li> <li>• Person Main</li> <li>• Person Names</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Policy</b> and <b>Template page</b> is selected as <b>Policy Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Policy Main</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Policy Plan</b> and <b>Template page</b> is selected as <b>Plan</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Plan Main</li> </ul>	Yes
Default Field	<p>Used to specify the default field using which you want to create the customer registration template.</p> <p><b>Note:</b> The list includes only those default fields which are associated to the specified template sections.</p>	Yes

6. Enter the required details in the **Main** section.

7. Configure the template page, template section and set the default value for the relevant fields, if required.

8. Click **Save**.

The customer registration template is defined.

**Editing a Customer Registration Template****Prerequisites**

To edit a customer registration template, you should have:

- Template categories defined in the application

**Procedure**

To edit a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.  
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Template** sub-menu.  
The **Customer Registration Template** screen appears.
4. Enter the search criteria in the **Customer Registration Template List** zone.
5. Click **Search**.

A list of customer registration template that meet the search criteria appears in the **Search Results** section.

6. In the **Search Result**, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer registration template whose details you want to edit.

The **Customer Registration Template - Banking** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Code	Displays the customer registration template.	Yes
Template Category	Used to indicate the template category using which you want to create the customer registration template.	Yes
Business Object	Indicates the business object using which you want to create the customer registration template.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Field Name	Field Description	Mandatory (Yes or No)
Template Page	<p>Used to indicate the template page using which you want to create the customer registration template.</p> <p><b>Note:</b> The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> <li>• Persons</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Person</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Policy</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Policy Main</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Policy Plan</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Plan</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Section	<p>Used to indicate the template section using which you want to create the customer registration template.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> and <b>Template page</b> is selected as <b>Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Account Identifiers</li> <li>• Account Information</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> and <b>Template page</b> is selected as <b>Persons</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> <li>• Bill Routing</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Person</b> and <b>Template page</b> is selected as <b>Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Person Identifiers</li> <li>• Person Main</li> <li>• Person Names</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Policy</b> and <b>Template page</b> is selected as <b>Policy Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Policy Main</li> </ul> <p>The following template sections are mandatory, if the <b>Template Category</b> is selected as <b>Policy Plan</b> and <b>Template page</b> is selected as <b>Plan</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Plan Main</li> </ul> </div>	Yes
Default Field	<p>Used to specify the default field using which you want to create the customer registration template.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The list includes only those default fields which are associated to the specified template sections.</p> </div>	Yes

**Tip:** Alternatively, you can edit the details of a customer registration template by clicking the **Edit** button in the **Customer Registration Template** zone.

7. Modify the details in the **Main** section, if required.
8. Configure the template page, template section and set the default value for the relevant fields, if required.
9. Click **Save**.

The changes made to the customer registration template are saved.

## Copying a Customer Registration Template

Instead of creating a customer registration template from scratch, you can create a new customer registration template using an existing customer registration template. This is possible through copying a customer registration template. On copying a customer registration template, the details including the default fields are copied to the new customer registration template. You can then edit the details, if required.

### Prerequisites

To copy a customer registration template, you should have:

- Customer registration template (whose copy you want to create) defined in the application
- Template categories defined in the application

### Procedure

To copy a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.

A sub-menu appears.

3. Click the **Search** option from the **Customer Registration Template** sub-menu.

The **Customer Registration Template** screen appears.

4. In the **Customer Registration Template List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the customer registration template whose copy you want to create.

The **Customer Registration Template - Banking** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Code	Used to specify the customer registration template.	Yes
Template Category	Used to indicate the template category using which you want to create the customer registration template.	Yes
Business Object	Indicates the business object using which you want to create the customer registration template.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No
Template Page	<p>Used to indicate the template page using which you want to create the customer registration template.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> <li>• Persons</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Person</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Policy</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Policy Main</li> </ul> <p>The following template pages are mandatory, if the <b>Template Category</b> is selected as <b>Policy Plan</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Plan</li> </ul> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Section	<p>Used to indicate the template section using which you want to create the customer registration template.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The following sections are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> and <b>Template page</b> is selected as <b>Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Account Identifiers</li> <li>• Account Information</li> </ul> <p>The following sections are mandatory, if the <b>Template Category</b> is selected as <b>Account</b> and <b>Template page</b> is selected as <b>Persons</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Main</li> <li>• Bill Routing</li> </ul> <p>The following sections are mandatory, if the <b>Template Category</b> is selected as <b>Person</b> and <b>Template page</b> is selected as <b>Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Person Identifiers</li> <li>• Person Main</li> <li>• Person Names</li> </ul> <p>The following sections are mandatory, if the <b>Template Category</b> is selected as <b>Policy</b> and <b>Template page</b> is selected as <b>Policy Main</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Policy Main</li> </ul> <p>The following sections are mandatory, if the <b>Template Category</b> is selected as <b>Policy Plan</b> and <b>Template page</b> is selected as <b>Plan</b> in the <b>Main</b> section:</p> <ul style="list-style-type: none"> <li>• Plan Main</li> </ul> </div>	Yes
Default Field	<p>Used to specify the default field using which you want to create the customer registration template.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The list includes only those default fields which are associated to the specified template sections.</p> </div>	Yes

**Tip:** Alternatively, you can copy a customer registration template by clicking the **Duplicate** button in the **Customer Registration Template** zone.

5. Enter the required details in the **Main** section.

6. Configure the template page, template section and set the default value for the relevant fields, if required.
7. Click **Save**.

The new customer registration template is defined.

## Deleting a Customer Registration Template

### Procedure

To delete a Customer Registration Template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Customer Registration Template**.  
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Template** sub-menu.  
The **Customer Registration Template** screen appears.
4. In the **Customer Registration Template List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the customer registration template that you want to delete.

A message appears confirming whether you want to delete the customer registration template.

**Note:** You can delete a customer registration template only when you have not created a customer registration using the customer registration template.

**Tip:** Alternatively, you can delete a customer registration template by clicking the **Delete** button in the **Customer Registration Template** zone.

5. Click **OK**.

The customer registration template is deleted.

## Customer Registration Type

A customer registration type encapsulates the following information:

- Users with a particular access group can only create a customer registration object using the customer registration type
- Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility
- Whether the approval is required when you create, edit, or delete a customer registration object
- Whether the final level approval is required once the approver at the first level approves the customer registration object
- Whether a To Do should be created indicating that the users have to manually create the billing hierarchy and pricing for the parent customer.
- The business objects using which the person, account, policy plan, membership, and address should be created when a customer registration object is created using the customer registration type
- A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account, policy, and policy plan.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, policies, policy plans, policy characteristics, or policy plan characteristics, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

## Customer Registration Type

The **Customer Registration Type** zone displays the details of the customer registration type. It contains the following sections:

- **Main** - Displays the basic information about the customer registration type. It contains the following fields:

Field Name	Field Description
Customer Registration Type	Displays the Customer Registration Type.
Description	Displays the description of the customer registration type.
Customer Registration Business Object	Displays the business object using which you want to create the Customer Registration Type.
Detailed Description	Displays additional information about the customer registration type.
Status	Displays the status of the customer registration type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <b>Note:</b> You cannot change the status of a customer registration type to <b>Inactive</b> when the corresponding customer registration is in a status other than <b>Processed</b> or <b>Rejected</b> .

Field Name	Field Description
Access Group	<p>Displays the access group of the customer registration type.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Access Group</b> field. On clicking the <b>Search</b> icon, the <b>Access Group Search</b> window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the <b>Access Group</b> field.</p>
Registration Source	Displays the registration source of the customer registration type.

- **Additional Data** - The **Additional Data** section lists the approval type, submitter type and its respective fields defined for the customer registration type. It contains the following fields:

Column Name	Column Description
Approval Required	Indicates whether approval is required while creating the customer registration using the customer registration type.
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when you submit the customer registration for approval.</p> <p><b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve or reject the customer registration submitted for approval.</p> <p><b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Role</b> screen appears with the details of the respective To Do role.</p>
Submitter To Do Type	<p>Indicates the To Do type for the submitter when the funding request type is resubmitted by the approver.</p> <p><b>Note:</b> The <b>Submitter To Do Type</b> field appears only when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do type.</p>

Column Name	Column Description
Submitter To Do Role	<p>Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver.</p> <p><b>Note:</b> The <b>Submitter To Do Role</b> field appears only when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.</p>
Person Business Object	<p>Indicates the business object using which the customer registration type for a person is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Account Business Object	<p>Indicates the business object using which the customer registration type for an account is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Address Business Object	<p>Indicates the business object using which the customer registration type for an address is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>

- **Characteristics** - The **Record Information** section contains the following columns:

Field Name	Field Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Customer Registration Templates** - The **Customer Registration Templates** section contains the following columns:

Field Name	Field Description
Sequence	Displays the sequence of the <b>Customer Registration Type</b> .
Template Category	Displays the template category of the <b>Customer Registration Type</b> .
Template	Indicates the template of the <b>Customer Registration Type</b> .

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration type.

Button Name	Button Description
Delete	Used to delete the customer registration type.  <b>Note:</b> You can delete a customer registration type only when you have not created a customer registration using the customer registration type.
Duplicate	Used to create a new customer registration type using an existing customer registration type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Copy Customer Registration Details** - The **Copy Customer Registration Details** section lists allows to copy certain fields and its respective details defined for the customer registration type. It contains the following fields:

Column Name	Column Description
Person Names	Indicates whether the field <b>Person Names</b> and its respective details need to be copied while creating the customer registration type.
Accounts	Indicates whether the field <b>Accounts</b> and its respective details need to be copied while creating the customer registration type.
Person Identifiers	Indicates whether the field <b>Person Identifiers</b> and its respective details need to be copied while creating the customer registration type.
Account Identifiers	Indicates whether the field <b>Account Identifiers</b> and its respective details need to be copied while creating the customer registration type.
Person Phones	Indicates whether the field <b>Person Phones</b> and its respective details need to be copied while creating the customer registration type.
Account Characteristics	Indicates whether the field <b>Account Characteristics</b> and its respective details need to be copied while creating the customer registration type.
Person Characteristics	Indicates whether the field <b>Person Characteristics</b> and its respective details need to be copied while creating the customer registration type.
Account Auto Pay Information	Indicates whether the field <b>Account Auto Pay Information</b> and its respective details need to be copied while creating the customer registration type.
Person Addresses	Indicates whether the field <b>Person Addresses</b> and its respective details need to be copied while creating the customer registration type.
Account Persons	Indicates whether the field <b>Account Persons</b> and its respective details need to be copied while creating the customer registration type.
Person Hierarchy	Indicates whether the field <b>Person Hierarchy</b> and its respective details need to be copied while creating the customer registration type.

Column Name	Column Description
Account Override Address	Indicates whether the field <b>Account Override Address</b> and its respective details need to be copied while creating the customer registration type.
Bill Routing Information	Indicates whether the field <b>Bill Routing Information</b> and its respective details need to be copied while creating the customer registration type.
Credit Rating History	Indicates whether the field <b>Credit Rating History</b> and its respective details need to be copied while creating the customer registration type.

By default, the **Customer Registration Type** zone does not appear in the **Customer Registration Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the customer registration template in the **Customer Registration Type List** zone.

## Searching for a Customer Registration Type

### Prerequisites

To search for a customer registration type, you should have:

- Customer registration types defined in the application

### Procedure

To search for a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Type** sub-menu.  
The **Customer Registration Type** screen appears.
4. Enter the search criteria in the **Customer Registration Type List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of customer registration types that meet the search criteria appears in the **Search Results** section.

**Defining a Customer Registration Type****Prerequisites**

To define a customer registration type, you should have:

- Customer registration type business objects defined in the application
- Customer registration business objects defined in the application
- Person business objects defined in the application
- Account business objects defined in the application
- Address business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Characteristic types defined in the application
- Template categories defined in the application

**Procedure**

To define a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type Business Object	Used to indicate the business object using which you want to create the customer registration type. The valid values are: <ul style="list-style-type: none"> <li>• Customer Registration Type (C1-CustomerRegistration)</li> <li>• Customer Registration Type - Banking (C1-CustomerRegistrationBanking)</li> <li>• Customer Registration Type - Healthcare (C1-CustomerRegistrationHC)</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Type** screen.

4. Select the **Customer Registration Type - Banking** business object from the respective field.
5. Click **OK**.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to provide the additional information about the customer registration type.
- **Characteristics** - Used to lists characteristics defined for the customer registration type.
- **Customer Registration Type Template** - Used to lists template categories for the customer registration type.
- **Copy Customer Registration**- Used to indicate template pages, template sections and their respective fields to be copied for the customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create a customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the customer registration business object using which you want to create a customer registration type.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type.	Yes
Access Group	Used to specify the access group of the customer registration type.  The <b>Search</b>  icon appears corresponding to the <b>Access Group</b> field. On clicking the <b>Search</b> icon, the <b>Access Group Search</b> window appears.	Yes
Registration Source	Used to indicate the registration source of the customer registration type.	Yes

- **Additional Data**- The **Additional Data** section is used to provide the additional information about the customer registration type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether the approval is required before creating the customer registration type.	No
Person Business Object	Used to indicate the business object for a person.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Business Object	Used to indicate the business object for an account.	Yes
Address Business Object	Used to indicate the business object for an address.	Yes

6. Enter the required details in the **Main** section.
7. Enter the required details in the **Additional Data** section.
8. Configure the template page, template section and set the default value for the relevant fields, if required.
9. Select the **Person** fields to copy customer registration, if required.
10. Select the **Accounts** fields to copy customer registration, if required.
11. Click **Save**.

The customer registration type is defined.

## Defining an Additional Data for a Customer Registration Type

### Prerequisites

To define an additional data for a customer registration type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration Type**)

### Procedure

To define an additional data for a customer registration type:

1. Ensure that the **Additional Data** section is expanded when you are defining, editing, or copying a customer registration type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required while creating the customer registration using the customer registration type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Customer Registration Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> checkbox is selected.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	<p>Used to indicate that the To Do entry of the specified To Do type must be created when you submit the customer registration for approval.</p> <p><b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> checkbox is selected.</p>
Approval To Do Role	<p>Used to indicate that users with the specified To Do role can only approve or reject the customer registration submitted for approval.</p> <p><b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears with the details of the respective To Do role.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> checkbox is selected.</p>
Submitter To Do Type	<p>Used to indicates the To Do type for the submitter when the funding request type is resubmitted by the approver.</p> <p><b>Note:</b> The <b>Submitter To Do Type</b> field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do type.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> checkbox is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	<p>Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver.</p> <p><b>Note:</b> The <b>Submitter To Do Role</b> field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> checkbox is selected.</p>
Person Business Object	<p>Indicates the business object using which the customer registration type for a person is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>	<p>Yes</p>
Account Business Object	<p>Indicates the business object using which the customer registration type for an account is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>	<p>Yes</p>

Field Name	Field Description	Mandatory (Yes or No)
Address Business Object	Used to indicate the business object using which the customer registration type for an address is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.	Yes

- Enter the required details in the **Additional Data** section.

## Defining a Characteristic for a Customer Registration Type

### Prerequisites

To define a characteristic for a customer registration type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration Type**)

### Procedure

To define a characteristic for a customer registration type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a customer registration type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Customer Registration Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the customer registration type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the customer registration type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the customer registration type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the customer registration type, click the **Delete (🗑)** icon corresponding to the characteristic.

## Configuring Attributes to Copy Customer Registration Type

### Prerequisites

To configure an attribute for a customer registration type, you should have:

- **Person** attributes defined in the application
- **Account** attributes defined in the application

### Procedure

To configure an attribute for a customer registration type:

- Ensure that the **Copy Customer Registration Details** section is expanded when you are defining, editing, or copying a customer registration type.

The **Copy Customer Registration Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person Names	Used to indicate the person names in the customer registration.	No
Accounts	Used to indicate the account in the customer registration.	No
Person Identifiers	Used to indicate the person identifiers in the customer registration.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifiers	Used to indicate the account identifiers in the customer registration.  <b>Note:</b> This field is enabled only when the <b>Accounts</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Person Phones	Used to indicate the person phones in the customer registration.	No
Account Characteristics	Used to indicate the characteristics defined for the account in the customer registration.  <b>Note:</b> This field is enabled only when the <b>Accounts</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Person Characteristics	Used to indicate the characteristics defined for the person in the customer registration.	No
Account Autopays Information	Used to indicate the account autopays information in the customer registration.  <b>Note:</b> This field is enabled only when the <b>Accounts</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Person Addresses	Used to indicate the person addresses in the customer registration.	No
Account Persons	Used to indicate the account persons in the customer registration.  <b>Note:</b> This field is enabled only when the <b>Accounts</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Person Hierarchy	Used to indicate the hierarchy of the person in the customer registration.	No
Account Override Address	Used to specify the account override address information in the customer registration.  <b>Note:</b> This field is enabled only when the <b>Accounts</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Bill Routing Information	Used to indicate the bill routings in the customer registration.  <b>Note:</b> This field is enabled only when the <b>Accounts</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No

Field Name	Field Description	Mandatory (Yes or No)
Credit Rating History	Used to indicate the credit rating history in the customer registration.  <b>Note:</b> This field is enabled only when the <b>Accounts</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Policies	Used to indicate the policies in the customer registration.  <b>Note:</b> This field appears only when the <b>Customer Registration Type</b> is selected as <b>Healthcare</b>	No
Policy Plans	Used to indicate the policy plans in the customer registration.  <b>Note:</b> This field appears only when the <b>Customer Registration Type</b> is selected as <b>Healthcare</b> This field is enabled only when the <b>Policies</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Policy Characteristics	Used to indicate the policy characteristics in the customer registration.  <b>Note:</b> This field appears only when the <b>Customer Registration Type</b> is selected as <b>Healthcare</b> This field is enabled only when the <b>Policies</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No
Plan Characteristics	Used to indicate the plan characteristics in the customer registration.  <b>Note:</b> This field appears only when the <b>Customer Registration Type</b> is selected as <b>Healthcare</b> This field is enabled only when the <b>Policies</b> field is selected in the <b>Copy Customer Registration Details</b> section.	No

2. Select the required attributes in the **Copy Customer Registration Details** section.

## Editing a Customer Registration Type

### Prerequisites

To edit a customer registration type, you should have:

- Access groups defined in the application
- Registration sources defined in the application
- Customer registration business objects defined in the application
- Person business objects defined in the application
- Account business objects defined in the application
- Plan business objects defined in the application
- Membership business objects defined in the application
- Address business objects defined in the application
- Characteristic types defined in the application
- Template categories defined in the application

### Procedure

To edit a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Type** sub-menu.  
The **Customer Registration Type** screen appears.
4. Click the **Filter** () icon in the title bar of the **Customer Registration Type List** zone.  
It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	No
Description	Used to specify the description.	No

5. Enter the search criteria in the **Customer Registration Type List** zone.
6. Click **Search**.  
A list of customer registration template that meet the search criteria appears in the **Search Results** section.

7. In the **Search Result**, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer registration template whose details you want to edit.

The **Customer Registration Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Displays the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Access Group	Used to specify an access group of the customer registration type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Access Group</b> field. On clicking the <b>Search</b> icon, the <b>Access Group Search</b> window appears.</p> </div>	Yes
Registration Source	Used to indicate the registration source of the customer registration type	Yes

**Tip:** Alternatively, you can edit the details of a customer registration template by clicking the **Edit** button in the **Customer Registration Type** zone.

8. Modify the details in the **Main** section, if required.
9. Configure the template page, template section and set the default value for the relevant fields, if required.
10. Click **Save**.

The changes made to the customer registration type are saved.

## Copying a Customer Registration Type

Instead of creating a customer registration type from scratch, you can create a new customer registration type using an existing customer registration type. This is possible through copying a customer registration type. On copying a customer registration type, the details including the default fields are copied to the new customer registration type. You can then edit the details, if required.

### Prerequisites

To copy a customer registration type, you should have:

- Customer registration type (whose copy you want to create) defined in the application
- Template categories defined in the application

### Procedure

To copy a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.

A sub-menu appears.

3. Click the **Search** option from the **Customer Registration Type** sub-menu.

The **Customer Registration Type** screen appears.

4. In the **Customer Registration Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the customer registration type whose copy you want to create.

The **Customer Registration Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create a customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the customer registration business object using which you want to create a customer registration type.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to specify the access group of the customer registration type.  The <b>Search</b>  icon appears corresponding to the <b>Access Group</b> field. On clicking the <b>Search</b> icon, the <b>Access Group Search</b> window appears.  On specifying the access group, the description of the access group appears corresponding to the <b>Access Group</b> field.	Yes
Registration Source	Used to indicate the registration source of the customer registration type.	Yes

**Tip:** Alternatively, you can copy a customer registration type by clicking the **Duplicate** button in the **Customer Registration Type** zone.

5. Enter the required details in the **Main** section.
6. Enter the required details in the **Additional Data** section.
7. Define characteristics for the customer registration type, if required.
8. Configure the template page, template section and set the default value for the relevant fields, if required.
9. Select the required fields in the **Copy Customer Registration Details** section.
10. Click **Save**.

The new customer registration type is defined.

## Deleting a Customer Registration Type

### Procedure

To delete a Customer Registration Type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Customer Registration Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Type** sub-menu.  
The **Customer Registration Type** screen appears.

- In the **Customer Registration Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the customer registration type that you want to delete.

A message appears confirming whether you want to delete the customer registration type.

**Note:** You can delete a customer registration type only when you have not created a customer registration using the customer registration type.

**Tip:** Alternatively, you can delete a customer registration type by clicking the **Delete** button in the **Customer Registration Type** zone.

- Click **OK**.

The customer registration type is deleted.

## Searching a Customer Registration

### Prerequisites

To search a customer registration, you should have:

- Customer registration statuses defined in the application
- Customer registration types defined in the application

### Procedure

To search a customer registration:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Person Information** and then click **Customer Registration**.

A sub-menu appears.

- Click the **Search** option from the **Customer Registration** sub-menu.

The **Customer Registration** screen appears.

- Enter the search criteria in the **Search Customer Registration** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of customer registrations that meet the search criteria appears in the **Search Results** section.

## Copying a Customer Registration

Instead of creating a customer registration from scratch, you can create a new customer registration using an existing customer registration. This is possible through copying a customer registration. On copying a customer registration, the details including the characteristics are copied to the new customer registration. You can then edit the details, if required.

### Prerequisites

To copy a customer registration, you should have:

- Person type (whose copy you want to create) defined in the application
- Divisions defined in the application
- Access groups defined in the application
- Name types defined in the application
- Phone types defined in the application
- Person identifier types defined in the application
- Address type code defined in the application
- Countries defined in the application
- Characteristic types defined in the application
- Parent/Child entities defined in the application
- Relationship type defined in the application

**Procedure**

To copy a customer registration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Person Information** and then click **Customer Registration**.

A sub-menu appears.

3. Click the **Search** option from the **Customer Registration** sub-menu.

The **Customer Registration** screen appears.

4. In the search result of **Search Customer Registration** zone, click the **Copy** () icon in the **Copy** column corresponding to the customer registration id whose copy you want to create.

The **Customer Registration** screen appears. It contains the following panels:

- Main
- Contact
- Person characteristics
- Hierarchy
- Accounts
- Policies
- Registration Characteristics

The **Main** panel appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration.
- **Person Names** - Used to define the name type details about the customer registration.
- **Person Phones** - Used to define the phone type details about the customer registration.
- **Person IDs**- Used to define the identifier details about the customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Used to indicate the type of a person. <b>Note:</b> This field is in the read-only mode.	Yes
Date of Birth	Used to indicate the date of birth.	Not applicable

## Customer Registration - Main

The **Main** tab displays information about the customer registration object. It contains the following zones:

- [Customer Registration](#)
- [Account Information](#) on page 129
- [Policies](#)
- [Parent Policies](#)

### Customer Registration

Oracle Revenue Management and Billing provides the automatic customer registration facility for an account, person, policy or policy plan. Initial customer setup or customer on-boarding as well as updates to the Customer information is an integral part of the Oracle Insurance Revenue Management and Billing (OIRMB) for **Healthcare** customers, be it **ASO** or Fully Insured.

In the OIRMB, the customer registration can be used to create customer and related entities by using the following methods:

- The **User Interface** for low volume data
- The **Inbound Messages** for integration with the case install systems for low to medium volume data
- The **File Upload Utility** for integration with the case install systems for high volume data

A **Customer Registration** module enables user to set up a new business in a structured manner. A user can set up:

- Parent Customer
- Bill Groups and Billing Hierarchy
- Billing Accounts and Contracts
- Policies and Plans

A complete workflow is processed through the To-do notifications sent to different **Billing Users** requesting the setup of various entities like Bill Groups, Pricing etc.

For better usability, different templates can be defined for each of the entities that are setup to enable the validations and defaulting of data.

For more information on how to setup the customer registration process, see [Prerequisites](#).

### Account Information

The **Account Information** zone displays the account details of the customer. It contains of the following sections:

- **Main** - Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Indicates the information about the account.
Customer Class	Indicates the customer class to which account belongs.
Division	Indicates the division to which account is associated.
Set Up Date	Indicates the set up date of the account.
Invoice Currency	Indicates the invoice currency of the account.
Account Category	Indicates the category of the account.
Access Group	Indicates the access group of the account.
Exclude Accrual	Indicates whether the accrual is excluded.
Eligible for Repricing	Indicates whether the account is eligible for repricing.
Product	Indicates the product.
Bill Lead Days	Indicates the bill lead days.
Bill Cycle	Indicates the bill cycle.
Comments	Displays the comments entered for the account.

- **Account Identifiers** - The **Account Identifiers** section displays the account identifiers details.

Column Name	Column Description
Primary ID	Indicates whether the primary id of the account.
Account Identifier Type	Indicates the type of the account identifier.
Account Identifier	Indicates the account identifier details.

- **Account Characteristics-** The **Account Characteristics** section displays the characteristics details of the account.

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the customer registration.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

**Auto Pay Details-** The **Auto Pay Details** section displays the auto pay details of an account.

Column Name	Column Description
Defer Auto Pay Date	Displays the date from when auto pay process is to be put on deferred mode.
Rule Based Auto Pay	Indicates whether the rule based auto pay option is enabled.
Start Date	Indicates the date from when the automatic payment process is effective for an account.
End Date	Indicates the date till when the automatic payment process is effective for an account.
Percentage	Indicates the percentage of payment details.
Priority	Indicates the priority of payment.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit card or credit card.
Auto Pay Route Type	Indicates when and how an automatic payment request of the account is routed.
Account Number	Displays the account number.
Expires On	Indicates the date on which auto pay expires.
Name	Displays the name of the account owner.
Maximum Withdrawal Amount	Displays the maximum limit of the withdrawal amount.
Comments	Displays the comments entered for auto payment.

- **Account Credit Rating**

- The **Account Credit Rating** section displays the account credit rating details. It contains the following fields:

Column Name	Column Description
Collection Class	Indicates the collection class to which account belongs.
Current Credit Rating	Indicates the current credit rating.
Current Cash Only Score	Indicates the current cash only score.
Start Date	Indicates the start date.
End Date	Indicates the end date.
Affect Credit Rating By	Indicates the count by which the credit rating is affected.
Affect Cash-Only Score By	Indicates the score by which cash only affected.

Column Name	Column Description
Comments	Indicates the comments for account credit rating.

- **Account Persons**

- The **Account Persons** section displays the person related details.

Column Name	Column Description
Person ID	Indicates the person identification value.
Person Name	Indicates the name of the person.
Main Customer	Indicates whether the person is a main customer.
Financially Responsible	Indicates whether a person is financially responsible.
Account Relationship Type	Indicates the account relationship type.

- **Account Override Address** - The **Account Override Address** section displays the account override address. It contains the following fields:

Column Name	Column Description
Country	Indicates the country of the address of the account.
Address 1 / 2 / 3 / 4	Indicates the address details.
City	Displays the city of the address.
State	Indicates the state of the address.
Postal	Displays the postal code of the address.

- **Bill Routing Information** - The **Bill Routing Information** section displays the bill routing information of the account. It contains the following columns:

Column Name	Column Description
Receives Copy of Bill	Indicates whether to receive a copy of bill.
Bill Format	Indicates the bill format.
Address Source	Indicates the address source.
Number of Bill copies	Indicates the total number of bill copies.
Bill Route Type	Indicates the bill route type.
Receives Notification	Indicates whether to receive notification for the bill routing.

The **Resubmit Customer Registration** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the customer registration before resubmitting it for approval.	Yes

**Note:** The **Re Submit** button appears only when:

- The customer registration is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the customer registration.

4. Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the customer registration type. In addition, the status of the customer registration is changed to **Draft**.

## Customer 360° View

---

### Topics:

- [Customer 360° View](#)
- [Customer 360° Information](#)
- [Bill Information](#)

Oracle Revenue Management and Billing provides you with the ability to quickly view in-depth information about the person by aggregating data from the application and presenting the same on a screen named **Customer 360° View**. This data can then be easily used for analysis. You can use the person or account details to view the 360° information of the person, such as:

- Basic details, characteristics, linked accounts, hierarchy, and the customer contacts of a person
- Basic details, characteristics, account persons list, automatic payment options, billing history, payment history, dispute details, hold details, and overdue processes details of the person's account
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, or write off) through which the bill is settled, high level summary and details of the bill segments included the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

## Customer 360° View

The **Customer 360° View** screen allows you to search for a person and account using various search criteria. You can then view 360° information of the person and the person's account, and vice-versa. By default, whenever you login to the application, the **Customer 360° View** screen appears. This screen consists of the following zone:

- [360° Search](#) on page 146

### 360° Search

The **360° Search** zone allows you to search a person and account using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person or account. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> </ul> <p><b>Note:</b> By default, the <b>Person</b> option is selected.</p>	Yes
Division	Used to search persons or accounts which belong to a particular division. <p><b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.</p>	Yes (Conditional) <p><b>Note:</b> If you specify the address, city and/or prospect as a search criteria, you have to enter the division.</p>
Customer Class	Used to search accounts which belongs to a particular customer class. <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>	No
Person Name	Used to search a particular person. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer. <p><b>Note:</b> If you are searching for an account, this field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p>	No
Person ID	Used to search a particular person. <p><b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	<p>Used to indicate the person identifier type based on which you want to search for a person.</p> <p><b>Note:</b> If you search for a person information using the <b>Account</b> option from the <b>Search By</b> then, this field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.</p>
Person Identifier	<p>Used to search a person with a particular identifier.</p> <p><b>Note:</b> If you search for a person information using the <b>Account</b> option from the <b>Search By</b> then, this field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.</p>
Person Type	<p>Used to search persons of a particular type.</p> <p><b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p>	No
Segment	<p>Used to search a person with a particular segment.</p> <p><b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p>	No
Prospect	<p>Used to indicates whether the person is a prospective customer or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address.  <b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	No
City	Used to search persons who belong to a particular city or accounts' whose main customer belong to a particular city.  <b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	No
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number.  <b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	No
Account ID	Used to search a particular account.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search an account with a particular identifier.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Account Category	Used to search accounts which belongs to a particular category. The valid values are: <ul style="list-style-type: none"> <li>• Invoice Account</li> <li>• Settlement Account</li> <li>• Usage Account</li> </ul>	No
Product	Used to search a particular product. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list</p> <p>The Search () icon appears corresponding to this field. On clicking the Search icon, the <b>Product Search</b> window appears.</p> </div>	No
Characteristic Type	Used to search persons, accounts or policies with a particular type of characteristic. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p> </div>	No
Characteristic Value	Used to search persons, accounts or policies with a particular characteristic. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> If you specify the characteristic type as a search criteria, you have to enter the characteristics value.</p> </div>

**Note:**

You must specify at least one search criterion while searching for a person or account. One more search criterion is required when you are searching for a person or account using the division and/or customer class.

If you have specified any other search criterion along with the person ID or account ID, the system ignores the additional search criterion and searches using the person ID or account ID respectively.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	<p>Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person. This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Person Name	<p>Displays the name of the person.</p> <p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Primary Person Identifier Type	<p>Indicates the primary identifier type associated with the person.</p> <p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Primary Person Identifier	<p>Displays the primary person identifier.</p> <p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Account Information	<p>Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Division	<p>Indicates the division to which the account belongs.</p>
Customer Class	<p>Indicates the customer class to which the account belongs.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Primary Account Identifier Type	<p>Indicates the primary identifier type associated with the account.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Account Identifier	<p>Displays the primary account identifier.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>

Column Name	Column Description
Main Customer	Displays the name of the customer to which the account belongs.  <b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.

**Note:** You can view the 360° information of the person or account by clicking the **View** () icon corresponding to the record in the **Search Results** section.

## Searching for a Person

### Prerequisites

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

### Procedure

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Customer 360° View**.  
The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

**Note:**

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division .

You must specify the division when you are searching for a person using city.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. In this screen, you can only use the ‘%’ wildcard character in the **Person Name** and **Address** fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

**Searching for an Account****Prerequisites**

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

**Procedure**

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Customer 360° View**.  
The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.
4. Enter the required search criteria in the **360° Search** zone.

**Note:**

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.

If you have specified any other search criterion along with the account ID, the system ignores the additional search criterion and searches for the account using the account ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. In this screen, you can only use the '%' wildcard character in the **Person Name** and **Address** fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

### Person Information

The **Person Information** zone displays information about the person. It contains the following sections:

- **Main** - Displays the basic details of the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the person.
Person Type	Indicates the type of the person.
Date of Birth	Displays the date when the person was born.  <b>Note:</b> This field appears only when the respective data is available for the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

**Note:** The above mentioned fields appear in the **Contact Information** section only when the respective data is available for the person.

- **Deal Information** - Displays the deal details of the person received from the external system. It contains the following columns:

Column Name	Column Description
Deal ID	Displays the deal ID. This is an identifier generated in the Deal Management system (such as, Oracle Revenue Management and Billing Analytics (ORMBA)).
Relationship Manager	Indicates the professional who is working to improve the relationship with the person with respect to the deal.

Column Name	Column Description
Prospect	Indicates whether the person is a prospective customer or not. The valid values are <b>Yes</b> or <b>No</b> .
Segment	Displays the segment to which the person belongs.

- **Phone Details** - Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.

### Person Characteristics

The **Person Characteristics** zone lists the characteristics defined for the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.  <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b>. </div>

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

**Note:** This zone lists the person characteristics in the descending order of the effective date.

### Linked Accounts

The **Linked Accounts** zone displays all the accounts of a person. It contains the following field:

Field Name	Field Description
Search By	Used to indicate the type of search to be performed. The valid values are: <ul style="list-style-type: none"> <li>• Linked Accounts</li> </ul>

In addition to the above field, this section contains the following columns:

Column Name	Column Description
Sr. No.	Displays the sequential number of the data.
360° Degree Information	On clicking the <b>360 Degree Information</b> (  ) icon, the <b>Accounts</b> tab appears with the details of the respective account.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Primary Account Identifier	Displays the primary account identifier type of the account.
Division	Displays the division to which the account belongs.

### Person Legal Hierarchy

The **Person Legal Hierarchy** zone lists the following in a tree view:

- Information string of accounts where the person is the main customer
- Information string of the parent persons
- Information strings of the child persons

Displays information about the person, account, child person, and parent person in a tree view. Each node in the tree has a link. The following table indicates the information string that appears in various scenarios:

If...	Then...
The person is the main customer of an account	The account information string appears. It has a link. On clicking the link, the information of an account appears in the <b>Account</b> screen.
The person has a child	The child person information string appears. It has a link. On clicking the link, the information of the child person appears in the <b>Person</b> screen.  <b>Note:</b> The child person information string does not appear only if the end date of the child person is earlier than the system date.
The person has a parent person	The person information string appears. It has a link. On clicking the link, the information of the person appears in the <b>Person</b> screen.

You will see the **Get More...** button in the bottom of the zone only when the person hierarchy list exceeds the 25 records.

### Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Customer Contact Information	Displays information about the customer contact.  <b>Note:</b> It has a link. On clicking the link, the <b>Customer Contact</b> screen appears where you can view the details of the respective customer contact.

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and so on) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

### Enrolled Products

The **Enrolled Products** zone displays information about products which are enrolled by a person. It contains the following fields:

Column Name	Column Description
Product	Displays the name of the product.  <b>Note:</b> It has a link. On clicking the link, the <b>Product</b> screen appears with the details of the respective product.
Product Type	Displays the type of the product.
Product Version	Displays the version of the enrolled product.  <b>Note:</b> It has a link. On clicking the link, the <b>Product Version</b> screen appears where you can view the details of the respective product version.

### Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** – Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the account.
Division	Displays the division to which the account belongs.

- **Accounting Information** – Displays various accounting related information. It contains the following columns:

Field Name	Field Description
Eligible for Accrual	Displays whether an account is eligible for accrual or not. The valid values are <b>Yes</b> or <b>No</b> .
Account on Dispute	Displays whether an account is on dispute or not. The valid values are <b>Yes</b> or <b>No</b> .
Overdue Process for Account	Displays whether an account is having overdue process or not. The valid values are <b>Yes</b> or <b>No</b> .
ECR Offset Eligibility	Displays the ECR offset eligibility.

Field Name	Field Description
ECR Expiration Cycle	Displays the ECR expiration cycle.
Accrual Cycle	Displays the description of an accrual cycle which is set for an account.
Account on Hold	Displays whether an account is in hold or not. The valid values are <b>Yes</b> or <b>No</b> .
ECR Eligibility	Displays whether an account is eligible for ECR offset or not. The valid values are <b>Yes</b> or <b>No</b> .
ECR Offset Distribution Type	Displays the ECR offset distribution type.
ECR Account Distribution Priority	Displays the ECR account distribution priority.

- **Contact Information** – Displays the contact details of the account’s main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account’s bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer’s address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer’s address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer’s address. It may contain the landmark details.
Address 4	Displays the fourth line of the main customer’s address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

**Note:** Only **Address Source** field appears in the **Contact Information** section when the address source of the main customer is set to **Account Override**.

- **Account Identifiers** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

- **Billing Information** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Bill Cycle	Displays the bill cycle of the account.
Last Bill	Displays the bill information string for the last bill of an account. It has a link. On clicking the link, the information of bill appears in the <b>Bill</b> screen.  <b>Note:</b> This field appears only when last bill information exists for the account.
Previous Bill	Displays the bill information string for the bill prior to the last bill of an account. It has a link. On clicking the link, the information of bill appears in the <b>Bill</b> screen.  <b>Note:</b> This field appears only when previous bill information exists for the account.
Auto Pay	Displays whether auto pay exists on an account or not. The valid values are <b>Yes</b> or <b>No</b> .
Next Bill Date	Displays the next date on which bill is scheduled to be generated for an account.  <b>Note:</b> This field appears only when next payment date exists for the account.
Pending Bill	Displays the bill information string for the pending bill of an account. It has a link. On clicking the link, the information of bill appears in the <b>Bill</b> screen.  <b>Note:</b> This field appears only when pending bill information exists for the account.

- **Financial Details** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Current Balance	Displays the current balance of the account.
Payoff Balance	Displays the payoff balance for the account.
Overdue Amount	Displays the overdue amount of the account.
Dispute Amount	Displays the dispute amount of the account.
Last Payment Information	Displays the information string for the last payment on the account. It has a link. On clicking the link, the information of payment event appears in the <b>Payment Event</b> screen.  <b>Note:</b> This field appears only when last payment exists for the account.

## Account Characteristics

The **Account Characteristics** zone lists the characteristics defined for the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.  <b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b> .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Account Persons

The **Account Persons** zone lists all the linked person information of the account. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the person.
Relationship Type	Indicates how the person is related to the account.
Main Customer	Displays whether the person is main customer or not. The valid values are <b>Yes</b> or <b>No</b> .
Financially Responsible	Displays whether the person is financially responsible or not. The valid values are <b>Yes</b> or <b>No</b> .

**Note:** You can view the 360° information of the person by clicking the **360 Degree Information** () icon corresponding to the record.

## Enrolled Products

The **Enrolled Products** zone displays information about products which are enrolled by a person. It contains the following columns:

Column Name	Column Description
Product	Displays information about the product details.  <b>Note:</b> It has a link. On clicking the link, the screen appears with the details of the respective product.

Column Name	Column Description
Product Version	Displays the version of the enrolled product. <b>Note:</b> It has a link. On clicking the link, the screen appears with the details of the respective product version.
Start Date	Displays the start date of the product enrollment.
End Date	Displays the end date of the product enrollment.
Product Priority	Displays the product priority.
Product Type	Indicates the type of product.

### Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options available for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit card or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card. <b>Note:</b> The data appears in this column only when the external type of the auto pay source code's tender type is set to Credit Card Withdrawal.
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

### Timeline

The **Timeline** zone displays the following information in a graphical presentation:

- Number of regular bills created for the account in a particular month
- Number of adhoc bills created for the account in a particular month
- Number of payments created for the account in a particular month
- Number of dispute requests created for the account in a particular month
- Number of active hold requests created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information. <b>Note:</b> By default, the current month appears in this field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Year	Used to indicate the year till when you want to display the above stated information.  <b>Note:</b> By default, the current year appears in this field.	Yes

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (  ) icon.

You can use the **Previous Year** (  ), **Previous Month** (  ), **Next Month** (  ), and **Next Year** (  ) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description						
Regular Bills	<p>A small icon appears for each regular bill created for the account in the respective month. For example, if three regular bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1"> <thead> <tr> <th>If the bill is...</th> <th>Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td>Fully Matched</td> <td>Green</td> </tr> <tr> <td>Unmatched</td> <td>Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the bill.</p> <p><b>Note:</b></p> <p>If you want to display the day of the due date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>D</b>. However, if you want to display the day of the bill date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>B</b>.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the <b>C1-TL-OI-EVT</b> algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red
If the bill is...	Then the icon appears in...						
Fully Matched	Green						
Unmatched	Red						

Row Name	Row Description												
Adhoc Bills	<p>A small icon appears for each adhoc bill created for the account in the respective month. For example, if three adhoc bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1" data-bbox="467 485 1461 638"> <thead> <tr> <th data-bbox="475 493 964 533">If the bill is...</th> <th data-bbox="972 493 1461 533">Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 543 964 583">Fully Matched</td> <td data-bbox="972 543 1461 583">Green</td> </tr> <tr> <td data-bbox="475 594 964 634">Unmatched</td> <td data-bbox="972 594 1461 634">Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the bill.</p> <p><b>Note:</b></p> <p>If you want to display the day of the due date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>D</b>. However, if you want to display the day of the bill date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>B</b>.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the <b>C1-TL-OI-EVT</b> algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red						
If the bill is...	Then the icon appears in...												
Fully Matched	Green												
Unmatched	Red												
Payments	<p>A small icon appears for each payment created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:</p> <table border="1" data-bbox="467 1299 1461 1602"> <thead> <tr> <th data-bbox="475 1308 964 1348">Status</th> <th data-bbox="972 1308 1461 1348">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 1358 964 1398">Frozen</td> <td data-bbox="972 1358 1461 1398">Green</td> </tr> <tr> <td data-bbox="475 1409 964 1449">Canceled</td> <td data-bbox="972 1409 1461 1449">Red</td> </tr> <tr> <td data-bbox="475 1459 964 1499">Freezable</td> <td data-bbox="972 1459 1461 1499">Blue</td> </tr> <tr> <td data-bbox="475 1509 964 1549">Error</td> <td data-bbox="972 1509 1461 1549">Red</td> </tr> <tr> <td data-bbox="475 1560 964 1600">Incomplete</td> <td data-bbox="972 1560 1461 1600">Yellow</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding payment information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the payment.</p> <p><b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the <b>C1-TL-PY-EVT</b> algorithm.</p>	Status	Color	Frozen	Green	Canceled	Red	Freezable	Blue	Error	Red	Incomplete	Yellow
Status	Color												
Frozen	Green												
Canceled	Red												
Freezable	Blue												
Error	Red												
Incomplete	Yellow												

Row Name	Row Description												
Dispute Requests	<p>A small icon appears for each dispute request created for the account in the respective month. For example, if one dispute request is created for the account in the month of Aug 2016, three dispute requests are created in the month of Dec 2016, and four dispute request are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the dispute request was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the dispute request:</p> <table border="1" data-bbox="467 453 1461 758"> <thead> <tr> <th data-bbox="475 457 964 506">Status</th> <th data-bbox="972 457 1461 506">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 508 964 556">Active</td> <td data-bbox="972 508 1461 556">Green</td> </tr> <tr> <td data-bbox="475 558 964 606">Approved</td> <td data-bbox="972 558 1461 606">Green</td> </tr> <tr> <td data-bbox="475 609 964 657">Rejected</td> <td data-bbox="972 609 1461 657">Red</td> </tr> <tr> <td data-bbox="475 659 964 707">Approval In Progress</td> <td data-bbox="972 659 1461 707">Orange</td> </tr> <tr> <td data-bbox="475 709 964 758">Draft</td> <td data-bbox="972 709 1461 758">Orange</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding dispute information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Dispute Request</b> screen appears where you can view the details of the dispute.</p> <p><b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the <b>C1-TL-DP-EVT</b> algorithm.</p>	Status	Color	Active	Green	Approved	Green	Rejected	Red	Approval In Progress	Orange	Draft	Orange
Status	Color												
Active	Green												
Approved	Green												
Rejected	Red												
Approval In Progress	Orange												
Draft	Orange												
Processes on Hold	<p>A small icon appears for each active hold request for the account in the respective month depending upon the number of processes on hold. For example, if there is one active hold request having two processes on hold for the account in the month of Aug 2016 and two active hold requests as H1 and H2, having one process on hold for H1 hold request and four processes on hold for H2 hold request for the month of Dec 2016, then two icon appears in the Aug 2016 column and five icons appear in the Dec 2016 column. A text indicating the day of the month on which an entity was kept on hold appears on the icon. The following table indicates the color in which the icon appears depending on the status of the hold request:</p> <table border="1" data-bbox="467 1272 1461 1377"> <thead> <tr> <th data-bbox="475 1276 964 1325">Status</th> <th data-bbox="972 1276 1461 1325">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 1327 964 1375">Active</td> <td data-bbox="972 1327 1461 1375">Green</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding hold information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the dispute.</p> <p><b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the <b>C1-TL-HR-EVT</b> algorithm.</p>	Status	Color	Active	Green								
Status	Color												
Active	Green												

### Billing History

The **Billing History** zone lists all the bill information of the account. It contains the following columns:

Column Name	Column Description
Bill Information	Displays information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Bill Information</b> screen appears where you can view the details of the bill.
Bill Amount	Displays the bill amount.
Unpaid Amount	Displays the unpaid amount of the bill.
Days Past Due	Displays the number of days past after the due date.
Billing Method	Displays the method used for generating bill.

You can filter the list using the **On or before Bill Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

**Note:** You can view additional information about the bill by clicking the **View** () icon corresponding to the bill in the **Billing History** zone.

### Related Topics

How to view the details of a bill	<a href="#">Viewing the Bill Information</a> on page 183

### Payment History

The **Payment History** zone lists all the payment information of the account. It contains the following columns:

Column Name	Column Description
Payment Event Information	Displays information about the payment event.  <b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the payment.
Payment Date	Displays the date when the payment was made.
Payment Amount	Displays the amount paid through the tender.
Payment Status	Displays the current status of payment. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Error</li> <li>• Freezable</li> <li>• Frozen</li> <li>• Incomplete</li> </ul>
Tender Source	Displays the tender source through which the payment was remitted.

### Dispute Details

The **Dispute Details** zone lists the dispute requests for the account. It contains the following columns:

Column Name	Column Description
Dispute Request Information	Displays information about the dispute request. <b>Note:</b> It has a link. On clicking the link, the <b>Dispute Request</b> screen appears where you can view the details of the dispute request.
Dispute Amount	Displays the dispute amount.
Status	Indicates the status of the dispute request.

### Hold Details

The **Hold Details** zone lists the active hold requests due to which the account is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request. <b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the hold request.
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Bill</li> </ul>
Hold Reason	Displays the hold reason.
Hold Process	Indicates the process that is kept on hold for the entity.
Start Date	Displays the date from when the entity is kept on hold for the process.
End Date	Displays the date till when the entity is kept on hold for the process.

### Overdue Process Details

The **Overdue Process Details** zone lists the overdue processes of the account. It contains the following columns:

Column Name	Column Description
Overdue Process Information	Displays information about the overdue process. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Overdue Process</b> screen appears where you can view the details of the overdue process.
Overdue Amount	Displays the overdue amount for the account.
Number of Overdue Bills	Displays the total number of bills that are overdue.

## Customer 360° Information - Product and Pricing

The **Pricing** tab displays details of price list and price list price items, effective price assignments for account, effective price assignments for person. It consists of the following zones:

- [Product](#) on page 173
- [Price List Assignments](#) on page 174
- [Price List Price Items](#) on page 174
- [Effective Price Assignments for Account](#) on page 176
- [Effective Price Assignments for Person](#) on page 179
- [Associated Price Items](#) on page 173

### **Product**

The **Product** zone displays information about products which are enrolled by a person. It contains the following fields:

Field Name	Field Description
Product	Displays information about the product details. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Product</b> screen appears where you can view the details of the respective product.</p> </div>

**Note:** By default, the **Products** zone is displayed with the **Product Name** and **Product Version**. It also displays various **Product Service Price Items** that form a part of the product. To view the price items that are associated with the product, click the **Broadcast**  icon, corresponding to the product whose associated price items you want to view.

### **Associated Price Items**

The **Associated Price Items** zone displays information about the price items associated with the product. It contains the following columns:

Field Name	Field Description
Sequence No.	Displays the sequence number.
Pricing Information	Displays information about the pricing information of the product. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears with the details of the respective product.</p> </div>
Price Item	Displays the price item.

## Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You will not find any records in this zone if the account does not have any price lists assigned to it. This zone contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list which is assigned to the account or person. <b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears with the details of the respective price list.
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> <li>• Product Default Price List</li> </ul>

On clicking the **Broadcast**  icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

## Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	Displays information about the price item pricing. <b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the details of the price item pricing.

Column Name	Column Description
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>
Pricing Status	<p>Indicates the status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>

By default, the **Price List Price Items** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears only when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using the **Price Item**, **Effective Start Date** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

## Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

### Note:

The **Effective Price Assignments for Account** zone appears when the **Customer 360° Information** is searched for account.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.  <b>Note:</b> By default, this field is set to the system date.	No
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Pending For Approval</li> <li>• Proposed</li> </ul> <b>Note:</b> By default, the <b>Active</b> option is selected.	No

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Product-specific default price list defined for the division</li> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> <li>• <b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Product-specific default price list defined for the division</li> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> </ul> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	No
Price Item	<p>Used to search price assignments of a particular price item or price item bundle.</p> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.</p>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID for the account.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears with the details of the respective price item pricing.</p>
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	<p>Used to specify multiple parameters based on which you want to determine the pricing utilization.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> <li>• Product Default Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
View Rate	On Clicking the <b>View Rate</b> (  ) icon, the <b>Effective Pricing Information</b> screen appears where you can view the details persisted rate. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> When the value of Price Item Type is defined as Rate, only then the icon would be available.</p> </div>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Account Agreed</b>.</p> </div>

Column Name	Column Description
Override	<p>On clicking the <b>Override</b>  icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p> </div>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2364.

### Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

**Note:**

The **Effective Price Assignments for Person** zone appears when the **Customer 360° Information** is searched for person.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.  <b>Note:</b> By default, this field is set to the current date.	No
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Pending For Approval</li> <li>• Proposed</li> </ul> <b>Note:</b> By default, the <b>Active</b> option is selected.	No

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> <li>• <b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> </ul> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	No
Price Item	<p>Used to search price assignments of a particular price item or price item bundle.</p> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.</p>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID for the person.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears with the details of the respective price item pricing.</p>
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	<p>Used to specify multiple parameters based on which you want to determine the pricing utilization.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the person.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the <b>Edit</b> () icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Customer Agreed</b>.</p>
Override	<p>On clicking the <b>Override</b> () icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2364.

## Bill Information

---

The **Bill Information** screen allows you to view:

- Basic details about the bill
- Settlement activities, such as payment, offset, refund, or write off through which the bill is settled
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Bill line items of the bill
- Garnishment adjustments of the bill
- Refund and write off requests through which the bill or its bill segment is either refunded or written off
- Dispute requests due to which bill is kept on hold

It consists of the following zones:

- [Bill Information](#) on page 185
- [Settlement Activities](#) on page 186
- [Hold Details](#) on page 186
- [Offset Details](#) on page 187
- [Bill Line Items](#) on page 187
- [Garnishment Details](#) on page 188
- [Refund and Write Off Details](#) on page 188
- [Dispute Details](#)

### Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** — Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	<p>Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the bill.</p>
Account Information	<p>Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the account.</p>

## Settlement Activities

You may settle a bill by making a payment, offsetting a bill, refunding a bill, or by writing off a bill. The **Settlement Activities** zone lists the activities related to the bill settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity occurred.
Activity Type	<p>Indicates the type of the activity. The valid values are:</p> <ul style="list-style-type: none"> <li>• Payment</li> <li>• Offset</li> <li>• Refund</li> <li>• Write Off</li> </ul>
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the activity.
Related Object ID	<p>Displays the payment, offset request, refund request, or write off request ID depending on the type of the activity.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Payment, Offset Request, Refund Request, or Write Off Request</b> screen appears where you can view the details of the respective activity.</p>

## Hold Details

The **Hold Details** zone lists the active hold requests due to which the bill is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	<p>Displays information about the hold request.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the hold request.</p>

Column Name	Column Description
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Bill</li> </ul>
Entity Information	Indicates the entity for which the hold request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b> It has a link. On clicking the link, the <b>Person, Account, or Bill</b> screen appears where you can view the details of the respective entity. </div>
Start Date	Displays the date from when the entity is kept on hold.
End Date	Displays the date till when the entity is kept on hold.

## Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b> It has a link. On clicking the link, the <b>Offset Request</b> screen appears where you can view the details of the offset request. </div>
Offset Amount	Indicates the amount of the bill which is offset.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> <li>• Automatic</li> <li>• Manual</li> </ul>

## Bill Line Items

The **Bill Line Items** zone lists the information about the selected bill's bill line item. It contains the following columns:

Column Name	Column Description
Bill Line Item	Displays the bill line item of the selected bills. The valid value are: <ul style="list-style-type: none"> <li>• Bill Segment</li> <li>• Adjustment</li> </ul>
Bill Line Item Information	Displays information about the bill line item. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment or Adjustment</b> screen appears with the details of respective bill line item or adjustments </div>
Amount	Displays the amount of the bill line item.

Column Name	Column Description
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

You can filter the list using the **Bill Segment Date From** and **To** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

## Garnishment Details

The **Garnishment Details** zone lists the garnishment adjustments that are created against the bill. It contains the following columns:

Column Name	Column Description
Garnishment Contract ID	Displays the garnishment contract ID. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the contract.
Garnishment Amount	Displays the garnishment amount.

## Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request.  <b>Note:</b> It has a link. On clicking the link, the <b>Refund Request</b> or <b>Write Off Request</b> screen appears depending on whether the request is for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request.
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> <li>Refund</li> <li>Write Off</li> </ul>
Account Information	Displays additional information about the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the account.

Column Name	Column Description
Created By	Indicates the user who has created the refund or write off request.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

## Dispute Details

The **Dispute Details** zone lists the dispute requests for the account. It contains the following columns:

Column Name	Column Description
Dispute Request Information	Displays information about the dispute request. <b>Note:</b> It has a link. On clicking the link, the <b>Dispute Request</b> screen appears where you can view the details of the dispute request.
Dispute Amount	Displays the dispute amount.
Status	Indicates the status of the dispute request.

# Chapter 3

---

## Invoicing Group

---

### Topics:

- [Manage Invoicing Groups](#)
- [Invoicing Group](#)
- [Invoicing Group Information](#)

Invoicing group allows you to combine the charges for multiple accounts onto one bill for each billing period. It consists of the following:

- **Master Account** - The group level account that controls the billing.
- **Member Accounts** - The accounts whose bills are aggregated at the group level.

The following figure is a graphical representation of an invoicing group:

You can create an invoicing group by adding member accounts to the master account. An account can be the master account in the invoicing group only when its **Invoice Group Account** characteristic type is set to **Y**. On the other hand, an account can be added as a member to the master account only when its **Invoice Group Account** characteristic type is set to **N**.

**Note:** You can define the Invoice Group Account characteristic for the account only when the **Invoice Group Account** option type in the **C1\_ACCTINFO** feature configuration is set. If the **Invoice Group Account** option type in the **C1\_ACCTINFO** feature configuration is not set, you will not be able to indicate whether the account is a master or member account. For more information, refer to [Setting the C1\\_ACCTINFO Feature Configuration](#) on page 2342.

There is no restriction on the number of accounts that can be added to the master account. The accounts in the invoicing group can belong to different persons and may have different currencies, but they should be from the same banking division and person hierarchy. If the member accounts have a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.

Balances are maintained at the master account level. Bills are added to the master account's balance, and payments are subtracted from that balance. However, the charges can be traced back to the originating member accounts. The master account cannot have charges of its own; all charges come from the member accounts. However, when an account does not belong to any master account, it is billed individually with its charges appearing on the bill.

The contracts linked at the member level are duplicated at the master level when member accounts are added to the master account. However, note that only contracts which are eligible for billing are duplicated at the master level. Once a contract is duplicated at the master level, you need to activate the contract at the master level. Otherwise, the charges will be billed to the member account instead of the master account.

## Manage Invoicing Groups

The **Manage Invoicing Groups** screen allows you to search for the master or member accounts using various search criteria. It contains the following zone:

- [Manage Invoice Groups](#) on page 193

Through this screen, you can navigate to the following screen:

- [Invoicing Group Information](#) on page 201
- [Invoicing Group](#) on page 197

## Manage Invoice Groups

The **Manage Invoice Groups** zone allows you to search for a invoice groups using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoicing Group Assignment Type	Used to indicate whether you want to search for a master or member account. The valid values are: <ul style="list-style-type: none"> <li>• Master</li> <li>• Member</li> </ul>	Yes
Account ID	Used to specify the account ID.	No
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.         </div>
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.         </div>
Division	Used to specify the division whose accounts you want to search.	No
Person Name	Used to specify the person whose accounts you want to search.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> If you specify the billing cycle or customer class as a search criteria, you have to specify the person name.         </div>
Billing Cycle	Used to specify the billing cycle during which the account is billed.	No
Customer Class	Used to specify the customer class of the account.	No

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

**Note:** You must specify at least one search criterion while searching for a member account.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Indicates the account ID. <b>Note:</b> It has a link. On clicking the link, the <b>Invoicing Group Information</b> screen appears where you can view the details of the respective member account.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the account. <b>Note:</b> If the member account has a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.
Division	Displays the division from which the account belongs
Person Name	Displays the name of the main customer.
Customer Class	Indicates the customer class of the account.
Master Account Identifier Type	Displays the account identifier type of the master account. <b>Note:</b> This field appears only when the <b>Member</b> option is selected from the <b>Invoicing Group Assignment Type</b> list.
Master Account Identifier	Displays the value of the master account identifier type. <b>Note:</b> This field appears only when the <b>Member</b> option is selected from the <b>Invoicing Group Assignment Type</b> list.
Master Person Name	Displays the name of the main customer of the master account. <b>Note:</b> This field appears only when the <b>Member</b> option is selected from the <b>Invoicing Group Assignment Type</b> list.
Billing Cycle	Displays the billing cycle during which the account is billed.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for a Master Account

### Prerequisites

To search for a master account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Master accounts created in the application

### Procedure

To search for a master account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears.

#### **Note:**

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

You must specify at least one search criterion while searching for a master account.

3. Select **Master** from the **Invoicing Group Assignment Type** list.
4. Enter the search criteria in any of the criteria groups.
5. Click **Search**.

The master accounts that meet the search criteria and to which you have access based on the account's access group appear in the **Search Results** section.

## Searching for a Member Account

### Prerequisites

To search for a member account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Accounts added as a member to the master accounts

### Procedure

To search for a member account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears.

**Note:**

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

You must specify at least one search criterion while searching for a member account.

- Select **Member** from the **Invoicing Group Assignment Type** list.
- Enter the search criteria in any of the criteria groups.
- Click **Search**.

The member accounts that meet the search criteria and to which you have access based on the account's access group appear in the **Search Results** section.

- [Edit Member Account Assignment](#) on page 198

## Invoicing Group Information

The **Invoicing Group Information** zone displays the master account details of the member account. This zone contains the following fields:

Field Name	Field Description
Invoicing Group Assignment Type	Indicates that this zone displays information about the member's master account.
Person Name	Displays the name of the main customer.
Primary Account Identifier	Displays the primary account identifier type of the master account along with its value.
Customer Class	Displays the customer class of the master account.
Account Currency	Displays the invoice currency of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.
Division	Displays the division to which the master account belongs.

**Note:** All fields in the **Invoicing Group Information** zone are read-only.

## Selected Member Account

The **Selected Member Account** zone displays the details of the member account. This zone contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the member account.
Account Identifier	Displays the value of the primary account identifier type.
Account Currency	Displays the invoice currency of the member account. <b>Note:</b> During billing, the charges for the member account are calculated in this currency and then converted to the master account's currency.
Effective Start Date	Displays the date from when the charges for the member account appears on the bill of the master account.
Effective End Date	Displays the date till when the charges for the member account appears on the bill of the master account.
Person Name	Displays the name of the main customer.

Column Name	Column Description
Customer Class	Displays the customer class of the member account.
Billing Cycle	Displays the billing cycle during which the member account is billed.  <b>Note:</b> If the member account is removed from the master account, it will be billed during this billing cycle.

On clicking the **Broadcast**  icon corresponding to the member account, the **Edit Member Account Assignment** zone appears with the details of the respective member account.

## Edit Member Account Assignment

The **Edit Member Account Assignment** zone allows you to edit the assignment details of the member account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to modify the date from when you want the charges for the member account to appear on the bill of the master account.  <b>Note:</b> You can modify the date only when it is a future date.	Yes
Invoicing Group Assignment Type	Indicates that the account is a member account.	Not applicable
Effective End Date	Used to modify the date till when you want the charges for the member account to appear on the bill of the master account.  <b>Note:</b> You can modify the date only when it is not a past date.	No
Primary Account Identifier	Displays the primary account identifier type of the member account along with its value.	Not applicable

**Note:** If a bill is already generated for the master account, you cannot modify the effective start and end dates.

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Remove Member	Used to remove the member from the master account.

By default, the **Edit Member Account Assignment** zone does not appear in the **Invoicing Group Information** screen. It appears only when you click the **Broadcast**  icon corresponding to the member account in the **Selected Member Accounts** zone.

## **Editing the Member Account Assignment Details**

### **Procedure**

You can edit the member account assignment details from both the **Invoicing Group** and **Invoicing Group Information** screens. To edit the member account assignment details:

1. Do either of the following:

<b>If you want to</b>	<b>Then</b>
Edit the member account assignment details from the <b>Invoicing Group</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group</b> screen.</li> <li>2. In the <b>Member Accounts</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account whose assignment details you want to edit.</li> </ol>
Edit the member account assignment details from the <b>Invoicing Group Information</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Information</b> screen.</li> <li>2. In the <b>Selected Member Account</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account whose assignment details you want to edit.</li> </ol>

The **Edit Member Account Assignment** zone appears.

2. Modify the effective start and end dates, if required.

#### **Note:**

The effective start date should be earlier than or equal to the member account's contract end date. And, the effective end date cannot be earlier than the effective start date.

If a bill is already generated for the master account, you cannot modify the effective start and end dates.

3. Click **Save**.

The changes are saved.

## Removing a Member from the Master Account

### Procedure

You can remove a member from the master account through both the **Invoicing Group** and **Invoicing Group Information** screens. To remove a member from the master account:

1. Do either of the following:

If you want to	Then
Remove a member from the master account through the <b>Invoicing Group</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group</b> screen.</li> <li>2. In the <b>Member Accounts</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account that you want to remove from the master account.</li> </ol>
Remove a member from the master account through the <b>Invoicing Group Information</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Information</b> screen.</li> <li>2. In the <b>Selected Member Account</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account that you want to remove from the master account.</li> </ol>

The **Edit Member Account Assignment** zone appears.

2. Click **Remove Member**.

The member is removed from the master account.

## Viewing the Master Account Details

### Procedure

To view the master account details:

1. Search for the master account in the **Manage Invoicing Groups** screen.
2. In the **Search Results** section, click the link in the **Account ID** column corresponding to the master account whose details you want to view.

The **Invoicing Group** screen appears.

3. View the master account details in the **Account Information** zone.
4. View the accounts that are already added to the master account in the **Member Accounts** zone.
5. View the list of accounts that can be added to the master account in the **Search Accounts to Add** zone.

Oracle Revenue Management and Billing allows you to define prices for price item and services offered to the customers. These prices are either standard prices defined in the price lists or override prices that are specific to a customer or an account. The system allows you to define prices at various levels in a customer hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define prices in the account's price list, main customer's price list, parent customer's price list, price list's parent price list. As prices can be defined at multiple places, the order in which the system searches for effective price item pricing will affect the price charged to the customer. The search order is configurable, and can vary with each division. You need to define the search order in the price assignment search algorithm (which is also known as crawling algorithm) and then attach the algorithm to the division. You can change the search order at any time.

You need to define the price assignment search algorithm using the C1\_PRASN algorithm type. The price assignment search algorithm is used while:

- Listing effective price item pricing for an account or a customer
- Fetching effective price item pricing while creating recurring and non-recurring bill segments
- Fetching effective post processing pricing while creating post processing bill segments
- Fetching effective price item pricing in the **Price Item Pricing Verification (C1-TXNVP)** batch

For more information about the price assignment search algorithm, see [Price Assignment Search Mechanism](#) on page 213.

Since a global customer is not associated to any division, the system cannot determine the price assignment search order for a global customer. Hence, the default search order is defined for global customers through the **C1\_PRASNORDR** feature configuration. You can change this default search order, if required.

The prices that are specific to a customer or an account are referred to as customer agreed or account agreed prices, respectively. You can override these agreed prices. Customer agreed or account agreed prices are effective for a particular duration and do not expire until you manually specify the end date. However, if you set the **Expire Override Switch** option type of the **C1\_EXP\_OVRD** feature configuration to **Y**, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the **Expire Override Switch** option type of the **C1\_EXP\_OVRD** feature configuration to **N**.

The system allows you to define the following types of pricing:

- Flat Pricing
- Tiered Pricing

For more information about the types of pricing, see [Types of Pricing](#) on page 209.

The price for a price item or service may differ depending upon various transaction, customer or account attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. This multi parameter based pricing feature enables the price analyst to define price item and its parameters which influence pricing. You can then define pricing for the price item based on these parameters. Bundles are offered to customers to provide discounted rates. You can also define pricing for bundles based on multiple parameters. To enable the multi parameter based pricing feature, you must set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration to **True**. For more information about the multi parameter based pricing feature, see [Multi Parameter Based Pricing](#) on page 209.

## Types of Pricing

The system allows you to define the following types of pricing:

- **Flat Pricing** — Used when you want to charge a fixed price per unit to the customer.
- **Tiered Pricing** — Used when standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization. For example, CG Limited uses wire transfer services provided by a large bank. If CG Limited initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If CG Limited initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, the following tiered pricing is defined:

Quantity Range	Rate (\$) per transfer
0 – 1000	5
1000+	3

You can define two types of tiered pricing:

- **Step Tiered Pricing** — The rate of the first tiering range is used to calculate the charge for the maximum quantity in the range, and for incremental service quantity utilization, the rate of the progressive tiering range is used. This happens till the utilized quantity is exhausted. For example, when you define the following step tiered pricing for Price Item A and the user consumes 60,000 units of the same, the system will charge the first 45,000 units at \$2 per unit and the remaining 15,000 units at \$1 per unit:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

- **Threshold Tiered Pricing** — The rate of the tiering range within which the service quantity utilization falls is used to calculate the charge for the entire volume. For example, when you define the following threshold tiered pricing for Price Item A and the user consumes 75,000 units of the same, the system will charge 75,000 units at \$1 per unit as the service quantity utilization falls within 45000+ tiering range:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

## Multi Parameter Based Pricing

Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. You can also define pricing for bundles based on multiple parameters. You can enable or disable the multi parameter based pricing feature by setting the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration. For more information, see [Setting the C1\\_PPARM\\_FLG Feature Configuration](#) on page 2363.

If the multi parameter based pricing feature is disabled, you can define pricing for a price item based on the variance parameter. If the multi parameter based pricing feature is enabled, you can define pricing for a price item based on multiple parameters. For example:

Price Item A	Country	Currency
Pricing 1	US	USD

Price Item A	Country	Currency
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Price Item A based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price item (i.e. Price item A).

Then, when you define Pricing 1 for Price item A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item A	US, USD		0	5000
20	1	Number of Transactions	Price Item A	US, USD		5000	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Price Item A	Germany, USD		0	1000
20	3	Number of Transactions	Price Item A	Germany, USD		1000	

Now, when the user performs 1500 transactions (in USD) of Price Item A in Germany, 12000 transactions (in USD) of Price Item A in US, the system creates two billable charges. In one billable charge (with Price Item A, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Price Item A, Germany and USD combination), the system uses \$3 as the rate for calculating charges.

Note that in this case the parameters based on which you have defined pricing and tiering ranges are same. You can use different parameters while defining pricing and tiering ranges, if required. You can also use another price item or bundle and its parameters while defining tiering ranges. For example:

The following table lists the tiering ranges of Pricing 1 defined for Price Item A where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item B	Germany, USD		0	100
20	1	Number of Transactions	Price Item B	Germany, USD		100	200
30	0.5	Number of Transactions	Price Item B	Germany, USD		200	

Now, when the user performs 1500 transactions (in USD) of Price Item A in US, 200 transactions (in USD) of Price Item B in Germany, the system creates one billable charge. The system adds the transactions with the following combinations and then determines the range of Price Item A within which the total units (i.e. 200) fall:

- Price Item B, Germany, USD

In this case, the total units fall in the 100 – 200 range of Price Item A, and therefore the system uses \$1 as the rate for calculating charges (i.e.  $1500 * 1 = 1500$ ).

Some parameters might be mandatory and some might be optional while defining price item pricing. You can define price item pricing based on these parameters at various levels, such as:

- Account Agreed
- Account Price List
- Account Inherited Price List
- Customer Agreed
- Customer Price List
- Customer Inherited Price List
- Parent Customer Agreed
- Parent Customer Price List
- Parent Customer Inherited Price List
- Default Price List
- Global Price List

As prices can be defined at multiple levels, the system first searches for exact match at all levels (using the search order). If the system finds the exact match at multiple levels, the price assignment at the higher precedence level is considered. Let us understand this with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters at the Account Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 2 is defined for Price Item A with the following parameters at the Parent Customer Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters at the Account Price List level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	—

Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system searches for price with exact match (Type — BT, Country — US, and Currency — USD). The exact match is available at two levels — Account Agreed and Parent Customer Agreed. The system considers the price at the Account Agreed level because this level has higher precedence.

Depending on the search order defined for the division (to which the account belongs), the level with higher precedence changes. Accordingly, the price assignment at the higher precedence level is considered for calculating the charges.

If the system does not find the exact match at any level, it searches for the best fit match at all levels. Let us understand how the best fit match is determined with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	-

Pricing 2 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	-

Pricing 4 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	GBP

The system has Pricing 1, Pricing 2, Pricing 3, and Pricing 4 defined for Price Item A. Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system does not find price with exact match (Type — BT, Country — US, and Currency — USD). Therefore, it searches for the best fit match.

While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Currency) and checks whether the price (with Type — BT and Country — US) is available. If the price is available, the system considers the price as the best fit match. Therefore, in this case, Pricing 1 is considered as the best fit match.

Suppose, if the price (with Type — BT and Country — US) is not available, then the system rules out the optional parameter with next lowest priority (i.e. Country) and checks whether the price (with Type — BT and Currency — USD) is available. If the price is available, the system considers the price as the best fit match. In this case, Pricing 2 would be considered as the best fit match. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered.

## Price Assignment Search Mechanism

The price assignment search algorithm searches effective price item pricing based on the following parameters:

- **Search Order** — Used to indicate the order in which the system must search effective price item pricing at various levels in the customer hierarchy. This is a mandatory parameter. The valid values are:

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_PRICELIST	<ol style="list-style-type: none"> <li>1. <b>Account Agreed</b> — Means price item pricing is agreed for the account in the hierarchy.</li> <li>2. <b>Account Price List</b> — Means price item pricing is defined within the price list which is assigned to the account.</li> <li>3. <b>Account Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account.</li> <li>4. <b>Customer Agreed</b> — Means price item pricing is agreed for the customer in the hierarchy.</li> <li>5. <b>Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the customer.</li> <li>6. <b>Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer.</li> <li>7. <b>Parent Customer Agreed</b> — Means price item pricing is agreed for the parent customer in the hierarchy.</li> <li>8. <b>Parent Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the parent customer.</li> <li>9. <b>Parent Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.</li> </ol>

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_FIRST	<ol style="list-style-type: none"> <li>1. <b>Account Agreed</b> — Means price item pricing is agreed for the account in the hierarchy.</li> <li>2. <b>Customer Agreed</b> — Means price item pricing is agreed for the customer in the hierarchy.</li> <li>3. <b>Parent Customer Agreed</b> — Means price item pricing is agreed for the parent customer in the hierarchy.</li> <li>4. <b>Account Price List</b> — Means price item pricing is defined within the price list which is assigned to the account.</li> <li>5. <b>Account Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account.</li> <li>6. <b>Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the customer.</li> <li>7. <b>Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer.</li> <li>8. <b>Parent Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the parent customer.</li> <li>9. <b>Parent Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.</li> </ol>

**Note:** In these price assignment search orders, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.

- **Default Price List ID** — Used to indicate the default price list. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list.
- **Global Price List** — Used to indicate whether the system should consider the price item pricing defined in the global price list. If the effective price item pricing is not available in the default price list or if the default price list is not specified in the price assignment search algorithm, the system checks whether it should consider the price item pricing defined in the global price list. The valid values are:

- Y
- N

Finally, if the effective price item pricing is not available in either default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.

- **Prefer Price Item Over Bundle** — Used to indicate whether to prefer price item, regular bundle, or parent bundle pricing when the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) are assigned at the same level. The valid values are:

- Y
- N

If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

- **Person Relationship Type Sequence Algorithm** — Used to attach an algorithm which is defined using the C1-CUSRLALGT algorithm type. The attached algorithm is used while searching effective price item pricing at the parent customer level. It indicates whether the system should search person to person relationship type sequence defined:
  - For the division, price item, and price item parameters combination
  - For the division
  - In the C1\_PER\_REL feature configuration

### Related Topics

For more information on...	See...
Person to Person Relationship Type Sequence	<a href="#">Person Relationship Type Sequence</a> on page 215

## Person Relationship Type Sequence

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

Sequence Number	Relationship Type
10	Subsidiary
20	Franchise Owner

In the above example, the system will inherit effective price item pricing (if available) from Parent 1 or within its hierarchy. If the effective price item pricing is not available in the Parent 1 hierarchy, the system will inherit effective price item pricing (if available) from Parent 2 or within its hierarchy. If the effective price item pricing is not available in the Parent 2 hierarchy, an error message occurs indicating that the effective price item pricing is not available.

While searching effective pricing at the parent customer level based on the person to person relationship type sequence, the system will use the depth first search mechanism. Let us understand this with the help of an example.

Person To Person Relationship Type Sequence	
Sequence Number	Relationship Type
10	Subsidiary (S)
20	Branch (B)
30	Franchise Owner (F)

In the above example, if the effective pricing is not available at the account or customer level, the system will search effective pricing at the parent customer level in the following order:

- P1 (because the first relationship type in the sequence is Subsidiary)
- P2 (grandparent of P1 irrespective of the relationship type)
- P3 (because the second relationship type in the sequence is Branch)
- P4 (because the second relationship type in the sequence is Branch)
- P6 (grandparent of P4 irrespective of the relationship type)
- P5 (because the third relationship type in the sequence is Franchise Owner)

The system provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1\_PER\_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration and accordingly search the effective price item pricing at the parent customer level.

To enable the system to search person to person relationship type sequence at different levels, you need to create an algorithm of the C1-CUSRLALGT algorithm type and attach it to the **Person Relationship Type Sequence Algorithm** parameter in the price assignment search algorithm. The C1-CUSRLALGT algorithm type has the following parameters:

- **Check on Division, Price Item and Price Item Parameters Combination** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division, price item, and price item parameters combination. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Division** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Feature Configuration** – Used to indicate whether you want the system to consider the person to person relationship type sequence defined in the **C1\_PER\_REL** feature configuration. This is a mandatory parameter. The valid values are:

- **A** – Used when you want to consider all person to person relationship types defined in the feature configuration (in the specified sequence).
- **F** – Used when you want to only consider the person to person relationship type defined with the lowest sequence in the feature configuration.
- **N** – Used when you do not want to consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration.

By default, the value is set to **F**.

## Pricing Eligibility

Oracle Revenue Management and Billing enables you to define pricing eligibility criteria using the account, person, and product attributes while defining a price item pricing. For example, a bank offers a product named 12 Month Standard Certificate of Deposit (CD). The interest rate charged to a person for this product differs based on two parameters – Deposit Amount and Person Type (Preferred and Non-Preferred). The following table lists the interest rates offered for the 12 Month Standard Certificate of Deposit (CD) product:

Deposit Amount	Non-Preferred	Preferred
Less than \$5,000	0.13%	0.20%
Greater than \$5,000	0.15%	0.22%

Earlier, you were able to define different interest rates based on different parameters using the rate eligibility feature at the rate component level. Considering the above example, you had to define four rate components. The respective rate component would appear while defining price item pricing based on the following:

- The value defined for the **Deposit Amount** characteristic on the account

- The value defined for the **Customer Type** characteristic on the main customer

However, now, you can implement the above scenario using a single rate component instead of maintaining four different rate components. Now, while defining price item pricing, you need to define four different price components for a rate component. For each price component, you need to define the pricing eligibility criteria in the following manner:

Price Component	Rate	Pricing Criteria	Eligibility	If True	If False
P1	0.13%	Deposit Amount > 5000		Check Next Condition	Return False
P1	0.13%	Person Type = Non-Preferred		Return True	Return False
P2	0.15%	Deposit Amount < 5000		Check Next Condition	Return False
P2	0.15%	Person Type = Non-Preferred		Return True	Return False
P3	0.20%	Deposit Amount > 5000		Check Next Condition	Return False
P3	0.20%	Person Type = Preferred		Return True	Return False
P4	0.22%	Deposit Amount < 5000		Check Next Condition	Return False
P4	0.22%	Person Type = Preferred		Return True	Return False

You can define pricing eligibility criteria only when the appropriate parameters are created in the system. These parameters must be mapped to either of the following:

- Account attributes, characteristics, usage amounts, or usage counters
- Person attributes, characteristics, usage amounts, or usage counters
- Product attributes or characteristics
- Service Quantity Identifier
- Custom algorithm which returns the appropriate value

In the above example, you can define the pricing eligibility criteria only when the following parameters are defined in the system:

Parameter	Source Entity	Source Type	Source Type Code	Value Type
Deposit Amount	Account	Usage Amount	Deposit Amount	Adhoc
Customer Type	Person	Characteristic	Person Type	Predefined

You can define pricing eligibility criteria for rate components whose tiering type is set to **Flat**, **Threshold**, or **Step**. Each criterion in the pricing eligibility criteria is executed in the specified sequence. If the value of the pricing eligibility criteria is **True**, the rate of the respective price component is passed to the rate component for further calculations.

## Persisting Interest Rate for Rate Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**.

#### Related Topics

For more information on...	See...
Repricing	<a href="#">Repricing</a> on page 219

## Persisting Fee for Fee Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate
- Fees

The input elements Pricing Frequency, Advance Pricing should be populated if **Price Item** is available for **Pricing Only**, **Price Item Type** is **Fees** and **Price Assignment Type** is **Post-Processing**.

If the type of a price item is **Fee**, the system calculates and persist the fee for the price item.

**Note:** The **Process Fees Request and Persist Fees for an Account (C1-ACFEE)** batch is used to calculate and persist the fees for the account. It must be executed when a user wants to store fees.

## Repricing

If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**. The **Repricing** process is triggered in the following scenarios when:

- You edit the attributes and characteristics of an account.
- You add or delete the usage amount and counter details of an account.
- You edit the attributes and characteristics of a person.
- You add or delete the usage amount and counter details of a person.
- You define or edit the price item pricing of an active price list which is assigned to an account or a person.
- You define, edit, override, or copy the price item pricing of an account or a person.
- You assign a price list to an account or a person, or edit the price list assignment details of an account or a person.

The system behaves in the following manner in the above scenarios:

Scenario	System Behaviour
On editing the attributes and characteristics of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the account attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> On editing the account attributes, the effective date is set to the date when you edit the account attributes. However, on editing the account's characteristic, the effective date is set to the date from when the characteristic is effective for the account.</p>
On adding or deleting the usage amount and counter details of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> The effective date is set to the date from when the usage amount or counter is effective for the account.</p>
On editing the attributes and characteristics of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the person attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>On editing the person attributes, the effective date is set to the date when you edit the person attributes. However, on editing the person's characteristic, the effective date is set to the date from when the characteristic is effective for the person.</p>

Scenario	System Behaviour
<p>On adding or deleting the usage amount and counter details of a person</p>	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <div data-bbox="605 514 1461 735" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The effective date is set to the date from when the usage amount or counter is effective for the person.</p> </div>
<p>On assigning a price list to an account or editing the price list assignment details of an account</p>	<p>The system creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date.</li> <li>• If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date.</li> </ul> <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day.</li> <li>• If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day.</li> </ul> <p>On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <div data-bbox="605 1612 1461 1690" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p> </div>

Scenario	System Behaviour
<p>On assigning a price list to a person or editing the price list assignment details of a person</p>	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date.</li> <li>• If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date.</li> </ul> <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day.</li> <li>• If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> If the Price List Assignment Start Date and Price List Assignment End Date are earlier than the current date, repricing requests for the accounts are not created in the <b>CI_REPRC_REQ_DTL</b> table.</p> </div> <p>On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p> </div>
<p>On defining, editing, overriding, or copying the price item pricing of an account</p>	<p>The system creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p> </div>

Scenario	System Behaviour
On defining, editing, overriding, or copying the price item pricing of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <div data-bbox="605 514 1466 741" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p> </div>
On defining or editing the price item pricing of an active price list which is assigned to an account or a person	<p>The system creates an entry for the price item pricing in the <b>CI_REPRC_ENTITY_DTL</b> table. On executing the <b>Identify Accounts for Repricing (C1-REPC1)</b> batch, the system identifies the following in the specified order:</p> <ol style="list-style-type: none"> <li>1. Price list on which the price item pricing is assigned</li> <li>2. Account or Person on which the price list is assigned</li> <li>3. All accounts which belong to the person and its child persons when the price list is assigned to a person</li> </ol> <p>Once the accounts are identified, the system checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, a repricing request is created for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <div data-bbox="605 1465 1466 1549" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Only accounts where the person and child person are the main customers are considered for repricing.</p> </div>

For more information about the **Identify Accounts for Repricing (C1-REPC1)** and **Process Repricing Request and Persist Pricing for an Account (C1-REPC2)** batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

To enable the repricing feature, you need to do the following:

- Define an algorithm using the **C1-REPRCACCT** algorithm type and attach it to the **Audit** algorithm spot of the **C1-AccountBO** business object
- Define an algorithm using the **C1-REPRCACBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-ACCBALCNT** business object

- Define an algorithm using the **C1-REPRCPERS** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PERSON\_BO** business object
- Define an algorithm using the **C1-REPRCPPEBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-PERBALCNT** business object
- Define an algorithm using the **C1\_PLASGNAUD** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PLASGNADD** and **C1\_PLASGNEDIT** business objects
- Define an algorithm using the **C1-PRCASGNAD** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PRICEASGN\_BO** business object
- Define an algorithm using the **C1-REPRCPPLPA** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PRICEASGN\_BO** business object
- Define the required parameters for the account and person attributes, characteristics, usage amount and usage counter

## Two-Dimensional Pricing

---

Oracle Revenue Management and Billing enables you to define two-dimensional pricing for a price item. In the two-dimensional pricing, you can offer rates based on utilization of two service quantity identifiers (SQIs). For example, the rate for a price item can vary for each customer depending on the number of ATM transactions and current monthly balance as shown below: Current Monthly Balance Number of ATM Transactions 0-25 25-50 50-75 75-100 0-10000 2 1.9 1.8 1.7 10000-50000 1.6 1.5 1.4 1.3 50000-100000 1.2 1.1 1.0 0.9 100000-500000 0.8 0.7 0.6 0.5 The system allows you to define two-dimensional pricing in a grid which has X-axis and Y-axis. Both, the X-axis and Y-axis should contain service quantity identifiers (SQIs). The two-dimensional pricing is composed of threshold and step tiered pricing. The X-axis is a threshold tier and Y-axis is a step tier. On creating two-dimensional pricing, one price component is created for each X-axis and Y-axis combination. The step tier is stored as the tiering range whereas the threshold tier is stored as the eligibility criteria in the price component. Note that the tiering ranges and eligibility criteria are automatically created in the price component. You cannot manually add a tiering range and eligibility criteria in the price component. You can define two-dimensional pricing only when the tiering type of the rate components in the rate schedule is set to STEP. A new field named Pricing Rule Type is added in the Price Item Pricing screen. If you select the Two-Dimensional option from the Pricing Rule Type list, you can define two-dimensional pricing for the price item. However, if you do not select the Two-Dimensional option from the Pricing Rule Type list, you can define traditional flat, step, or tiered pricing for the price item. Besides selecting the Two-Dimensional option from the Pricing Rule Type list, you also need to select the Pricing Eligibility option while defining the two-dimensional pricing for the price item.

## Types of Price Item Bundle

---

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 224
- [Phantom Bundle](#) on page 228
- [Ratio Bundle](#) on page 226

### Regular Bundle

In case of a regular bundle, pricing is defined at the bundle level. The system determines the rate by identifying the tiering range within which the total service quantities used for all price items in the bundle fall. Note that the rate is determined from the tiering range of the price component whose pricing eligibility criteria is met. Let us understand this with the help of an example.

Bundle X, which is a regular bundle, contains the following three price items:

- Price Item A

- Price Item B
- Price Item C

The following tiered pricing is defined for Bundle X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 4000	2
4001 – 8000	1

**Note:** In the above example, the assumption is that there only one rate component, one price component within the rate component, and pricing eligibility criteria is not defined for the price component.

Now, when the user consumes 1500 units of Price Item A, 1000 units of Price Item B, and 2000 units of Price Item C, the system adds the quantities of services used for all price items in Bundle X (i.e. 1500+1000+2000=4500), and then determines the range within which the total units (i.e. 4500) fall. In this case, the total units fall in the 4001 – 8000 range, and therefore the system uses \$1 as the rate for calculating charges.

If the multi parameter based pricing feature is enabled, you can define pricing for regular bundles based on multiple parameters. For example:

Bundle X	Country	Currency
Pricing 1	US	USD
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Bundle X based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the regular bundle (i.e. Bundle X) and then add price items (i.e. Price Item A, Price Item B, and Price Item C) to the bundle. Note that you can add a price item to a regular bundle only when the regular bundle and price item have same parameters associated with them for the specified date range. Therefore, before adding Price Item A, Price Item B, and Price Item C to Bundle X, you should ensure that Country and Currency are also associated with these price items.

Then, when you define Pricing 1 for Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Bundle X	US, USD		0	500
20	1	Number of Transactions	Bundle X	US, USD		500	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Bundle X	Germany, USD		0	1000
20	3	Number of Transactions	Bundle X	Germany, USD		1000	

Now, when the user performs 500 transactions (in USD) of Bundle X in Germany, 1200 transactions (in USD) of Bundle X in US, the system creates two billable charges. In one billable charge (with Bundle X, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Bundle X, Germany and USD combination), the system uses \$4 as the rate for calculating charges.

## Ratio Bundle

In case of a ratio bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle.

A ratio expresses the magnitude of quantities relative to each other. It has two factors — Numerator and Denominator. For ratio bundle, the ratio of price item quantities is used to determine the rate for volume based pricing. To determine within which range of ratio limit does the price item utilization falls, the ratio of price item quantities is used. Once the range limits are determined, the rate specified for that range is applied to the quantity of the price item used. Let us understand this with the help of an example.

Bundle X, which is a ratio bundle, contains the following price items:

- **Price Item A** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	4
0.6 – 0.9	3
0.9+	2

- **Price Item B** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	5
0.6 – 0.9	4
0.9+	3

- **Price Item C** — It has been added to the bundle using the price item relationship type as Denominator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	3
0.6 – 0.9	2
0.9+	1

Now, when the user consumes 500 units of Price Item A, 2500 units of Price Item B, and 4000 units of Price Item C, the system calculates the ratio of price item quantities (i.e.  $(500+2500)/4000=0.75$ ). Once the ratio is calculated, the system determines the range of each price item within which the ratio (i.e. 0.75) falls. In this case, the ratio falls in the 0.6 – 0.9 range of Price Item A, B, and C. Therefore, the system uses \$3, \$4, and \$2, respectively, as the rate for calculating charges (i.e.  $(500*3)=1500$ ,  $(2500*4)=10000$ , and  $(4000*2)=8000$ ).

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a ratio bundle based on multiple parameters. For example:

Bundle X	Country	Currency
Price Item A	US	USD

<b>Bundle X</b>	<b>Country</b>	<b>Currency</b>
Price Item B	Germany	USD
Price Item C	England	USD

Price Item A, Price Item B, and Price Item C are added in Bundle X. Price Item A, Price Item B, and Price Item C utilization in Bundle X is determined based on two parameters — Country and Currency. Before you add price item to a ratio bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item A, Price Item B, and Price Item C) and then add these price items to the bundle (i.e. Bundle X).

While adding Price Item A to Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Price Item B to Bundle X with Country set to Germany and Currency set to USD, and Price Item C with Country set to England and Currency set to USD.

The following table lists the tiered pricing defined for Price Item A:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	5	Number of Transactions	Bundle X			0	1.75
20	4	Number of Transactions	Bundle X			1.75	2.50
30	3	Number of Transactions	Bundle X			2.50	

The following table lists the tiered pricing defined for Price Item B:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	5	Number of Transactions	Bundle X			0	3.5
20	4	Number of Transactions	Bundle X			3.5	

The following table lists the tiered pricing defined for Price Item C:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	2	Number of Transactions	Bundle X			0	2.0
20	1	Number of Transactions	Bundle X			2.0	

Now, when the user performs 5000 transactions (in USD) of Price Item A in US, 6000 transactions (in USD) of Price Item B in Germany, and 5000 transactions (in USD) of Price Item C in England, the system creates three billable charges — one for each price item (i.e. Price Item A, Price Item B, and Price Item C). The system calculates the ratio of transactions with the following combinations and then determines the range of each price item within which the ratio (i.e. 2.2) falls:

- Price Item A, US, USD
- Price Item B, Germany, USD
- Price Item C, England, USD

In this case, the ratio falls in the 1.75 – 2.50 range of Price Item A, the 0 – 3.5 range of Price Item B, and in the 2.0 — Infinite range of Price Item C. Therefore, the system uses \$4, \$5, and \$1 as the rate for calculating charges (i.e.  $(5000*4)=20000$  ,  $(6000*5)=30000$  , and  $(5000*1)=5000$ ).

You can also add a price item more than once in a ratio bundle with different set of parameters. For example:

Bundle X	Relationship Type	Country	Currency
Price Item A	Numerator	US	USD
Price Item A	Numerator	England	USD
Price Item B	Numerator	Germany	USD
Price Item C	Denominator	England	USD
Price Item C	Denominator	US	USD

In this case, the system calculates the ratio of transactions with the following combinations and then determines the range of each price item (i.e. Price Item A, Price Item B, and Price Item C) within which the ratio falls:

- Price Item A, US, USD
- Price Item A, England, USD
- Price Item B, Germany, USD
- Price Item C, England, USD
- Price Item C, US, USD

## Phantom Bundle

In case of a phantom bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle. The system determines the price by identifying the tiering range of each price item within which the total quantities of services used for all price items in the bundle fall. Let us understand this with the help of an example.

Bundle A, which is a phantom bundle, contains the following two price items:

- **Price Item X** — The following tiered pricing is defined for Price Item X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 6000	2

- **Price Item Y** — The following tiered pricing is defined for Price Item Y:

Quantity Range	Rate (\$) per unit
1 – 5000	2
5001 – 10000	1

Now, when the user consumes 2500 units of Price Item X and 3500 units of Price Item Y, the system adds the quantities of services used for all price items in Bundle A (i.e.  $2500+3500=6000$ ), and then determines the range of each price item within which the total units (i.e. 6000) fall. In this case, the total units fall in the 3001 – 6000 range of Price Item X and the 5001 – 10000 range of Price Item Y, and therefore the system uses \$2 and \$1, respectively, as the rate for calculating charges (i.e.  $(2500*2)=5000$  and  $(3500*1)=3500$ ). This helps the customer to take advantage of the lowest rate.

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a phantom bundle based on multiple parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item Y	Germany	USD

Price Item X and Price Item Y are added in Bundle A. Price Item X and Price Item Y utilization in Bundle A is determined based on two parameters — Country and Currency. Before you add price item to a phantom bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item X and Price Item Y) and then add these price items to the bundle (i.e. Bundle A).

While adding Price Item X to Bundle A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Product Y to Bundle A with Country set to Germany and Currency set to USD.

The following table lists the tiered pricing defined for Price Item X:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	3	Number of Transactions	Bundle A			0	5000
20	2	Number of Transactions	Bundle A			5000	10000
30	1	Number of Transactions	Bundle A			10000	

The following table lists the tiered pricing defined for Price Item Y:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle A			0	5000
20	4	Number of Transactions	Bundle A			5000	

Now, when the user performs 5000 transactions (in USD) of Price Item Y in Germany, 6000 transactions (in USD) of Price Item X in US, the system creates two billable charges — one for Price Item X and another for Price Item Y. The system adds the transactions with the following combinations and then determines the range of each price item within which the total units (i.e. 11000) fall:

- Price Item X, US, USD
- Price Item Y, Germany, USD

In this case, the total units fall in the 10000 – Infinite range of Price Item X and the 5000 – Infinite range of Price Item Y, and therefore the system uses \$1 and \$4, respectively, as the rate for calculating charges (i.e.  $(5000*4)=20000$  and  $(6000*1)=6000$ ).

You can also add a price item more than once in a phantom bundle with different set of parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item X	Germany	USD
Price Item Y	Germany	USD
Price Item Y	US	USD

In this case, the system adds the transactions with the following combinations and then determines the range of each price item (i.e. Price Item X and Price Item Y) within which the total units fall:

- Price Item X, US, USD
- Price Item X, Germany, USD
- Price Item Y, Germany, USD

- Price Item Y, US, USD

## Parameter

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQI, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI\_COUNTRY\_L** (i.e. where the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI\_COUNTRY\_L** table in the parameter value.

## Parameter (Used for Searching)

The **Parameter** screen allows you to define, edit, delete and copy a parameter. It contains the following zone:

- [Search Parameter](#) on page 230

### Search Parameter

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
Value Type	Used to search parameters in which you can store a particular type of value. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>	No
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul>	No
Description	Used to search parameters with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter name.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>
Description	Displays the description of the parameter.

Column Name	Column Description
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul>
View	On clicking the <b>View</b> (  ) icon, the <b>Parameter</b> screen appears where you can view the details of the parameter.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Parameter</b> screen appears where you can edit the details of the parameter.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the parameter. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>You can delete a parameter only when the following conditions are met:</p> <ul style="list-style-type: none"> <li>• It is not yet associated to any price item or price item bundle.</li> <li>• It is not yet used while defining the pricing, price list, or product eligibility criteria.</li> </ul> </div>
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Parameter</b> screen appears where you can define a new parameter using an existing parameter.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for a Parameter

### Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.  
The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of parameters that meet the search criteria appears in the **Search Results** section.

## Defining a Parameter

### Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

### Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

### Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.

- From the **Admin** menu, select **P** and then click **Parameter**.

The **Parameter** screen appears.

- Click the **Add** button in the **Page Title** area of the **Parameter** screen.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.  <b>Note:</b> You cannot specify any special character except underscore (_) in the parameter name.	Yes
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul> <b>Note:</b> This field appears only when the <b>Account</b> , <b>Person</b> , or <b>Product</b> option is selected from the <b>Source Entity</b> list. The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list.	Yes
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Validation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Reference Entity</b> field. On clicking the <b>Search</b> icon, the <b>Reference Table Search</b> window appears.</p> <p>You can only specify a language table, where the <b>DESCR</b> column is available, in the <b>Reference Entity</b> field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.  <b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Yes
Description	Used to specify the description for the parameter value.	Yes

**Note:**

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)																
Price Item	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p><b>Note:</b> The following table lists the source entity and source type combinations when the <b>Price Item</b> option is disabled in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="542 562 1263 814"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="542 951 1263 1098"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Quantity Identifier</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—	<p>Yes (Conditional)</p> <p><b>Note:</b> You must select this option when you want to associate the parameter with a price item.</p>
Source Entity	Source Type																	
Account	Usage Amount																	
Account	Usage Counter

Algorithm	—																	
Service Quantity Identifier	—																	
Pricing Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> You must select this option when you want to define a pricing eligibility criteria using the parameter.</p>																
Price List Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> You must select this option when you want to define a price list eligibility criteria using the parameter.</p>																

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.  <b>Note:</b> This option does not appear when the <b>Algorithm</b> , <b>Service Quantity Identifier</b> , or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	Yes (Conditional)  <b>Note:</b> You must select this option when you want to define a product eligibility criteria using the parameter.

**Note:** You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.

The parameter is defined.

**Note:** If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

### Editing a Parameter

#### Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

#### Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

#### Procedure

To edit a parameter:

- Search for the parameter in the **Parameter** screen.

2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the parameter whose details you want to edit.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter name.	Not applicable
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>This field appears only when you select the <b>Account</b>, <b>Person</b>, or <b>Product</b> option from the <b>Source Entity</b> list.</p> <p>The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list.</p> </div>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>	Not applicable
Source Type Code	Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQL, or algorithm, from where the parameter value should be derived.	Yes

Field Name	Field Description	Mandatory (Yes or No)																																				
	<p><b>Note:</b></p> <p>This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p> <p>The following table indicates the values that are listed in the <b>Source Type Code</b> field depending on the source entity and source type combination:</p> <table border="1" data-bbox="480 506 1203 1650"> <thead> <tr> <th data-bbox="480 506 662 583">Source Entity</th> <th data-bbox="667 506 841 583">Source Type</th> <th data-bbox="846 506 1203 583">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="480 590 662 699">Account</td> <td data-bbox="667 590 841 699">Characteristic</td> <td data-bbox="846 590 1203 699">Lists all characteristics where the characteristic entity is set to <b>Account</b>.</td> </tr> <tr> <td data-bbox="480 705 662 783">Account</td> <td data-bbox="667 705 841 783">Field</td> <td data-bbox="846 705 1203 783">Lists all fields of the <b>CI_ACCT</b> table.</td> </tr> <tr> <td data-bbox="480 789 662 867">Account</td> <td data-bbox="667 789 841 867">Usage Amount</td> <td data-bbox="846 789 1203 867">Lists all values defined for the <b>BAL_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="480 873 662 951">Account</td> <td data-bbox="667 873 841 951">Usage Counter</td> <td data-bbox="846 873 1203 951">Lists all values defined for the <b>CNT_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="480 957 662 1066">Person</td> <td data-bbox="667 957 841 1066">Characteristic</td> <td data-bbox="846 957 1203 1066">Lists all characteristics where the characteristic entity is set to <b>Person</b>.</td> </tr> <tr> <td data-bbox="480 1073 662 1150">Person</td> <td data-bbox="667 1073 841 1150">Field</td> <td data-bbox="846 1073 1203 1150">Lists all fields of the <b>CI_PER</b> table.</td> </tr> <tr> <td data-bbox="480 1157 662 1234">Person</td> <td data-bbox="667 1157 841 1234">Usage Amount</td> <td data-bbox="846 1157 1203 1234">Lists all values defined for the <b>BAL_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="480 1241 662 1318">Person</td> <td data-bbox="667 1241 841 1318">Usage Counter</td> <td data-bbox="846 1241 1203 1318">Lists all values defined for the <b>CNT_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="480 1325 662 1434">Product</td> <td data-bbox="667 1325 841 1434">Characteristic</td> <td data-bbox="846 1325 1203 1434">Lists all characteristics where the characteristic entity is set to <b>Product</b>.</td> </tr> <tr> <td data-bbox="480 1440 662 1507">Product</td> <td data-bbox="667 1440 841 1507">Field</td> <td data-bbox="846 1440 1203 1507">Lists all fields of the <b>CI_PRODUCT</b> table.</td> </tr> <tr> <td data-bbox="480 1514 662 1650">Service Quantity Identifier</td> <td data-bbox="667 1514 841 1650">—</td> <td data-bbox="846 1514 1203 1650">Lists all service quantity identifiers available in the <b>CI_SQI</b> table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Account	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Account</b> . Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Validation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Reference Entity</b> field. On clicking the <b>Search</b> icon, the <b>Reference Table Search</b> window appears.</p> <p>You can only specify a language table, where the <b>DESCR</b> column is available, in the <b>Reference Entity</b> field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.  <b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Yes
Description	Used to specify the description for the parameter value.	Yes

**Note:**

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

You cannot delete a predefined parameter value which is already used in the system.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)																
Price Item	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p><b>Note:</b> The following table lists the source entity and source type combinations when the <b>Price Item</b> option is disabled in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="581 590 1107 842"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="581 1010 1107 1192"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Identifier</td> <td>Quantity</td> </tr> </tbody> </table>	Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—	Service Identifier	Quantity	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to associate the parameter with a price item.</p>
Source Entity	Source Type																	
Account	Usage Amount

Pricing Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to define a pricing eligibility criteria using the parameter.</p>																
Price List Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to define a price list eligibility criteria using the parameter.</p>																

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.  <b>Note:</b> This option does not appear when the <b>Algorithm</b> , <b>Service Quantity Identifier</b> , or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you want to define a product eligibility criteria using the parameter.

**Note:**  
You must select at least one option in the **Parameter Usage** section.  
  
If the parameter is already associated to a price item or used while defining the pricing, price list, or product eligibility criteria, you cannot deselect the respective option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

#### **Related Topics**

For more information on...	See...
How to search for a parameter	<a href="#">Searching for a Parameter</a> on page 233

#### **Deleting a Parameter**

##### **Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

**Note:**

You can delete a parameter only when the following conditions are met:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, price list, or product eligibility criteria.

3. Click **OK**.

The parameter is deleted.

## Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with other parameter details. You can then edit the details, if required.

**Note:** You cannot change the type of value that you can store in the new parameter (which is created using an existing parameter).

### Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

### Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

### Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> You cannot specify any special character except underscore (_) in the parameter name.</div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>This field appears only when you select the <b>Account</b>, <b>Person</b>, or <b>Product</b> option from the <b>Source Entity</b> list.</p> <p>The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list.</p> </div>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)																																				
Source Type Code	<p>Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.</p> <p><b>Note:</b></p> <p>This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p> <p>The following table indicates the values that are listed in the <b>Source Type Code</b> field depending on the source entity and source type combination:</p> <table border="1" data-bbox="451 575 1243 1686"> <thead> <tr> <th data-bbox="451 575 651 625">Source Entity</th> <th data-bbox="651 575 878 625">Source Type</th> <th data-bbox="878 575 1243 625">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="451 625 651 741">Account</td> <td data-bbox="651 625 878 741">Characteristic</td> <td data-bbox="878 625 1243 741">Lists all characteristics where the characteristic entity is set to <b>Account</b>.</td> </tr> <tr> <td data-bbox="451 741 651 825">Account</td> <td data-bbox="651 741 878 825">Field</td> <td data-bbox="878 741 1243 825">Lists all fields of the <b>CI_ACCT</b> table.</td> </tr> <tr> <td data-bbox="451 825 651 909">Account</td> <td data-bbox="651 825 878 909">Usage Amount</td> <td data-bbox="878 825 1243 909">Lists all values defined for the <b>BAL_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="451 909 651 993">Account</td> <td data-bbox="651 909 878 993">Usage Counter</td> <td data-bbox="878 909 1243 993">Lists all values defined for the <b>CNT_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="451 993 651 1108">Person</td> <td data-bbox="651 993 878 1108">Characteristic</td> <td data-bbox="878 993 1243 1108">Lists all characteristics where the characteristic entity is set to <b>Person</b>.</td> </tr> <tr> <td data-bbox="451 1108 651 1192">Person</td> <td data-bbox="651 1108 878 1192">Field</td> <td data-bbox="878 1108 1243 1192">Lists all fields of the <b>CI_PER</b> table.</td> </tr> <tr> <td data-bbox="451 1192 651 1276">Person</td> <td data-bbox="651 1192 878 1276">Usage Amount</td> <td data-bbox="878 1192 1243 1276">Lists all values defined for the <b>BAL_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="451 1276 651 1360">Person</td> <td data-bbox="651 1276 878 1360">Usage Counter</td> <td data-bbox="878 1276 1243 1360">Lists all values defined for the <b>CNT_FLG</b> lookup field.</td> </tr> <tr> <td data-bbox="451 1360 651 1476">Product</td> <td data-bbox="651 1360 878 1476">Characteristic</td> <td data-bbox="878 1360 1243 1476">Lists all characteristics where the characteristic entity is set to <b>Product</b>.</td> </tr> <tr> <td data-bbox="451 1476 651 1560">Product</td> <td data-bbox="651 1476 878 1560">Field</td> <td data-bbox="878 1476 1243 1560">Lists all fields of the <b>C1_PRODUCT</b> table.</td> </tr> <tr> <td data-bbox="451 1560 651 1686">Service Quantity Identifier</td> <td data-bbox="651 1560 878 1686">—</td> <td data-bbox="878 1560 1243 1686">Lists all service quantity identifiers available in the <b>CI_SQI</b> table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Account	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Account</b> . Yes (Conditional)  <b>Note:</b> This field is required when you want to define a product eligibility criteria using the parameter.

**Note:** You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.

The parameter is defined.

**Note:** If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

### Viewing the Parameter Details

#### Procedure

To view the details of a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the parameter whose details you want to view.

The **Parameter** screen appears.

- View the details of the parameter in the **Parameter** screen.

### Related Topics

How to search for a parameter	<a href="#">Searching for a Parameter</a> on page 233
<b>Parameter</b> screen	<a href="#">Parameter (Used for Viewing)</a> on page 252
<b>Parameter</b> zone	<a href="#">Parameters</a> on page 278

## Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- [Parameter](#) on page 252

### Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- Main** – Displays basic information about the parameter. It contains the following fields:

Field Name	Field Description
Parameter	Displays the parameter name.
Description	Displays the description of the parameter.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>
Validation Algorithm	Indicates the algorithm which is used to validate the adhoc parameter value. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.</p> </div>
Referenced Table	Indicates the table whose primary key (i.e. column) is used to validate the parameter value. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>It has a link. On clicking the link, the <b>Table</b> screen appears where you can view the details of the respective table.</p> </div>

Field Name	Field Description
Source Entity	<p>Indicates the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>
Source Type	<p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul> <p><b>Note:</b> This field appears only when the <b>Account</b>, <b>Person</b>, or <b>Product</b> option is selected from the <b>Source Entity</b> list.</p>
Source Type Code	<p>Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p><b>Note:</b> This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>

- **Parameter Usage** – Indicates where the parameter can be used in the system. It contains the following options:

Option Name	Option Description						
Price Item	<p>Indicates whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Quantity Identifier</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—
Source Entity	Source Type						
Algorithm	—						
Service Quantity Identifier	—						
Pricing Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the pricing eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>						

Option Name	Option Description
Price List Eligibility Criteria	Indicates whether the parameter can be used while defining the price list eligibility criteria.  <b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.
Product Eligibility Criteria	Indicates whether the parameter can be used while defining the product eligibility criteria.  <b>Note:</b> This option does not appear when the <b>Algorithm, Service Quantity Identifier, or Transaction</b> option is selected from the <b>Source Entity</b> list.

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns in the grid:

Column Name	Column Description
Parameter Value	Displays the parameter value.
Description	Displays the description of the parameter value.

**Note:** The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

## Price Item

A bank may offer wide range of services to customers and accordingly charge them fees and/or interest for a service. You can define each charge as a price item in Oracle Revenue Management and Billing. Once a price item is defined, you can define pricing for the price item. The price item pricing can be a standard price defined in the price list or override price that is specific to a person or an account. The system allows you to define price item pricing at various levels in a person hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define price item pricing in the account's price list, main customer's price list, parent customer's price list, and price list's parent price list.

You can associate one or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. You can also create a price item bundle and then add price items within the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items. While associating a price item with the parent price item or adding a price item to the price item bundle, you need to specify how the two price items are related to each other.

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 224
- [Phantom Bundle](#) on page 228
- [Ratio Bundle](#) on page 226

The system allows you to define price items and price item bundles which are available for only pricing or pricing and billing. If the price item is available for only pricing, you can indicate the type of the price item. The valid values are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to **Rate**. When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated with the price item or price item bundle.

You can associate a price item or price item bundle to one or more divisions. You can assign a price item or price item bundle to an account, person, or price list only when the account, person, or price list belongs to the division to which the price item or price item bundle is associated. You can define a set of characteristics for a price item or price item bundle which are common across divisions or specific to a division. You can associate one or more parameters to a price item. These parameters can then be used for aggregating transactions and defining the price item pricing. Note that you can associate parameters only to regular price item bundles and not to ratio and phantom price item bundles.

## Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It allows you to create and edit a price item or price item bundle. In addition, it allows you to copy a price item bundle only when **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **False**. This screen consists of the following zones:

- [Search Price Item](#) on page 255

### Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> <li>• Price Item Details</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>Price Item Details</b> option is selected.</div>	Yes
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search a price item or price item bundle with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item Usage	Used to search price items or price item bundles which can be used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> By default, the <b>Pricing and Billing</b> option is selected.</p> </div>	No
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> <li>• Fees</li> <li>• Rate</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.</p> </div>	No

**Note:** You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle. <div style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.</p> </div>

Column Name	Column Description
Bundle Type	<p>Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> <p>However, if the price item bundle is available for only pricing and the <b>Price Item Type</b> is set to <b>Fees</b>, the valid value is:</p> <ul style="list-style-type: none"> <li>• Regular</li> </ul>
Price Item Type	<p>Indicates the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>
Price Item Usage	<p>Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>
Copy	<p>On clicking the <b>Copy</b> () icon, the <b>Price Item</b> screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.</p>
Price Item Assigned To	<p>On clicking the <b>View</b> () icon in the <b>Price Item Assigned To</b> column, the <b>Price Item Assignments</b> screen appears where you can view the active price lists, persons, and accounts to which the price item or price item bundle is assigned.</p>
Price Item Relationship	<p>On clicking the <b>View</b> () icon in the <b>Price Item Relationship</b> column, the <b>Price Item Relationship</b> screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.</p>

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for a Price Item or Price Item Bundle

### Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user belongs

### Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.  
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.  
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### Related Topics

## Defining a Price Item or Price Item Bundle

### Prerequisites

To define a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

### Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.

- From the **Main** menu, select **Pricing Management** and then click **Price Item**.

A sub-menu appears.

- Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

**Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs, division-specific accrual type criteria, and division-specific characteristics for the price item or price item bundle.
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul> <div data-bbox="548 1360 1107 1436" style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> By default, the <b>Pricing and Billing</b> option is selected.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> By default, the <b>Fees</b> option is selected. This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p> </div>	Yes
Bundle	<p>Used to indicate whether you want to define a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p> </div>	Yes
Bundle Type	<p>Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list. All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b>, you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"><b>Note:</b> This field is required when you are creating a price item bundle.</div>

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>No</b> option is selected.</div>	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"><b>Note:</b> This field appears only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list.  The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</div>	Yes

**Tip:** Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.
5. Associate parameters with the price item or price item bundle, if required.
6. Associate the price item or price item bundle to the required divisions.
7. Define the required division-specific SQIs for the price item or price item bundle.
8. Define division-specific characteristics for the price item or price item bundle, if required.
9. Define division-specific accrual type criteria for the price item or price item bundle, if required.
10. Define characteristics for the price item or price item bundle, if required.
11. Click **Save**.

The price item is defined.

**Note:** When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

## Associating a Parameter with a Price Item or Price Item Bundle

### Prerequisites

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)

### Procedure

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the parameter is effective for the price item or price item bundle.	Yes
Effective End Date	Used to specify the date till when the parameter is effective for the price item or price item bundle.	No
Parameter	Used to indicate the parameter that you want to associate with the price item or price item bundle.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>In the <b>Parameter Search</b> window, the system allows you to search only those parameters where the parameter usage is set to <b>Price Item</b>.</p> </div>	Yes
Business Label	Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter Usage	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• <b>Aggregation</b> – Indicates that you want to use the parameter for aggregating transactions.</li> <li>• <b>Pricing</b> – Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing.</li> </ul>	Yes
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.  <b>Note:</b> This field is disabled when the <b>Mandatory</b> option is selected.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Mandatory</b> option is not selected.

**Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining, editing, or copying ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- Enter the required details in the **Parameters** section.
- If you want to associate more than one parameter with the price item or price item bundle, click the **Add (+)** icon and then repeat steps 2.

**Note:**

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete (🗑)** icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

- Click **Save**.

The parameters are associated with the price item or price item bundle.

**Note:** The priority for all parameters which are mandatory is set to 0.

How to define valid predefined parameter values for a price item or price item bundle	<a href="#">Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle</a> on page 264

## Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle

### Prerequisites

To define valid predefined parameter values for a price item or price item bundle, you should have:

- Values defined for the predefined parameter which is associated with the price item or price item bundle

### Procedure

To define valid predefined parameter values for a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears.

2. Click the **Add** (  ) icon in the **Parameter** column corresponding to the predefined parameter for which you want to define valid values for the price item or price item bundle.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	<p>Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b> (  ) icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> window appears.</p> <p>On specifying the valid predefined parameter value for a price item or price item bundle, the description of the valid predefined parameter value appears corresponding to the <b>Parameter Value</b> field.</p> </div>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are defining valid predefined parameter values for the price item or price item bundle.</p> </div>

3. Select the predefined parameter value from the respective field.
4. If you want to define more than one valid predefined parameter value for the price item or price item bundle, click the **Add** (  ) icon and then repeat step 3.

**Note:** However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete** () icon corresponding to the parameter value.

- Click **Save**.

The valid predefined parameter values are defined for the price item or price item bundle.

## **Associating a Price Item or Price Item Bundle with a Division**

### **Prerequisites**

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application

### **Procedure**

To associate a price item or price item bundle with a division:

- Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQIs	On clicking the <b>Add</b> (  ) icon, you can define division-specific SQIs for the price item or price item bundle.	No
Division Characteristics	On clicking the <b>Add</b> (  ) icon, you can define division-specific characteristics for the price item or price item bundle.	No
Accrual Type Criteria	On clicking the <b>Add</b> (  ) icon, you can define division-specific accrual type criteria for the price item or price item bundle.	No
Division	Used to indicate the division to which you want to associate the price item or price item bundle.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	Yes

- Enter the required details in the **Divisions** section.
- If you want to associate the price item or price item bundle with more than one division, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove the price item or price item bundle from a division, click the **Delete** () icon corresponding to the division.

- Define division-specific SQIs for the price item or price item bundle, if required.

5. Define division-specific characteristics for the price item or price item bundle, if required.
6. Define division-specific accrual type criteria for the price item or price item bundle, if required.
7. Click **Save**.

The price item or price item bundle is associated to the division.

**Tip:** Alternatively, you can associate a price item or price item bundle to a division using the **Division** screen.

## **Defining Division-Specific SQIs for a Price Item or Price Item Bundle**

### **Prerequisites**

To define division-specific SQIs for a price item or price item bundle, you should have:

- SQIs defined in the application
- Price items or price item bundles associated with the division to which the user belongs

### **Procedure**

To define division-specific SQIs for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** (  ) icon in the **SQIs** column corresponding to the division for which you want to define division-specific price item or price item bundle SQIs.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>SQI</b> field. On clicking the <b>Search</b> icon, the <b>Service Quantity Identifier Search</b> window appears.</p> <p>On indicating the SQI, the description of the SQI appears corresponding to the <b>SQI</b> field.</p> </div>	Yes (Conditional)  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are defining a division-specific SQI for the price item or price item bundle.</p> </div>

- Enter the required details in the **Divisions** section.
- If you want to define more than one division-specific SQI for the price item or price item bundle, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a division-specific SQI from the price item or price item bundle, click the **Delete**  icon corresponding to the SQI.

- Click **Save**.

The division-specific SQIs are defined for the price item or price item bundle.

## **Defining Division-Specific Characteristics for a Price Item or Price Item Bundle**

### **Prerequisites**

To define division-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated to the division to which the user belongs

### **Procedure**

To define division-specific characteristics for a price item or price item bundle:

- Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

- Click the **Add** () icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

The following fields appear in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Division/Price Item Combination</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (  ) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.

- Enter the required details in the **Divisions** section.
- If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

**Note:** However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

- Click **Save**.

The division-specific characteristics are defined for the price item or price item bundle.

## Defining Division-Specific Accrual Type Criteria for a Price Item or Price Item Bundle

### Prerequisites

To define division-specific accrual type criteria for a price item or price item bundle, you should have:

- Accrual types defined in the application
- Price items or price item bundles associated with the division to which the user belongs

### Procedure

To define division-specific accrual type criteria for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **Accrual Type Criteria** column corresponding to the division for which you want to define a division-specific price item or price item bundle accrual type criteria.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type Criteria	<p>Used to indicate the accrual type to which you want to associate the price item or price item bundle in the division. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Actual</b> - Used to create accrual for the price item or price item bundle based on the current trial bill data in a division.</li> <li>• <b>Historical</b> - Used to create accrual for the price item or price item bundle based on the historical bill data in a division.</li> <li>• <b>Not Applicable</b> - Used to create accrual for the price item or price item bundle based on the current trial bill data as well as the historical bill data in a division.</li> </ul> <p><b>Note:</b> By default, the <b>Not Applicable</b> option is selected.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining a division-specific accrual type criteria for the price item or price item bundle.</p>

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific accrual type criteria for the price item or price item bundle, click the **Add** () icon corresponding to the respective division and then repeat step 3.

**Note:** However, if you want to remove a division-specific accrual type criteria from the price item or price item bundle, click the **Delete** () icon corresponding to the respective division.

5. Click **Save**.

The division-specific accrual type criteria are defined for the price item or price item bundle.

**Defining a Characteristic for a Price Item or Price Item Bundle****Prerequisites**

To define a characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

**Procedure**

To define a characteristic for a price item or price item bundle:

1. Click the **Price Item Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Price Item Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item or price item bundle.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	<p>Used to specify the value for the characteristic type.</p> <p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.</p>

- Enter the required details in the **Price Item Characteristics** section.
- If you want to define more than one characteristic for the price item or price item bundle, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price item or price item bundle, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item or price item bundle.

### Related Topics

For more information on...	See...
How to define a price item or price item bundle	<a href="#">Defining a Price Item or Price Item Bundle</a> on page 258
How to edit a price item or price item bundle	<a href="#">Editing a Price Item or Price Item Bundle</a> on page 282
How to copy a price item or price item bundle	<a href="#">Copying a Price Item or Price Item Bundle</a> on page 271

### Copying a Price Item or Price Item Bundle

Instead of creating a price item or price item bundle from scratch, you can create a new price item or price item bundle using an existing price item or price item bundle. This is possible through copying a price item or price item bundle. On copying a price item or price item bundle, the details including the parameters, divisions, division-specific characteristics, division-specific SQIs, and characteristics are copied to the new price item or price item bundle. You can then edit the details, if required.

### Prerequisites

To copy a price item or price item bundle, you should have:

- Price item or price item bundle (whose copy you want to create) defined in the application
- Price item or price item bundle (whose copy you want to create) associated with the division to which the user belongs
- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

**Procedure**

To copy a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item or price item bundle using which you want to define a new price item or price item bundle.

The **Price Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item or price item bundle.
- **Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

**Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs, division-specific accrual type criteria, and division-specific characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul> <div data-bbox="548 1640 1105 1892" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Bundle Type	Used to indicate the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b>, you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p> </div>	Yes (Conditional)  <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are creating a price item bundle.</p> </div>
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</p> </div>	Yes

3. Enter the required details in the **Main** section.
4. Associate, edit, or disassociate parameters from the price item or price item bundle, if required.

5. Associate or disassociate the price item or price item bundle from the required divisions.
6. Define or remove the division-specific SQIs from the price item or price item bundle, if required.
7. Define or remove the division-specific characteristics for the price item or price item bundle, if required.
8. Define, edit, or remove the division-specific accrual type criteria for the price item or price item bundle, if required.
9. Define, edit, or remove characteristics from the price item or price item bundle, if required.
10. Click **Save**.

The new price item is defined.

**Note:**

When you define a new price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

The system allows you to add a price item to the new price item bundle only when:

- Price item and price item bundle (whose copy you are creating) are associated to the same contract type.
- Price item is associated with the division to which the price item bundle (whose copy you are creating) is associated.
- Another price item bundle with the same price item, relationship type, and date range combination does not exist in the system.

### **Viewing the Price Item or Price Item Bundle Details**

#### **Procedure**

To view the details of a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.

2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to view.

The **Price Item** screen appears. It contains the following zones:

- [Price Item](#) on page 276
  - [Parameters](#) on page 278
  - [Predefined Parameter Values for Price Item](#) on page 278
  - [Divisions](#) on page 279
  - [Division-Specific SQIs for Price Item](#) on page 279
  - [Division-Specific Characteristics for Price Item](#) on page 280
  - [Division-Specific Accrual Type Criteria for Price Item](#) on page 280
  - [Price Item Relationship](#) on page 281
3. View the basic details and characteristics of the price item or price item bundle in the **Price Item** zone.
  4. View the parameters associated with the price item or price item bundle in the **Parameters** zone.
  5. View the valid predefined parameter values of the price item or price item bundle in the **Predefined Parameter Values for Price Item** zone.
  6. View the divisions to which the price item or price item bundle is associated in the **Divisions** zone.
  7. View the division-specific SQIs of the price item or price item bundle in the **Division-Specific SQIs for Price Item** zone.
  8. View the division-specific characteristics of the price item or price item bundle in the **Division-Specific Characteristics for Price Item** zone.
  9. View the division-specific accrual type criteria of the price item or price item bundle in the **Division-Specific Accrual Type Criteria for Price Item** zone.
  10. View the price items or price item bundles related to the parent price item or price item bundle in the **Price Item Relationship** zone.

### Related Topics

For more information on...	See...
How to search for a price item or price item bundle	<a href="#">Searching for a Price Item or Price Item Bundle</a> on page 258
<b>Price Item</b> screen	<a href="#">Price Item (Used for Viewing)</a> on page 275

## Price Item (Used for Viewing)

The **Price Item** screen allows you to view the details of the price item or price item bundle. It also allows you to edit the details of the price item or price item bundle. It contains the following zones:

- **Price Item** – Displays the basic details of the price item or price item bundle.
- **Parameters** – Lists the parameters which are associated with the price item or price item bundle.
- **Predefined Parameter Values for Price Item** – Lists the predefined parameter values which are valid for the price item or price item bundle.

**Note:** By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

- **Divisions** – Lists the divisions to which the price item or price item bundle is associated.
- **Division-Specific SQIs for Price Item** – Lists the SQIs to which the price item or price item bundle is associated in the respective division.

**Note:** By default, the **Division-Specific SQIs for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Division-Specific Characteristics for Price Item** – Lists the characteristics which are defined for the price item or price item bundle in the respective division.

**Note:** By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Division-Specific Accrual Type Criteria for Price Item** – Indicates the accrual type to which the price item or price item bundle is associated in the respective division.

**Note:** By default, the **Division-Specific Accrual Type Criteria for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Price Item Relationship** – Lists the price items or price item bundles which are associated with the parent price item or added in the price item bundle.

## Price Item

The **Price Item** zone displays the details of the price item or price item bundle. It contains the following sections:

- **Main** – Displays basic information about the price item or price item bundle. It contains the following fields:

Field Name	Field Description
Price Item	Displays information about the price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Price Item Usage	Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.</p>
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

Field Name	Field Description
Bundle Type	<p>Indicates the type of the price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Yes</b> option from the <b>Bundle</b> list.</p>
Global Price List	<p>Indicates whether the price item or price item bundle is assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Contract Type	Displays the contract type to which the price item or price item bundle is associated.

- **Price Item Characteristics** – Lists the characteristics defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item or price item bundle.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price item or price item bundle.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	<p>Indicates the business object using which the price item or price item bundle is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>

### Related Topics

## Parameters

The **Parameters** zone lists the parameters to which the price item or price item bundle is associated. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the parameter is effective for the price item or price item bundle.
Effective End Date	Displays the date till when the parameter is effective for the price item or price item bundle.
Parameter	Indicates the parameter to which the price item or price item bundle is associated. <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the respective parameter.
Business Label	Displays the business label of the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.
Display Order	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.
Parameter Usage	Indicates whether the parameter is used for aggregation and/or for defining the pricing of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• <b>Aggregation</b> – Indicates that the parameter is used for aggregating transactions.</li> <li>• <b>Pricing</b> – Indicates that the parameter is used for aggregating transactions and defining the price item pricing.</li> </ul>
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing.
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.

On clicking the **Broadcast**  icon corresponding to a parameter, the **Predefined Parameter Values for Price Item** zone appears where you can view the valid predefined parameter values of the price item or price item bundle.

<b>Predefined Parameter Values</b> zone	<a href="#">Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle</a> on page 264

### Predefined Parameter Values for Price Item

The **Predefined Parameter Values for Price Item** zone lists the predefined parameter values which are valid for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the predefined parameter value.
Description	Displays the description of the predefined parameter value.

By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

### Related Topics

For more information on...	See...
<b>Price Item</b> screen	<a href="#">Price Item (Used for Viewing)</a> on page 275

### Divisions

The **Divisions** zone lists the divisions to which the price item or price item bundle is associated. It contains the following column:

Column Name	Column Description
Division	Indicates the division to which the price item or price item bundle is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Division</b> screen appears where you can view the details of the respective division.

On clicking the **Broadcast**  icon corresponding to a division, the **Division-Specific SQIs for Price Item**, **Division-Specific Characteristics for Price Item**, and **Division-Specific Accrual Type Criteria for Price Item** zones appear.

You can filter the list using the **Division** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

### Related Topics

### Division-Specific SQIs for Price Item

The **Division-Specific SQIs for Price Item** zone lists the SQIs to which the price item or price item bundle is associated in a specific division. It contains the following column:

Column Name	Column Description
SQI	Indicates the SQI to which the price item or price item bundle is associated in the division.

By default, the **Division-Specific SQIs for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

### Division-Specific Characteristics for Price Item

The **Division-Specific Characteristics for Price Item** zone lists the characteristics defined for a price item or price item bundle in a specific division. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the price item or price item bundle characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type.  <b>Note:</b> It has a link. On clicking the link, the <b>Characteristic Type</b> screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

### Division-Specific Accrual Type Criteria for Price Item

The **Division-Specific Accrual Type Criteria for Price Item** zone lists the accrual type to which the price item or price item bundle is associated in a specific division. It contains the following column:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type Criteria	Indicates the accrual type to which you want to associate the price item or price item bundle in the division. The valid values are: <ul style="list-style-type: none"> <li>• <b>Actual</b> <ul style="list-style-type: none"> <li>- Indicates the accrual created for the price item or price item bundle is based on the current trial bill data in a division.</li> </ul> </li> <li>• <b>Historical</b> - Indicates the accrual created for the price item or price item bundle is based on the historical bill data in a division.</li> <li>• <b>Not Applicable</b> - Indicates the accrual created for the price item or price item bundle is based on the current trial bill data as well as the historical bill data in a division.</li> </ul> <p><b>Note:</b> By default, the <b>Not Applicable</b> option is selected.</p>	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific accrual type criteria for the price item or price item bundle.

By default, the **Division-Specific Accrual Type Criteria for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

### Price Item Relationship

The **Price Item Relationship** zone lists the price items or price item bundles which are associated with the parent price item or added to the price item bundle. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Relationship Type	Indicates how the price item or price item bundle is related with the parent price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> <b>Note:</b> The data appears in this column only when the associated price item is a bundle.

You can filter the list using various search criteria (such as, **Price Item**, **Description**, **Effective Start Date**, and **Relationship Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

You can associate or disassociate a price item or price item bundle from a parent price item and add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

## Editing a Price Item or Price Item Bundle

### Prerequisites

To edit a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

### Procedure

To edit a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to edit.

The **Price Item** screen appears.

3. Click the **Edit** button in the **Price Item** zone.

The **Price Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item or price item bundle.
- **Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

#### **Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while editing the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs, division-specific accrual type criteria, and division-specific characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item or price item bundle.	Not applicable
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> The system does not allow you to change the price item usage from <b>Pricing and Billing</b> to <b>Pricing</b> for a price item or price item bundle. </div>	Yes
Price Item Type	Used to indicate the type of price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing</b>. </div>	Yes
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> <p><b>Note:</b> This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>All the above mentioned values are available in the list when you are editing a price item bundle which is available for pricing and billing. However, when you are editing a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b>, you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when the <b>Pricing</b> option is selected from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are editing a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p><b>Note:</b> This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing and Billing</b>.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</p>	Yes

4. Modify the required details in the **Main** section.
5. Associate or disassociate a parameter from the price item or price item bundle, if required.

**Note:**

You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

6. Associate or disassociate the price item or price item bundle from the divisions, if required.

**Note:** If the price item or price item bundle is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

7. Define, edit, or remove division-specific SQIs from the price item or price item bundle, if required.
8. Define, edit, or remove division-specific characteristics from the price item or price item bundle, if required.
9. Define, edit, or remove division-specific accrual type criteria from the price item or price item bundle, if required.
10. Define, edit, or remove characteristics from the price item or price item bundle, if required.
11. Click **Save**.

The changes made to the price item or price item bundle are saved.

**Price Item Relationship**

Oracle Revenue Management and Billing allows you to associate two or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. In other words, you can define a price item to price

item relationship. The price item to which a set of price items are associated is called a parent price item. You can also create a price item bundle and then add price items to the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items.

While associating a price item with a parent price item or adding a price item to a price item bundle, you need to specify how the price item is related to the parent price item or price item bundle. You can add a price item to a price item bundle using the following relationship types:

- **Bundle** – Used while adding price items in the regular and phantom price item bundles.
- **Denominator** – Used while adding price items in the ratio price item bundles.
- **Numerator** – Used while adding price items in the ratio price item bundles.

However, you can associate a price item or price item bundle with a parent price item using the following relationship types:

- Other
- Custom
- Price Item
- Service
- Service Group

**Note:**

You cannot add same set of price items using the same relationship type while defining two or more bundles with the same bundle type. For example, you cannot add P1 and P2 using the relationship type as Bundle while defining regular bundles named BUN1 and BUN2. However, you can use same set of price items while defining two or more price item to price item relationships.

If the multi parameter based pricing feature is enabled, you can add same set of price item and price item parameter combination (using the same relationship type) in more than one bundle (having the same bundle type) provided the price item parameter values are different.

The **Price Item Relationship** screen allows you to view the price items that are already associated with the parent price item or added to the price item bundle. It also allows you to associate or disassociate a price item or price item bundle from the parent price item, or add or remove a price item or price item bundle from the price item bundle. This screen consists of the following zone:

- [Assigned Price Items](#) on page 286

### Assigned Price Items

The **Assigned Price Items** zone lists the price items or price item bundles that are already associated with the parent price item or added to the price item bundle. You will not find any records in this zone if the parent price item does not have any price item or price item bundle associated with it or if the price item bundle does not have any price item or price item bundle added to it. It contains the following sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search a particular price item or price item bundle which is associated with the parent price item or added to the price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to search price items or price item bundles which are associated with the parent price item or added to the price item bundle from a particular date.	No
Relationship Type	Used to search price items or price item bundles which are related to the parent price item or added to the price item bundle using a particular relationship type. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.

Column Name	Column Description
Relationship Type	<p>Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul> <p><b>Note:</b> The <b>Bundle</b> relationship type is used while adding price items in the regular and phantom price item bundles. The <b>Denominator</b> and <b>Numerator</b> relationship types are used while adding price items in the ratio price item bundles. And, all other relationship types, such as <b>Other</b>, <b>Custom</b>, <b>Price Item</b>, <b>Service</b>, and <b>Service Group</b> are used while associating price items to the parent price item.</p>
Price Item Parameters	Indicates the parameters based on which you want to determine pricing for the price item.

You can associate or disassociate a price item or price item bundle from a parent price item, or add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

## Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item

### Procedure

To view the price items or price item bundles associated with a parent price item:

1. Search for the price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** (☰) icon in the **Price Item Relationship** column corresponding to the price item whose relationship details you want to view.

The **Price Item Relationship** screen appears.

3. View the price items or price item bundles that are associated with the parent price item in the **Assigned Price Items** zone.

### Related Topics

## Viewing the Price Items or Price Item Bundles Added to a Price Item Bundle

### Procedure

To view the price items or price item bundles added to a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** (☰) icon in the **Price Item Relationship** column corresponding to the price item bundle whose relationship details you want to view.

The **Price Item Relationship** screen appears.

3. View the price items or price item bundles that are added to the price item bundle in the **Assigned Price Items** zone.

### Related Topics

<b>Price Item Relationship</b> screen	<a href="#">Price Item Relationship</a> on page 285
<b>Assigned Price Items</b> zone	<a href="#">Assigned Price Items</a> on page 286

## Associating a Price Item or Price Item Bundle with a Parent Price Item

### Prerequisites

To associate a price item or price item bundle with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs
- Price item or price item bundle associated to at least one division to which the parent price item belongs.

### Procedure

To associate a price item or price item bundle with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** (🔍) icon in the **Price Item Relationship** column corresponding to the parent price item to which you want to associate a price item or price item bundle.

The **Price Item Relationship** screen appears.

3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to associate with the parent price item.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	Yes
Relationship Type	Used to indicate how the price item or price item bundle is related with the parent price item. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul> <b>Note:</b> You can use the <b>Other, Custom, Price Item, Service, or Service Group</b> relationship type while associating a price item or price item bundle to the parent price item.	Yes
Effective Start Date	Used to specify the date from when you want to associate the price item or price item bundle with the parent price item.  <b>Note:</b> The effective start date cannot be later than the effective end date.	Yes
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.</p> <p>You must not use the <b>Price Item Parameters</b> field while associating a price item or price item bundle with a parent price item. This is because it is designed to be used while adding a price item or price item bundle to the ratio and phantom price item bundles.</p>	Not applicable
Characteristics	<p>On clicking the <b>Add</b> () icon, you can define relationship-specific characteristics for the price item or price item bundle.</p>	Not applicable

4. Enter the required details in the **Price Item Relationship** screen.

**Note:** You can associate the same set of price items or price item bundles using the same relationship type to more than one parent price item. For example, you can associate the **P1** and **P2** price items using the **Service** relationship type to the **PP1** and **PP2** price items.

5. Define relationship-specific characteristics for the price item or price item bundle, if required.
6. If you want to associate more than one price item or price item bundle with the parent price item, click the **Add** () icon and then repeat the steps from 4 to 5.

**Note:** However, if you want to disassociate a price item or price item bundle from a parent price item, click the **Delete** () icon corresponding to the price item or price item bundle.

7. Click **Save**.

The price item or price item bundle is associated with the parent price item.

## Adding a Price Item or Price Item Bundle to a Price Item Bundle

### Prerequisites

To add a price item or price item bundle to a price item bundle, you should have:

- Price item bundle (to which you want to add a price item or price item bundle) associated with the division to which the user belongs
- Price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated to the same contract type
- Parameters associated with the price item or price item bundle (which you want to add) when you want to determine pricing for the price item based on the parameters in the ratio and phantom price item bundles
- Regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated with the same parameters

**Note:** Not only the parameters, but also their details such as parameter usage, mandatory flag, and priority should be identical. Also, the date from when the parameters are effective for the price item bundle (to which you want to add a price item or price item bundle) should be earlier than or equal to the date from when the parameters are effective for the price item or price item bundle (which you want to add).

- Price item or price item bundle (which you want to add) associated to at least one division to which the price item bundle (to which you want to add a price item or price item bundle) belongs

### Procedure

To add a price item or price item bundle to a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the price item bundle to which you want to add a price item or price item bundle.

The **Price Item Relationship** screen appears.

3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to add to the price item bundle.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	<p>Used to indicate how the price item or price item bundle is related to the price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul> <p><b>Note:</b> You can use the <b>Bundle</b> relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the <b>Denominator</b> and <b>Numerator</b> relationship type while adding a price item or price item bundle in the ratio price item bundles.</p>	Yes
Effective Start Date	<p>Used to specify the date from when the price item or price item bundle is added to the price item bundle.</p> <p><b>Note:</b> The effective start date cannot be later than the effective end date.</p>	Yes
Effective End Date	<p>Used to specify the date till when the price item or price item bundle is added to the price item bundle.</p> <p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	No
Price Item Parameters	<p>Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.</p> <p><b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>. The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item Parameters</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.</p>	No
Characteristics	<p>On clicking the <b>Add</b> (📄+) icon, you can define relationship-specific characteristics for the price item or price item bundle.</p>	Not applicable

4. Enter the required details in the **Price Item Relationship** screen.

**Note:**

You can add a price item or price item bundle to a regular price item bundle only when the regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) are associated with the same parameters for the specified date range.

You cannot add the same set of price items using the same relationship type to two or more price item bundles with the same bundle type. For example, you cannot add **P1** and **P2** using the **Bundle** relationship type to the **BUN1** and **BUN2** regular price item bundles.

If the multi parameter based pricing feature is enabled, you can add the same set of price item and price item parameter combination (using the same relationship type) to more than one bundle (with the same bundle type) provided the price item parameter values are different.

You cannot add the same price item or price item bundle in numerator and denominator while defining a ratio price item bundle.

5. Define relationship-specific characteristics for the price item or price item bundle, if required.
6. If you want to add more than one price item or price item bundle to the price item bundle, click the **Add** () icon and then repeat the steps from 4 to 5.

**Note:** However, if you want to remove a price item or price item bundle from a price item bundle, click the **Delete** () icon corresponding to the price item or price item bundle.

7. Click **Save**.

The price item or price item bundle is added to the price item bundle.

**Setting the Parameters for a Price Item or Price Item Bundle****Prerequisites**

To set the parameters for a price item or price item bundle, you should have:

- Parameters (where the **Parameter Usage** field is set to **Pricing**) associated with the price item or price item bundle

**Procedure**

To set the parameters for a price item or price item bundle:

1. Click the **Search** () icon corresponding to the **Price Item Parameters** field.

The **Price Item Parameters** screen appears. It contains the following fields:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle for which you want to set the parameters.
Description	Displays the description of the price item or price item bundle.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Indicates the parameter which is associated with the price item or price item bundle.  <b>Note:</b> Here, the system displays the price item parameter where the <b>Parameter Usage</b> field is set to <b>Pricing</b> .	Not applicable
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Not applicable
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.  <b>Note:</b> The priority for all parameters which are mandatory is set to 0.	Not applicable
Parameter Value	Used to specify the parameter value.  <b>Note:</b> If the parameter value type is <b>Predefined</b> or <b>Reference</b> , the <b>Search</b>  icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, you can search for a parameter value.  You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes (Conditional)  <b>Note:</b> This field is required when you want to determine pricing for the price item or price item bundle based on the parameter.

2. Enter the required details in the **Price Item Parameters** screen.
3. Click **OK**.

A comma-separated list of values appear in the **Price Item Parameters** column corresponding to the price item or price item bundle. The order in which parameter values appear in the price item parameter information string is controlled by the display order (which is defined while associating a parameter with a price item).

**Note:** The value specified for a parameter whose value type is set to **Adhoc** is validated using the validation algorithm attached to the respective parameter.

## Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle

### Prerequisites

To define relationship-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Relationship**)

### Procedure

To define relationship-specific characteristics for a price item or price item bundle:

1. Click the **Add** (  ) icon in the **Characteristics** column corresponding to the price item or price item bundle for which you want to define relationship-specific characteristics.

A grid appears corresponding to the price item or price item bundle with the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Relationship</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (  ) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.

2. Enter the required details in the **Characteristics** grid.
3. If you want to define more than one relationship-specific characteristic for the price item or price item bundle, click the **Add** (  ) icon and then repeat step 2.

**Note:** However, if you want to remove a relationship-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The relationship-specific characteristics are defined for the price item or price item bundle.

## **Disassociating a Price Item or Price Item Bundle from a Parent Price Item**

### **Prerequisites**

To disassociate a price item or price item bundle from a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

### **Procedure**

To disassociate a price item or price item bundle from a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the parent price item from which you want to disassociate a price item or price item bundle.

The **Price Item Relationship** screen appears.

3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears.

4. Filter the price items or price item bundles associated to the parent price item, if required.
5. In the **Search Results** section, click the **Delete** () icon corresponding to the price item or price item bundle that you want to disassociate from the parent price item.

6. Click **Save**.

The price item or price item bundle is disassociated from the parent price item.

## Removing a Price Item or Price Item Bundle from a Price Item Bundle

### Prerequisites

To remove a price item or price item bundle from a price item bundle, you should have:

- Price item bundle associated with the division to which the user belongs

### Procedure

To remove a price item or price item bundle from a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the price item bundle from which you want to remove a price item or price item bundle.  
The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.  
The **Price Item Relationship** screen appears.
4. Filter the price items or price item bundles added to the price item bundle, if required.
5. In the **Search Results** section, click the **Delete** (🗑) icon corresponding to the price item or price item bundle that you want to remove from the price item bundle.
6. Click **Save**.  
The price item or price item bundle is removed from the price item bundle.

## Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item

### Prerequisites

To filter the price items or price item bundles associated with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

### Procedure

To filter the price items or price item bundles associated with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the parent price item whose details you want to view.  
The **Price Item Relationship** screen appears.
3. Enter the search criteria in the **Assigned Price Items** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

The search results are filtered based on the specified criteria.

## Price Item Assignments

The **Price Item Assignments** screen allows you to view the active price lists, persons, and accounts where the price item or price item bundle is assigned. It contains the following zones:

- [Active Price Lists where Price Item is Assigned](#) on page 300
- [Persons to whom Price Item is Assigned](#) on page 300
- [Accounts where Price Item is Assigned](#) on page 301

### Active Price Lists where Price Item is Assigned

The **Active Price Lists where Price Item is Assigned** zone lists the active price lists where the pricing is defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list.  <b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment.
Availability End Date	Displays the date till when the price list is available for assignment.

### Persons to whom Price Item is Assigned

The **Persons to whom Price Item is Assigned** zone lists the persons where the pricing is defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Person ID	Indicates the person to whom the price item is assigned.
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Price Assignment Start Date	Displays the date from when the price item is assigned to the person.
Price Assignment End Date	Displays the date till when the price item is assigned to the person.
Division	Indicates the division to which the person belongs.

Column Name	Column Description
Price Assignment ID	Indicates the price item pricing which is assigned to the person.

### **Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned**

#### **Prerequisites**

To view the price lists, persons, or accounts where the price item or price item bundle is assigned, you should have:

- Price item or price item bundle assigned to a price list, person, or account

#### **Procedure**

To view the price lists, persons, or accounts where the price item or price item bundle is assigned:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View**  icon in the **Price Item Assigned To** column corresponding to the price item or price item bundle whose assignment details you want to view.

The **Price Item Assignments** screen appears.

3. View the price lists where the pricing is defined for the price item or price item bundle in the **Active Price Lists where Price Item is Assigned** zone.
4. View the accounts where the pricing is defined for the price item or price item bundle in the **Accounts where Price Item is Assigned** zone.
5. View the persons where the pricing is defined for the price item or price item bundle in the **Person to whom Price Item is Assigned** zone.

## Price List

---

A price list allows you to define standard prices for a group of price items. In other words, a price list is a rate card for price items or services which are offered to the accounts or persons. You can create more than one price list. For example, you can create a price list for large, medium-sized, and small customers. You can also create a set of price lists for different regions. You can define two types of price lists — **Standard** and **Promotional**. You can also set eligibility criteria for the price list with effective start date, end date, and description. At present, there is no functionality associated with the price list type. The implementation team can use the price list type to define the custom logic as per the business requirements.

A price list and price item pricing within the price list are effective for a particular duration. You can define multiple pricing for the same price item and variance parameter or product parameters combination within a price list only when the price item pricing date range is different. You can assign the same price item in multiple price lists and define different pricing for the price item in each price list based on the business requirements.

The system enables you to specify the duration for which the price list is available for assignment to an account or a person. However, note that at present, the availability start and end dates are not used in the product while assigning a price list to an account or a person. If required, the implementation team can build the custom logic using the availability start and end dates in the product.

Once you create a price list, you have to assign price items to the price list and define pricing for each price item assigned to the price list. The price lists are then assigned to accounts or persons to indicate the prices that will be charged for various price items or services offered to them. You can assign multiple price lists to an account or a person for an overlapping date range. But, you need to specify the priority or order for the price list in which the pricing from the price list should be considered. You can also assign the same price list to multiple accounts or persons.

You can define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit price item pricing from the price list hierarchy.

The system allows you to create the following:

- **Default Price List** – You can create a price list and set it as a default price list for a particular division. To define a default price list for a division, you need to set the value for the **Default Price List ID** parameter in the price

assignment search algorithm which is attached to the division. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list and accordingly uses the price item pricing. You can have the same price list as a the default price list for multiple divisions.

- **Global Price List** – You can create one global price list in the system. It is used only when the price item pricing is not available at any level in the customer hierarchy and in the default price list associated with the division. You can assign only those price items in the global price list whose the **Global Price List** option is set to **Yes**. The global price list is used while searching an effective price item pricing only when the **Global Price List** parameter in the price assignment search algorithm (attached to the division) is set to **Y**. Finally, if the effective price item pricing is not available in the default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.
- **Template Price List** – You can define a template price list and assign template price item pricing to a template price list. You cannot assign template price list to an account or a person. You can only create a copy of a template price item pricing which is assigned to a template price list. Once you create a copy of the template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

## Price List (Used for Searching)

The **Price List** screen allows you to search for a price list using various search criteria. It also allows you to create a price list. This screen consists of the following zones:

- [Search Price List](#) on page 303
- [Price List Price Items](#) on page 306

### Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price list using the price list details. The valid value is: <ul style="list-style-type: none"> <li>• Price List Details</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>Price List Details</b> option is selected.</div>	Yes
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search a price list with a particular description.	No
Effective Start Date	Used to search price lists which are effective from a particular date.	No
Effective End Date	Used to search price lists which are effective till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	<p>Used to search a particular type of price lists. The valid values are:</p> <ul style="list-style-type: none"> <li>• Promotional</li> <li>• Standard</li> </ul> <p><b>Note:</b> By default, the <b>Standard</b> option is selected.</p>	No
Global Price List	<p>Used to indicate whether you want to search a global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Availability Start Date	<p>Used to search price lists which are available for assignment to an account or a person from a particular date.</p> <p><b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone.</p>	No
Availability End Date	<p>Used to search price lists which are available for assignment to an account or a person till a particular date.</p> <p><b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone.</p>	No
Status	<p>Used to search price lists with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> <li>• Template</li> </ul> <p><b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone.</p>	No
Division	<p>Used to search price lists which are associated with a particular division.</p> <p><b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List	Used to search price lists which inherit pricing from a particular parent price list.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.  By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone.	No
Parent Price List Effective Date	Used to search price lists that can inherit pricing from a parent price list which is effective from a particular date.  <b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone.	No

**Note:** You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list.  <b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.
Copy	On clicking the <b>Copy</b>  icon, the <b>Price List</b> screen appears where you can create a new price list using an existing price list.
Price List Pricing	On clicking the <b>View</b>  icon in the <b>Price List Pricing</b> column, the <b>Price List Price Item Pricing</b> screen appears where you can view and edit a list of price items pricing information assigned to the price list.

Column Name	Column Description
Price List Assigned To	On clicking the <b>View</b> (🔍) icon in the <b>Price List Assigned To</b> column, the <b>Price List Assignments</b> screen appears where you can view the details of the persons and accounts to which the price list is assigned.
Eligible Accounts/ Persons	On clicking the <b>View</b> (🔍) icon in the <b>Eligible Accounts/Persons</b> column, the <b>Entities Eligible for Price List Assignment</b> screen appears where you can search for a list of eligible accounts and persons to which you want to assign the price list in a particular division.

**Note:**

However, when you search for a price list by specifying the date (which can be current, past or future date) in the **Parent Price List Effective Date** field, the system retrieves the price lists that meet the search criteria along with the details of the parent price list that is effective on that date.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🗑️) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to the **Price List Information** field, the **Price List Price Items** zone appears where you can view a list of price items to which the price list is assigned.

**Price List Price Items**

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma (,) for the price list.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the pricing information of the respective price list.

Column Name	Column Description
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Displays the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List** screen. It appears only when you click the **Broadcast** () icon corresponding to the price list in the **Search Price List** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

### **Searching for a Price List**

#### **Prerequisites**

To search for a price list, you should have:

- Divisions defined in the application

- Price list associated with the division to which the user belongs

### **Procedure**

To search for a price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.  
The **Price List** screen appears.
4. Enter the search criteria in the **Search Price List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### **Viewing Price Items Assigned to a Price List**

#### **Prerequisites**

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

#### **Procedure**

To view price items assigned to a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the price list whose price items details you want to view.  
The **Price List Price Items** zone appears.
3. View the price items that are assigned to the price list in the **Price List Price Items** zone.

### **Related Topics**

## Defining a Price List

### Procedure

To define a price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
A sub-menu appears.
3. Click the **Add** option from the **Price List** sub-menu.

The **Price List** screen appears. It consists the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a particular duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define characteristics for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective.  <b>Note:</b> By default, the current date appears in this field.	Yes
Effective End Date	Used to specify the date till when the price list is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul> <b>Note:</b> By default, the <b>Standard</b> option is selected.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person. <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.</p> </div>	No
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person. <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The availability end date cannot be earlier than the availability start date. At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.</p> </div>	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> - Used to indicate that the price list is used for billing.</li> <li>• <b>Proposed</b> - Used to indicate that the price list is used for quotations.</li> <li>• <b>Template</b> - Used to indicate that the price list is a template price list.</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> By default, the <b>Active</b> option is selected.</p> </div>	Yes

**Tip:** Alternatively, you can access the **Price List** screen by clicking the **Add** button in the **Page Title** area of the **Price List** screen.

4. Enter the required details in the **Main** section.

**Note:** By default the **Main** section is displayed.

5. Click the **Show All** link from the **Section** to view all the sections and define or associate the following:
- Associate the price list with one or more parent price list, if required.
  - Associate price list with one or more divisions, if required.
  - Define eligibility criteria for the price list, if required.

- Define characteristics for the price list, if required.

6. Click **Save**.

**Note:** The price list ID is generated automatically when the price list is created.

### Defining the Price List Hierarchy

Oracle Revenue Management and Billing allows you to define the price list hierarchy. It helps you to inherit the price item pricing from the parent price list if the price item pricing is not available in the price list (assigned to the account, person, or parent person). And, if the price item pricing is not available in the parent price list, the system will search for the price item pricing in the parent's parent price list (i.e. in the grandparent price list) and continue till it reaches the last level in the hierarchy.

In other words, when you define the price list hierarchy and assign the price list to an account or a person, the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. However, if the price item pricing is available on both the assigned and parent price lists, the system derives the price item pricing from the assigned price list.

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Two or more price lists can have the same parent price list.

### Procedure

To define the price list hierarchy:

1. Click the **Hierarchy** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Hierarchy** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective From Date	Used to specify the date from when the price list inherits pricing from the parent price list.	Yes (Conditional) <b>Note:</b> This field is required when you are associating the price list with a parent price list.
Parent Price List Effective To Date	Used to specify the date till when the price list inherits pricing from the parent price list. <b>Note:</b> The parent price list effective to date cannot be earlier than the parent price list effective from date and later than price list effective end date.	No

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List	<p>Used to specify the parent price list ID to which you want to associate the price list.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.</p> <p>On specifying the parent price list, the description of the parent price list appears corresponding to the <b>Parent Price List</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating the price list with a parent price list.</p>

2. Enter the required details in the **Hierarchy** section.

**Note:** You can search for a price list by clicking the **Search**  icon corresponding to the **Parent Price List** field.

3. If you want to associate the price list with more than one parent price list, click the **Add**  icon corresponding to the parent price list and then repeat step 2.

**Note:**

You can associate a price list with multiple parent price lists. But, only one parent price list is effective for a particular duration. Also, while associating a price list with a parent price list, you can only specify a price list which is effective during the specified duration.

If you want to remove a parent price list from the price list hierarchy, click the **Delete**  icon corresponding to the parent price list.

4. Click **Save**.

The price list is associated with the parent price lists.

### **Defining a Characteristic for a Price List**

#### **Prerequisites**

To define a characteristic for a price list, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List**)

#### **Procedure**

To define a characteristics for a price list:

1. Click the **Characteristics** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list.

## Associating a Price List with a Division

You can assign a price list only to those accounts or persons which belong to the division to which the price list is associated. Therefore, you need to associate the price list with appropriate divisions.

### Prerequisites

To associate a price list with a division, you should have:

- Divisions defined in the application

### Procedure

To associate a price list with a division:

1. Click the **Divisions** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Divisions** section appears. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the price list.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No

2. Select the required division from the list.
3. If you want to associate the price list with more than one division, click the **Add** (+) icon corresponding to the division and then repeat step 2.

**Note:** However, if you want to remove the price list from a division, click the **Delete** (🗑️) icon corresponding to the division.

4. Click **Save**.

The price list is associated with the divisions.

**Tip:** Alternatively, you can associate a price list with a division using the **Division** screen.

## Defining Eligibility Criteria for a Price List

### Prerequisites

To define eligibility criteria for a price list, you should have:

- The **Price List Eligibility Criteria** check box selected in the **Parameter Usage** section while defining the parameter

### Procedure

To define eligibility criteria for a price list:

1. Click the **Eligibility** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Eligibility** section appears. It contains the following fields in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Criteria	On clicking the <b>Add</b> (  ) icon, you can associate eligibility criteria of parameters for the price list.	Yes (Conditional) <b>Note:</b> This field is required when you are defining an eligibility criteria for the price list.
Effective Start Date	Used to specify the date from when the criteria is effective for the price list.	Yes (Conditional) <b>Note:</b> This field is required when you are defining an eligibility criteria for the price list.
Effective End Date	Used to specify the date till when the criteria is effective for the price list.	No
Description	Used to specify the description for the criteria type.	Yes

2. Enter the required details in the **Eligibility** section.
3. If you want to define more than one eligibility criteria for the price list, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove the eligibility criteria, click the **Delete** () icon corresponding to the criteria.

4. Associate eligibility criteria of parameter for the price list, if required.
5. If you want to define more than one eligibility criteria of parameter for the price item, click the **Add** () icon corresponding to the parameter.

**Note:** However, if you want to remove the eligibility criteria of parameter for the price item, click the **Delete** () icon corresponding to the parameter.

6. Click **Save**.

The eligibility criteria are defined for the price list.

### Related Topics

## Copying a Price List

Instead of creating a price list from scratch, you can create a new price list using an existing price list. This is possible through copying a price list. On copying a price list, the details including the pricing parameters, divisions, characteristics, eligibility criteria, and the assigned price items are copied to the new price list. You can then edit the details, if required.

### Prerequisites

To copy a price list, you should have:

- Price list (whose copy you want to create) defined in the application
- Price list (whose copy you want to create) associated with the division to which the user belongs

### Procedure

To copy a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price list using which you want to define a new price list.

The **Price List** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price list.
- **Hierarchy** – Used to define parent price list for the price list for a particular duration.
- **Divisions** – Used to associate price list with one or more divisions.
- **Eligibility Criteria** – Used to define eligibility criteria for price list.
- **Characteristics** – Used to define characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective	Yes
Effective End Date	Used to specify the date till when the price list is effective.	No
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul>	Yes
Global Price List	Used to Indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Availability Start Date	Used to specify the date from when the price list is available for assignment to an account or a person.	Yes
Availability End date	Used to specify the date till when the price list is available for assignment to an account or a person.	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	Yes
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> <li>• Template</li> </ul>	Yes
Copy Pricing	Used to indicate whether you want to copy the pricing information to the price list. The valid values are: <ul style="list-style-type: none"> <li>• All</li> <li>• None</li> </ul>	Yes (Conditional)

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the parent price list details, if required.
5. Associate or disassociate the price list from the required divisions.
6. Define, edit, or remove the price list eligibility criteria and parameter eligibility criteria for price list in the, if required.
7. Define, edit, or remove characteristics from the price list, if required.
8. Click **Save**.

The new price list is defined.

**Note:** The price list ID is generated automatically when the price list is defined.

### **Viewing the Price List Details**

#### **Procedure**

To view the details of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to view.

The **Price List** screen appears. It contains the following zones:

- [Price List](#) on page 318
  - [Eligibility Criteria](#) on page 320
  - [Price List Price Items](#) on page 306
3. View the basic details, hierarchy, divisions, and characteristics of the price list in the **Price List** zone.
  4. View the eligibility criteria to which the price list is associated in the **Eligibility Criteria** zone.
  5. View the price items that are assigned to the price list in the **Price List Price Items** zone.

### Related Topics

## Price List (Used for Viewing)

The **Price List** screen allows you to view the details of a price list. It also allows you to edit a price list. It contains the following zones:

- **Price List** - Displays the basic details of the price list.
- **Eligibility Criteria** - Displays the eligibility criteria for the price list.
- **Price List Price Items** - Displays the price items that are assigned to the price list.

### Price List

The **Price List** zone displays the details of the price list. It contains the following sections:

- **Main** - Displays basic information about the price list. It contains the following fields:

Field Name	Field Description
Price List ID	Displays the price list ID.
Price List Description	Displays the description for the price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Price List Type	Indicates the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul>
Global Price List	Indicates whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.

Field Name	Field Description
Availability End date	Displays the date till when the price list is available for assignment to an account or a person.
Validity Period (in Days)	Displays the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> – Indicates that the price list is used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price list is used for quotations.</li> <li>• <b>Template</b> – Indicates that the price list is a template price list.</li> </ul>

- **Hierarchy** - Lists the parent price list from which the price list has inherited the price item pricing for a particular duration. It contains the following columns:

Column Name	Column Description
Parent Price List ID	Displays the ID of the parent price list.
Parent Price List Effective From Date	Displays the date from when the price list can inherit pricing from the parent price list.
Parent Price List Effective To Date	Displays the date till when the price list can inherit pricing from the parent price list.

- **Divisions** - Lists the divisions to which the price list is associated. It contains the following column:

Column Name	Column Description
Division	Displays the division to which the price list is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Division</b> screen appears where you can view the details of the respective division.

- **Characteristics** - Lists the characteristics that are associated with the price list. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price list.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price list.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	<p>Indicates the business object using which the price list is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>

### Eligibility Criteria

The **Eligibility Criteria** zone lists the eligibility criteria of the price list. It contains the following columns:

Field Name	Field Description
Effective Start Date	Displays the date from when the criteria is effective for the price list.
Effective End Date	Displays the date till when the criteria is effective for the price list.
Description	Displays the description for the criteria type.
Sequence	Indicates the order in which the price list eligibility criteria should be executed.
Parameter	Indicates the parameter (on the left hand side) is used in the pricing eligibility criteria.
Operator	Displays the relational operator to define the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you want to compare the parameter (on the left hand side).
Is True	<p>Indicates what happens when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

Field Name	Field Description
Is False	<p>Indicates what happens when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is Insufficient	<p>Indicates what happens when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

## Editing a Price List

### Procedure

To edit a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to edit.

The **Price List** screen appears.

3. Click the **Edit** button in the **Price List** zone.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to define parent price list to inherit price item pricing for the price list for a particular duration.
- **Divisions** - Used to associate price list with one or more divisions.
- **Eligibility Criteria** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the price list is effective.  <b>Note:</b> The system will not allow you to change the effective start date when: <ul style="list-style-type: none"> <li>• There is a price item assigned to the price list on that date.</li> <li>• The price list is assigned to an account or a person on that date.</li> </ul>	Yes
Effective End Date	Used to specify the date till when the price list is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul>	Yes
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.  <b>Note:</b> At present, the availability start date is not used in the product while assigning a price list to an account or a person. It is available for future use.	No
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.  <b>Note:</b> The availability end date cannot be earlier than the availability start date.  At present, the availability end date is not used in the product while assigning a price list to an account or a person. It is available for future use.	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Active</b> – Used to indicate that the price list is used for billing. This value appears only when you are editing a proposed price list</li> <li>• <b>Proposed</b> – Used to indicate that the price list is used for quotations.</li> <li>• <b>Template</b> – Used to indicate that the price list is a template price list.</li> </ul> <p><b>Note:</b> You cannot change the status of an active and a template price list.</p>	Yes

4. Modify the details in the **Main** section, if required.

**Note:** By default the **Main** section is displayed.

5. Add, edit or remove parent price list from the price list hierarchy, if required.
6. Associate or disassociate the price list from the divisions, if required.

**Note:** You can only view those divisions to which you have access in the **Division** list. If the price list is associated to a division to which you do not have access, then the **Divisions** section is grayed out.

7. Define, edit, or remove eligibility criteria from the price list, if required
8. Define, edit, or remove characteristics from the price list, if required.
9. Click **Save**.

The changes made to the price list are saved.

## **Price List Price Item Pricing**

Once a price list is created, you can either assign a price item to the price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to the price list. The **Price List Price Item Pricing** screen allows you to:

- View and filter the price items that are assigned to the price list
- Search and assign price items to the price list
- Copy a price item pricing and assign it to the price list

This screen consists of the following zones:

- [Price List Price Items](#) on page 324
- [Search Price Item](#) on page 325

### Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	Displays the details of price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Edit	On clicking the <b>Edit</b> (  ) icon, you can edit the price item from the price list.
Delete	On clicking the <b>Delete</b> (  ) icon, you can remove the price item from the price list.  <b>Note:</b> The <b>Delete</b> icon appears in this column only when the price list is not yet assigned to any account or person.  This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

### **Search Price Item**

You can assign a price item or price item bundle to a price list and then define pricing for the price item or price item bundle, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Search By	Used to indicate whether you want to search price item, pricing assigned to price list and override pricing for an account, or person. The valid values are: <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price list Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> </ul>	Yes
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p> </div>	No
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to search for price item bundles. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price List ID	Used to search pricing of price items or price item bundles which are assigned to a particular price list.  <b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.	No
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.  <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.  <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul> <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search pricing of price items or price item bundles which are assigned to a particular account.  <b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.	Yes
Person ID	Used to search pricing of price items or price item bundles which are assigned to a particular person.  <b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.	Yes

**Note:**  
You must specify at least one search criterion while searching for a price item or price item bundle.  
You can search for an account, person by clicking the **Search**  icon corresponding to the respective field.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the price list belongs. It may also include price items or price item bundles that are already assigned to the price list in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.
Price Item Information	Displays details of the price item or price item bundle.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.
Copy	On clicking the <b>Copy</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.  <b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> window appears with the details of the respective price item pricing.

Column Name	Column Description
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="570 321 1463 657" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p> <p>The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p> </div>
Person Information	<p>Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="570 800 1463 1136" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p> </div>
Price List Information	<p>Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="570 1276 1463 1507" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective person.</p> </div>
Variance Parameter	<p>Indicates the variance parameter which is used for defining the price item pricing.</p> <div data-bbox="570 1581 1463 1696" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p> </div>

Column Name	Column Description
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> </div>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Pricing Status	<p>Indicates the status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment Usage	<p>Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p> </div>
Price Item	<p>Displays the price item or price item bundle code.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can define the pricing for the respective price item or price item bundle.</p> </div>
Description	Displays the description of the price item or price item bundle.
Global Price List	<p>Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Column Name	Column Description
Unit of Measure	Indicates the unit of measure associated with the price item or price item bundle.
Bundle	Indicates whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Owner ID	Displays the ID of the person for whose account the price list is created.
Party ID	Displays the third party ID.
Price List ID	Indicates the price list to which the price item pricing is assigned. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list. </div>
Price Assignment ID	Displays the price assignment ID.
Price Assignment Owner Type Flag	Displays whether price list or party is the owner of the price assignment.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> <p>However, if the price item bundle is available for only pricing and the price item type is <b>Fees</b> then the valid value is <b>Regular</b>.</p> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This column appears only when you select the <b>Yes</b> option from the <b>Bundle</b> list. </div>
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>

## Editing a Price Item Pricing of a Price List

### Prerequisites

To edit a price item pricing of a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Price List Pricing** (  ) icon corresponding to the price list whose details you want to view.  
The **Price List Price Item Pricing** screen appears.
3. Price assignments effective for the price list appears in the **Price List Price Items** zone.
4. Click the **Edit** (  ) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the price item pricing is effective.</p> <div data-bbox="548 321 1195 661" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p> </div>	Yes
End Date	<p>Used to specify the date till when the price item pricing is effective.</p> <div data-bbox="548 768 1195 850" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="613 642 1198 884" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="613 1108 1198 1192" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="613 1417 1198 1501" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="548 1577 1198 1692" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Active</b> – Indicates that the price assignment is used for billing.</li> <li>• <b>Inactive</b> – Indicates that the price assignment is no longer used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is to be used for quotations.</li> <li>• <b>Template</b> – Indicates that the price assignment is a template price list.</li> </ul> <div data-bbox="548 716 1195 947" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If a price assignment is in <b>Active</b> status, you can change its status to <b>Inactive</b>. If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b>.</p> </div>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <div data-bbox="548 1136 1195 1398" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Rate schedules control how the bills for the price item will be calculated. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p> </div>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	<p>Yes (Conditional)</p> <div data-bbox="1214 1478 1463 1654" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are editing a two-dimensional pricing rule.</p> </div>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div data-bbox="548 1860 1195 1906" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>. </div>	Yes

5. Modify the details in the **Main** section, if required.
6. Edit the TFM Information in a price item pricing, if required.
7. Edit the characteristics for a price item pricing, if required.
8. Edit the parameters for a price item pricing, if required.
9. Click **Save**.

The changes made to the price item pricing are saved.

## **Assigning a Price Item to a Price List**

### **Prerequisites**

To assign a price item to a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### **Procedure**

To assign a price item to a price list:

1. Search for the price list in the **Price List** screen.

- In the **Search Results** section, click the **Price List Pricing** () icon corresponding to the price list whose details you want to view.

The **Price List Price Item Pricing** screen appears.

- Search for the price item that you want to assign to the price list in the **Search Price Item or Price Item Pricing** zone.
- In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the price list.

The **Price Item Pricing** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the price item pricing.
- TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- Characteristics** – Used to define characteristics for the price item pricing.
- Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.  <b>Note:</b> By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.	Yes
End Date	Used to specify the date till when the price item pricing is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="610 642 1187 884" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="610 1108 1187 1192" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="610 1417 1187 1501" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> <li>• <b>Template</b> – Indicates that the price assignment is a template price list.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p> </div>	Yes
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>	Yes (Conditional)  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.</p> </div>
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p> </div>	Yes
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>.</p> </div>	Yes

5. Enter the required details in the **Main** section.
6. Define TFM Information in a price item pricing, if required.
7. Define characteristics for a price item pricing, if required.
8. Define parameters for a price item pricing, if required.
9. Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a price list and vice versa, in the same date range.

### **Defining Characteristics for a Price Item Pricing**

#### **Prerequisites**

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

#### **Procedure**

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

<b>Column Name</b>	<b>Column Description</b>	<b>Mandatory (Yes or No)</b>
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	<p>Used to specify the value for the characteristic type.</p> <p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item pricing.

## **Defining Parameters for a Price Item Pricing**

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>• Parameter Description</li> <li>• Mandatory (Yes or No)</li> <li>• Priority</li> </ul>	Not applicable
Parameter Value	Used to specify the value of the parameter.	Yes

2. Enter the required details in the **Price Item and Parameter Information** section.
3. If you want to define more than one parameter information for the price item pricing, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

4. Click **Save**.

The parameters are defined for the price item pricing.

## Defining TFM Information in a Price Item Pricing

### Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

### Procedure

To define the TFM information in a price item pricing:

1. Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quaterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

2. Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

## Price List Assignment

Once a price list is defined, you can assign it to accounts or persons to indicate the prices that will be charged for the price items or services offered to the accounts or persons. You can assign multiple price lists to an account or a person along with the priority or order in which the pricing should be considered. You can also define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit the price item pricing from the price list hierarchy.

For example, suppose you have PL1 (with priority 10) and PL2 (with priority 20) assigned to an account or a person. While determining pricing for a price item, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing in PL2. The system will behave in this manner only when the price list inheritance for PL1 is set to **No** during the price list assignment.

If the price list inheritance while assigning PL1 and PL2 to an account or a person is set to **Yes**, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing from the price list hierarchy defined for PL1. However, if the system does not find the price item pricing from the price list hierarchy of PL1, it will then search for the price item pricing in PL2 (assigned to the account or person with priority 20). If the system still does not find the price item pricing in PL2, it will search for the price item pricing from the price list hierarchy defined for PL2.

The **Price List Assignment** screen allows you to search and assign a price list to an account or a person. It also allows you to view the price lists that are already assigned to an account or a person. It contains the following zones:

- [Price List Assignments](#) on page 345
- [Price List Price Items](#) on page 347
- [Search Price List for Assignment](#)

### Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You can also search for the price lists assigned to the account or person which are either inactive or expired. You will not find any records in this zone if the account does not have any price lists assigned to it. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the current, inactive, or historical price list assignments. The valid values are: <ul style="list-style-type: none"> <li>• Current Price List Assignments</li> <li>• Inactive Price List Assignments</li> <li>• Historical Price List Assignments</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> By default, the <b>Current Price List Assignments</b> option is selected. </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to search a particular price list assigned to an account or a person.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Price List ID</b> field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.	No
Price List Description	Used to search price lists which are assigned to the account or person having a particular description.	No
Effective Start Date	Used to search price lists which are assigned to the account or person from a particular date.	No
Effective End Date	Used to search price lists which are assigned to the account or person till a particular date.	No
Assignment Status	Used to search price list assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Rejected</li> <li>• Proposed</li> <li>• Inactive</li> </ul> <b>Note:</b> The <b>Inactive</b> option is not available in the <b>Assignment Status</b> list when you have selected the <b>Current Price List Assignments</b> or <b>Historical Price List Assignments</b> option from the <b>Search By</b> list. This field is disabled, and by default, the <b>Inactive</b> option is selected when you select the <b>Inactive Price List Assignments</b> option from the <b>Search By</b> list.	No
Price List Inheritance	Used to search price list assignments where the account or person inherits price item pricing from the price list hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for price list assignments.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list which is assigned to the account or person.  <b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears with the details of the respective price list.

Column Name	Column Description
Effective Start Date	Displays the date from when the price list is assigned to the account or person.
Effective End Date	Displays the date till when the price list is assigned to the account or person.
Priority	Indicates the order in which the assigned price list must be considered while determining the price item pricing for the account or person.
Assignment Status	Indicates the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Rejected</li> <li>Proposed</li> <li>Inactive</li> </ul>
Price List Inheritance	Indicates whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the account or person can inherit the price item pricing from the price list hierarchy.
Edit	On clicking the <b>Edit</b>  icon, the <b>Price List Assignment</b> screen appears where you can edit the price list assignment details.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast**  icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

### **Price List Price Items**

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays information about the price item pricing. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the details of the price item pricing.</p> </div>

Column Name	Column Description
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>
Pricing Status	<p>Indicates the status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	<p>Indicates the type of the price assignment for price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>
Copy	<p>On clicking the <b>Copy</b> () icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.</p>

By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filter** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

### Search Price List for Assignment

The **Search Price List for Assignment** zone allows you to search for a price list that you want to assign to the account or person. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search against all price lists or against those price lists which are already assigned to an account or a person. The valid values are: <ul style="list-style-type: none"> <li>• Price List</li> <li>• Assigned Price List</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>Price List</b> option is selected.</div>	Yes
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are effective from a particular date onwards. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are assigned to an account or a person from a particular date onwards.	No
Effective End Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are effective till a particular date. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are assigned to an account or a person till a particular date.	No
Account ID	Used to search price lists assigned to a particular account. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list.</div>	No
Person ID	Used to search price lists assigned to a particular person. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list.</div>	No
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> <li>Standard</li> <li>Promotional</li> </ul> <p><b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.</p>	No
Only Eligible Price Lists	Used to search price lists which are eligible for the account or person. <p><b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.</p>	No
Eligibility Date	Used to search price lists which are eligible for the account or person from a particular date. <p><b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list. By default, the current date appears in this field when the <b>Only Eligible Price Lists</b> option is selected. You can change the value, if required.</p>	No

**Note:** You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b> (  ) icon, the <b>Price List Assignment</b> screen appears where you can assign the price list to the account or person.
Price List Information	Displays the information about the price list. <p><b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.</p>
Account Information	Displays the information about the account. <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>

Column Name	Column Description
Person Information	Displays the information about the person.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Effective Start Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, the date from when the price list is effective appears in this column. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, the date from when the price list is assigned to the account or person appears in this column.
Effective End Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, the date till when the price list is effective appears in this column. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, the date till when the price list is assigned to the account or person appears in this column.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.

### **Assigning a Price List to an Account**

#### **Prerequisites**

To assign a price list to an account, you should have:

- Price list defined in the application
- Price list associated with the division to which the account belongs

#### **Procedure**

To assign a price list to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to edit.

A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the account.
  - **Price List Price Items** – Lists the price items that are assigned to the price list.
  - **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the account.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
  5. Enter the search criteria in the **Search Price List for Assignment** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

**Note:** The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the account.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the account.
- **Characteristics** – Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account to which you want to assign the price list.	Not applicable
Price List Information	Displays the information about the price list.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)										
Effective Start Date	<p>Used to specify the date from when you want to assign the price list to the account.</p> <p><b>Note:</b> The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.</p>	Yes										
Effective End Date	<p>Used to specify the date till when you want to assign the price list to the account.</p> <p><b>Note:</b></p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> <li>• Price list assignment validity end date (which is price list assignment start date + validity period)</li> <li>• Price list effective end date</li> </ul> <p>Let us understand this with the help of the following example:</p> <table border="1" data-bbox="521 974 1141 1352"> <tbody> <tr> <td><b>Price List Effective Start Date</b></td> <td>01-Jan-2015</td> </tr> <tr> <td><b>Price List Effective End Date</b></td> <td>31-Jan-2015</td> </tr> <tr> <td><b>Validity Period</b></td> <td>15 Days</td> </tr> <tr> <td><b>Price List Assignment Start Date</b></td> <td>15-Jan-2015</td> </tr> <tr> <td><b>Price List Assignment Validity End Date</b></td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </tbody> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>	<b>Price List Effective Start Date</b>	01-Jan-2015	<b>Price List Effective End Date</b>	31-Jan-2015	<b>Validity Period</b>	15 Days	<b>Price List Assignment Start Date</b>	15-Jan-2015	<b>Price List Assignment Validity End Date</b>	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)	No
<b>Price List Effective Start Date</b>	01-Jan-2015											
<b>Price List Effective End Date</b>	31-Jan-2015											
<b>Validity Period</b>	15 Days											
<b>Price List Assignment Start Date</b>	15-Jan-2015											
<b>Price List Assignment Validity End Date</b>	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)											
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the account.	Yes										
Price List Inheritance	<p>Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used to indicate that the account can inherit the price item pricing from the price list hierarchy.</li> <li>• <b>No</b> – Used to indicate that the account cannot inherit the price item pricing from the price list hierarchy.</li> </ul>	Yes										

Field Name	Field Description	Mandatory (Yes or No)
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> – Used to indicate that you want to use the price item pricing on the price list for billing.</li> <li>• <b>Proposed</b> – Used to indicate that you want to use the price item pricing on the price list for quotations.</li> </ul>	Yes

8. Enter the required details in the **Main** section.
9. Define characteristics for the price list assignment, if required.
10. Click **Save**.

The price list is assigned to the account.

How to define characteristics for a price list assignment	<a href="#">Defining Characteristics for a Price List Assignment</a>

## **Defining Characteristics for a Price List Assignment**

### **Prerequisites**

To define characteristics for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

### **Procedure**

To define characteristics for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing characteristics for a price list assignment.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List Assignment</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

## Viewing Accounts and Persons where Price List is Assigned

### Prerequisites

To view accounts and persons where price list is assigned, you should have:

- Accounts and persons created in the application
- Price list defined and assigned to the accounts and persons

### Procedure

To view accounts and persons where price list is assigned:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
The **Price List** screen appears.
3. You can search for a price list by entering the search criteria in the **Search Price List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of price lists that meet the search criteria appears in the search results.
5. In the **Search Results** section, click the **Assigned To** (🔗) icon in the **Assigned To** column corresponding to the price list whose details you want to view.  
The **Price List Assignments** screen appears.
6. You can view the accounts and persons list where price list is assigned in the **Price List Assignments** screen.

## Defining Characteristics for a Price List Assignment

### Prerequisites

To define characteristics for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

### Procedure

To define characteristics for a price list assignment:

1. Click the **Characteristics** tab in the **Price List Assignment** screen when you are assigning a price list to multiple persons or accounts and also editing the price list assignment details of multiple persons or accounts.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List Assignment</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

- Enter the required details in the **Characteristics** tab.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list assignment, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list assignment, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

## Pricing (Account)

The **Pricing (Account)** screen allows you to:

- View effective price assignments of an account
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to an account

- Edit or override a price item pricing
- Copy a price item pricing and assign it to an account

This screen consists of the following zones:

- [Effective Price Assignments for Account](#) on page 376
- [Search Price Item](#) on page 381

## Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.  <b>Note:</b> By default, this field is set to the system date.	No

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account Agreed</b> – Means price item pricing is agreed for the account.</li> <li>• <b>Account Price List</b> – Means price item pricing is defined in the price list which is assigned to the account.</li> <li>• <b>Account Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account.</li> <li>• <b>Customer Agreed</b> – Means price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> – Means price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> – Means price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Parent Customer Agreed</b> – Means price item pricing is agreed for the parent customer in the customer hierarchy.</li> <li>• <b>Parent Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> <li>• <b>Product Default Price List</b> – Means product defined in the price list is available in the default price list.</li> </ul>	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Proposed</li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> By default, the <b>Active</b> option is selected.</div>	No
Show Default and Global Pricing	Used to search price assignments inherited from the default or global price list. The valid values are: <ul style="list-style-type: none"> <li><b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Product-specific default price list defined for the division</li> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> <li><b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Product-specific default price list defined for the division</li> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> By default, the <b>No</b> option is selected.</div>	No
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	Used to search the price list using the following values: <ul style="list-style-type: none"> <li>Best Fit</li> <li>Exact Match</li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> By default, the <b>Exact Match</b> option is selected.</div>	No

**Note:** The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search price assignments which are defined using a particular parameter.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	No
Parameter Value	Used to search price assignments which are defined using a particular parameter value.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	No

**Note:**

The **Search**  icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search**  icon appears corresponding to the **Parameter Value** field only when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the account.  <b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> <li>• Product Default Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Account Agreed</b>.</p> </div>

Column Name	Column Description
Override	<p>On clicking the <b>Override</b>  icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2364.

### Search Price Item

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price List Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> </ul>	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list. </div>	No
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list. </div>	No
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list. </div>	No
Price List ID	Used to search the price list to which the price item pricing is assigned.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list. </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	<p>Used to search price item pricing on price lists which are effective from a particular date onwards.</p> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Effective End Date	<p>Used to search price item pricing on price lists which are effective till a particular date.</p> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Pricing Status	<p>Used to search price item pricing with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Price Assignment Type	<p>Used to search a particular type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Account ID	<p>Used to search pricing of price items which are assigned to a particular account.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search pricing of price items which are assigned to a particular person.  <b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.	No

**Note:**

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID**, **Price Item**, **Account ID**, and **Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the account belongs. It may also include price items or price item bundles that are already assigned to the account in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.  <b>Note:</b> This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.
Price Item Information	Displays details of the price item or price item bundle.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.  This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.
Copy	On clicking the <b>Copy</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.  <b>Note:</b> This column appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.

Column Name	Column Description
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p> <p>The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Person Information	<p>Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Price List Information	<p>Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.</p>
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Effective Start Date	<p>Displays the date from when the price item pricing is effective.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>

Column Name	Column Description
Effective End Date	<p>Displays the date till when the price item pricing is effective.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Rate Schedule	<p>Indicates the rate schedule which is used for defining the price item pricing.</p> <p><b>Note:</b> It has a link. On clicking the link <b>Rate Schedule</b> screen appears. This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Usage	<p>Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>

## Viewing Effective Price Assignments of an Account

### Prerequisites

To view effective price assignments of an account, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

**Procedure**

To view effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. View the pricing for price items or price item bundles assigned to the account (either directly or through the customer hierarchy) in the **Effective Price Assignments for Account** zone.
5. Filter the effective price assignments of the account, if required.

**Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to search for an account	<a href="#">Searching for an Account</a>
<b>Pricing (Account)</b> screen	<a href="#">Pricing (Account)</a> on page 375
<b>Effective Price Assignments for Account</b> zone	<a href="#">Effective Price Assignments for Account</a> on page 376
How to filter effective price assignments of an account	<a href="#">Filtering Effective Price Assignments of an Account</a> on page 387

**Filtering Effective Price Assignments of an Account****Prerequisites**

To filter effective price assignments of an account, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

**Procedure**

To filter effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Account** zone.

**Note:**

You can search for a price item, parameter, or parameter value by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** (+) icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

**Delete** (🗑️) icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

##### 5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Account** zone.

## Exporting Effective Price Assignments of an Account

### Prerequisites

To export effective price assignments of an account in the CSV format, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

### Procedure

To export effective price assignments of an account in the CSV format:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Filter the effective price assignments of the account, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.  
A message appears confirming whether you want to open or save the EffectivePricing.csv file.
6. Select the **Save As** option from the **Save** list.  
The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>

Column Name	Column Description
Price List Description	Displays the description of the price list.  <b>Note:</b> The description appears only when the assignment level is <b>Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, or Parent Customer Inherited Price List.</b>
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.

Column Name	Column Description
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item is billed individually or at the price item bundle level.

## Copying a Price Item Pricing

### Prerequisites

To copy a price item pricing and assign it to an account, you should have:

- Account (to which you want to assign the price item pricing) defined in the application
- Account associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

### Procedure

To copy a price item pricing and assign it to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

- In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

- Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the account.
- Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

- In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

- Modify the required pricing details.

**Note:**

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

- Edit the characteristics of the price item pricing, if required.
- Click **Save**.

A new price item pricing is defined and assigned to the account.

## **Viewing a Price Item Pricing**

### **Procedure**

To view a price item pricing and assignment details:

- Search for the account in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- **Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
  - **Pricing Information** – Displays the pricing information of the price item.
  - **TFM Information** – Displays the transaction feed management information of the price item.
  - **Characteristics** – Displays the details of price item pricing characteristics.
  - **Price Item and Parameter Information** – Displays the price item parameter details.
  - **Record Actions** – Displays the record actions of the price item pricing.
  - **Record Information** – Displays the record information of the price item pricing.
- **Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- **Rate Components** – Displays the rate components of the price item.
- **Price Components** – Displays the details of price components of the price item.
- **Tiering Criteria** – Displays the tiering criteria of the price item pricing.

**Note:** This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- **Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

**Note:** This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

6. View the basic details of price item pricing in the **Price Item Pricing** zone.
7. View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
8. View the rate components of price item in the **Rate Components** zone.
9. View the details of price components of price item in the **Price Components** zone.
10. View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
11. View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

## Editing a Price Item Pricing of an Account

### Prerequisites

To edit a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the price item pricing is effective.</p> <div data-bbox="548 289 1105 659" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p> </div>	Yes
End Date	<p>Used to specify the date till when the price item pricing is effective.</p> <div data-bbox="548 768 1105 848" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="613 638 1109 915" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="613 1171 1109 1255" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="613 1512 1109 1596" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="548 1703 1109 1818" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Active</b> – Indicates that the price assignment is used for billing.</li> <li>• <b>Inactive</b> – Indicates that the price assignment is no longer used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> If a price assignment is in <b>Active</b> status, you can change its status to <b>Inactive</b>. If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b>.</p> </div>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p> </div>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are editing a two-dimensional pricing rule.</p> </div>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p> </div>	Yes
Pricing Frequency	<div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>.</p> </div>	Yes

6. Modify the details in the **Main** section, if required.
7. Edit the TFM Information in a price item pricing, if required.
8. Edit the characteristics for a price item pricing, if required.
9. Edit the parameters for a price item pricing, if required.
10. Click **Save**.

The changes made to the price item pricing are saved.

## Overriding a Price Item Pricing of an Account

### Prerequisites

To override a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To override a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the price item pricing is effective.</p> <p><b>Note:</b> The effective start date cannot be later than the effective end date. If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range. This field will be in read-only mode when the price assignment has been used.</p>	Yes
End Date	<p>Used to specify the date till when the price item pricing is effective.</p> <p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	Yes
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <b>Note:</b> By default, <b>Yes</b> is selected.	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.  <b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	Yes

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to an account and vice versa, in the same date range.

## Defining Characteristics for a Price Item Pricing

### Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

### Procedure

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

## **Defining Parameters for a Price Item Pricing**

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

1. Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

<b>Field Name</b>	<b>Field Description</b>
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

<b>Column Name</b>	<b>Column Description</b>	<b>Mandatory (Yes or No)</b>
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>Parameter Description</li> <li>Mandatory (Yes or No)</li> <li>Priority</li> </ul>	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

## Defining TFM Information in a Price Item Pricing

### Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

### Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quaterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

2. Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

## **Pricing (Person)**

The **Pricing (Person)** screen allows you to:

- View effective price assignments of a person
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to a person

- Edit or override a price item pricing
- Copy a price item pricing and assign it to a person

You can also view effective price assignments of a global person (i.e. a person who is not associated to any division) in this screen. The pricing for all price items or price item bundles assigned to the global person either directly or through a price list appears in this screen. However, you will be able to view pricing for only those price items or price item bundles that are associated to the division to which you have access.

Since a global person is not associated to any division, the system cannot determine the price assignment search order for a global person. Hence, the default search order is defined for global persons through the **C1\_PRASNORDR** feature configuration. This feature configuration contains the **Price Assignment Algorithm** option type where you need to specify the algorithm which contains default search order for global persons. You can change this default search order, if required. The valid search order values are — **AGREED\_PRICELIST** and **AGREED\_FIRST**. You can also create a custom search order, if required.

This screen consists of the following zones:

- [Effective Price Assignments for Person](#) on page 410
- [Search Price Item](#) on page 415

## Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.  <b>Note:</b> By default, this field is set to the current date.	No

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Customer Agreed</b> – Means price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> – Means price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> – Means price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Parent Customer Agreed</b> – Means price item pricing is agreed for the parent customer in the customer hierarchy.</li> <li>• <b>Parent Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> </ul>	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No
Pricing Status	<p>Used to search price assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul> <p><b>Note:</b> By default, the <b>Active</b> option is selected.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> <li>• <b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> </ul> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	No
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	<p>Used to search the price list using the following values:</p> <ul style="list-style-type: none"> <li>• Best Fit</li> <li>• Exact Match</li> </ul> <p><b>Note:</b> By default, the <b>Exact Match</b> option is selected.</p>	No

**Note:** The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to search price assignments which are defined using a particular parameter.</p> <p><b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to search price assignments which are defined using a particular parameter value.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	No

<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Parameter</b> field. On clicking the <b>Search</b> icon, you can search for a parameter.</p> <p>You can only use those parameters where the source entity is set to <b>Transaction</b>.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Parameter Value</b> field only when the value type of the parameter is <b>Predefined</b> or <b>Reference</b>. If the value type of the parameter is <b>Predefined</b> then on clicking the <b>Search</b> icon, you can search for a predefined parameter value. However, if the value type of the parameter is <b>Reference</b> then on clicking the <b>Search</b> icon, you can search for a reference parameter value.</p>
--

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the person.  <b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the <b>Edit</b>  icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Customer Agreed</b>.</p>
Override	<p>On clicking the <b>Override</b>  icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2364.

**Search Price Item**

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price List Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> </ul>	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	<p>Used to search price items or price item bundles which can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>	No
Bundle	<p>Used to search whether the price item is a bundle or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>	No
Price List ID	<p>Used to search the price list to which the price item pricing is assigned.</p> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p>	No
Effective Start Date	<p>Used to search price item pricing on price lists which are effective from a particular date onwards.</p> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Effective End Date	<p>Used to search price item pricing on price lists which are effective till a particular date.</p> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to search price item pricing with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Price Assignment Type	<p>Used to search a particular type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Account ID	<p>Used to search pricing of price items which are assigned to a particular account.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Person ID	<p>Used to search pricing of price items which are assigned to a particular person.</p> <p><b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No

**Note:**

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID, Price Item, Account ID, and Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the person belongs. However, if the person does not belong to any division, the search will be performed

against all price items or price item bundles defined in the system. It may also include price items or price item bundles that are already assigned to the person in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	<p>On clicking the <b>Assign</b> () icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.</p> <p><b>Note:</b> This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>
Price Item Information	<p>Displays details of the price item or price item bundle.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle. This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>
Copy	<p>On clicking the <b>Copy</b> () icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.</p>
Pricing Information	<p>Displays details of the price item pricing.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b> This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>

Column Name	Column Description
Person Information	<p>Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="570 323 1466 661" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p> </div>
Price List Information	<p>Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="570 800 1466 1024" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.</p> </div>
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).</p> <div data-bbox="570 1167 1466 1278" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p> </div>
Effective Start Date	<p>Displays the date from when the price item pricing is effective.</p> <div data-bbox="570 1356 1466 1438" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p> </div>
Effective End Date	<p>Displays the date till when the price item pricing is effective.</p> <div data-bbox="570 1514 1466 1596" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p> </div>
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <div data-bbox="570 1671 1466 1753" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p> </div>

Column Name	Column Description
Rate Schedule	<p>Indicates the rate schedule which is used for defining the price item pricing.</p> <p><b>Note:</b> It has a link. On clicking the link <b>Rate Schedule</b> screen appears. This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Usage	<p>Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>

## Viewing Effective Price Assignments of a Person

### Prerequisites

To view effective price assignments of a person, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### Procedure

To view effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. View the pricing for price items or price item bundles assigned to the person (either directly or through the customer hierarchy) in the **Effective Price Assignments for Person** zone.
5. Filter the effective price assignments of the person, if required.

### Related Topics

For more information on...	See...
How to search for a person	<a href="#">Searching for a Person</a>
<b>Pricing (Person)</b> screen	<a href="#">Pricing (Person)</a> on page 409
<b>Effective Price Assignments for Person</b> zone	<a href="#">Effective Price Assignments for Person</a> on page 410
How to filter effective price assignments of a person	<a href="#">Filtering Effective Price Assignments of a Person</a> on page 421

## Filtering Effective Price Assignments of a Person

### Prerequisites

To filter effective price assignments of a person, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### Procedure

To filter effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Person** zone.

**Note:**

You can search for a price item, parameter, or parameter value by clicking the **Search**  icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add**  icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

**Delete**  icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

### 5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Person** zone.

## Exporting Effective Price Assignments of a Person

### Prerequisites

To export effective price assignments of a person in the CSV format, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### Procedure

To export effective price assignments of a person in the CSV format:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu**  icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Filter the effective price assignments of the person, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.  
A message appears confirming whether you want to open or save the EffectivePricing.csv file.
6. Select the **Save As** option from the **Save** list.  
The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>
Price List Description	Displays the description of the price list.  <b>Note:</b> The description appears only when the assignment level is <b>Customer Price List, Customer Inherited Price List, Parent Customer Price List, or Parent Customer Inherited Price List</b> .

Column Name	Column Description
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Column Name	Column Description
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item or price item bundle's total usage is considered for determining the rate.

## **Copying a Price Item Pricing**

### **Prerequisites**

To copy a price item pricing and assign it to a person, you should have:

- Person (to which you want to assign the price item pricing) defined in the application
- Person associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

### **Procedure**

To copy a price item pricing and assign it to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

5. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the person.
6. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

8. Modify the required pricing details.

**Note:**

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

9. Edit the characteristics of the price item pricing, if required.

10. Click **Save**.

A new price item pricing is defined and assigned to the person.

## **Viewing a Price Item Pricing**

### **Procedure**

To view a price item pricing and assignment details:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- **Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
  - **Pricing Information** – Displays the pricing information of the price item.
  - **TFM Information** – Displays the transaction feed management information of the price item.
  - **Characteristics** – Displays the details of price item pricing characteristics.
  - **Price Item and Parameter Information** – Displays the price item parameter details.
  - **Record Actions** – Displays the record actions of the price item pricing.
  - **Record Information** – Displays the record information of the price item pricing.
- **Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- **Rate Components** – Displays the rate components of the price item.
- **Price Components** – Displays the details of price components of the price item.
- **Tiering Criteria** – Displays the tiering criteria of the price item pricing.

**Note:** This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- **Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

**Note:** This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

6. View the basic details of price item pricing in the **Price Item Pricing** zone.
7. View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
8. View the rate components of price item in the **Rate Components** zone.
9. View the details of price components of price item in the **Price Components** zone.
10. View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
11. View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

## Editing a Price Item Pricing of a Person

### Prerequisites

To edit a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the price item pricing is effective.</p> <div data-bbox="548 289 1105 659" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p> </div>	Yes
End Date	<p>Used to specify the date till when the price item pricing is effective.</p> <div data-bbox="548 768 1105 848" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="613 640 1109 913" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="613 1171 1109 1255" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="613 1514 1109 1598" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="548 1703 1109 1818" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Active</b> – Indicates that the price assignment is used for billing.</li> <li>• <b>Inactive</b> – Indicates that the price assignment is no longer used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul> <p><b>Note:</b> If a price assignment is in <b>Active</b> status, you can change its status to <b>Inactive</b>. If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b>.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p><b>Note:</b> Rate schedules control how the bills for the price item will be calculated. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p>	Yes
Pricing Frequency	<p>Used to indicate pricing frequency for the price item.</p> <p><b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>.</p>	Yes

6. Modify the details in the **Main** section, if required.
7. Edit the TFM Information in a price item pricing, if required.
8. Edit the characteristics for a price item pricing, if required.
9. Edit the parameters for a price item pricing, if required.
10. Click **Save**.

The changes made to the price item pricing are saved.

## Overriding a Price Item Pricing of a Person

### Prerequisites

To override a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To override a price item pricing of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.  <b>Note:</b> The effective start date cannot be later than the effective end date. If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range. This field will be in read-only mode when the price assignment has been used.	Yes
End Date	Used to specify the date till when the price item pricing is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="613 640 1109 913" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. **Assigning a Price Item to a Person****Prerequisites**

To assign a price item to a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

**Procedure**

To assign a price item to a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Search for the price item that you want to assign to the person in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the person.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.  <b>Note:</b> By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.	Yes
End Date	Used to specify the date till when the price item pricing is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="613 611 1162 852" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="613 1077 1162 1157" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="613 1388 1162 1467" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.  <b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	Yes
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <b>Note:</b> By default, <b>Yes</b> is selected.	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.  <b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	Yes

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a person and vice versa, in the same date range.

## Defining Characteristics for a Price Item Pricing

### Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

### Procedure

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

## **Defining Parameters for a Price Item Pricing**

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

1. Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

<b>Field Name</b>	<b>Field Description</b>
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

<b>Column Name</b>	<b>Column Description</b>	<b>Mandatory (Yes or No)</b>
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>Parameter Description</li> <li>Mandatory (Yes or No)</li> <li>Priority</li> </ul>	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

## Defining TFM Information in a Price Item Pricing

### Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

### Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quaterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

2. Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

## **Price Item Pricing (Used for Viewing)**

Once the pricing is defined for a price item pricing which is assigned to a account, person, or price list, the **Price Item Pricing** screen allows you to:

- Edit the details of a price item pricing
- Delete a price item pricing

- Submit a price item pricing for processing
- View the details of price components of the rate component
- View the details of tiering criteria, pricing eligibility criteria of a price component
- Add price components of the rate components
- Add tiering components, pricing eligibility criteria of the price components
- Edit price components, tiering criteria, pricing eligibility criteria
- Delete price components, tiering criteria, pricing eligibility criteria

**Note:**

When the price assignment is in **Draft** status and when:

- Approval Workflow is off then status is changed from **Draft** to **Active**.
- Approval Workflow is on then status is changed from **Draft** to **Pending in Approval**.

## Price Item Pricing

The **Price Item Pricing** zone displays the details of the price item pricing. It contains the following sections:

- **Pricing Information** - Displays basic information about the pricing of the price item. It contains the following fields:

Field Name	Field Description
Start Date	Displays the date from when the pricing of the price item is effective.
End Date	Displays the date till when the pricing of the price item is effective.

Field Name	Field Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Post Processing</b> – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> <li>• <b>Post Processing – Invoice Based</b> – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This is not applicable for price items which are defined for <b>Pricing</b> and where the <b>Price Item Type</b> field is set to <b>Fees</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> <li>• <b>Regular</b> – Indicates that the pricing is used to generate regular bill segment.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This is not applicable for price items which are defined for <b>Pricing</b> and where the <b>Price Item Type</b> field is set to <b>Fees</b>. By default, the <b>Regular</b> option is selected in the <b>Bundle Type</b> field for price item which are applicable for <b>Pricing</b> and cannot be edited. The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div>
Pricing Eligibility	Indicates whether the price item pricing is eligible for pricing assignment or not.
Pricing Status	<p>Indicates the pricing assignment status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Currency</b> screen appears where you can view the details of the currency.</p> </div>
Rate Schedule	<p>Indicates the rate schedule that is used to define the price item pricing.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the rate schedule.</p> </div>

Field Name	Field Description
Pricing Rule Type	Indicates the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>
Print Zero	Indicates the zero pricing displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>

- **TFM Information** – Displays the transactions mapped to the price item pricing. It contains the following fields:

Field Name	Field Description
Ignore Transaction	Indicates whether the transactions mapped to the price item pricing is considered for billing or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>
Aggregate Transactions	Indicates whether the transactions mapped to the price item pricing is aggregated for billing or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>Daily</li> <li>Weekly</li> <li>Monthly</li> <li>Quarterly</li> <li>Yearly</li> </ul>
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Transactions and Then Rate Aggregated SQs</li> <li>Do Not Rate Transactions</li> </ul>

**Note:**

**TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Usage** field is set to **Pricing and Billing**.

**TFM Information** section does not appear when the **Price Item Usage** field is set to **Only Pricing** and the **Price Item Type** field is set to **Fees**, then, only the **Pricing Frequency** field appears.

- **Characteristics** – Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Price Item and Parameter Information** – Displays the parameter details for the price item pricing. It contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the parameter value.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the price item pricing.  <b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.
Delete	Used to delete the price item pricing.  <b>Note:</b> The <b>Delete</b> button appears only when the price item pricing is in the <b>Draft</b> status.
Submit	Used to submit the price item pricing for validation and processing.  <b>Note:</b> The <b>Submit</b> button appears only when the price item pricing is in the <b>Draft</b> status.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item pricing is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Rate and Price Component Summary

The **Rate and Price Component Summary** zone lists the following in a tree view:

- Information string of price component with tiers where the rate schedule is flat.

- Information string of price component with tiers where the rate schedule is step.
- Information string of price component with tiers where the rate schedule is threshold.

## Rate Components

The **Rate Components** zone lists rate components and its details for price item pricing that are assigned to an account, person, or price list. This zone contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence number of the rate component.
Rate Components	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component ID</li> <li>• Rate Component Sequence Number</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Add Price Component	On clicking the <b>Add Price Component</b> button, the <b>Price Component</b> screen appears where you can add the price component for the rate component. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This button appears only when the <b>Pricing Status</b> of the price item pricing is in <b>Draft, Proposed</b> and <b>Template</b> status.</p> </div>

On clicking the broadcast **Broadcast** (📡) icon corresponding to the rate component, the **Price Components** zone appears with the details of the price components for the respective rate component.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

## Tiering Criteria

The **Tiering Criteria** zone lists the detail of tiering criterions that are used in the tiering range. This zone contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence number of the tiering criteria.
Tiering Criterion	Indicates the tiering criterion.
Price Item	Displays the price item.
Parameter Information	Displays information about the parameter associated with the price item.
Lower Limit	Displays the lower limit of the tiering range.
Upper Limit	Displays the upper limit of the tiering range.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Price Component</b> screen appears where you can edit the details of the tiering criteria.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the tiering criteria.  <b>Note:</b> The <b>Delete</b> icon appears only when the price assignment is in <b>Draft</b> , <b>Proposed</b> or <b>Template</b> status.

By default, the **Tiering Criteria** zone does not appear in the **Price Item Pricing** screen. It appears only when you click the broadcast **Broadcast** (📡) icon corresponding to a price component in the **Price Components** zone.

### Note:

The **Tiering Criteria** zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**.

You can define tiering criteria for a price component by clicking the **Add** link in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

## Pricing Eligibility Criteria

The **Pricing Eligibility Criteria** zone lists the detail of parameters used while defining the pricing eligibility criteria. This zone contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence number of the tiering criteria.
Parameter	Indicates the parameter (on the left hand side) is used in the pricing eligibility criteria.
Operator	Displays the relational operator defined for the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you have compared the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you have compared the parameter (on the left hand side).
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number is executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number is executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field is executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
Is Insufficient	Indicates what happens when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number is executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field is executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Price Component</b> screen appears where you can edit the details of the pricing eligibility criteria.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the pricing eligibility criteria. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Delete</b> icon appears only when the price assignment is in <b>Draft, Proposed</b> or <b>Template</b> status.</p> </div>

By default, the **Pricing Eligibility Criteria** zone does not appear in the **Price Item Pricing** screen. It appears only when you click the broadcast **Broadcast** (📡) icon corresponding to a price component in the **Price Components** zone.

**Note:**

The **Pricing Eligibility Criteria** zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

You can define pricing eligibility criteria for a price component by clicking the **Add** link in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

**Two-Dimensional Pricing**

The **Two-Dimensional Pricing** zone displays the details of the two-dimensional pricing. It contains the following field:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma(,) for an account, person or price list.

In addition, this section contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Displays the <b>Price Criteria</b> of the price component
Threshold Parameter	Displays the parameter of the price component eligibility
Tiering Range	Displays the tiering range of the pricing.

**Defining a Price Item Pricing****Prerequisites**

To define pricing for a price item, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application

- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### **Procedure**

To define pricing for a price item:

- Do either of the following:

<b>If you want to...</b>	<b>Then...</b>
Define pricing for a price item that you want assign to a customer	<ol style="list-style-type: none"> <li>Access the <b>Pricing (Person)</b> screen.</li> <li>Search for the price item that you want to assign to the customer.</li> <li>In the <b>Search Results</b> section, click the <b>Assign</b>  icon in the <b>Assign</b> column corresponding to the price item that you want to assign to the customer.</li> </ol>
Define pricing for a price item that you want assign to an account	<ol style="list-style-type: none"> <li>Access the <b>Pricing (Account)</b> screen.</li> <li>Search for the price item that you want to assign to the account.</li> <li>In the <b>Search Results</b> section, click the <b>Assign</b>  icon in the <b>Assign</b> column corresponding to the price item that you want to assign to the account.</li> </ol>
Define pricing for a price item that you want assign to a price list	<ol style="list-style-type: none"> <li>Access the <b>Price list Price Item Pricing</b> screen.</li> <li>Search for the price item that you want to assign to the price list.</li> <li>In the <b>Search Results</b> section, click the link in the <b>Price Item</b> column corresponding to the price item that you want to assign to the price list.</li> </ol>

The **Price Item Pricing** screen appears.

- Enter the transaction feed management information that you want to map to the price item pricing.
- Enter the date from when the price item pricing is effective in the **Effective Start Date** field.
- Select the currency, in which you want to define the pricing, from the **Pricing Currency** list.
- Enter the rate schedule that you want to use while defining price item pricing.
  - Parameter details segment is displayed in the **Price Item and Parameter Information** section.

**Note:** You can specify multiple parameter codes associated with the price items, search for a price item parameters using the **Search**  icon corresponding to the **Parameter** field.

- A section appears at the bottom of the screen.

**Note:** You can search for a rate schedule by clicking the **Search** (🔍) icon corresponding to the field.

6. Select the type of price assignment from the respective field.
7. Select **All Customers** or **New Customers** from the **Apply To** list depending on whether you want to apply the price item pricing to all customers or only to the new customers.
8. Select **Pricing Frequency** and **Advance Pricing** (this field would be displayed only if additionally **Price Assignment Type** is **Post Processing**). These fields are applicable for price item value as **Pricing Only** and **Price Item Type** value as **Fees**.
9. The section at the bottom of the screen contains rate components of the rate schedule on the left hand side and the eligibility and tiering ranges per price component on the right hand side.
10. Rate is used to specify the price for the price item.
11. You can expand details to add tiering criteria and pricing eligibility criteria by clicking the **Add** (📄+) icon corresponding to the **Eligibility tier Details** field.
12. If price component is for **Flat Rate** then **Pricing Eligibility Criteria** details are displayed and if price component is for **Step Tiering** or **Threshold Tiering** then **Pricing Eligibility Criteria** and **Tiering Criteria** details are displayed.
13. In the **Pricing Eligibility Criteria** section, you can enter price component details to following mandatory fields:
  - a) You can specify relational **Operator** to define relation between **LHS Parameter Code** and **RHS Parameter Code**.
  - b) You can select the type of pricing eligibility for **RHS Parameter Value Type**.
  - c) Select the values from **Is True**, **Is False** and **Is Insufficient** that indicates what should happen when the condition is true, false or insufficient.
14. To add more than one **Pricing Eligibility Criteria**, click the **Add** (+) icon and to delete the pricing eligibility click the **Delete** (🗑️) icon corresponding to the **Sequence Number**.
15. In the **Tiering Criteria** section, you can enter price component details to the following mandatory fields:
  - a) Select the **Tiering Criterion** from the list.
  - b) If you want to define tiering range based on some other price item or bundle's usage, enter the price item or bundle code in the **Price Item** field

**Note:** You can search for a price item by clicking the **Search** (🔍) icon corresponding to the **Price item** field.

- c) You can define the price item pricing based on multiple parameters, select the parameters using the **Search** (🔍) icon corresponding to the **Price Item Parameters** field.
  - d) To add more than one **Price Item Parameters**, click the **Add** (+) icon and to delete the price item parameters click the **Delete** (🗑️) icon corresponding to the **Parameter** field.
  - e) Enter the lower and upper limits of the tiering range in the **From** and **To** fields.
16. To add more than one **Price Component Details**, click the **Add** (+) icon and repeat the steps from 9 to 14. To delete the details of price component click the **Delete** (🗑️) icon corresponding to the **Price Component Sequence** field.
  17. Define characteristics for the price assignment, if required.
  18. Click **Save**.  
The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a price list, customer, or an account, and vice versa, in the same date range.

Enter the required details in the <b>Price Item Pricing</b> screen and click <b>Save</b>.</li> <li>4. The <b>Price Item Pricing</b> screen appears.</li> </ol>

2. Click the **Add Price Component** button in the **Add Price Component** of **Rate Components** zone.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.
- **Tiering Criteria** – Used to specify the details of tiering criterions that are used in the tiering range.
- **Pricing Eligibility Criteria** – Used to specify the details of parameters used while defining the pricing eligibility criteria.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which price component should be considered.	Yes
Show Price Component	Used to indicate whether the price component should appear or not.	Yes
Description	Used to specify the description of the price component.	Yes
Rate Value	Used to indicate the rate defined for the price component.	Yes

**Tip:** Alternatively, you can access the **Price Component** screen by clicking the **Add** link to the right hand side corner of the **Price Components** zone.

3. Enter the required details in the **Main** section.

4. Define tiering criteria for a price component.
5. Define pricing eligibility criteria for a price component.
6. Click **Save**.

The price component is defined for a rate component.

## Defining a Tiering Criteria for a Price Component

### Prerequisites

To define a tiering criteria for a price component, you should have:

- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application.

### Procedure

To define a tiering criteria for a price component:

1. Click the **Add** link the right hand side corner of the **Tiering Criteria** zone.

#### **Note:**

The **Tiering Criteria** zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.

Field Name	Field Description
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>Rate Component Sequence</li> <li>Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- Main** – Used to specify the basic details about the price component.

This section contains the following fields:

Field Name	Field Description
Sequence	Indicates the sequence in which price component should be considered.
Show Price Component	Indicates that the price component will appear or not.
Description	Displays the description of the price component.
Rate Value	Indicates the rate defined for the price component.

- Tiering Criteria** – Used to specify the details of tiering criterions that are used in the tiering range.

This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which tiering criteria should be considered.	Yes
Tiering Criterion	Used to select the tiering criterion which is used in the tiering range.	Yes
Lower Limit	Used to specify the lower limit of the pricing range.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.</p> </div>	Yes
Upper Limit	Used to specify the upper limit of the pricing range.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.  When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 9999999999999999.99.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item	<p>Used to Indicate whether the price item or price item bundle's total usage is considered for determining the rate. By default, the price item code for which you are defining the pricing appears in this field. You can specify any other price item or bundle code, if required.</p> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.</p>	Yes
Price Item Parameters	<p>Used to specify the parameters based on which price item or bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the <b>Pricing</b> flag is set to <b>Yes</b>), if required. However, note that you can only select parameters associated with the price item or bundle which is used for defining the tiering criteria.</p> <p><b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Edit</b> () appears corresponding to this field. On clicking the <b>Edit</b> icon, the <b>Parameters Search</b> screen appears.</p>	No

- Enter the required details in the **Tiering Criteria** section.
- If you want to define more than one tiering criteria for the price component, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a tiering criteria from the price component, click the **Delete** () icon corresponding to the tiering criterion.

- Click **Save**.

The tiering criteria is defined for the price component.

## Defining a Pricing Eligibility Criteria for a Price Component

### Prerequisites

To define a pricing eligibility criteria for a price component, you should have:

- Pricing eligibility defined in the application

### Procedure

To define a pricing eligibility criteria for a price component:

1. Click the **Add** link the right hand side corner of the **Pricing Eligibility Criteria** zone.

#### Note:

The **Pricing Eligibility Criteria** zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.

This section contains the following fields:

Field Name	Field Description
Sequence	Indicates the sequence in which price component should be considered.
Show Price Component	Indicates that the price component will appear or not.
Description	Displays the description of the price component.
Rate Value	Indicates the rate defined for the price component.

- **Pricing Eligibility Criteria** – Used to specify the details of parameters used in the pricing eligibility criteria.

This section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter	<p>Used to indicate the left hand side parameter which you want to use along with the price item for price determination.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.</p> <p>You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p> </div>	Yes
Operator	<p>Used to specify the relational operator to define the relation between the left hand side and right hand side parameters code. The valid values are:</p> <ul style="list-style-type: none"> <li>• &lt;</li> <li>• &lt;=</li> <li>• &lt;&gt;</li> <li>• =</li> <li>• &gt;</li> <li>• &gt;=</li> <li>• Algorithm</li> <li>• Between</li> <li>• In</li> <li>• Like</li> </ul>	Yes
Parameter Value Type	<p>Used to indicate the type of pricing eligibility. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Parameter</b> – Used to indicate the type of parameter.</li> <li>• <b>Value</b> – Used to indicate the type of value.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	<p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the right hand side parameter which you want to use along with the price item for price determination. When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the parameter value.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field only when the <b>Parameter</b> option is selected for <b>Parameter Value Type</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.</p> <p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then you must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p> <p>When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then you can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon (;) in the parameter value.</p> </div>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

2. Enter the required details in the **Pricing Eligibility Criteria** section.
3. If you want to define more than one pricing eligibility criteria for the price component, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a pricing eligibility criteria from the price component, click the **Delete** (🗑️) icon corresponding to the parameter.

4. Click **Save**.

The pricing eligibility criteria is defined for the price component.

The <b>Price Item Pricing</b> screen appears.</li> </ol>

If you want to edit the tiering criteria of.....	Then...
	<p><b>Tip:</b> Alternatively, you can access the <b>Price Item Pricing</b> screen by:</p> <ol style="list-style-type: none"> <li>1. Search for a price item in the <b>Search Price Item or Price Item Pricing</b> zone.</li> <li>2. In the <b>Search Results</b> section, click the <b>Assign</b> () icon corresponding to the price item.</li> <li>3. Enter the required details in the <b>Price Item Pricing</b> screen and click <b>Save</b>.</li> <li>4. The <b>Price Item Pricing</b> screen appears.</li> </ol>

2. In the **Rate Components** zone, click the **Broadcast** () icon corresponding to the rate component, the **Price Components** zone appears with the details of the price components for the respective rate component.
3. In the **Price Components** zone, click the **Broadcast** () icon corresponding to the price component, the **Tiering Criteria** zone appears with the details of tiering criterions that are used in the tiering range.

**Note:**

The **Tiering Criteria** zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**.

4. Click the **Edit** () icon in the **Edit** column corresponding to the tiering criteria whose details you want to edit for the price component.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.

This section contains the following fields:

Field Name	Field Description
Sequence	Indicates the sequence in which price component should be considered.
Show Price Component	Indicates that the price component will appear or not.
Description	Displays the description of the price component.
Rate Value	Indicates the rate defined for the price component.

- **Tiering Criteria** – Used to specify the details of tiering criteria that are used in the tiering range.

This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which tiering criteria is to be considered.	Yes
Tiering Criterion	Used to select the tiering criterion which is used in the tiering range.	Yes
Lower Limit	Used to specify the lower limit of the pricing range.  <b>Note:</b> The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.	Yes
Upper Limit	Used to specify the upper limit of the pricing range.  <b>Note:</b> The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.  When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 9999999999999999.99.	Yes
Price Item	Used to Indicate whether the price item or price item bundle's total usage is considered for determining the rate. By default, the price item code for which you defined the pricing appears in this field. You can specify any other price item or bundle code, if required.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters based on which price item or bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the <b>Pricing</b> flag is set to <b>Yes</b>), if required. However, note that you can only select parameters associated with the price item or bundle which is used for defining the tiering criteria.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Edit</b> () appears corresponding to this field. On clicking the <b>Edit</b> icon, the <b>Parameters Search</b> screen appears.</p> </div>	No

5. Modify the tiering criteria for a price component.

6. Click **Save**.

The tiering criteria is edited for a price component.

If you want to...	Then...
	<p>item whose pricing details you want to view.</p> <p>The <b>Price Item Pricing</b> screen appears.</p> <ul style="list-style-type: none"> <li>Click the <b>Edit</b> button in the <b>Record Actions</b> section.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of a price item.</p> <div data-bbox="1013 554 1395 667" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div> <p>c. Third alternative,</p> <ul style="list-style-type: none"> <li>Search for a price item in the <b>Search Price Item or Price Item Pricing</b> zone.</li> </ul> <p>In the <b>Search Results</b> section, click the <b>Assign</b> () icon corresponding to the price item.</p> <ul style="list-style-type: none"> <li>Enter the required details in the <b>Price Item Pricing</b> screen and click <b>Save</b>.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears.</p> <ul style="list-style-type: none"> <li>Click the <b>Edit</b> button in the <b>Record Actions</b> section.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of a price item.</p> <div data-bbox="1013 1377 1395 1491" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div>

The **Price Item Pricing** screen appears.

2. Modify the required pricing details.

**Note:**

If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.

You can search for parameter, rate schedule by clicking the **Search** () icon corresponding to the respective fields.

3. Edit the TFM Information in a price item pricing, if required.

4. Edit the characteristics for a price item pricing, if required.
5. Edit the parameters for a price item pricing, if required.
6. Edit the price assignment, if required.
7. Click **Save**.

**Note:**

If any value other than **Status** and **End Date** is updated then the price item pricing for the price item is end with **End Date** updated as (today's date -1) and a new price item pricing is generated for the price item with new price item pricing ID and start date as today's date.

The **Edit Price Components** button appears only when you are editing a price assignment which is in the **Active**, **Proposed**, or **Template** status and which is not past dated; If the approval workflow is on, then the **Edit Price Components** button appears when you are editing a proposed and template price assignment which is already approved.

When the price assignment is in **Draft** status and,

- When the approval workflow is on and is in **Draft** status then it is changed to **Pending in Approval**.

When the price assignment is in **Draft** status and,

- When the approval workflow is off and is in **Draft** status then it is changed to **Active**.

The changes made to the price item pricing are saved.

## Overriding a Price Item Pricing

### Prerequisites

To override a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To override a price item pricing:

1. Do either of the following:

If you want to...	Then...
Override price item pricing assigned to the customer either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Person)</b> screen.</li> <li>2. In the <b>Effective Price Assignment</b> zone, click the <b>Override</b>  icon in the <b>Override</b> column corresponding to the price item pricing that you want to override.</li> </ol>
Override price item pricing assigned to the account either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Account)</b> screen.</li> <li>2. In the <b>Effective Price Assignment</b> zone, click the <b>Override</b>  icon in the <b>Override</b> column corresponding to the price item pricing that you want to override.</li> </ol>

The **Price Item Pricing** screen appears.

2. Modify the required pricing details.

#### Note:

If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.

While overriding a price item pricing, you can not only edit the existing tiering combination details, but also add additional tiering combinations until the maximum tiering combinations limit is met.

3. Modify the price assignment characteristics, if required.
4. Click **Save**.

The price item pricing is overridden.

## Editing the Two-Dimensional Pricing

### Procedure

To edit a two-dimensional pricing:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Search for the price item pricing in the **Search Price Item or Price Item Pricing** screen.

5. Click the **Assign** icon () corresponding to the **Price Item Information**.

The **Price Item Pricing** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Displays the date from when the price item pricing is effective.	Yes
End Date	Displays the date till when the price item pricing is effective.	No
Rate Schedule	Indicates the rate schedule used while defining price item pricing.  <b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the rate schedule.	Yes
Print Zero	Indicates the zero pricing displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Pricing Currency	Indicates the currency in which the price item pricing is defined.  <b>Note:</b> It has a link. On clicking the link, the <b>Currency</b> screen appears where you can view the details of the currency.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Indicates the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>	Yes
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>	Yes
Pricing Eligibility	Displays the pricing eligibility criteria for price item pricing.	Yes
Pricing Rule Type	Indicates the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes

6. Click **Save**.

The **Price Item Pricing** screen appears.

7. Click the **Edit** link in the top-right of the **Two-Dimensional Pricing** zone.

The **Two-Dimensional Pricing** screen appears. It contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Used to search by the various criterion.
Threshold Parameter	Used to search by the threshold parameter.
Tiering Range	Displays the tiering range of the pricing.

8. Modify the details in the **Two-Dimensional Pricing** screen, if required.

9. If you want to add more than one threshold parameter, click the **Add** (+) icon and then enter the threshold parameter name and its value.

However, if you want to remove a threshold parameter, click the **Delete** (trash) icon corresponding to the parameter.

10. If you want to add more than one tiering range, click the **Add** (+) icon and then enter the specific range.

However, if you want to remove a tiering range, click the **Delete** (trash) icon corresponding to the range that you want to remove.

11. Click **Save**.

The changes made to the two-dimensional pricing are saved.

**Related Topics**

For more information on...	See...
How to search for a price list	<a href="#">Searching for a Price List</a> on page 307

## Pricing Simulation

The **Pricing Simulation** screen allows you to:

- View pricing simulation details for account or price list
- View effective pricing information
- Search simulation details of account or price list

This screen consists of the following zones:

- [Search Pricing](#) on page 508

Through the **Pricing Simulation** screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 275
- [Simulation - Effective Pricing Information](#) on page 512

## Search Pricing

The **Search Pricing** zone allows you to search pricing for an account.

In case of bundles, the order in which the price item pricing is listed in this zone is based on the following condition:

- If the system finds pricing for price items that belong to a bundle before finding pricing for the bundle, then the system lists the pricing for price items that belong to the bundle, and not the pricing for the bundle. For example, let say, B0001 is a bundle, and contains C0001 and C0002 price items. If the system finds pricing for B0001, it validates whether the pricing for C0001 and C0002 has already been found. If yes, then the system lists the pricing for C0001 and C0002. If the system does not find pricing for C0001 and C0002 before finding pricing for B0001, it lists the pricing for B0001.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following two options:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for pricing using price list or account or person details. The valid values are: <ul style="list-style-type: none"> <li>• Price List</li> <li>• Account /Person</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, <b>Price List</b> option is selected.</div>	Yes
Price List ID	Used to indicate Price List ID for which simulation must be created. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when the <b>Price List ID</b> option is selected for the <b>Search By</b> field. The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> screen appears.</div>	Yes
Account ID	Used to specify the account for which simulation must be created. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when the <b>Account</b> option is selected for the <b>Search By</b> field. The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> screen appears.</div>	Yes
Person ID	Used to specify the person for which simulation must be created. This field gets auto populated once the Account ID value is defined. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> screen appears.</div>	Yes
Simulation Date	Used to search price simulations which are effective from a particular date onwards.	Yes
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Search Type	Used to indicate whether you want to search the price list using the following values: <ul style="list-style-type: none"> <li>• Best Fit</li> <li>• Exact Match</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> By default, <b>Exact Match</b> option is selected. </div>	No
Show Default and Global Pricing	Used to indicate whether the product is assigned to a default and global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item	Used to specify the price items for pricing simulation. <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears. </div>	No
Description	Used to search price assignments of a price item having a particular description.	No
View Type	Used to indicate whether you want to view summary or tiering details of price components. The valid values are: <ul style="list-style-type: none"> <li>• <b>Detail</b> — Used when you want to view the details of price component with pricing eligibility and tiering criteria.</li> <li>• <b>Summary</b> — Used when you want to view the summary of effective price component.</li> </ul>	No
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing. <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b>  This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> screen appears. </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	<p>Displays the value of the parameter or used to specify multiple parameter value.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field only when the value type for the <b>Parameter</b> is <b>Reference</b> or <b>Predefined</b>.</p> <p>If the value type of the <b>Parameter</b> is <b>Reference</b> then on clicking the <b>Search</b> icon, the <b>Reference Parameter Value Search</b> screen appears.</p> <p>If the value type of the <b>Parameter</b> is <b>Predefined</b> then on clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> screen appears.</p> </div>	No

To add more than one **Parameter**, click the **Add**  icon and to delete the parameters click the **Delete**  icon corresponding to the **Parameter** field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

**Note:** If default Price List ID is added to the Price List Value and if **Yes** is selected for **Show Default and Global Pricing**, also if Price List is added to the product for selected account then **Search Results** section will display price list assignments for the value and product will be displayed along with the default price list assignments.

Column Name	Column Description
Price Item	<p>Displays the price item code.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>View Price Item</b> screen appears with the details of the respective price item.</p> </div>
Description	Displays the description of the price item.
Variance Parameters	<p>Indicates the variance parameter which is used for defining the price item pricing.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p> </div>
Price Item Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values used for defining the price item pricing.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> </div>

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> The description appears only when the pricing assignment type is Account Price List, or Account Inherited Price List.</p> </div>
Rate Description	Displays the description of the tiering setup of the rate component.
Simulate	On clicking the Simulate (🔍) icon, the <b>Simulation — Effective Pricing Information</b> screen appears where you can add the <b>Price Item SQIs</b> and <b>Pricing Eligibility Parameters</b> details that can be passed for pricing simulation. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> This column appears only when the price item is <b>Rate</b> and <b>Fees</b>.</p> </div>
Effective Start Date	Displays the date from when the pricing is effective.
Effective End Date	Displays the date till when the pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.

**Note:**

The number of records that can be displayed in the **Search Results** section of the **Search Pricing** zone is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2364.

## Simulation - Effective Pricing Information

The **Simulation — Effective Pricing Information** screen contains the following sections:

- **SQIs** — This section contains the following fields:

Field Name	Field Description
SQI	<p>Used to indicate the SQI that you want to associate with the price item.</p> <p><b>Note:</b></p> <p>If you want to define more than one price item SQI, click the <b>Add</b> (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI, click the <b>Delete</b> (🗑️) icon corresponding to this field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the search icon, the <b>Search for Service Quantity Identifier</b> screen appears.</p> <p>This field is required when you want to view the effective pricing simulation.</p>
Value	<p>Used to indicate the SQI value that you want to associate with the price item.</p> <p><b>Note:</b></p> <p>If you want to define more than one value, click the <b>Add</b> (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI value, click the <b>Delete</b> (🗑️) icon corresponding to this field.</p>

- **Pricing Eligibility Parameters** — This section contains the following fields:

Field Name	Field Description
Parameter	<p>Used to specify multiple parameter codes based on which you want to define the pricing</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to true.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the search icon, the <b>Parameter Search</b> screen appears.</p> <p>If you want to define more than one parameter, click the <b>Add</b> (+) icon corresponding to this field.</p> <p>If you want to remove a parameter, click the <b>Delete</b> (🗑️) icon corresponding to this field.</p>

Field Name	Field Description
Parameter Value	<p>Displays the value of the parameter or used to specify multiple parameter value.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field appears only when the value type for the <b>Parameter</b> is defined as <b>Reference</b> or <b>Predefined</b>. If the value type of the <b>Parameter</b> is <b>Reference</b>, then the <b>Reference Parameter Value Search</b> screen appears and if the value type of the <b>Parameter</b> is <b>Predefined</b>, then the <b>Predefined Parameter Value Search</b> screen appears.</p> <p>If you want to define more than one value, click the <b>Add</b>  icon corresponding to this field.</p> <p>If you want to remove a parameter value, click the <b>Delete</b>  icon corresponding to this field.</p>

After providing the required information, when you click on **Simulate** button, the **Effective Pricing Information** zone appears where you can view the effective pricing simulation. This zone contains the following sections:

- **Rate Information** — This section contains the following fields:

Field Name	Field Description
Applicable Rate	Displays the rate applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

**Note:** This section appears only when **Price Item Type** is **Rate** .

- **Fee Information** — This section contains the following fields:

Field Name	Field Description
Applicable Fee	Displays the fee applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

**Note:** This section appears only when **Price Item Type** is **Fees** .

- **Price Item and Parameter Information** — This section contains the following fields:

Field Name	Field Description
Price Item	Displays the price item for which pricing is defined.
Description	Displays the description of the price item

The Parameter Information appears only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

This segment contains the following fields:

Field Name	Field Description
Parameter	Specifies multiple parameter codes associated with the price items based on which pricing is defined.
Parameter Information	Displays the parameter information with concatenated comma separated values.
Parameter Value	Displays the value of the parameter.

- **TFM Information** — This section contains the following fields:

Field Name	Field Description
Ignore Transaction	Displays whether the transactions mapped to the price item is considered for billing.
Aggregation Schedule	Displays the aggregation cycle.
Aggregation Transaction	Specifies whether the transactions mapped to the price item are aggregated for billing.
Rating Criteria	Specifies how and when you rate the transaction legs mapped to the price item.

**Note:** This section appears only when the **Price Item** is available for **Pricing and Billing**.

- **Pricing Information** — This section contains the following fields.

Field Name	Field Description
Effective Start Date	Displays the date from when the price item pricing is effective.
Pricing Currency	Specifies the currency in which you define the price item pricing.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Status	Displays the status of price assignment.
Variance Parameter	Specifies the variance based on which price item pricing is defined. <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Rate Schedule	Specifies the rate schedule used for defining price item pricing.
Price Assignment Type	Displays the type of price assignment.
Print Zero	Specifies whether zero pricing should be displayed in the bill.
Apply To	Displays whether the price item pricing is applied to all customers or only to the new customers.
Pricing Frequency	Displays the frequency for pricing where <b>Price Item Type</b> is fees.
Advance Pricing	Displays only if <b>Price Item</b> is defined as <b>Pricing Only</b> , <b>Price Item Type</b> is defined as <b>Fees</b> and <b>Price Assignment Type</b> is defined as <b>Post Processing</b> . The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

**Pricing Eligibility Criteria** and **Tiering Criteria** for each eligibility or tier range are displayed in following fields:

Field Name	Field Description
Rate Component Sequence	Displays the sequence number of the rate component.
Tiering Type	Displays the tiering type of the rate component.
Price Component Sequence	Specifies the sequence of price component whose rate is used for calculation.
Price Component Description	Displays the description of the rate component.
Rate	Specifies the price for the price item.
Contributing Factor	Displays the availability of contributing factor.
Eligibility/Tier Details	On clicking the <b>Add (+)</b> icon, expandable details of <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> are displayed.

When you click the **Add (+)** icon, if the price component is scheduled for Flat Rate then, only **Pricing Eligibility Criteria** segment appears. If the price component is scheduled for Step or Threshold then both the segments, **Tiering Criteria** and **Pricing Eligibility Criteria** appears.

**Tiering Criteria** segment contains the following fields:

Field Name	Field Description
Tiering Criteria	Displays the tiering criteria.
Price Item	Specifies whether the price item or bundle's total usage is considered for determining the rate.
Variance Parameter	Specifies the variance based on which price item or bundle's total usage is considered for determining the rate. <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Specifies the parameters based on which price item or bundle's total usage is considered for determining the rate. <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
From	Specifies the lower limit of the tiering range.
To	Specify the upper limit of the tiering range.

**Pricing Eligibility Criteria** segment contains the following fields:

Field Name	Field Description
Sequence Number	Specifies the order in which the criteria should be executed in the rule.

Field Name	Field Description
Parameter	Specifies the left hand side parameter which you want to use along with the price item for price determination.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Operator	Specifies the relational operator to define the relation between the left hand side and right hand side parameters.
Parameter Value Type	Displays the type of pricing eligibility.
Parameter	Specifies the right hand side parameter which you want to use along with the price item for price determination.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Parameter Value	Specifies the parameter value.
Is True	Displays what should happen when the condition is true (satisfied).
Is False	Displays what should happen when the condition is false (not satisfied).
Is Sufficient	Displays what should happen when the data is insufficient.

This section contains the following links:

Link Name	Link Description
Expand All	Used to define all the <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments.
Collapse All	Used to un-define the displayed <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments.
Expand Only Contributing Factors	Used to define only those <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments with contributing factors.

## Searching Pricing Simulation for Account or Price List

### Prerequisites

To search pricing simulation for an account or price list, you should have:

- Price Item, Account or Person details defined in the application

### **Procedure**

To search pricing simulation for an account or price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. In the **Search Pricing** zone, select **Account** or **Price List** depending on what you want search pricing simulation.
4. Enter the additional search criteria, if required.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of pricing details that meet the search criteria appears in the **Search Results** section.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
<b>Pricing Simulation</b> screen	<a href="#">Pricing Simulation</a> on page 508
<b>Search Pricing</b> zone	<a href="#">Search Pricing</a> on page 508

## **Viewing Pricing Simulation**

### **Prerequisites**

To view pricing simulation details of an account, you should have:

- Price items assigned to the account

### **Procedure**

To view pricing simulation of an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

## Exporting Effective Price Simulation

### Procedure

To export effective price simulation for an account in the CSV format:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Export to Excel** link in the **Search Pricing** zone.  
The **File Download** dialog box appears.
5. Click **Save**.  
The **Save As** dialog box appears.
6. Browse to the location where you want to save the file.
7. Enter the file name in the respective field, and click **Save**.  
The search results are exported in CSV format.
8. Open the CSV file in Microsoft Excel.

It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
Description	Displays the description of the price item.

Column Name	Column Description
Variance	Indicates the variance parameter which is used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Indicates the parameters which are used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.  <b>Note:</b> The description appears only when the pricing assignment type is Account Price List, Customer Price List, or Parent Customer Price List.
Rate	Displays the price of the price item. It also indicates whether the price is a Flat, Threshold, or Step price. The price can be agreed pricing, price list pricing, or pricing inherited from the price list hierarchy. If the price is applicable only to new customers, an asterisk (*) symbol appears corresponding to the price.
Price Component Description	Displays the description of the price component whose rate is used for calculation.  <b>Note:</b> The data appears in this column only when the rate corresponding to the price component in the price item pricing is used for calculation.
Effective Start Date	Displays the date from when the pricing assignment is effective.
Effective End Date	Displays the date till when the pricing assignment is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price assignment is applicable to all customers or only to the new customers.
Price Assignment ID	Displays the ID that is generated automatically when the price assignment is done.
Parent Level	Displays the numerical level of the parent in the hierarchy from whom the pricing is inherited.
Price List ID	Displays the price list ID from where the pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.

Column Name	Column Description
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.
Parent Pricelist Level	Indicates the parent level when pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item should be considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the aggregation cycle.
Tiering Criterion	Indicates the tiering criterion.
Tiering Price Item	Indicates whether the price item is billed individually or at the bundle level.

## Eligible Price List

---

The **Eligible Price List** screen allows you to:

- View eligible price list details for account or person
- View pricing simulation details of account or person

This screen consists of the following zones:

- [Search Eligible Price Lists](#) on page 521
- [Pricing Simulation](#) on page 508

### Search Eligible Price Lists

The **Search Eligible Price List** zone allows you to search eligible price list for account and person. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible Date	Used to specify the date on which the eligibility check need to be searched.	Yes
Person ID	Used to specify the person for which eligible price list to be searched.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Person Search</b> screen appears.	No
Account ID	Used to specify the account for which eligible price list to be searched.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Account Search</b> screen appears.	No
Status	Used to search eligible price list based on status.	Yes
Division	Used to search eligible price list based on division.	Yes
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing.  <b>Note:</b> This field appears only when the <b>MultiPrice Parameter</b> option type of the <b>MultiParameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to True.  The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Parameter Search</b> screen appears.	No
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field only when the value type for the <b>Parameter</b> is defined as <b>Reference</b> or <b>Predefined</b> . If the value type of the <b>Parameter</b> is <b>Reference</b> then on clicking the search icon, the <b>Reference Parameter Value Search</b> screen appears else if the value type of the <b>Parameter</b> is <b>Predefined</b> then on clicking the search icon, the <b>Predefined Parameter Value Search</b> screen appears.	No

**Note:** To add more than one **Parameter**, click the add (+) icon and to delete the parameters click the delete (🗑️) icon corresponding to this field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List ID	Displays the price list ID. <b>Note:</b> It has a link. On clicking the link, the <b>Price List Price Item Assignments</b> screen appears where you can view the details of the respective price list.
Price List Description	Displays the price list description. <b>Note:</b> It has a link. On clicking the link, the <b>Price List Price Item Assignments</b> screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>
Availability Start Date	Used to search price lists which are available for assignment from a particular date.
Availability End Date	Used to search price lists which are available for assignment till a particular date.
Effective Start Date	Used to search price lists which are effective from a particular date.
Effective End Date	Used to search price lists which are effective till a particular date.
Simulate	On clicking the <b>Simulate</b>  icon, the <b>Pricing Simulation Screen</b> appears with the price list ID, account and person fields prepopulated.

## Rate Definition

---

Rate schedules, rate versions, and rate components are used to define the formulas to calculate the total amount charged to a customer for a product. Some examples of formulas are: price times the number of transactions used and a flat monthly charge plus a percentage of the average daily balance.

The rate is a formula with variables whose values are supplied by a user by setting up a price list or override price. For example, a rate might add a flat monthly charge and a percentage of the average daily balance to arrive at the amount charged to the customer. This rate might be used to calculate the charge for multiple products, each product with its own flat amount and percentage. So, these two factors are defined as variables whose values must be entered by users when they setup price list or override price. In Oracle Revenue Management and Billing (ORMB), these variables are defined as rate components.

The system provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. The **Rate Definition** screen allows you to indicate whether the rate component supports standard

flat pricing or tiered pricing. It allows you to define, edit, and delete the tiering setup of a rate component. This screen consists of the following zones:

- [Rate Schedule Components](#) on page 524
- [Create/Edit Rate Definition](#) on page 525

## Rate Schedule Components

The **Rate Schedule Components** zone allows you to select the rate schedule whose rate components' tiering setup you want to define or edit. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to select the rate schedule.	Yes

- **Search Results** — On clicking the **Search** button, the rate components of the rate schedule appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Rate Schedule	Displays the rate schedule.
Rate Component Sequence	Displays the sequence number of the rate component.
Rate Component Description	Displays the description of the rate component.
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.
Tiering Type	Displays the tiering type.
Maximum Tiering Combinations	Displays the maximum number of tiering ranges supported by the rate component.  <b>Note:</b> Each tiering range supports more than one tiering criteria. For example, a rate component supports tiering based on two different criteria such as transaction volumes from a bundle and balances of the priced product. In such case, for a single rate, it is possible to enter separate tiering range information for each criterion and vary this information by product.
Rate Component Map Description	Displays the description of the tiering setup of the rate component.
Action	Indicates the action that can be performed on the rate component. The valid values are: <ul style="list-style-type: none"> <li>• <b>Add</b> — Allows you to define the tiering setup of the rate component</li> <li>• <b>Edit</b> — Allows you to edit the tiering setup of the rate component</li> </ul>
Rate Component Map ID	Displays the rate component map ID.  <b>Note:</b> This ID is generated automatically when you define the tiering setup of the rate component.

On clicking the **Broadcast**  icon corresponding to the rate component, the **Create/Edit Rate Definition** zone appears with the details of the respective rate component.

How to delete tiering setup of a rate component	<a href="#">Deleting Tiering Setup of a Rate Component</a> on page 528

**Create/Edit Rate Definition**

The **Create/Edit Rate Definition** zone allows you to define and edit tiering setup of the rate component. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Displays the code of the rate schedule.	Not applicable
Rate Component Description	Displays the description of the rate component.	Not applicable
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.	Not applicable
Rate Component Sequence	Displays the sequence number of the rate component.	Not applicable
Tiering Type	Used to specify the tiering type. The valid values are: <ul style="list-style-type: none"> <li>• FLAT</li> <li>• STEP</li> <li>• THRESHOLD</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field is non-editable when you edit the tiering setup of the rate component. </div>	Yes
Maximum Tiering Combinations	Used to specify the maximum number of tiering ranges supported by the rate component. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b>  This field is non-editable when you: <ul style="list-style-type: none"> <li>• Select the tiering type as <b>FLAT</b> or <b>STEP</b></li> <li>• Edit the tiering setup of the rate component</li> </ul> By default, <b>0</b> appears in this field when you select the tiering type as <b>FLAT</b>, and <b>1</b> appears when you select the tiering type as <b>STEP</b>. </div>	Yes
Rate Component Map Description	Used to specify the description for the tiering setup of the rate component. For example, if you want the user to enter price per transaction for a tiering range, enter <b>Price Per Transaction</b> in the <b>Rate Component Map Description</b> field.	Yes

This zone contains the following buttons:

Button Name	Button Description (When the Action is Add)	Button Description (When the Action is Edit)
Save	Used to create the tiering setup.	Used to save the changes made in this zone.
Delete	<b>Note:</b> This button is disabled when you define the tiering setup of the rate component.	Used to delete the tiering setup of the rate component.  <b>Note:</b> You can delete the tiering setup only when the rate component is not yet used for any product pricing.
Cancel	Used to clear the fields in this zone.	Used to reset the changes made in this zone.

How to define tiering setup of a rate component	<a href="#">Defining Tiering Setup of a Rate Component</a> on page 526
How to edit tiering setup of a rate component	<a href="#">Editing Tiering Setup of a Rate Component</a> on page 527
How to delete tiering setup of a rate component	<a href="#">Deleting Tiering Setup of a Rate Component</a> on page 528

## **Defining Tiering Setup of a Rate Component**

### **Prerequisites**

To define tiering setup of a rate component, you should have:

- Rate schedules defined in the application
- Rate components of the rate schedule defined in the application

### **Procedure**

To define tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.  
The **Rate Definition** screen appears.
3. Select the rate schedule in the **Rate Schedule Components** zone.
4. Click **Search**.  
The rate components of the rate schedule appear as the search results.
5. Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to define.  
The **Create/Edit Rate Definition** zone appears.
6. Select the tiering type from the list.
7. Enter the maximum number of tiering ranges supported by the rate component.

#### **Note:**

The **Maximum Tiering Combinations** field is non-editable when you select the tiering type as **FLAT** or **STEP**. By default, **0** appears in the **Maximum Tiering Combinations** field when you select the tiering type as **FLAT**, and **1** appears when you select the tiering type as **STEP**.

- Enter the description for the tiering setup of the rate component.

For example, if you want the user to enter price per transaction for a tiering range, enter `Price Per Transaction` in the **Rate Component Map Description** field.

- Click **Save**.

The rate component map ID is generated automatically when you define the tiering setup of the rate component.

### Related Topics

<b>Rate Definition</b> screen	<a href="#">Rate Definition</a> on page 523
<b>Rate Schedule Components</b> zone	<a href="#">Rate Schedule Components</a> on page 524
<b>Create/Edit Rate Definition</b> zone	<a href="#">Create/Edit Rate Definition</a> on page 525

## Editing Tiering Setup of a Rate Component

### Procedure

To edit tiering setup of a rate component:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.  
The **Rate Definition** screen appears.
- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.  
The rate components of the rate schedule appear as the search results.
- Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to edit.  
The **Create/Edit Rate Definition** zone appears.
- Modify the details of the tiering setup.

**Note:** You can only modify the rate component map description.

- Click **Save**.

The changes made to the tiering setup are saved.

### Related Topics

For more information on...	See...
<b>Rate Definition</b> screen	<a href="#">Rate Definition</a> on page 523
<b>Rate Schedule Components</b> zone	<a href="#">Rate Schedule Components</a> on page 524

## Deleting Tiering Setup of a Rate Component

### Procedure

To delete tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.

The **Rate Definition** screen appears.

3. Select the rate schedule in the **Rate Schedule Components** zone.

4. Click **Search**.

The rate components of the rate schedule appear as the search results.

5. Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to delete.

The **Create/Edit Rate Definition** zone appears.

6. Click **Delete**.

The tiering setup of the rate component is deleted, and the action that can be performed on the rate component changes from **Edit** to **Add** in the **Rate Schedule Components** zone.

#### Note:

The **Delete** button is disabled when you define the tiering setup of the rate component.

You can delete the tiering setup only when the rate component is not yet used for any product pricing.

## Tiering Criterion

Oracle Revenue Management and Billing (ORMB) provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization.

Let us understand this with the help of an example. ABC company uses wire transfer services provided by a large bank. If ABC company initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If ABC company initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, you will have to define tiered pricing with the following tiering ranges:

- If the number of wire transfers is greater than 0 and less than or equal to 1000, then charge \$5 per transfer to ABC company.
- If the number of wire transfers is greater than 1000, then charge \$3 per transfer to ABC company.

In the above example, number of wire transfers is the tiering criterion, 0 – 1000 and 1000 – BLANK are tiering ranges, and \$5 and \$3 are rates per transfer.

The **Tiering Criteria** screen allows you to create and edit a tiering criterion. This screen consists of the following zones:

- [Tiering Criterion List](#) on page 529
- [Edit Tiering Criterion](#) on page 529
- [Create Tiering Criterion](#) on page 530

## Tiering Criterion List

The **Tiering Criterion List** zone displays tiering criterion that are already defined in the system. This zone contains the following columns:

Column Name	Column Description
Tiering Criterion	Displays the code of the tiering criterion.
Description	Displays the description of the tiering criterion.
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

On clicking the **Broadcast**  icon corresponding to the tiering criterion, the **Edit Tiering Criterion** zone appears with the details of the respective tiering criterion.

## Edit Tiering Criterion

The **Edit Tiering Criterion** zone allows you to edit the tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Displays the code of the tiering criterion.	Not applicable
Description	Used to modify the description of the tiering criterion.	Yes
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.	Not applicable

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Cancel	Used to clear the changes made in this zone.

By default, the **Edit Tiering Criterion** zone does not appear in the **Tiering Criteria** screen. It appears only when you click the **Broadcast**  icon corresponding to the tiering criterion in the **Tiering Criteria List** zone.

### Related Topics

For more information on...	See...
How to edit a tiering criterion	<a href="#">Editing a Tiering Criterion</a> on page 531

## Create Tiering Criterion

The **Create Tiering Criterion** zone allows you to create tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to specify the code that uniquely identifies the tiering criterion.	Yes
Description	Used to specify the description for the tiering criterion.	Yes
Service Quantity Identifier	Used to specify the Service Quantity Identifier (SQI) for the tiering criterion.  <b>Note:</b> During billing, the rating engine uses the SQI to determine which service quantities are applied to tiers.	Yes

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to create the tiering criterion.
Cancel	Used to clear the fields in this zone.

### Related Topics

For more information on...	See...

## Creating a Tiering Criterion

### Prerequisites

To create a tiering criterion, you should have:

- Service Quantity Identifiers (SQIs) defined in the application

### Procedure

To create a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.  
The **Tiering Criterion** screen appears.
3. In the **Create Tiering Criterion** zone, enter the code that uniquely identifies the tiering criterion.
4. Enter the description for the tiering criterion.
5. Select the Service Quantity Identifier (SQI) that you want to associate with the tiering criterion.
6. Click **Save**.  
The tiering criterion is created.

## Variance Parameter

---

Oracle Revenue Management and Billing allows you to define pricing for a product based on the variance parameter. This helps you to maintain variance based pricing for a product. For example, you can define different product pricing for each country or currency, if required. Before you define product pricing based on a variance parameter, you need to define the variance parameter. The **Variance Parameter** screen allows you to define, edit, and delete a variance parameter. It also allows you to filter the variance parameters using a search criteria.

## Filtering the Variance Parameters

### **Procedure**

To filter the variance parameters:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following two sections:

- **Search Criteria**— The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	No

- **Search Results** — On clicking the **Search** button corresponding to the **Variance Parameter** field, the search results are filtered based on the specified criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Variance Parameter	Displays the variance parameter.
Description	Displays the description of the variance parameter.

3. Enter the search criteria in the **Variance Parameter** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Search** button corresponding to the **Variance Parameter** field.

The search results are filtered based on the specified criteria.

### **Related Topics**

For more information on...	See...

## **Defining a Variance Parameter**

### **Procedure**

To define a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	Yes
Description	Used to specify the description for the variance parameter.	Yes

3. Enter the required details.
4. If you want to define more than one variance parameter, click the **Add (+)** icon and then repeat step 4.

**Note:** However, if you want to remove a variance parameter, click the **Delete** (🗑️) icon corresponding to the variance parameter that you want to delete.

5. Click **Save**.

The variance parameter is defined.

**Related Topics**

For more information on...	See...
Variance Parameter screen	<a href="#">Variance Parameter</a> on page 531

## Editing a Variance Parameter

**Procedure**

To edit a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears.

3. If required, you can filter the variance parameters in the **Variance Parameter** screen.

A list of variance parameters that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Displays the variance parameter.	Not applicable
Description	Used to specify the description for the variance parameter.	Yes

4. Modify the required details.

5. Click **Save**.

The changes made to the variance parameter are saved.

**Related Topics**

Variance Parameter screen	<a href="#">Variance Parameter</a> on page 531
How to filter the variance parameters	<a href="#">Filtering the Variance Parameters</a> on page 531

## Deleting a Variance Parameter

**Procedure**

To delete a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.  
The **Variance Parameter** screen appears.
3. If required, you can filter the variance parameters in the **Variance Parameter** screen.  
A list of variance parameters that meet the search criteria appears in the **Search Results** section.
4. Click the **Delete** () icon corresponding to the variance parameter that you want to delete.
5. Click **Save**.  
The variance parameter is deleted.

**Note:** You can only delete a variance parameter which is not yet used.

## Person to Person Relationship Type Sequence

Oracle Revenue Management and Billing provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1\_PER\_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration and accordingly search effective price item pricing at the parent customer level.

The **Person to Person Relationship Type Sequence** screen allows you to define, edit, and delete person to person relationship type sequence of:

- a division
- a division, price item, and price item parameters combination

This screen consists of the following zones:

- [Search Person Relationship Type Sequence for Price Item](#) on page 535
- [Search Person Relationship Type Sequence for Division](#) on page 536

## Search Person Relationship Type Sequence for Price Item

The **Search Person Relationship Type Sequence for Price Item** zone allows you to search person to person relationship type sequence defined for a division, price item, and price item parameters combination. You can also define, edit, and delete person to person relationship type sequence of a division, price item, and price item parameters combination.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item code.	No
Price Item Description	Used to specify the description of the price item.	No
Division	Used to specify the division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No

**Note:** You must specify at least one search criterion while searching person to person relationship type sequence defined for a division, price item, and price item parameters combination.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.  <b>Note:</b> It has a link. On clicking the link, the <b>View Price Item</b> screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.
View	On clicking the <b>View</b> (🔍) icon, the <b>Person Relationship Type Sequence for Division and Price Item</b> screen appears where you can view person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Person Relationship Type Sequence for Division and Price Item</b> screen appears where you can edit person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete person to person relationship type sequence defined for the division, price item, and price item parameters combination.

You can define person to person relationship type sequence for a division, price item, and price item parameters combination by clicking the **Add** link in the upper right corner of this zone.

**Related Topics**

**Search Person Relationship Type Sequence for Division**

The **Search Person Relationship Type Sequence for Division** zone allows you to search person to person relationship type sequence defined for a division. You can also define, edit, and delete person to person relationship type sequence of a division.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division for which person to person relationship type sequence is defined.
Description	Displays the description of the division.
View	On clicking the <b>View</b> (👁️) icon, the <b>Person Relationship Type Sequence for Division</b> screen appears where you can view person to person relationship type sequence of the division.
Edit	On clicking the <b>Edit</b> (✏️) icon, the <b>Person Relationship Type Sequence for Division</b> screen appears where you can edit person to person relationship type sequence of the division.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the person to person relationship type sequence of the division.

You can define person to person relationship type sequence for a division by clicking the **Add** link in the upper right corner of this zone.

## Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

### Prerequisites

To search person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application

### Procedure

To search person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.  
The **Person to Person Relationship Type Sequence** screen appears.
3. Enter the search criteria in the **Search Person Relationship Type Sequence for Price Item** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually whenever required.

4. Click **Search**.

A list of division, price item, and price item parameters combinations that meet the search criteria and for which person to person relationship type sequence is defined appears in the **Search Results** section.

## Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

### Prerequisites

To define person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application
- Price items associated with the division to which the user belongs
- Parameters associated with the price item
- Person relationship types defined in the application

### Procedure

To define person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.

The **Person to Person Relationship Type Sequence** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Price Item** zone.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define price item and price item parameters specific person to person relationship type sequence.	Yes
Price Item	Used to specify the price item code.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.	Yes
Price Item Parameters	Used to specify the price item parameters.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters Search</b> screen appears.	No

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

4. Enter the required details.

**Note:** You can search for a price item and price item parameters by clicking the **Search** (🔍) icon corresponding to the respective field.

5. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** (+) icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (🗑️) icon corresponding to the relationship type.

6. Click **Save**.

The person to person relationship type sequence is defined for the division, price item, and price item parameters combination.

## **Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters**

### **Prerequisites**

To edit person to person relationship type sequence of a division, price item, and price item parameters combination, you should have:

- Person relationship types defined in the application

### **Procedure**

To edit person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.

- In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.	Not applicable
Price Item	Displays the price item code.	Not applicable
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).	Not applicable

In addition, this screen contains the following section:

- Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

- If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** () icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** () icon corresponding to the relationship type.

- Click **Save**.

The changes made to the person to person relationship type sequence are saved.

## Deleting Relationship Type Sequence of a Division, Price Item, and Price Item Parameters

### Procedure

To delete person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to delete.

A message appears confirming whether you want to delete the person to person relationship type sequence.

3. Click **OK**.

The person to person relationship type sequence of the division, price item, and price item parameters combination is deleted.

## Viewing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters

### Procedure

To view person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to view.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.
Price Item	Displays the price item code.
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to view person to person relationship type sequence defined for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the sequence in which relationship type will be considered while searching for effective price item pricing at the parent customer level.
Relationship Type	Indicates the person to person relationship type.

3. View the person to person relationship type sequence defined for the division, price item, and price item parameters combination in the **Person Relationship Type Sequence for Division and Price Item** screen.

## Defining Relationship Type Sequence for a Division

### Prerequisites

To define person to person relationship type sequence for a division, you should have:

- Divisions defined in the application

### Procedure

To define person to person relationship type sequence for a division:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.  
The **Person to Person Relationship Type Sequence** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Division** zone.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define person to person relationship type sequence.	Yes

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

4. Enter the required details.
5. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** (+) icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (🗑️) icon corresponding to the relationship type.

6. Click **Save**.

The person to person relationship type sequence is defined for the division.

## Multiple Parameter Based Post-Processing Pricing

Until now, while deriving the post-processing bill segments, the system aggregated the regular bill segments of related price items without considering the price item parameters. Now, if you specify a price item parameter while associating regular price items with a post-processing price item and if the pricing for the post-processing price item is based on the price item parameter, the system aggregates the bill segments of regular price item and price item parameter combination. The system searches for the exact match. In this case, if the exact match is not found, the system does not aggregate the bill segments of the related price item. For example, the PR1 post processing price item is associated with the following regular price items:

Regular Price Item	Price Item Parameter
R1	Country = US
R2	Country = US

And, the pricing for PR1 post processing price item is based on Country = US. Now, if the following bill segments are generated for R1 and R2 in a bill:

Bill Segment	Price Item	Parameter 1	Parameter 2
BS1	R1	Country = US	-
BS2	R1	Country = US	Currency = USD
BS3	R1	Country = US	-
BS4	R1	-	-
BS5	R2	Country = US	-
BS6	R2	Country = US	-

Then, the system will aggregate the following regular bill segments while creating the post-processing bill segment for PR1:

- BS1
- BS3
- BS5

- BS6

However, if you specify a price item parameter while associating regular price items with a post-processing price item, but the pricing for the post-processing price item is not based on the price item parameter, the system aggregates all bill segments of regular price item irrespective of the price item parameter. For example, the PR1 post processing price item is associated with the following regular price items:

Regular Price Item	Price Item Parameter
R1	Country = US
R2	-

And, the pricing for PR1 post processing price item is not based on a price item parameter. Now, if the following bill segments are generated for R1 and R2 in a bill:

Bill Segment	Price Item	Parameter 1	Parameter 2
BS1	R1	Country = US	-
BS2	R1	Country = US	Currency = USD
BS3	R1	Country = US	-
BS4	R1	-	-
BS5	R2	Country = US	-
BS6	R2	-	-

Then, the system will aggregate the following regular bill segments while creating the post-processing bill segment for PR1:

- BS1
- BS2
- BS3
- BS4
- BS5
- BS6

## Division

---

### Topics:

- [Division](#)

The following two types of divisions are used while defining a contract type:

- **General Ledger (GL) Division** — GL divisions typically comprise of individual entities (for example, companies) in the general ledger. You must set up a GL division for each such entity. The GL division is used to define the accounting period for financial transactions linked to contracts. Contracts are associated with GL divisions through their contract type. The system uses accounting periods to prevent a user from creating financial transactions in the closed periods. It also uses accounting periods when it generates the flat file that contains the consolidated journal entry that is interfaced to the general ledger.
- **Division** — A division is associated with a jurisdiction. A jurisdiction is a geographic-oriented entity with unique business rules. For example, if you conduct business in California and Japan, each jurisdiction has different set of rules, and therefore you need to have a separate jurisdiction for each division. You must set up a division for each jurisdiction in which you conduct the business. For the Pricing Management functionality, setting up a division is mandatory, and the system must contain information about at least one division.

A division is associated with the following:

- **Person** — You may or may not associate person to a division. It is optional. But, when you are using division specific functionality, you have to associate person to a division while creating a local person.
- **Contract** — Contract is associated to a division through its contract type. The contract type controls multiple business rules which are defined for a given jurisdiction and contract type combination. In addition to controlling the business rules defined on the contract's contract type, the contract's division also controls the type of collection criteria used to determine if and how to collect overdue debt.
- **Account** — The division on account when combined with the account's customer class defines the jurisdiction that governs financial business rules (for example, the bill's due date, when and how late payment charges are calculated, etc.). It also allows you to assign To Do entries associated with the account to a given To Do role based on the account's division.

## Division

---

The **Division** screen allows you to define, edit, and delete a division. It consists of the following tabs:

Tab Name	Tab Description	Mandatory (Yes or No)
Main	Used to define basic details of a division.	Yes
Access Groups	Used to define the users who have right to associate objects (such as persons, accounts, price items, price lists, etc.) with this division. The users can only view those divisions to which they have access in the <b>Division</b> list used across the application.	No
Price Items	Used to define which price items are available to persons or accounts in a division.  <b>Note:</b> Once the price item is created, you need to associate it with a division.	No
Price Lists	Used to define which price lists are available to persons or accounts in a division.  <b>Note:</b> Once the price list is created, you need to associate it with a division.  You can associate a price list with a division only when all price items in the price list are already associated with the division.	No
Languages	Used to limit the languages that you can select for a person's bills and correspondence in a division.	No
Invoice Currencies	Used to limit the invoice currencies that you can select for accounts in a division.  <b>Note:</b> Invoice currency is a currency in which the accounts in the division can be billed.	No
Person Identifier Types	Used to limit the person identifier types that you can select for persons in a division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Algorithms	<p>Used to associate algorithms with the division. Once a division is created, you must associate the <b>Price Assignment Search</b> algorithm to it. For the Banking functionality, this is required to ensure that the price item pricing is displayed in the correct order as defined by the algorithm. Each division can have unique hierarchy order or more than one division can have the same hierarchy order. The hierarchy order is also used in billing when the price determination is controlled by the sort order definition of the algorithm.</p> <p>You can define algorithms in the <b>Algorithm</b> screen. The search order is governed by the second parameter of the algorithm, and the valid values for the same are:</p> <ul style="list-style-type: none"> <li>• <b>AGREED_PRICELIST</b> - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Account Price List, Account Inherited Price List, Customer Agreed, Customer Price List, Customer Inherited Price List, Parent Customer Agreed, Parent Customer Price List, and Parent Customer Inherited Price List.</li> </ul> <div data-bbox="607 961 1105 1104" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> <ul style="list-style-type: none"> <li>• <b>AGREED_FIRST</b> - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Customer Agreed, Parent Customer Agreed, Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, and Parent Customer Inherited Price List.</li> </ul> <div data-bbox="607 1394 1105 1537" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div>	No
Characteristics	Used to define characteristics for a division.	No
Bill Messages	Used to specify the bill messages that are valid for accounts in a division.	No
Party Char Types	Used to limit the characteristic types that you can select for persons and accounts in a division.	No
Bill Cycles	Used to limit the bill cycles that you can select for accounts in a division.	No
Account Identifier Types	Used to limit the account identifier types that you can select for accounts in a division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Price Item Characteristics	Used to define division-specific characteristics for price items associated with the division.	No

## Division - Main

The **Main** tab displays the basic information about the division. It contains the following fields:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The Search  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.
Description	Displays the description of the division.
Work Calendar	Indicates the work calendar which is associated with the division.

Field Name	Field Description
Status	Indicates the status of the division. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Pending</li> <li>• Retired</li> </ul>
Bill Format	Indicates the format in which the bills should be printed for the accounts which belong to the division. The valid values are: <ul style="list-style-type: none"> <li>• Detailed</li> <li>• Summary</li> </ul>
Bill Route Type	Indicates how the bills must be sent to the main customer of the accounts which belong to the division.
Base Currency	Indicates the currency in which the GL entries should be created for the accounts which belong to the division.
Time Zone	Indicates the time zones in which the division is operational.
Eligible for Accrual	Indicates whether accrual should be calculated for the accounts which belong to the division.
Accrual Cycle	Indicates the accrual cycle of the accounts which belong to the division.
Comments	Displays additional details about the division.
Business Object	Indicates the business object using which the division is created in the system.

In addition, the **Main** tab contains the following fields in a grid:

Field Name	Field Description
To Do Type	Indicates the To Do type for which division-specific To Do role is defined.
To Do Role	Indicates the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.

## **Division - Access Groups**

The **Access Groups** tab lists the access groups which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Access Group	Indicates the access group which is associated with the division.

Field Name	Field Description
Description	Displays the description of the access group.

### **Related Topics**

How to associate an access group with a division	<a href="#">Associating an Access Group with a Division</a> on page 563

## **Division - Price Items**

The **Price Items** tab lists the price items which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Price Item	Indicates the price item which is associated with the division.
Description	Displays the description of the price item.
Accrual Type Criteria	Indicates whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> <li>• Actual</li> <li>• Historical</li> <li>• Not Applicable</li> </ul>

## **Division - Price Lists**

The **Price Lists** tab lists the price lists which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Price List ID	Indicates the price list.
Description	Displays the description of the price list.

### **Related Topics**

## Division - Invoice Currencies

The **Invoice Currencies** tab lists the currencies which you can use for generating the invoice of the accounts in the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Currency	Indicates the currency.
Rounding Type	Indicates the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> <li>• Down</li> <li>• Nearest</li> <li>• Up</li> </ul>

## **Division - Algorithms**

The **Algorithms** tab lists the algorithms which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Division Algorithm Entity	Indicates the algorithm entity to which you want to attach the algorithm.
Sequence Number	Displays the order in which the algorithms with the same entity should be executed.
Algorithm	Indicates the algorithm.
Description	Displays the description of the algorithm.

#### **Related Topics**

## **Division - Characteristics**

The **Characteristics** tab lists the characteristics which are defined for the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type.

Field Name	Field Description
Characteristic Value	Indicates the value for the characteristic type.

## **Division - Bill Messages**

The **Bill Messages** tab lists the bill messages which are valid for the accounts in the division for a specified duration. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Start Date	Indicates the date from when you want the bill message to appear on the bill.
End Date	Indicates the date till when you want the bill message to appear on the bill.
Bill Message	Indicates the bill message that is valid for the accounts in the division.
Description	Displays the description of the bill message.

How to associate a bill cycle with a division	<a href="#">Associating a Bill Cycle with a Division</a> on page 581

## Division - Account Identifier Types

The **Account Identifier Types** tab lists the identifier types which are valid for the accounts associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following field appears in a grid:

Field Name	Field Description
Account Identifier Type	Indicates the account identifier type.

### Related Topics

For more information on...	See...
How to associate an account identifier type with a division	<a href="#">Associating an Account Identifier Type with a Division</a> on page 582

## Division - Price Item Characteristics

The **Price Item Characteristics** tab lists division-specific characteristics of price items which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Price Item	Displays the price item count associated with the selected division to which the user belongs.
Price Item	Displays the price item associated with the division to which the user belongs.
Effective Date	Indicates the date from when the price item characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

## Searching for a Division

### Procedure

To search for a division:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.  
A sub-menu appears.
3. Click the **Search** option from the **Division** sub-menu.

The **Division Search** window appears. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search for a particular division.	No
Description	Used to search division with a particular name.	No

**Note:** You must specify at least one search criterion while searching for a division.

- **Search Results** - On clicking the **Search** button corresponding to the respective field, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Displays the division.
Description	Displays the description of the division.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- In the **Search Results** section, click the division whose details you want to view or edit.

The **Division** screen appears.

## Defining a Division

### Prerequisites

To define a division, you should have:

- Required division business object defined in the application
- Work calendars, bill route types, currencies, time zones, accrual cycles, To Do types, and To Do roles defined in the application
- Values defined for the **BILL\_FORMAT\_FLG** lookup field

### Procedure

To define a division:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **D** and then click **Division**.  
A sub-menu appears.
- Click the **Add** option from the **Division** sub-menu.  
The **Division** screen appears.
- Ensure that the **Main** tab is selected.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division.	Yes
Description	Used to specify the description for the division.	Yes
Work Calendar	Used to indicate the work calendar that you want to associate with the division. The work calendar indicates the days when the division is operational. It is used to ensure that the system calculated dates (for example, bill due date, credit and collection event dates, etc.) fall on a working day.  <b>Note:</b> The list includes only those work calendars which are already defined in the system.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the division. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Active</b> - Indicates that you can use the division in the system.</li> <li>• <b>Pending</b> - Indicates that the division is not yet available for use.</li> <li>• <b>Retired</b> - Indicates that the division is no longer available for use.</li> </ul> <p><b>Note:</b> The list includes only those statuses which are defined in the <b>DIVISION_STATUS_FLG</b> lookup field.</p>	No
Bill Format	<p>Used to specify the format in which the bills should be printed for the accounts which belong to the division. The valid values are:</p> <ul style="list-style-type: none"> <li>• Detailed</li> <li>• Summary</li> </ul> <p><b>Note:</b> The list includes only those bill formats which are defined in the <b>BILL_FORMAT_FLG</b> lookup field.</p>	No
Bill Route Type	<p>Used to indicate how the bills must be sent to the main customer of the accounts which belong to the division.</p> <p><b>Note:</b> The list includes only those bill route types which are already defined in the system.</p>	No
Base Currency	<p>Used to specify the currency in which the GL entries should be created for the accounts which belong to the division. If the account's invoice currency and division's base currency are different, the system converts the GL amount from the account's invoice currency to the division's base currency. In such cases, the system creates the financial transactions for the accounts in both the currencies (i.e. account's invoice currency and division's base currency).</p> <p><b>Note:</b> The list includes only those currencies which are already defined in the system.</p>	Yes
Time Zone	<p>Used to indicate the time zone in which the division is operational.</p> <p><b>Note:</b> The list includes only those time zones which are already defined in the system.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Accrual	Used to indicate whether you can calculate accrual for the accounts which belong to the division.	No
Accrual Cycle	Used to indicate the accrual cycle for the accounts which belong to the division.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is enabled when the <b>Eligible for Accrual</b> option is selected.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Accrual Cycle</b> field. On clicking the <b>Search</b> icon, the <b>Accrual Cycle Search</b> window appears.</p> </div>	Yes (Conditional)  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The field is required when the <b>Eligible for Accrual</b> option is selected.</p> </div>
Comments	Used to specify additional details about the division.	No
Business Object	Used to indicate the business object using which you want to create the division.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Business Object</b> field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.</p> </div>	Yes

In addition, the **Main** tab contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Type	Used to indicate the To Do type for which you want to define division-specific To Do role.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> </div>	Yes (Conditional)  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are defining the division-specific To Do role for a To Do type.</p> </div>
To Do Role	Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>To Do Role</b> field. On clicking the <b>Search</b> icon, the <b>Role for To Do Type</b> window appears.</p> </div>	Yes (Conditional)  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are defining the division-specific To Do role for a To Do type.</p> </div>

5. Enter the required details in the **Main** tab.
6. Associate access groups, price items, price lists, languages, invoice currencies, person identifier types, algorithms, bill messages, party characteristic types, bill cycles, and account identifier types with the division, if required.
7. Define characteristics for the division, if required.
8. Define division-specific characteristics for the price items, if required.

9. Click the **Save** button in the **Page Title** area.

The division is defined. The status of the division is set to **Pending**.

## Associating an Access Group with a Division

On associating an access group with a division, the users which belong to the access group can view the division in the respective list across the system. These users can then create and edit the accounts of the division.

### Prerequisites

To associate an access group with a division, you should have:

- Access groups defined in the application

### Procedure

To associate an access group with a division:

1. Search for the division to which you want to associate an access group.
2. Click the **Access Groups** tab in the **Division** screen.

The **Access Groups** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to indicate the access group which you want to associate with the division.  <b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to the <b>Access Group</b> field. On clicking the <b>Search</b> icon, the <b>Access Group Search</b> window appears.  On specifying an access group, the description of the access group appears in the <b>Description</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an access group with the division.
Description	Displays the description of the access group.	Not applicable

- Enter the required details in the **Access Groups** tab.
- If you want to associate more than one access group with the division, click the **Add** () icon and then repeat step 3.

**Note:** However, if you want to remove an access group from the division, click the **Delete** () icon corresponding to the access group.

- Click the **Save** button in the **Page Title** area.

The access group is associated with the division.

## Associating a Price Item with a Division

On associating a price item with a division, you can assign the price item to the persons and accounts which belong to the division. While associating a price item with a division, you can specify the accrual type criteria for the price item. The accrual type criteria is referred only when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

If the accrual type criteria is set to...	Then...
Actual	The system considers the billable charges of the price item only when the accrual is calculated for an account using the accrual type where the accrual criteria is set to <b>Actual</b> .
Historical	The system considers the billable charges of the price item only when the accrual is calculated for an account using the accrual type where the accrual criteria is set to <b>Historical</b> .

### **Prerequisites**

To associate a price item with a division, you should have:

- Price items defined in the application

### **Procedure**

To associate a price item with a division:

1. Search for the division to which you want to associate a price item.
2. Click the **Price Items** tab in the **Division** screen.

The **Price Items** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to associate with the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears. On specifying a price item, the description of the price item appears in the <b>Description</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating a price item with the division.
Description	Displays the description of the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type Criteria	<p>Used to indicate whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are:</p> <ul style="list-style-type: none"> <li> <b>Actual</b> <ul style="list-style-type: none"> <li>- Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to <b>Actual</b>.</li> </ul> </li> <li> <b>Historical</b> <ul style="list-style-type: none"> <li>- Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to <b>Historical</b>.</li> </ul> </li> <li> <b>Not Applicable</b> <ul style="list-style-type: none"> <li>- Used to indicate that the billable charges of the price item should be considered for accrual irrespective of the accrual criteria specified in the accrual type</li> </ul> </li> </ul>	No

- Enter the required details in the **Price Items** tab.
- If you want to associate more than one price item with the division, click the **Add (+)** icon and then repeat step 3.

**Note:** However, if you want to remove a price item from the division, click the **Delete (🗑)** icon corresponding to the price item.

- Click the **Save** button in the **Page Title** area.  
The price item is associated with the division.

## **Associating a Price List with a Division**

### **Prerequisites**

To associate a price list with a division, you should have:

- Price lists defined in the application

### **Procedure**

To associate a price list with a division:

1. Search for the division to which you want to associate a price list.
2. Click the **Price Lists** tab in the **Division** screen.

The **Price Lists** tab appears. It contains the following field:

Field Name	Field Description
Division	<p>Indicates the division.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.</p>

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	<p>Used to specify the price list which you want to associate with the division.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.</p> <p>On specifying a price list, the description of the price list appears in the <b>Description</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating a price list with a division.</p>
Description	Displays the description of the price list.	Not applicable

3. Enter the required details in the **Price Lists** tab.
4. If you want to associate more than one price list with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a price list from the division, click the **Delete**  icon corresponding to the price list.

5. Click the **Save** button in the **Page Title** area.

The price list is associated with the division.

## **Associating a Language with a Division**

### **Prerequisites**

To associate a language with a division, you should have:

- Languages defined in the application

### **Procedure**

To associate a language with a division:

1. Search for the division to which you want to associate a language.
2. Click the **Languages** tab in the **Division** screen.

The **Languages** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Language	Used to specify the language which you want to select for generating invoice and correspondence for the accounts in the division.	No

3. Select the language from the list.
4. If you want to associate more than one language with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a language from the division, click the **Delete**  icon corresponding to the language.

5. Click the **Save** button in the **Page Title** area.

The language is associated with the division.

## **Associating an Invoice Currency with a Division**

### **Prerequisites**

To associate an invoice currency with a division, you should have:

- Currencies defined in the application

### **Procedure**

To associate an invoice currency with a division:

1. Search for the division to which you want to associate an invoice currency.
2. Click the **Invoice Currencies** tab in the **Divisions** screen.

The **Invoice Currencies** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to indicate the currency which you want to use for generating the invoice of the accounts in the division.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an invoice currency with the division.
Rounding Type	Used to indicate the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> <li>• Down</li> <li>• Nearest</li> <li>• Up</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an invoice currency with the division.

3. Select the currency and its rounding type from the respective list.
4. If you want to associate more than one invoice currency with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove an invoice currency from the division, click the **Delete**  icon corresponding to the currency.

5. Click the **Save** button in the **Page Title** area.

The invoice currency is associated with the division.

## Associating a Person Identifier Type with a Division

### Prerequisites

To associate a person identifier type with a division, you should have:

- Person identifier types defined in the application

### Procedure

To associate a person identifier type with a division:

1. Search for the division to which you want to associate a person identifier type.
2. Click the **Person Identifier Types** tab in the **Division** screen.

The **Person Identifier Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating a person identifier type with a division.

3. Select the person identifier type from the list.
4. If you want to associate more than one person identifier type with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a person identifier type from the division, click the **Delete**  icon corresponding to the person identifier type.

5. Click the **Save** button in the **Page Title** area.

The person identifier type is associated with the division.

## Associating an Algorithm with a Division

### Prerequisites

To associate an algorithm with a division, you should have:

- Required algorithms defined in the application

### Procedure

To associate an algorithm with a division:

1. Search for the division to which you want to associate the algorithm.

The **Division** screen appears.

2. Click the **Algorithms** tab.

The **Algorithms** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division      Algorithm Entity	<p>Used to indicate the algorithm entity to which you want to attach the algorithm. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>ASL Accumulation Post-Processing</b> - Used to attach an algorithm which must be triggered for undertaking some post-processing activities on the aggregate stop-loss accumulation amount. This algorithm is invoked when you execute the <b>C1-ACASL</b> batch.</li> </ul> <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p><b>Note:</b> No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> </div> <ul style="list-style-type: none"> <li>• <b>ASL Accumulation Pre-Processing</b> - Used to attach an algorithm which must be triggered for undertaking some pre-processing activities on the aggregate stop-loss accumulation records. This algorithm is invoked when you execute the <b>C1-ACASL</b> batch.</li> </ul> <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p><b>Note:</b> No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> </div> <ul style="list-style-type: none"> <li>• <b>Account - Post Processing</b> - Used to attach an algorithm which must be triggered when you create or edit an account.</li> </ul> <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p><b>Note:</b> The <b>C1-CLSACCT</b> and <b>C1-UACM-IC</b> algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> <ul style="list-style-type: none"> <li>• <b>Accrual</b> - Used to attach an algorithm which must be triggered to create the accruals for the account.</li> <li>• <b>Contract Derivation</b> - Used to attach an algorithm which must be triggered to derive active contract for the account. This algorithm is invoked when you execute the <b>C1-TXNVP</b> batch. Note that this algorithm is invoked only when the account has multiple active contracts of the contract type which is associated with the price item.</li> </ul> <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p><b>Note:</b> The <b>SA_DERV_POPC</b> algorithm type is shipped with the product. For more information, see the algorithm type description.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the division.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li data-bbox="618 218 1122 373"> <p><b>Currency Conversion For Adjustments</b> - Used to attach a date or date and time based currency conversion algorithm which must be triggered while creating adjustments and FT GL entries for adjustments.</p> <div data-bbox="656 394 1122 573" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>C1_CURALGAD</b> and <b>C1_EXCRTAD</b> algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> </li> <li data-bbox="618 590 1122 745"> <p><b>Currency Conversion For Bill Segments</b> - Used to attach a date or date and time based currency conversion algorithm which must be triggered while creating bill segments and FT GL entries for bill segments.</p> <div data-bbox="656 766 1122 945" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>C1_CURALGBS</b> and <b>C1_EXCRTBS</b> algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> </li> <li data-bbox="618 961 1122 1117"> <p><b>Currency Conversion For Payments</b> - Used to attach a date or date and time based currency conversion algorithm which must be triggered while creating payments, payment tenders, and FT GL entries for payments.</p> <div data-bbox="656 1165 1122 1344" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>C1_CURALGPY</b> and <b>C1_EXCRTPY</b> algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> </li> <li data-bbox="618 1360 1122 1453"> <p><b>GL Account Validation</b> - Used to attach an algorithm which must be triggered during dynamic GL account validation.</p> <div data-bbox="656 1474 1122 1619" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>C1-GLVAL</b> and <b>C1-GLVAL-COB</b> algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> </li> <li data-bbox="618 1638 792 1667"> <p><b>GL Assign</b> -</p> </li> <li data-bbox="618 1686 1052 1715"> <p><b>Generate Conditional GL Entries</b> -</p> </li> <li data-bbox="618 1734 1122 1921"> <p><b>Price Assignment Eligibility</b> - Used to attach an algorithm which must be triggered to determine whether the post-processing pricing is eligible for the account. This algorithm is invoked when you execute the <b>C1-BLPPR</b> and <b>POSTPROC</b> batches.</p> <div data-bbox="656 1942 1122 2100" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This algorithm is invoked while executing these batches only when an algorithm created using the <b>C1-GENBSICPA</b></p> </div> </li> </ul>	

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>Price Assignment Search</b> - Used to attach an algorithm which indicates the order in which the price item pricing must be determined while billing. It also indicates the order in which the price item pricing must be listed in the <b>Pricing (Account)</b> and <b>Pricing (Person)</b> screens.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The <b>C1_PRASN_PP</b> algorithm type is shipped with the product. For more information, see the algorithm type description.</p> </div> <ul style="list-style-type: none"> <li>• <b>Pricing Fees Calculation Post-Processing</b> -</li> <li>• <b>Pricing Fees Calculation Pre-Processing</b> -</li> <li>• <b>Pricing Rate Post-Processing</b> -</li> <li>• <b>Pricing Rate Pre-Processing</b> -</li> <li>• <b>Sequential Bill Number Generation</b> - Used to attach an algorithm which indicates how to sequence alternate bill numbers which are unique within the division.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The <b>C1_ALTBLLDIV</b> and <b>C1_ALTBLDIV1</b> algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> <ul style="list-style-type: none"> <li>• <b>SSL Accumulation Pre-Processing</b> - Used to attach an algorithm which must be triggered for undertaking some pre-processing activities on the aggregate stop-loss accumulation records. This algorithm is invoked when you execute the <b>C1-ACSSL</b> batch.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> </div> <ul style="list-style-type: none"> <li>• <b>TFM - Billable Charge Post-Processing</b> - Used to attach an algorithm which must be triggered for undertaking some post-processing activities on the billable charges which are generated through the transaction aggregation process. This algorithm is invoked when you execute the <b>C1-TXNSQ</b> and <b>C1-TXNCU</b> batches.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> The <b>C1_BCHG_POPC</b> algorithm type is shipped with the product. For more information, see the algorithm type description.</p> </div> <ul style="list-style-type: none"> <li>• <b>TFM - Cancellation Pre-Processing</b> -</li> </ul>	

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li data-bbox="618 218 1122 342">• <b>TFM - Currency Conversion</b> - Used to attach a date or date and time based currency conversion algorithm which must be triggered while aggregating transactions.   <div data-bbox="656 365 1122 541" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>C1_CURALGTFM</b> and <b>C1_EXCRTTFM</b> algorithm types are shipped with the product. For more information, see the algorithm type description.</p> </div> </li> <li data-bbox="618 558 1122 745">• <b>TFM - Disaggregation Pre-Processing</b> - Used to attach an algorithm which must be triggered for undertaking some pre-processing activities while disaggregating the transactions. This algorithm is invoked when you execute the <b>C1-ACSSL</b> batch.           <div data-bbox="656 831 1120 1003" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> No algorithm types for this algorithm entity are shipped with the product. The implementation team can create custom algorithm type for this algorithm entity based on the customer requirements.</p> </div> </li> <li> <b>TFM - Verify Pricing Post-Processing</b> - Used to attach an algorithm which must be triggered for undertaking some post-processing activities on a summary record in the <b>CI_TXN_DTL_PRITM_SUMMARY</b> table. This algorithm is invoked when you execute the <b>C1-TXNVP</b> batch.           <div data-bbox="656 1293 1120 1436" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>C1-VRPR_POPC</b> algorithm type is shipped with the product. For more information, see the algorithm type description.</p> </div> </li> </ul>	
Sequence Number	Used to specify the order in which the algorithms with the same entity should be executed.	Yes (Conditional) <div data-bbox="1140 1520 1466 1629" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the division.</p> </div>
Algorithm	Used to specify the algorithm code. <div data-bbox="591 1709 1120 1860" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> </div>	Yes (Conditional) <div data-bbox="1140 1709 1466 1818" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the division.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
Description	Displays the description of the algorithm.  <b>Note:</b> The description appears automatically when you specify the algorithm code in the <b>Algorithm</b> field.	Not applicable

- Enter the required details in the **Algorithms** tab.
- If you want to associate more than one algorithm with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove an algorithm from the division, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click the **Save** button in the **Page Title** area.  
The algorithm is associated with the division.

## Defining a Characteristic for a Division

### Prerequisites

To define a characteristic for a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

### Procedure

To define a characteristic for a division:

- Search for the division for which you want to define characteristics.
- Click the **Characteristics** tab in the **Division** screen.

The **Characteristics** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the division.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the division.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the division.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Value Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the division.

- Enter the required details in the **Characteristics** tab.
- If you want to define more than one characteristic for the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the division, click the **Delete**  icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.  
The characteristic is defined for the division.

## **Associating a Bill Message with a Division**

### **Prerequisites**

To associate a bill message with a division, you should have:

- Bill messages defined in the application

### **Procedure**

To associate a bill message with a division:

1. Search for the division to which you want to associate a bill message.
2. Click the **Bill Messages** tab in the **Division** screen.

The **Bill Messages** tab appears. It contains the following field:

Field Name	Field Description
Division	<p>Indicates the division.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.</p>

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want the bill message to appear on the bill for the accounts in the division.	Yes (Conditional)
End Date	Used to specify the date till when you want the bill message to appear on the bill for the accounts in the division.	No
Bill Message	<p>Used to specify the bill message which is valid for the accounts in the division.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Message Search</b> window appears.</p> <p>On specifying a bill message, the description of the bill message appears in the <b>Description</b> field.</p>	Yes (Conditional)
Description	Displays the description of the bill message.	Not applicable

3. Enter the required details in the **Bill Messages** tab.
4. If you want to associate more than one bill message with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a bill message from the division, click the **Delete**  icon corresponding to the bill message.

5. Click the **Save** button in the **Page Title** area.

The bill message is associated with the division.

## Associating a Party Characteristic Type with a Division

### Prerequisites

To associate a party char type with a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

### Procedure

To associate a party char type with a division:

1. Search for the division to which you want to associate a party char type.
2. Click the **Party Char Types** tab in the **Division** screen.

The **Party Char Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	Used to indicate whether the characteristic type is valid for a person or an account in the division.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating a party char type with the division.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating a party char type with the division.

3. Enter the required details in the **Party Char Types** tab.
4. If you want to associate more than one party char type with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a party char type from the division, click the **Delete**  icon corresponding to the characteristic type.

- Click the **Save** button in the **Page Title** area.

The party char type is associated with the division.

## Associating a Bill Cycle with a Division

### Prerequisites

To associate a bill cycle with a division, you should have:

- Bill cycles defined in the application

### Procedure

To associate a bill cycle with a division:

- Search for the division to which you want to associate a bill cycle.
- Click the **Bill Cycles** tab in the **Division** screen.

The **Bill Cycles** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Cycle	Used to specify the bill cycle that is valid for the accounts associated with the division.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating a bill cycle with the division.

- Select the bill cycle from the list.
- If you want to associate more than one bill cycle with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a bill cycle from the division, click the **Delete** (🗑️) icon corresponding to the bill cycle.

- Click the **Save** button in the **Page Title** area.

The bill cycle is associated with the division.

## Associating an Account Identifier Type with a Division

### Prerequisites

To associate an account identifier type with a division, you should have:

- Account identifier types defined in the application

### Procedure

To associate an account identifier type with a division:

- Search for the division to which you want to associate an account identifier type.
- Click the **Account Identifier Types** tab in the **Division** screen.

The **Account Identifier Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type valid for the accounts associated with the division.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an account identifier type with the division.

- Select the account identifier type from the list.
- If you want to associate more than one account identifier type with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove an account identifier type from the division, click the **Delete**  icon corresponding to the account identifier type.

- Click the **Save** button in the **Page Title** area.

The account identifier type is associated with the division.

**Defining a Division-Specific Characteristic for a Price Item****Prerequisites**

To define a division-specific characteristics for a price item, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division/Price Item Combination)
- Price item associated with the division to which the user belongs

**Procedure**

To define a division-specific characteristic for a price item:

1. Search for the division for which you want to define a price item characteristic.
2. Click the **Price Item Characteristics** tab in the **Division** screen.

The **Price Item Characteristics** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Division</b> field. On clicking the <b>Search</b> icon, the <b>Division Search</b> window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item count associated with the selected division.	No
Price Item	Indicates the price item code associated with the division to which the user belongs.	Not applicable
Effective Date	Used to specify the date from when the price item characteristic is effective for the division.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Value Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.

- If the division has multiple price items associated with it, navigate to define characteristics for the required price item.

**Note:** You can use the **Previous** (⏪) and **Next** (⏩) buttons to navigate through the price items while defining their characteristics.

- Enter the required details in the **Price Item Characteristics** tab.
- If you want to define more than one division-specific characteristic for the price item, click the **Add** (+) icon and then repeat step 4.

**Note:** However, if you want to remove a division-specific characteristic from the price item, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The division-specific characteristic is defined for the price item.

How to define a division	<a href="#">Defining a Division</a> on page 560

## Associating a To Do Type and To Do Role with a Division

### Prerequisites

To associate a To Do type and To Do role with a division, you should have:

- To Do types and to do roles defined in the application
- To Do roles associated to the respective to do types

### **Procedure**

To associate a To Do type and To Do role with a division:

1. Search for the division to which you want to associate a To Do type and To Do role.
2. Click the **Main** tab in the **Divisions** screen.  
The **Main** tab appears.
3. The **To Do** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Type	Used to indicate the To Do type for which you want to define division-specific To Do role.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a To Do type for the division
To Do Role	Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>To Do Role</b> field. On clicking the <b>Search</b> icon, the <b>Role for To Do Type</b> window appears.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific To Do role for a To Do type

4. If you want to associate more than one To Do type and To Do role with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a To Do type and To Do role from the division, click the **Delete**  icon corresponding to the To Do type.

5. Click the **Save** button in the **Page Title** area.

The To Do type and To Do role is associated with the division.

Oracle Revenue Management and Billing may optionally be configured to use the approval workflow process whenever any addition, modification, or deletion is done manually by a user. The approval workflow process routes any changes made to the business objects (such as person, account, contract, division, and so on) to a group of people for approval. The approval workflow process allows you to manage and track all tasks involved in the approval process.

Approval workflow allows you to define the rules for requiring an approval step before the data changes are committed to the database. Once you establish the approval workflow rules, the application manages the business process flow for having data changes approved before they are reflected in the database.

The system provides you with a flexible set of options used to determine when approvals are required, and how the approval process is to be managed including:

- Turning approval on or off for individual business objects within the application
- Grouping business objects so that approval is required for the group rather than the individual business objects within the group
- Who should approve
- How many levels of approvals are required
- Different approval workflow chains based on different criteria

Once you have turned approval workflow on for an object, or a group of objects, the system will use the approval workflow configuration to manage the entire approval process including:

- Determining whether approval is required based on data changes submitted by a user
- Routing approval workflow requests to one or more qualified approvers
- Managing rejected data changes and sending these back to the submitter for resolution
- Committing the changes once all required approvals are received

- *Approval Workflow Reason  
(Used for Viewing)*

## Most Commonly Used Terms

---

Before you understand the approval workflow process, you must familiarize yourself with the following terms:

Term	Description
Submitter	A person who adds, modifies or deletes a business object, such as person, account, contract, and division is called a submitter.
Approver	A person who approves any changes made to a business object is called an approver.
Approval Workflow Group	A group of one or more business objects for which approval is required, under some or all conditions, when data changes are made.
Approval Workflow Chain	The approval workflow chain indicates how many levels of approvals are required to approve the changes made by the submitter.

## Approval Workflow Process

---

When a submitter adds, edits or deletes a business object (for example, an account) that belongs to an approval workflow group, the system checks whether approval workflow is activated for the approval workflow group. If the approval workflow is activated for the group, the system creates an approval workflow request. Every approval workflow request is uniquely identified in the system through the Approval Transaction ID.

The system identifies the approval workflow chain that must be used for approval depending on the pre-configured conditions or criteria. Based on the number of levels defined in the approval workflow chain, the request is sent to the approver at each level in the chain or hierarchy for approval. When the approver at the first level approves the request, a notification is sent to the approver at the second level for approval. This process continues till the approval is received from all levels in the hierarchy. Once the approvers at all levels approve the request, the changes are committed to the database.

However, if an approver at any level in the hierarchy rejects the request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments and resubmits the changes for approval. In this case, the approval process starts once again from the beginning and not from the level at which the request was rejected.

The submitter also has the facility to modify the request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval. The submitter also has the facility to cancel the request.

The following figure indicates the flow of the approval workflow process:

To implement the approval workflow process, you need to define the following:

- [Approval Workflow Group \(Used for Searching\)](#) on page 644
- [Approval Workflow Chain \(Used for Searching\)](#) on page 661
- [Approval Workflow Criterion Type \(Used for Searching\)](#) on page 668
- [Approval Workflow Group Chain Linkage \(Used for Searching\)](#) on page 674
- [Approval Workflow Reason \(Used for Searching\)](#) on page 691
- [Approval Workflow Setting \(Used for Searching\)](#) on page 684

For price list, price item and price assignment, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1PRODUCT** – Contains the C1\_PRICEITEM\_BO business object
- **C1PRICELST** – Contains the C1\_F\_ADDPLBO business object
- **C1PRICEASG** – Contains the C1\_PRICECOMP and C1\_PRICEASGN\_BO business objects

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains. To setup the approval workflow process for price assignment, you need to do the following:

For Price Item	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICEITEM</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICEITEM_BO</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICEITEM</b> MO.</li> <li>3. Link the <b>C1PRODUCT</b> group to the appropriate approval workflow chain.</li> <li>4. Activate the approval workflow for the <b>C1PRODUCT</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>
----------------	---

For Price List	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICELIST</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_F_ADDPLBO</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICELIST</b> MO.</li> <li>3. Link the <b>C1PRICELST</b> group to the appropriate approval workflow chain.</li> <li>4. Activate the approval workflow for the <b>C1PRICELST</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>
For Price Assignments	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICECOMP</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICECOMP</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICECOMP</b> MO.</li> <li>3. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICEASGN</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICEASGN_BO</b> as the business object on this algorithm.</li> <li>4. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICEASGN</b> MO.</li> <li>5. Link the <b>C1PRICEASG</b> group to the appropriate approval workflow chain.</li> <li>6. Activate the approval workflow for the <b>C1PRICEASG</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>

Similarly, for invoicing group, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1IGADD**
- **C1IGUPD**

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains, and activate the approval workflow for these groups by setting the following in the **Approval Workflow Settings** screen:

- Set **Active** flag to **Yes**
- Set **Prevalidation** flag to **Yes**

**Note:** You must set the **Active** flag to **No** for both the groups in case you do not want to activate the approval workflow for invoicing group. If you set the **Active** flag to **Yes** for either of the groups, approval workflow is triggered when you add and/or edit an invoicing group.

## Prerequisites

You need to setup the following prerequisites to implement the approval workflow process:

- **Setup Feature Configuration for Approval Workflow** — If you create new Maintenance Objects (MOs) and want the access control for these MOs in the approval workflow transactions to be based on the access group and division, then you have to create a custom algorithm and attach it to the **Approval Transaction Entity Access Algorithms** option type of the **C1\_AXENTITY** feature configuration. Note that you will then have two access algorithms; one default algorithm (that is, **C1-APPTXN**) and another custom algorithm. For more information

about the **C1\_AXENTITY** feature configuration, see [Setting the C1\\_AXENTITY Feature Configuration](#) on page 2343.

- **Create and Attach Determine BO Algorithm** — To use approval workflow for a business object, check the corresponding maintenance object to see if a **Determine BO** algorithm is already attached to it. If not, create a **Determine BO** algorithm using the **F1-MOBO** algorithm type, and specify the appropriate business object name on the newly created algorithm. Attach this algorithm on the **Determine BO** algorithm spot of the maintenance object.
- **Attach Audit Algorithm to Business Objects** — To use the approval workflow process for a business object, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object. Unless you attach the audit algorithm to a business object, the approval workflow process will not be triggered for the respective business object. This step is only required when you are using the base panels. If you have created custom UI maps to enter or modify data for a specific business object, this step is not needed.
- **Attach Validation Algorithms to Business Objects** — The following algorithms are shipped with ORMB:

Business Object	Basic Validation Algorithm	Pending Transaction Validation Algorithm
C1-AppBOChain	C1-GRPCHNALG	C1-APPGRPCHL
C1-AppGrp	C1-GRPALG	C1-APPGROUPV
C1-ApprovalChainEligible	C1-ADMALG	C1-APGBYPORT
C1-ApprovalTransactionChain	C1-APCHALGO	C1-APCHNPEND

The basic validation algorithms are attached to the respective business objects, and then shipped with ORMB. However, the pending transaction validation algorithms are not attached to the respective business objects. If you want to restrict the users from either editing or deleting the approval workflow group, approval workflow settings, approval workflow chain, or approval workflow group chain linkage when the respective approval workflow requests are in the **Pending**, **Work-in-Progress**, or **Rejected** state, then you must attach the pending transaction validation algorithm on the **Validation** algorithm spot of the respective business object.

- **Set Colors for Highlighting during Comparison** — While approving, rejecting, or cancelling approval workflow requests where the submitter action is Update (UPD), you will be able to compare the existing and new data. By default, any modifications are highlighted in the Yellow (9933FF) color and new additions are highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Changing the Highlighting Colors](#).
- **Create To Do Types** — You need to create the To Do types that you want to use in the approval workflow process. Once the To Do type is created, you need to link it to the required To Do roles so that users belonging to the To Do role can view and work on the To Do type.
- **Create To Do Roles** — You need to create the To Do roles that you want to use in the approval workflow process. Once the To Do role is created, you need to add the users whom you want to assign this role.

**Note:** User who is withdrawing the approval workflow request must be assigned to the To Do role to which the approver at the first level in the hierarchy is assigned. Otherwise, the user will not be able to withdraw the approval workflow request.

- **Create Input UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group. For more information on how to create an Input UI map manually, see [Creating Input UI Map for an Approval Workflow Group](#) on page 2341.
- **Create Display UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group. For more information on

how to create a Display UI map manually, see [Creating Display UI Map for an Approval Workflow Group](#) on page 2340.

## Approval Transaction

If an approver at any level in the hierarchy rejects a request, a notification is sent to the submitters having the To Do role to resolve. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Approval Transaction** screen allows you to resolve or withdraw a request. It consists of the following zones:

- [Search Approval Transaction](#)
- [Approval Transaction Log](#)

## Search Approval Transaction

The **Search Approval Transaction** zone allows you to search for an approval transaction using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an approval transaction using the task or approval transaction details. The valid values are: <ul style="list-style-type: none"> <li>• Task Details</li> <li>• Approval Transaction Details</li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> By default, the <b>Task Details</b> option is selected.</div>	Yes
Status	Used to search approval transactions with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Inprocess</li> <li>• Pending</li> <li>• Deleted</li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears only when you select the <b>Approval Transaction Details</b> option from the <b>Search By</b> list.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Task	<p>Used to search approval transactions with a particular task. The valid values are:</p> <ul style="list-style-type: none"> <li>• Approve</li> <li>• Modify</li> <li>• Resolve</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Task Details</b> option from the <b>Search By</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to search approval transactions using the task details.</p>
Approval Workflow Group	Used to search approval transactions created for the business objects that belong to a particular approval workflow group.	No
Division	<p>Used to search approval transactions which belong to a particular division.</p> <p><b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.</p>	No
Reference ID	Used to search approval transactions created for the business object with a particular reference ID.	No
Approval Transaction ID	Used to search for a particular approval transaction.	No
Created From	Used to search approval transactions which are created from a particular date onwards.	No
Created Until	Used to search approval transactions which are created till a particular date.	No
Action	Used to search approval transactions which are created while adding, updating, or deleting a business object.	No
Submitter ID	<p>Used to search approval transactions which are created by a particular submitter.</p> <p><b>Note:</b></p> <p>This field appears either when you select the <b>Task Details</b> from the <b>Search By</b> list and <b>Approve</b> option from the <b>Task</b> list or when you select the <b>Approval Transaction Details</b> from the <b>Search By</b> list and <b>Processing, Pending, or Deleted</b> option from the <b>Approval Transaction Status</b> list.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Submitter Id for Status</b> window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approver ID	<p>Used to search approval transactions which are rejected by a particular approver.</p> <p><b>Note:</b></p> <p>The <b>Approver ID</b> is displayed when the approval transaction is searched by <b>Task Details</b> and <b>Task is Resolve</b>. It is also displayed when the approval transaction is searched by <b>Approval Transaction Details</b> and Status is <b>Approved, Canceled, or Rejected</b>.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Approver ID Search</b> window appears.</p>	No

**Note:** You must specify at least one search criterion while searching for an approval transaction. One more search criterion is required when you are searching for an approval transaction using the **Task** field.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Transaction ID	<p>Displays the approval transaction ID.</p> <p><b>Note:</b> It has a link. The link appears when you select <b>Task Details</b> option from the <b>Search By</b> list. If the <b>Approve</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Comparison: New versus Existing</b> window appears with the compared details of the new and existing approval transactions. If the <b>Modify</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Modify/Resolve Price List Assignment</b> window appears to modify or resolve the details of price list assignment. If the <b>Resolve</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Modify/Resolve Price List Assignment</b> window appears to modify or resolve the details of price list assignment.</p>
Approval Workflow Group	Displays the code of the approval workflow group.
Submitter Name	<p>Displays the name of submitter who submits the approval transaction details list.</p> <p><b>Note:</b> This column appears either when you select the <b>Approve</b> or <b>Modify</b> option from the <b>Task</b> list or when you select the <b>Processing, Pending, or Deleted</b> option from the <b>Approval Transaction Status</b> list.</p>
Approver Name	<p>Displays the name of an approver who approves an approval transaction details list.</p> <p><b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Approved, Canceled, or Rejected</b> option from the <b>Approval Transaction Status</b> list.</p>

Column Name	Column Description
Submitted On	<p>Displays the date and time on which approval transaction is submitted for approval.</p> <p><b>Note:</b> This column appears either when you select the <b>Approve</b> or <b>Modify</b> option from the <b>Task</b> list or when you select the <b>Approved</b>, <b>Pending</b>, or <b>Deleted</b> option from the <b>Approval Transaction Details</b> list.</p>
Action	<p>Indicates the various types of action. The valid values are:</p> <ul style="list-style-type: none"> <li>• Add</li> <li>• Delete (DEL)</li> <li>• Update (UPD)</li> </ul>
Division	Displays the division to which the approval transaction belongs.
Status	<p>Displays the status of approval transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Processing</li> <li>• Pending</li> <li>• Deleted</li> </ul> <p><b>Note:</b> This column appears either when you select <b>Approval Transaction Details</b> option from the <b>Search By</b> list of the search criteria.</p>
To Do Type	Displays the type of <b>To Do</b> (notification) received for the approval transaction.
Approval Transaction Information	Displays additional information about the approval transaction.
Rejected On	<p>Displays the date and time on which the transaction is rejected.</p> <p><b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Rejected</b>, option from the <b>Approval Transaction Details</b> list.</p>
Reject Reason	<p>Displays the reason for which the approval transaction is rejected by the approver.</p> <p><b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Rejected</b> option from the <b>Approval Transaction Details</b> list.</p>
Canceled On	<p>Displays the date and time on which the approval transaction is canceled by the user.</p> <p><b>Note:</b> This column appears when you select the <b>Cancelled</b> option from the <b>Approval Transaction Details</b> list.</p>

Column Name	Column Description
Cancel Reason	Displays the reason for which the approval transaction is canceled by the user.  <b>Note:</b> This column appears either when you select the <b>Canceled</b> option from the <b>Approval Transaction Details</b> list.
Withdraw	Displays a link to withdraw an approval transaction.  <b>Note:</b> This column appears either when you select the <b>Modify</b> or <b>Resolve</b> option from the <b>Task</b> list. It has a link and on clicking the link, a message appears to confirm the withdrawal of the respective approval transaction.

On clicking the **Broadcast**  icon corresponding to the approval transaction the **Approval Transaction Log** zone appears with the approval transaction log details.

### Related Topics

For more information on...	See...
<b>Approval Transaction Log</b> zone	<a href="#">Approval Transaction Log</a> on page 597
How to search for an approval transaction	<a href="#">Searching for an Approval Transaction</a> on page 598
How to view the log of an approval transaction	<a href="#">Viewing the Log of an Approval Transaction</a> on page 598

## Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Displays the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• InProcess</li> <li>• Pending</li> <li>• Deleted</li> </ul>
View	It has a link. On clicking the <b>View</b> link, the <b>Comparison: New versus Existing</b> window appears where you can view the existing and new compared transactions”.
Status Reason	Displays the status reason of the approval transaction.
Comments	Displays additional information about the approval transaction.

By default, the **Banking Approval Transaction Log** zone does not appear. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction in the **Approval Transaction** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

How to view the log of an approval transaction	<a href="#">Viewing the Log of an Approval Transaction</a> on page 598

**Searching for an Approval Transaction****Procedure**

To search for an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.  
The **Approval Transaction** screen appears.
3. Click the **Search** option from the **Approval Transaction** sub-menu.  
The **Approval Transaction** screen appears.
4. Enter the search criteria in the **Search Approval Transaction** zone depending on whether you want to search for a task or approval transaction details.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of task or approval transactions that meet the search criteria appears in the **Search Results** section.

**Related Topics**

<b>Approval Transaction</b> screen	<a href="#">Approval Transaction</a> on page 593
<b>Search Approval Transaction</b> zone	<a href="#">Search Approval Transaction</a> on page 593

**Viewing the Log of an Approval Transaction****Procedure**

To view the log of an approval transaction:

1. Search for the task or approval transaction details in the **Approval Transaction** screen.
2. In the Search Results section, click the **Broadcast**  icon corresponding to the approval transaction whose log details you want to view.  
The **Approval Transaction Log** zone appears.
3. View the log details of the approval transactions in the **Approval Transaction Log** zone.

**Related Topics**

For more information on...	See...
Search Approval Transaction zone	<a href="#">Search Approval Transaction</a> on page 593
Approval Transaction Log zone	<a href="#">Approval Transaction Log</a> on page 597

## Comparison: New versus Existing

You have to define the reason codes which are used when the approval workflow request is either rejected or cancelled. The reason code helps to indicate the reason why a particular request was rejected or cancelled.

The **Comparison: New versus Existing** screen allows you to view the changes in the new approval transaction compared to the existing one. It contains the following sections:

- New
- Existing

Through this screen you can do the following:

- Approve an approval transaction
- Reject an Approval Transaction
- Cancel an approval transaction
- Modify an approval transaction
- Withdraw an Approval Transaction
- Resolve an approval transaction

## Approving an Approval Transaction

You can view the number of approval transactions which are pending for approval in the **Approval Transaction** screen. The approver can review, and accordingly approve, return to the submitter, revert to the original, or cancel the approval transaction based on the observations.

**Note:** The system will not allow you to approve, return to the submitter, revert to the original or cancel an approval transaction submitted by you.

### **Procedure**

To approve an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Approve**.

A message appears with confirmation on transaction approved successfully.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **OK**.

The approval transaction is removed from the search results.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2343.

6. Review the changes and click **Approve** to accept the changes.

The changes in the approval transaction are approved.

**Related Topics**

<b>Search Approval Transaction</b> zone	<a href="#">Search Approval Transaction</a> on page 593
<b>Comparison: New versus Existing</b> screen	<a href="#">Comparison: New versus Existing</a> on page 599
How to search for an approval transaction	<a href="#">Searching for an Approval Transaction</a> on page 598

**Rejecting an Approval Transaction****Prerequisites**

To return an approval transaction to its submitter, you should have:

- Rejection reasons defined in the application

**Note:**

While returning an approval transaction, you need to specify the reason why you want to return the approval transaction. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

**Procedure**

To reject an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.

4. Click Return to Submitter.” With stepresult, “The Rejection/Cancelation Reason window appears. It contains the following fie

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.
6. Click **OK**.

The approval transaction is removed from the search results.

## Canceling an Approval Transaction

### Prerequisites

To revert an approval transaction to its initial status, you should have:

- Cancellation reasons defined in the application

### **Note:**

While reverting an approval transaction, you need to specify the reason why you want to revert the approval transaction. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

### Procedure

To cancel an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Revert to Original**.

The **Rejection/Cancellation Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.

A **Comparison: New versus Existing** screen appears where you can view the changes in the new transaction as compared to the existing ones.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2343.

6. Click **OK**.

The approval transaction is removed from the search results.

**Modifying an Approval Transaction****Prerequisites**

To modify an approval transaction, you should have:

- Characteristic Types defined in the application.

**Procedure**

To Modify an approval transaction:

1. Search for approval transactions with task details and status as Modify in the **Approval Transaction** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is **Update (UPD)**, you will be able to compare the existing and new data, and accordingly take an action.

3. Modify the required details.
4. Click **Save**.

The modifications made to the approval transaction are saved.

## Withdrawing an Approval Transaction

### Procedure

To withdraw an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. In the **Search Results** section, click the link in the **Withdraw** column corresponding to the approval transaction which you want to withdraw.

A message appears confirming whether you want to withdraw the approval transaction.

3. Click **OK**.

A message appears confirming whether you want to delete the approval transaction.

4. Click **OK**.

The approval transaction is deleted.

## Resolving an Approval Transaction

### Prerequisites

To resolve an approval transaction, you should have:

- Characteristic Types defined in the application.

### Procedure

To resolve an approval transaction:

1. Search for approval transactions with task details and status as Resolve in the **Approval Transaction** screen.

A list appears.

2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to resolve.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is Update (UPD), you will be able to compare the existing and new data, and accordingly take an action.

3. Make the required changes.

4. Click **Save**.

The changes resolve for the approval transaction are saved.

## Approve Price Assignment

The **Approve Price Assignment** screen allows you to search for the price assignment requests that are pending in your workflow for approval. You can review the changes, and accordingly approve, reject or cancel the request based on your observations. It contains the following zones:

- [Search](#) on page 604
- [List of Price Assignments](#) on page 607
- [Approve Price Assignment - Comparison: New versus Existing](#) on page 608
- [Approval Transaction Log](#) on page 597

## Search

The **Search** zone allows you to search for the price assignment requests that are pending in your workflow for approval. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approval Transaction ID</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>Person</b> option is selected.</div>	Yes
Division	Used to search price assignments which are associated with a particular division. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the value for the person identifier type.	Yes (Conditional)  <b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the ID linked to the person.  <b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search price assignments which are created for a particular account.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	No
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the account whose price assignments you want to view.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Price List Description	Used to search price lists with a particular description.  <b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	No
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.  <b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction ID	<p>This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.</p> <p><b>Note:</b></p> <p>The approval transaction ID is generated automatically when the price assignment request is created.</p> <p>This field appears only when you select the <b>Transaction ID</b> option from the <b>Search By</b> list.</p>	No

**Note:** You must specify at least one search criterion while searching for a price assignment.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. It contains the following columns:

Column Name	Column Description
Account ID	<p>Displays the account ID.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Account Identifier Type	<p>Indicates the account identifier type of the account for the price assignments.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Account Identifier	<p>Displays the value of the account identifier type.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Price List ID	<p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
Price List Description	<p>Displays the description for the price list.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
Person Identifier	<p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Person Name	<p>Displays the name of the person.</p> <p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Division	<p>Displays the division to which the account, person, or price list belongs.</p>

Column Name	Column Description
Submitter ID	Displays the ID of the submitter.  <b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.
Approval Transaction ID	Displays the approval transaction ID.  <b>Note:</b> This column appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction id.  <b>Note:</b> The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Displays the name of the submitter.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> performed by the submitter during price assignment.
Submitted On	Indicates the submitter who has created the price assignment request.

Column Name	Column Description
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays the additional information of an approval transaction.

**Note:**

By default, the **List of Price Assignments** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

**Approve Price Assignment - Comparison: New versus Existing**

The **Comparison: New versus Existing** zone lists the existing and the new price assignments defined in the system. You can approve, cancel, reject a price assignment through this zone. It contains the following fields:

Field Name	Field Description
Approval Transaction ID	Displays the approval transaction id.
Submitter ID	Displays the submitter id who has created the price assignment request.

Field Name	Field Description
Approval Transaction Information	Displays information about the approval transaction
Action	Indicates the action that can be performed on the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Add – Allows you to define the tiering setup of the price assignment</li> <li>• DEL – Allows you to delete the tiering setup of the price assignment.</li> <li>• UPD – Allows you to upload the tiering setup of the price assignment.</li> </ul>

In addition to the above fields, this zone also contains the following two sections:

- **New** – It consists of the new approved price assignments.
- **Existing** – It consists of the existing or old price assignments.

In addition, this zone also contains the following buttons:

Button Name	Button Description
Approve	Used to approve the price assignment.
Return to Submitter	Used to reject the price assignment.
Revert to Original	Used to cancel the price assignment.

**Note:**

By default, the **Comparison: New versus Existing** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

The changes made are highlighted in both the sections for the respective fields. The fields change according to the price assignments.

You can click on **Approve** button, **Return to Submitter** button, or **Revert to Original** button to **Approve**, **Reject** or **Cancel** the price assignments, respectively.

## Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Indicates the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Inprocess</li> <li>• Pending</li> <li>• Initial</li> <li>• Deleted</li> </ul>
Status Reason	Indicates the reason why the approval transaction was rejected or cancelled.
Comments	Displays the additional details entered by the approver on rejecting or cancelling the approval transaction.

### Note:

By default, the **Approval Transaction Log** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2336.

For more information on...	See...
<b>List Of Price Assignments</b> zone	<a href="#">List of Price Assignments</a> on page 626

## Approving a Price Assignment for an Account

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. The approver can review, and accordingly approve, reject or cancel the price assignment based on the observations.

**Note:** The system will not allow you to approve, reject or cancel a price assignment submitted by you.

### Procedure

To approve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review for approval.  
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast**  icon corresponding to the price assignment whose details you want to review and approve.  
The **Comparison: New Versus Existing** zone appears.

**Note:**  
By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2343.  
Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.  
A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.
8. Click **Approve**.  
A message appears with confirmation on transaction approved successfully.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve and then click **Approve**.

9. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

## Approving a Price Assignment for a Person

**Procedure**

To approve a price assignment for a person:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria by selecting **Person** in the **Search By** field.

**Note:**

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Search Results** appear only when **Person Identifier Type** and **Person Identifier** fields are entered.

4. Click **Search**.  
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the person whose price assignments you want to review for approval.  
The **List of Price Assignments** zone appears.
6. Click the **Broadcast**  icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.  
The **Comparison: New Versus Existing** zone appears.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2343.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are accurate, then click **Approve**.

A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.

- Click **OK**.

A To Do (notification) is sent to the approver at the next level in the hierarchy. You will no longer be able to view this request in your workflow for approval. In case you are the last approver in the hierarchy, the changes are committed to the database.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve, and then click **Approve**.

A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review for approval.  
The **List of Price Assignments** zone appears.
6. Click the **Broadcast**  icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.  
The **Comparison: New Versus Existing** zone appears.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2343.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are not appropriate, then click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

- Select the reason for rejecting the price assignment request and enter the comments in the respective field.
- Click **OK**.

The **Approve** and **Revert to Original** buttons are disabled. You will no longer be able to view this request in your workflow for approval.

**Rejecting a Price Assignment for a Person**

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. You can review, and accordingly approve, reject or cancel the price assignment based on the observations.

**Note:** The system will not allow you to approve, reject or cancel a price assignment submitted by you.

**Procedure**

To reject a price assignment for a person:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
- Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast**  icon corresponding to the person whose price assignments you want to review.  
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast**  icon corresponding to the price assignment whose details you want to review.  
The **Comparison: New Versus Existing** zone appears.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2343.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.

The **Rejection/Cancellation Reason** screen appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason Code	Used to specify the reason why the approval workflow request is rejected.	Yes
Rejection/Cancellation Comment	Used to specify additional information while rejecting/cancelling the approval workflow request.	Yes

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

8. Click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to add additional comments.	No

9. Enter the required details.

10. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

**Note:** Alternatively, you can cancel the price assignment by selecting the check box corresponding to the price assignment which you want to cancel and then click the **Revert to Original** button in the **List of Price Assignments** zone.

## Modify Price Assignment

The submitter has the facility to modify or withdraw a price assignment request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval.

The **Modify Price Assignment** screen allows you to modify or withdraw a price assignment request. It contains the following zones:

- [Search](#) on page 622
- [List of Price Assignments](#) on page 637

### Search

The **Search** zone allows you to search for the price assignment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are:</p> <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approval Transaction ID</li> </ul> <p><b>Note:</b> By default, the <b>Person</b> option is selected.</p>	Yes
Division	<p>Used to search price assignments which are associated with a particular division.</p> <p><b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.</p>	No
Person Identifier Type	<p>Used to select the identifier type based on which you want to search price assignments through which the person's record is created or updated in the system.</p> <p><b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>	Yes (Conditional)
Person Identifier	<p>Used to specify the value for the person identifier type.</p>	Yes (Conditional)
Account ID	<p>Used to search price assignments which are created for a particular account.</p> <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>	No
Account Identifier Type	<p>Used to select the identifier type based on which you want to search price assignments of an account.</p> <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account whose price assignments you want to view.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Price List Description	Used to search price lists with a particular description.  <b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	No
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.  <b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	No
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.  <b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created. This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for a price assignment.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Indicates the person for whom the price assignment is created.  <b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.
Person Name	Displays the name of the person.  <b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.
Person Identifier Type	Displays the person identifier type.  <b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Account Information	<p>Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>
Account Identifier Type	<p>Indicates the account identifier type of the account for the price assignments.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p>
Account Identifier	<p>Displays the value of the account identifier type.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p>
Price List ID	<p>Displays the price list ID.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
Price List Description	<p>Displays the description for the price list.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p> <p><b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.</p>
Submitter ID	<p>Displays the ID of the submitter.</p> <p><b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.</p>

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.  <b>Note:</b> The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> , performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays information about the approval transaction.  <b>Note:</b> This information string is generated using the <b>C1-APPTXNINF</b> algorithm.
Modify	It has a link. On clicking the <b>Modify</b> link, the <b>Modify/Resolve Price Assignment</b> screen appears where you can modify the price assignment.
Withdraw	It has a link. On clicking the <b>Withdraw</b> link, you can withdraw and remove the approval transaction from the list of price assignments.
View	It has a link. On clicking the <b>Log</b> link, you can view the approval transaction log details.

By default, the **List of Price Assignments** zone does not appear in the **Modify Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

## Modifying a Price Assignment for an Account

You can view the number of price assignments which are pending for modification in the **Modify Price Assignment** screen. The modifier can review, and accordingly modify, withdraw or view log of the price assignment based on the observations.

### Procedure

To modify a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.  
The **Modify Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review.  
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment that you want to modify.  
The **Modify/Resolve Price Assignment** screen appears.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Modify the required details.

The changes made to the price assignment are saved.

## Modifying a Price Assignment for a Person

### Procedure

To modify a price assignment for a person:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.  
The **Modify Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria, such as the division to which the person belongs or the person identification type and value.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the person whose price assignment requests you want to modify.  
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment request that you want to modify.  
The **Modify/Resolve Price Assignment** screen appears where you can modify the pricing details, tiering ranges, and price assignment characteristics.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Click **Save**.  
The price assignment for a person is updated.

## Modifying a Price Assignment for a Price List

### Procedure

To modify a price assignment for a price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.  
The **Modify Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria, such as the description of the price list.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of price lists that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the price list whose price assignment requests you want to modify.  
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment request that you want modify.  
The **Modify/Resolve Price Assignment** screen appears where you can modify the pricing details, tiering ranges, and price assignment characteristics.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Click **Save**.  
The price assignment for a price list is updated.

## **Resolve Price Assignment**

---

If an approver at any level in the hierarchy rejects a price assignment request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver’s comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Resolve Price Assignment** screen allows you to resolve or withdraw a price assignment request. It consists of the following zones:

- [Search](#) on page 633
- [List of Price Assignments](#) on page 637

### **Search**

The **Search** zone allows you to search for the price assignment requests rejected by approvers and pending for you to resolve. It contains the following two sections:

- Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search price assignments using various details. The valid values are:</p> <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approver Transaction ID</li> </ul> <p><b>Note:</b> By default, the <b>Person</b> option is selected.</p>	Yes
Division	<p>Used to search price assignments which belong to a particular division.</p> <p><b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.</p>	No
Person Identifier Type	<p>Used to specify the identifier type based on which you want to search for price assignment requests of a person.</p> <p><b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>	Yes (Conditional) <b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	<p>Used to specify the ID linked to the person.</p> <p><b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>	Yes (Conditional) <b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	<p>Used to search for price assignment requests created for an account.</p> <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>	No
Account Identifier Type	<p>Used to specify the account identifier type of the account whose price assignment requests you want to search.</p> <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	<p>Used to specify the value of the account identifier type.</p> <p><b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>	Yes (Conditional) <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to search for price assignment requests created for a price list.  <b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	No
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.  <b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	No
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.  <b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.  This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for a price assignments.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Displays the ID linked to the person.  <b>Note:</b> This column appears only when you are searching for price assignment requests of a person.
Person Name	Displays the name of the person.  <b>Note:</b> This column appears only when you are searching for price assignment requests of a person.
Division	Displays the division to which the account, person, or price list belongs.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> This column appears only when you are searching for price assignment requests of an account.  It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

Column Name	Column Description
Account Identifier Type	Displays the account identifier type. <b>Note:</b> This column appears only when you are searching for price assignment requests of an account.
Account Identifier	Displays the value of the account identifier type. <b>Note:</b> This column appears only when you are searching for price assignment requests of an account.
Price List ID	Displays the price list ID. <b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.
Price List Description	Displays the description of the price list. <b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.
Owner ID	Displays the ID of the person for whose account the approval workflow request is created.
Approval Transaction ID	Displays the approval transaction ID. <b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.
Person Identifier Type	Displays the person identifier type. <b>Note:</b> This column appears only when you are searching for price assignment requests of a person.

On clicking the **Broadcast**  icon corresponding to the account, person, or price list, the **List of Price Assignments** zone appears.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID. <b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item code.
Description	Displays the description of the product.
Pricing Currency	Indicates the currency in which the product pricing is defined.
Start Date	Displays the date from when the product pricing is effective.
End Date	Displays the date till when the product pricing is effective.
Approver Name	Indicates the approver who has rejected the price assignment request.
Rejected On	Displays the date and time when the price assignment request was rejected by an approver.
Reject Reason	Indicates the reason why the price assignment request was rejected.
Rejection Comments	Displays the additional details entered by an approver on rejecting the price assignment request.
Approval Transaction Information	Displays information about the approval transaction. <b>Note:</b> This information string is generated using the <b>C1-APPTXNINF</b> algorithm.
Resolve	On clicking the <b>Resolve</b> link, you can modify the details of the price assignment request, and resubmit it for approval. On resubmitting, the approval workflow process starts once again from the first level in the hierarchy.
Withdraw	On clicking the <b>Withdraw</b> link, you can withdraw the price assignment request. Once you withdraw the request, no further action will be taken on the request.
View	On clicking the <b>Log</b> link, you can view the log of the price assignment request from the <b>Resolve Price Assignment</b> screen before resolving or withdrawing a request.

By default, the **List of Price Assignments** zone does not appear in the **Resolve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

- Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

- Click the **Broadcast**  icon corresponding to the price list whose price assignment requests you want to withdraw.

The **List of Price Assignments** zone appears.

**Note:** The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

- Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.

A message box appears confirming whether you want to delete the price assignment request.

- Click **OK**.

You will no longer be able to view this request in your workflow.

## Viewing the Log of an Approval Transaction

### Procedure

To view the log of an approval transaction:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.  
The **Resolve Price Assignment** screen appears.

- In the **Search** zone, enter the search criteria, such as the description of the price list.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

- Click the **Broadcast**  icon corresponding to the price list whose price assignment requests you want to modify.

The **List of Price Assignments** zone appears.

- Click on **Log** link in the **View** column.

The **Approval Transaction Log** screen appears.

- You can view the log of an approval transaction, as required.

## Search Approval Workflow Group

The **Search Approval Workflow Group** zone allows you to search for an approval workflow group using various search criteria. It contains the following sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to search a particular approval workflow group.	No
Description	Used to search approval workflow groups with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Group	Displays the approval workflow group.
Description	Displays the description of the approval workflow group. <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group</b> screen appears where you can view the details of the respective approval workflow group.

**Note:** You must specify at least one search criterion while searching for an Approval Workflow Group.

## Defining an Approval Workflow Group

### Prerequisites

To define an approval workflow group, you should have:

- Input and Display UI maps created in the application in case you want to use custom UI maps.
- Dependency, Approval, and Approval Post Processing algorithms defined in the application in case you want to use any of them.

**Note:** Before you define an approval workflow group for the User BO, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object belonging to the USER-SC MO, and not the USER MO.

### Procedure

To define an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.
3. Click the **Add** button in the **Page Title** area of **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group.
- **Business Objects and Group BO Relation** - Used to add business objects and define group BO Relation for the approval workflow group.

The **Main** section contains the following:

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction Type	Used to indicate the transaction type to which the approval workflow group belongs.	Yes
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Description	Used to specify the approval workflow group with a particular description.	Yes
Display UI Map	<p>Used to specify the UI map that you want to use for viewing data of the business objects within the approval workflow group.</p> <p><b>Note:</b> You can search for a UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Display UI Map field.</p> <p><b>Note:</b> If you clear the <b>Display UI Map</b> field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the <b>Regenerate UI Maps</b> icon corresponding to the group in the <b>Approval Workflow Settings</b> screen.</p>	No
Input UI Map	<p>Used to specify the UI map that you want to use for modifying data of the business objects within the approval workflow group.</p> <p><b>Note:</b> You can search for a UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Input UI Map field.</p> <p><b>Note:</b> If you clear the <b>Input UI Map</b> field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the <b>Regenerate UI Maps</b> icon corresponding to the group in the <b>Approval Workflow Settings</b> screen.</p>	No
Dependency Algorithm	<p>Used to specify the algorithm that will be triggered before creating the approval workflow group.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Dependency Algorithm field.</p> <p><b>Note:</b> This algorithm can be used to check all prerequisites before creating the approval workflow group.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Algorithm	<p>Used to specify the algorithm that will be triggered after the approval workflow group is approved by the approver at the last level in the hierarchy. The following approval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPPROD</b> - This approval algorithm is used for the C1PRODUCT group, which is shipped with ORMB.</li> <li>• <b>C1-APPPL</b> - This approval algorithm is used for the C1PRICELST group, which is shipped with ORMB.</li> <li>• <b>C1-APPASG</b> - This approval algorithm is used for the C1PRICEASG group, which is shipped with ORMB.</li> <li>• <b>C1-APPALG</b> - This is a standard approval algorithm that you can use for approval workflow groups where custom logic is not required.</li> </ul> <p>You can also create your own approval algorithms for custom UIs.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Approval Algorithm field.</p> </div>	No
Approval Post Processing Algorithm	<p>Used to specify the algorithm that will be triggered after the changes (which are approved by all approvers' in the hierarchy) are committed to the database.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Approval Post Processing Algorithm field.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Creation Algorithm	<p>Used to specify the algorithm that will create approval workflow group. The following transaction creation algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPASGCR</b> - Used to create approval workflow group for price assignment.</li> <li>• <b>C1-AXPROD</b> - Used to create approval workflow group for price item.</li> <li>• <b>C1-AXUSR</b> - Used to create approval workflow group for user.</li> <li>• <b>C1-IGCREATE</b> - Used to create approval workflow group for invoicing group.</li> <li>• <b>C1-AXCREATE</b> - This is a standard transaction creation algorithm that you can use to create approval workflow group for most of the base objects.</li> </ul> <p>You can also create your own transaction creation algorithms for custom UIs.</p> <p>In case of the base UIs, this algorithm is only used while modifying or resolving a group. The initial approval transaction creation for base UIs takes place through the Audit algorithm attached on the business object.</p> <div data-bbox="565 1003 1198 1129" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Transaction Creation Algorithm field.</p> </div>	Yes
Data Retrieval Algorithm	<p>Used to specify the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). The following data retrieval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPIGDR</b> - Used to retrieve data for invoicing group.</li> <li>• <b>C1-AXPRICEOV</b> - Used to retrieve data for price assignment.</li> <li>• <b>C1_APPDATA</b> - This is a standard data retrieval algorithm that you can use to retrieve data for most of the base objects.</li> </ul> <p>You can also create your own data retrieval algorithms for custom UIs.</p> <div data-bbox="565 1711 1198 1837" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Data Retrieval Algorithm field.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Information Algorithm	Used to specify the algorithm information.  <b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Approval Post Processing Algorithm field.	No
Compare Map	Used to specify the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Display UI Map</b> field.  <b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Approval Post Processing Algorithm field.	No
Input Script	Used to specify the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Input UI Map</b> field.  <b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Approval Post Processing Algorithm field.	No

4. Enter the required details.
5. Add business objects and group BO relation with the approval workflow group, if required.
6. Click **Save**.

The approval workflow group is defined.

### **Related Topics**

<b>Approval Workflow Group</b> zone	<a href="#">Approval Workflow Group</a> on page 654
How to add business objects and group BO relation	<a href="#">Adding a Business Object</a>

## **Adding a Business Object**

### **Prerequisites**

To add a business object in the approval workflow group, you should have:

- Business object and approval workflow group created in the application.

### **Procedure**

To add a business object in the approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A**, and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

- Click the **Add** button in the page-title area of the **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains following sections:

- Main** - Used to specify basic details of the approval workflow group.
- Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects and link them with the approval workflow group.

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the Business Object Code that you want to include in the Approval Workflow Group.	Yes
Reference ID 1	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 2	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 3	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 4	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference Foreign Key 1	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 3	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
List	Used to indicate whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Used to specify the XPATH key of the field or list of fields in the parent business object.	No
To Key	Used to specify the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a business object and parent business object, by clicking the **Search** () icon placed corresponding to the **Business Object** field.

- If you want to define more than one business and parent business object for the approval workflow group, click the **Add** () icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**

The business object is added in the approval workflow group.

**Note:** When you add business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** () icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

## Defining a Group BO Relation

### Prerequisites

To define a relationship between business object in the approval workflow group, you should have:

- Business objects added in the approval workflow group.

### Procedure

To define a relationship between business objects in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.

3. Search for an approval workflow group in the **Approval Workflow Group** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
5. The **Approval Workflow Group** screen appears. It contains following sections:
  - **Main** - Used to specify basic details of the approval workflow group.
  - **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects, and link them with the approval workflow group.
6. Define and edit the approval workflow group details from the **Main** section, if required.
7. If you only want to define a business object, enter the required details in the **Business Objects and Group BO Relation** section.
8. If you want to define a group BO relation with the business object, enter the required details in the following fields.
  - a) **Parent Business Object**
  - b) **From Key**
  - c) **To Key**

**Note:** If you want to define more than one business or parent object, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a business or parent object, click the **Delete** (🗑️) icon corresponding to the business or parent object field.

9. Click **Save**.

The business object is defined, and its relationship with the parent object is also defined in the approval workflow group.

## **Approval Workflow Group (Used for Viewing)**

Once you define an approval workflow group, the **Approval Workflow Group** screen allows you to:

- Edit the details of an approval workflow group
- Edit the details of business objects and group business object relation
- Delete an approval workflow group
- Delete a business object and a group business object relation
- View the details of an approval workflow group

This screen consists of the following zone:

- [Approval Workflow Group](#) on page 654

## Approval Workflow Group

The **Approval Workflow Group** zone displays the details of the approval workflow group. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the name of the approval workflow group.
Description	Displays the description of the approval workflow group.
Display UI Map	Indicates the UI map that will be used for viewing data of the business objects within the approval workflow group.  <b>Note:</b> It has a link. On clicking the link, the <b>UI Map</b> screen appears where you can view the details of the respective UI Map.
Input UI Map	Indicates the UI map that will be used for modifying data of the business objects within the approval workflow group.  <b>Note:</b> It has a link. On clicking the link, the <b>UI Map</b> screen appears where you can view the details of the respective UI Map.
Dependency Algorithm	Indicates the algorithm that will be triggered before creating the approval workflow request.  <b>Note:</b> This algorithm can be used to check all prerequisites before creating the approval workflow request.
Approval Algorithm	Indicates the algorithm that will be triggered after the approval workflow request is approved by the approver at the last level in the hierarchy.
Approval Post Processing Algorithm	Indicates the algorithm that will be triggered after the changes (which are approved by all approvers in the hierarchy) are committed to the database.
Transaction Creation Algorithm	Indicates the algorithm that will create approval workflow requests.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Data Retrieval Algorithm	Indicates the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD).  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Information Algorithm	Indicates the Approval Transaction information from the Approval Transactions that are created for a particular entity, based on the inputs of the XPath paths provided in the Reference IDs.
Compare Map	Indicates the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Display UI Map</b> field.
Input Script	Indicates the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Input UI Map</b> field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit the approval workflow group. It is also used to delete the business objects and group BO relation.
Delete	Used to delete an approval workflow group.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow group is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Business Objects And Group BO Relation** - The Business Objects And Group BO Relation contains the following fields:

Field Name	Field Description
Business Object	Indicates the Business Object that you want to include in the Approval Workflow Group.
Reference ID 1	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 2	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 3	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 4	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference Foreign Key 1	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 2	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 3	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 4	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 5	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 6	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.

Field Name	Field Description
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.
Parent Business Object	Indicates the parent business object. This should be one of the business objects within the group.
From Key	Indicates the XPATH key of the field or list of fields in the parent business object.
To Key	Indicates the XPATH key of the field or list of fields in the current business object.

## Editing an Approval Workflow Group

### Procedure

To edit an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Group** screen appears.

3. Click the **Edit** button in the **Approval workflow Group** zone.

The **Approval Workflow Group** screen appears.

4. Modify the details of the approval workflow group, if required.
5. Define, edit, or remove business objects and group BO relation from the approval workflow group, if required.
6. Click **Save**.

The changes made to the approval workflow group are saved.

## Editing a Business Object

### Procedure

To edit a business object in the approval workflow group:

1. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.
2. Search for an approval workflow group in the **Search Approval Workflow Group** zone.
3. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.
4. The **Approval Workflow Group** zone appears. Click the **Edit** button from **Record Action** sections.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business objects and link them with the approval workflow group

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the Business Object Code that is included in the Approval Workflow Group.	Yes
Reference ID 1	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 2	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 3	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 4	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference Foreign Key 1	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference Foreign Key 3	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Display the XPATH key of the field or list of fields in the parent business object.	No
To Key	Display the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a business object or parent business object by clicking the **Search**  icon placed corresponding to the **Business Object** and **Parent Business Object** field.

- If you want to define more than one business object or parent object for the approval workflow group, click the **Add**  icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**.

The changes made to the business object in approval workflow group are saved.

**Note:** When you change business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps**  icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

How to delete a Business Object	<a href="#">Deleting a Business Object</a> on page 659

## Deleting a Business Object

### Procedure

To delete a business object in the approval workflow group:

1. Search for an approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** zone appears.

3. In the View section of **Approval Workflow Group**, click the **Edit** button.

The **Approval Workflow Group** window appears.

4. In the **Business Objects and Group BO Relation** zone, click the **Delete** (🗑️) icon corresponding to the business object that you want to delete.
5. Click **Save**.

The business object is deleted from the approval workflow group.

## Editing a Group BO Relation

### Procedure

To edit the business object's relationship details in the approval workflow group:

1. If required, filter the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** screen appears. It contains following two sections:

- **Main** - Displays the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Displays the fields that allow to define or edit business objects, and link them with the approval workflow group.

3. If required, define and edit the approval workflow group details from the **Main** section.
4. The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the business object that you want to add in the approval workflow group.	Yes
Reference ID 1	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 2	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference ID 3	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 4	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference Foreign Key 1	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 2	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 3	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 4	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 5	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 6	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Displays the parent business object. This should be one of the business objects within the group.	No
From Key	Displays the XPATH key of the field or list of fields in the parent business object.	No
To Key	Displays the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a parent business object by clicking the **Search** () icon placed corresponding to the field. You can also define a new parent business object by clicking the **Add** () icon placed corresponding to the field.

5. Modify the required details in **Business Objects and Group BO Relation** section.
6. Click **Save**.

The changes made to business object's relationship are saved in the approval workflow group.

**Approval Workflow Chain (Used for Searching)**

The **Approval Workflow Chain** screen allows you to search for approval workflow chain using various search criteria. Through this screen, you can navigate to the following screen:

- [Approval Workflow Chain \(Used for Viewing\)](#) on page 665

This screen consists of the following zone:

- [Search Approval Workflow Chain](#) on page 661

**Search Approval Workflow Chain**

The **Search Approval Workflow Chain** zone allows you to search for an approval workflow chain using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to search a particular approval workflow chain.	No
Description	Used to search approval workflow chains with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Chain	Displays the approval workflow chain.
Description	Displays the description of the approval workflow chain.  <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears where you can view the details of the respective approval workflow chain.

**Note:** You must specify at least one search criterion while searching for an approval workflow chain.

### Related Topics

How to search for an approval workflow chain	<a href="#">Searching for an Approval Workflow Chain</a> on page 662
How to view the details of an approval workflow chain	<a href="#">Viewing the Approval Workflow Chain Details</a> on page 663

## Searching for an Approval Workflow Chain

### Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

3. Enter the search criteria in the **Search Approval Workflow Chain** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

## Defining an Approval Workflow Chain

### Prerequisites

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

### Procedure

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.  
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.  
The **Approval Workflow Chain** screen appears. It contains the following sections:
  - **Main** - Used to specify basic details of the approval workflow chain.
  - **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to specify the approval workflow chain	Yes
Description	Used to specify the description for the approval workflow chain	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Role To Resolve	Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy.	Yes

- Enter the required details.
- Define approval levels for the approval workflow chain, if required.
- Click **Save**.

The approval workflow chain is defined.

## Defining Approval Levels for an Approval Workflow Chain

### Prerequisites

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

### Procedure

To define an approval levels for an approval workflow chain:

- Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.

The **Approval Levels** section contains the following fields

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.  <b>Note:</b> You can search for an action algorithm by clicking the <b>Search</b>  icon corresponding to the <b>Action Algorithm</b> field.	Yes
Approver To Do Role	Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.  <b>Note:</b> You can search for an approver to do role by clicking the <b>Search</b>  icon corresponding to the <b>Approver To Do Role</b> field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approver To Do Type	Used to specify the type of notification that you want to generate when the approver approves or rejects the request.  <b>Note:</b> You can search for an approver to do type by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Approver To Do Type</b> field.	Yes

- Enter the required details in the **Approval Levels** section.
- If you want to define more than one approval level for the approval workflow chain, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete** (🗑️) icon corresponding to the approval level.

## Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 665

### Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- Main** - Displays basic information about the approval workflow chain. It contains the following fields:

Field Name	Field Description
Approval Workflow Chain	Displays the approval workflow chain and levels.
Description	Displays the description of the approval workflow chain and levels.
To Do Role To Resolve	Displays the description of To Do Role role type.

- Approval Levels** - Displays the levels defined in the approval workflow chain.

Field Name	Field Description
Action Algorithm	Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request.

Field Name	Field Description
Level	Indicates the level in the hierarchy.
Approver To Do Role	Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy.
Approval To Do Type	Indicates the type of notification that will be generated when the approver approves or rejects the request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit and delete the approval workflow chain and approval levels.
Delete	Used to delete the approval workflow chain.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing an Approval Workflow Chain

### Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Chain** screen appears.

3. Click the **Edit** button in the **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

- **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Displays the approval workflow chain.	Yes
Description	Displays the description for the approval workflow chain.	Yes
To Do Role To Resolve	Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy.	Yes

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
Approver To Do Role	Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
Approval To Do Type	Displays the type of notification that you want to generate when the approver approves or rejects the request.	Yes

4. Modify the required details in the **Main** section.
5. Edit, or remove approval levels from the approval workflow chain, if required.
6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

## Defining an Approval Workflow Criterion Type

### Prerequisites

To define an approval workflow criterion type, you should have:

- Algorithm, Business object, and Field object defined in the application.

### Procedure

To define an approval workflow criterion type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Criterion Type**.

The **Approval Workflow Criterion Type** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Criterion Type** screen.

The **Approval Workflow Criterion Type** screen appears. It contains the following section:

- Main** - Used to specify basic details about the approval workflow criterion type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Criterion Type	Used to specify the approval workflow criterion type.	Yes
Description	Used to specify the description for the approval workflow criterion type.	Yes
Derived From	Used to indicate the option which triggers the approval workflow. The valid values are: <ul style="list-style-type: none"> <li>Algorithm</li> <li>Business Object</li> </ul>	Yes
Algorithm	Used to indicate the algorithm for which you want to define the approval workflow criterion type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>This field appears only when you select the Algorithm option form the Derived From list.</p> </div>	Yes
Business Object	Used to indicate the business object for which you want to define the approval workflow criterion type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears only when you select the Business Object option form the Derived From list.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Field	<p>Used to indicate the field that you want to use to define the criteria for associating approval workflow requests with the approval workflow chains.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon corresponding to this field. On clicking the Search icon, the Field Search window appears.</p> <p>This field appears only when you select the Business Object option from the Derived From list.</p>	Yes

4. Enter the required details.
5. Click **Save**.

The approval workflow criterion type is created.

Once you define an approval workflow criterion type, the **Approval Workflow Criterion Type** screen allows you to:

- Edit the details of an approval workflow criterion type
- Delete an approval workflow criterion type

This screen contains the following zone:

- [Approval Workflow Criterion Type](#) on page 671

### Approval Workflow Criterion Type

The **Approval Workflow Criterion Type** zone displays the details of the approval workflow criterion types. It contains the following sections:

- **Main** - Displays basic information about the approval workflow criterion type. It contains the following fields:

Field Name	Field Description
Approval Workflow Criterion Type	Displays the approval workflow criterion type.
Description	Displays the description of the approval workflow criterion type.
Derived From	<p>Indicates the criteria type that triggers the approval workflow. The valid values are:</p> <ul style="list-style-type: none"> <li>• Algorithm</li> <li>• Business Object</li> </ul>

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow criterion type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Field	Indicates the field using which the criteria for associating approval workflow requests with the approval workflow chains will be defined.  <b>Note:</b> It has a link. On clicking the link, the <b>Fields</b> screen appears where you can view the details of the respective field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the approval workflow criterion type.
Delete	Used to delete the approval workflow criterion type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain and levels is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing an Approval Workflow Criterion Type

### Procedure

To edit an approval workflow criterion type:

1. Search for the approval workflow criterion type in the **Approval Workflow Criterion Type** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow criterion type whose details you want to edit.

The **Approval Workflow Criterion Type** screen appears.

3. Click the **Edit** button in the **Approval Workflow Criterion Type** zone.

The **Approval Workflow Criterion Type** screen appears. It contains the following section:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Criterion Type	Displays the approval workflow criterion type.	Yes
Description	Displays the description for the approval workflow criterion type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Derived From	Displays an option which triggers the approval workflow.	Yes
Algorithm	<p>Displays the algorithm for which you want to define the approval workflow criterion type.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon corresponding to this field. On clicking the Search icon, the Algorithm Search window appears</p> <p>This field appears only when you select the Algorithm option form the Derived From list.</p> </div>	Yes
Business Object	<p>Displays the business object which is used to define the approval workflow criterion type.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears only when you select the Business Object option form the Derived From list.</p> </div>	Yes
Field	<p>Displays the field which is used to define the criteria for associating approval workflow requests with the approval workflow chains.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The Search  icon corresponding to the respective field. On clicking the Search icon, the Field Search window appears.</p> <p>This field appears only when you select the Business Object option form the Derived From list.</p> </div>	Yes

4. Modify the required details in the **Approval Workflow Criterion Type** screen.

5. Click **Save**.

The changes made to the approval workflow criterion type screen are saved.

## Approval Workflow Group Chain Linkage (Used for Searching)

The **Approval Workflow Group Chain Linkage** screen allows you to search for an approval workflow group chain linkage using various search criteria. Through this screen, you can navigate to the following screen:

- [Approval Workflow Group Chain Linkage \(Used for Viewing\)](#) on page 680

This screen consists of the following zone:

- [Search Approval Workflow Group Chain Linkage](#) on page 674

For more information on...	See...
How to search for an approval workflow group chain linkage	<a href="#">Searching for an Approval Workflow Group Chain Linkage</a> on page 675
How to view the details of an approval workflow group chain linkage	<a href="#">Viewing the Approval Workflow Group Chain Linkage Details</a> on page 676

## Search Approval Workflow Group Chain Linkage

The **Search Approval Workflow Group Chain Linkage** zone allows you to search for an approval workflow group chain linkage using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Used to search a particular approval workflow group chain linkage.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to search a group chain linkage for which an approval workflow group is defined.	Yes
Approval Workflow Chain	Used to search a group chain linkage for which an approval workflow chain is defined.	Yes

**Note:** You must specify at least one search criterion while searching for an approval workflow group chain linkage.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.
Approval Workflow Group	Indicates the approval workflow group for which the link is created. <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group Chain Linkage</b> screen appears with the details of the respective business object.
Approval Workflow Chain	Indicates the approval workflow chain for which the link is created.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

### Related Topics

## Searching for an Approval Workflow Group Chain Linkage

### Procedure

To search an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Enter the search criteria in the **Search Group Chain Linkage** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

A list of group chain linkages that meet the search criteria appears in the **Search Results** section.

## Viewing the Approval Workflow Group Chain Linkage Details

### Procedure

To view the details of an approval workflow chain linkage:

1. Search for the approval workflow group chain linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to view.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following zone:

- [Approval Workflow Group Chain Linkage](#) on page 681
3. View the details of the approval workflow group chain linkage in the **Approval Workflow Group Chain Linkage** zone.

### Related Topics

For more information on...	See...
How to search for an approval workflow group chain linkage	<a href="#">Searching for an Approval Workflow Group Chain Linkage</a> on page 675

## Defining an Approval Workflow Group Chain Linkage

### Prerequisites

To define an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group and Approval Workflow Chain defined in the application.

### Procedure

To define an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.

The **Approval Workflow Group Chain Linkage** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Group Chain Linkage** screen.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the approval workflow group chain linkage.
- Group Chain Linkage Criteria** - Used to define group chain linkage criteria for the approval workflow type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to indicate the approval workflow group.  <b>Note:</b> You can search for an approval workflow group type by clicking the Search (🔍) icon corresponding to the field.	Yes
Approval Workflow Chain	Used to indicate the approval workflow chain.  <b>Note:</b> You can search for an approval workflow chain by clicking the Search (🔍) icon corresponding to the field.	Yes
Field Approval Rule	Used to indicate whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

- Enter the required details.
- Define group chain linkage criteria for the approval workflow, if required.
- Define field approval rule criteria for the approval workflow, if required.
- Click **Save**.

The approval workflow group chain linkage is created.

## Defining Group Chain Linkage Criteria for an Approval Workflow

### Prerequisites

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

### Procedure

To define group chain linkage criteria for an approval workflow:

1. Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.

The **Group Chain Linkage Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Displays the Group Chain Linkage ID.  <b>Note:</b> The data appears in this field only when you are editing the details of an approval workflow criterion type.	Yes
Criterion Type	Used to indicate the criteria type needed for defining the criterion.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears.	Yes
Operator	Used to indicate the relational operator used to define the relation between the criterion type and criterion value.	Yes
Criterion Value	Used to specify the criterion value.	Yes

2. Enter the required details.
3. If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add** (+) icon, and then repeat step 2.

**Note:** However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete** (🗑️) icon corresponding to the group chain linkage criteria.

## Defining a Field Approval Rule

### Prerequisites

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

**Procedure**

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the **Field Approval Rule Criteria** section is expanded when you select the Yes option from the Field Approval Rule field of the Main section.

The **Field Approval Rule Criteria** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence.	Used to indicate the order in which the rule criteria should be executed while adding or updating the field value.	Yes
Applicable For	Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"> <li>• Add</li> <li>• Update</li> <li>• Add and Update</li> </ul>	Yes
Business Object	Used to indicate the business object in which the field is included. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Business Object</b> field. On clicking the search icon, the <b>Search Group Based Business Object</b> search window appears.</p> </div>	Yes
Field	Used to indicate the field for which you want to define the approval rule criteria. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Field</b> search field. On clicking the search icon, the <b>Field Search</b> search window appears.</p> </div>	Yes
Approval Workflow Chain	Used to indicate the approval workflow chain that you want to use for the field value approval. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Approval Workflow Chain</b> field. On clicking the search icon, the <b>Approval Workflow Chain Search</b> search window appears.</p> </div>	Yes
Value Range	Used to indicate whether you want to define value based threshold limit for each approval level. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is enabled only when the data type of the field is <b>Numeric</b>.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical	Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.	No

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Used to specify the threshold value using which you want to control the approval hierarchy.
Approval Level	Used to indicate the approval level at which approval is required when the field value is within the threshold value.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.</p> <hr/> <p><b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.</p> </div>
Approval Level Information	Displays additional information about the approval level.

- Enter the required details in the **Field Approval Rule Criteria** section.
- If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow chain linkage, click the **Delete** (🗑️) icon corresponding to the sequence field.
- Click **Save**.

The approval workflow field rule is defined.

## Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group for which a link is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group</b> screen appears with the details of the respective approval workflow group.
Approval Workflow Chain	Displays the approval workflow chain for which a link is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow group.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria.
Delete	Used to delete the approval workflow group chain linkage.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.

Column Name	Column Description
Criterion Type	Displays the criterion type needed for defining the criterion.  <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Criterion Type</b> screen appears where you can view the details of the respective criterion type.
Operator	Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> <li>EQUALS</li> <li>IN</li> </ul>
Criterion Value	Displays the criterion value.

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the rule criteria should be executed while adding or updating the field value.
Applicable For	Displays the rule criteria which should be considered while adding and/or updating the field value.
Business Object	Displays the business object in which the field is included.
Field	Displays the field for which you want to define the approval rule criteria.  <b>Note:</b> The <b>Context Menu</b> (☰) icon appears corresponding to the <b>Field</b> search field. On clicking the context menu icon, the <b>Go to Field</b> menu appears. On clicking the <b>Go to Field</b> menu item, the <b>Field</b> screen appears with the details of the respective field.  <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears with the details of the respective field.
Approval Workflow Chain	Indicates the approval workflow chain that you want to use for the field value approval.  <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow chain.
Value Range	Indicates whether you want to define value based threshold limit for each approval level.  <b>Note:</b> This field is enabled only when the data type of the field is <b>Numeric</b> .

Column Name	Column Description
Hierarchical Approval	Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.  <b>Note:</b> This field is enabled only when the <b>Value Range</b> check box is selected.

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Displays the threshold value using which you want to control the approval hierarchy.
Approval Level	Displays the approval level at which approval is required when the field value is within the threshold value.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.  <b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

## Editing an Approval Workflow Group Chain Linkage

### Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

### Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.  
The **Approval Workflow Group Chain Linkage** screen appears.
4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

<b>Approval Workflow Group Chain Linkage</b> zone	<a href="#">Approval Workflow Group Chain Linkage</a> on page 681

## Deleting an Approval Workflow Group Chain Linkage

### Procedure

To delete an approval workflow group chain linkage:

1. Search for an approval workflow group chain linkage in the **Search Approval Workflow Group Chain Linkage** zone.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain that you want to delete.

The **Approval Workflow Group Chain Linkage** screen appears.

3. Click the **Delete** button in the **Approval Workflow Group Chain Linkage** zone.

A message appears confirming whether you want to delete the approval workflow group chain linkage.

4. Click **OK**.

The approval workflow group chain linkage is deleted.

## Defining Approval Workflow Group Settings

### Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

### Procedure

To define an approval workflow group setting:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.  
The **Approval Workflow Settings** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.

The **Approval Workflow Settings** screen appears. It contains the following section:

- **Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Approval Chain Selection Algorithm	<p>Used to specify the algorithm that will be triggered before creating the approval workflow request.</p> <p><b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.</p> <p><b>Note:</b> You can search for an approval chain selection algorithm by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Approval Chain Selection Algorithm</b> field.</p>	Yes
Prevalidation	<p>Used to indicate whether validation must be done before the approval workflow request is created. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> You can search for a prevalidation by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Prevalidation</b> field.</p>	Yes
Approval Reason Required	<p>Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Active	<p>Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Conditional Algorithm	Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated.  <b>Note:</b> This field appears only when the <b>Conditional</b> option is selected from the <b>Active</b> list.	Yes

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

## Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group.

Field Name	Field Description
Approval Chain Selection Algorithm	<p>Displays the algorithm that will be triggered after creating the approval workflow request.</p> <p><b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective approval chain selection algorithm.</p>
Prevalidation	<p>Indicates whether validation must be done before the approval workflow request is created. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Approval Reason Required	<p>Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Active	<p>Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li> </ul>
Conditional Algorithm	<p>Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.</p> <p><b>Note:</b> This field appears only when the <b>Conditional</b> option is selected from the <b>Active</b> list.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective conditional algorithm.</p>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the settings of the approval workflow group.
Delete	Used to delete the approval workflow group setting.
Regenerate UI Maps	Used to regenerate the approval workflow group setting UI Maps.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing Approval Workflow Group Settings

### Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

### Procedure

To edit approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Settings** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.

The **Approval Workflow Group Settings** screen appears.

4. Edit the settings for the approval workflow group, if required.
5. Click **Save**.

The changes made to the approval workflow group settings are saved.

<b>Approval Workflow Settings</b> screen	<a href="#">Approval Workflow Setting (Used for Viewing)</a> on page 688
<b>Approval Workflow Group Settings</b> zone	<a href="#">Approval Workflow Group Settings</a> on page 688

## Deleting Approval Workflow Group Settings

### Procedure

To delete approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group that you want to delete.

The **Approval Workflow Settings** screen appears.

3. Click the **Delete** button in the **Approval Workflow Group Settings** zone.

A message appears confirming whether you want to delete the approval workflow group settings.

4. Click **OK**.

The approval workflow setting is deleted.

## Regenerating Input and Display UI Maps

### Procedure

To regenerate UI Maps for an approval workflow group setting:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group for which you want to regenerate UI maps.

The **Approval Workflow Settings** screen appears.

3. Click the **Regenerate UI Maps** button in the **Approval Workflow Group Settings** zone.

A message appears confirming whether you want to replace the existing Input and Display UI Maps.

4. Click **OK**.

The Input and Display UI Maps are generated.

## Approval Workflow Reason (Used for Searching)

The **Approval Workflow Reason** screen allows you to search for an approval workflow reason using various search criteria. It also allows you to define an approval workflow reason. It contains the following zone:

- [Approval Workflow Reason List](#) on page 691

### Approval Workflow Reason List

The **Approval Workflow Reason List** zone lists the approval workflow reasons that are already defined in the system. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	No
Description	Used to search approval workflow reasons with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Reason	Displays the approval workflow reason.
Description	Displays the description of the approval workflow reason.
Reason Category	Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>

### Related Topics

How to define an approval workflow reason	<a href="#">Defining an Approval Workflow Reason</a> on page 693

## Filtering the Approval Workflow Reasons

### Procedure

To filter the approval workflow reasons:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. Enter the required search criteria in the **Approval Workflow Reason List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The search results are filtered based on the specified criteria.

## Viewing the Approval Workflow Reason Details

### Procedure

To view the details of an approval workflow reason:

1. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to view.

The **Approval Workflow Reason** screen appears. It contains the following zone:

- [Approval Workflow Reason](#) on page 694

3. View the details of the approval workflow reason in the **Approval Workflow Reason** zone.

### Related Topics

## Defining an Approval Workflow Reason

### Prerequisites

To define an approval workflow reason, you should have:

- Values defined for the **APPTXN\_REASON\_TYPE** lookup field

### Procedure

To define an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Reason** screen.

The **Approval Workflow Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to specify the approval workflow reason.	Yes
Description	Used to specify the description for the approval workflow reason.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Reason Category	Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>	Yes

- Enter the required details in the **Approval Workflow Reason** screen.
- Click **Save**.

The approval workflow reason is defined.

### **Related Topics**

For more information on...	See...
<b>Approval Workflow Reason</b> screen	<a href="#">Approval Workflow Reason (Used for Searching)</a> on page 691

## **Approval Workflow Reason (Used for Viewing)**

Once you define an approval workflow reason, the **Approval Workflow Reason** screen allows you to:

- View the details of an approval workflow reason
- Edit and delete an approval workflow reason

This screen contains the following zone:

- [Approval Workflow Reason](#) on page 694

### **Approval Workflow Reason**

The **Approval Workflow Reason** zone displays the details of the approval workflow reason. It contains the following sections:

- **Main** - Displays basic information about the approval workflow reason. It contains the following fields:

Field Name	Field Description
Approval Workflow Reason	Displays the approval workflow reason.
Description	Displays the description of the approval workflow reason.
Reason Category	Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow reason.
Delete	Used to delete the approval workflow reason.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	<p>Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>

## **Editing an Approval Workflow Reason**

### **Prerequisites**

To edit an approval workflow reason, you should have:

- Values defined for the **APPTXN\_REASON\_TYPE** lookup field

### **Procedure**

To edit an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to edit.

The **Approval Workflow Reason** screen appears.

5. Click the **Edit** button in the **Approval Workflow Reason** zone.

The **Approval Workflow Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Displays the approval workflow reason.	Not applicable
Description	Used to specify the description for the approval workflow reason.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Reason Category	Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>	Yes

6. Modify the required details in the **Approval Workflow Reason** screen.

7. Click **Save**.

The changes made to the approval workflow reason are saved.

# Chapter 7

---

## Multi-Currency Accounts

---

### Topics:

- [Creating Adjustments](#)
- [Generating Bills](#)
- [Applying Payments](#)
- [Monitoring Overdue Debt](#)
- [Generating History](#)

Oracle Revenue Management and Billing allows you to change the currency in which an account is invoiced. While the charges on a bill must be in a single currency, accounts can now be billed in different currencies over time. For example, when a person opens an account, he/she might be billed in US Dollars. However, with the Multi-Currency Accounts feature enabled, the same account can be billed in Euros in the near future. You can use the Multi-Currency Accounts functionality only when:

- You set the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration.
- The account's person class is enabled for open item accounting. In other words, the **Open Item Accounting** check box of the account's customer class is selected.
- The account does not have any active or pending loans, payment plans, payment arrangements, or recurring charge contracts.

The following are some limitations while using the Multi-Currency Accounts functionality:

- Overdue charges in multiple currencies may not be referred to a collection agency. Such cases would be handled via a manual referral.
- Because the account's customer class must be enabled for open-item accounting, you can only use Overdue Processing to collect overdue bills. The Collections and Severance processes are not supported for open-item accounting.
- Write offs involving multiple currencies must be performed manually.
- Budgets, deposits, pay plans, and payment arrangements are not supported.

**Note:** If there is an outstanding debt for an account in more than one currency, the system displays "\*\*\*" instead of the total account balance across the application.

To use the Multi-Currency Accounts functionality, you need to:

- Set the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration
- Define required currencies along with currency symbols
- Define invoice currencies for divisions. This is because while changing the invoice currency of an account, you can only view those invoice currencies that are associated to the account's division.
- Define the required exchange rates for currency conversion

- Create tender control and deposit control for every invoice currency defined in the system
- Define an adjustment type that you want to use during currency conversion, and link it to the relevant adjustment profile
- Define an adjustment type that you want to use during Write off process, and link it to the relevant adjustment profile
- Define a contract type that you want to use during over payments to transfer the credit balance to other contracts
- Set the collection method of the account's customer class to **Overdue**
- Setup auto-pay to debit the bill amount, and not the account's balance
- Setup the account's customer class to keep credits on a separate contract

The following business processes are enhanced for implementing the Multi-Currency Accounts functionality:

- [Creating Adjustments](#) on page 699
- [Generating Bills](#) on page 699
- [Applying Payments](#) on page 699
- [Monitoring Overdue Debt](#) on page 699
- [Generating History](#) on page 699

For more information on...	See...
How to set the <b>Multi-Currency Accounts (C1_MLTCURACC)</b> feature configuration	<a href="#">Setting the C1_MLTCURACC Feature Configuration</a> on page 2356

## Creating Adjustments

---

If you are using the Multi-Currency Accounts functionality, you can create adjustments in the currency which is different from the account's invoice currency.

## Generating Bills

---

A bill is generated in the account's invoice currency. If you change the invoice currency of an account, any new bills will be generated in the new currency. For example, if you have changed the invoice currency of an account from US Dollars to Euros on 1<sup>st</sup> Feb 2010, all bills generated thereafter will be generated in Euros.

When a bill is completed and adjustments are swept onto the bill, adjustments that are created in the currency which is different from the account's invoice currency will be converted to the account's invoice currency. The system will create a transfer adjustment for each adjustment that is converted to provide complete audit information. The adjustment type specified in the **Transfer Adjustment Type for Currency Conversion** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration will be used for the conversion. The original adjustment and to-side of the transfer adjustment will be placed on the same match event.

Also, during bill completion, the Contract Type – Bill Completion algorithm type, **CREDIT-XFER**, which is usually specified on the credit contract, will automatically convert credit amounts in one currency to the invoice currency before distributing those credits.

## Applying Payments

---

If you are using the Multi-Currency Accounts feature, you can apply payments in the currency which is different from the account's invoice currency. However, note that the currency used for payment cannot be different from the one used for billing.

When applying a payment, you can only select **Bill ID** as the match type. Also, all tenders for the same payment event must be in the same currency.

## Monitoring Overdue Debt

---

Currency code is now optional while defining collection class overdue rules. When a batch job is processed, the Overdue Debt Monitor will search for overdue rules that match the account's collection class, division, and currency. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the Overdue Debt Monitor will search for overdue rules that match the account's collection class and division. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the account will be skipped.

## Generating History

---

If the account has financial transactions in multiple currencies, zero appears throughout the **Current Balance** and **Payoff Balance** columns in the following screens:

- Account Financial History
- Contract Financial History
- View Account Financial Transaction History

---

# Chapter 8

---

## Rules Engine

---

### Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [View Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule**

**Is True** and the rule true action is set to **Success**. Oracle Revenue Management and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1\_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1\_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

**Note:** The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

## Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 703

### Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to search a particular rule type.	No
Description	Used to search rule types with a particular description.	No
Rule Type Usage	Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>• Auto Pay</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank.</p> </div>	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Type	Displays the rule type.
Description	Displays the description of the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.

Column Name	Column Description
View	On clicking the <b>View</b> (  ) icon, the <b>Rule Type</b> screen appears where you can view the details of the rule type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Rule Type</b> screen appears where you can edit the details of the rule type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rule type.  <b>Note:</b> You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Rule Type</b> screen appears where you can create a new rule type using an existing rule type.

## Searching for a Rule Type

### Prerequisites

To search for a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.  
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rule types that meet the search criteria appears in the **Search Results** section.

Rule Type screen	<a href="#">Rule Type (Used for Searching)</a> on page 703
Search Rule Type zone	<a href="#">Search Rule Type</a> on page 703

## Defining a Rule Type

### Prerequisites

To define a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>Auto Pay</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b>. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p> </div>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list. The maximum rule count cannot be less than or equal to zero.</p> </div>	No

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

- Enter the required details in the **Main** section.
- Define input and output parameters for the rule type.
- Associate one or more characteristic entities with the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The rule type is defined.

## Defining Input and Output Parameters for a Rule Type

### Prerequisites

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

### Procedure

To define the input and output parameters for a rule type:

1. Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the input or output parameter.	Yes
Field	Used to indicate the field that you want to use as the input or output parameter.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears.	Yes
Rule Input/Output	Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are: <ul style="list-style-type: none"> <li>• Input</li> <li>• Input and Output</li> <li>• Output</li> </ul> <b>Note:</b> By default, the <b>Input</b> option is selected. This field appears only when you do not select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Search Zone	Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Zone Search</b> window appears.</p> <p>This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.</p> </div>	No

- Enter the required details in the **Input and Output Parameters** section.

<p><b>Note:</b></p> <p>At present, the following fields are only supported while defining a rule type where the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b>:</p> <ul style="list-style-type: none"> <li>• Policy Number</li> <li>• Plan Number</li> <li>• Price Item</li> </ul> <p>If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.</p>
--

- If you want to define more than one input or output parameter for the rule type, click the **Add**  icon and then repeat step 2.

<p><b>Note:</b> However, if you want to remove an input or output parameter from the rule type, click the <b>Delete</b>  icon corresponding to the parameter.</p>
--

## Associating a Characteristic Entity with a Rule Type

### Prerequisites

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE\_CRITERIA\_ENTITY\_FLG** lookup field

### Procedure

To associate a characteristic entity with a rule type:

- Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	<p>Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are:</p> <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Billable Charge</li> <li>• Policy</li> <li>• Policy Plan</li> <li>• Price Item</li> </ul> <p><b>Note:</b> At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement.</p>	Yes

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- Enter the required details in the **Rule Criteria Characteristic Entities** section.
- If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

## Associating an Algorithm with a Rule Type

### Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

### Procedure

To associate an algorithm with a rule type:

- Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm should be executed.	Yes
Algorithm	<p>Used to attach an algorithm which you want to use for deriving the following from the financial transaction:</p> <ul style="list-style-type: none"> <li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li> <li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li> </ul> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Derivation Algorithms** section.
3. If you want to associate more than one algorithm with the rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the rule type, click the **Delete**  icon corresponding to the algorithm.

### Related Topics

## Editing a Rule Type

### Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.	Not applicable
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	<p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This field appears only when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b>.</p> <p>The maximum rule count cannot be less than or equal to zero.</p> <p>You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.</p> </div>	No

**Tip:** Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove input or output parameters from the rule type, if required.

**Note:** You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

5. Associate or remove one or more characteristic entities from the rule type, if required.

**Note:**

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

**Deleting a Rule Type****Procedure**

To delete a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule type that you want to delete.

A message appears confirming whether you want to delete the rule type.

**Note:** You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.

- Click **OK**.

The rule type is deleted.

## Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

### Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>Auto Pay</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b>. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p> </div>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list. The maximum rule count cannot be less than or equal to zero.</p> </div>	No

- Enter the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.
- Associate or remove one or more characteristic entities from the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The new rule type is defined.

## Viewing the Rule Type Details

### Procedure

To view the details of a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

3. View the details of the rule type in the **Rule Type** zone.

### Related Topics

<b>Rule Type</b> screen	<a href="#">Rule Type (Used for Viewing)</a> on page 715
<b>Rule Type</b> zone	<a href="#">Rule Type</a>

## Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 715

### Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- **Main** - Displays basic information about the rule type. It contains the following fields:

Field Name	Field Description
Rule Type	Displays the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.  <b>Note:</b> This field appears only when the rule type usage is specified while defining the rule type.
Description	Displays the description of the rule type.
Maximum Rule Count	Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.  <b>Note:</b> This field appears only when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b> .

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the input or output parameter.
Field	Indicates the field which is used as the input or output parameter.
Type	Indicates whether the field is used as input and/or output parameter while defining a business rule.
Search Zone	Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions.  <b>Note:</b> It has a link. On clicking the link, the <b>Zone</b> screen appears where you can view the details of the zone.

- **Rule Criteria Characteristic Entities** - This section contains the following column:

Column Name	Column Description
Characteristic Entity	Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Billable Charge</li> <li>• Policy</li> <li>• Policy Plan</li> <li>• Price Item</li> </ul>

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm should be executed.
Algorithm	Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"> <li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li> <li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li> </ul>

**Note:** The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear only when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

### **Related Topics**

How to edit a rule type	<a href="#">Editing a Rule Type</a> on page 710

## **Viewing the Rule Type Details**

### **Procedure**

To view the details of a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

3. View the details of the rule type in the **Rule Type** zone.

### **Related Topics**

<b>Rule Type</b> zone	<a href="#">Rule Type</a>

## **Editing a Rule Type**

### **Procedure**

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Rule Type	Displays the rule type.	Not applicable
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.	Not applicable
Description	Used to specify the description for the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Rule Count	<p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b>.</p> <p>The maximum rule count cannot be less than or equal to zero.</p> <p>You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.</p>	No

**Tip:** Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

**Note:** You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- Associate or remove one or more characteristic entities from the rule type, if required.

**Note:**

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

## Rule

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search](#) on page 719

## Search

The **Search** zone allows you to search for a rule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	No
Rule Type	Used to specify the type of rule.	No
Description	Used to specify the description for the rule.	No
Rule Priority	Used to specify the priority of the rule.	No
Effective Start Date	Used to specify the date from when the rule is effective.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Priority	Displays the priority of the rule.
Code	Displays the rule code.
Description	Displays the description of the rule.
Type	Displays the type of rule.
Start Date	Displays the date from when the rule is effective.
End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
View	On clicking the <b>View</b> (  ) icon, the <b>View Rule</b> screen appears where you can view the details of the rule.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Edit Rule</b> screen appears where you can edit the details of the rule.

Column Name	Column Description
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the rule.  <b>Note:</b> You can delete a rule only if it is not used.
Copy	On clicking the <b>Copy</b> (📄) icon, the <b>Copy Rule</b> screen appears where you can create a rule using an existing rule.

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

## Searching for a Rule

### Procedure

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.  
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of rules that meet the search criteria appears in the **Search Results** section.

## Defining a Rule

### Prerequisites

To define a rule, you should have:

- Rule types defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

### Procedure

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.

A sub-menu appears.

3. Click the **Add** option from the **Rule** sub-menu.

The **Add Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.  <b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	No
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	No
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.

Field Name	Field Description	Mandatory (Yes or No)
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional)  <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list. </div>

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.  <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <a href="#">Transaction Validation and Initial Price Item Determination</a> on page 799.   The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears. </div>	Yes
Parameter Value	Used to specify the value for the parameter.  <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value. </div>	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	<p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p> </div>	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value	<p>Used to specify the parameter value.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p> </div>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Add Rule** screen by clicking the **Add** link in the upper right corner of the **Search** zone in the **Rule** screen.

4. Enter the required details.

**Note:**

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The rule is defined.

## **Editing a Rule**

### **Prerequisites**

To edit a rule, you should have:

- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them.

### **Procedure**

To edit a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule whose details you want to edit.

The **Edit Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.  <b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	Yes
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	No
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list. </div>
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list. </div>

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	<p>Used to specify the parameter.</p> <p><b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <i>Transaction Validation and Initial Price Item Determination</i> on page 799.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	Yes
Parameter Value	<p>Used to specify the value for the parameter.</p> <p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p>	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter Name	<p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.</p> <p><b>Note:</b></p> <p>If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value	<p>Used to specify the parameter value.</p> <p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is True	Used to indicate what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Edit Rule** screen by clicking the **Edit** link in the **View Rule** screen.

3. Modify the required details.

**Note:** You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Add or remove output parameters or criteria from the rule, if required.

**Note:** If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The changes made to the rule are saved.

## Deleting a Rule

### Procedure

To delete a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Delete**  icon in the **Delete** column corresponding to the rule that you want to delete.

A message appears confirming whether you want to delete the rule.

**Note:** You can delete a rule only if it is not used.

3. Click **OK**.

The rule is deleted.

## Copying a Rule

Instead of creating a rule from scratch, you can also create a new rule using an existing rule. You can do this by copying a rule. When you copy a rule, the output parameters and criteria defined for the original rule are copied to the new rule. You can then add or remove parameters or criteria from the new rule.

### Prerequisites

To copy a rule, you should have:

- Rule (whose copy you want to create) defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

### Procedure

To copy a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Copy**  icon corresponding to the rule whose copy you want to create.

The **Copy Rule** screen appears.

3. Enter the new rule code and the description for the new rule.

4. Modify the required details.
5. Add or remove output parameters or criteria from the new rule.

**Note:**

You can specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

For more information about the output parameters that you can specify while defining a rule, see [Transaction Validation and Initial Price Item Determination](#) on page 799.

6. Click **Save**.

The new rule is defined.

## View Rule

The **View Rule** screen allows you to view the details of a rule. This screen consists of the following zones:

- [Rule Information](#) on page 731

## Rule Information

The **Rule Information** zone displays information about the rule. This zone contains the following fields:

Field Name	Field Description
Rule Code	Displays the rule code.
Rule Type	Indicates the type of rule.
Description	Displays the description of the rule.
Rule Priority	Indicates the priority of the rule.  <b>Note:</b> You can use the <b>Move Up</b> (↑) and <b>Move Down</b> (↓) icons corresponding to this field to view the details of a rule (having the same rule type) with a higher or lower priority. Note that this functionality is available only when you access the <b>View Rule</b> screen through the <b>Rule</b> screen.
Effective Start Date	Displays the date from when the rule is effective.

Field Name	Field Description
Effective End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered after executing the criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
Rule True Action	Indicates what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.
Rule False Action	Indicates what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Lists the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the name of the parameter. In addition, this column has a context menu which helps in navigating to the <b>Field</b> screen.
Parameter Value	Displays the value of the parameter.

- **Criteria** — Lists the criteria defined in the rule. This section contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the order in which the criteria should be executed in the rule.
Parameter Type	Indicates whether the input parameter is a field or an algorithm.
Parameter Name	Displays the field or algorithm name which is used as an input parameter.
Operator	Indicates the relational operator used to define the relation between the parameter name and value.
Parameter Value	Displays the parameter value.
Is True	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

Column Name	Column Description
Is False	<p>Indicates what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is Insufficient	<p>Indicates what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

The **Edit** link appears in the upper-right corner of the **Rule Information** zone. On clicking the **Edit** link, the **Edit Rule** screen appears where you can edit the details of the rule.

### Related Topics

For more information on...	See...
How to view the details of a rule	<a href="#">Viewing the Rule Details</a> on page 721

## Viewing the Rule Details

### Procedure

To view the details of a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule whose details you want to view.

The **View Rule** screen appears.

3. View the details of the rule in the **Rule Information** zone.

### Related Topics

For more information on...	See...
<b>View Rule</b> screen	<a href="#">View Rule</a> on page 731

How to search for a rule	<a href="#">Searching for a Rule Type</a> on page 704

## Rule Check

The **Rule Check** screen allows you to validate whether rules of a particular rule type are executed as expected. On validating, it indicates the sequence in which all effective rules were executed, the total execution time, and the output parameters of the rule that was successfully executed. This screen consists of the following sections:

- Rule Type Input Parameters
- Rule Output Parameters
- Rule Execution

### Rule Type Input Parameters

The **Rule Type Input Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.  <b>Note:</b> If you do not specify the effective date, the system executes all rules which are effective on the system date.	No
Parameter Name	Indicates the input parameter.  <b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	Not applicable
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

### Rule Output Parameters

The **Rule Output Parameters** section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> <li>• <b>Success</b> — Indicates that one of the rule was successfully executed and returned the output parameters.</li> <li>• <b>Fail</b> — Indicates that none of the rules with the specified rule type were successfully executed.</li> <li>• <b>Error</b> — Indicates that an error occurred while executing a rule.</li> </ul>
Execution Time	Displays the total time taken to execute all effective rules with the specified rule type.
Error	Displays the error message indicating the error that occurred while executing a rule.  <b>Note:</b> This field appears only when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

### **Rule Execution**

The **Rule Execution** section indicates the sequence in which all effective rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Indicates the rule that was executed.
Rule Type	Indicates the type of rule.
Rule Priority	Indicates the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

### **Rule Check**

The **Rule Check** zone allows you to validate whether rules of a particular rule type are executed as expected. It indicates the sequence in which all effective rules were executed along with the total execution time. This zone consists of the following sections:

- **Rule Type Input Parameters** — This sections contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
Parameter Name	Indicates the input parameter.  <b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	Not applicable
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

- **Rule Output Parameters** — This section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> <li>• <b>Success</b> — Indicates that one of the rule was successfully executed and returned the output parameters.</li> <li>• <b>Fail</b> — Indicates that none of the rules with the specified rule type were successfully executed.</li> <li>• <b>Error</b> — Indicates that an error occurred while executing a rule.</li> </ul>
Execution Time	Displays the total time taken to execute a set of rules.

Field Name	Field Description
Error	Displays the error message indicating the error that occurred while executing a rule. <b>Note:</b> This field appears only when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

- **Rule Execution** — Indicates the sequence in which the rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Displays the rule code.
Rule Type	Displays the type of rule.
Rule Priority	Displays the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

## Alternate Sequential Bill Numbers

---

### Topics:

- [Sequential Bill Number Generation Algorithms](#)
- [Enabling the Alternate Sequential Bill Numbers Feature](#)

Each bill is uniquely identified by its bill ID. Bill ID is a random, system-generated number. In some locales, bills have an additional identifier known as alternate sequential bill number. Alternate sequential bill numbers are system-generated, sequential numbers. For example, the first bill generated by the system is assigned a sequential bill number of 1, the next bill is assigned a value of 2, and so on.

If you want to generate alternate sequential bill numbers, you must select the **Use Sequential Bill Numbers** check box in the **Billing** tab of the **Installation Options** screen. However, you can only generate alternate sequential bill numbers for bills that are complete and for which the alternate sequential bill numbers are not yet generated.

You can configure the application to generate alternate sequential bill numbers which are either unique throughout the system or within the division. The **Assign Sequential Bill Numbers (ASSGNSBN)** batch allows you to generate alternate sequential bill numbers for completed bills. You need to configure this batch such that it is executed at regular intervals. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Sequential Bill Number Generation Algorithms

The following table lists the sequential bill number generation algorithm types shipped with the product:

If you want to generate...	Then create algorithm using the following algorithm type....
Alternate sequential bill numbers unique throughout the system	<a href="#">C1_ALTBLLSYS</a> on page 738
Alternate sequential bill numbers unique within the division	<a href="#">C1_ALTBLDV</a> on page 741
Alternate sequential bill numbers unique throughout the system and in the required format using a set of parameters	<a href="#">C1_ALTBSYSI</a> on page 738 <b>Note:</b> The alternate sequential bill number will be unique throughout the system only when you configure the algorithm parameters appropriately.
Alternate sequential bill numbers unique within the division and in the required format using a set of parameters	<a href="#">C1_ALTBLDIVI</a> on page 741 <b>Note:</b> The alternate sequential bill number will be unique within the division only when you configure the algorithm parameters appropriately.

### C1\_ALTBLLSYS

The **C1\_ALTBLLSYS** algorithm type is used to generate alternate bill ID for a completed bill. The alternate bill ID is sequenced using the sequence number, and is unique throughout the system. This algorithm type does not have any parameters.

### C1\_ALTBSYSI

The **C1\_ALTBSYSI** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.

Parameter	Description
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li> </ul>
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <div data-bbox="820 1241 1464 1352" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p> </div>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• "yyyy" or "yy" for year</li> <li>• "MM" or "M" for month</li> <li>• "dd" or "d" for day</li> </ul> <p><b>Note:</b> The date format should either start or end with the year.</p>
SEQ_NBR	<p>The sequence number generated by the database. It should not be more than 12 characters.</p>
FIXED_SUFFIX=XX	<p>Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.</p>
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the C1\_ALTBLSYS1 algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7

- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS\_DIVISION
- Field2 — ‘|’
- Field3 — SEQ\_NBR
- Field4 — ‘-’
- Field5 — FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|SEQ\_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ\_NBR** parameter while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLSYS1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

## C1\_ALTBLDV

The **C1\_ALTBLDV** algorithm type is used to generate alternate bill ID for a completed bill which is unique within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Initial Bill Sequence Number	Used to specify the initial alternate bill ID that you want to use while sequencing.  <b>Note:</b> If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing.	No

## C1\_ALTBLDIV1

The **C1\_ALTBLDIV1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
‘X’	Here, X stands for a separator. For example, ‘;’. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.

Parameter	Description
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li> </ul>
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p> </div>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• “yyyy” or “yy” for year</li> <li>• “MM” or “M” for month</li> <li>• “dd” or “d” for day</li> </ul> <p><b>Note:</b> The date format should either start or end with the year.</p>
FIXED_SUFFIX=XX	<p>Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.</p>
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the C1\_ALTBLDIV1 algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9

- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS\_DIVISION
- Field2 — ‘|’
- Field3 — BILL\_DT=MMddy
- Field4 — ‘-’
- Field5 — FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|MMddy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for a completed bill.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

## Enabling the Alternate Sequential Bill Numbers Feature

---

### Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1\_ALTBLLSYS**, **C1\_ALTBLSYS1**, **C1\_ALTBLDV**, or **C1\_ALTBLDIV1** algorithm type depending on which you want to use for alternate sequential bill number generation

### Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Installation Options**.  
The **Installation Options** screen appears.
3. Click the **Billing** tab.  
The **Billing** tab appears.
4. Select the **Use Sequential Bill Numbers** check box to indicate that you want to generate alternate sequential bill numbers for completed bills.  
The **Sequential Invoice** field is enabled.
5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.
6. Do either of the following:

If you want to generate...	Then
Alternate sequential bill numbers unique throughout the system	<ol style="list-style-type: none"> <li>1. Attach an algorithm created using the <b>C1_ALTBLLSYS</b> algorithm type to the <b>Sequence Generation Algorithm</b> field to indicate how the alternate bill numbers which are unique throughout the system should be sequenced.</li> </ol>

If you want to generate...	Then
	<p><b>Note:</b> The <b>Sequence Generation Algorithm</b> field is enabled only when you select the <b>System-wide</b> option from the <b>Sequential Invoice</b> list.</p> <ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> </ol>
Alternate sequential bill numbers unique within the division	<ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> <li>Search for the division, whose accounts' bills should have alternate sequential bill numbers unique within the division, in the <b>Division</b> screen. The <b>Division</b> screen appears.</li> <li>Click the <b>Algorithms</b> tab. The <b>Algorithms</b> tab appears.</li> <li>Select the <b>Sequential Bill Number Generation</b> option from the <b>Division Algorithm Entity</b> list.</li> <li>Enter the sequence number to indicate the order in which the algorithms with the same entity should be executed.</li> <li>Attach an algorithm created using the <b>C1_ALTBLDV</b> algorithm type to the respective field to indicate how alternate bill numbers which are unique within the division should be sequenced.</li> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the division are saved.</li> </ol>
Alternate sequential bill numbers unique throughout the system and in the required format using a set of parameters	<ol style="list-style-type: none"> <li>Attach an algorithm created using the <b>C1_ALTBLSYS1</b> algorithm type to the <b>Sequence Generation Algorithm</b> field to indicate how the alternate bill numbers which are unique throughout the system should be generated.</li> </ol> <p><b>Note:</b> The <b>Sequence Generation Algorithm</b> field is enabled only when you select the <b>System-wide</b> option from the <b>Sequential Invoice</b> list. The alternate sequential bill number will be unique throughout the system only when you configure the algorithm parameters appropriately.</p> <ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> </ol>

If you want to generate...	Then
<p>Alternate sequential bill numbers unique within the division and in the required format using a set of parameters</p>	<ol style="list-style-type: none"> <li>1. Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> <li>2. Search for the division, whose accounts' bills should have alternate sequential bill numbers unique within the division, in the <b>Division</b> screen. The <b>Division</b> screen appears.</li> <li>3. Click the <b>Algorithms</b> tab. The <b>Algorithms</b> tab appears.</li> <li>4. Select the <b>Sequential Bill Number Generation</b> option from the <b>Division Algorithm Entity</b> list.</li> <li>5. Enter the sequence number to indicate the order in which the algorithms with the same entity should be executed.</li> <li>6. Attach an algorithm created using the <b>C1_ALTBLDIV1</b> algorithm type to the respective field to indicate how the alternate bill numbers which are unique within the division should be generated.</li> </ol> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> The alternate sequential bill number will be unique within the division only when you configure the algorithm parameters appropriately.</p> </div> <ol style="list-style-type: none"> <li>7. Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the division are saved.</li> </ol>

# Chapter 10

---

## Currency Conversion

---

### Topics:

- [Prerequisites](#)
- [Bill Segment Generation](#)
- [Adjustment Creation](#)
- [Payment and Tender Creation](#)
- [Transaction Aggregation](#)
- [FT GL Creation](#)
- [Currency Conversion Algorithms](#)
- [Exchange Rate \(Used for Searching\)](#)
- [Exchange Rate \(Used for Viewing\)](#)

Oracle Revenue Management and Billing supports currency conversion using an exchange rate. The currency conversion feature is used only when the multi-currency accounts feature is enabled. In other words, you can use the currency conversion feature only when the **Allow Multi-Currency Accounts** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration is set to **Y**.

The currency conversion can take place during the following business processes which are configured in the system:

- Bill Segment Generation
- Adjustment Creation
- Payment and Tender Creation
- FT GL Creation
- Transaction Aggregation

To enable the currency conversion feature, you need to attach the currency conversion algorithm at the division level. The system facilitates you to define different conversion currency algorithm for each business process. The currency conversion feature functions only when the appropriate exchange rate is available in the system. Otherwise, erroneous results might occur.

The system allows you to define date or date and time based global and division-specific exchange rates. The date based exchange rate mean that the exchange rate is applicable throughout the day. However, the date and time based exchange rate mean that the exchange rate is applicable from that date and time onwards.

**Note:** At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during

currency conversion. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

While converting the amount from the source currency to the target currency (i.e. FROM CCY to TO CCY), the system uses the precision (i.e. decimal positions) of the target currency (i.e. TO CCY). For example, if you set the decimal positions for USD and INR to 1 and 2, respectively, the system uses 1 decimal position during currency conversion from INR to USD.

The system provides you with a facility to define whether you want to enable or disable the currency conversion feature for a rate component. If the currency conversion feature is enabled for a rate component, the currency conversion will take place while generating bill segments for the rate (i.e. rate component) based billable charges.

## Prerequisites

---

To setup the currency conversion feature, you need to do the following:

- Define the required divisions and currencies in the system
- Define the values for the **CONV\_TYPE\_FLG** and **EXCH\_RATE\_SRC\_FLG** lookup fields
- Define the Determine Business Object algorithm using the **F1-MOBO** algorithm type and attach it to the **C1\_EXCHRATE** maintenance object

**Note:** The **C1-ExchangeRate** and **C1\_EXCHRATE\_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1\_EXCHRATE\_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Define the required exchange rates for currency conversion
- Set the following option types of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration:
  - Allow Multi-Currency Accounts
  - Transfer Adjustment Type
- Set the **Allow Currency Conversion** field for each rate component to either **Yes** or **No** depending on whether you want to enable the currency conversion feature for the rate (i.e. rate component) based billable charges
- Create an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division when you want to enable currency conversion during:
  - Bill Segment Generation
  - FT GL Creation for Bill Segments

**Note:** The **C1\_CURALGBS** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTBS** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division when you want to enable currency conversion during:
  - Adjustment Creation
  - FT GL Creation for Adjustments

**Note:** The **C1\_CURALGAD** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTAD** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division when you want to enable currency conversion during:
  - Payment and Tender Creation
  - FT GL Creation for Payments

**Note:** The **C1\_CURALGPY** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTPY** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGTFM** or **C1\_EXCRTTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division when you want to enable currency conversion during transaction aggregation

**Note:** The **C1\_CURALGTFM** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTTFM** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to create FT GL extension

## Bill Segment Generation

The system allows you to generate bill segments using the following:

- **Pass through billable charges** — If the pass through billable charges have a bill line currency which is different from the account's invoice currency, the bill line amount is converted into the account's invoice currency during the bill segment generation.
- **Rate based billable charges** — If the rate based billable charges have a pricing currency which is different from the account's invoice currency, the amount is converted into the account's invoice currency during the bill segment generation.

In addition, during the post processing bill segment generation, if the pricing currency is different from the account's invoice currency, then the amount is converted into the account's invoice currency. The currency conversion is done only when you have an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. In addition, the currency conversion is done for rate based billable charges only when the **Allow Currency Conversion** field in the respective rate component is set to **Yes**. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the bill segment will change to **Error**.

### Related Topics

For more information on...	See...
<b>C1_CURALGBS</b> algorithm type	<a href="#">CI_CURALGBS</a> on page 754
<b>C1_EXCRTBS</b> algorithm type	<a href="#">CI_EXCRTBS</a> on page 761

## Adjustment Creation

There might be situations when the adjustment currency is different from the account's invoice currency. The system enables you to determine whether currency conversion must be done during adjustment creation or during bill completion. If you clear the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during adjustment creation. However, if you select the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during bill completion and not during adjustment creation. A transfer adjustment is created in the account's invoice currency and the reverse adjustment is created against the original adjustment in the adjustment currency when you complete the next bill of the account. The system creates the transfer and reverse adjustments using the adjustment type specified in the **Transfer Adjustment Type** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration.

The currency conversion is done only when you have an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the transfer adjustment will not be created.

### Related Topics

For more information on...	See...
<b>C1_CURALGAD</b> algorithm type	<a href="#">CI_CURALGAD</a> on page 755
<b>C1_EXCRTAD</b> algorithm type	<a href="#">CI_EXCRTAD</a> on page 762

## Payment and Tender Creation

If the payment currency is different from the account's invoice currency, the amount is converted into the account's invoice currency during payment and tender creation. The currency conversion is done only when you have an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the payment and tenders will not be created.

### Note:

The currency conversion feature is available only when the payment currency (i.e. tender currency) is different from the payor account's invoice currency and not when the payor account's invoice currency is different from the payee account's invoice currency.

The currency conversion feature for payments is currently not supported from the **Payment Portal** screen and while uploading payment data from an external source.

<b>C1_CURALGPY</b> algorithm type	<a href="#">CI_CURALGPY</a> on page 757
<b>C1_EXCRTPY</b> algorithm type	<a href="#">CI_EXCRTPY</a> on page 764

## Transaction Aggregation

---

If the transaction or user defined (UDF) currency is different from the pricing currency, the amount is converted into the pricing currency when you are aggregating transactions based on the transaction or UDF amount. The currency conversion is done only when you have an algorithm of the **C1\_CURALGTFM** or **C1\_EXCRTTFM** algorithm type attached on the **TFM - Currency Conversion** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the transaction will change to **Error**.

<b>C1_EXCRTTFM</b> algorithm type	<a href="#">CI_EXCRTTFM</a> on page 766

## FT GL Creation

---

During FT GL creation, the system creates an FT GL extension when the account's invoice currency is different from the division's base currency. The FT GL extension is created for the following financial transaction (FT) types:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

The FT GL extension is created for bill segments only when you have an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments only when you have an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments only when you have an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen and the FT GL extension will not be created. In addition, if the required exchange rate is not available during currency conversion, the FT GL extension will not be created.

## C1\_CURALGBS

The **C1\_CURALGBS** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1\_CURALGBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No

Parameter	Description	Mandatory (Yes or No)
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_CURALGAD

The **C1\_CURALGAD** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_CURALGAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## **C1\_CURALGPY**

The **C1\_CURALGPY** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1\_CURALGPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No

Parameter	Description	Mandatory (Yes or No)
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_CURALGTFM

The **C1\_CURALGTFM** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)

7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1\_CURALGTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_EXCRTBS

The **C1\_EXCRTBS** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1\_EXCRTBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No

Parameter	Description	Mandatory (Yes or No)
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field. </div>	No

## C1\_EXCRTAD

The **C1\_EXCRTAD** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or

direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_EXCRTAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field. </div>	No

## C1\_EXCRTPY

The **C1\_EXCRTPY** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1\_EXCRTPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field. </div>	No

## C1\_EXCRTTFM

The **C1\_EXCRTTFM** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate

2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1\_EXCRTTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p>If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.</p>	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p>If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.</p>	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm. <p><b>Note:</b> A sample algorithm type named <b>CI_EXCRTOVRD</b> is shipped with the product. It is used to fetch the exchange rate which is available corresponding to the transaction in the <b>CI_TXN_DETAIL</b> table. The exchange rate is then used by the algorithm which is created using the <b>CI_EXCRTTFM</b> algorithm type to convert the transaction amount from the transaction currency to the pricing currency. You must specify the column from where the exchange rate must be picked during currency conversion in the <b>Transaction Detail Field for Exchange Rate</b> parameter.</p>	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. <p><b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field.</p>	No

## FTFREZGLEXTN

The **FTFREZGLEXTN** algorithm type is used to create FT GL extension for the following financial transaction (FT) types when the account's invoice currency is different from the division's base currency:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

You need to attach an algorithm of the **FTFREZGLEXTN** algorithm type on the **FT Freeze** system event of the customer class. The FT GL extension is created for bill segments only when you have an algorithm of the **C1\_CURALGBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments only when you have an algorithm of the **C1\_CURALGPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments only when you have an algorithm of the **C1\_CURALGAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division.

The **FTFREZGLEXTN** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Will	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the <b>Freeze At Will</b> option. The valid values are: <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Bill Completion	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the <b>Freeze At Bill Completion</b> option. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes
Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for payments. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C, E)	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for bill segments. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> <li>• <b>E (Bill Segment End Date)</b> - Used to search for an exchange rate which is effective on the bill segment end date.</li> </ul> <p><b>Note:</b> If you set the <b>Exchange Rate Date Type for Bill Segments</b> parameter to <b>R</b>, ensure that you set the <b>Bill Segment Freeze Option</b> to <b>Freeze At Bill Completion</b> in the <b>Billing</b> tab of the <b>Installation Options</b> screen. Otherwise, erroneous results might occur.</p>	Yes

## C1\_EXCRTOVRD

The **C1\_EXCRTOVRD** algorithm type is used to fetch the exchange rate which is available corresponding to the transaction in the **CI\_TXN\_DETAIL** table. The exchange rate is then used by the algorithm which is created using the **C1\_EXCRTTFM** algorithm type to convert the transaction amount from the transaction currency to the pricing currency. If you want to fetch exchange rate from the **CI\_TXN\_DETAIL** table, you need to create an algorithm using the **C1\_EXCRTOVRD** algorithm type and attach it to the **Exchange Rate Override Algorithm** parameter in the algorithm which is created using the **C1\_EXCRTTFM** algorithm type.

The **C1\_EXCRTOVRD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Transaction Detail Field for Exchange Rate	Used to indicate the column of the <b>CI_TXN_DETAIL</b> table from where the exchange rate must be picked during currency conversion.	Yes

C1_EXCRTTFM algorithm type	<a href="#">CI_EXCRTTFM</a> on page 766

## Exchange Rate (Used for Searching)

You can define date or date and time based global and division-specific exchange rates. The date based exchange rate means that the exchange rate is applicable throughout the day. However, the date and time based exchange rate means that the exchange rate is applicable from that date and time onwards. The global exchange rate can be used for all divisions, whereas the division-specific exchange range can only be used for the division for which the exchange rate is defined.

**Note:** At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

The **Exchange Rate** screen allows you to search for date or date and time based global and division-specific exchange rate using various search criteria. It also allows you to define, edit, and delete an exchange rate. This screen consists of the following zones:

- [Search Exchange Rate](#) on page 772

## Search Exchange Rate

The **Search Exchange Rate** zone allows you to search for an exchange rate using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search date or date and time based exchange rates. The valid values are: <ul style="list-style-type: none"> <li>• Date/Time and Exchange Rate Source</li> <li>• Date</li> </ul> <p><b>Note:</b> By default, the <b>Date/Time and Exchange Rate Source</b> option is selected.</p>	Yes
From Currency	Used to search exchange rates with a particular source currency.	No
To Currency	Used to search exchange rates with a particular target currency.	No

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search exchange rates which are defined for a particular division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No
Conversion Type	Used to search exchange rates which are defined using a particular conversion type.	No
Effective Start Date/ Time	Used to search exchange rates which are effective from a particular date and time onwards.  <b>Note:</b> This field appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	No
Effective End Date/ Time	Used to search exchange rates which are effective till a particular date and time.  <b>Note:</b> This field appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	No
Effective Start Date	Used to search exchange rates which are effective from a particular date onwards.  <b>Note:</b> This field appears only when you select the <b>Date</b> option from the <b>Search By</b> list.	No
Effective End Date	Used to search exchange rates which are effective till a particular date.  <b>Note:</b> This field appears only when you select the <b>Date</b> option from the <b>Search By</b> list.	No
Exchange Rate Source	Used to search exchange rates which are received from a particular source.  <b>Note:</b> This field appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for an exchange rate.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Exchange Rate ID	Displays the exchange rate ID.  <b>Note:</b> It has a link. On clicking the link, the <b>Exchange Rate</b> screen appears with the details of the respective exchange rate.

Column Name	Column Description
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Division	Indicates the division for which the exchange rate is defined.  <b>Note:</b> The data does not appear in this column when the exchange rate is a global exchange rate.
Exchange Rate Source	Indicates the source from where the exchange rate is received.  <b>Note:</b> This column appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.
Conversion Type	Indicates the conversion type of the exchange rate.
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.
Effective End Date/Time	Displays the date and time till when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.
Effective Start Date	Displays the date from when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date</b> option from the <b>Search By</b> list.
Effective End Date	Displays the date till when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date</b> option from the <b>Search By</b> list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.
Inverse Rate	Displays the reverse exchange rate.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Add/Edit Exchange Rate</b> screen appears where you can edit the details of the exchange rate.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the exchange rate.

**Note:**

If you specify the effective start date and time while searching for an exchange rate, the system searches exchange rates which are effective from the specified date and time onwards. Let us understand this with the help of an example. The following table lists the exchange rates which are defined in the system where the From Currency is USD, To Currency is INR, and Division is D1:

Exchange Rate	Effective Start Date and Time	Effective End Date and Time
RT1	01-01-2014 12:00:00 PM	-
RT2	02-01-2014 12:00:00 PM	-
RT3	03-01-2014 12:00:00 PM	-

Now, when you search for exchange rates using the following search criteria, the system accordingly displays the search results:

Search Criteria	Search Results
Effective Start Date and Time: 01-01-2014 12:00:00 PM	All three exchange rates — RT1, RT2, and RT3 — will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 31-01-2014 22:00:00 PM	RT1 will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 02-01-2014 22:00:00 PM	RT1 and RT2 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM	RT2 and RT3 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM; Effective End Date and Time: 02-28-2014 22:00:00 PM	RT2 will appear in the search results.
Effective Start Date and Time: 03-01-2014 12:00:00 PM	RT3 will appear in the search results.

**Searching for an Exchange Rate****Prerequisites**

To search for an exchange rate, you should have:

- Currencies and divisions defined in the application

- Conversion types defined in the **CONV\_TYPE\_FLG** lookup field
- Exchange rate sources defined in the **EXCH\_RATE\_SRC\_FLG** lookup field

### **Procedure**

To search for an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.  
A sub-menu appears.
3. Click the **Search** option from the **Exchange Rate** sub-menu.  
The **Exchange Rate** screen appears.
4. Select the required option from the **Search By** list depending on whether you want to search date or date and time based exchange rates.
5. Enter the search criteria in the **Search Exchange Rate** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all the input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of exchange rates that meet the search criteria appears in the **Search Results** section.

## **Defining an Exchange Rate**

### **Prerequisites**

To define an exchange rate, you should have:

- Determine Business Object algorithm defined using the **F1-MOBO** algorithm type and attached to the **C1\_EXCHRATE** maintenance object

**Note:** The **C1-ExchangeRate** and **C1\_EXCHRATE\_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1\_EXCHRATE\_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Currencies and divisions defined in the application
- Conversion types defined in the **CONV\_TYPE\_FLG** lookup field
- Exchange rate sources defined in the **EXCH\_RATE\_SRC\_FLG** lookup field

**Procedure**

To define an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.  
A sub-menu appears.
3. Click the **Add** option from the **Exchange Rate** sub-menu.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Business Object	Indicates the business object using which you are defining an exchange rate.	Not applicable
From Currency	Used to indicate the currency that you want to translate. In other words, it is used to indicate the source currency.	Yes
To Currency	Used to indicate the currency in which you want to translate the source currency. In other words, it is used to indicate the target currency.	Yes
Conversion Type	Used to indicate the conversion type for the exchange rate.	Yes
Division	Used to indicate the division for which you want to define the exchange rate.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.  You must leave this field blank while defining a global exchange rate.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a division-specific exchange rate.
Exchange Rate Source	Used to indicate the source from where the exchange rate is received.  <b>Note:</b> This field appears only when you are defining a date and time based exchange rate.	No
Effective Start Date/Time	Used to specify the date and time from when the exchange rate is effective.  <b>Note:</b> This field appears only when you are defining a date and time based exchange rate.  By default, the time is set to 12:00 AM. You can change the time, if required.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date/ Time	Used to specify the date and time till when the exchange rate is effective.  <b>Note:</b> The effective end date and time cannot be earlier than the effective start date and time. You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date and time. This field appears only when you are defining a date and time based exchange rate. By default, the time is set to 12:00 AM. You can change the time, if required.	Yes (Conditional)  <b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
Effective Start Date	Used to specify the date from when the exchange rate is effective.  <b>Note:</b> This field appears only when you are defining a date based exchange rate.	Yes
Effective End Date	Used to specify the date till when the exchange rate is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date. You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date. This field appears only when you are defining a date based exchange rate.	Yes (Conditional)  <b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.  <b>Note:</b> The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).	Yes
Spread	Used to specify the spread for the exchange rate.	No

**Tip:** Alternatively, you can access the **Add/Edit Exchange Rate** screen by clicking the **Add Exchange Rate** button in the **Page Title** area of the **Exchange Rate** screen.

4. Enter the required details in the **Add/Edit Exchange Rate** screen.
5. Define characteristics for the exchange rate, if required.

**Note:** You can define characteristics only when you are defining a date and time based exchange rate.

6. Click **Save**.

The exchange rate is defined in the system.

**Note:** If an exchange rate is already defined with a source and conversion type combination on a given date and time, the system will not allow you to define another exchange rate with the same specifications.

## **Defining Characteristics for an Exchange Rate**

### **Prerequisites**

To define characteristics for an exchange rate, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Exchange Rate**)

### **Procedure**

To define characteristics for an exchange rate:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an exchange rate.

The **Characteristics** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Effective Date	Used to specify the date from when the characteristic is effective for the exchange rate.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Exchange Rate</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.

**Note:** The **Characteristics** section appears only when you are defining or editing a date and time based exchange rate.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the exchange rate, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the exchange rate, click the **Delete**  icon corresponding to the characteristic.

## Editing an Exchange Rate

### Procedure

To edit an exchange rate:

- Search for the exchange rate in the **Exchange Rate** screen.
- In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the exchange rate whose details you want to edit.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Exchange Rate ID	Displays the exchange rate ID.	Not applicable
Business Object	Indicates the business object used while defining an exchange rate.	Not applicable
From Currency	Indicates the currency which is translated. In other words, it is the source currency.	Not applicable
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Conversion Type	Indicates the conversion type of the exchange rate.	Not applicable
Division	Indicates the division for which the exchange rate is defined.  <b>Note:</b> The data does not appear corresponding to this field when the exchange rate is a global exchange rate.	Not applicable
Exchange Rate Source	Indicates the source from where the exchange rate is received.  <b>Note:</b> This field appears only when you are editing a date and time based exchange rate.	Not applicable
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective.  <b>Note:</b> This field appears only when you are editing a date and time based exchange rate.	Not applicable
Effective End Date/Time	Used to specify the date and time till when the exchange rate is effective.  <b>Note:</b> The effective end date and time cannot be earlier than the effective start date and time. This field appears only when you are editing a date and time based exchange rate. This field is non-editable when you are editing a date and time based global exchange rate. This is because a global exchange rate does not have an end date and time.	Yes (Conditional)  <b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
Effective Start Date	Displays the date from when the exchange rate is effective.  <b>Note:</b> This field appears only when you are editing a date based exchange rate.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the exchange rate is effective.  <b>Note:</b> The effective end date cannot be earlier than the effective start date. This field appears only when you are editing a date based exchange rate. This field is non-editable when you are editing a date based global exchange rate. This is because a global exchange rate does not have an end date.	Yes (Conditional)  <b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.  <b>Note:</b> The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).	Yes
Spread	Used to specify the spread for the exchange rate.	No

**Tip:** Alternatively, you can click the **Edit** button in the **Exchange Rate** zone to edit the details of the exchange rate.

3. Modify the required details in the **Add/Edit Exchange Rate** screen.
4. Define, edit, or remove characteristics from the exchange rate, if required.

**Note:** The **Characteristics** section appears only when you are editing a date and time based exchange rate.

5. Click **Save**.

The changes made to the exchange rate are saved.

## **Deleting an Exchange Rate**

### **Procedure**

To delete an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.

- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the exchange rate that you want to delete.

A message appears confirming whether you want to delete the exchange rate.

**Tip:** Alternatively, you can click the **Delete** button in the **Exchange Rate** zone to delete the exchange rate.

- Click **OK**.

The exchange rate is deleted.

## Exchange Rate (Used for Viewing)

Once you define an exchange rate, the **Exchange Rate** screen allows you to:

- Edit the details of the exchange rate
- Delete the exchange rate
- View the details of the exchange rate
- View the log of the exchange rate

This screen consists of the following zones:

- [Exchange Rate](#) on page 783
- [Exchange Rate Log](#) on page 785

## Exchange Rate

The **Exchange Rate** zone displays the details of the exchange rate. This zone contains the following sections:

- Main** — This section provides basic information about the exchange rate. It contains the following fields:

Field Name	Field Description
Exchange Rate ID	Displays the exchange rate ID.
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Conversion Type	Indicates the conversion type of the exchange rate.

Field Name	Field Description
Division	<p>Indicates the division for which the exchange rate is defined.</p> <p><b>Note:</b> The data does not appear corresponding to this field when the exchange rate is a global exchange rate. It has a link. On clicking the link, the <b>Division</b> screen appears with the details of the respective division.</p>
Exchange Rate Source	<p>Indicates the source from where the exchange rate is received.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date and time based exchange rate.</p>
Effective Start Date/ Time	<p>Displays the date and time from when the exchange rate is effective.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date and time based exchange rate.</p>
Effective End Date/ Time	<p>Displays the date and time till when the exchange rate is effective.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date and time based exchange rate. The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.</p>
Effective Start Date	<p>Displays the date from when the exchange rate is effective.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date based exchange rate.</p>
Effective End Date	<p>Displays the date till when the exchange rate is effective.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date based exchange rate. The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.</p>
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.

- **Characteristics** — This section lists the characteristics defined for the exchange rate. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the exchange rate.
Characteristic Type	Indicates the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

**Note:** The **Characteristics** section appears only when you are viewing the details of a date and time based exchange rate.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the exchange rate.
Delete	Used to delete the exchange rate.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the exchange rate is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the exchange rate is created.

## Exchange Rate Log

The **Exchange Rate Log** zone lists the complete trail of actions performed on the exchange rate. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the exchange rate.
Details	Displays the details about the action performed on the exchange rate.
User	Indicates the user who has performed the action on the exchange rate.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is generated when the action is performed on the exchange rate.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the status was changed.  <b>Note:</b> At present, no data appears in this column. The implementation team can create a custom exchange rate business object with the status lifecycle.

## Viewing the Exchange Rate Details

### Procedure

To view the details of an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the link in the **Exchange Rate ID** column corresponding to the exchange rate whose details you want to view.

The **Exchange Rate** screen appears. It contains the following zones:

- **Exchange Rate** — Displays the details of the exchange rate.
  - **Exchange Rate Log** — Lists the complete trail of actions performed on the exchange rate.
3. View the details of the exchange rate in the **Exchange Rate** zone.
  4. View the log of the exchange rate in the **Exchange Rate Log** zone.

- [Transaction Source](#)
- [Transaction Record Type](#)
- [Transaction Aggregation Rule](#)
- [Schedule](#)
- [Disaggregation Request](#)
- [Accumulation Data](#)

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 840.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#) on page 796
- [Transaction Disaggregation](#) on page 822
- [Transaction Cancellation](#) on page 833
- [Transaction Rollback](#) on page 837

## Prerequisites

---

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item —division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1\_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE\_NUMBER lookup field
- Create an algorithm of the **C1\_RTCL\_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- *Rule Engine (C1\_RLENG)*
- *Dummy Header (C1-TXNDMYID)*
- *Multi Parameter Based Pricing (C1\_PPARAM\_FLG)*
- *Feed Management (C1\_FM)*

## Transaction Rating Before Billing

---

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** – In this approach, you can use either of the following ways:
  - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
  - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** – In this approach, you can use either of the following ways:
  - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation

parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

**3. Ignore the Transaction Leg for Billing** – In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

**Note:**

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups — Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created only when you attach an algorithm of the **C1\_RTCL\_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3a	Yes	Not applicable	Do Not Rate Transactions (DNRT)	Not applicable because ignored transactions are not considered for billing.

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3b	Yes	Not applicable	Rate Transactions (RITX)	Update Status (C1-TXNEX)
1b	No	Yes	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2b	No	Yes	Aggregate transactions and then rate aggregated SQs (AGTR)	Service Quantity Calculation (C1-TXNSQ)
2a	No	Yes	Rate individual transactions and aggregate calc lines across transactions (RITA)	Update Status (C1-TXNEX)
1a	No	No	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2c	No	No	Rate Transactions (RITX)	Service Quantity Calculation (C1-TXNSQ)

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

Transaction	Transaction Volume	Transaction Date	Account	Price Item	Price Item Parameter Group ID	Price Assignment ID	Aggregation Schedule
T1	300	01/01/2015	A1	P1	PG1	PA1	Monthly
T1	300	01/01/2015	A2	P1	PG1	PA2	Monthly
T2	200	15/01/2015	A1	P1	PG1	PA1	Monthly
T2	200	15/01/2015	A3	P1	PG1	PA3	Monthly

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T1	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T1	PA2	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T1	PA2	RC4-0.2*Transaction Volume	USD	BK-AR4	ABC	Char2=Y
T2	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T2	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T2	PA3	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T2	PA3	RC4-0.2*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1- A1P1PG1- PA1, T2- A1P1PG1- PA1	RC1	$300*0.1 = 30$ , $200*0.1 = 20$	$30+20 = 50$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1– A1P1PG1– PA1, T2– A1P1PG1– PA1	RC2	$300*0.2 = 60$ , $200*0.2 = 40$	$60+40 = 100$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC3	$300*0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC4	$300*0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2– A3P1PG1– PA3	RC3, RC4	$200*0.3 = 60$ , $200*0.2 = 40$	$60+40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC1	$300 * 0.1 = 30$	30	The pass through charge is calculated for the transaction leg.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC2	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC1	$200 * 0.1 = 20$	20	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC2	$200 * 0.2 = 40$	40	The pass through charge is calculated for the transaction leg.
BC4	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	$200 * 0.3 = 60$ , $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC1	500*0.1 = 50	50	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC2	500*0.2 = 100	100	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A3P1PG1- PA3- Monthly	200	BC3	01/01/2015	31/01/2015	RC3, RC4	200*0.3 = 60, 200*0.2 = 40	60+40 = 100	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

## Transaction Aggregation

---

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 797
- [Transaction Validation and Initial Price Item Determination](#) on page 799
- [Price Item Pricing Verification](#) on page 809
- [Aggregation](#) on page 813
- [Clean Up](#) on page 817

The following figure graphically explains the transaction aggregation process:

## Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to validate a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to validate the transaction feeds which are received from a particular transaction source.	No
Checksum Validation Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> <li>The number of transaction records in the file matches the total transaction records in the header.</li> <li>The sum of transaction amount matches the total transaction amount in the header.</li> <li>The sum of transaction volume matches the total transaction volume in the header.</li> </ul> The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
Duplicate Check Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> <li>File with the same header date and external header ID is not available in the system.</li> </ul> The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> The duplicate check is done only against the transaction feeds which are in the <b>Validated (VALD)</b> status and not against the transaction feeds which are in the <b>Uploaded (UPLD)</b> status.</div>	No
Allow Positive Transaction Volume in Header	Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the parameter value is set to <b>Y</b>.</div>	Yes
Allow Negative Transaction Volume in Header	Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the parameter value is set to <b>N</b>.</div>	Yes

Parameter Name	Description	Mandatory (Yes or No)
Allow Zero Transaction Volume in Header	Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the parameter value is set to N.</div>	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Validation and Initial Price Item Determination

This process includes the following three sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
  - Transaction source is defined in the system.
  - Transaction record type is defined for the transaction source in the system.
  - Division and currencies are defined in the system.
  - The account with the specified account identifier, account identifier type and division exists in the system.

**Note:** This validation is done only when the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- **Initial Price Item Determination** - Once the transaction records are validated, the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped are determined using certain business rules. These business rules are invoked through a rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

**Note:** The system determines rules which are effective based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which the transaction belongs. The system uses the **Processing Date for Transaction Feed Management** characteristic which is effective on the transaction date. If the **Processing Date for Transaction Feed Management** characteristic type is set to BATCH\_DT, the system executes rules which are effective on the batch business date. However, if the **Processing Date for Transaction Feed Management** characteristic type is set to TXN\_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **Processing Date for Transaction Feed Management** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT\_NO1\_Val - Account 1
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT\_NO1\_Val, DIVISION1\_VAL and PRODUCT1\_1\_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT\_NO1\_Val set to Account 1, DIVISION1\_VAL set to D1, PRODUCT1\_1\_Val set to Price Item X, and PRODUCT1\_2\_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - US
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country
- PVL1\_2\_1\_VAL - US

- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - UK
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country
- PVL1\_2\_1\_VAL - UK
- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD
- ACCT\_NO2\_Val - Account B
- DIVISION2\_VAL - D2
- PRODUCT2\_1\_Val - Price Item A
- PCD2\_1\_1\_VAL - Country
- PVL2\_1\_1\_VAL - US
- PCD2\_1\_2\_VAL - Currency
- PVL2\_1\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

<b>Charges Borne By</b>	<b>Division to which the account belongs...</b>	<b>Price Item</b>	<b>Country</b>	<b>Currency</b>
Account A	D1	Price Item X	UK	USD
Account A	D1	Price Item Y	UK	USD
Account B	D2	Price Item A	US	USD

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 938. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE\_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

Output Parameter	Naming Convention	Example	Description
Account Identifier	ACCT_NOX_Val	ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val, ....	Used to indicate the account which must bear the charges for the transaction.
Account Identifier Column Name	ACCT_NOX_Col	ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ...	Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked.
Account Identifier Type	ACCT_NO_TYPEX_Val	ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ...	Used to indicate the type of account identifier.
Account Identifier Type Column Name	ACCT_NO_TYPEX_Col	ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ...	Used to indicate the column from where the account identifier type corresponding to the transaction (in the transaction details) must be picked.
Account Division	DIVISIONX_VAL	DIVISION1_VAL	Used to indicate the division to which the account belongs.
Account Division Column Name	DIVISIONX_COL	DIVISION1_COL	Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked.
Price Item Name	PRODUCTX_Y_Val <b>Note:</b> Here, X represents the account and Y represents the price item.	PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val, ....	Used to indicate the price item to which the transaction must be mapped.
Price Item Column Name	PRODUCTX_Y_Col <b>Note:</b> Here, X represents the account and Y represents the price item.	PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ...	Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked.

Output Parameter	Naming Convention	Example	Description
TOU	TOUX_Y_Val  <b>Note:</b> Here, X represents the account and Y represents the price item.	TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ...	Used to indicate the variance parameter which you want to use along with the price item for price determination.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
TOU Column Name	TOUX_Y_Col  <b>Note:</b> Here, X represents the account and Y represents the price item.	TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ...	Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Parameter Code	PCDX_Y_Z_VAL  <b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.	PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ...	Used to indicate the parameter which you want to use along with the price item for price determination.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  You must not specify any special character except underscore ( ) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .

Output Parameter	Naming Convention	Example	Description
Parameter Value	PVLX_Y_Z_VAL  <b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.	PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ...	Used to specify the value for the parameter.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .
Parameter Value Column Name	PVLX_Y_Z_COL  <b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.	PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ...	Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .

Output Parameter	Naming Convention	Example	Description
Processing Date Type	PRCS_DTX_Y_TYP  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Here, X represents the account and Y represents the price item.</p> </div>	PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ...	Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are: <ul style="list-style-type: none"> <li>• <b>TXN_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date.</li> <li>• <b>Batch_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date.</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Based on the <b>Processing Date for Transaction Feed Management</b> characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_TYP output parameter. In other words, the PRCS_DTX_Y_TYP output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p> </div>

Output Parameter	Naming Convention	Example	Description
Processing Date	PRCS_DTX_Y_VAL  <b>Note:</b> Here, X represents the account and Y represents the price item.	PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ...	Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate.  <b>Note:</b> The custom date must be a date other than the transaction or batch business date.  Based on the <b>Processing Date for Transaction Feed Management</b> characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.
Ignore Transaction	IGNORE_SW		Used to ignore transactions based on the transaction attributes. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Item Parameters
T1	A1	D1	P1	-	Country - US, Currency - USD
T1	A1	D1	P2	-	Country - Germany, Currency - USD
T1	A2	D2	P3	USD	-
T2	A1	D1	P1	-	Country - US, Currency - USD
T2	A2	D2	P2	USD	-
T3	A1	D1	P3	-	Country - Germany, Currency - USD

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

Note:
<p>During this sub-process, the system validates the following:</p> <ul style="list-style-type: none"> <li>• Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.</li> <li>• Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.</li> <li>• Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.</li> </ul> <p>If any of the above validation fails, the status of the transaction is changed to <b>Error (EROR)</b> and no transaction legs are created.</p>

- **Parameter Group Creation** - Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:
  - Account A, Price Item X, Country - US, Currency - USD
  - Account A, Price Item Y, Country - Germany, Currency - USD
  - Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped only when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Batch Business Date	<p>Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If you do not specify any date, the batch business date is set to the current date.</p> <p>The batch business date used while executing the <b>C1-TXNIP</b> batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.</p> </div>	No
Transaction Header ID	Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to validate and derive price item for the transactions which are received from a particular transaction source.	No
Division	Used when you want to validate and derive price item for the transactions belonging to a particular division.	No
Shuffle Work Unit	<p>Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> By default, the parameter value is set to N.</p> </div>	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1\_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

**Note:**

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1\_PRDR\_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_PRDR\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

Rules Engine	<a href="#">Rules Engine</a> on page 701
How to define a rule	<a href="#">Defining a Rule</a> on page 721

**Price Item Pricing Verification**

In this process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the effective pricing is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b>.</p>
Enabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see <a href="#">Multi Parameter Based Pricing</a> on page 209. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b>.</p>

**Note:**

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to find the price item pricing for transactions which are received in a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to find the price item pricing for transactions which are received from a particular transaction source.	No
Division	Used when you want to find the price item pricing for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 788.

You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the parameter value is set to N.</div>	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI\_PRC\_AGRD
- CI\_PRC\_PL
- CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to update the price item pricing information of accounts belonging to a particular division.	No
Chunk Size	Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

How to set the <b>C1_FM</b> feature configuration	<a href="#">Setting the C1_FM Feature Configuration</a> on page 2348

**Aggregation**

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the **SQL** values in the billable charge. In the aggregation process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <div data-bbox="597 457 1468 1037" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p> </div>
Enabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p> <div data-bbox="597 1310 1468 1913" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p> </div>

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item — division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 788.

**Note:** If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item — division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to create the billable charges for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to create the billable charges for transactions which are received from a particular transaction source.	No
Division	Used when you want to create the billable charges for transactions belonging to a particular division.	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

Rate for other transaction leg is determined using the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>Yes</b> and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>No</b> , and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding billable charge and calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The corresponding calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The corresponding billable charge and calculation lines are not deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>No</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The corresponding non-aggregated billable charge is deleted.

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

**Related Topics**

For more information on...	See...
Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 841

**Clean Up**

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The SQIs are recalculated in the billable charge.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The pass through charges are recalculated and accumulated accordingly.

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The aggregated billable charge is deleted.

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The aggregated billable charge and the corresponding calculation lines are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The aggregated billable charge is deleted.

**Note:**

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** — During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** — During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed.  <b>Note:</b> This parameter should not be used during the disaggregation process.	Yes (Conditional)  <b>Note:</b> This parameter is required when you set the request type to <b>CNCL</b> .

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source.  <b>Note:</b> This parameter should not be used during the cancellation and disaggregation processes.	No
Division	Used when you want to update or delete billable charges created for transactions belonging to a particular division.  <b>Note:</b> This parameter should not be used during the cancellation process.	No
Account ID	Used when you want to update or delete billable charges created for transactions of a particular account.  <b>Note:</b> This parameter should be used only during the disaggregation process.	No
Bill Cycle	Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle.  <b>Note:</b> This parameter should be used only during the disaggregation process.	No
Disaggregate Transactions From Date	Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards.  <b>Note:</b> You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process.	Yes (Conditional)  <b>Note:</b> This parameter is required when you set the request type to <b>DISAGG</b> .
Request Type	Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"> <li>• CNCL</li> <li>• EROR</li> <li>• DISAGG</li> </ul>	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 841
How to set the C1_FM feature configuration	<a href="#">Setting the C1_FM Feature Configuration</a> on page 2348

## Transaction Aggregation Batch Processing

---

During the transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI\_TXN\_DTL\_PRITM\_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

**Note:**

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
  - CI\_PRC\_AGRD
  - CI\_PRC\_PL
  - CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

## Transaction Disaggregation

---

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI\_TXN\_DISAGG\_REQ table:

If...	Then
A price item is assigned to an account	A disaggregation request is created for the account.

If...	Then
<p>The following values in the price item pricing assigned to an account is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Aggregation Schedule</li> <li>• Ignore Transaction</li> <li>• Aggregate Transaction</li> <li>• Rating Criteria</li> <li>• Price Item Parameter</li> </ul>	<p>A disaggregation request is created for the account.</p>
<p>A price item is assigned to a person</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price item pricing assigned to a person is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Aggregation Schedule</li> <li>• Ignore Transaction</li> <li>• Aggregate Transaction</li> <li>• Rating Criteria</li> <li>• Price Item Parameter</li> </ul>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>A price list is assigned to an account.</p>	<p>A disaggregation request is created for the account.</p>
<p>The following values in the price list assigned to an account is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Priority</li> <li>• Price List Inheritance</li> </ul>	<p>A disaggregation request is created for the account.</p>
<p>A price list is assigned to a person.</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price list assigned to a person is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Priority</li> <li>• Price List Inheritance</li> </ul>	<p>A disaggregation request is created for each account of the person and its child person.</p>

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CL\_TXN\_DISAGG\_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a

disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.
- The following details in the price item pricing assigned to a price list is changed:
  - Variance Parameter
  - Effective Start Date
  - Effective End Date
  - Aggregation Schedule
  - Ignore Transaction
  - Rating Criteria
  - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

Transaction	Account	Price Item
T1	A1	P1
T1	A1	P2
T1	A2	P1
T1	A2	P2

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to create disaggregation request for accounts belonging to a particular division.	No
Person ID	Used when you want to create disaggregation request for accounts belonging to a particular person.	No
Bill Cycle	Used when you want to create disaggregation request for accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards.  <b>Note:</b> You must specify the date in the YYYY-MM-DD format.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

**Note:** The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI\_TXN\_DISAGG\_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation.	No
Account ID	Used when you want to identify the transactions of a particular account for disaggregation.	No
Bill Cycle	Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation.	No

Parameter Name	Description	Mandatory (Yes or No)
Disaggregate Transactions From Date	<p>Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the <b>Disaggregate Transactions From Date</b> parameter.</p> </div>	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Post-Processing Algorithm	Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation.	No
Exclude Canceled Billable Charges (Y or N)	<p>Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the <b>Canceled</b> status during the disaggregation process. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If you do not specify any value, by default, the parameter value is set to N.</p> </div>	No
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The corresponding transaction leg and calculation lines (if any) are deleted.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to disaggregate the transactions of accounts belonging to a particular division.	No
Account ID	Used when you want to disaggregate the transactions of a particular account.	No
Bill Cycle	Used when you want to disaggregate the transactions of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to disaggregate the transactions which were performed from a particular date onwards. <b>Note:</b> You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_DSAG\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_DSAG\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 817.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the `CI_TXN_DISAGG_REQ` table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update the disaggregation requests' status of a particular account.	No
Division	Used when you want to update the disaggregation requests' status of accounts belonging to a particular division.	No
Bill Cycle	Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the <b>Pending Cancel</b> or <b>Frozen</b> status.  <b>Note:</b> You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Update Status Algorithm	Used to attach a custom algorithm which indicates when the status of the disaggregation request in the <code>CI_TXN_DISAGG_REQ</code> table must be changed to <b>COMPLETE</b> .  <b>Note:</b> If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to change the status of the disaggregation request to <b>COMPLETE</b> when the canceled billable charges are excluded during the disaggregation process. The valid values are:  <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <b>Note:</b> If you do not specify any value, by default, the parameter value is set to N.  You must specify the same value for this parameter while executing the <b>Identify Transactions for Disaggregation (C1-IDENT)</b> and <b>Update Disaggregation Request Status (C1-DRSUA)</b> batches during the disaggregation process. Otherwise, erroneous results will occur.	No

Parameter Name	Description	Mandatory (Yes or No)
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Disaggregation Batch Processing

---

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

## Reseeding

In the self-funded health care business, there might be situations when you may want to disaggregate the claim, enrollment, and ancillary transactions. The system enables you to disaggregate the claim, enrollment, and ancillary transactions until these transactions are not billed to the customer. If a transaction is billed to the customer, you cannot disaggregate the transaction using the normal transaction disaggregation process.

In the following scenarios, you may want to disaggregate the claim or ancillary transactions once these are billed to the customer:

- The changes are made to the specific stop-loss (SSL), aggregate stop-loss (ASL), discount arrangement, or level funded pricing rule which is used during the transaction aggregation process.
- A new pricing rule is created using a specific stop-loss (SSL) or aggregate stop-loss (ASL) pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a discount arrangement pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a level funded pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

- A specific stop-loss, aggregate stop-loss, discount arrangement, or level funded pricing rule type is added as related pricing rule type in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

The former scenario arises due to change in pricing rule, whereas the latter four scenarios arise due to the late setup. In such scenarios, you can create the **Accumulation Group Based Disaggregation Request** (also known as **Reseeding Request**) to disaggregate the claim and ancillary transactions. In the **Accumulation Group Based Disaggregation** (also known as **Reseeding**) feature, the system allows you to create the reseeding requests for the accounts using a parent accumulation group. At present, you can create the reseeding requests for the accounts only from the user interface and not through the **Disaggregation Request Creation (C1-DISTG)** batch.

While creating a reseeding request using the **Parent Accumulation Group** request type, you can specify the accumulation type (i.e. whether it is stop-loss or discount arrangement). If the accumulation type is set to **Stop Loss**, the system provides the **Disaggregate All Account** option. If you select the **Disaggregate All Account** option, the system considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a reseeding request for each such account. However, if you do not select the **Disaggregate All Account** option, the system considers accounts of only those bill groups where the parent accumulation group is used for creating the specific stop-loss and aggregate stop-loss pricing rules and then creates a reseeding request for each such account. In addition, the system creates a reseeding request for the ASSL and ASL Credit accounts which are specified in the specific stop-loss and aggregate stop-loss pricing rules, respectively. Note that the reseeding requests are created for the ASSL and ASL Credit accounts irrespective of whether the **Disaggregate All Account** option is selected or not.

However, if the accumulation type is set to **Discount Arrangement**, the system does not provide the **Disaggregate All Account** option. In this case, the system, by default, considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a reseeding request for each such account.

**Note:** In the late setup scenarios, you need to ensure that the pricing rules are created before you create the reseeding requests for accounts.

In the **Reseeding** process, you need to execute the following batches in the specified sequence:

- 1. Identify Transactions for Disaggregation (C1-IDENT)** - It fetches the reseeding requests for accounts and then identifies the claim or ancillary transactions for disaggregation. If the reseeding request is created due to change in a pricing rule, the **BILLABLE\_CHG\_ACT\_CD** column corresponding to the specific stop-loss, aggregate stop-loss, discount, or level-funded billable charges in the **CI\_DISAGG\_BCHG\_DETAIL** table is set to **Billable Charge is Part of Frozen Bill Segment (40)**. It indicates that no action must be taken on these billable charges. And, if the reseeding request is created due to the late setup scenarios, the claim or ancillary transaction and its legs are moved to the **CI\_TXN\_DETAIL\_STG** and **CI\_TXN\_DTL\_PRITM\_STG** tables, respectively. In addition, the status of the claim or ancillary transaction is changed to **Uploaded**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.
- 2. Process Non-Aggregated Transactions (C1-PDTXN)** - If the reseeding request is created due to change in a pricing rule, it does the following:
  - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in the **Frozen** or **Pending Cancel** status, are forcibly deleted from the **CI\_TXN\_DTL\_PRITM** table.
  - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in a status other than **Frozen** or **Pending Cancel**, are moved to the **CI\_TXN\_DTL\_PRITM\_STG** table. And, the claim or ancillary transaction is moved to the **CI\_TXN\_DETAIL\_STG** table and its status is changed to **Uploaded**.

Irrespective of whether the reseeding request is created due to change in a pricing rule or the late setup scenarios, this batch does not perform any actions on the claim, claim based fee, and ancillary transaction legs and their billable charges. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

- 3. Transaction Cleanup Batch (C1-TXNCU)** - While executing the **Clean Up (C1-TXNCU)** batch during reseeding, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

- 4. Update Disaggregation Request Status (C1-DRSUA)** - Once the claim or ancillary transaction is successfully disaggregated, the status of the reseeded request is changed to **COMPLETE**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

When you re-aggregate the claim or ancillary transactions which were disaggregated due to late setup, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and their billable charges. However, when you re-aggregate the claim or ancillary transactions which were disaggregated due to change in a pricing rule, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and the billable charges for the delta amount (which resulted due to change in pricing).

If the accumulation type is set to **Stop Loss**, the system deletes the specific stop-loss transaction legs. In addition, it deletes the aggregate stop-loss transaction legs (if any), discount arrangement transaction legs (if any), and level funded transaction legs (if any) whose calculation is based on the specific stop-loss transaction legs.

However, if the accumulation type is set to **Discount Arrangement**, the system deletes the discount arrangement transaction legs. It deletes the specific stop-loss transaction legs (if any), aggregate stop-loss transaction legs (if any), and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the specific stop-loss pricing rule. However, it deletes the aggregate stop-loss transaction legs (if any) and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the aggregate stop-loss pricing rule.

For example, the CLAIM pricing rule type contains the SSL, ASL, DISCOUNT, and LEVEL FUNDED pricing rule types as the related pricing rule types, and the SSL and ASL pricing rules contain the following discount arrangement pricing rules:

Discount Arrangement Pricing Rule	Included in the SSL Pricing Rule (Yes or No)	Included in the ASL Pricing Rule (Yes or No)
DISCOUNT1	Yes	No
DISCOUNT2	No	Yes

Now, if the reseeded request (where the accumulation type is set to **Stop Loss**) is created for an account due to change in the SSL pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Yes	Yes	No	Yes
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	Yes	Yes	No	Yes
DISCOUNT2	Yes	Yes	No	Yes

However, if the reseeded request (where the accumulation type is set to **Discount Arrangement**) is created for an account due to change in the DISCOUNT2 pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	No	No	No	No
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	No	No	No	No
DISCOUNT2	Yes	Yes	No	Yes

Let us take another example where the related pricing rule types are not specified in the CLM1 pricing rule type. Therefore, the system just created claim-specific transaction legs and billable charges for the C2 claim transaction. These claim billable charges are then billed to the customer. Now, if you add the SSL and ASL pricing rule types as the related pricing rule types in the CLM1 pricing rule type and create a reseeding request (where the accumulation type is set to **Stop Loss**) for an account, the system behaves in the following manner for the C2 claim transaction when the transaction incurred and paid dates fall within the incurred and paid date ranges defined in the parent accumulation group:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Not applicable	Yes	Not applicable	Yes
ASL	Not applicable	Yes	Not applicable	Yes
DISCOUNT1	Not applicable	Yes	Not applicable	Yes
DISCOUNT2	Not applicable	Yes	Not applicable	Yes

## Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

When you cancel a transaction feed for which...	Then
<p>A bill (with the <b>Pending</b> status) is already generated in the system</p>	<p>The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b>.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>If a pending bill has a bill segment in the <b>Frozen</b> or <b>Pending Cancel</b> status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the <b>Cancel</b> status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> <li>• Deletes all other bill segments which are not in the <b>Cancel</b> status.</li> <li>• The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is deleted if the billable charge is in the <b>Billable</b> status and if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>• The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is not deleted or recalculated if the billable charge is in the <b>Cancelled</b> status.</li> <li>• The billable charge corresponding to the bill segment which is in the <b>Cancel</b> status is cancelled if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>• The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds.</li> </ul> <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>• The bill and their corresponding bill segments are deleted.</li> <li>• The SQIs are recalculated in the corresponding billable charges.</li> <li>• The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>• The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul> </div>
<p>A bill (with the <b>Complete</b> status) already exists in the system</p>	<p>The system does not allow you to cancel the transaction feed.</p>

When you cancel a transaction feed for which...	Then
A bill (with the <b>Complete</b> status) has all bill segments in the <b>Cancelled</b> status	The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .
A billable charge (with the <b>Billable</b> status) exists in the system	<p>The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b>.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>• The SQIs are recalculated in the billable charge.</li> <li>• The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>• The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul> </div>
A billable charge (with the <b>Cancelled</b> status) exists in the system	The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .

To cancel a transaction feed, you need to execute the following batches in the specified order:

- Pending Bill Deletion (C1-DELBL)** — This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- Clean Up (C1-TXNCU)** — This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted only when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 817.

3. **Cancellation (C1-TXCNC)** — This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to cancel a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_CNCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_CNCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 841

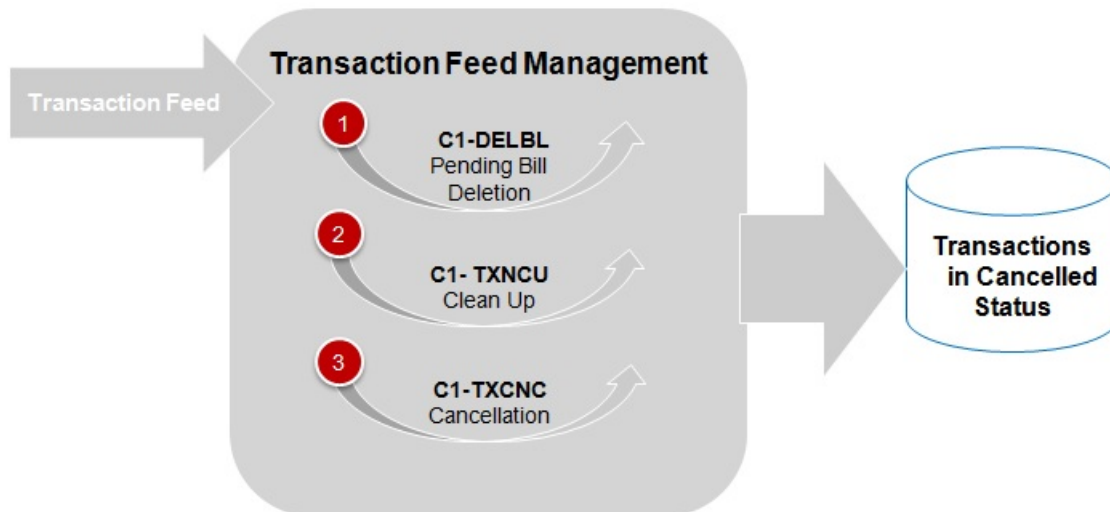

## Transaction Cancellation Batch Processing

---

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

## Transaction Rollback

---

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item — division combination.
- Transaction aggregation rule is not defined for the SQL.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)

**Note:** You must execute the **Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)** batch only when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Status	Used to indicate whether you want to rollback transactions which are in the <b>Ignored</b> or <b>Error</b> status. The valid values are: <ul style="list-style-type: none"> <li>• IGNR</li> <li>• EROR</li> </ul>	Yes
Transaction Header ID	Used when you want to rollback transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to rollback transactions which are received from a particular transaction source.	No
Division	Used when you want to rollback transactions belonging to a particular division.	No
Rollback From Date	Used when you want to rollback transactions which were performed from a particular date onwards. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.</p> </div>	No
Rollback To Date	Used when you want to rollback transactions which were performed till a particular date. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.</p> </div>	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_ROBK\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_ROBK\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

## Feed Status Transition

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

## Transaction Status Transition

### Aggregation

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

### Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

## Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

**Note:** This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

**Note:** This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

### Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNIP	Transaction validation fails due to incomplete transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	INVALID	Not applicable as the transaction legs are not yet created
2	C1-TXNIP	Transaction validation fails due to invalid or incorrect transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
3	C1-TXNIP	Transaction validation is successful but no product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
4	C1-TXNIP	Transaction validation is successful and product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
5	C1-TXNIP	Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes	UPLOADED	Not applicable as the transaction legs are not yet created	IGNORED	Not applicable as the transaction legs are not yet created
6	C1-TXNVP and C1-TXNEX	Effective pricing is not found for any of the transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
7	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for one or more transaction legs but not for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED (when <b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing) INITIAL PRODUCT DETERMINED (when <b>Ignore Transaction</b> flag is set to <b>N</b> in the effective pricing)
8	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED	IGNORED

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
9	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>N</b> in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
10	C1-TXNSQ and C1-TXNCM	SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	COMPLETED	COMPLETED

### Transaction Rollback

The following table indicates how a transaction leg moves from one status to another during the rollback process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNRB	Transactions with the Error (EROR) status are rolled back	ERROR	ERROR	UPLOADED	Not applicable as the transaction legs are not yet created
2	C1-TXNRB	Transactions with the Ignored (IGNR) status are rolled back	IGNORED	IGNORED	UPLOADED	Not applicable as the transaction legs are not yet created

### Transaction Cancellation

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXCNC	Transactions in any status are cancelled	UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED	INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED	CANCELLED	CANCELLED

**Transaction Disaggregation**

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

<b>Sr. No.</b>	<b>Batch</b>	<b>Event</b>	<b>Pre Event Transaction Status</b>	<b>Pre Event Transaction Leg Status</b>	<b>Post Event Transaction Status</b>	<b>Post Event Transaction Leg Status</b>
1	C1-DISTG	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED  <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
2	C1-DISTG	Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated.	CANCELLED, INVALID, or UPLOADED	Not applicable as the transactions will not have any legs in these statuses	No change in the status	Not applicable as the transactions will not have any legs in these statuses
3	C1-IDENT	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED  <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
4	C1-IDENT	Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status.	UPLOADED	UPLOADED	No change in the status	No change in the status
5	C1-PDTXN	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	UPLOADED	Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table.

### **Transaction Reaggregation**

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
1	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. <b>IGNORE_SW</b> is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED
2	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. <b>IGNORE_SW</b> is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
3	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg.	COMPLETED	COMPLETED	ERROR	Derived Leg: No new transaction leg was created Existing Legs: COMPLETED
4	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction.	ERROR	No Transaction Legs Exist	ERROR	Derived Leg: No new transaction leg was created Existing Legs: None
5	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a product was derived for the transaction.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Leg: INITIAL PRODUCT DETERMINED Existing Legs: None

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
6	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg.	COMPLETED	COMPLETED, IGNORED	ERROR	Derived Leg: ERROR Existing Legs: COMPLETED and IGNORED
7	C1-TXNVP and C1-TXNEX	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Legs: INITIAL PRODUCT DETERMINED Existing Legs: None
8	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
9	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED
10	C1-TXNSQ and C1-TXNCM	While reaggregating transaction legs, SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion.	COMPLETED, ERROR, IGNORED <b>Note:</b> There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	ERROR	Derived Legs: ERROR Existing Legs: No change in the status
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated.	COMPLETED, ERROR, IGNORED <b>Note:</b> There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	COMPLETED	Derived Leg: COMPLETED Existing Legs: No change in the status

## Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

Header Data	Description	Mandatory (Yes or No)
Transaction Source	Used to specify the source from where the transactions are received.	Yes
Header Date (YYYYMMDD)	Used to specify the header date.	Yes
Transaction Header ID	Used to specify the external transaction header ID.	Yes
File Name	Used to specify the file name.	Yes
Number of Transactions	Used to specify the total number of transaction records in the file.	Yes
Total Transaction Volume	Used to specify the total transaction volume.	Yes
Total Transaction Amount	Used to specify the total transaction amount.	Yes

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

Record Data	Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Source	Used to specify the source from where the transaction is received.	Yes
Transaction Date (YYYYMMDD)	Used to specify the date when the transaction was performed.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	Yes
Customer Reference Number	Used to indicate the customer who has performed the transaction.	No
Division	Used to specify the division to which the transaction belongs.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Transaction Amount	Used to specify the transaction amount.	Yes

Record Data	Description	Mandatory (Yes or No)
Transaction Currency	Used to specify the currency in which the transaction was performed.  <b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	Yes
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"> <li>• Plus (+)</li> <li>• Minus (-)</li> </ul>	Yes
Account Identifier Type	Used to indicate the account identifier type.	Yes
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes
UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20	Used to specify additional information about the transaction.	No
UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10	Used to specify additional transaction amount.	Yes (Conditional)  <b>Note:</b> The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified.
UDF_CCY_1, UDF_CCY_2, UDF_CCY_3, ....., UDF_CCY_10	Used to specify additional transaction currency.  <b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	Yes (Conditional)  <b>Note:</b> The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified.
UDF_DTTM_1, UDF_DTTM_2, ....., UDF_DTTM_5	Used to specify additional information about the transaction.	No
UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50	Used to specify additional information about the transaction.  <b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	No

## Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	102	{Checksum Validation Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Checksum Validation Required</b> parameter.</li> </ul>
C1-TXNHV	102	{Duplicate Check Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Duplicate Check Required</b> parameter.</li> </ul>
C1-TXNHV	1314	The Transaction Source is mandatory.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Source</b> column.</li> </ul>
C1-TXNHV	1332	Sum of transaction records in the header does not match the total number of records in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1333	Sum of transaction volume in the header does not match the total transaction volume in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1334	Sum of transaction amount in the header does not match the total transaction amount in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1338	The Transaction Header ID already exists in the system. Please enter unique header ID.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The same file is uploaded multiple times in the system.</li> </ul>
C1-TXNHV	1341	Exception occurred during the transaction header validation.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the required format.</li> </ul>
C1-TXNHV	1421	Transaction records does not exist in the file. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	1422	Sum of transaction records in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Number of Transactions</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1423	Sum of transaction volume in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Volume</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1663	Transaction Header External Id is missing.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Header ID</b> column.</li> </ul>
C1-TXNHV	1664	Header Transaction Amount should be greater than 0.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Amount</b> column is less than or equal to zero.</li> </ul>
C1-TXNIP	102	{Chunk Size} field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Chunk Size</b> parameter is less than or equal to one.</li> </ul>
C1-TXNIP	102	{ Maximum Batch Size } field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Maximum Batch Count</b> parameter is greater than the value specified for the <b>Chunk Size</b> parameter.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id}	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Transaction Header ID</b> parameter exceeds the maximum length of 14 characters.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code}	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Transaction Source</b> parameter exceeds the maximum length of 30 characters.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division}	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Division</b> parameter exceeds the maximum length of 5 characters.</li> </ul>

Batch Name	Message Number	Error Message	Message Category	Possible Issues

## Feed Management Dashboard

---

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics defined for each calculation line

This screen consists of the following zones:

- [Search - Feed Level](#) on page 888
- [Division Level Information](#) on page 890
- [Transaction Level Information](#) on page 891
- [Transaction Leg Information](#) on page 892
- [Transaction Leg Service Quantity](#) on page 893
- [Transaction Leg Calculation Lines](#) on page 893
- [Transaction Leg Calc Line Characteristics](#) on page 895

### Search - Feed Level

The **Search - Feed Level** zone allows you to search for a transaction feed using various search criteria. You can view the details of a transaction feed which is already uploaded in the system. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Feed Header Date From	Used to search for transaction feeds having header date later than or equal to the specified date.	No
Feed Header Date To	Used to search for transaction feeds having header date earlier than or equal to the specified date.	No
Transaction Source	Used to search for transaction feeds received from a particular transaction source.	No
File Name	Used to search for a transaction feed based on the file name.	No
Feed Load Date From	Used to search for transaction feeds which are uploaded on or later than the specified date.	No
Feed Load Date To	Used to search for transaction feeds which are uploaded on or earlier than the specified date.	No
Transaction Header ID	Used to search for a transaction feed based on the header ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the file from where the transaction feed is uploaded.
Transaction Source	Displays the transaction source from where the transaction feed is received.
Transaction Header ID	Displays the transaction header ID. <b>Note:</b> The transaction header ID is generated automatically when the file is uploaded.
Transaction Header External ID	Displays the ID mentioned in the file header.
Feed Header Date	Displays the date mentioned in the file header.
Feed Load Date	Displays the date when the transaction feed was uploaded in the system.
Feed Status	Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> <li>• <b>Uploaded</b> - Indicates that the transaction feed is uploaded.</li> <li>• <b>Validated</b> - Indicates that the file header is validated.</li> <li>• <b>Cancelled</b> - Indicates that the transaction feed is cancelled.</li> <li>• <b>Invalid</b> - Indicates that the file header validation failed.</li> </ul>
Error Message	Indicates the reason why the file header validation failed.
Total Volume	Displays the total transaction volume of the feed.
Uploaded Volume	Displays the total transaction volume which is uploaded in the system.
INPD Volume	Displays the total transaction volume which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume for which billable charges are created and completed in the system.

Column Name	Column Description
Error Volume	Displays the total transaction volume which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume which is cancelled in the system.
Ignored Volume	Displays the total transaction volume which is ignored in the system.
Invalid Volume	Displays the total transaction volume which is invalid.

## Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used when you want to view the transaction volume details of a particular division received through the feed.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division.
Total Volume	Displays the total transaction volume of the division.
Uploaded Volume	Displays the total transaction volume (of the division) which is uploaded in the system.
INPD Volume	Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume (of the division) for which billable charges are created and completed in the system.
Error Volume	Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume (of the division) which is cancelled in the system.
Ignored Volume	Displays the total transaction volume (of the division) which is ignored in the system.
Invalid Volume	Displays the total transaction volume (of the division) which is invalid.

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction feed in the **Search — Feed Level** zone.

## Transaction Level Information

The **Transaction Level Information** zone lists transactions in a feed which belong to a division. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Transaction Status	Used to search transactions with a particular status.	No
External Reference Number	Used to search a transaction with a particular external reference number.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
External Reference Number	Displays the external reference number of the transaction.
Division	Indicates the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.

Column Name	Column Description
Customer Reference Number	Indicates the customer who performed the transaction.
Transaction Status	Indicates the status of the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Rule	Indicates the rule which was met while determining initial price item for the transaction.  <b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.  <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

## Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Sequence	Displays the sequence number of transaction leg.
Account Identifier Type	Indicates the type of account identifier to which the transaction is mapped.
Account Identifier	Indicates the account which will bear the charges for the transaction.
Price Item	Indicates the price item to which the transaction is mapped.
Variance	Indicates the variance parameter which is used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Billable Charge ID	<p>Indicates the billable charge which is created for the transaction leg.</p> <p><b>Note:</b> The data appears in this column only when the billable charge is created for the transaction leg. It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the billable charge.</p>
Transaction Calculation ID	<p>Displays the transaction calculation ID.</p> <p><b>Note:</b> The data appears in this column only when the transaction leg is rated before billing.</p>
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction in the **Transaction Level Information** zone.

## **Transaction Leg Service Quantity**

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Daily Service Quantity	Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item - division combination.

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

#### **Related Topics**

For more information on...	See...
How to view the SQIs calculated for a transaction leg	<a href="#">Viewing the SQIs Calculated for a Transaction Leg</a> on page 897

## **Transaction Leg Calculation Lines**

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Displays the rate which is used for calculation.
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Description on Bill	Displays the summarized information about the calculation line that will be printed on the bill.
Distribution Code	Indicates the distribution code associated with the rate component.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

### **Related Topics**

How to view the calculation lines of a transaction leg	<a href="#">Viewing the Calculation Lines of a Transaction Leg</a> on page 898

## Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics defined for each calculation line. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

## Searching for a Transaction Feed

### Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Feed Management Dashboard**.  
The **Feed Management Dashboard** screen appears.
3. Enter the search criteria in the **Search — Feed Level** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

## View Billed Transactions

The **View Billed Transactions** screen allows you to view the transactions which are billed to the person. This screen consists of the following zones:

- [Search Bill](#) on page 899
- [Bill Segments](#) on page 901
- [Transaction Details](#) on page 902
- [SQ Details](#) on page 903

You can also access this screen from the **Bill** screen by selecting the **Go To View Billed Transactions** option from the **Bill ID** context menu. The only difference is that the **Search Bill** zone does not appear when you access this screen from the **Bill** screen.

## Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search bills of a particular person.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search a particular bill.  <b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Division	Used to search bills of accounts that belong to a particular division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	Yes (Conditional)  <b>Note:</b> This field is not required when you search for a bill using the Bill ID or the Alternate Bill ID.
Primary Account Identifier Type	Used to select the identifier type based on which you want to search bills of a particular account.	Yes (Conditional)  <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used when you want search bills of a particular account.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Primary Person Identifier Type	Used to select the identifier type based on which you want to search bills of a particular person.	Yes (Conditional)  <b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.
Primary Person Identifier	Used when you want search bills of a particular person.	Yes (Conditional)  <b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Bill Completion From Date	Used to search bills which are completed on or later than the specified date.	No
Bill Completion To Date	Used to search bills which are completed on or earlier than the specified date.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Status	Used to search bills with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Complete</li> <li>• Pending</li> </ul>	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID. <b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Bill Status	Displays the status of the bill.
Completion Date	Displays the date when the bill was completed.
Total Bill Amount	Displays the total amount billed to the person.
Invoice Currency	Displays the currency in which the amount is billed to the person.
Account Identifier Type	Displays the primary account identifier type.
Account Identifier	Indicates the account for which the bill is created.
Person Identifier Type	Displays the primary person identifier type.
Person Identifier	Indicates the person for whom the bill is created.
Division	Displays the division to which the account belongs.
Alternate Bill ID	Displays the alternate bill ID.

### Bill Segments

The **Bill Segments** zone lists the bill segments of a bill. This zone contains the following columns:

Column Name	Column Description
Bill Segment ID	Displays the bill segment ID. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears with the details of the respective bill segment.
Status	Indicates the status of the bill segment.

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Amount	Displays the amount of the bill segment.
Currency	Indicates the currency in which the bill segment is generated.
Price Item	Indicates the price item for which the bill segment is generated.
Variance Parameter	Indicates the variance parameter which is used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated.  <b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the respective billable charge.
Account Information	Indicates the member account (in the invoicing group) for which the bill segment is generated.
Invoice Construct ID	Indicates the construct through which the bill segment is generated.

By default, the **Bill Segments** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Search** zone.

## Transaction Details

The **Transaction Details** zone lists the transactions for which the billable charge (corresponding to the bill segment) is created. This zone contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.  <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Date	Displays the date when the transaction was performed.
Transaction Volume	Displays the transaction volume.

Column Name	Column Description
Transaction Amount	Displays the transaction amount.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction. <b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction. <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

By default, the **Transaction Details** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill segment in the **Bill Segments** zone.
