- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-ASOCINVAL**, **C1-ASOCINPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the values for the **ADDRESS\_TYPE\_FLG** and **RUNOUT\_ADM\_OPT\_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Parent Customer Policy Person Role
  - Invoice Type Characteristic Type
- Define the required divisions, person identifier types, account identifier types, phone types, person relationship types, customer classes, bill cycles, bill route types, auto pay route types, auto pay sources, policy person roles, price items, and characteristic types in the application.
- Set the batch control type of the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## ASO Customer Inbound Message Status Transition through User Interface

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the user interface:

### ASO Customer Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch:

## Algorithms Used in C1-ASOCustomerInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-ASOCustomerInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to <a href="#">C1-AT-RQJ</a> on page 1762.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1257.
	Enter	C1-ASOCINVAL	C1-ASOCINVAL	Refer to <a href="#">C1-ASOCINVAL</a> on page 1831.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1257.
	Enter	C1-ASOCINPRC	C1-ASOCINPRC	Refer to <a href="#">C1-ASOCINPRC</a> on page 1832.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to <a href="#">C1-TODORETRY</a> on page 1772.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to <a href="#">C1-TDCRINMSG</a> on page 1772.
Processed	-	-	-	-
Voided	-	-	-	-

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-ASOCINVAL

This algorithm is invoked when you execute the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the ASO customer inbound message which is in the **Pending** status. It checks the following:

- Whether the parent customer information exists in the ASO customer inbound message.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.

- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-ASOCINPRC

This algorithm is invoked once an ASO customer inbound message is successfully validated. It processes the ASO customer inbound message and accordingly creates or updates a person (parent customer and bill group), account (including automatic payment options), policy and policy plan.

If the processing fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## ASO Customer Inbound Message XML Format

**Note:** We recommend you to refer the ASO Customer Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the ASO customer inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)						
schema	Used to specify the tags of an ASO customer inbound message.	Yes						
bo	Used to indicate the business object using which the ASO customer inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> <li>C1-ASOCustomerInboundMessage</li> </ul>	Yes						
messageType	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system.  <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</td> </tr> <tr> <td>headerData</td> <td>Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.</td> </tr> </tbody> </table> <p><b>Note:</b> You must specify a valid ASO customer inbound message type which is in the <b>Active</b> status.</p>	If this tag is used within...	Then the purpose of the messageType tag is...	schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system.  <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.	headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.	Yes
If this tag is used within...	Then the purpose of the messageType tag is...							
schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system.  <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.							
headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.							

Tag Name	Tag Description	Mandatory (Yes or No)								
sourceSystem	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="570 302 1190 898"> <thead> <tr> <th data-bbox="570 302 837 386">If this tag is used within...</th> <th data-bbox="837 302 1190 386">Then the purpose of the sourceSystem tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 386 837 638">schema</td> <td data-bbox="837 386 1190 638">           Indicates the external system from where the ASO customer inbound message is received.   <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.         </td> </tr> <tr> <td data-bbox="570 638 837 785">headerData</td> <td data-bbox="837 638 1190 785">Used to indicate the external system from where the ASO customer inbound message is received.</td> </tr> <tr> <td data-bbox="570 785 837 898">policyData</td> <td data-bbox="837 785 1190 898">Used to indicate the source system from where the policy is originated.</td> </tr> </tbody> </table> <p><b>Note:</b> You must specify a source system which is already defined in the <b>C1-SourceSystemLookup</b> extendable lookup. Tag Name	Tag Description	Mandatory (Yes or No)																
accountData	<p>Used to specify the account details of the bill group.</p> <p><b>Note:</b> The system, by default, adds the bill group (for whom the account information is given in the ASO customer inbound message) as the main customer of the account. While linking the bill group as main customer of the account, the system sets the following attributes:</p> <table border="1" data-bbox="570 527 1190 909"> <thead> <tr> <th data-bbox="570 527 919 575">Attribute Name</th> <th data-bbox="919 527 1190 575">Attribute Value</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 575 919 625">Financially Responsible</td> <td data-bbox="919 575 1190 625">Y</td> </tr> <tr> <td data-bbox="570 625 919 676">Account Relationship Type</td> <td data-bbox="919 625 1190 676">Main Customer</td> </tr> <tr> <td data-bbox="570 676 919 726">Receive Copy of Bill</td> <td data-bbox="919 676 1190 726">Y</td> </tr> <tr> <td data-bbox="570 726 919 777">Bill Format</td> <td data-bbox="919 726 1190 777">Detailed</td> </tr> <tr> <td data-bbox="570 777 919 827">Receives Notification</td> <td data-bbox="919 777 1190 827">Y</td> </tr> <tr> <td data-bbox="570 827 919 877">Number of Bill Copies</td> <td data-bbox="919 827 1190 877">1</td> </tr> <tr> <td data-bbox="570 877 919 909"></td> <td data-bbox="919 877 1190 909"></td> </tr> </tbody> </table>	Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y	Number of Bill Copies	1			<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing an account.</p>
Attribute Name	Attribute Value																	
Financially Responsible	Y																	
Account Relationship Type	Main Customer																	
Receive Copy of Bill	Y																	
Bill Format	Detailed																	
Receives Notification	Y																	
Number of Bill Copies	1																	
accountType	<p>Used to indicate the type of account. This information is stored as a characteristic for the account.</p> <p><b>Note:</b> The value is stored in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration. You must specify a value which is already defined in the predefined characteristic type.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing an account.</p>																
customerClass	<p>Used to indicate the customer class to which the account belongs.</p> <p><b>Note:</b> You must specify a customer class which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining an account.</p>																
billCycle	<p>Used to indicate the bill cycle for the account.</p> <p><b>Note:</b> You must specify a bill cycle which is already defined in the system.</p>	<p>No</p>																
billRouteType	<p>Used to indicate how the account's bill must be sent to the main customer.</p> <p><b>Note:</b> You must specify a bill route type which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining the bill routing information for the main customer.</p>																

Tag Name	Tag Description	Mandatory (Yes or No)
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>	Yes (Conditional) <b>Note:</b> This data is required while defining the bill routing information for the main customer.
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date. <b>Note:</b> The priority cannot be less than or equal to zero.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> <li>• <b>C1DD</b> - Indicates that you want to directly debit the main customer's bank account.</li> <li>• <b>C1PA</b> - Indicates that you want to send a payment advice to the main customer.</li> </ul>	No
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution. <b>Note:</b> You must specify an auto pay route type which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.

Tag Name	Tag Description	Mandatory (Yes or No)
autoPaySourceCode	<p>Used to indicate the financial institution that receives the automatic payment request.</p> <p><b>Note:</b> You must specify an auto pay source which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.</p>
accountNumber	<p>Used to indicate the bank account number through which the automatic payment must be done.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.</p>
expiryMonth	<p>Used to specify the month when the tender type of the auto pay source will expire.</p> <p><b>Note:</b> You must specify the month in the MM format.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.</p>
expiryYear	<p>Used to specify the year when the tender type of the auto pay source will expire.</p> <p><b>Note:</b> You must specify the year in the YYYY format.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.</p>
name	<p>Used to specify the name of the person as it appears in the financial institution's system.</p>	No
maxWithdrawalAmount	<p>Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.</p> <p><b>Note:</b> The maximum withdrawal amount cannot be less than zero.</p>	No
comments	<p>Used to specify additional information about the auto pay instruction.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
policyData	Used to specify the details of the self-funded policy.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing a self-funded policy.
policyNumber	Used to specify the policy number.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing a self-funded policy.
policyDescription	Used to specify the description for the self-funded policy	Yes (Conditional)  <b>Note:</b> This data is required while defining a self-funded policy.
runOutEndDate	Used to specify the date when the runout period of the self-funded policy ends.  <b>Note:</b> The runout end date cannot be earlier than the policy end date. You must specify the date in the YYYY-MM-DD format.	No
runOutAdminOption	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"><li>• NROA</li><li>• PERC</li></ul> <b>Note:</b> At present, this data is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. You must specify a value which is already defined in the <b>RUNOUT_ADM_OPT_FLG</b> lookup field. It must be in the <b>Active</b> status.	No

Tag Name	Tag Description	Mandatory (Yes or No)
policyPersons	Used to associate a person with the policy.	Yes (Conditional) <b>Note:</b> This data is required while associating a person with the policy.
policyPerRole	Used to indicate the role of the person in the policy. <b>Note:</b> You must specify a policy person role which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while associating a person with the policy.
planData	Used to specify the details of the policy plan.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a policy plan.
planNumber	Used to specify the plan number.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a policy plan.
planCode	Used to specify the price item which you want to associate with the policy plan. <b>Note:</b> You must specify a price item which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a policy plan.

The following table lists and describes the tags which are available in the ASO customer inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the ASO customer inbound message.
statusReason	Indicates the reason why the status of the ASO customer inbound message is changed.
person	At present, this tag is not supported in an ASO customer inbound message.
statusDateTime	Displays the date and time when the status of the ASO customer inbound message is changed in the system.
creationDateTime	Displays the date and time when the ASO customer inbound message is created in the system.
searchCharacteristicValue	At present, this tag is not supported in an ASO customer inbound message.

Tag Name	Tag Description						
version	<p>This tag appears within the following parent tags:</p> <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the ASO customer inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the ASO customer inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the ASO customer inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the ASO customer inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.						
toDoRetry	<p>Displays the information about the retry option used for the ASO customer inbound message.</p> <p><b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the ASO customer inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the ASO customer inbound message from <b>Rejected</b> to <b>Pending</b> .						
numberOfRetries	Indicates the number of times the retry option is used for the ASO customer inbound message.						
currentErrorState	<p>Indicates the status to which the ASO customer inbound message is transitioned when its validation or processing fails. The valid value is:</p> <ul style="list-style-type: none"> <li>REJECTED</li> </ul>						
isRetried	<p>Indicates whether the retry option is used to change the status of the ASO customer inbound message. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## Sample ASO Customer Inbound Message

Using the below example, you can do the following:

- Create the parent customer and bill groups for the self-funded health care business
- Create the accounts for the bill groups
- Create the self-funded policies for the bill groups

Parent Customer	Bill Group	Account	Policy
UK OIL AND GAS CORP	UK OIL AND GAS ACRE	Standard	Active Employee Health Care Policy
		Retention	Retiree Employee Health Care Policy
	UK OIL AND GAS COBRA	Standard	Active COBRA Employee Health Care Policy
		Retention	Retiree COBRA Employee Health Care Policy

```

## Health Care Inbound Message

---

On calling the **C1-HCInboundMessage** web service, you can create a health care inbound message using a health care inbound message type. You can create a health care inbound message type using the **Health Care Inbound Message Type (C1-HCInboundMsgType)** business object. The health care inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. You must specify the **Health Care Inbound Message (C1-HCInboundMessage)** business object in the health care inbound message type.
- **Customer Registration Type** - The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. The customer registration type helps the system to determine:
  - **Customer Registration Business Object** - The business object using which the customer registration object should be created in the system. You must specify the **Customer Registration - Health Care (C1-CustomerRegistrationHC)** business object in the customer registration type.
  - **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Person BO (C1\_PERSON\_BO)** business object in the customer registration type.
  - **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Account BO (C1-AccountBO)** business object in the customer registration type.
  - **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the customer registration type.
  - **Membership Business Object** - The business object using which the membership should be created in the system. You must specify the **Membership (C1-Membership)** business object in the customer registration type.
  - **Address Business Object** - The business object using which the effective dated address should be created in the system. You must specify the **Address (C1-Address)** business object in the customer registration type.

While creating a health care inbound message type for the fully-insured health care business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health care business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

The **C1-HCInboundMessage** web service enables you to do the following depending on the person type and the category to which the policy type belongs:

Person Type	Policy Category	Enables you to:
Parent Customer	Self-Funded	<ul style="list-style-type: none"> <li>• Create or edit a parent customer</li> <li>• Create or edit a bill group of the parent customer</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of a bill group</li> <li>• Create or edit the policies of a bill group</li> </ul>
	Fully-Insured Group	<ul style="list-style-type: none"> <li>• Create or edit a parent customer</li> <li>• Create or edit a bill group of the parent customer</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of the parent customer and bill group</li> <li>• Create or edit the policies of the parent customer and bill group</li> <li>• Create or edit the plans of the policies</li> <li>• Associate one or more pricing rule types with a policy plan</li> <li>• Create or edit the pricing rules of the policy plans</li> <li>• Terminate, reinstate, or renew policies of the parent customer and bill group</li> </ul>
Bill Group	Self-Funded	<ul style="list-style-type: none"> <li>• Create or edit a bill group</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of the bill group</li> <li>• Create or edit the policies of the bill group</li> </ul>

Person Type	Policy Category	Enables you to:
	Fully-Insured Group	<ul style="list-style-type: none"> <li>• Create or edit a bill group</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of the bill group</li> <li>• Create or edit the policies of the bill group</li> <li>• Create or edit the plans of the policies</li> <li>• Associate one or more pricing rule types with a policy plan</li> <li>• Create or edit the pricing rules of the policy plans</li> <li>• Terminate, reinstate, or renew policies of the bill group</li> </ul>
Any Other Person Type	-	<ul style="list-style-type: none"> <li>• Create or edit a person</li> <li>• Credit or edit the accounts of the person</li> <li>• Create or edit the memberships of the policy plans</li> <li>• Add or remove members from a membership</li> <li>• Create or edit the one-time or recurring pass-through billable charges for a membership</li> </ul>

The following table describes how the system behaves when the respective entity information is given in a health care inbound message:

Entity	System Behavior
Person	<p>The system uses the <b>C1-PERSTYPE</b> feature configuration to decide whether the person type specified in the health care inbound message represents <b>Parent Customer</b> or <b>Bill Group</b>. If the person type specified in the health care inbound message matches the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type of the <b>C1-PERSTYPE</b> feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the related person information is given for a bill group and the person type of the related person is <b>Parent Customer</b>, then the bill group is related to the parent customer using the person relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p> <div data-bbox="581 1058 1461 1230" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The system supports the <b>Add</b> and <b>Update</b> operations for all entities except the derivation and pricing parameters for the bill group. Through the health care inbound message, each time, the system creates a new derivation and pricing parameters record for the bill group and does not update the existing derivation and pricing parameters record of the bill group.</p> </div>
Account	<p>While creating an account, the system defines the <b>Invoice Type</b> characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.</p>

Entity	System Behavior
Policy	<p>If the fully-insured policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> <li>• Associates the bill group with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> <li>• Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> </ul> <p>However, if the fully-insured policy information is given for a parent customer, the system does the following:</p> <ul style="list-style-type: none"> <li>• Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> </ul> <p>If the self-funded policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> <li>• Associates the bill group with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> <li>• Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> </ul> <p>On renewing a fully-insured group policy, the system removes the end date from the policy and stamps the renewal date against the policy.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You can renew a policy where the policy category is set to <b>Self-Funded</b> from the user interface and not through a health care inbound message. However, you can renew a policy where the policy category is set to <b>Fully-Insured Group</b> through a health care inbound message and not from the user interface.</p> </div> <p>On terminating a fully-insured group policy, the system updates the end date of the following entities with the termination date:</p> <ul style="list-style-type: none"> <li>• Policy</li> <li>• Policy Person</li> <li>• Policy Plan</li> <li>• Membership</li> <li>• Membership Person</li> <li>• Pricing Rule</li> </ul> <p>However, before updating the end dates, the system stores the original end date in the <b>ORG_END_DT</b> column of the respective table for all the above entities. The status of the policy is changed to the status which is specified in the <b>Policy Termination Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p> <p>On reinstating a fully-insured group policy, the system updates the end date of the above entities with the original end date. In addition, the status of the policy is changed to the status which is specified in the <b>Policy Reinstatement Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p>

Entity	System Behavior
Policy Plan	While creating a policy plan, the system requires either the price item or at least one pricing rule type. The system allows you to associate only those pricing rule types where the category is set to <b>Age Based</b> , <b>Tier Based</b> , or <b>Pass-Through Billable Charge</b> .
Pricing Rule Type	The system does not allow you to create or update a pricing rule type through a health care inbound message.
Pricing Rule	<p>The system allows you to define and edit the age-based and tier-based pricing rules of the policy plan. Note that the system supports the <b>Replace</b> operation and not the <b>Update</b> operation when you are editing these pricing rules through a health care inbound message.</p> <p><b>Note:</b></p> <p>You can define and edit the age-based and tier-based pricing rules through a health care inbound message and not from the user interface.</p> <p>You can create the following pricing rules from the user interface and not through a health care inbound message:</p> <ul style="list-style-type: none"> <li>• Claim</li> <li>• Specific Stop-Loss</li> <li>• Aggregate Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• One-Time Flat Fees</li> <li>• Recurring Flat Fees</li> <li>• Ancillary</li> <li>• Discount Arrangement</li> <li>• Level Funded</li> </ul>
Pass-Through Billable Charge	If the price item, account identifier type, and account identifier are given in the billable charge information, the system directly creates an SQI based billable charge when you process the health care inbound message. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to <b>Pass-Through Billable Charge</b> . If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). If so, the system creates an SQI based billable charge using the respective pass-through billable charge pricing rule type.

**Note:**

We recommend you to create or update the following through separate health care inbound messages:

- Entities, such as parent customer, bill group, accounts, policies, and policy plans
- Pricing rules
- Membership, member persons, and pass-through billable charges

On calling the **C1-HCInboundMessage** web service, a health care inbound message is created in the **Pending** status. When the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch is executed, the system checks whether there are any health care inbound messages in the **Pending** status. If there is a health care inbound message in the **Pending** status, the system validates the inbound message. If the health care inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the health care inbound messages for validation and processing from the user interface. On submitting a health care inbound message, the system validates the health care inbound message. If a health care inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

If the person type is **Parent Customer**, the customer registration object is created in the **Complete** status. However, if the person type is **Bill Group**, the customer registration object is created in the **Bill Group Approved** status. The policies are created in the **In Force/Active** status and the pricing rules are created in the **Active** status. Finally, the status of the health care inbound message is changed to **Processed**.

**Note:** The above status transition is mentioned for a customer registration object based on the assumption that the data sent through the health care inbound message will be pre-approved and does not require any approval in the system.

If any error occurs while validating or processing a health care inbound message, the status of the health care inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected health care inbound message. The system can reprocess a health care inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the health care inbound message from **Rejected** to **Pending**. The **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch will then reconsider and reprocess the health care inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected health care inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a health care inbound message depends on the value defined in the **Maximum Retry** parameter.

At present, if a customer registration object is created through a health care inbound message, you cannot edit the customer registration object from the user interface. You can only edit such customer registration objects through a health care inbound message.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to setup the <b>C1-ASOBLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLNG Feature Configuration</a> on page 2889
How to setup the <b>C1-PERSTYPE</b> feature configuration	<a href="#">Setting the C1_PERSTYPE Feature Configuration</a> on page 2920

### **Prerequisites**

To use the health care inbound message feature, you need to do the following:

- Define the required customer registration types in the system.

**Note:** The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. While creating a health care inbound message type for the fully-insured health care business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health care business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

- Define the required health care inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-HCINVAL**, **C1-HCINPROC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** and **C1-ExtLookRetTypeRateOpt** extendable lookups.
- Define the values for the **PER\_OR\_BUS\_FLG**, **NAME\_TYPE\_FLG**, **ADDRESS\_TYPE\_FLG**, **BILL\_ADDR\_SRCE\_FLG**, **BILL\_FORMAT\_FLG**, and **RUNOUT\_ADM\_OPT\_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Parent Customer Policy Person Role
  - Invoice Type Characteristic Type
  - Policy Termination Status
  - Policy Reinstatement Status
  - Default Rate Option – Flat
  - Default Rate Option – Percentage
  - Age Based Parameter
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
  - Bill Group Person Type
  - Parent Person Type
- Define the required person identifier types, account identifier types, person relationship types, characteristic types, phone types, customer classes, bill cycles, collection classes, divisions, bill route types, charge types, currencies, bill periods, invoice frequencies, distribution codes, auto pay route types, auto pay sources, account relationship types, policy types, policy person roles and contract relationship types in the application.
- Define the values for the **C1\_INVOICE\_DAY\_BILL\_PERIOD\_FLG** lookup field.

**Note:** Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

- Define the required predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination.
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement.

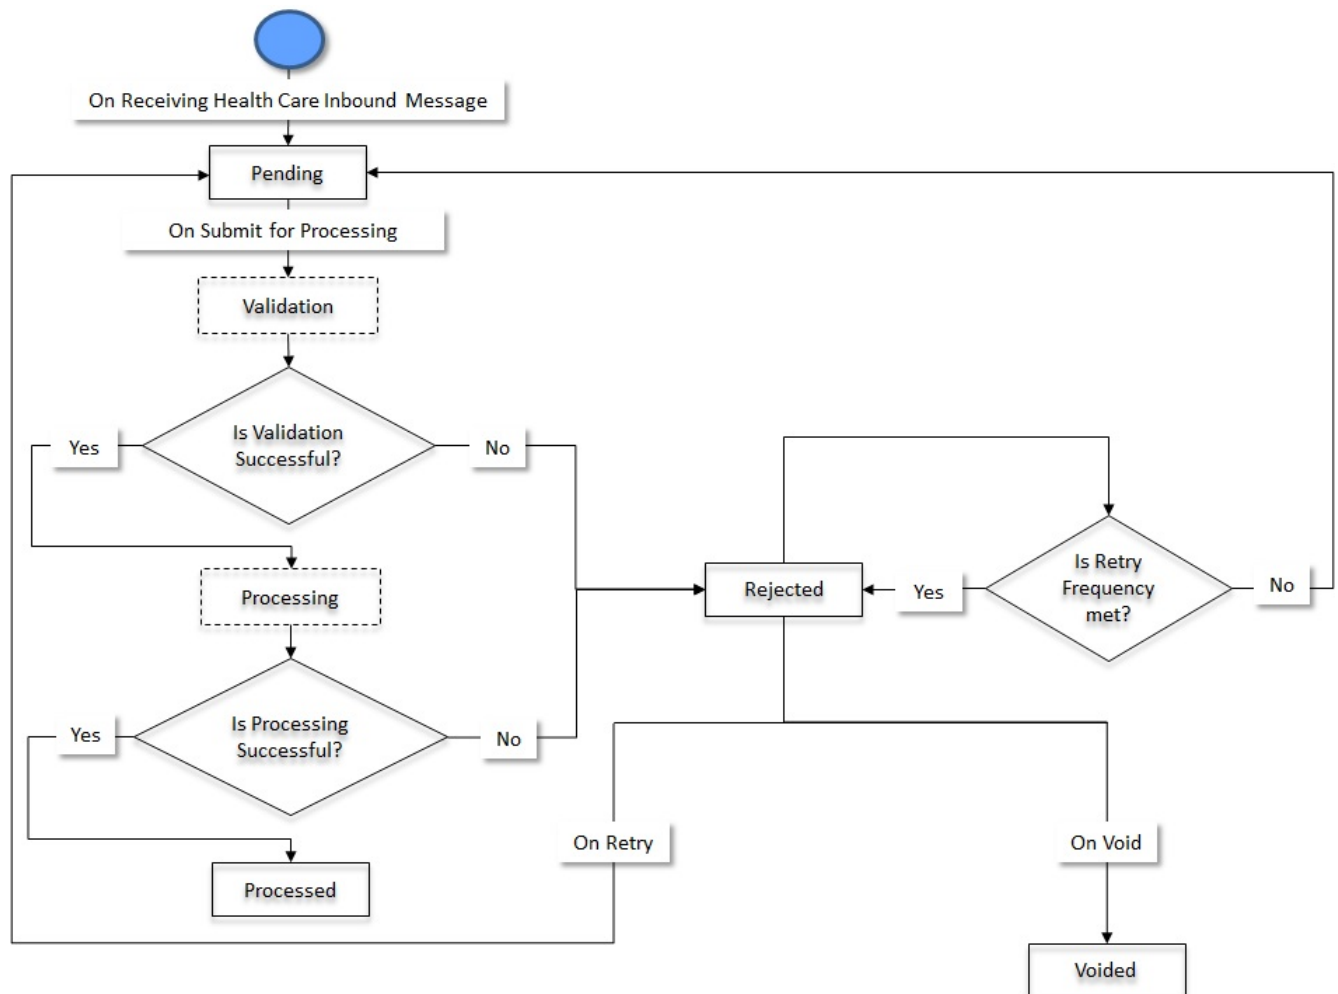

- Define the bill cancel reasons which you want to use when the premium bill segment is canceled during the policy or membership termination.
- Define the required exchange rates in the system.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-HCINVAL

Health Care Inbound Message - Validation

This algorithm is invoked when you execute the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the health care inbound message which is in the **Pending** status. It checks the following:

- Whether the details of the parent customer are given in the bill group information.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.

- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-HCINPROC

This algorithm is invoked once a health care inbound message is successfully validated. It processes the health care inbound message and creates or updates the parent customers, bill groups (including derivation and pricing parameters for the bill group), accounts, self-funded or fully-insured group policies, policy plans, memberships, member persons, pass-through billable charges, and pricing rules. In addition, it allows you to terminate, reinstate, and renew a fully-insured group policy.

If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. The memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.

If the processing fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

## C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## Health Care Inbound Message XML Format

**Note:** We recommend you to refer the Health Care Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the health care inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health care inbound message.	Yes
bo	Used to indicate the business object using which the health care inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> <li>• C1-HCInboundMessage</li> </ul>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)						
messageType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 302 1227 785"> <thead> <tr> <th data-bbox="602 302 797 386">If this tag is used within...</th> <th data-bbox="797 302 1227 386">Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 386 797 638">schema</td> <td data-bbox="797 386 1227 638">           Indicates the health care inbound message type using which the health care inbound message is created in the system.   <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.         </td> </tr> <tr> <td data-bbox="602 638 797 785">headerData</td> <td data-bbox="797 638 1227 785">           Used to specify the health care inbound message type using which the health care inbound message should be created in the system.         </td> </tr> </tbody> </table> <p><b>Note:</b> You must specify a valid health care inbound message type which is in the <b>Active</b> status.</p>	If this tag is used within... billAfterDt	<p>Used to specify the date after which the bill must be generated for the billable charge.</p> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format.</p>	No						
billableChargeLines	Used to specify the details for a pass through line in the billable charge.	Yes						
descriptionOnBill	Used to specify the information about the pass through line that should appear on the bill.	Yes						

Tag Name	Tag Description	Mandatory (Yes or No)
currencyCode	<p>Used to indicate the currency in which you want to charge the amount.</p> <div data-bbox="602 321 1227 579" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.</p> </div>	Yes
chargeAmount	Used to specify the charge amount.	Yes
showOnBillSw	<p>Used to indicate whether the charge should appear on the person's printed bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <div data-bbox="602 835 1227 915" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>true</b>.</p> </div>	No
appearInSummarySw	<p>Used to indicate whether the charge should be included in the summary line. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <div data-bbox="602 1121 1227 1201" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>false</b>.</p> </div>	No
distributionCode	<p>Used to specify the distribution code which indicates the GL account associated with the charge.</p> <div data-bbox="602 1310 1227 1390" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You must specify a distribution code which is already defined in the system.</p> </div>	No
accountData	Used to specify the account details of a person.	<p>Yes (Conditional)</p> <div data-bbox="1252 1472 1464 1612" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This data is required while defining or editing an account.</p> </div>

Tag Name	Tag Description	Mandatory (Yes or No)
accountType	<p>Used to indicate the type of account. This information is stored as a characteristic for the account.</p> <p><b>Note:</b> The value is stored in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration. You must specify a value which is already defined in the predefined characteristic type.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing an account.</p>
customerClass	<p>Used to indicate the customer class to which the account belongs.</p> <p><b>Note:</b> You must specify a customer class which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining an account.</p>
billCycle	<p>Used to indicate the bill cycle for the account.</p> <p><b>Note:</b> You must specify a bill cycle which is already defined in the system.</p>	No
billLeadDays	<p>Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0).</p> <p><b>Note:</b> If you do not specify the value, by default, it is set to zero(0).</p>	No
currency	<p>Used to indicate the currency in which you want to bill the account.</p> <p><b>Note:</b> You must specify a currency which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining an account.</p>
setUpDate	<p>Used to specify the date when the account was first created. This is purely informational.</p> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format. If you do not specify the value, by default, it is set to the current date.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)						
acctUsageFlg	<p>Used to indicate the category to which the account belongs. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>INVC</b> - Indicates that the account will be used to bill charges of the usage accounts.</li> <li>• <b>SETL</b> - Indicates that the account will be used only for settlement purposes.</li> <li>• <b>USAG</b> - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually.</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>USAG</b>.</p>	No						
comments	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 827 1227 1136"> <thead> <tr> <th data-bbox="602 827 894 911">If this tag is used within...</th> <th data-bbox="894 827 1227 911">Then the purpose of the comments tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 911 894 1026">accountData</td> <td data-bbox="894 911 1227 1026">Used to specify additional information about the account.</td> </tr> <tr> <td data-bbox="602 1026 894 1136">autoPayDetails</td> <td data-bbox="894 1026 1227 1136">Used to specify additional information about the auto pay instruction.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the comments tag is...	accountData	Used to specify additional information about the account.	autoPayDetails	Used to specify additional information about the auto pay instruction.	No
If this tag is used within...	Then the purpose of the comments tag is...							
accountData	Used to specify additional information about the account.							
autoPayDetails	Used to specify additional information about the auto pay instruction.							
deferAutoPayDt	Used to specify the date till when you want to hold the automatic payment process for the account.	No						
collectionClass	<p>Used to specify the collection class using which you want to control the account's debt.</p> <p><b>Note:</b> If you do not specify the value, by default, it is set to the collection class which is specified in the customer class of the account. You must specify a collection class which is already defined in the system.</p>	No						

Tag Name	Tag Description	Mandatory (Yes or No)						
billRouteType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 302 1219 611"> <thead> <tr> <th data-bbox="602 302 894 380">If this tag is used within...</th> <th data-bbox="894 302 1219 380">Then the purpose of the billRouteType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 380 894 495">accountData</td> <td data-bbox="894 380 1219 495">Used to indicate how the account's bill must be sent to the main customer.</td> </tr> <tr> <td data-bbox="602 495 894 611">accountPersonRouting</td> <td data-bbox="894 495 1219 611">Used to indicate how the account's bill must be sent to the linked person.</td> </tr> </tbody> </table> <p><b>Note:</b> You must specify a bill route type which is already defined in the system.</p>	If this tag is used within... accountPersonRouting	Used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>							

Tag Name	Tag Description	Mandatory (Yes or No)
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date.  <b>Note:</b> The priority cannot be less than or equal to zero.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> <li>• <b>C1DD</b> - Indicates that you want to directly debit the main customer's bank account.</li> <li>• <b>C1PA</b> - Indicates that you want to send a payment advice to the main customer.</li> </ul>	No
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution.  <b>Note:</b> You must specify an auto pay route type which is already defined in the system.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request.  <b>Note:</b> You must specify an auto pay source which is already defined in the system.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.

Tag Name	Tag Description	Mandatory (Yes or No)
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire.  <b>Note:</b> You must specify the month in the MM format.	Yes (Conditional)  <b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.
expiryYear	Used to specify the year when the tender type of the auto pay source will expire.  <b>Note:</b> You must specify the year in the YYYY format.	Yes (Conditional)  <b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.
name	Used to specify the name of the person as it appears in the financial institution's system.	No
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.  <b>Note:</b> The maximum withdrawal amount cannot be less than zero.	No

Tag Name	Tag Description	Mandatory (Yes or No)														
accountPerson	<p>Used to specify information about the person (other than main customer) to whom you want to link the account.</p> <p><b>Note:</b> The system, by default, adds the person (for whom the account information is given in the health care inbound message) as the main customer of the account. While linking the person as main customer of the account, the system sets the following attributes:</p> <table border="1" data-bbox="602 562 1227 940"> <thead> <tr> <th data-bbox="602 562 954 611">Attribute Name</th> <th data-bbox="954 562 1227 611">Attribute Value</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 611 954 659">Financially Responsible</td> <td data-bbox="954 611 1227 659">Y</td> </tr> <tr> <td data-bbox="602 659 954 707">Account Relationship Type</td> <td data-bbox="954 659 1227 707">Main Customer</td> </tr> <tr> <td data-bbox="602 707 954 756">Receive Copy of Bill</td> <td data-bbox="954 707 1227 756">Y</td> </tr> <tr> <td data-bbox="602 756 954 804">Bill Format</td> <td data-bbox="954 756 1227 804">Detailed</td> </tr> <tr> <td data-bbox="602 804 954 852">Receives Notification</td> <td data-bbox="954 804 1227 852">Y</td> </tr> <tr> <td data-bbox="602 852 954 900">Number of Bill Copies</td> <td data-bbox="954 852 1227 900">1</td> </tr> </tbody> </table>	Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y	Number of Bill Copies	1	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while linking a person to an account.</p>
Attribute Name	Attribute Value															
Financially Responsible	Y															
Account Relationship Type	Main Customer															
Receive Copy of Bill	Y															
Bill Format	Detailed															
Receives Notification	Y															
Number of Bill Copies	1															
accountRelationshipType	<p>Used to indicate how the person is related to the account.</p> <p><b>Note:</b> You must specify an account relationship type which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while linking a person to an account.</p>														
isFinanciallyResponsible	<p>Used to indicate whether the person is financially responsible for the account. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>false</b>.</p>	<p>No</p>														
personAddressOverride	<p>Used to specify the account override address for the linked person.</p>	<p>No</p>														
postal	<p>Used to specify the postal code of the address.</p>	<p>No</p>														
accountPersonRouting	<p>Used to specify the bill routing information for the linked person.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing the bill routing information of a linked person.</p>														

Tag Name	Tag Description	Mandatory (Yes or No)
shouldReceiveCopyOfBill	<p>Used to indicate whether the linked person should receive a copy of the account's bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>N</b>.</p>	No
billFormat	<p>Used to indicate whether the linked person should receive the detailed or summary bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• D</li> <li>• S</li> </ul> <p><b>Note:</b> You must specify a value which is already defined in the <b>BILL_FORMAT_FLG</b> lookup field. It must be in the <b>Active</b> status. If you do not specify the value, by default, it is set to <b>D</b> when the linked person should receive a copy of the account's bill. This information is ignored when the <b>shouldReceiveCopyOfBill</b> tag contains <b>N</b>.</p>	No
numberOfBillCopies	<p>Used to indicate the number of copies of the bill which the linked person must receive.</p> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>1</b> when the linked person should receive a copy of the account's bill. This information is ignored when the <b>shouldReceiveCopyOfBill</b> tag contains <b>N</b>.</p>	No
receivesNotification	<p>Used to indicate whether the linked person should receive letters (i.e. notifications) initiated by collection, write-off, and overdue events. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>N</b>. This information is ignored when the <b>shouldReceiveCopyOfBill</b> tag contains <b>N</b>.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
policyData	Used to specify the details of the policy.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing a policy.
policyType	Used to indicate the type of policy.  <b>Note:</b> You must specify a policy type which is already defined in the system. If you want to create a fully-insured group policy, you must specify a policy type where the policy category is set to <b>Fully-Insured Group</b> . However, if you want to create a self-funded policy, you must specify a policy type where the policy category is set to <b>Self-Funded</b> .	Yes (Conditional)  <b>Note:</b> This data is required while defining a policy.
runOutEndDate	Used to specify the date when the runout period of the self-funded policy ends.  <b>Note:</b> The runout end date cannot be earlier than the policy end date. You must specify the date in the YYYY-MM-DD format.	No
runOutAdminOption	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"><li>• NROA</li><li>• PERC</li></ul> <b>Note:</b> At present, this data is used only for the informational purpose and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. You must specify a value which is already defined in the <b>RUNOUT_ADM_OPT_FLG</b> lookup field. It must be in the <b>Active</b> status.	No
renewalDate	Used to specify the date when you want to renew the fully-insured group policy.  <b>Note:</b> You can renew a self-funded policy only from the user interface. You must specify the date in the YYYY-MM-DD format.	Yes (Conditional)  <b>Note:</b> This data is required while renewing a fully-insured group policy.

Tag Name	Tag Description	Mandatory (Yes or No)
policyPersons	Used to associate a person with the policy.	Yes (Conditional) <b>Note:</b> This data is required while associating a person with the policy.
policyPerRole	Used to indicate the role of the person in the policy. <b>Note:</b> You must specify a policy person role which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while associating a person with the policy.
terminationInformation	Used to specify the termination details of the fully-insured group policy. <b>Note:</b> At present, you cannot terminate a self-funded policy either from the user interface or through a health care inbound message.	No
terminateDate	Used to specify the date when you want to terminate the fully-insured group policy. <b>Note:</b> You must specify the date in the YYYY-MM-DD format. The termination date cannot be earlier than the policy start date. On terminating a policy, the status of the policy is changed to the status which is specified in the <b>Policy Termination Status</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.	Yes (Conditional) <b>Note:</b> This data is required while terminating a fully-insured group policy.
terminationReason	Used to indicate the reason why you want to terminate the fully-insured group policy. <b>Note:</b> You must specify the status reason which is already defined for the status specified in the <b>Policy Termination Status</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.	Yes (Conditional) <b>Note:</b> This data is required while terminating a fully-insured group policy.
reinstateInformation	Used to specify the reinstatement details of the fully-insured group policy. <b>Note:</b> At present, you cannot reinstate a self-funded policy either from the user interface or through a health care inbound message.	No

Tag Name	Tag Description	Mandatory (Yes or No)
reinstatementDate	<p>Used to specify the date when you want to reinstate the fully-insured group policy.</p> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format. The reinstatement date cannot be earlier than the policy start date. On reinstating a policy, the status of the policy is changed to the status which is specified in the <b>Policy Reinstatement Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while reinstating a fully-insured group policy.</p>
reinstatementReason	<p>Used to indicate the reason why you want to reinstate the fully-insured group policy.</p> <p><b>Note:</b> You must specify the status reason which is already defined for the status specified in the <b>Policy Reinstatement Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while reinstating a fully-insured group policy.</p>
planData	<p>Used to specify the details of the policy plan.</p> <p><b>Note:</b> At present, you can only define a policy plan in a fully-insured group policy. Therefore, the system will ignore this information when given for a self-funded policy.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing a policy plan.</p>
planName	Used to specify the description for the policy plan.	No
pricingRuleTypeList	Used to associate a pricing rule type with the policy plan.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while associating a pricing rule type with the policy plan.</p>
pricingRuleType	<p>Used to specify the pricing rule type.</p> <p><b>Note:</b> At present, you can only associate those pricing rule types where the category is set to <b>Age Based, Tier Based, or Pass-Through Billable Charge</b>. Therefore, the system will ignore the pricing rule types where the category is set to <b>Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Flat Fees, Ancillary, Discount Arrangement, or Level Funded</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when a price item is not associated with the policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
primaryPlanSw	Used to indicate whether the plan is a primary plan in the policy. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> If you do not specify the value, by default, it is set to N.           </div>	No
pricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This data is required while defining or editing a pricing rule.           </div>
entityType	Used to indicate the type of entity for which you want to define the pricing rule. The valid value is: <ul style="list-style-type: none"> <li>• PLAN</li> </ul>	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This data is required while defining or editing a pricing rule.           </div>
entityIdentifier	Used to indicate the policy plan for which you want to define the pricing rule.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This data is required while defining or editing a pricing rule.           </div>
pricingRuleType	Used to indicate the pricing rule type using which you want to define the pricing rule. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> You must specify a pricing rule type where the category is set to <b>Age Based</b> or <b>Tier Based</b>.           </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This data is required while defining or editing a pricing rule.           </div>
priceItemCd	Used to indicate the price item for which you want to define the pricing rule. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> You must specify a price item which is already associated with the respective pricing rule type.           </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This data is required while defining or editing a pricing rule.           </div>

Tag Name	Tag Description	Mandatory (Yes or No)
rateOption	<p>Used to indicate the rate option using which you want to create price assignment for the pricing rule.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>You must specify a rate option which is already defined in the <b>C1-ExtLookRetTypeRateOpt</b> extendable lookup. It must be in the <b>Active</b> status.</p> <p>If the rate option is not given for an age-based pricing rule, by default, it is set to:</p> <ul style="list-style-type: none"> <li>The value specified in the <b>Default Rate Option – Flat</b> option type of the <b>C1-ASOBLNG</b> feature configuration when the modifier method is set to <b>FLAT</b></li> <li>The value specified in the <b>Default Rate Option – Percentage</b> option type of the <b>C1-ASOBLNG</b> feature configuration when the modifier method is set to <b>EXPT</b> or <b>INPT</b></li> </ul> <p>However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the <b>Default Rate Option – Flat</b> option type of the <b>C1-ASOBLNG</b> feature configuration when the modifier method is set to <b>FLAT</b> or <b>NULL</b>.</p> </div>	No
modifierApplicability	<p>Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>N</b>.</p> </div>	No
modifierMethod	<p>Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are:</p> <ul style="list-style-type: none"> <li><b>FLAT</b> - Indicates that the system should consider the modifier rate as a flat amount.</li> <li><b>INPT</b> - Indicates that the system should consider the modifier rate as inclusive percentage.</li> <li><b>EXPT</b> - Indicates that the system should consider the modifier rate as exclusive percentage.</li> </ul>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This data is required when the <b>modifierApplicability</b> tag contains <b>Y</b>.</p> </div>

Tag Name	Tag Description	Mandatory (Yes or No)
baseRate	<p>Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes.</p> <p><b>Note:</b> While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining a pricing rule.</p>
baseFee	<p>Used to specify the base fees for the eligible members.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining a pricing rule.</p>
lowerAgeLimit	<p>Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component.</p> <p><b>Note:</b> The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the <b>Age Based Parameter</b> option type of the <b>C1-ASOBLNG</b> feature configuration. This data is ignored when given in a tier-based pricing rule information.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining an age-based pricing rule.</p>
upperAgeLimit	<p>Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component.</p> <p><b>Note:</b> The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the <b>Age Based Parameter</b> option type of the <b>C1-ASOBLNG</b> feature configuration. This data is ignored when given in a tier-based pricing rule information.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining an age-based pricing rule.</p>
pricingParameter	<p>Used to specify a set of employee attributes based on which the base fees may vary.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining a tier-based pricing rule.</p>

Tag Name	Tag Description	Mandatory (Yes or No)						
parameterCode	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 300 1227 772"> <thead> <tr> <th data-bbox="602 300 857 384">If this tag is used within...</th> <th data-bbox="857 300 1227 384">Then the purpose of the parameterCode tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 384 857 594">pricingParameter</td> <td data-bbox="857 384 1227 594">Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> <tr> <td data-bbox="602 594 857 772">modifierInformation</td> <td data-bbox="857 594 1227 772">Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> </tbody> </table> <p><b>Note:</b> You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to <b>Pricing Eligibility Criteria</b>. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information. You cannot specify any special character except underscore (_) in the parameter name.</p>	If this tag is used within...	Then the purpose of the parameterCode tag is...	pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.	modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the respective information.</p>
If this tag is used within...	Then the purpose of the parameterCode tag is...							
pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.							
modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.							
parameterValue	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 1234 1227 1518"> <thead> <tr> <th data-bbox="602 1234 857 1318">If this tag is used within...</th> <th data-bbox="857 1234 1227 1318">Then the purpose of the parameterValue tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 1318 857 1434">pricingParameter</td> <td data-bbox="857 1318 1227 1434">Used to specify the value for the parameter (i.e. employee attribute).</td> </tr> <tr> <td data-bbox="602 1434 857 1518">modifierInformation</td> <td data-bbox="857 1434 1227 1518">Used to specify the value for the parameter (i.e. modifier).</td> </tr> </tbody> </table> <p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p>	If this tag is used within...	Then the purpose of the parameterValue tag is...	pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).	modifierInformation	Used to specify the value for the parameter (i.e. modifier).	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the respective information.</p>
If this tag is used within...	Then the purpose of the parameterValue tag is...							
pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).							
modifierInformation	Used to specify the value for the parameter (i.e. modifier).							

Tag Name	Tag Description	Mandatory (Yes or No)
modifierInformation	Used to specify the modifier based on which you want to increase or decrease the base fees.  <b>Note:</b> While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.	Yes (Conditional)  <b>Note:</b> This data is required while specifying the modifier information.
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional)  <b>Note:</b> This data is required while specifying the modifier information.

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
c1InboundMessage	Displays the inbound message ID.						
boStatus	Displays the status of the health care inbound message.						
statusReason	Indicates the reason why the status of the health care inbound message is changed.						
person	At present, this tag is not supported in a health care inbound message.						
statusDateTime	Displays the date and time when the status of the health care inbound message is changed in the system.						
creationDateTime	Displays the date and time when the health care inbound message is created in the system.						
searchCharacteristicValue	At present, this tag is not supported in a health care inbound message.						
version	This tag appears within the following parent tags: <table border="1" data-bbox="683 1446 1463 1728"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the health care inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the health care inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the health care inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the health care inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.						
paidThroughDate	Indicates the term end date of the last fully or partially paid term. For more information about the paid through date, refer to <a href="#">Policy</a> on page 2095.						

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the health care inbound message.  <b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the health care inbound message is validated and processed either through the user interface or batch process.
retryDateTime	Displays the date and time when the retry option is used to change the status of the health care inbound message from <b>Rejected</b> to <b>Pending</b> .
numberOfRetries	Indicates the number of times the retry option is used for the health care inbound message.
currentErrorState	Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> <li>REJECTED</li> </ul>
isRetried	Indicates whether the retry option is used to change the status of the health care inbound message. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## Sample Health Care Inbound Message for Fully-Insured Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured health care business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Care Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Care Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Care Policy	HMO Medical Bronze 60 RE	AGE_BASED

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
				APE Medicare Gold RE MALE	AGE_BASED
				APE Medicare Bronze RE FEMALE	AGE_BASED
				APE Medicare Silver RE FEMALE	AGE_BASED
				APE Medicare Gold RE FEMALE	AGE_BASED

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	PPO
Antartica Petroleum COBRA	SMALLPRIME	COBRA	SEATTLE	MEDICAL	HMO
	SMALLPRIME	COBRA	SEATTLE	MEDICAL	PPO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	HMO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	PPO
	SMALLPRIME	COBRA	SAN FRANCISCO	MEDICAL	HMO
	SMALLPRIME	COBRA	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	COBRA	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	COBRA	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	COBRA	LOS ANGELES	MEDICAL	HMO

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	COBRA	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	COBRA	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	COBRA	LOS ANGELES	DENTAL	PPO
Antartica Petroleum RETIREE	SMALLPRIME	RETIRED	SEATTLE	MEDICAL	HMO
	SMALLPRIME	RETIRED	SEATTLE	MEDICAL	PPO

## Sample Health Care Inbound Message for Self-Funded Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a self-funded health care business
- Create the accounts for the bill groups
- Create the policies for the bill groups where the policy category is set to **Self-Funded**

Person Name	Person Type	Policy	Account
US Energy Corp	Parent Customer	-	-
US Energy ACTIVE	Bill Group	Active Employee Health Care Policy	Standard
			Retention
US Energy COBRA	Bill Group	Active COBRA Employee Health Care Policy	Standard
			Retention
US Energy RETIREE	Bill Group	Retiree Employee Health Care Policy	Standard
			Retention

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
US Energy ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	-	-
	SMALLPRIME	ACTIVE	LOS ANGELES	-	-
	SMALLPRIME	ACTIVE	DALLAS	-	-
	SMALLPRIME	ACTIVE	SAN JOSE	-	-
	SMALLPRIME	ACTIVE	SAN FRANCISCO	-	-
	SMALLPRIME	ACTIVE	CHARLOTTE	-	-
	SMALLPRIME	ACTIVE	DETROIT	-	-
	SMALLPRIME	ACTIVE	CLEVELAND	-	-
	SMALLPRIME	ACTIVE	ORLANDO	-	-
	SMALLPRIME	ACTIVE	JERSEY CITY	-	-
	SMALLPRIME	ACTIVE	FONTANA	-	-
	SMALLPRIME	ACTIVE	OXNARD	-	-
US Energy COBRA	SMALLPRIME	COBRA	SEATTLE	-	-
	SMALLPRIME	COBRA	LOS ANGELES	-	-

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	COBRA	DALLAS	-	-
	SMALLPRIME	COBRA	SAN JOSE	-	-
	SMALLPRIME	COBRA	SAN FRANCISCO	-	-
	SMALLPRIME	COBRA	CHARLOTTE	-	-
	SMALLPRIME	COBRA	DETROIT	-	-
	SMALLPRIME	COBRA	CLEVELAND	-	-
	SMALLPRIME	COBRA	ORLANDO	-	-
	SMALLPRIME	COBRA	JERSEY CITY	-	-
	SMALLPRIME	COBRA	FONTANA	-	-
	SMALLPRIME	COBRA	OXNARD	-	-
US Energy RETIREE	SMALLPRIME	RETIRED	SEATTLE	-	-
	SMALLPRIME	RETIRED	LOS ANGELES	-	-
	SMALLPRIME	RETIRED	DALLAS	-	-
	SMALLPRIME	RETIRED	SAN JOSE	-	-
	SMALLPRIME	RETIRED	SAN FRANCISCO	-	-
	SMALLPRIME	RETIRED	CHARLOTTE	-	-
	SMALLPRIME	RETIRED	DETROIT	-	-
	SMALLPRIME	RETIRED	CLEVELAND	-	-
	SMALLPRIME	RETIRED	ORLANDO	-	-
	SMALLPRIME	RETIRED	JERSEY CITY	-	-
	SMALLPRIME	RETIRED	FONTANA	-	-
	SMALLPRIME	RETIRED	OXNARD	-	-

## Sample Health Care Inbound Message for Pricing Rules

Using the below example, you can create the following:

- Tier-based pricing rule for the **DD\_BASIC** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Parameter	Parameter Value
DD_BASIC	TIER_BASED	30	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	MALE
		40	EMPBAND	IC1

Policy Plan	Pricing Rule Type	Base Rate	Parameter	Parameter Value
			SUBSCRIPTIONTIER	ES
			GENDER	MALE
		60	EMPBAND	IC1
			SUBSCRIPTIONTIER	F
			GENDER	MALE
		25	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	FEMALE
		35	EMPBAND	IC1
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
		50	EMPBAND	IC1
SUBSCRIPTIONTIER	F			
GENDER	FEMALE			

- Age-based pricing rule for the **PPO\_MED\_BRONZE\_RET** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
PPO_MED_BRONZE_RET	AGE_BASED	150	0	15	GENDER	FEMALE	TOBUSAGE	Y	10
		150	0	15	GENDER	MALE	TOBUSAGE	Y	20
		170	16	18	GENDER	FEMALE	TOBUSAGE	Y	20
		170	16	18	GENDER	MALE	TOBUSAGE	Y	30
		200	19	20	GENDER	FEMALE	TOBUSAGE	Y	30
		200	19	20	GENDER	MALE	TOBUSAGE	Y	40
		240	21	40	GENDER	FEMALE	TOBUSAGE	Y	40
		240	21	40	GENDER	MALE	TOBUSAGE	Y	50
		270	41	60	GENDER	FEMALE	TOBUSAGE	Y	50
		270	41	60	GENDER	MALE	TOBUSAGE	Y	60
		300	61	65	GENDER	FEMALE	TOBUSAGE	Y	60

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
		300	61	65	GENDER	MALE	TOBUSAGE	Y	70
		350	66	199	GENDER	FEMALE	TOBUSAGE	Y	70
		350	66	199	GENDER	MALE	TOBUSAGE	Y	80

## Sample Health Care Inbound Message for Membership

Using the below example, you can do the following:

- Create the persons who are neither parent customer nor bill group
- Create a membership where the person is the main subscriber
- Add persons in a membership

Person Name	Person Type	Policy	Policy Plan	Main Subscriber	Member Relationship Type
G, ALLEN	Person	AP234389	HMO_MED_SILVER_RET	Yes	SELF
G, JOHNSON	Person	AP234389	HMO_MED_SILVER_RET	No	SPOUSE
G, CLARK	Person	AP234389	HMO_MED_SILVER_RET	No	SON
G, NELSON	Person	AP234389	HMO_MED_SILVER_RET	No	SON
G, PARKER	Person	AP234389	HMO_MED_SILVER_RET	No	SON
G, RUSSEL	Person	AP234389	HMO_MED_SILVER_RET	No	SON
G, LINDA	Person	AP234389	HMO_MED_SILVER_RET	No	DAUGHTER

```

## Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Person Business Object</b> - The business object using which a person should be created when the customer inbound message is processed.</li> <li>• <b>Account Business Object</b> - The business object using which an account should be created when the customer inbound message is processed.</li> <li>• <b>Hold Request Business Object</b> - The business object using which the hold request should be created when the <b>Invoice Hold Reason</b> characteristic is defined for an account in the customer inbound message.</li> <li>• <b>Status on Policy Termination</b> - The status to which the policy should be transitioned when the policy termination request is processed through the customer inbound message.</li> <li>• <b>Status on Policy Reinstatement</b> - The status to which the policy should be transitioned when the policy reinstatement request is processed through the customer inbound message.</li> <li>• <b>Status on Policy Renewal</b> - The status to which the policy should be transitioned when the policy renewal request is processed through the customer inbound message.</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> </ul>

Inbound Message Type	Helps the system to determine...
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Person Business Object</b> - The business object using which a person should be created when the ASO customer inbound message is processed.</li> <li>• <b>Account Business Object</b> - The business object using which an account should be created when the ASO customer inbound message is processed.</li> <li>• <b>Policy Type</b> - The policy type using which a policy should be created when the ASO customer inbound message is processed.</li> <li>• <b>Policy Plan Business Object</b> - The business object using which a policy plan should be created when the ASO customer inbound message is processed.</li> </ul>
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Customer Registration Type</b> - The customer registration type using which the customer registration object should be created through a health care inbound message.</li> </ul>

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- [Inbound Message Type List](#) on page 1982
- [Inbound Message Type](#) on page 1983

## Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Inbound Message Type</b> screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Inbound Message Type</b> screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the inbound message type.  <b>Note:</b> You can delete an inbound message type only when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** () icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

## Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** – Displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.
Customer Registration Type	<p>Indicates the customer registration type using which the customer registration object is created through a health care inbound message.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Customer Registration Type</b> screen appears where you can view the details of the respective customer registration type. This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-HCInboundMsgType</b> business object.</p>
Person Business Object	<p>Indicates the business object using which a person is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object. This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Account Business Object	<p>Indicates the business object using which an account is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object. This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>

Field Name	Field Description
Policy Type	<p>Indicates the policy type using which a policy is created when the ASO customer inbound message is processed.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Policy Type</b> screen appears where you can view the details of the respective policy type.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Policy Plan Business Object	<p>Indicates the business object using which a policy plan is created when the ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Hold Request Business Object	<p>Indicates the business object using which a hold request is created for an account when the customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Termination	<p>Indicates the status to which the policy is transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Reinstatement	<p>Indicates the status to which the policy is transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>

Field Name	Field Description
Status on Policy Renewal	Indicates the status to which the policy is transitioned when the policy renewal request is processed through the customer inbound message.  <b>Note:</b> This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.
Inbound Message Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the inbound message type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Detailed Description	Displays additional information about the inbound message type.

- **Characteristics** – Lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type.  <b>Note:</b> You can delete an inbound message type only when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears only when you click the **Broadcast**  icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

## **Viewing the Inbound Message Type Details**

### **Procedure**

To view the details of an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Broadcast**  icon corresponding to the inbound message type whose details you want to view.  
The **Inbound Message Type** zone appears.
5. View the details of the inbound message type in the **Inbound Message Type** zone.

## **Defining an Inbound Message Type**

### **Prerequisites**

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message type business objects defined in the application</li> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message type business objects defined in the application</li> <li>• Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message type business objects defined in the application</li> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• Health care inbound message type business objects defined in the application</li> <li>• Health care inbound message business objects defined in the application</li> <li>• Customer registration types defined in the application</li> </ul>

### **Procedure**

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.  
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)										
Inbound Message Type Business Object	Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type: <table border="1" data-bbox="565 390 1252 768"> <thead> <tr> <th>Inbound Message Type</th> <th>Business Object</th> </tr> </thead> <tbody> <tr> <td>Customer Inbound Message Type</td> <td>C1-CustomerInboundMessageType</td> </tr> <tr> <td>Membership Inbound Message Type</td> <td>C1-MemberInboundMessageType</td> </tr> <tr> <td>ASO Customer Inbound Message Type</td> <td>C1-ASOCustomerInboundMsgType</td> </tr> <tr> <td>Health Care Inbound Message Type</td> <td>C1-HCInboundMsgType</td> </tr> </tbody> </table>	Inbound Message Type	Business Object	Customer Inbound Message Type	C1-CustomerInboundMessageType	Membership Inbound Message Type	C1-MemberInboundMessageType	ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType	Health Care Inbound Message Type	C1-HCInboundMsgType	Yes
Inbound Message Type	Business Object											
Customer Inbound Message Type	C1-CustomerInboundMessageType											
Membership Inbound Message Type	C1-MemberInboundMessageType											
ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType											
Health Care Inbound Message Type	C1-HCInboundMsgType											

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Inbound Message Type** screen.

- Select the **ASO Customer Inbound Message Type**, **Customer Inbound Message Type**, **Health Care Inbound Message Type**, or **Membership Inbound Message Type** business object to create the respective inbound message type.
- Click **OK**.

The **Inbound Message Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the inbound message type.
- Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-HCInboundMsgType</b> business object.</p> <p>While creating a health care inbound message type for the fully-insured health care business, you must use a customer registration type where the <b>Approval Required</b>, <b>Final Approval Required</b>, and <b>Manual Billing Hierarchy and Pricing</b> options are not selected. However, while creating a health care inbound message type for the self-funded health care business, you must use a customer registration type where the <b>Final Approval Required</b> and <b>Manual Billing Hierarchy and Pricing</b> options are selected, but the <b>Approval Required</b> option is not selected.</p>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p>	Yes
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object. You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object. You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- Enter the required details in the **Main** section.
- Define characteristics for the inbound message type, if required.
- Click **Save**.

The inbound message type is defined.

<b>Inbound Message Type</b> screen	<a href="#">Inbound Message Type</a> on page 1981
How to define a characteristic for an inbound message type	<a href="#">Defining a Characteristic for an Inbound Message Type</a> on page 1991

## **Defining a Characteristic for an Inbound Message Type**

### **Prerequisites**

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

### **Procedure**

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound message type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Inbound Message Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the inbound message type, click the **Delete**  icon corresponding to the characteristic.

## **Editing an Inbound Message Type**

### **Prerequisites**

The following table lists the prerequisites for editing various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• Health care inbound message business objects defined in the application</li> <li>• Customer registration types defined in the application</li> </ul>

### **Procedure**

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *Inbound message type* whose details you want to edit.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <div data-bbox="591 436 1105 1014" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-HCInboundMsgType</b> business object.</p> <p>While creating a health care inbound message type for the fully-insured health care business, you must use a customer registration type where the <b>Approval Required</b>, <b>Final Approval Required</b>, and <b>Manual Billing Hierarchy and Pricing</b> options are not selected. However, while creating a health care inbound message type for the self-funded health care business, you must use a customer registration type where the <b>Final Approval Required</b> and <b>Manual Billing Hierarchy and Pricing</b> options are selected, but the <b>Approval Required</b> option is not selected.</p> </div>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <div data-bbox="591 1152 1105 1331" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p> </div>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <div data-bbox="591 1470 1105 1648" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p>	Yes
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object. You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Reinstatement	Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

**Tip:** Alternatively, you can edit the details of an inbound message type by clicking the **Edit** button in the **Inbound Message Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the inbound message type, if required.
7. Click **Save**.

The changes made to the inbound message type are saved.

**Related Topics**

<b>Inbound Message Type</b> zone	<a href="#">Inbound Message Type</a> on page 1983
How to define a characteristic for an inbound message type	<a href="#">Defining a Characteristic for an Inbound Message Type</a> on page 1991

**Copying an Inbound Message Type**

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

**Prerequisites**

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message type (whose copy you want to create) defined in the application</li> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message type (whose copy you want to create) defined in the application</li> <li>• Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message type (whose copy you want to create) defined in the application</li> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• Health care inbound message type (whose copy you want to create) defined in the application</li> <li>• Health care inbound message business objects defined in the application</li> <li>• Customer registration types defined in the application</li> </ul>

### **Procedure**

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.

A sub-menu appears.

3. Click the **Search** option from the **Inbound Message Type** sub-menu.

The **Inbound Message Type** screen appears.

4. In the **Inbound Message Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the inbound message type whose copy you want to create.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-HCInboundMsgType</b> business object.</p> <p>While creating a health care inbound message type for the fully-insured health care business, you must use a customer registration type where the <b>Approval Required</b>, <b>Final Approval Required</b>, and <b>Manual Billing Hierarchy and Pricing</b> options are not selected. However, while creating a health care inbound message type for the self-funded health care business, you must use a customer registration type where the <b>Final Approval Required</b> and <b>Manual Billing Hierarchy and Pricing</b> options are selected, but the <b>Approval Required</b> option is not selected.</p>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p>	Yes
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object. You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object. You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

**Tip:** Alternatively, you can copy an inbound message type by clicking the **Duplicate** button in the **Inbound Message Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics from the inbound message type, if required.
- Click **Save**.

The new inbound message type is defined.

## Deleting an Inbound Message Type

### Procedure

To delete an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the Inbound message type that you want to delete.  
A message appears confirming whether you want to delete the inbound message type.

**Note:** You can delete an inbound message type only when an inbound message is not created using the inbound message type.

**Tip:** Alternatively, you can delete an inbound message type by clicking the **Delete** button in the **Inbound Message Type** zone.

5. Click **OK**.  
The inbound message type is deleted.

## **Inbound Message (Used for Searching)**

---

The **Inbound Message** screen allows you to search for an inbound message using various search criteria. It contains the following zone:

- [Search Inbound Message](#) on page 2002

Through this screen, you can navigate to the following screen:

- [Inbound Message \(Used for Viewing\)](#) on page 2009

### **Search Inbound Message**

The **Search Inbound Message** zone allows you to search for an inbound message using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an inbound message using the inbound message or person details. The valid values are: <ul style="list-style-type: none"> <li>• Message Details</li> <li>• Person Details</li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> By default, the <b>Message Details</b> option is selected.</div>	Yes
Inbound Message ID	Used to search a particular inbound message. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</div>	No
Status	Used to search inbound messages with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</div>	No
Source System	Used to search inbound messages which are received from a particular external system. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</div>	No
Created From	Used to search inbound messages which are created from a particular date onwards. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</div>	No
External Source ID	Used to search inbound messages which are received from a particular external source system. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</div>	No
Created To	Used to search inbound messages which are created till a particular date. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
External Transaction ID	Used to search the inbound message which was a result of a particular transaction in the external source system.  <b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	No
User ID	Used to search inbound messages which are created by a particular user.  <b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	No
External Batch ID	Used to search inbound messages which are created through a particular batch job.  <b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	No
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type.  <b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	No
Person Name	Used to search inbound messages through which a particular person and its related entities are created or updated in the system.  <b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	No
Person Identifier Type	Used to indicate the person identifier type.  <b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search inbound messages through which a particular person and its related entities are created or updated in the system.  <b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the person identifier type as a search criteria, you have to specify the person identifier.

**Note:** You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Inbound Message Information	Displays information about the inbound message.  <b>Note:</b> It has a link. On clicking the link, the <b>Inbound Message</b> screen appears where you can view the details of the respective inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul>
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Created By	Indicates the user who has created the inbound message.  <b>Note:</b> This column appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.
Creation Date	Displays the date when the inbound message is created in the system.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 2005
How to view the details of an inbound message	<a href="#">Viewing the Inbound Message Details</a> on page 2008

## **Searching for an Inbound Message**

### **Prerequisites**

To search for an inbound message, you should have:

- Inbound message types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

### **Procedure**

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.  
The **Inbound Message** screen appears.
3. Enter the search criteria in the **Search Inbound Message** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of inbound messages that meet the search criteria appears in the **Search Results** section.

## **Creating an Inbound Message**

Oracle Revenue Management and Billing allows you to create the following inbound messages by calling the respective inbound web service:

<b>Inbound Message</b>	<b>Inbound Web Service</b>
<a href="#">Customer Inbound Message</a> on page 1758	<a href="#">CI-CustomerStructureInboundMessage</a> on page 2006
<a href="#">Membership Inbound Message</a> on page 1796	<a href="#">CI-MembershipInboundMessage</a> on page 2007
<a href="#">ASO Customer Inbound Message</a> on page 1826	<a href="#">CI-ASOCustomerInboundMessage</a> on page 2007
<a href="#">Health Care Inbound Message</a> on page 1863	<a href="#">CI-HCInboundMessage</a> on page 2008

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

### **C1-CustomerStructureInboundMessage**

The **C1-CustomerStructureInboundMessage** inbound web service enables you to create or update a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. It also allows you to terminate, reinstate, or renew a policy. In addition, it allows you to hold an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message.

On calling the **C1-CustomerStructureInboundMessage** inbound web service, a customer inbound message is created in the **Pending** status. A customer inbound message goes through various statuses in its lifecycle. You can search for a customer inbound message through the **Inbound Message** screen.

Before calling the **C1-CustomerStructureInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1758.

#### **C1-MembershipInboundMessage**

The **C1-MembershipInboundMessage** inbound web service enables you to create or update a membership in a policy plan, add or remove dependents from a membership, create or update the main subscriber or dependent person, associate a contract with a membership, add membership premium for a coverage period, or create billable charges for membership premium.

On calling the **C1-MembershipInboundMessage** inbound web service, a membership inbound message is created in the **Pending** status. A membership inbound message goes through various statuses in its lifecycle. You can search for a membership inbound message through the **Inbound Message** screen.

Before calling the **C1-MembershipInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1796.

Membership Inbound Message Status Transition through a Batch Process	<a href="#">Membership Inbound Message Status Transition through a Batch Process</a> on page 1798

#### **C1-ASOCustomerInboundMessage**

The **C1-ASOCustomerInboundMessage** inbound web service enables you to create or update a parent customer and its bill groups. In addition, it allows you to create or update an account and self-funded policy for a bill group.

On calling the **C1-ASOCustomerInboundMessage** inbound web service, an ASO customer inbound message is created in the **Pending** status. An ASO customer inbound message goes through various statuses in its lifecycle. You can search for an ASO customer inbound message through the **Inbound Message** screen.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1828

### C1-HCInboundMessage

The **C1-HCInboundMessage** inbound web service enables you to create or update a person, account and self-funded or fully-insured group policy. It also allows you to create or update a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, it allows you to terminate, reinstate, or renew a fully-insured group policy.

On calling the **C1-HCInboundMessage** inbound web service, a health care inbound message is created in the **Pending** status. A health care inbound message goes through various statuses in its lifecycle. You can search for a health care inbound message through the **Inbound Message** screen.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1869.

## Viewing the Inbound Message Details

### Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the inbound message in the **Inbound Message** zone.

How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 2005
<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 2009
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 2009

## Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing
- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- [Inbound Message - Main](#) on page 2009
- [Inbound Message - Message](#) on page 2011
- [Inbound Message - Log](#) on page 2012

### Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- [Inbound Message](#) on page 2009

### Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** – Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul>
Inbound Message Type	Indicates the inbound message type using which the inbound message is created. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Inbound Message Type</b> screen appears where you can view the details of the respective inbound message type.</p> </div>
Source System	Indicates the external source system from where the inbound message is received.

Field Name	Field Description
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** – Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics from the inbound message. <b>Note:</b> The <b>Edit</b> button appears only when the inbound message is in the <b>Pending</b> or <b>Rejected</b> status.
Delete	Used to delete the inbound message. <b>Note:</b> The <b>Delete</b> button appears only when the inbound message is in the <b>Pending</b> status.
Submit for Processing	Used to submit the inbound message for validation and processing. <b>Note:</b> The <b>Submit for Processing</b> button appears only when the inbound message is in the <b>Pending</b> status.
Retry	Used when you want to change the status of the inbound message from <b>Rejected</b> to <b>Pending</b> so that the inbound message can be considered once again for validation and processing. <b>Note:</b> The <b>Retry</b> button appears only when the inbound message is in the <b>Rejected</b> status.
Void	Used to cancel the inbound message. <b>Note:</b> The <b>Void</b> button appears only when the inbound message is in the <b>Rejected</b> status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

## Inbound Message - Message

The **Message** tab displays the content of the inbound message in the XML format. It contains the following zone:

- [Inbound Message Content](#) on page 2011

### Inbound Message Content

The **Inbound Message Content** zone displays the content of the inbound message in the XML format. By default, each tag in the inbound message is expanded. You can collapse the tag whenever required.

For more information about the tags, refer to the respective XML format section:

Inbound Message	XML Format
Customer Inbound Message	<a href="#">Customer Inbound Message XML Format</a> on page 1773
Membership Inbound Message	<a href="#">Membership Inbound Message XML Format</a> on page 1809
ASO Customer Inbound Message	<a href="#">ASO Customer Inbound Message XML Format</a> on page 1833
Health Care Inbound Message	<a href="#">Health Care Inbound Message XML Format</a> on page 1875

Once the inbound message is validated and processed either from the user interface or through a batch process, the following tags appear at the bottom of the inbound message in the **Inbound Message Content** zone:

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the inbound message.
retryDateTime	Displays the date and time when the retry option is used to change the status of the inbound message from <b>Rejected</b> to <b>Pending</b> .
numberOfRetries	Indicates the number of times the retry option is used for the inbound message.
currentErrorState	Indicates the status to which the inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> <li>• REJECTED</li> </ul>
isRetried	Indicates whether the retry option is used to change the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>

### Related Topics

How to view the content of an inbound message	<a href="#">Viewing the Content of an Inbound Message</a> on page 2018

## Inbound Message - Log

The **Log** tab contains the following zone:

- [Inbound Message Log](#) on page 2012

### Inbound Message Log

The **Inbound Message Log** zone lists the complete trail of actions performed on the inbound message. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the inbound message.
Details	Displays the details about the action performed on the inbound message.
User	Indicates the user who has performed the action on the inbound message.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is created when the action is performed on the inbound message.
Status Reason	Indicates the reason why the status of the inbound message is changed.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the inbound message by clicking the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

## Editing an Inbound Message

### Procedure

To edit an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to edit.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Inbound Message** zone.

The **Inbound Message** screen appears. It contains the following sections:

- **Main** - Displays the basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** - Used to define, edit, or remove characteristics from the inbound message.

**Note:** The **Edit** button appears only when the inbound message is in the **Pending** or **Rejected** status.

5. Define, edit, or remove characteristics from the inbound message, if required.
6. Click **Save**.

The changes made to the inbound message are saved.

<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 2009
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 2009
How to define a characteristic for an inbound message	<a href="#">Defining a Characteristic for an Inbound Message</a> on page 2013

## **Defining a Characteristic for an Inbound Message**

### **Prerequisites**

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

### **Procedure**

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Inbound Message</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the inbound message.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the inbound message.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the inbound message, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the inbound message, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the inbound message.

### Related Topics

For more information on...	See...
How to edit an inbound message	<a href="#">Editing an Inbound Message</a> on page 2012

## Deleting an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message only when the inbound message is in the **Pending** status.

### Procedure

To delete an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to delete.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Inbound Message** zone.

A message appears confirming whether you want to delete the inbound message.

**Note:** The **Delete** button appears only when the inbound message is in the **Pending** status.

5. Click **OK**.

The inbound message is deleted.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 2005
<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 2009
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 2009

## **Processing an Inbound Message**

### **Prerequisites**

The following table lists the prerequisites which you should setup before processing the respective inbound message:

<b>Inbound Message</b>	<b>Refer to...</b>
Customer Inbound Message	<a href="#">Prerequisites</a> on page 1758
Membership Inbound Message	<a href="#">Prerequisites</a> on page 1796
ASO Customer Inbound Message	<a href="#">Prerequisites</a> on page 1828
Health Care Inbound Message	<a href="#">Prerequisites</a> on page 1869

### **Procedure**

To process an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to submit for validation and processing.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Processing** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Customer inbound message	<p>Creates or updates a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. If requested, it terminates, reinstates, or renews a policy. In addition, if requested, it holds an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message. Finally, status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a person and account using the person and account business objects, respectively, as specified in the inbound message type. It creates a policy using the policy type specified in the <b>C1-CINMSGPRC</b> algorithm. It creates a policy plan using the <b>Policy Plan BO (C1PPLNBO)</b> characteristic defined on the policy type.</p>
Membership inbound message	<p>Creates or updates a membership in a policy plan, adds or removes dependents from a membership, creates or updates the main subscriber or dependent person, associates a contract with a membership, adds membership premium for a coverage period, or creates billable charges for membership premium. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a membership using the <b>Membership BO (C1MEMBRO)</b> characteristic defined on the policy type. If the person who is the main subscriber or dependent in a membership does not exist, the system creates main subscriber or dependent person using the person business object specified in the inbound message type.</p>
ASO Customer Inbound Message	<p>Creates or updates a parent customer and its bill groups. In addition, it creates or updates an account and self-funded policy of a bill group. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a parent customer and bill group using the person business object specified in the inbound message type. It creates an account using the account business object specified in the inbound message type. It creates a self-funded policy using the policy type specified in the inbound message type.</p>

If the inbound message is a...	Then...
Health Care Inbound Message	<p>Creates or updates a person, account and self-funded or fully-insured group policy. It creates or updates a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, if requested, it terminates, reinstates, or renews a fully-insured group policy. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>The system uses the <b>C1-PERSTYPE</b> feature configuration to decide whether the person type specified in the health care inbound message represents <b>Parent Customer</b> or <b>Bill Group</b>. If the person type specified in the health care inbound message matches the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type of the <b>C1-PERSTYPE</b> feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p>

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

**Note:** The **Submit for Processing** button appears only when the inbound message is in the **Pending** status.

## Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

### Procedure

To use the retry option for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to use the retry option.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
5. Click the **Retry** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Pending**.

**Note:** The **Retry** button appears only when the inbound message is in the **Rejected** status.

<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 2009
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 2009

## Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message only when the inbound message is in the **Rejected** status.

### Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to void.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Voided**.

**Note:** The **Void** button appears only when the inbound message is in the **Rejected** status.

## Viewing the Content of an Inbound Message

**Procedure**

To view the content of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Click the **Message** tab.

The **Message** tab appears.

4. View the content of the inbound message in the XML format in the **Inbound Message Content** zone.

**Related Topics**

How to add a log entry for an inbound message	<a href="#">Adding a Log Entry for an Inbound Message</a> on page 2019

**Adding a Log Entry for an Inbound Message****Procedure**

To add a log entry for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.

- In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to add a log entry.

The **Inbound Message** screen appears.

- Click the **Log** tab.

The **Log** tab appears.

- Click the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

The **Add Inbound Message Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Information	Displays information about the inbound message.	Not applicable
Log Details	Used to specify additional comments on the inbound message.	Yes

- Enter the comments in the **Log Details** field.
- Click **Save**.

The log entry is added in the **Inbound Message Log** zone.

Health insurance is a type of insurance coverage that pays for medical and surgical expenses incurred by the insured. Health insurance can reimburse the insured for expenses incurred from illness or injury, or pay the care provider directly. Health insurance policy is a contract between the insurer and the insured, known as the policy holder.

A small, middle, or large organization can opt for a fully-insured or self-funded health care plan for its employees. A fully-insured health plan is the traditional way to structure an employer-sponsored health plan. In the fully-insured plan, the employer contracts an insurance company to cover the employees and dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year, based on the number of employees enrolled in the plan each month. The monthly premium changes during the year when the number of enrolled employees in the plan changes. The insurance carrier collects the premiums and pays the health care claims based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

In self-funded health plan, employers (usually larger) operate their own health plan. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured plan. However, self-insuring exposes the company to much larger risk in the event that more claims than expected must be paid.

Oracle Revenue Management and Billing enables you to create policies for the fully-insured and self-funded health care plans. You can also import the policy data from the policy processing system through a health care inbound message and then view such policy data in the system.

You can create a fully-insured policy using the **C1-POLICY** business object and a self-funded policy using the **C1-ASOPolicy** business object. The fully-insured and self-funded policies go through various statuses in their lifecycle. For more information, see [Fully-Insured Policy Status Transition](#) on page 2044 and [Self-Funded Policy Status Transition](#) on page 2045 processes.

## Pre-requisites (for Fully-Insured Policy)

---

To use the fully-insured policy feature, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the status reasons for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the status reasons for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the required price items in the system.
- Define the required pricing rule types where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.
- Define the required characteristic types where the characteristic entity is set to **Policy Plan**.
- Define the required contract relationship types in the system.
- Define the required characteristic types where the characteristic entity is set to **Membership**.
- Define the required characteristic types where the characteristic entity is set to **Membership Person**.
- Define the required contracts (which you want to associate with a membership) in the system.
- Define the values for the **BILL\_TO\_TYPE\_FLG** lookup field
- Define the required parameter values in the following algorithm which is attached to the **C1-POLICY** business object:
  - C1-POLBOVAL
- Define the required parameter values in the following algorithms which are used in the lifecycle of the **C1-POLICY** business object:
  - C1-EVCSTSTAT
  - C1-PLCYTRMRQ
  - C1-POLCYTERM
  - C1-DELTRMLTR
  - C1-PLCYREIRQ
  - C1-POLCYREIN
  - C1-CCPOLRE1
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
  - Membership ID Characteristic for Billable Charge
  - Parent Customer Policy Person Role
  - Bill Group Policy Person Role
  - Membership Inactive Status

- Membership Person Inactive Status

### Related Topics

For more information on...	See...
How to setup the <b>C1-ASOBLLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLLNG Feature Configuration</a> on page 2889

## Pre-requisites (for Self-Funded Policy)

To use the self-funded policy feature, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **RUNOUT\_ADM\_OPT\_FLG** lookup field.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the required parameter values in the following algorithm which is attached to the **C1-ASOPolicy** business object:
  - C1-ASOBOPOSP
- Define the required parameter values in the following algorithm which is used in the lifecycle of the **C1-ASOPolicy** business object:
  - C1-ASOPOLMOA
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Parent Customer Policy Person Role
  - Bill Group Policy Person Role
- Set the batch control type of the **Policy Periodic Monitor (C1-POLPR)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

How to setup the <b>C1-ASOBLLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLLNG Feature Configuration</a> on page 2889

## Types of Policies

The system enables you to create policies for different lines of business in the health care domain, such as policies for:

- Fully-Insured Health Care Business

- Self-Funded Health Care Business

## Fully-Insured Policy

You can create a fully-insured policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. The policy type indicates the business object using which the fully-insured policy should be created in the system.

**Note:** At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

As per the fully-insured health care business, the system enables you to create a fully-insured policy for the following:

- A parent customer (where a bill group is not associated)
- A bill group (where the parent customer is the policy holder)

You can create or edit a fully-insured policy from the **Policy** screen. In addition, you can create or edit a fully-insured policy through a customer registration object or a health care inbound message. If the fully-insured policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

However, if the fully-insured policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A fully-insured policy encapsulates the following information:

- **Policy Persons** – While creating a fully-insured policy, you need to associate the person who is the main customer of the policy. While associating a person with a fully-insured policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a fully-insured policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Plans** – You can define one or more plans in a fully-insured policy. For example, Medical, Dental, Medicare, and Disability plans. While defining a policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received in a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can only associate a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**. If you associate an age based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the membership premium is calculated for eligible members. If you associate a tier based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the premium is calculated for membership. However, if you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

- **Membership** – You can define one or more memberships in a policy plan. While defining a membership, you need to specify the plan for which you want to create the membership, the person who is the main subscriber of the membership, and how the main subscriber is related to the membership. Once the membership is created, you can add more members (i.e. persons) to the membership, if required. You can inactivate a membership whenever required. On terminating a policy, the system automatically terminates the membership.

- **Member Persons** – While adding a person to a membership, you need to specify whether the person is the main subscriber of the membership, whether the person is financially responsible for the membership, and how the person is related to the main subscriber. At a time, only one person can be the main subscriber of the membership. You cannot remove a member person, who is the main subscriber, from the membership. You can inactivate a member person whenever required. If you inactivate a member person who is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership.
- **Membership Contracts** – You can associate one or more contracts with a membership. At present, the system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. The system does not use the membership contracts for billing the membership premium.
- **Policy Plan Contracts** – The system creates or updates contracts of a policy plan when you do either of the following:
  - Create or Edit a Policy Plan from the User Interface or through an Inbound Message
  - Create or Edit an Account from the User Interface or through an Inbound Message

The system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. For more information, refer to [Fully-Insured Policy Plan Contract Creation](#) on page 2027.

On defining a fully-insured policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a fully-insured policy is activated, you can terminate, reinstate, or renew the policy whenever required.

### Fully-Insured Policy Activation

You can activate a fully-insured policy by clicking the **Activate** button in the **Policy** screen. On activating a fully-insured policy, the status of the policy is set to **In Force/Active**.

**Note:** If a fully-insured policy is created through a customer registration object or a health care inbound message, the status of the policy is directly set to **In Force/Active**

Once a fully-insured policy is activated, you can terminate, reinstate, or renew the policy whenever required.

### Fully-Insured Policy Termination

The system enables you to terminate a fully-insured policy whenever required. There are two ways in which you can terminate a fully-insured policy:

- **Initiate Policy Termination Process** – In this method, you can initiate the policy termination process from the user interface. To initiate the termination process, you need to specify the termination date and termination reason. On initiating the termination process, the status of the policy is changed to **Pending Termination**. In addition, the system creates an outbound message which request for confirmation whether the policy should be terminated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Terminated**.
- **Terminate Policy** – In this method, you can directly terminate a fully-insured policy. To terminate a fully-insured policy, you need to specify the termination reason. You can directly terminate the policy from the user interface or through a health care inbound message. On clicking the **Terminate** button, the system will terminate the fully-insured policy on the system date. However, when you terminate a fully-insured policy through a health care inbound message, the policy is terminated when the health care inbound message is processed in the system. On terminating a fully-insured policy, the status of the policy is changed to **Terminated**.

Once the status of the policy is changed to **Terminated**, the system sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)

**Note:** The system does not consider those persons associated with policy whose start date is later than the termination date or whose end date is earlier than the termination date.

- Policy Plan (when the termination date falls within the date range of the policy plan)

**Note:** The system does not consider those policy plans whose start date is later than the termination date or whose end date is earlier than the termination date.

- Membership (when the termination date falls within the date range of the membership)

**Note:** The system does not consider those memberships whose start date is later than the termination date or whose end date is earlier than the termination date.

- Member Person (when the termination date falls within the date range in which the person is associated with the membership)

**Note:** The system does not consider those member persons whose start date is later than the termination date or whose end date is earlier than the termination date.

- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

**Note:** The system does not consider those contracts whose start date is later than the termination date or whose end date is earlier than the termination date.

The system also changes the status of all memberships to **Terminated** irrespective of whether it is effective on the termination date or not. On terminating a membership, the system creates an audit event for the membership. For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. An entry for each membership, pricing rule type, and effective date combination is created in the **Pending (P)** status in the **CI\_REPRC\_ENTITY\_DTL** table. For more information, see [Audit Framework for Fully-Insured Health Care Billing](#) on page 2834.

### Fully-Insured Policy Reinstatement

The system enables you to reinstate the terminated policy whenever required. There are two ways in which you can reinstate a fully-insured policy:

- **Initiate Policy Reinstatement Process** – In this method, you can initiate the policy reinstatement process from the user interface. To initiate the reinstatement process, you need to specify the reinstatement reason. On initiating the reinstatement process, the status of the policy is changed to **Pending Reinstatement**. In addition, the system creates an outbound message which request for confirmation whether the policy should be reinstated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Reinstated**.
- **Reinstate Policy** – In this method, you can directly reinstate a fully-insured policy. To reinstate a fully-insured policy, you need to specify the reinstatement reason. You can directly reinstate the policy from the user interface or through a health care inbound message. On clicking the **Reinstate** button, the system will reinstate the fully-insured policy on the system date. However, when you reinstate a fully-insured policy through a health care inbound message, the policy is reinstated when the health care inbound message is processed in the system. On reinstating a fully-insured policy, the status of the policy is changed to **Reinstated**.

Once the status of the policy is changed to **Reinstated**, the system updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan

- Membership
- Member Person
- Contracts Associated with the Membership

**Note:**

The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

Finally, the system automatically transitions the fully-insured policy from **Reinstated** to **In Force/Active**.

**Fully-Insured Policy Renewal**

You can renew a fully-insured policy only through a health care inbound message and not from the user interface. If you want to renew a fully-insured policy, you must send the renewal date along with the new policy end date through a health care inbound message. On processing the health care inbound message, the fully-insured policy is renewed. The renewal date is stamped on the fully-insured policy. The policy end date is extended as mentioned in the health care inbound message. The policy plan and membership information for the renewed period must be sent in the subsequent health care inbound messages.

**Note:** You can renew a fully-insured policy only when it is in the **In Force/Active** status.

**Fully-Insured Policy Plan Contract Creation**

The system automatically creates a contract for a fully-insured policy plan on the parent customer and/or bill group accounts. Depending on the account for which the billable charge is created, the system uses the respective contract for billing the membership premium. The system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** – The system creates a contract in either of the following ways:
  - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
  - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

Let us assume that PRT1 is associated with the policy plan and it contains three price items – P1, P2, and P3. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, and P3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the P1 and P3 are associated with the CT1 contract type and P2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type. Let us assume that PRT1 and PRT2 are associated with the policy plan, PRT1 contains three price items – P1, P2, and P3, and PRT2 contains three price items – P1, P4, and P5. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, P3 is associated with the CT3 contract type, P4 is associated with the CT4 contract type, and P5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if P1, P2, and P5 are associated with the CT1 contract type and P3 and P4 are associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

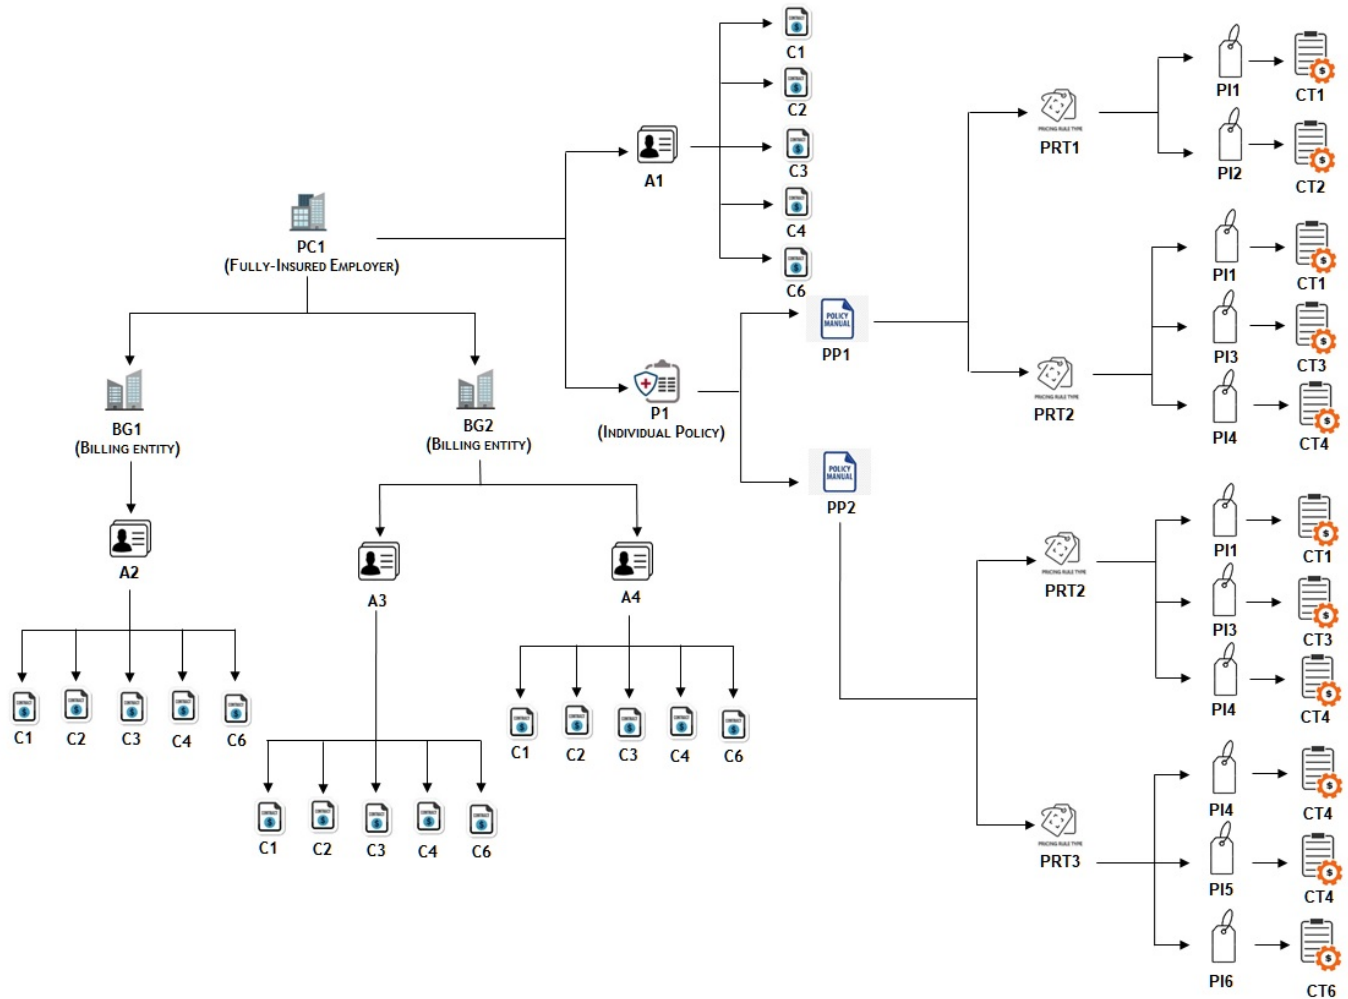

If the policy plan belongs to an individual policy of the parent customer (i.e. a policy where a bill group is not associated), the system will create contracts of distinct contract types for each account of the parent customer and bill groups. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- An individual policy named P1 with two plans – PP1 and PP2 - is created for PC1
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

Now, in such case, the system will create five distinct contracts – C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C6 using CT6 – on the A1, A2, A3, and A4 accounts. In this example, the start date is derived in the following manner:

Price Item	Contract Type	Contract	Plans for which the contract is created...	Earliest Plan Date (i.e. Contract Start Date)
PI1	CT1	C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
PI2	CT2	C2	PP1 (01-01-2019)	01-01-2019
PI3	CT3	C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
PI4	CT4	C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
PI5	CT4	C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))
PI6	CT6	C6	PP2 (03-01-2019)	03-01-2019

The following figure graphically illustrates the above example:

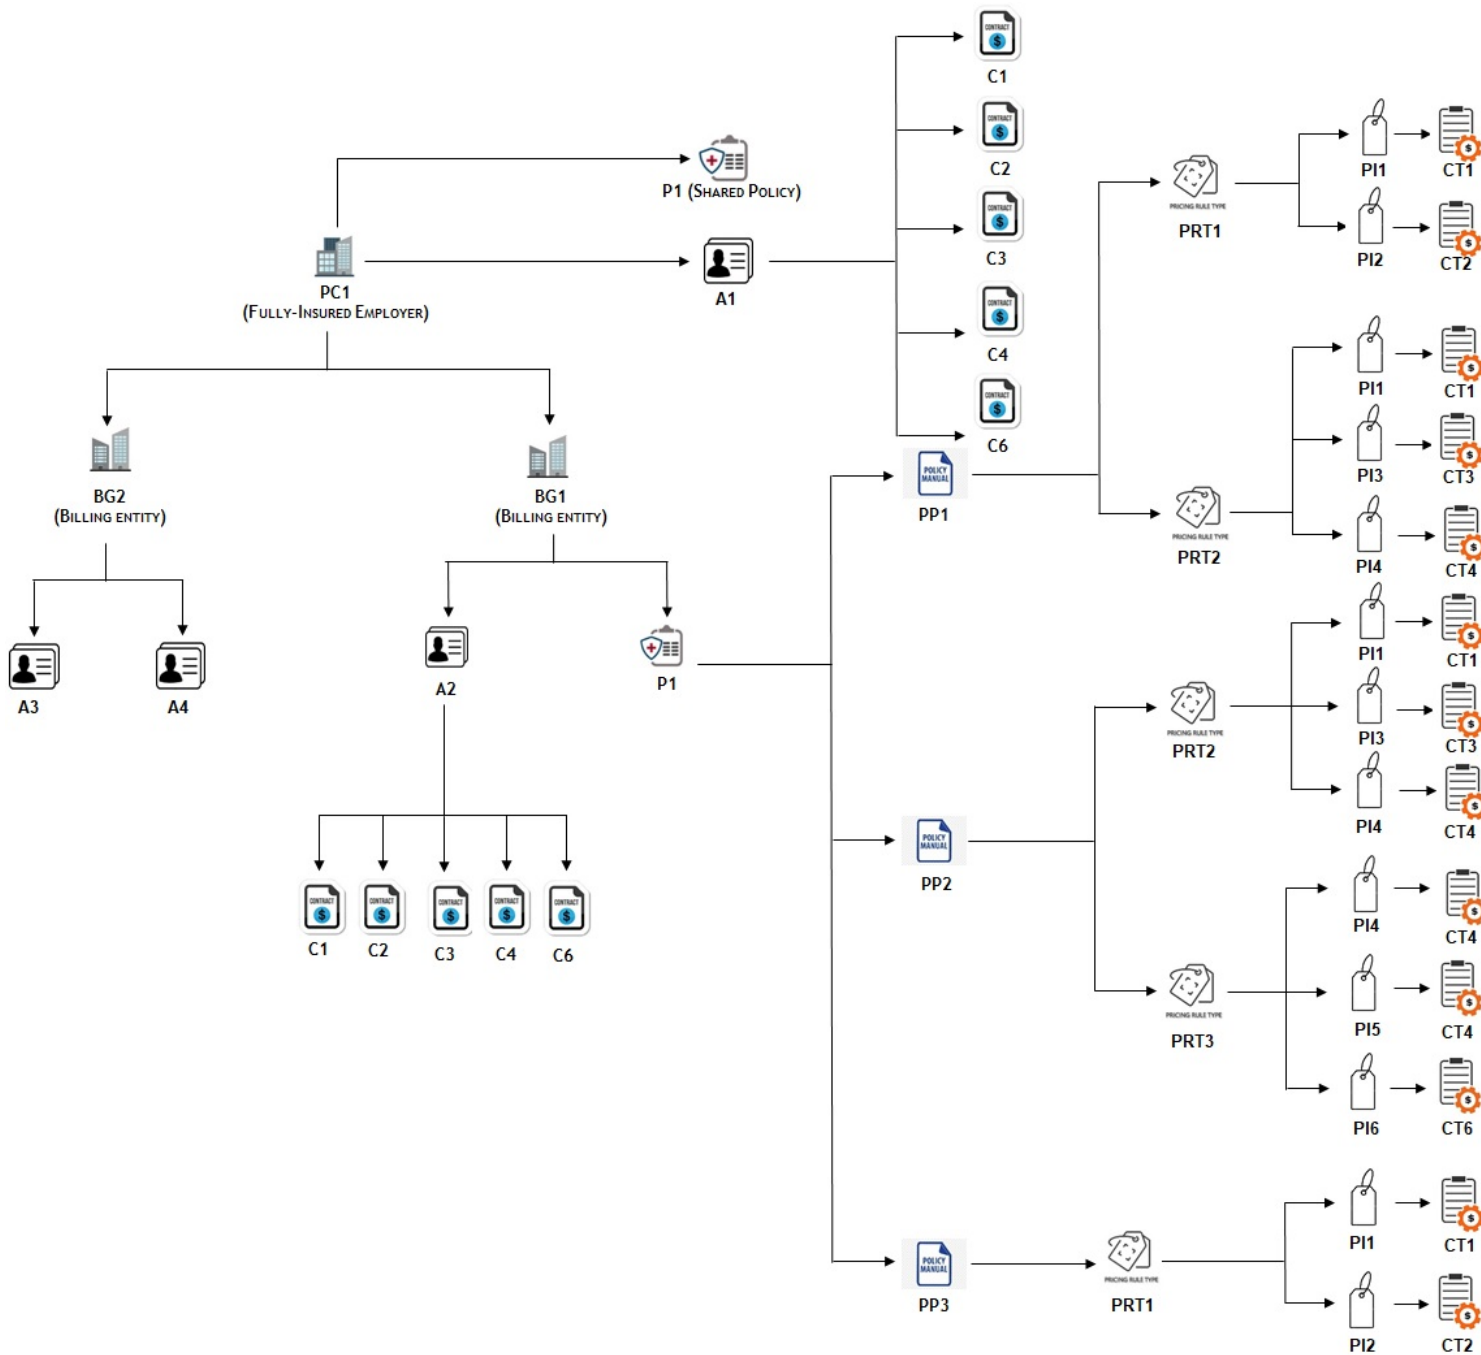

However, if the policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create contracts of distinct contract types for each account of the parent customer and the bill group. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans – PP1, PP2, and PP3 – is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

Now, in such case, the system will create five distinct contracts – C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C6 using CT6 – on the A1 and A2 accounts. The start date is derived in the following manner:

<b>Price Item</b>	<b>Contract Type</b>	<b>Contract</b>	<b>Plans for which the contract is created...</b>	<b>Earliest Plan Date (i.e. Contract Start Date)</b>
PI1	CT1	C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
PI2	CT2	C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
PI3	CT3	C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
PI4	CT4	C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
PI5	CT4	C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))
PI6	CT6	C6	PP2 (03-01-2019)	03-01-2019

The following figure graphically illustrates the above example:

**Note:**

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

The contract start date is set to the start date of the earliest plan across policies when the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans on different policies.

- **Create or Edit an Account from the User Interface or through an Inbound Message** – The system creates a contract when either of the following condition is met:
  - The main customer of the account is a parent customer and holds an individual policy (i.e. a policy where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Individual** or **Fully-Insured Group**.
  - The main customer of the account is a parent customer and holds a shared policy (i.e. a policy where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Individual** or **Fully-Insured Group**.
  - The main customer of the account is a bill group and holds a shared policy (i.e. a policy where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Individual** or **Fully-Insured Group**.

The system creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

Let us assume that PRT1 is associated with the policy plan and it contains three price items – P1, P2, and P3. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, and P3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the P1 and P3 are associated with the CT1 contract type and P2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type. Let us assume that PRT1 and PRT2 are associated with the policy plan, PRT1 contains three price items – P1, P2, and P3, and PRT2 contains three price items – P1, P4, and P5. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, P3 is associated with the CT3 contract type, P4 is associated with the CT4 contract type, and P5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if P1, P2, and P5 are associated with the CT1 contract type and P3 and P4 are associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans on different policies, the contract start date is set to the start date of the earliest plan across policies. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

If you create an account for a parent customer who holds both individual and shared policies, the system will create contracts of distinct contract types for all parent customer's policies on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – an individual policy named P1 (where a bill group is not associated) and a shared policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1
- P1 has two plans – PP1 and PP2
- P2 has two plans – PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2

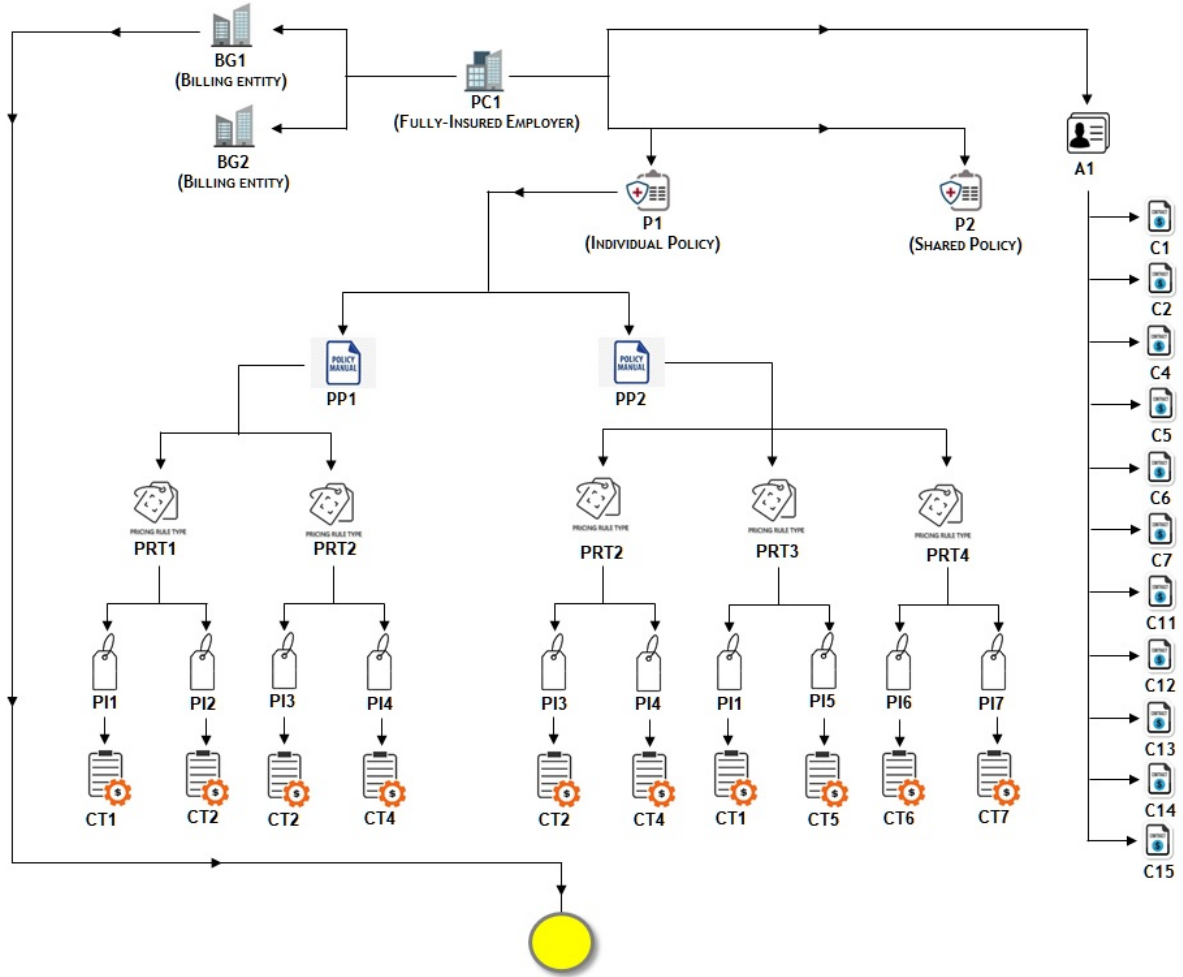

- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI4
- PRT3 contains two price items – PI1 and PI5
- PRT4 contains two price items – PI6 and PI7
- PRT111 contains two price items – PI11 and PI12
- PRT112 contains two price items – PI1 and PI5
- PRT113 contains two price items – PI13 and PI14
- PRT114 contains two price items – PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

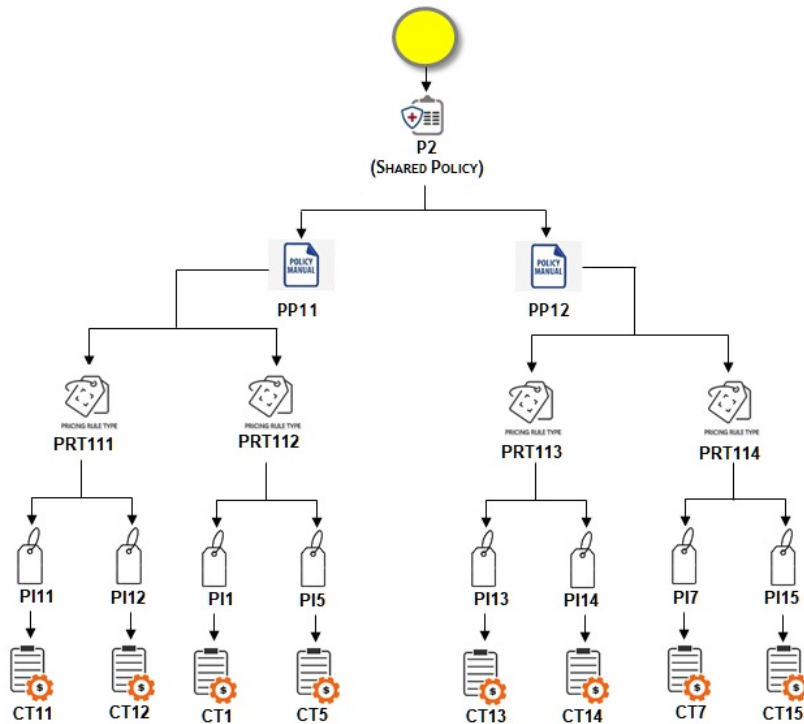

Now, in such case, the system will create eleven distinct contracts – C1 using CT1, C2 using CT2, C4 using CT4, C5 using CT5, C6 using CT6, C7 using CT7, C11 using CT11, C12 using CT12, C13 using CT13, C14 using CT14, and C15 using CT15 – on the A1 account. In this example, the start date is derived in the following manner:

Price Item	Contract Type	Contract	Plans for which the contract is created...	Earliest Plan Date (i.e. Contract Start Date)
PI1	CT1	C1	PP1 (01-01-2019), PP2 (06-01-2019), and PP11 (05-01-2019)	01-01-2019
PI2	CT2	C2	PP1 (01-01-2019)	01-01-2019
PI3	CT2	C2	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019
PI4	CT4	C4	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019
PI5	CT5	C5	PP2 (06-01-2019) and PP11 (05-01-2019)	05-01-2019
PI6	CT6	C6	PP2 (06-01-2019)	06-01-2019
PI7	CT7	C7	PP2 (06-01-2019) and PP12 (09-01-2019)	06-01-2019
PI11	CT11	C11	PP11 (05-01-2019)	05-01-2019
PI12	CT12	C12	PP11 (05-01-2019)	05-01-2019
PI13	CT13	C13	PP12 (09-01-2019)	09-01-2019

Price Item	Contract Type	Contract	Plans for which the contract is created...	Earliest Plan Date (i.e. Contract Start Date)
PI14	CT14	C14	PP12 (09-01-2019)	09-01-2019
PI15	CT15	C15	PP12 (09-01-2019)	09-01-2019

The following figure graphically illustrates the above example:

If you create an account for a bill group who holds a shared policy and its parent customer holds both individual and shared policies, the system will create contracts of distinct contract types for the bill group's shared policies and parent customer's individual policies on the account. Let us assume...

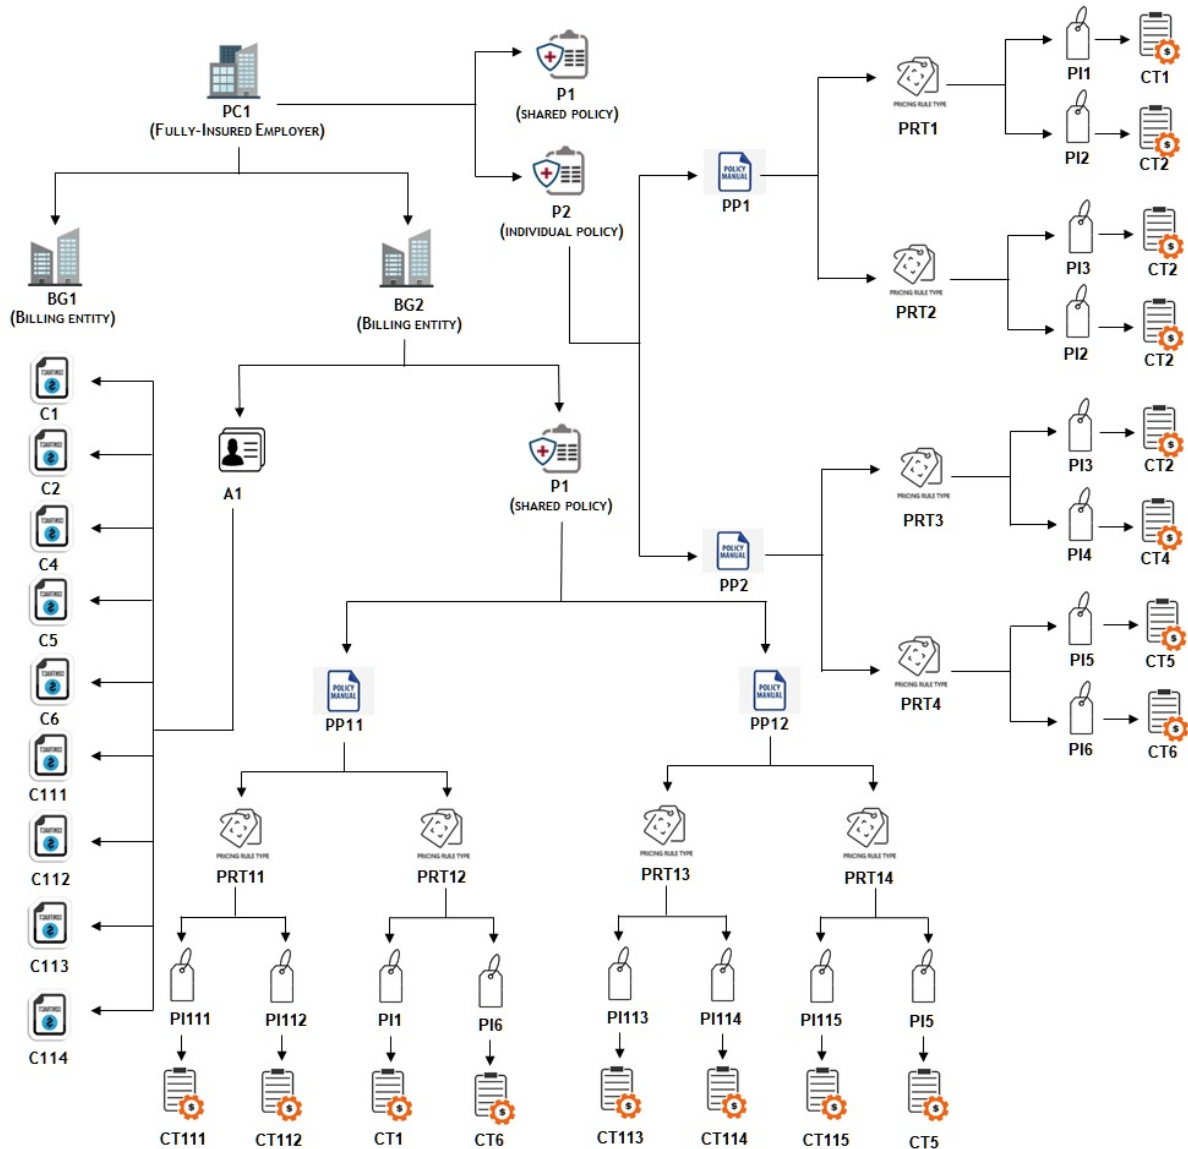

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – an individual policy named P2 (where a bill group is not associated) and a shared policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans – PP11 and PP12
- P2 has two plans – PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI2
- PRT3 contains two price items – PI3 and PI4
- PRT4 contains two price items – PI5 and PI6
- PRT11 contains two price items – PI111 and PI112
- PRT12 contains two price items – PI1 and PI6
- PRT13 contains two price items – PI113 and PI114

- PRT14 contains two price items – PI15 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

Now, in such case, the system will create nine distinct contracts – C1 using CT1, C2 using CT2, C4 using CT4, C5 using CT5, C6 using CT6, C111 using CT111, C112 using CT112, C113 using CT113, and C114 using CT114 – on the A1 account. In this example, the start date is derived in the following manner:

Price Item	Contract Type	Contract	Plans for which the contract is created...	Earliest Plan Date (i.e. Contract Start Date)
PI1	CT1	C1	PP1 (01-01-2019) and PP11 (07-01-2019)	01-01-2019
PI2	CT2	C2	PP1 (01-01-2019)	01-01-2019
PI3	CT2	C2	PP1 (01-01-2019) and PP2 (04-01-2019)	01-01-2019
PI4	CT4	C4	PP2 (04-01-2019)	04-01-2019
PI5	CT5	C5	PP2 (04-01-2019) and PP12 (11-01-2019)	04-01-2019
PI6	CT6	C6	PP2 (04-01-2019) and PP11 (07-01-2019)	04-01-2019
PI111	CT111	C111	PP11 (07-01-2019)	07-01-2019
PI112	CT112	C112	PP11 (07-01-2019)	07-01-2019
PI113	CT113	C113	PP12 (11-01-2019)	11-01-2019
PI114	CT114	C114	PP12 (11-01-2019)	11-01-2019
PI115	CT114	C114	PP12 (11-01-2019)	11-01-2019

The following figure graphically illustrates the above example:

**Note:**

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

**Self-Funded Policy**

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. The policy type indicates the business object using which the self-funded policy should be created in the system.

As per the self-funded health care business, the system enables you to create a self-funded policy for a bill group where the parent customer is the policy holder. You can create or edit a self-funded policy from the **Policy** screen. In addition,

you can create or edit a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A self-funded policy encapsulates the following information:

- **Policy Persons** – While creating a self-funded policy, you need to associate the person who is the main customer of the policy. While associating a person with a self-funded policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a self-funded policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Contracts** – The system creates a contract for a self-funded policy when the policy is created either from the user interface or through an inbound message. For more information, refer to [Self-Funded Policy Contract Creation](#) on page 2041.

On defining a self-funded policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a self-funded policy is activated, you can renew the policy whenever required.

**Note:** If a self-funded policy is created through a customer registration object or a health care inbound message, the status of the policy is set to **Pending**.

In a self-funded policy, you can specify the policy period as well as the runout period. Here, the policy period means the period between the policy start and end dates when the policy is active. And, the runout period means the period between the runout start and end dates when the policy is no more active. Note that the system sets the runout start date to the policy end date + 1 Day when you specify the runout end date.

The system enables you to create a self-funded policy for the following contract types which are used in the self-funded health care business:

Contract Type	Policy (Example)	Policy Period (i.e. Period when Policy will be in the Active Status)	Runout Period (i.e. Period when Policy will be in the Runout Status)	Comments
<b>12/12</b> (Claims Incurred and Paid During the Policy Period)	P1	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P1).
<b>12/15</b> (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P2	01-01-2019 to 12-31-2019	01-01-2020 to 03-31-2020	Here, the runout period is derived only when you set the runout end date of the self-funded policy (i.e. P2) to 03-31-2020.

Contract Type	Policy (Example)	Policy Period (i.e. Period when Policy will be in the Active Status)	Runout Period (i.e. Period when Policy will be in the Runout Status)	Comments
<b>12/18</b> (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P3	01-01-2019 to 12-31-2019	01-01-2020 to 06-30-2020	Here, the runout period is derived only when you set the runout end date of the self-funded policy (i.e. P3) to 06-30-2020.
<b>15/12</b> (Claims Incurred Three Months Prior to the Policy Start Date and During the Policy Period and Paid During the Policy Period)	P4	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P4).

The system enables you to offer different pricing for different policy periods, such as active, runout, and post runout.

### Self-Funded Policy Activation

A self-funded policy can be activated manually from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can activate a self-funded policy by clicking the **Activate** button in the **Policy** screen. On clicking the **Activate** button, the system checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

**Note:** The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Active** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment Based
- Ancillary
- Flat Fees
- Level Funded

### Transition of Self-Funded Policy to Runout Status

A self-funded policy can be transitioned to the **Runout** status from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can transition a self-funded policy to the **Runout** status by clicking the **Runout** button in the **Policy** screen. On clicking the **Runout** button, the system checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

**Note:** The status of the policy is not changed from **In Force/Active** to **Runout** when either of the following condition is met:

- The runout end date is not specified.
- The system date is earlier than or equal to the policy end date.
- The policy is renewed.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary
- Flat Fees
- Level Funded

### Transition of Self-Funded Policy to Post Runout Status

A self-funded policy can be transitioned to the **Post Runout** status only through the **Policy Periodic Monitor (C1-POLPR)** batch. On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Post Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss

- Retention Type Claim Based
- Ancillary

### Self-Funded Policy Renewal

You can renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy only when it is in the **In Force/Active** status and which is not yet renewed. You can renew a self-funded policy only from the user interface and not through a health care inbound message.

On renewing a self-funded policy, a new policy is created in the **Pending** status. The renewal date is stamped in the base policy. The information from the base policy is copied to the renewed policy. The start date of the renewed policy is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.

While renewing a self-funded policy, you cannot disassociate persons (from the renewed policy) who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.

While renewing a self-funded policy, the system enables you to copy the following pricing rules of the base policy and thereby create new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

Once a policy is renewed, you cannot edit the base policy's end date or manually change the status of the base policy to **Runout**. The system automatically changes the status of the base policy to **Runout** when the status of the latest renewed policy is changed to **Runout**.

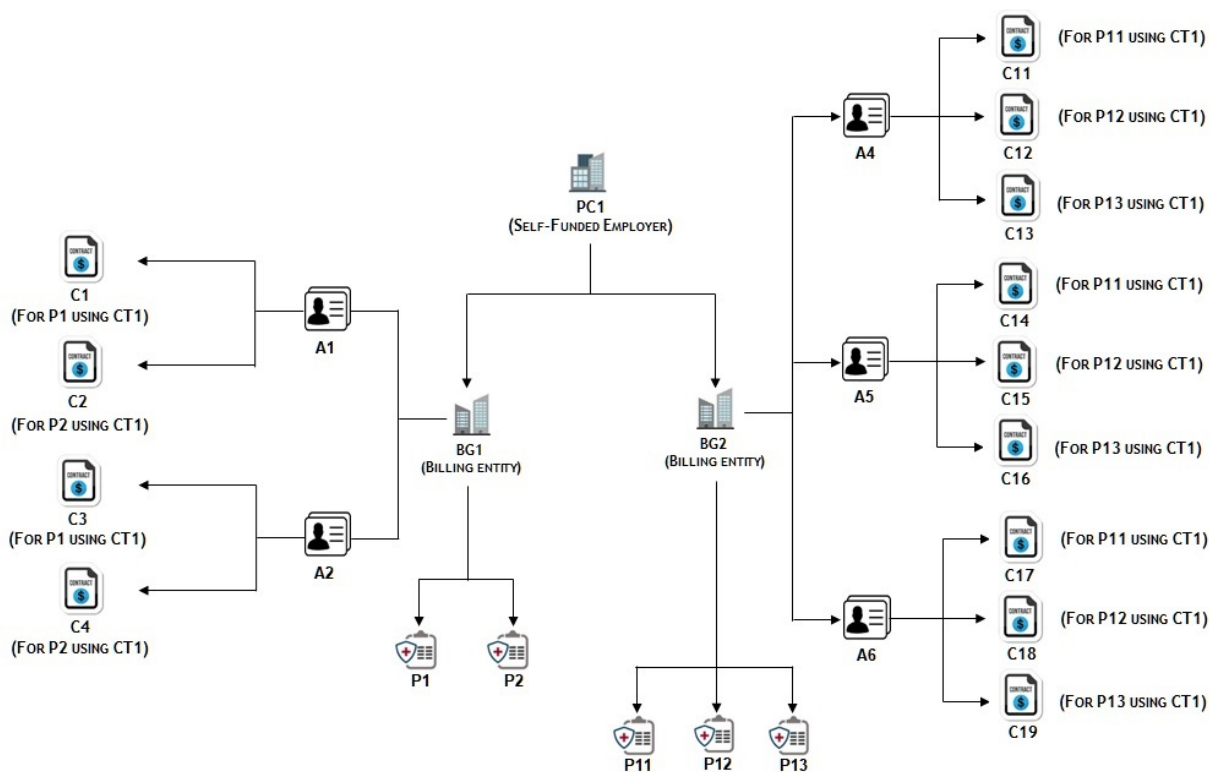

### Self-Funded Policy Contract Creation

The system automatically creates contracts when a self-funded policy is created either from the user interface or through a health care inbound message. It creates a contract for a self-funded policy on each account of the bill group. It creates a contract using the contract type which is specified in the **Contract Type** parameter of an algorithm which is created using the **C1-ASOBOPOSP** algorithm type. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to CT1. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11, P12, and P13 for BG2 through a health care inbound message, the system will create the following contracts on the respective accounts:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P2 using the CT1 contract type)
	A2	C3 (for P1 using the CT1 contract type)
		C4 (for P2 using the CT1 contract type)
BG2	A4	C11 (for P11 using the CT1 contract type)
		C12 (for P12 using the CT1 contract type)

Bill Group	Account	Contract
	A5	C13 (for P13 using the CT1 contract type)
		C14 (for P11 using the CT1 contract type)
		C15 (for P12 using the CT1 contract type)
	A6	C16 (for P13 using the CT1 contract type)
		C17 (for P11 using the CT1 contract type)
		C18 (for P12 using the CT1 contract type)
		C19 (for P13 using the CT1 contract type)

The following figure graphically represents the above example:

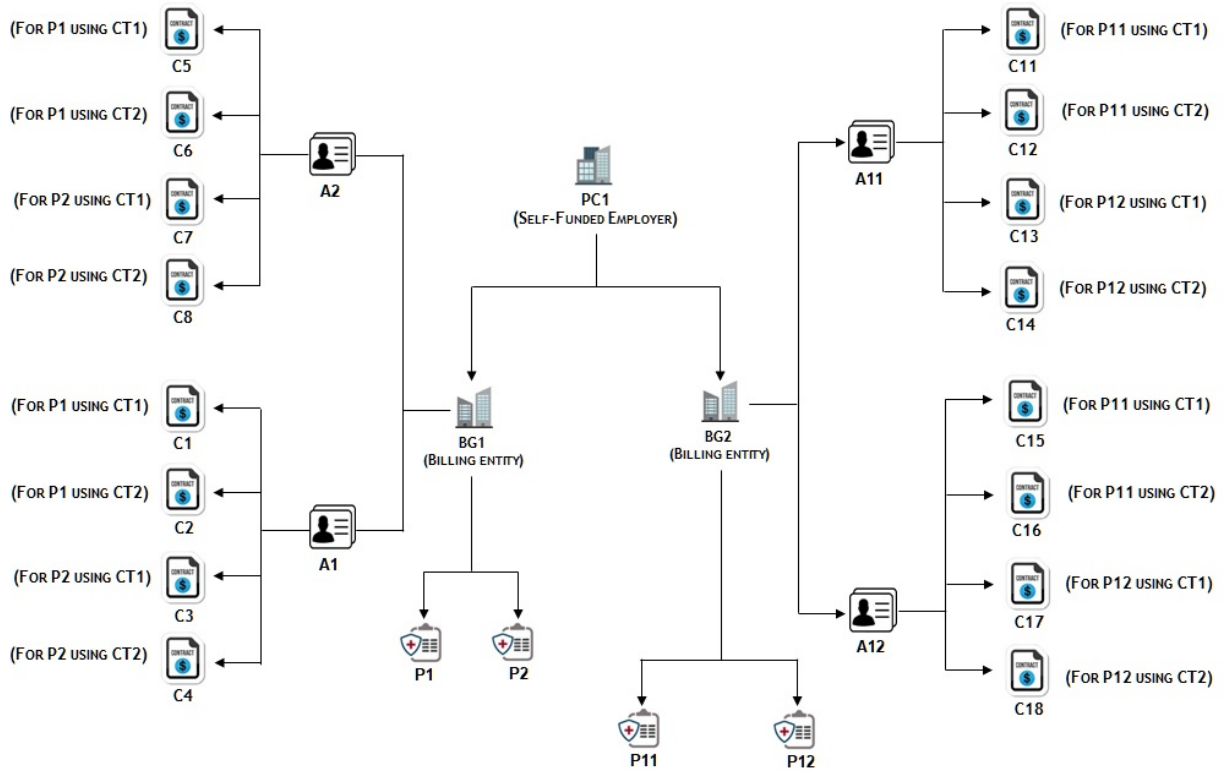

You can also specify comma-separated values for the **Contract Type** parameter. The system will then create a contract using each contract type for each self-funded policy on each account of the bill group. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to CT1 , CT2. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11 and P12 for BG2 through a health care inbound message, the system will create the following contracts on the respective accounts:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)

Bill Group	Account	Contract
		C2 (for P1 using the CT2 contract type)
		C3 (for P2 using the CT1 contract type)
		C4 (for P2 using the CT2 contract type)
	A2	C5 (for P1 using the CT1 contract type)
		C6 (for P1 using the CT2 contract type)
		C7 (for P2 using the CT1 contract type)
		C8 (for P2 using the CT2 contract type)
	BG2	A11
C12 (for P11 using the CT2 contract type)		
C13 (for P12 using the CT1 contract type)		
C14 (for P12 using the CT2 contract type)		
A12		C15 (for P11 using the CT1 contract type)
		C16 (for P11 using the CT2 contract type)
		C18 (for P12 using the CT1 contract type)
		C19 (for P12 using the CT2 contract type)

The following figure graphically represents the above example:

## Fully-Insured Policy Status Transition

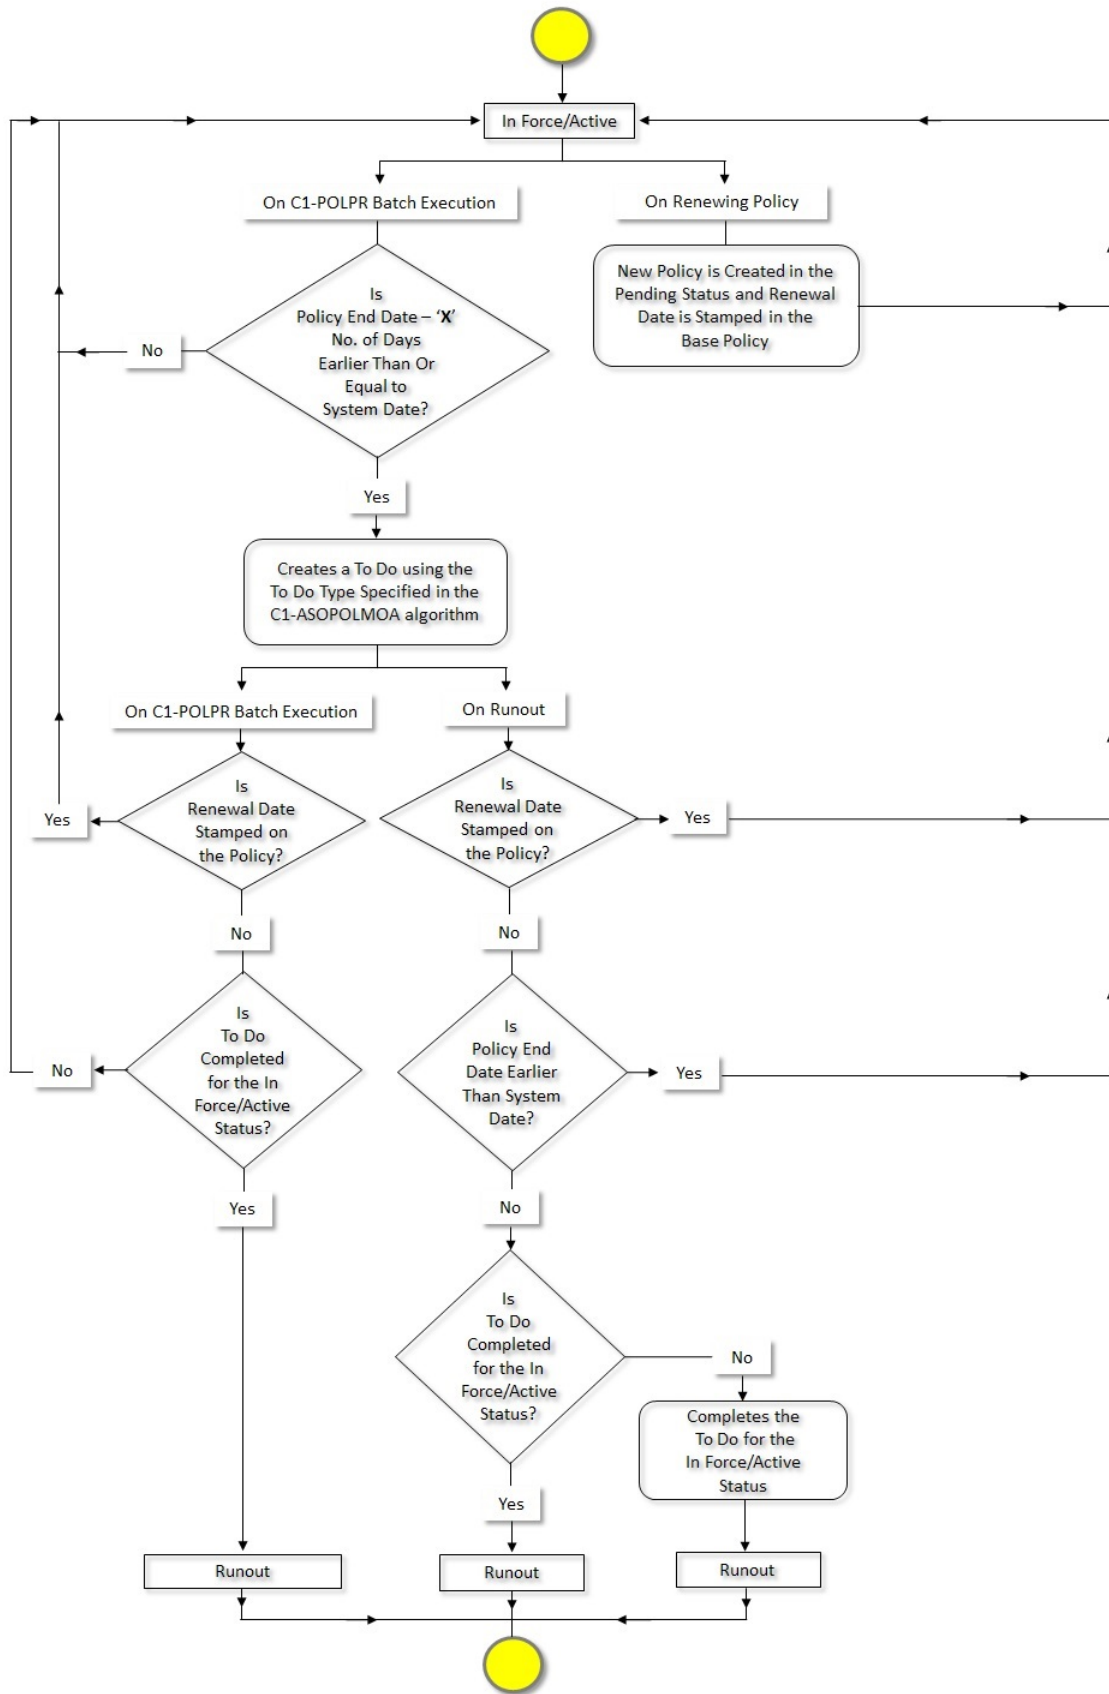

The following figure graphically indicates how a fully-insured policy moves from one status to another in its lifecycle:

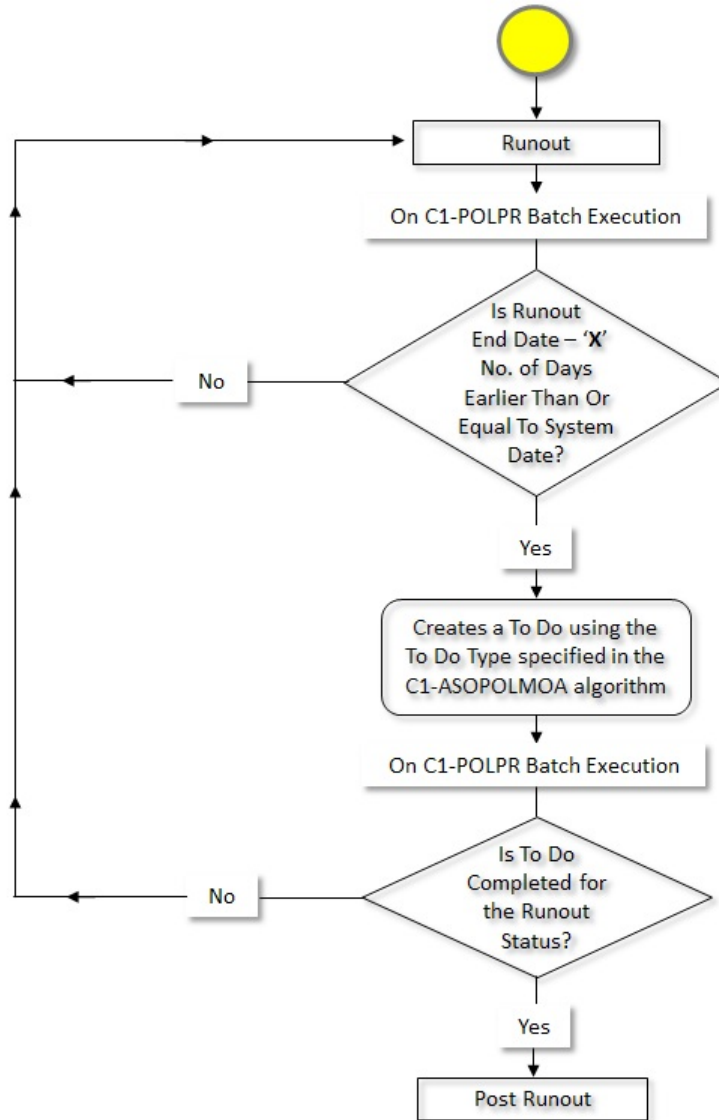

## Self-Funded Policy Status Transition

The following figure graphically indicates how a self-funded policy moves from one status to another in its lifecycle:

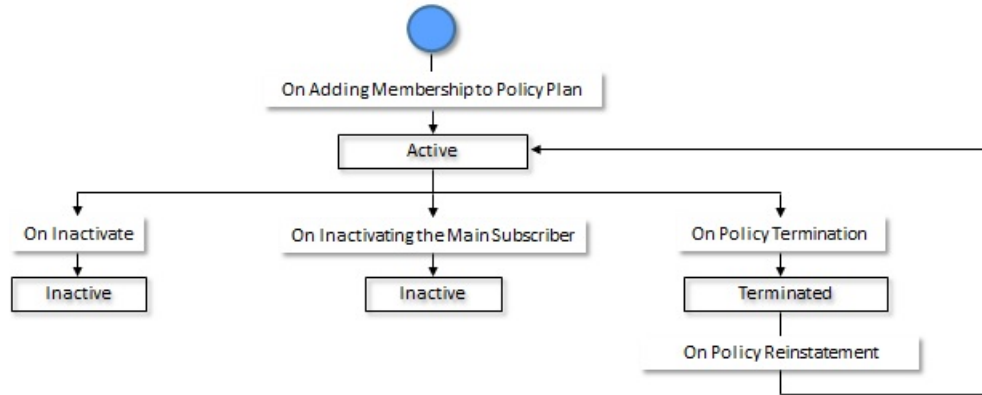

## Membership Status Transition

The following figure graphically indicates how a membership moves from one status to another in its lifecycle:

## Algorithms Used in C1-POLICY

The following table lists the algorithms which are attached to the **C1-POLICY** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1- READEVNT	C1-READEVNT	Refer to <a href="#">C1-READEVNT</a> on page 2050.
Validation	C1- POLBOVAL	C1-POLBOVAL	Refer to <a href="#">C1-POLBOVAL</a> on page 2051.

The following table lists the algorithms which are used in the lifecycle of the **C1-POLICY** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1- TRNDFLSYS	C1- TRNDFLSYS	Refer to <a href="#">C1-TRNDFLSYS</a> on page 2051.

## C1-READEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type.
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section.
- Deleting an entity when the **Delete Action** option is selected in the audit event type.

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

**Note:** Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event

At present, this algorithm is designed to work with the business objects of the following maintenance objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1\_PERSON\_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

In case, you want to create audit event for any other maintenance objects, you need to create a custom algorithm type.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

## C1-POLBOVAL

This algorithm validates a fully-insured policy throughout its lifecycle. It checks the following:

- Whether the policy end date is not earlier than the policy start date.
- Whether the policy person end date is not earlier than the policy person start date.
- Whether the policy person start date is not earlier than the policy start date or later than policy end date.
- Whether the policy person end date is not earlier than the policy start date or later than policy end date.

**Note:** The above validation is done only when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter to **TERMINATED**, the system will not perform the above validation when the status of the policy is changed to **Terminated**.

- Whether the person who is the main customer is associated with the policy.
- Whether the policy person role is specified while associating a person with the policy.

It contains the following parameter:

- **Skip Status for Policy Person End Date Validation** – Used to specify the policy status in which you do not want to validate the policy person end date. You can specify comma-separated values for this parameter.

## C1-TRNDFLSYS

This algorithm checks whether the fully-insured policy is created from the user interface or through an inbound message. If a fully-insured policy is created through an inbound message, the system will automatically transition the fully-insured policy to the default next status specified in its lifecycle.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-EVCSTSTAT

This algorithm updates the **Customer Status** characteristic of the main customer of the policy. This characteristic indicates whether the customer is active or inactive. If the customer owns at least one active policy, the customer status is set to **Active**. However, if the customer does not own any active policy, the customer status is set to **Inactive**.

It is invoked while activating or terminating a fully-insured policy. It contains the following parameters:

- **Customer Status Characteristic Type** – Used to specify the characteristic type whose value should be updated whenever the policy is activated or terminated. You must specify a characteristic type where the characteristic entity is set to **Person**.
- **Active Customer Status Characteristic Value** – Used to specify the characteristic value which should be used when the main customer owns at least one active policy.
- **Inactive Customer Status Characteristic Value** – Used to specify the characteristic value which should be used when the main customer does not own any active policy (in other words, when all policies of the main customer are terminated).
- **Policy Active Status** – Used to specify the status in which at least one policy should exist to indicate that the main customer is active.

All the above parameters are mandatory.

## C1-PLCYTRMRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy termination process from the user interface. While creating the outbound message, the system identifies the account using the characteristic type specified in the **Main Customer Characteristic Type** parameter. The system checks whether this characteristic type is set to the main customer's ID on any account. If so, the system considers the account and then fetches the value of the account identifier type specified in the **Account Identifier Type** parameter.

In addition, it stores the details of the outbound message (which is created) in the log of the policy. It contains the following parameters:

- **Outbound Message Type** – Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** – Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.
- **Account Identifier Type** – Used to specify the account identifier type whose value you want to use in the outbound message. You must specify an account identifier type which is already defined in the system.
- **Main Customer Characteristic Type** – Used to specify the characteristic type using which you want to identify the account of the main customer. You must specify a characteristic type where the characteristic entity is set to **Person**.

All the above parameters are mandatory.

## C1-POLCYTERM

This algorithm sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)
- Policy Plan (when the termination date falls within the date range of the policy plan)
- Membership (when the termination date falls within the date range of the membership)

- Member Person (when the termination date falls within the date range in which the person is added to the membership)
- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

It contains the following parameters:

- **Membership Old Status** – Used to specify the status from which you want to transition the membership when the policy is terminated.
- **Membership New Status** – Used to specify the status to which you want to transition the membership when the policy is terminated.

## C1-DELTRMLTR

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **TERMINATED** status, it creates a customer contact whenever the policy is terminated. You can create a customer contact while terminating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while terminating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** – Used when you want to create a customer contact when the policy is terminated for a particular reason. The valid values are:
  - **Y** – Used to indicate that the system should create a customer contact when a particular status reason is specified while terminating a policy.
  - **N** – Used to indicate that the system should create a customer contact while terminating a policy irrespective of the status reason.
- **Policy Status Reason Codes** – Used to specify the status reason defined for the **TERMINATED** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** – Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** – Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** – Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
  - **Y** – If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
  - **N** – If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

**Note:** If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** – Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** – Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.

- **Status To Skip Process** – Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

## C1-PLCYREIRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy reinstatement process from the user interface. In addition, it stores the details of the outbound message (which is created) in the log of the policy.

It contains the following parameters:

- **Outbound Message Type** – Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** – Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.

All the above parameters are mandatory.

## C1-POLCYREIN

This algorithm updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

**Note:** The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

It contains the following parameters:

- **Membership Old Status** – Used to specify the status from which you want to transition the membership when the policy is reinstated.
- **Membership New Status** - Used to specify the status to which you want to transition the membership when the policy is reinstated. This field is mandatory.

## C1-CCPOLRE1

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **REINSTATE** status, it creates a customer contact whenever the policy is reinstated. You can create a customer contact while reinstating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while reinstating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** – Used when you want to create a customer contact when the policy is reinstated for a particular reason. The valid values are:

- **Y** – Used to indicate that the system should create a customer contact when a particular status reason is specified while reinstating a policy.
- **N** – Used to indicate that the system should create a customer contact while reinstating a policy irrespective of the status reason.
- **Policy Status Reason Codes** – Used to specify the status reason defined for the **REINSTATE** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** – Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** – Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** – Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
  - **Y** – If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
  - **N** – If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

**Note:** If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** – Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** – Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** – Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

## Algorithms Used in C1-PolicyPlan

The following table lists the algorithms which are attached to the **C1-PolicyPlan** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-PPCONCRE	C1-PPCONCRE	Refer to <a href="#">C1-PPCONCRE</a> on page 2055.
Validation	C1-VALPPBO	C1-VALPPBO	Refer to <a href="#">C1-VALPPBO</a> on page 2056.

### C1-PPCONCRE

This algorithm is invoked when you create or edit a policy plan from the user interface or through an inbound message. It creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

Let us assume that PRT1 is associated with the policy plan and it contains three price items – P1, P2, and P3. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, and P3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the P1 and P3 are associated with the CT1 contract type and P2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

If the policy plan belongs to an individual policy of the parent customer (i.e. a policy where a bill group is not associated), the system will create contracts of distinct contract types for each account of the parent customer and bill groups. However, if the policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create contracts of distinct contract types for each account of the parent customer and the bill group.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

**Note:**

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans on different policies, the contract start date is set to the start date of the earliest plan across policies.

## C1-VALPPBO

This algorithm validates a policy plan. It checks the following:

- Whether the policy plan end date is not earlier than the policy plan start date.
- Whether the policy plan start date is not earlier than the policy start date or later than policy end date.
- Whether the policy plan end date is not earlier than the policy start date or later than policy end date.
- Whether the price item or at least one pricing rule type is associated with the policy plan.

## Algorithms Used in C1-Membership

The following table lists the algorithms which are attached to the **C1-Membership** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to <a href="#">C1-FIAUDEV</a> on page 2057.
Pre-Processing	C1-MEMSTPRE	C1-MEMSTPRE	Refer to <a href="#">C1-MEMSTPRE</a> on page 2058.
Validation	C1-VALMEMBO	C1-VALMEMBO	Refer to <a href="#">C1-VALMEMBO</a> on page 2058.

The following table lists the algorithms which are used in the lifecycle of the **C1-Membership** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Active	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Inactive	Enter	C1-MEMINACT	C1-MEMINACT	Refer to <a href="#">C1-MEMINACT</a> on page 2058.
Terminated	-	-	-	-

## C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **C1-Membership** and **C1\_PERSON\_BO** business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a membership is added to a policy plan and member person is added to a membership. It also creates the audit event whenever the membership and member person details are updated. However, note that the audit events are created in the update scenario only when the element listed for auditing in the age based or tier based pricing rule types is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. membership or member person whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1\_AUDIT\_EVENT** table.

### Note:

The system creates an audit event whenever the membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age based or tier based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the memberships on the policy plans which are impacted and the pricing rule types whose pricing rules are defined on the respective policy plans. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI\_REPRC\_ENTITY\_DTL** table. The status of the repricing entity detail record is set to **P**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

How the audit events are created and processed for a person	<a href="#">Person Audit Process</a> on page 2839

## C1-MEMSTPRE

Once the status of the main subscriber is changed to **Inactive**, this algorithm changes the status of the membership to the value specified in the **Membership Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. In addition, it does not allow you to add a member person in the **Inactive** status to a membership.

## C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

## C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO\_STATUS\_CD** column corresponding to the record in the **C1\_AUDIT\_EVENT**, **C1\_AUDIT\_EVENT\_LOG**, and **CI\_PRCE\_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO\_STATUS\_CD** column corresponding to the record in the **CI\_REPRC\_ENTITY\_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO\_STATUS\_CD** column corresponding to the record in the **CI\_REPRC\_REQ\_DTL** table is set to **COMPLETE**.

## Algorithms Used in C1-ASOPolicy

The following table lists the algorithms which are attached to the **C1-ASOPolicy** business object:

System Event	Algorithm	Algorithm Type	Description
Validation	C1-ASOPOLVAL	C1-ASOPOLVAL	Refer to <a href="#">C1-ASOPOLVAL</a> on page 2059.
Post-Processing	C1-ASOBOPOSP	C1-ASOPOLPOS	Refer to <a href="#">C1-ASOBOPOSP</a> on page 2060.
	C1-ASOPRUCPY	C1-ASOPRUCPY	Refer to <a href="#">C1-ASOPRUCPY</a> on page 2060.

The following table lists the algorithms which are used in the lifecycle of the **C1-ASOPolicy** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to <a href="#">C1-ASOPOLMOA</a> on page 2060.
	Enter	C1-ASOPOLREN	C1-ASOPOLREN	Refer to <a href="#">C1-ASOPOLREN</a> on page 2061.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to <a href="#">C1-ASOPCKTD</a> on page 2061.
In Force/ Active	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to <a href="#">C1-ASOPOLMOA</a> on page 2060.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to <a href="#">C1-ASOPCKTD</a> on page 2061.
Runout	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to <a href="#">C1-ASOPOLMOA</a> on page 2060.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to <a href="#">C1-ASOPCKTD</a> on page 2061.
Post Runout	-	-	-	-

## C1-ASOPOLVAL

This algorithm validates a self-funded policy throughout its lifecycle. It checks the following:

- The policy end date is not earlier than the policy start date.
- The runout end date is later than the policy end date.
- The runout end date is later than the system date while editing the policy which is in the **Runout** status.
- The runout end date is not removed when the policy is in the **Runout** or **Post Runout** status.
- The policy end date is not modified when the policy is in the **Runout** status.
- The policy end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status.
- The runout end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status.
- The runout end date is not set to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.
- The policy is not edited when it is in the **Post Runout** status.
- The policy start date is not modified when the policy is in the **In Force/Active**, **Runout**, or **Post Runout** status.
- The policy person end date is not earlier than the policy person start date.
- The policy person role is specified while associating a person with the policy.
- One of the policy persons is set as the main customer of the policy.
- The policy end date is not changed when the policy is renewed.

## C1-ASOBOPOSP

This algorithm is invoked when you create a self-funded policy either from the user interface or through an inbound message. It creates a contract of the specified contract type for the self-funded policy on each account of the bill group. For example, if you create a self-funded policy named P1 for a bill group who has two accounts - A1 and A2, the system will create two contracts for P1 - one on the A1 account and another on the A2 account.

It contains the following parameter:

- **Contract Type** - Used to indicate the contract type whose contract you want to create for the self-funded policy on each account of the bill group. You can also specify comma-separated values for this parameter. It will then create a contract of each contract type for the self-funded policy on each account of the bill group.

## C1-ASOPRUCPY

This algorithm is invoked when the **Copy Pricing Rules** option is selected while renewing a self-funded policy. It copies the following pricing rules of the base policy and creates new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

## C1-ASOPOLMOA

This algorithm is invoked when the **Policy Periodic Monitor (C1-POLPR)** batch is executed. It does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter.
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.
- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter.
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.
- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter.
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

It contains the following parameters:

- **To Do Type for Pending Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy start date.
- **To Do Type for Active Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy end date.
- **To Do Type for Runout Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the runout end date.
- **X Days** - Used to specify the number of days prior to which you want to create a To Do for the self-funded policy.

All these parameters are mandatory.

## C1-ASOPOLREN

This algorithm is invoked when you renew a self-funded policy. Once the new policy is created in the **Pending** status, it stamps the renewal date on the base policy.

## C1-ASOPCKTD

This algorithm is invoked when you click the **Activate** and **Runout** buttons in the **Policy** screen. On clicking the **Activate** button, it checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Similarly, on clicking the **Runout** button, it checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

It also validates the following:

- The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.
- The status of the policy is not changed from **In Force/Active** to **Runout** when the runout end date is not specified.
- The status of the policy is not changed from **In Force/Active** to **Runout** until the system date is later than the policy end date.
- The status of the policy is not changed to **Runout** if it is renewed.

In addition, it also changes the status of the base policies to **Runout** when the status of the latest renewed policy is changed to **Runout**.

## Policy Type

---

Oracle Revenue Management and Billing enables you to define a policy type using which you can create a policy. The policy type helps the system to determine:

- **Policy Category** - The category implies the line of business in the health care domain for which the policy should be created using the policy type. The valid values are:
  - Fully-Insured Group
  - Fully-Insured Individual
  - Self-Funded

**Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.

- **Policy Business Object** - The business object using which the policy should be created in the system. You can specify the **C1-POLICY** or **C1-ASOPolicy** business object depending on whether you want to create the policy type for the fully-insured or self-funded health care business.

The **Policy Type** screen allows you to define, edit, copy, and delete a policy type. It contains the following zones:

- [Policy Type List](#) on page 2062
- [Policy Type](#) on page 2062

## Policy Type List

The **Policy Type List** zone lists the policy types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Policy Type	Displays the policy type.
Description	Displays the description of the policy type.
Policy Category	Indicates the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> <li>• Self-Funded</li> <li>• Fully-Insured Group</li> <li>• Fully-Insured Individual</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Policy Type</b> screen appears where you can edit the details of the policy type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Policy Type</b> screen appears where you can define a new policy type using an existing policy type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the policy type. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b> You can delete a policy type only when a policy is not created using the policy type. </div>

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a policy type, the **Policy Type** zone appears with the details of the respective policy type.

You can filter the list using the **Policy Category** field available in the **Filter** area. By default, the **Filter** area is hidden.

You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Policy Type

The **Policy Type** zone displays the details of the policy type. It contains the following sections:

- **Main** - Displays basic information about the policy type. It contains the following fields:

Field Name	Field Description
Policy Type	Displays the policy type.
Policy Business Object	Indicates the business object using which the policy should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the policy type.
Status	Indicates the status of the policy type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Policy Category	Indicates the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> <li>Self-Funded</li> <li>Fully-Insured Group</li> <li>Fully-Insured Individual</li> </ul>
Detailed Description	Displays additional information about the policy type.

- **Characteristics** - Lists the characteristics defined for the policy type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy type.
Delete	Used to delete the policy type.  <b>Note:</b> You can delete a policy type only when a policy is not created using the policy type.
Duplicate	Used to create a new policy type using an existing policy type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Policy Type** zone does not appear in the **Policy Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the policy type in the **Policy Type List** zone.

## **Defining a Policy Type**

### **Prerequisites**

To define a policy type, you should have:

- Required policy business object defined in the application

**Note:** The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured policy and the **C1-ASOPolicy** business object to create a self-funded policy.

### **Procedure**

To define a policy type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Policy Type** sub-menu.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.
- **Characteristics** - Used to define characteristics for the policy type.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> <li>Fully-Insured Group</li> <li>Fully-Insured Individual</li> <li>Self-Funded</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> At present, the <b>Fully-Insured Individual</b> policy category is not supported in the system.</div>	Yes
Detailed Description	Used to specify additional information about the policy type.	No

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy Type** screen.

- Enter the required details in the **Main** section.

**Note:** If you want to create a policy type for the fully-insured health care business, select the **C1-POLICY** business object from the **Policy Business Object** list and the **Fully-Insured Group** option from the **Policy Category** list. However, if you want to create a policy type for the self-funded health care business, select the **C1-ASOPolicy** business object from the **Policy Business Object** list and the **Self-Funded** option from the **Policy Category** list.

- Define the characteristics for the policy type, if required.
- Click **Save**.

The policy type is defined.

## Defining a Characteristic for a Policy Type

### Prerequisites

To define a characteristic for a policy type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Type**).

### Procedure

To define a characteristic for a policy type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a policy type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to the <b>Policy Type</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the policy type.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the policy type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the policy type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the policy type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing a Policy Type

### Prerequisites

To edit a policy type, you should have:

- Required policy business object defined in the application

**Note:** The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured policy and the **C1-ASOPolicy** business object to create a self-funded policy.

### Procedure

To edit a policy type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.  
The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the policy type whose details you want to edit.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.
- **Characteristics** - Used to define characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Displays the policy type.	Not applicable
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> <li>• Fully-Insured Group</li> <li>• Fully-Insured Individual</li> <li>• Self-Funded</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> At present, the <b>Fully-Insured Individual</b> policy category is not supported in the system. </div>	Yes
Detailed Description	Used to specify additional information about the policy type.	No

**Tip:** Alternatively, you can edit the details of a policy type by clicking the **Edit** button in the **Policy Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the policy type, if required.
7. Click **Save**.

The changes made to the policy type are saved.

**Copying a Policy Type**

Instead of creating a policy type from scratch, you can create a new policy type using an existing policy type. This is possible through copying a policy type. On copying a policy type, the details including the characteristics are copied to the new policy type. You can then edit the details, if required.

**Prerequisites**

To copy a policy type, you should have:

- Policy type (whose copy you want to create) defined in the application
- Required policy business object defined in the application

**Note:** The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured policy and the **C1-ASOPolicy** business object to create a self-funded policy.

**Procedure**

To copy a policy type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.  
The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the policy type whose copy you want to create.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.
- **Characteristics** - Used to define characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> <li>Fully-Insured Group</li> <li>Fully-Insured Individual</li> <li>Self-Funded</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> At present, the <b>Fully-Insured Individual</b> policy category is not supported in the system. </div>	Yes
Detailed Description	Used to specify additional information about the policy type.	No

**Tip:** Alternatively, you can copy a policy type by clicking the **Duplicate** button in the **Policy Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics from the policy type, if required.
- Click **Save**.

The new policy type is defined.

## Deleting a Policy Type

### Procedure

To delete a policy type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Policy Type**.

A sub-menu appears.

- Click the **Search** option from the **Policy Type** sub-menu.

The **Policy Type** screen appears.

- In the **Policy Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the policy type that you want to delete.

A message appears confirming whether you want to delete the policy type.

**Note:** You can delete a policy type only when a policy is not created using the policy type.

**Tip:** Alternatively, you can delete a policy type by clicking the **Delete** button in the **Policy Type** zone.

- Click **OK**.

The policy type is deleted.

## Policy Person Role

Oracle Revenue Management and Billing enables you to specify the role of a person while associating the person to a policy. This helps to indicate whether the person is a policy holder, broker, underwriter, and so on in a policy. The **Policy Person Role** screen allows you to define, edit, and delete a policy person role. It contains the following zone:

- [Policy Person Role List](#) on page 2071

### Policy Person Role List

The **Policy Person Role List** zone lists the roles which you can assign to a person in a policy. It contains the following columns:

Column Name	Column Description
Policy Person Role	Displays the policy person role.
Description	Displays the description of the policy person role.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Policy Person Role</b> screen appears where you can edit the details of the policy person role.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the policy person role.  <b>Note:</b> You can delete a policy person role only when it is not used while associating a person with a policy.

You can define a new policy person role by clicking the **Add** link in the upper-right corner of this zone.

You can filter the list using various search criteria (such as **Policy Person Role** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (✖) icon in the upper-right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2882.

## Contract Relationship Type

Oracle Revenue Management and Billing enables you to define various relationship types using which you can relate main subscriber and other dependent persons in a membership. The **Contract Relationship Type** screen allows you to define, edit, and delete such relationship types. It also allows you to filter the contract relationship types using various search criteria.

### Filtering the Contract Relationship Types

#### Prerequisites

To filter the contract relationship types, you should have:

- Contract relationship types defined in the application

#### Procedure

To filter the contract relationship types:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

The **Contract Relationship Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to search a particular contract relationship type.	Yes

- Enter the search criteria in the **Relationship Type** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

The search results are filtered based on the specified criteria.

## Editing a Contract Relationship Type

### **Procedure**

To edit a contract relationship type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

The **Contract Relationship Type** screen appears.

3. If required, you can filter the list in the **Contract Relationship Type** screen.

A list of contract relationship types that meet the search criteria appears in the search results. The **Search Results** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Displays the contract relationship type.	Not applicable
Description	Used to specify the description for the contract relationship type.	Yes

4. Modify the required details in the **Contract Relationship Type** screen.
5. Click **Save**.

The changes made to the contract relationship type are saved.

## **Deleting a Contract Relationship Type**

### **Procedure**

To delete a contract relationship type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.  
The **Contract Relationship Type** screen appears.
3. If required, you can filter the list in the **Contract Relationship Type** screen.  
A list of contract relationship types that meet the search criteria appears in the **Search Results** section.
4. Click the **Delete** (🗑️) icon corresponding to the contract relationship type that you want to delete.

**Note:** You can delete a contract relationship type only when it is not yet used in the system.

5. Click **Save**.

The contract relationship type is deleted.

## Source System Extendable Lookup

Oracle Revenue Management and Billing enables you to track the external system from where the fully-insured or self-funded policies are received for billing. Each external system must be defined in the system using the **Source System (C1-SourceSystemLookup)** extendable lookup.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2076

### Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.

**Note:** It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

### Related Topics

How to search for the <b>Source System</b> extendable lookup	<a href="#">Searching for the Source System Extendable Lookup</a> on page 2077
How to view the values of the <b>Source System</b> extendable lookup	<a href="#">Viewing the Values of the Source System Extendable Lookup</a> on page 2077

## Searching for the Source System Extendable Lookup

### Procedure

To search for the **Source System** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-SourceSystemLookup** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Source System** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Source System Extendable Lookup

### Procedure

To view the values of the **Source System** extendable lookup:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Source System** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

Extendable Lookup Value List zone	<a href="#">Extendable Lookup Value List</a> on page 2078

## Extendable Lookup (Source System)

The **Extendable Lookup** screen allows you to view the values of the **Source System (C1-SourceSystemLookup)** extendable lookup. It also allows you to define, edit, copy, and delete a source system. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2078
- [Extendable Lookup Value](#) on page 2079

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Source System** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the source system.
Description	Displays the description of the source system.
Owner	Indicates who has created the source system. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Extendable Lookup</b> screen appears where you can edit the details of the source system.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Extendable Lookup</b> screen appears where you can define a new source system using an existing source system.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the source system. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You can delete a source system only when it is not yet used in the system.</p> </div>
Detailed Description	Displays additional information about the source system.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a source system, the **Extendable Lookup Value** zone appears with the details of the respective source system.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the source system. It contains the following sections:

- **Main** – Displays basic information about the source system. It contains the following fields:

Field Name	Field Description
Source System	Displays the source system.
Description	Displays the description of the source system.
Override Description	Displays the overridden description of the source system.
Detailed Description	Displays additional information about the source system.
Status	Indicates the status of the source system. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the source system.
Delete	Used to delete the source system. <b>Note:</b> You can delete a source system only when it is not yet used in the system.
Duplicate	Used to create a source system using an existing source system.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the source system is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the source system. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the source system in the **Extendable Lookup Value List** zone.

**Defining a Source System****Procedure**

To define a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Extendable Lookup** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the source system.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to specify the external system from where the policies are received for billing.	Yes
Description	Used to specify the description for the source system.	Yes
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the value is set to <b>Active</b>.</div>	Yes

4. Enter the required details in the **Main** section.
5. Click **Save**.

The source system is added in the **C1-SourceSystemLookup** extendable lookup.

## Editing a Source System

### Procedure

To edit a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the source system whose details you want to edit.

The **Extendable Lookup** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the source system.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Displays the source system.	Not applicable
Description	Used to specify the description for the source system.	Yes
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a source system by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Click **Save**.

The changes made to the source system are saved.

## Copying a Source System

Instead of creating a source system from scratch, you can create a new source system using an existing source system. This is possible through copying a source system. On copying a source system, the details of the source system are copied to the new source system. You can then edit the details, if required.

### Prerequisites

To copy a source system, you should have:

- Source system (whose copy you want to create) defined in the application

### Procedure

To copy a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the source system whose copy you want to create.

The **Extendable Lookup** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the source system.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to specify the external system from where the policies are received for billing.	Yes
Description	Used to specify the description for the source system.	Yes
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can copy a source system by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Click **Save**.

The new source system is added in the **C1-SourceSystemLookup** extendable lookup.

## Deleting a Source System

### Procedure

To delete a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the source system that you want to delete.

A message appears confirming whether you want to delete the source system.

**Note:** You can delete a source system only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a source system by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The source system is deleted from the **C1-SourceSystemLookup** extendable lookup.

## Viewing the Source System Details

### Procedure

To view the details of a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Broadcast**  icon corresponding to the source system whose details you want to view.  
The **Extendable Lookup Value** zone appears.
4. View the details of the source system in the **Extendable Lookup Value** zone.

## **Policy (Used for Searching)**

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to define a policy. It contains the following zone:

- [Search Policy](#) on page 2084

Through this screen, you can navigate to the following screen:

- [Policy \(Used for Viewing\)](#) on page 2095

## **Search Policy**

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using the policy or person details. The valid values are: <ul style="list-style-type: none"> <li>• Policy Date/Policy Type/Status</li> <li>• Source System/Policy Number/Description</li> <li>• Person Name/Person Identifier</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>Policy Date/Policy Type/Status</b> option is selected.</div>	Yes
Policy Type	Used to search policies which are created using a particular policy type. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when the <b>Policy Date/Policy Type/Status</b> option is selected from the <b>Search By</b> list.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to search policies which are effective from a particular date.</p> <p><b>Note:</b> This field appears only when the <b>Policy Date/Policy Type/Status</b> option is selected from the <b>Search By</b> list.</p>	No
Status	<p>Used to search policies with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Canceled</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reinstatement</li> <li>• Pending Termination</li> <li>• Pending Termination Overridden</li> <li>• Post Runout</li> <li>• Reinstated</li> <li>• Runout</li> <li>• Terminated</li> </ul> <p><b>Note:</b> This field appears only when the <b>Policy Date/Policy Type/Status</b> option is selected from the <b>Search By</b> list.</p>	No
End Date	<p>Used to search policies which are effective till a particular date.</p> <p><b>Note:</b> This field appears only when the <b>Policy Date/Policy Type/Status</b> option is selected from the <b>Search By</b> list.</p>	No
Source System	<p>Used to search policies which originated from a particular external system.</p> <p><b>Note:</b> This field appears only when the <b>Source System/Policy Number/Description</b> option is selected from the <b>Search By</b> list.</p>	No
Policy Number	<p>Used to search a policy with a particular policy number.</p> <p><b>Note:</b> This field appears only when the <b>Source System/Policy Number/Description</b> option is selected from the <b>Search By</b> list.</p>	No
Description	<p>Used to search policies with a particular description.</p> <p><b>Note:</b> This field appears only when the <b>Source System/Policy Number/Description</b> option is selected from the <b>Search By</b> list.</p>	No
Person Name	<p>Used to search policies to which a particular person is associated.</p> <p><b>Note:</b> This field appears only when the <b>Person Name/Person Identifier</b> option is selected from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to indicate the person identifier type. <b>Note:</b> This field appears only when the <b>Person Name/Person Identifier</b> option is selected from the <b>Search By</b> list.	Yes (Conditional) <b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search policies to which a person is associated. <b>Note:</b> This field appears only when the <b>Person Name/Person Identifier</b> option is selected from the <b>Search By</b> list.	Yes (Conditional) <b>Note:</b> If you specify the person identifier type as a search criteria, you have to specify the person identifier.

**Note:** You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays additional information about the policy. <b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the respective policy.
Source System	Indicates the external system from where the policy is originated.
Description	Displays the description of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Column Name	Column Description						
Status	<p>Indicates the status of the policy. If the policy is created using the <b>C1-POLICY</b> business object, the valid values are:</p> <ul style="list-style-type: none"> <li>• Pending</li> <li>• In Force/Active</li> <li>• Pending Cancellation</li> <li>• Canceled</li> <li>• Pending Reinstatement</li> <li>• Reinstated</li> <li>• Pending Termination</li> <li>• Pending Termination Overridden</li> <li>• Terminated</li> </ul> <p>However, if the policy is created using the <b>C1-ASOPolicy</b> business object, the valid values are:</p> <ul style="list-style-type: none"> <li>• Pending</li> <li>• In Force/Active</li> <li>• Runout</li> <li>• Post Runout</li> </ul>						
Main Customer	<p>This column displays different data depending on whether you search for a policy using the policy or person details. ## **Searching for a Policy**

### **Prerequisites**

To search for a policy, you should have:

- Policy types and person identifier types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

### **Procedure**

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Policy**.  
A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.  
The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of policies that meet the search criteria appears in the **Search Results** section.

## Viewing the Policy Details

**Procedure**

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to view.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the policy in the **Policy** zone.

## Defining a Policy

Oracle Revenue Management and Billing enables you to define a policy for the fully-insured and self-funded health care business. You can define a fully-insured policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, you can define a self-funded policy using a policy type where the policy category is set to **Self-Funded**.

**Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.

**Prerequisites**

To define a policy, you should have:

- Policy types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

**Note:** This prerequisite is applicable only when you want to define a fully-insured policy.

- Values defined for the **RUNOUT\_ADM\_OPT\_FLG** lookup field

**Note:** This prerequisite is applicable only when you want to define a self-funded policy.

### Procedure

To define a policy:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Policy**.  
A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.

The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy.  <b>Note:</b> If you want to create a fully-insured policy, you must select a policy type where the policy category is set to <b>Fully-Insured Group</b> or <b>Fully-Insured Individual</b> . However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to <b>Self-Funded</b> .	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy** screen.

4. Select the required policy type from the respective field.
5. Click **OK**.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated.  <b>Note:</b> This field appears only when you are defining a policy using a policy type where the policy category is set to <b>Fully-Insured Group</b> or <b>Fully-Insured Individual</b> .	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the policy is effective.  <b>Note:</b> The policy start date cannot be later than the policy end date.	Yes
End Date	Used to specify the date till when the policy is effective.  <b>Note:</b> The policy end date cannot be earlier than the policy start date.	Yes
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.  <b>Note:</b> The runout end date cannot be earlier than or equal to the policy end date. This field appears only when you are defining a policy using a policy type where the policy category is set to <b>Self-Funded</b> .	No
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"><li>• None</li><li>• Percentage of Claim</li></ul> <b>Note:</b> At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears only when you are defining a policy using a policy type where the policy category is set to <b>Self-Funded</b> .	No

6. Enter the required details in the **Main** section.
7. Associate the required persons with the policy.

**Note:** While defining a policy, you must associate a person who is the main customer of the policy.

8. Define the characteristics for the policy, if required.
9. Click **Save**.

The policy is defined and its status is set to **Pending**.

## Associating a Person with a Policy

### Prerequisites

To associate a person with a policy, you should have:

- Required persons defined in the application
- Required policy person roles defined in the application

### Procedure

To associate a person with a policy:

1. Ensure that the **Persons** section is expanded when you are defining or editing a policy.

The **Persons** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate with the policy.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.  On specifying the person ID, the person name appears corresponding to the <b>Person</b> field.	Yes
Sequence	Used to specify the sequence number for the associated person.	Yes
Policy Person Role	Used to indicate the role of a person in the policy.	Yes
Main Customer	Used to indicate whether the person is the main customer of the policy.  <b>Note:</b> At a time, only one person can be the main customer of the policy.	Yes (Conditional)  <b>Note:</b> You must select this option while associating a person who is the main customer of the policy.

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the person is associated with the policy.  <b>Note:</b> The start date cannot be later than the end date. The start date cannot be earlier than the policy start date and later than the policy end date.	Yes
End Date	Used to specify the date till when the person is associated with the policy.  <b>Note:</b> The end date cannot be earlier than the start date. The end date cannot be earlier than the policy start date and later than the policy end date. This validation is done only when the policy is transition to the status which is not specified in the <b>Skip Status for Policy Person End Date Validation</b> parameter of the <b>C1-POLBOVAL</b> algorithm. For example, if you set the <b>Skip Status for Policy Person End Date Validation</b> parameter of the <b>C1-POLBOVAL</b> algorithm to <b>TERMINATED</b> , the system will not perform this validation when the status of the policy is changed to <b>Terminated</b> .	No

- Enter the required details in the **Persons** section.

**Note:** While associating the persons with a policy, you must always ensure that one person is the main customer of the policy.

- If you want to associate more than one person with the policy, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to dissociate a person from the policy, click the **Delete** (🗑️) icon corresponding to the person.

- Click **Save**.

The persons are associated with the policy.

## Defining a Characteristic for a Policy

### Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

### Procedure

To define a characteristic for a policy:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy.  <b>Note:</b> The effective date cannot be earlier than the policy start date and later than the policy end date.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Policy</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the policy.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the policy, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the policy.

## Policy (Used for Viewing)

---

The **Policy** screen allows you to:

- View the details of a fully-insured or self-funded policy
- Edit the details of a fully-insured or self-funded policy
- Delete a fully-insured or self-funded policy
- Activate a fully-insured or self-funded policy
- Add or edit plans in a fully-insured policy
- Add memberships to a fully-insured policy plan
- Initiate the termination process for a fully-insured policy
- Terminate a fully-insured policy
- Initiate the cancellation process for a fully-insured policy
- Cancel a fully-insured policy
- Initiate the reinstatement process for a fully-insured policy
- Reinstatement a fully-insured policy
- View the log of a fully-insured or self-funded policy
- Add a log entry for a fully-insured or self-funded policy

It consists of the following tabs:

- [Policy - Main](#) on page 2095
- [Policy - Plan](#) on page 2102
- [Policy - Log](#) on page 2104

### Policy - Main

The **Main** tab displays information about the policy. It contains the following zone:

- [Policy](#) on page 2095

### Policy

The **Policy** zone displays the details of the fully-insured or self-funded policy. It contains the following sections:

- **Main** - Displays basic information about the policy. It contains the following fields:

Field Name	Field Description
Base Policy Information	Displays information about the base policy.  <b>Note:</b> This field appears only when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to <b>Self-Funded</b> .
Policy Information	Displays information about the policy.
Policy Type	Indicates the policy type using which the policy is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Policy Type</b> screen appears where you can view the details of the respective policy type.

Field Name	Field Description
Status	<p>Indicates the status of the policy. If the policy is created using the <b>C1-POLICY</b> business object, the valid values are:</p> <ul style="list-style-type: none"> <li>• Pending</li> <li>• In Force/Active</li> <li>• Pending Cancellation</li> <li>• Canceled</li> <li>• Pending Reinstatement</li> <li>• Reinstated</li> <li>• Pending Termination</li> <li>• Terminated</li> </ul> <p>However, if the policy is created using the <b>C1-ASOPolicy</b> business object, the valid values are:</p> <ul style="list-style-type: none"> <li>• Pending</li> <li>• In Force/Active</li> <li>• Runout</li> <li>• Post Runout</li> </ul>
Status Reason	<p>Indicates the reason why the policy is terminated.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective termination reason.</p> <p>This field appears only when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to <b>Fully-Insured Group</b> or <b>Fully-Insured Individual</b>.</p> </div>
Policy Number	Displays the policy number.
Description	Displays the description of the policy.
Source System	Indicates the external system from where the policy is originated.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Renewal Date	<p>Displays the date when the policy is renewed.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field appears only when you are viewing the details of a policy which is renewed.</p> </div>

Field Name	Field Description																																													
Paid Through Date	<p data-bbox="516 212 1468 275">Indicates the term end date of the last fully or partially paid term. Field Name	Field Description
Runout End Date	Displays the date when the runout period of the self-funded policy ends.  <b>Note:</b> This field appears only when you are viewing the details of a policy which is created using a policy type where the policy category is set to <b>Self-Funded</b> .
Runout Administration Fees	Indicates whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> <li>• None</li> <li>• Percentage of Claim</li> </ul> <b>Note:</b> This field appears only when you are viewing the details of a policy which is created using a policy type where the policy category is set to <b>Self-Funded</b> .

- **Persons** - Lists the persons which are associated with the policy. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Sequence	Displays the sequence number of the associated person.
Policy Person Role	Indicates the role of the person in the policy.
Main Customer	Indicates whether the person is the main customer of the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

- **Characteristics** - Lists the characteristics which are defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.  <b>Note:</b> It has a link when you are viewing the details of a policy which is created using a policy type where the policy category is set to <b>Fully-Insured Group</b> or <b>Fully-Insured Individual</b> . On clicking the link, the <b>Characteristic Type</b> screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.  <b>Note:</b> This column appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to <b>Fully-Insured Group</b> or <b>Fully-Insured Individual</b> .

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description						
Edit	<p>Used to edit the details of the fully-insured or self-funded policy.</p> <p><b>Note:</b> The <b>Edit</b> button appears only when a policy of the respective category is in either of the following status:</p> <table border="1" data-bbox="521 401 1463 968"> <thead> <tr> <th data-bbox="521 401 907 449">Policy Category</th> <th data-bbox="907 401 1463 449">Status</th> </tr> </thead> <tbody> <tr> <td data-bbox="521 449 907 804">Fully-Insured Group or Fully-Insured Individual</td> <td data-bbox="907 449 1463 804"> <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Canceled</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reinstatement</li> <li>• Pending Termination</li> <li>• Terminated</li> </ul> </td> </tr> <tr> <td data-bbox="521 804 907 968">Self-Funded</td> <td data-bbox="907 804 1463 968"> <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Pending</li> <li>• Runout</li> </ul> </td> </tr> </tbody> </table>	Policy Category	Status	Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Canceled</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reinstatement</li> <li>• Pending Termination</li> <li>• Terminated</li> </ul>	Self-Funded	<ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Pending</li> <li>• Runout</li> </ul>

Initiate Reinstatement	<p>Used to initiate the reinstatement process for the terminated policy.</p> <p><b>Note:</b> The <b>Initiate Reinstatement</b> button appears only when the fully-insured policy is in the <b>Terminated</b> status.</p>						
Reinstate	<p>Used to reinstate the terminated policy.</p> <p><b>Note:</b> The <b>Reinstate</b> button appears only when the fully-insured policy is in the <b>Pending Reinstatement or Terminated</b> status.</p>						

Button Name	Button Description
Runout	Used to transition the self-funded policy to the <b>Runout</b> status.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Runout</b> button appears only when the self-funded policy is in the <b>In Force/Active</b> status.</p> <p>You cannot transition a self-funded policy to the <b>Runout</b> status when:</p> <ul style="list-style-type: none"> <li>• The self-funded policy is renewed.</li> <li>• The runout end date is not specified.</li> <li>• The policy end date is earlier than the system date.</li> </ul> </div>

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> </div>
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - Displays the termination details of the fully-insured policy. It appears only when the policy is in the **Pending Termination** status. It contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when you want to terminate the policy.
Terminate Reason	Indicates the reason why the termination process is initiated for the policy.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective termination reason.</p> </div>

- **Reinstate Information** - Displays the reinstatement details of the terminated policy. It appears only when the policy is in the **Pending Reinstatement** status. It contains the following fields:

Field Name	Field Description
Reinstate Reason	Indicates the reason why you want to reinstate the fully-insured policy.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective reinstatement reason.</p> </div>

## Policy - Plan

The **Plan** tab lists the plans defined for the policy and memberships defined for each policy plan. It contains the following zones:

- [Plans](#) on page 2102
- [Memberships](#) on page 2103

### Plans

The **Plans** zone lists the plans which are defined in the policy. It contains the following columns:

Column Name	Column Description
Plan Information	Displays information about the policy plan. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Policy Plan</b> screen appears where you can view the details of the respective policy plan.
Price Item Information	Indicates the price item to which the policy plan is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Plan</b> screen appears where you can edit the details of the policy plan.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new policy plan by clicking the **Add** link in the upper-right corner of this zone. On clicking the **Broadcast**  icon corresponding to a policy plan, the **Memberships** zone appears.

**Note:** Ideally, you define plans in a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, and **Effective From**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper-right corner of this zone.

How to view the memberships of a fully-insured policy plan	<a href="#">Viewing the Membership Details of a Fully-Insured Policy Plan</a> on page 2119

### Memberships

The **Memberships** zone lists the memberships which are defined in the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. <b>Note:</b> It has a link. On clicking the link, the <b>Membership</b> screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Last Billed Coverage	Indicates the last bill segment generated for the membership which is in the <b>Frozen</b> status. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in application. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears where you can view the details of respective bill segment.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears only when you click the **Broadcast**  icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2882

## **Policy - Log**

The **Log** tab contains the following zone:

- [Policy Log](#) on page 2104

### **Policy Log**

The **Policy Log** zone lists the complete trail of actions performed on the policy. It contains the following columns:

<b>Column Name</b>	<b>Column Description</b>
Creation Date Time	Displays the date and time when the action was performed on the policy.
Details	Displays the details about the action performed on the policy.
User	Indicates the user who has performed the action on the policy.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is created when the action is performed on the policy. <b>Note:</b> It contains a link. On clicking the link, the screen appears where you can view the details of the respective related object.
Status Reason	Indicates the reason why the status of the policy is changed.

**Note:** You can manually add a log entry for the policy by clicking the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

## Activating a Policy

### Procedure

To activate a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to activate.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Activate** button in the **Policy** zone.

The status of the policy is changed to **In Force/Active**.

<b>Note:</b>	
The <b>Activate</b> button appears only when a policy of the respective category is in either of the following status:	
Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> <li>• Pending</li> <li>• Pending Termination</li> </ul>
Self-Funded	<ul style="list-style-type: none"> <li>• Pending</li> </ul>

## Editing a Policy

### Prerequisites

To edit a policy, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

**Note:** This prerequisite is applicable only when you want to define a fully-insured policy.

- Values defined for the **RUNOUT\_ADM\_OPT\_FLG** lookup field

**Note:** This prerequisite is applicable only when you want to define a self-funded policy.

### Procedure

To edit a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Policy** zone.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined.	Not applicable
Status	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• In Force/Active</li> <li>• Runout</li> <li>• Post Runout</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This field appears only when you are editing a policy which is created using a policy type where the policy category is set to <b>Self-Funded</b>. </div>	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This field appears only when you are editing a policy which is created using a policy type where the policy category is set to <b>Fully-Insured Group</b> or <b>Fully-Insured Individual</b>. </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the policy is effective.</p> <p><b>Note:</b></p> <p>The policy start date cannot be later than the policy end date.</p> <p>You cannot change the start date of a self-funded policy when it is in the <b>In Force/Active</b>, <b>Runout</b>, or <b>Post Runout</b> status.</p>	Yes
End Date	<p>Used to specify the date till when the policy is effective.</p> <p><b>Note:</b></p> <p>The policy end date cannot be earlier than the policy start date.</p> <p>You cannot change the end date when the self-funded policy is in the <b>Runout</b> status.</p> <p>You cannot set the end date of a self-funded policy to a date which is later than or equal to the start date of a pricing rule which is defined for the <b>Runout</b> status.</p> <p>You cannot change the end date when the policy is renewed.</p>	Yes
Runout End Date	<p>Used to specify the date when the runout period of the self-funded policy ends.</p> <p><b>Note:</b></p> <p>This field appears only when you are editing a policy which is created using a policy type where the policy category is set to <b>Self-Funded</b>.</p> <p>The runout end date cannot be earlier than or equal to the policy end date.</p> <p>The runout end date cannot be earlier than or equal to the system date when the policy is in the <b>Runout</b> status.</p> <p>You cannot remove the runout end date when the policy is in the <b>Runout</b> or <b>Post Runout</b> status.</p> <p>You cannot set the runout end date to a date which is later than or equal to the start date of a pricing rule which is defined for the <b>Post Runout</b> status.</p> <p>You cannot set the runout end date to a date which is earlier than the end date of a pricing rule which is defined for the <b>Runout</b> status.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Percentage of Claim</li> </ul> <p><b>Note:</b></p> <p>At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> <p>This field appears only when you are editing a policy which is created using a policy type where the policy category is set to <b>Self-Funded</b>.</p>	No

<b>Note:</b>	
The <b>Edit</b> button appears only when a policy of the respective category is in either of the following status:	
Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Canceled</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reinstatement</li> <li>• Pending Termination</li> <li>• Terminated</li> </ul>
Self-Funded	<ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Pending</li> <li>• Runout</li> </ul>

5. Modify the required details in the **Main** section.
6. Associate the persons with the policy, if required.

**Note:** While editing a policy, you must ensure that one person is associated as the main customer of the policy.

7. Define, edit, or remove characteristics from the policy, if required.
8. Click **Save**.

The changes made to the policy are saved.

## Deleting a Policy

### Procedure

To delete a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to delete.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Policy** zone.

A message appears confirming whether you want to delete the policy.

<b>Note:</b>	
The <b>Delete</b> button appears only when a policy of the respective category is in either of the following status:	
<b>Policy Category</b>	<b>Status</b>
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Canceled</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reinstatement</li> <li>• Pending Termination</li> <li>• Terminated</li> </ul>
Self-Funded	<ul style="list-style-type: none"> <li>• Pending</li> </ul>
You can delete a fully-insured policy until the plans are not defined for the policy.	

5. Click **OK**.

The policy is deleted.

## Initiating the Termination Process for a Fully-Insured Policy

### Prerequisites

To initiate the termination process for a fully-insured policy, you should have:

- Reasons defined for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen

### Procedure

To initiate the termination process for a fully-insured policy:

- Search for the fully-insured policy in the **Policy** screen.
- In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for which you want to initiate the termination process.

The **Policy** screen appears.

- Ensure that the **Main** tab is selected.
- Click the **Initiate Termination** button in the **Policy** zone.

The **Termination Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Terminate Reason	Used to indicate the reason why you want to initiate the termination process for the fully-insured policy.	Yes
Terminate Date	Used to specify the date when you want to terminate the policy.  <b>Note:</b> The terminate date cannot be earlier than the policy start date or later than the policy end date.	Yes

**Note:** The **Initiate Termination** button appears only when the fully-insured policy is in the **In Force/Active** status.

- Enter the required details in the **Termination Information** window.
- Click **Save**.

The status of the fully-insured policy is changed to **Pending Termination**.

## Terminating a Fully-Insured Policy

### Prerequisites

To terminate a fully-insured policy, you should have:

- Reasons defined for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen

### Procedure

To terminate a fully-insured policy:

- Search for the fully-insured policy in the **Policy** screen.
- In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to terminate.

The **Policy** screen appears.

- Ensure that the **Main** tab is selected.
- Click the **Terminate** button in the **Policy** zone.

The **Status Reason** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to terminate the fully-insured policy.	Yes

**Note:** The **Terminate** button appears only when the fully-insured policy is in the **In Force/Active**, **Pending Reinstatement**, or **Pending Termination** status.

- Select the terminate reason from the respective field.
- Click **Save**.

The status of the policy is changed to **Terminated**.

**Note:** You cannot terminate a fully-insured policy which is in the **Pending Termination** status when the terminate date is earlier than the system date.

## Initiating the Reinstatement Process for a Fully-Insured Policy

### Prerequisites

To initiate the reinstatement process for a fully-insured policy, you should have:

- Reasons defined for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen

### Procedure

To initiate the reinstatement process for a fully-insured policy:

1. Search for the fully-insured policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for which you want to initiate the reinstatement process.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Initiate Reinstatement** button in the **Policy** zone.

The **Reinstatement Information** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Reinstatement Reason	Used to indicate the reason why you want to initiate the reinstatement process for the fully-insured policy.	Yes

**Note:** The **Initiate Reinstatement** button appears only when the fully-insured policy is in the **Terminated** status.

5. Select the reinstatement reason from the respective field.
6. Click **Save**.

The status of the fully-insured policy is changed to **Pending Reinstatement**.

## Reinstating a Fully-Insured Policy

### Prerequisites

To reinstate a fully-insured policy, you should have:

- Reasons defined for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen

### Procedure

To reinstate a fully-insured policy:

1. Search for the fully-insured policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to reinstate.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Reinstatement** button in the **Policy** zone.

The **Status Reason** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reinstate the fully-insured policy.	Yes

**Note:** The **Reinstate** button appears only when the fully-insured policy is in the **Pending Reinstatement** or **Terminated** status.

5. Select the reinstatement reason from the respective field.
6. Click **Save**.

The status of the policy is changed to **Reinstated**.

## **Manually Changing the Status of a Self-Funded Policy to Runout**

### **Prerequisites**

To manually change the status of a self-funded policy to **Runout**, you should have:

- Runout end date specified in the self-funded policy.

### **Procedure**

To manually change the status of a self-funded policy to **Runout**:

1. Search for the self-funded policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the self-funded policy whose status you want to change.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Runout** button in the **Policy** zone.

The status of the self-funded policy is changed to **Runout**.

### **Note:**

The **Runout** button appears only when the self-funded policy is in the **In Force/Active** status.

You cannot transition a self-funded policy to the **Runout** status when:

- The self-funded policy is renewed.
- The runout end date is not specified.
- The policy end date is earlier than the system date.

## Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy only when it is in the **In Force/Active** status and is not yet renewed. For more information, see [Self-Funded Policy Renewal](#) on page 2041.

### Procedure

To renew a self-funded policy of a bill group:

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Renew** () icon in the **Renew** column corresponding to the self-funded policy which you want to renew.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the renewed policy.
- **Persons** - Used to associate or disassociate persons from the renewed policy.

**Note:** You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration.

- **Characteristics** - Used to define characteristics for the renewed policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the renewed policy is effective.</p> <div data-bbox="537 289 1182 632" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.</p> <p>The start date cannot be later than the end date.</p> <p>The start date cannot be earlier than or equal to the base policy's end date.</p> </div>	Yes
End Date	<p>Used to specify the date till when the renewed policy is effective.</p> <div data-bbox="537 737 1182 789" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The end date cannot be earlier than the start date.</p> </div>	Yes
Runout End Date	<p>Used to specify the date when the runout period of the renewed policy ends.</p> <div data-bbox="537 898 1182 978" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The runout end date cannot be earlier than or equal to the renewed policy's end date.</p> </div>	No
Runout Administration Fees	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Percentage of Claim</li> </ul> <div data-bbox="537 1220 1182 1360" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Copy Pricing Rules	<p>Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the <b>Copy Pricing Rules</b> option, the system copies the following pricing rules of the base policy:</p> <ul style="list-style-type: none"> <li>• Claim</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Recurring Flat Fees</li> <li>• Ancillary</li> </ul> <p><b>Note:</b></p> <p>While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively.</p> <p>If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.</p>	No

**Note:** The **Renew** icon appears only when the policy is in the **In Force/Active** status and it is not yet renewed.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics from the renewed policy, if required.
8. Click **Save**.

The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group ASO Policy Information** zone.

## Defining a Plan for a Fully-Insured Policy

### Prerequisites

To define a plan for a fully-insured policy, you should have:

- Policy plan business objects defined in the application
- Price items defined in the application

### Procedure

To define a plan for a fully-insured policy:

1. Search for the fully-insured policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for which you want to define a plan.

The **Policy** screen appears.

3. Click the **Plan** tab.

The **Plan** tab appears.

4. Click the **Add** link in the upper right corner of the **Plans** zone.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	Used to indicate the business object using which you want to create a plan for a fully-insured policy.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** link in the upper right corner of the **Policy Plan** zone in the **Policy Plan** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple policy plan business objects defined in the application. If there is only one policy plan business object defined in the application, the **Plan** screen appears.

5. Select the required policy plan business object from the respective field.
6. Click **OK**.

The **Plan** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy plan.
- **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.

- **Characteristics** - Used to define characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Indicates the fully-insured policy for which you want to create the policy plan.	Not applicable
Price Item	Used to indicate the price item which you want to associate with the policy plan.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.  On specifying the price item, the description of the price item appears corresponding to the <b>Price Item</b> field.	Yes (Conditional)  <b>Note:</b> You must either specify the price item or associate at least one pricing rule type with the policy plan.
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Start Date	Used to specify the date from when the policy plan is effective.  <b>Note:</b> The policy plan start date cannot be earlier than the policy start date and later than the policy end date.  The policy plan start date cannot be later than the policy plan end date.	Yes
End Date	Used to specify the date till when the policy plan is effective.  <b>Note:</b> The policy plan end date cannot be earlier than the policy start date and later than the policy end date.  The policy plan end date cannot be earlier than the policy plan start date.	No

7. Enter the required details in the **Main** section.
8. Associate the pricing rule types with the policy plan, if required.

**Note:** You must associate at least one pricing rule type with the policy plan when the price item is not specified in the policy plan.

9. Define the characteristics for the policy plan, if required.
10. Click **Save**.

The plan is defined for the fully-insured policy.

### **Related Topics**

How to define a characteristic for a fully-insured policy plan	<a href="#">Defining a Characteristic for a Fully-Insured Policy Plan</a> on page 2123

## Associating a Pricing Rule Type with a Fully-Insured Policy Plan

You can define a pricing rule using a pricing rule type for a fully-insured policy plan only when the pricing rule type is associated with the fully-insured policy plan. You can associate a pricing rule type with a fully-insured policy plan either from the user interface or through a health care inbound message.

### Prerequisites

To associate a pricing rule type with a fully-insured policy plan, you should have:

- Pricing rule types defined in the application (where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**)

### Procedure

To associate a pricing rule type with a fully-insured policy plan:

- Ensure that the **Pricing Rule Types** section is expanded when you are defining or editing a fully-insured policy plan.

The **Pricing Rule Types** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	<p>Used to indicate the pricing rule type that you want to associate with the fully-insured policy plan.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Pricing Rule Type Search</b> window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the <b>Pricing Rule Type</b> field.</p> <p>Here, you can only specify a pricing rule type where the pricing rule type category is set to <b>Age Based</b>, <b>Tier Based</b>, or <b>Pass-Through Billable Charge</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> You must either specify the price item or associate at least one pricing rule type with the policy plan.</p>

- Enter the required details in the **Pricing Rule Types** section.
- If you want to associate more than one pricing rule type with the fully-insured policy plan, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to dissociate a pricing rule type from the fully-insured policy plan, click the **Delete** (🗑️) icon corresponding to the pricing rule type.

4. Click **Save**.

The pricing rule types are associated with the fully-insured policy plan.

## Defining a Characteristic for a Fully-Insured Policy Plan

**Prerequisites**

To define a characteristic for a fully-insured policy plan, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**).

**Procedure**

To define a characteristic for a fully-insured policy plan:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a fully-insured policy plan.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the fully-insured policy plan. <b>Note:</b> The effective date cannot be earlier than the policy plan start date and later than the policy plan end date.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the fully-insured policy plan.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Policy Plan</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the fully-insured policy plan.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	<p>Used to specify the value for the characteristic type.</p> <p><b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining a characteristic for the fully-insured policy plan.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the fully-insured policy plan, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the fully-insured policy plan, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the fully-insured policy plan.

How to edit a plan of a fully-insured policy	<a href="#">Editing a Plan of a Fully-Insured Policy</a> on page 2124

## Editing a Plan of a Fully-Insured Policy

### Prerequisites

To edit a plan of a fully-insured policy, you should have:

- Price items defined in the application

### Procedure

To edit a plan of a fully-insured policy:

- Search for the fully-insured policy in the **Policy** screen.
- In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.  
The **Policy** screen appears.
- Click the **Plan** tab.  
The **Plan** tab appears.
- In the **Plans** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the policy plan whose details you want to edit.

The **Plan** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy plan.
- **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
- **Characteristics** - Used to define characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Plan Information	Displays information about the fully-insured policy plan.	Not applicable
Policy Information	Indicates the fully-insured policy for which the policy plan is created.	Not applicable
Price Item	Used to indicate the price item which you want to associate with the policy plan.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.  On specifying the price item, the description of the price item appears corresponding to the <b>Price Item</b> field.	Yes (Conditional)  <b>Note:</b> You must either specify the price item or associate at least one pricing rule type with the policy plan.
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Start Date	Used to specify the date from when the policy plan is effective.  <b>Note:</b> The policy plan start date cannot be earlier than the policy start date and later than the policy end date.  The policy plan start date cannot be later than the policy plan end date.	Yes
End Date	Used to specify the date till when the policy plan is effective.  <b>Note:</b> The policy plan end date cannot be earlier than the policy start date and later than the policy end date.  The policy plan end date cannot be earlier than the policy plan start date.	No

**Tip:** Alternatively, you can edit the details of a fully-insured policy plan by clicking the **Edit** button in the **Policy Plan** zone of the **Policy Plan** screen.

5. Modify the required details in the **Main** section.
6. Associate the pricing rule types with the policy plan, if required.

**Note:** You must associate at least one pricing rule type with the policy plan when the price item is not specified in the policy plan.

7. Define, edit, or remove characteristics from the policy plan, if required.
8. Click **Save**.

The changes made to the fully-insured policy plan are saved.

## **Policy Plan (Used for Viewing)**

---

The **Policy Plan** screen allows you to:

- View the details of a fully-insured policy plan
- Add and edit a fully-insured policy plan
- Add a membership to a fully-insured policy plan

It contains the following zones:

- [Policy Plan](#) on page 2127
- [Memberships](#) on page 2129

### **Policy Plan**

The **Policy Plan** zone displays the details of the policy plan. It contains the following sections:

- **Main** - Displays the basic information about the policy plan. It contains the following fields:

Field Name	Field Description
Plan Information	Displays information about the policy plan.

Field Name	Field Description
Policy Information	Displays information about the policy. <b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the respective policy.
Price Item	Indicates the price item to which the policy plan is associated. <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.

- **Pricing Rule Types** - Lists the pricing rule types which are associated with the policy plan. It contains the following column:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type which is associated with the policy plan. <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule Type</b> screen appears where you can view the details of the respective pricing rule type.

- **Characteristics** - Lists the characteristics defined for the policy plan. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy plan.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy plan.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy plan is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

You can define a new policy plan by clicking the **Add** link in the upper right corner of this zone.

## Memberships

The **Memberships** zone lists the memberships which are defined in the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. <b>Note:</b> It has a link. On clicking the link, the <b>Membership</b> screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Terminated</li> </ul>
Last Billed Coverage	Indicates the last bill segment generated for the membership which is in the <b>Frozen</b> status. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in application. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears where you can view the details of respective bill segment.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2882

## Membership (Used for Searching)

The **Membership** screen allows you to search for a membership using various search criteria. It also allows you to define a membership. It contains the following zone:

- [Search Membership](#) on page 2130

Through this screen, you can navigate to the following screen:

- [Membership \(Used for Viewing\)](#) on page 2138

### Search Membership

The **Search Membership** zone allows you to search for a membership using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a membership using the policy plan, membership, or person details. The valid values are: <ul style="list-style-type: none"> <li>• Policy Plan Details</li> <li>• Membership Details</li> <li>• Person Details</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> By default, <b>Policy Plan Details</b> option is selected.         </div>	Yes
Policy ID	Used to search memberships which belong to plans of a particular policy. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b>            The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Policy Search</b> window appears.            This field appears only when the <b>Policy Plan Details</b> option is selected from the <b>Search By</b> list.         </div>	No
Price Item	Used to search memberships which belong to plans where a particular price item is associated. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b>            The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.            This field appears only when the <b>Policy Plan Details</b> or <b>Membership Details</b> option is selected from the <b>Search By</b> list.         </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Plan Number	Used to search memberships of a particular plan.  <b>Note:</b> This field appears only when the <b>Policy Plan Details</b> option is selected from the <b>Search By</b> list.	No
Start Date	Used to search memberships which are effective from a particular date.  <b>Note:</b> This field appears only when the <b>Membership Details</b> option is selected from the <b>Search By</b> list.	No
Status	Used to search memberships with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Terminated</li> </ul> <b>Note:</b> This field appears only when the <b>Membership Details</b> option is selected from the <b>Search By</b> list.	No
End Date	Used to search memberships which are effective till a particular date.  <b>Note:</b> This field appears only when the <b>Membership Details</b> option is selected from the <b>Search By</b> list.	No
Person Name	Used to search memberships in which a particular person is added.  <b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	No
Person Identifier Type	Used to indicate the person identifier type.  <b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	No
Person Identifier	Used to search memberships in which a particular person is added.  <b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for a membership.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Information	<p>Indicates the policy of the plan to which the membership is added.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the respective policy.</p>
Membership Information	<p>Displays information about the membership.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Membership Information</b> screen appears where you can view the details of the respective membership.</p>
Price Item Information	<p>Indicates the price item which is associated with the plan to which the membership is added.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.</p>
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Status	<p>Indicates the status of the membership. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Terminated</li> </ul>
Person Information	<p>Indicates the person who is added to the membership. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>This column appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.</p>

Column Name	Column Description						
Main Subscriber	<p>This column displays different data depending on whether you search for a membership using the policy plan, membership, or person details. The following table describes this column:</p> <table border="1"> <thead> <tr> <th>If you search for a membership using...</th> <th>Then...</th> </tr> </thead> <tbody> <tr> <td>The <b>Policy Plan Details</b> or <b>Membership Details</b> option</td> <td> <p>The <b>Main Subscriber</b> column displays the information about the person who is the main subscriber of the membership. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> </div> </td> </tr> <tr> <td>The <b>Person Details</b> option</td> <td> <p>The <b>Main Subscriber</b> column indicates whether the person is the main subscriber of the membership. **Searching for a Membership****Prerequisites**

To search for a membership, you should have:

- Price items and person identifier types defined in the application

**Procedure**

To search for a membership:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Membership**.  
A sub-menu appears.
3. Click the **Search** option from the **Membership** sub-menu

The **Membership** screen appears.

4. Enter the search criteria in the **Search Membership** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of memberships that meet the search criteria appears in the **Search Results** section.

## **Defining a Membership for a Fully-Insured Policy Plan**

### **Prerequisites**

To define a membership for a fully-insured policy plan, you should have:

- Plans defined in the policy
- Persons defined in the application
- Contract relationship types defined in the application

### **Procedure**

To define a membership for a fully-insured policy plan:

1. Do either of the following:

If you want to...	Then...
Define a membership for a fully-insured policy plan from the <b>Policy</b> screen	<ol style="list-style-type: none"> <li>1. Search for the fully-insured policy in the <b>Policy</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Policy Information</b> column corresponding to the policy whose details you want to edit. The <b>Policy</b> screen appears.</li> <li>3. Click the <b>Plan</b> tab. The <b>Plan</b> tab appears.</li> <li>4. In the <b>Plans</b> zone, click the <b>Broadcast</b>  icon corresponding to the policy plan for which you want to define a membership. The <b>Memberships</b> zone appears.</li> <li>5. Click the <b>Add</b> link in the upper right corner of the <b>Memberships</b> zone.</li> </ol>
Define a membership for a fully-insured policy plan from the <b>Membership</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Person Information</b> and then click <b>Membership</b>. A sub menu appears.</li> <li>3. Click the <b>Add</b> option from the <b>Membership</b> sub-menu.</li> </ol>

The **Membership** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the membership.
- **Characteristics** - Used to define characteristics for the membership.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Plan	<p>Used to indicate the policy plan for which you want to define the membership.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Policy Plan Search</b> window appears.</p> <p>On specifying the policy plan, the description of the policy plan appears corresponding to the <b>Plan</b> field.</p> <p>If you navigate to the <b>Membership</b> screen from the <b>Policy</b> screen, the data automatically appears in this field. You can change the plan, if required.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the membership is effective for a fully-insured policy plan.  <b>Note:</b> The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
End Date	Used to specify the date till when the membership is effective for a fully-insured policy plan.  <b>Note:</b> The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
Main Subscriber	Used to indicate the person who is the main subscriber of the membership.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears. On specifying the person, the description of the person appears corresponding to the <b>Main Subscriber</b> field.	Yes
Relationship Type	Used to indicate how the main subscriber is related to the membership.	Yes
External Membership ID	Used to specify the external membership ID.  <b>Note:</b> Here, you need to specify a membership ID which is maintained in the external source system.	No

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Membership** screen.

2. Enter the required details in the **Main** section.
3. Define characteristics for the membership, if required.
4. Click **Save**.

The membership is defined for the fully-insured policy plan. The status of the membership and the main subscriber is set to **Active**.

How to define a characteristic for a membership	<a href="#">Defining a Characteristic for a Membership</a> on page 2137

## Defining a Characteristic for a Membership

### Prerequisites

To define a characteristic for a membership, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership**)

### Procedure

To define a characteristic for a membership:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a membership.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the membership.  <b>Note:</b> The effective date cannot be earlier than the membership start date and later than the membership end date.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the membership.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Membership</b>	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the membership.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the membership.

2. Enter the required details in the **Characteristics** section.

3. If you want to define more than one characteristic for the membership, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the membership, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the membership.

## **Membership (Used for Viewing)**

---

The **Membership** screen allows you to:

- View the details of a membership
- Edit the details of a membership
- Inactivate a membership
- Inactivate a member person
- Add or remove a person from a membership
- View the other plans of the main subscriber
- Associate or disassociate a contract from a membership
- View the billable charges created for a membership
- View the bill segments generated for a membership billable charge
- View the timeline details of a membership billable charge
- Viewing the pricing calculation details of a timeline
- View the log of a membership
- Add a log entry for a membership

It consists of the following tabs:

- [Membership - Main](#) on page 2138
- [Membership - Contracts and Charges](#) on page 2143
- [Membership - Log](#) on page 2148

### **Membership - Main**

The **Main** tab displays information about the membership. It also lists the persons which are included in the membership and other plans (within or across policies) where the main subscriber is associated. It contains the following zones:

- [Membership](#) on page 2139

- [Member Persons](#) on page 2141
- [Other Plans of Main Subscriber](#) on page 2142

## Membership

The **Membership** zone displays the details of the membership. It contains the following sections:

- **Main** - Displays basic information about the membership. It contains the following fields:

Field Name	Field Description
Membership Information	Displays information about the membership.
Plan Information	Indicates the policy plan for which the membership is defined. <b>Note:</b> It has a link. On clicking the link, the <b>Policy Plan</b> screen appears where you can view the details of the respective policy plan.
Status	Indicates the status of the membership. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Terminated</li> </ul>
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
External Membership ID	Displays the corresponding membership ID which is maintained in the external source system.

- **Characteristics** - Lists the characteristics which are defined for the membership. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the membership.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the membership.
Inactivate	Used to inactivate the membership.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the membership is created. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the membership status is updated
Create Date/Time	Displays the date and time when the membership is created.

### **Related Topics**

### **Member Persons**

The **Member Persons** zone lists the persons who are added to the membership. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the person is added to the membership.
End Date	Displays the date till when the person is added to the membership.
Person Information	Indicates the person who is added to the membership. In addition, it has the context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Relationship Type	Indicates how the person is related to the main subscriber.

Column Name	Column Description
Main Subscriber	Indicates whether the person is the main subscriber of the membership. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Status	Indicates the status of the member person. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Member	Indicates whether the person is added as a member to the membership. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can remove the person from the membership. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> You cannot remove the member person who is the main subscriber of the membership.</div>
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Add/Edit Member Person</b> screen appears where you can edit the membership details of the person.

**Note:**

By default, the member persons which are in the **Active** status are listed in the **Member Persons** zone.

You can add a person to the membership by clicking the **Add Person** link in the upper right corner of this zone.

You can filter the list using the **Status** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2882.

**Other Plans of Main Subscriber**

The **Other Plans of Main Subscriber** zone lists the additional memberships of the main subscriber. These memberships may belong to different plans within or across the policies. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the main subscriber is added to the membership.
End Date	Displays the date till when the main subscriber is added to the membership.
Plan Number	Indicates the fully-insured policy plan for which the membership is created.
Price Item	Indicates the price item to which the policy plan is associated.
Membership Information	Displays information about the membership. <b>Note:</b> It has a link. On clicking the link, the <b>Membership</b> screen appears where you can view the details of the respective membership.
Last Billed Coverage	Indicates the last bill segment generated for the membership which is in the <b>Frozen</b> status. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in application. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears where you can view the details of the respective bill segment.

## Membership - Contracts and Charges

The **Contracts and Charges** tab lists the following:

- Contracts associated with the membership
- Billable charges created for the membership
- Bill segments generated for each billable charge
- Timeline generated for each billable charge
- Premium calculated for each eligible member person when an age based pricing is used during the membership premium calculation
- Premium calculated for the membership when a tier based pricing is used during the membership premium calculation

It contains the following zones:

- [Membership Contracts](#) on page 2143
- [Billable Charges](#) on page 2144
- [Bill Segment Details](#) on page 2146
- [Billable Charge Timeline Details](#) on page 2147
- [Pricing Calculation Details](#) on page 2147

### Membership Contracts

The **Membership Contracts** zone lists the contracts which are associated with the membership. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the contract is associated with the membership.
End Date	Displays the date till when the contract is associated with the membership.

Column Name	Column Description
Bill To	Indicates the entity against whom the corresponding charges are billed. The valid values are: <ul style="list-style-type: none"> <li>Federal</li> <li>State</li> <li>Group</li> <li>Individual</li> </ul>
Contract ID	Displays the contract ID. <b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Account Information	Indicates the account for which the contract is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can disassociate the contract from the membership.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Associate Contract with Membership</b> screen appears where you can edit the contract association details of the membership.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can associate a contract with the membership by clicking the **Add Contract** link in the upper-right corner of this zone.

You can filter the list using the **Bill To** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper-right corner of this zone.

### **Billable Charges**

The **Billable Charges** zone lists the one-time or recurring billable charges which are created for the membership. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the billable charge.

Column Name	Column Description
End Date	Displays the end date of the billable charge.
Bill Period	Indicates the intervals at which the recurring bill segments must be created for the billable charge.
Price Item Information	Indicates the price item for which the billable charge is created. <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.
Contract ID	Indicates the contract against which the billable charge is created. <b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Billable Charge Information	Displays information about the billable charge. <b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the respective billable charge.
Amount	Displays the billable charge amount.
Status	Indicates the status of the billable charge. The valid values are: <ul style="list-style-type: none"> <li>• Billable</li> <li>• Cancelled</li> </ul>
Last Billed Coverage	Indicates the last bill segment generated for the billable charge which is in the <b>Frozen</b> status. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in application. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears where you can view the details of the respective bill segment.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast**  icon corresponding to a billable charge, the **Bill Segment Details** and **Billable Charge Timeline Details** zones appear.

**Note:** On clicking the **Broadcast**  icon, the **Billable Charge Timeline Details** zone appears only when the timeline details are available for the respective billable charge.

You can filter the list using various search criteria (such as, **Price Item**, **Start Date**, **Contract ID**, **End Date** and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

### Bill Segment Details

The **Bill Segment Details** zone lists all bill segments which are generated for the billable charge. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Bill Segment Details	Displays information about the bill segment. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Billable Segment</b> screen appears where you can view the details of the respective bill segment.
Amount	Displays the bill segment amount.
Status	Indicates the status of the bill segment. The valid values are: <ul style="list-style-type: none"> <li>• Incomplete</li> <li>• Error</li> <li>• Freezable</li> <li>• Pending Cancel</li> <li>• Canceled</li> <li>• Frozen</li> </ul>
Bill Information	Indicates the bill in which the bill segment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Segment Details** zone does not appear in the **Contracts and Charges** tab of the **Membership** screen. It appears only when you click the **Broadcast**  icon corresponding to a billable charge in the **Billable Charges** zone.

You can filter the list using various search criteria (such as, **Start Date**, **Status**, and **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

## Billable Charge Timeline Details

The **Billable Charge Timeline Details** zone lists the timelines which are derived during the membership premium calculation. It appears only when the timeline details are available for the billable charge. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the timeline.
End Date	Displays the end date of the timeline.
Amount	Displays the premium amount calculated for the timeline.
Pricing Rule Information	Indicates the pricing rule using which the premium amount is calculated. <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule</b> screen appears where you can view the details of the respective pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created. <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule Type</b> screen appears where you can view the details of the respective pricing rule type.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Billable Charge Timeline Details** zone does not appear in the **Contracts and Charges** tab of the **Membership** screen. It appears only when you click the **Broadcast**  icon corresponding to a billable charge in the **Billable Charges** zone.

On clicking the **Broadcast**  icon corresponding to a timeline, the **Pricing Calculation Details** zone appears.

You can filter the list using various search criteria (such as, **Start Date** and **End Date**) available in the **Filter** area.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

<b>Pricing Calculation Details</b> zone	<a href="#">Pricing Calculation Details</a> on page 2147
How the timeline is derived during the membership premium calculation	<a href="#">Membership Premium Calculation</a> on page 2841

### Pricing Calculation Details

The **Pricing Calculation Details** zone indicates how the amount is calculated for the timeline. If the age based pricing is used during the membership premium calculation, this zone lists the premium calculated for each eligible member of the membership. It also displays the base fee and modifier fee which are applicable for each eligible member. However, if the tier based pricing is used during the membership premium calculation, this zone lists the premium calculated at the membership level. It contains the following columns:

Column Name	Column Description
Entity Information	If the age based pricing is used during the membership premium calculation, this column indicates the eligible member for whom the premium amount is calculated. However, if the tier based pricing is used during the membership premium calculation, this column indicates the main subscriber of the membership.
Description on Bill	Displays the description of the rate component for which the price component is created in the age based or tier based pricing.
Pricing Parameter	Indicates the pricing eligibility criteria which is satisfied while deriving the base fee.
Amount	Displays the base fee or applicable modifier fee.
Total Amount	If the age based pricing is used during the membership premium calculation, this column displays the sum total of the base fee and modifier fee (if any) for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the base fee applicable for the membership.

By default, the **Pricing Calculation Details** zone does not appear in the **Contracts and Charges** tab of the **Membership** screen. It appears only when you click the **Broadcast**  icon corresponding to a timeline in the **Billable Charge Timeline Details** zone.

## **Membership - Log**

The **Log** tab contains the following zone:

- [Membership Log](#) on page 2148

### **Membership Log**

The **Membership Log** zone lists the complete trail of actions performed on the membership. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the membership.
Details	Displays the details about the action performed on the membership.
User	Indicates the user who has performed the action on the membership.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the membership.  <b>Note:</b> It contains a link. On clicking the link, the screen appears where you can view the details of the respective related object.

Column Name	Column Description
Status Reason	Indicates the reason why the status of the membership is changed.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the membership by clicking the **Add Log Entry** link in the upper right corner of the **Membership Log** zone.

## **Editing a Membership of a Fully-Insured Policy Plan**

### **Procedure**

To edit a membership of a fully-insured policy plan:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose details you want to edit.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Membership** zone.

The **Membership** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the membership.
- **Characteristics** - Used to define characteristics for the membership.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Displays information about the membership.	Not applicable
Plan Information	Indicates the policy plan for which the membership is defined.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the membership is effective for a fully-insured policy plan.  <b>Note:</b> The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
End Date	Used to specify the date till when the membership is effective for a fully-insured policy plan.  <b>Note:</b> The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
External Membership ID	Used to specify the external membership ID.  <b>Note:</b> Here, you need to specify a membership ID which is maintained in the external source system.	No

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the membership, if required.
7. Click **Save**.

The changes made to the membership are saved.

## **Adding a Person to a Membership**

The system enables you to add a member person to a membership when the membership is in the **Active** status. However, you can only add a member person in the **Active** status and not in the **Inactive** status.

### **Prerequisites**

To add a person to a membership, you should have:

- Required persons defined in the application

- Contract relationship types defined in the application

### **Procedure**

To add a person to a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership to which you want to add a person.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Add Person** link in the upper right corner of the **Member Persons** zone.

The **Add/Edit Member Person** screen appears. It contains the following sections:

- **Main** - Used to specify the basic membership details of the person.
- **Characteristics** - Used to define characteristics for the member person.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Membership Information	Indicates the membership to which you want to add a person.	Not applicable
Person ID	Used to indicate the person whom you want to add to the membership.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	Yes
Relationship Type	Used to indicate how the person is related to the main subscriber.	Yes
Financially Responsible	Used to indicate whether the person is financially responsible for the membership.	No
Main Subscriber	Used to indicate whether the person is the main subscriber of the membership.	No
Member	Used to indicate whether the person is added as a member to the membership.	No
Start Date	Used to specify the date from when you want to add the person to the membership.  <b>Note:</b> The member person start date cannot be later than the member person end date. The member person start date cannot be earlier than the membership start date or later than the membership end date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when you want to add the person to the membership.  <b>Note:</b> The member person end date cannot be earlier than the member person start date. The member person end date cannot be earlier than the membership start date or later than the membership end date.	No
Membership Person Status	Used to indicate the status of the member person. The valid values are: <ul style="list-style-type: none"><li>Active</li><li>Inactive</li></ul> <b>Note:</b> By default, the <b>Active</b> option is selected.	Yes

- Enter the required details in the **Main** section.
- Define the characteristics for the member person, if required.
- Click **Save**.

The person is added to the membership.

<b>Membership</b> screen	<a href="#">Membership (Used for Viewing)</a> on page 2138
<b>Member Persons</b> zone	<a href="#">Member Persons</a> on page 2141
How to define a characteristic for a member person	<a href="#">Defining a Characteristic for a Member Person</a> on page 2152

## Defining a Characteristic for a Member Person

### Prerequisites

To define a characteristic for a member person, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership Person**)

### Procedure

To define a characteristic for a member person:

- Ensure that the **Characteristics** section is expanded when you are adding a person to a membership or editing the membership details of a person.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the member person.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the member person.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Membership Person</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the member person.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the member person.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the member person, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the member person, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the member person.

### Related Topics

How to add a person to a membership	<a href="#">Adding a Person to a Membership</a> on page 2150
How to edit the membership details of a person	<a href="#">Editing the Membership Details of a Person</a> on page 2155

## Inactivating a Membership

There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

**Procedure**

To inactivate a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership that you want to inactivate.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Inactivate** button in the **Membership** zone.

The status of the membership is changed to **Inactive**.

**Related Topics**

For more information on...	See...
How to search for a membership	<a href="#">Searching for a Membership</a> on page 2133
<b>Membership</b> screen	<a href="#">Membership (Used for Viewing)</a> on page 2138
<b>Membership</b> zone	<a href="#">Membership</a> on page 2139

**Inactivating a Member Person**

The system enables you to inactivate a member person of a membership. If the member person is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO\_STATUS\_CD** column corresponding to the record in the **C1\_AUDIT\_EVENT**, **C1\_AUDIT\_EVENT\_LOG**, and **CI\_PRCE\_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO\_STATUS\_CD** column corresponding to the record in the **CI\_REPRC\_ENTITY\_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO\_STATUS\_CD** column corresponding to the record in the **CI\_REPRC\_REQ\_DTL** table is set to **COMPLETE**.

**Procedure**

To inactivate a member person of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose details you want to edit.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the member person whom you want to inactivate.

The **Add/Edit Member Person** screen appears.

5. Select the **Inactive** option from the **Membership Person Status** list.

The status of the member person is changed to **Inactive**.

## Removing a Person from a Membership

### Procedure

To remove a person from a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership from which you want to remove a person.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Delete** () icon in the **Delete** column corresponding to the person that you want to remove from the membership.

A message appears confirming whether you want to remove the person from the membership.

**Note:** You cannot remove the member person who is the main subscriber of the membership.

5. Click **OK**.

The person is removed from the membership.

## Editing the Membership Details of a Person

### Prerequisites

To edit the membership details of a person, you should have:

- Contract relationship types defined in the application

### Procedure

To edit the membership details of a person:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose details you want to edit.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Edit** () icon in the **Edit** column corresponding to the member person whose details you want to edit.

The **Add/Edit Member Person** screen appears. It contains the following sections:

- **Main** - Used to specify the basic membership details of the person.
- **Characteristics** - Used to define characteristics for the member person.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which the person is added.	Not applicable
Person ID	Indicates the person who is added to the membership.	Not applicable
Relationship Type	Used to indicate how the person is related to the main subscriber.	Yes
Financially Responsible	Used to indicate whether the person is financially responsible for the membership.	No
Main Subscriber	Used to indicate whether the person is the main subscriber of the membership.	No
Member	Used to indicate whether the person is added as a member to the membership.	No
Start Date	Used to specify the date from when you want to add the person to the membership.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The member person start date cannot be later than the member person end date. The member person start date cannot be earlier than the membership start date or later than the membership end date.</p> </div>	Yes
End Date	Used to specify the date till when you want to add the person to the membership.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The member person end date cannot be earlier than the member person start date. The member person end date cannot be earlier than the membership start date or later than the membership end date.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Membership Person Status	<p>Used to indicate the status of the member person. The valid values are:</p> <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <p><b>Note:</b></p> <p>If you inactivate a member person who is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership.</p> <p>You cannot change the status of the member person to <b>Active</b> when the membership is in the <b>Inactive</b> status.</p>	Yes

- Modify the required details in the **Main** section.
- Define, edit, or remove the characteristics from the member person, if required.
- Click **Save**.

The changes made to the membership details of the person are saved.

## Associating a Contract with a Membership

### Prerequisites

To associate a contract with a membership, you should have:

- Contracts defined in the application
- Values defined for the **BILL\_TO\_TYPE\_FLG** lookup field

### Procedure

To associate a contract with a membership:

- Search for the membership in the **Membership** screen.
- In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership to which you want to associate a contract.

The **Membership** screen appears.

- Click the **Contracts and Charges** tab.

The **Contracts and Charges** tab appears.

- Click the **Add Contract** link in the upper right corner of the **Membership Contracts** zone.

The **Associate Contract with Membership** screen appears. It contains the following section:

- Main** - Used to associate a contract with the membership. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to associate a contract.	Not applicable
Contract ID	Used to indicate the contract that you want to associate with the membership.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Contract ID</b> field. On clicking the <b>Search</b> icon, the <b>Contract Search</b> window appears.	Yes
Bill To	Used to indicate the entity against whom the corresponding charges should be billed. The valid values are: <ul style="list-style-type: none"> <li>Federal</li> <li>State</li> <li>Group</li> <li>Individual</li> </ul> <b>Note:</b> You cannot associate multiple contracts with the membership using the same bill to option. For example, you cannot associate C1 and C2 with M1 by selecting the <b>Group</b> option from the <b>Bill To</b> field.	Yes
Start Date	Used to specify the date from when you want to associate the contract with the membership.  <b>Note:</b> The start date cannot be later than end date. The start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to associate the contract with the membership.  <b>Note:</b> The end date cannot be earlier than the start date. The end date cannot be earlier than the membership start date or later than the membership end date.	No

- Enter the required details in the **Main** section.
- Click **Save**.

The contract is associated with the membership.

## Disassociating a Contract from a Membership

### Procedure

To disassociate a contract from a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership from which you want to disassociate the contract.

The **Membership** screen appears.

3. Click the **Contract & Charges** tab.

The **Contract & Charges** tab appears.

4. In the **Membership Contracts** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the contract that you want to disassociate from the membership.

A message appears confirming whether you want to disassociate the contract from the membership.

5. Click **OK**.

The contract is disassociated from the membership.

## Editing the Contract Association Details of a Membership

### Prerequisites

To edit the contract association details of a membership, you should have:

- Contracts defined in the application
- Values defined for the **BILL\_TO\_TYPE\_FLG** lookup field

### Procedure

To edit the contract association details of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose contract details you want to edit.

The **Membership** screen appears.

3. Click **Contracts and Charges** tab.

The **Contracts and Charges** tab appears.

4. In the **Membership Contracts** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the contract whose association details you want to edit.

The **Associate Contract with Membership** screen appears. It contains the following section:

- **Main** - Used to associate a contract with the membership. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to associate a contract.	Not applicable
Contract ID	Used to indicate the contract that you want to associate with the membership.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Contract ID</b> field. On clicking the <b>Search</b> icon, the <b>Contract Search</b> window appears.	Yes
Bill To	Used to indicate the entity against whom the corresponding charges should be billed. The valid values are: <ul style="list-style-type: none"> <li>• Federal</li> <li>• State</li> <li>• Group</li> <li>• Individual</li> </ul> <b>Note:</b> You cannot associate multiple contracts with the membership using the same bill to option. For example, you cannot associate C1 and C2 with M1 by selecting the <b>Group</b> option from the <b>Bill To</b> field.	Yes
Start Date	Used to specify the date from when you want to associate the contract with the membership.  <b>Note:</b> The start date cannot be later than end date. The start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to associate the contract with the membership.  <b>Note:</b> The end date cannot be earlier than the start date. The end date cannot be earlier than the membership start date or later than the membership end date.	No

5. Modify the required details in the **Main** section.
6. Click **Save**.

The changes made to the membership are saved.

## Upload Lockbox Payment and Remittance Advices Overview

---

### Topics:

- [Prerequisites](#)
- [EDI 820 Flat File Description](#)
- [Sample EDI 820 Flat File](#)
- [Upload EDI 820 Files in ORMB](#)

Oracle Revenue Management and Billing enables you to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. Under this feature, the payments made by customers are directed to a special post office box instead of going to the company directly. The bank goes to this post office box, retrieves the payments, processes them and deposits the funds directly into the company's bank account.

An EDI 820 payment order or remittance advice is an electronic document that can be used to initiate payments and send remittance information. EDI 820 sends information to vendor furnishing details of payment for his supplies. A remittance advice is a note sent from a customer to their supplier, informing the supplier that they have paid their invoice. The advice may contain elements such as a text note, the invoice number and the invoice amount, among others. Remittance advice is not required, but they are seen as a courtesy since they make it easier for the supplier to match invoices with payments.

To enable this feature, lockbox payment files are required to be uploaded on ORMB and these files has to be allocated to the appropriate accounts. To support multiple lines of business, the lockbox upload needs to:

- Consider the primary identifier when looking for a source customer number match. For customers having multiple source system identifiers, the lockbox process only matches against the one identified as primary customer.
- Incorporate the payment allocation logic in the system on the basis of which the lockbox uploads the payments for the identified customer.

To support remittances which can split a tender across multiple customers:

- Allow source customer number or tax id to be provided as remittance (RMR) values. In case of multiple source customer number or tax id, remittance values are provided for a single tender, the account associated with the first remittance value is set as the payor account. If there is at least one remittance value where a single customer account cannot be determined, the entire tender is placed into general suspense.
- A new payment upload batch **C1-PUPSG** is developed to read lockbox payment files from the bank and load the payment details into the ORMB payment upload staging tables for processing.
- Once the text file is uploaded, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders,

payments, and payment segments using payment records in the staging area.

**Note:** For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

<b>For more information on...</b>	<b>See...</b>
<b>Prerequisites</b>	<a href="#">Prerequisites</a> on page 2167
<b>EDI 820 Flat File Description</b>	<a href="#">EDI 820 Flat File Description</a> on page 2167
<b>Sample EDI 820 Flat File</b>	<a href="#">Sample EDI 820 Flat File</a> on page 2169
<b>Upload EDI 820 Files in ORMB</b>	<a href="#">Upload EDI 820 Files in ORMB</a> on page 2172

## Prerequisites

---

To setup the upload lockbox payment process, you need to do the following:

- Define the values in the parameters of the **C1-CCPYTSADS** and **C1-MATSATYP** algorithms.
- Lockbox tender types defined in the **C1\_LBX\_TENDER\_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1\_LBX\_820\_RECORD\_TYPE**, **C1\_LBX\_REF\_IDQ\_LKP**, and **C1\_LBX\_RMR\_ID\_TYPE** lookup fields respectively.

## EDI 820 Flat File Description

---

Following is the description of the key field segments in the EDI 820 flat file format:

Field Name	Description
External Source ID	Uniquely identifies the lockbox.
External Transmission ID	Uniquely identifies the transmission. To ensure this transmission, the date component (such as, 20150813) should match the deposit date and there should only be one file per deposit date.
External Batch ID	Uniquely identifies the batch of payments in a transmission. To ensure these payments, if there are multiple ST records in a file, the transaction set control number (such as, 0101, 0202, ..) should be unique.

Field Name	Description																										
Payment Transaction	<p>The following table describes the fields that are included in the payment transaction:</p> <table border="1" data-bbox="548 262 1471 2026"> <thead> <tr> <th data-bbox="548 262 898 312">Field</th> <th data-bbox="898 262 1471 312">Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="548 312 898 594">Attributes</td> <td data-bbox="898 312 1471 594"> <p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> <li>• Payment Amount</li> <li>• Payment Method</li> <li>• Payment Date</li> <li>• Payor Name</li> </ul> </td> </tr> <tr> <td data-bbox="548 594 898 1648">Reference Records</td> <td data-bbox="898 594 1471 1648"> <p>Uniquely identifies the transaction. EDI 820 flat file format description	<a href="#">EDI 820 Flat File Description</a> on page 2167

## Upload EDI 820 Files in ORMB

A new batch named **Lockbox Payment Upload - Small Group (C1-PUPSG)** is introduced in this release. This batch is used to read the EDI 820 lockbox file received from the bank containing payment details for accounts and uploads the payment details into the ORMB payment upload staging tables. The batch uses the reference ID available in the payment and remittance record (in the specified order) to identify the account in the system:

- Source System Customer Number
- Invoice ID (if the source system customer number is not available)
- MICR (if the source system customer number and invoice ID are not available)

If all three reference IDs are available in the payment and remittance record, the system uses the source system customer number to identify the customer in ORMB. If the customer is found in ORMB, the system then checks whether the identified customer has an account. If the identified customer has one account, the system checks the following:

- If the **Check Binder Payment** parameter in the **Pay Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether the payment is the first payment for

the account and the tender used for the payment is not automatic payment. If so, the payment is applied to the **Binder Payment** contract.

- If the **Check Promise To Pay** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active promise to pay for the account. If so, the payment is applied to the **On Account** contract.
- If the **Check Payment Agreement** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active payment agreement request for the account. If so, the payment is applied to the **On Account** contract.

However, if the **Check Binder Payment**, **Check Promise To Pay**, and **Check Payment Agreement** parameters are set to **N**, the payment is applied to the account's open bills in the order of the due date (i.e. oldest bill first). If the payment amount is greater than the account's billed balance plus overpayment threshold amount (defined in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm), the entire amount is applied on the On Account contract. However, if the payment amount is greater than the account's billed balance, but less than account's billed balance plus overpayment threshold amount, the overpayment amount is applied on the On Account contract.

Let us understand this with the help of an example:

Payment Amount	Bill 1 (Due Date 01-Feb-2017)	Bill 2 (Due Date 01-April-2016)	Overpayment Threshold Amount	System Behavior
100	50	50	50	One payment (50\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
150	50	100	120	One payment (100\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
175	60	75	50	One payment (75\$) is created for Bill 2 (oldest due date); One payment (60\$) is created for Bill 1; The remaining amount (40\$) is applied on the On Account contract.
200	50	50	50	The entire amount (200\$) is applied on the On Account contract. This is because the payment amount is greater than the account's billed balance plus overpayment threshold amount.

If the identified customer has multiple accounts, then the payment is applied to the On Account contract. If there are no accounts for the identified customer, or account could not be found in ORMB, or the customer could not be found in ORMB, the payment is applied to the suspense contract defined on the tender source associated with the external source (lockbox) ID.

If the source system customer number is not available, but the invoice ID and MICR are available in the payment and remittance record, then batch uses the invoice ID to find the account for which the invoice is created. Once the account is identified, the system behaves in the similar manner (listed above) when the identified customer has one account.

If the source system customer number and invoice ID are not available, but the MICR is available in the payment and remittance record, then system finds the payment where the same MICR is stamped as a characteristic and then finds the account for which the respective payment is created. In this way, the system derives the account for which the payment must be applied. However, the MICR is used to derive the account only when the **Search Customer Using MICR (Y/**

**N**) parameter in the batch is set to **Y**. Once the account is derived, the system behaves in the similar manner (listed above) when the identified customer has one account.

You can upload payment and remittance advice in the TXT format. You need to ensure that the text file is in the required format; otherwise the file will not be uploaded.

Once the text file is uploaded through the **Lockbox Payment Upload - Small Group (C1-PUPSG)** batch, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

**Note:** For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

- [Algorithms Used in Deferred Revenue Recognition](#)
- [Deferred Revenue Recognition Template \(Used for Searching\)](#)
- [Deferred Revenue Recognition Template \(Used for Viewing\)](#)
- [Deferred Revenue Recognition \(Used for Searching\)](#)
- [Deferred Revenue Recognition \(Used for Viewing\)](#)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is \$1200. When this new business is booked, the revenue of \$1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, \$200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information

about the deferred revenue recognition statuses, see [Deferred Revenue Recognition Status Transition](#) on page 2177.

**Note:** The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see [Prerequisites](#) on page 2177.

## Prerequisites

---

To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
  - Use Calendar or Business Days (C or B)
  - Override Default Recognition Date (Y or N)
  - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
  - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## Deferred Revenue Recognition Status Transition

---

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

## Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	<p>This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• Use Contract Expiration Date (Y or N) – Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECITM	C1-REVRECITM	<p>This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon (which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters:</p> <ul style="list-style-type: none"> <li>• <b>Use Calendar or Business Days (C or B)</b> - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory.</li> <li>• <b>Override Default Recognition Date (Y or N)</b> – Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory.</li> <li>• <b>Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)</b> – Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day.</li> <li>• <b>Override Default Monthly Recognition Date (1-31)</b> - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, ..., 31. This parameter is required when you want to override the default monthly recognition date.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.
		C1-REVITMREC	C1-REVITMREC	<p>If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• <b>Create Adjustments (Y or N)</b> – Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.</li> </ul>
		C1-DRRTM-INF	C1-DRRTM-INF	<p>This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> <li>1. Deferred Revenue Recognition Template</li> <li>2. Description</li> </ol>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	<p>This algorithm validates the deferred revenue recognition template. It checks the following:</p> <ul style="list-style-type: none"> <li>• Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule.</li> <li>• Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events.</li> <li>• Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination.</li> <li>• Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field.</li> <li>• Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.&gt;&gt; Whether the low proration limit is between 0 to 31 and is less than the high proration limit.</li> </ul> <p>In addition, it does not allow you to:</p> <ul style="list-style-type: none"> <li>• Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition.</li> <li>• Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status.</li> <li>• Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status.</li> </ul> <p>You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRSC- INF	C1-DRRSC-INF	<p>This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> <li>1. Deferred Revenue Recognition Template</li> <li>2. Deferred Revenue Recognition Status</li> <li>3. Distribution Code</li> <li>4. Deferred Revenue Recognition ID</li> </ol>
		C1-REVMON	C1-REVMON	<p>This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.</p>
		C1- REVRECINP	C1-REVRECINP	<p>This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> <li>• Next Status</li> <li>• Next Transition Condition</li> </ul> <p>At a time, you can specify value for either the <b>Next Status</b> or <b>Next Transition Condition</b> parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.</p>

## Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition Template \(Used for Viewing\)](#) on page 2192

This screen consists of the following zone:

- [Search Deferred Revenue Recognition Template](#) on page 2184

## Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Monthly</li> <li>• Weekly</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the respective deferred revenue recognition template.</p> </div>
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

### Related Topics

How to view the details of a deferred revenue recognition template	<a href="#">Viewing the Deferred Revenue Recognition Template Details</a> on page 2191
How to search for a deferred revenue recognition template	<a href="#">Searching for a Deferred Revenue Recognition Template</a> on page 2185

## Searching for a Deferred Revenue Recognition Template

### Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

### Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.  
The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

## Defining a Deferred Revenue Recognition Template

### Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

### Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the deferred revenue recognition template.
- **Parameters** – Used to specify the various parameters for the deferred revenue recognition template.
- **Algorithms** – Used to associate algorithms with the deferred revenue recognition template.
- **Divisions** – Used to associate a deferred revenue recognition template with a division.
- **Characteristics** – Used to define characteristics for the deferred revenue recognition template.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

The **Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Distribution Code Search</b> window appears. </div>	Yes
Contract Type	Used to indicate a particular type of contract.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears. </div>	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears. </div>	No
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> <li>Automatic</li> <li>Manual</li> </ul>	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> <li>Daily</li> <li>Monthly</li> <li>Weekly</li> </ul>	Yes
Allow Proration	Used to allow proration.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> The <b>Allow Proration</b> field appears only when you select <b>Recognition Schedule</b> as <b>Monthly</b>. </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.  <b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b> .	Yes (Conditional)  <b>Note:</b> This field is required only when the recognition schedule is selected as monthly and when the <b>Allow Proration</b> check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.  <b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b> .	Yes (Conditional)  <b>Note:</b> This field is required only when the recognition schedule is selected as monthly and when the <b>Allow Proration</b> check box is selected.

4. Enter the required details.
5. Associate algorithms with the deferred revenue recognition template, if required.
6. View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
7. Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
8. Click **Save**.

The deferred revenue recognition template is created.

How to associate algorithms with the deferred revenue recognition template	<a href="#">Associating Algorithms with a Deferred Revenue Recognition Template</a> on page 2188

## Associating Algorithms with a Deferred Revenue Recognition Template

### Procedure

To associate algorithms with a deferred revenue recognition template:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes

- Enter the required details in the **Algorithms** section.
- If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add**  icon, and then repeat 2.

**Note:** However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete**  icon corresponding to the algorithm.

## Associating Deferred Revenue Recognition Template With A Division

### Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

### Procedure

To associate deferred revenue recognition template with a division:

- Ensure that the **Divisions** section is expanded when you are creating or editing a deferred revenue recognition template.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No

- Select the required division from the list.
- If you want to associate the deferred revenue recognition template with more than one division, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑️) icon corresponding to the division.

- Click **Save**.

The deferred revenue recognition template is associated with the divisions.

## Defining Characteristics for a Deferred Revenue Recognition Template

### Prerequisites

To define characteristics for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

### Procedure

To define characteristics for a deferred revenue recognition template:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition template.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Valued</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition template.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Viewing the Deferred Revenue Recognition Template Details

### Procedure

To view the details of a deferred revenue recognition template:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.  
The **Deferred Revenue Recognition Template** screen appears.
- Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to view.  
The **Deferred Revenue Recognition Template** screen appears.
- View the details of the deferred revenue recognition template in the **Deferred Revenue Recognition Template** zone.

## Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- [Deferred Revenue Recognition Template](#) on page 2192

### Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Parameters** – Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code.  <b>Note:</b> It has a link. On clicking the link, the <b>Distribution Code</b> screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the <b>Deferred Revenue Recognition Template</b> which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>Manual</li> <li>Automatic</li> </ul>
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: <ul style="list-style-type: none"> <li>Daily</li> <li>Monthly</li> <li>Weekly</li> </ul>
Allow Proration	Used to allow proration.  <div style="border: 1px solid black; padding: 5px;"><b>Note:</b> The <b>Allow Proration</b> field appears only when you select <b>Recognition Schedule</b> as <b>Monthly</b>.</div>
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.  <div style="border: 1px solid black; padding: 5px;"><b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b>.</div>
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.  <div style="border: 1px solid black; padding: 5px;"><b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b>.</div>

- **Divisions** – Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** – Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Displays an algorithm that needs to be attached to the selected system event.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.	No

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template.  <b>Note:</b> The <b>Edit</b> button appears only when the deferred revenue recognition template is in the <b>Active</b> status.
Delete	Used to delete the deferred revenue recognition template.

- 
- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing a Deferred Revenue Recognition Template

### Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to edit.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.

The **Deferred Revenue Recognition Template** screen appears.

**Note:** The **Edit** button appears only when the deferred revenue recognition template is in the **Active** status.

4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics from the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition template are saved.

### **Related Topics**

## **Deleting a Deferred Revenue Recognition Template**

### **Procedure**

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template that you want to delete.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.

A message appears confirming whether you want to delete the deferred revenue recognition template.

4. Click **OK**.

The deferred revenue recognition template is deleted.

## Deferred Revenue Recognition (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition \(Used for Viewing\)](#) on page 2202

This screen consists of the following zone:

- [Search Deferred Revenue Recognition](#) on page 2196

## Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account Details</li> <li>• Person Details</li> <li>• Deferred Revenue Recognition Details</li> <li>• Financial Transaction Details</li> <li>• Policy Details</li> </ul> <p><b>Note:</b> By default, the <b>Account Details</b> option is selected.</p>	Yes
Person ID	<p>Used to search deferred revenue recognition which are assigned to a particular person.</p> <p><b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.</p>	No
Account ID	<p>Used to search the account ID.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.</p>	No
Person Identifier Type	<p>Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.</p>
Person Identifier	<p>Used to specify the value for the person identifier type.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> If you specify the person identifier type as a search criteria, you have to specify the person identifier.</p>
Account Identifier Type	<p>Used to specify the account identifier type of the account whose details you want to search.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the value of the account identifier.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.  <b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.	No
Status	Used to search deferred revenue recognition with a particular status. The valid values are:  <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> <li>• Draft</li> </ul> <b>Note:</b> This field appears only when you select the <b>Person Details</b> , <b>Account Details</b> , or <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	No
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition.  <b>Note:</b> This field appears only when you select the <b>Person Details</b> , <b>Account Details</b> , or <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	No
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid.  <b>Note:</b> This field appears only when you select the <b>Person Details</b> or <b>Account Details</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition  <b>Note:</b> This field appears only when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	No
Description	Used to specify the description of the deferred revenue recognition.  <b>Note:</b> This field appears only when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Monthly</li> <li>• Weekly</li> </ul> <b>Note:</b> This field appears only when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	No
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction.  <b>Note:</b> This field appears only when you select the <b>Financial Transaction Details</b> option from the <b>Search By</b> list.	
Policy Type	Used to indicate the type of policy.  <b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	Yes
Policy Number	Used to indicate the policy number.  <b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	No
Plan Number	Used to indicate the plan number of the policy.  <b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	No
Source System	Used to indicate the name of the external system from where the policy originated.  <b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to indicate the date from when the policy is effective.  <b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	No
End Date	Used to indicate the date till when the policy is effective.  <b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.  <b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition</b> screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.  <b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the respective financial transaction.

### Related Topics

For more information on...	See...
How to view the details of a deferred revenue recognition	<a href="#">Viewing the Deferred Revenue Recognition Details</a> on page 2201
How to search for a deferred revenue recognition	<a href="#">Searching for a Deferred Revenue Recognition</a> on page 2200

## Searching for a Deferred Revenue Recognition

### Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.

- Person identifier types defined in the application
- Account identifier types defined in the application
- Recognition Schedules defined in the application
- Source Systems defined in the application

### **Procedure**

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Deferred Revenue Recognition**.  
A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.  
The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

### **Related Topics**

<b>Deferred Revenue Recognition</b> screen	<a href="#">Deferred Revenue Recognition (Used for Searching)</a> on page 2196
<b>Search Deferred Revenue Recognition</b> zone	<a href="#">Search Deferred Revenue Recognition</a> on page 2196

## **Viewing the Deferred Revenue Recognition Details**

### **Procedure**

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2202
  - [Deferred Revenue Recognition - Log](#) on page 2205
3. Ensure that the **Main** tab is selected.
  4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

### **Related Topics**

## Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2202
- [Deferred Revenue Recognition - Log](#) on page 2205

### Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- [Deferred Revenue Recognition](#) on page 2202
- [Associated Deferred Revenue Recognitions](#) on page 2204
- [Recognition Schedule](#) on page 2205
- [Revenue Recognition Items](#) on page 2205

### Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template. <b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.

Field Name	Field Description
Financial Transaction Information	<p>Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction Information</b> screen appears where you can view the details of the financial transaction.</p>
Total Revenue Deferred	Displays the total revenue deferred.
Total Revenue Recognized	Displays the total revenue recognized.
Status	<p>Indicates the status of the deferred revenue recognition. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> <li>• Draft</li> </ul>

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.</p> <p><b>Note:</b> The <b>Edit</b> button appears only when the deferred revenue recognition is in the <b>Active</b> status.</p>
Generate Schedule	<p>Used to generate the deferred revenue recognition schedule.</p> <p><b>Note:</b> The <b>Generate Schedule</b> button appears only when the deferred revenue recognition is in the <b>Draft</b> status.</p>

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

### Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.  <b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition</b> screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.  <b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.  <b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the deferred revenue recognition template.

Column Name	Column Description
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Closed</li> <li>Canceled</li> </ul>

### Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

**Note:** This zone appears when the deferred revenue recognition is in the **Active** status.

### Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. “ <div data-bbox="537 1283 1474 1367" style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the deferred revenue recognition.</p> </div>

## Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- [Deferred Revenue Recognition Log](#) on page 2205

### Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition

Column Name	Column Description
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

## Editing a Deferred Revenue Recognition

### Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you wa  
The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.  
The **Deferred Revenue Recognition** screen appears.

**Note:** The **Edit** button appears only when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics from the deferred revenue recognition, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition are saved.

## Creating the Deferred Revenue Recognition Schedule

### Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

### Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.

The **Deferred Revenue Recognition** screen appears.

3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

**Note:** The **Generate Schedule** button appears only when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

## Defining Characteristics for a Deferred Revenue Recognition

### Prerequisites

To define characteristics for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

### Procedure

To define characteristics for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Deferred Revenue Recognition</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

- If you want to define more than one characteristic for the deferred revenue recognition, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete**  icon corresponding to the characteristic.

## Adding Related Deferred Revenue Recognitions

### Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

### Procedure

To add related deferred revenue recognitions:

- Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Deferred Revenue Recognition Search</b> window appears.	Yes
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Financial Transactions Search</b> window appears.	Yes

- Enter the required details in the **Related Deferred Revenue Recognitions** section.
- If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the related deferred revenue recognition.

### Related Topics

## Editing the Deferred Revenue Recognition Schedule Details

### Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

### Procedure

To edit the details of the deferred revenue recognition schedule:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

The **Deferred Revenue Recognition** screen appears.

- Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.

The **Edit Recognition Schedule** screen appears.

**Note:** A recognition schedule from the deferred revenue recognition can be edited only when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

- Modify the details of the recognition schedule.
- If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add (+)** icon and then repeat step 4.

**Note:** However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete (🗑)** icon corresponding to the recognition schedule.

- Click **Save**.

The changes made to the recognition schedule are saved.

### **Related Topics**

## **Viewing the Log of a Deferred Revenue Recognition**

### **Procedure**

To view the log of a deferred revenue recognition:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2202
- [Deferred Revenue Recognition - Log](#) on page 2205

- Click the **Log** tab.

The **Log** tab appears.

- View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

## Adding a Log Entry for a Deferred Revenue Recognition

### Procedure

To add a log entry for a deferred revenue recognition:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to edit.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:.

- [Deferred Revenue Recognition - Main](#) on page 2202
- [Deferred Revenue Recognition - Log](#) on page 2205

- Click the **Log** tab.

The **Log** tab appears.

- Click on the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

The **Add Deferred Revenue Recognition Schedule Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes Or No)
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.	Not applicable
Log Details	Used to specify additional comments on the deferred revenue recognition.	Yes

- Enter the comments in the **Log Details** field.

**6. Click Save.**

The log entry is added in the **Deferred Revenue Recognition Log** zone.

- [Pay Instruction](#)
- [Discrepancy Report Type](#)
- [Discrepancy Report \(Used for Searching\)](#)
- [Discrepancy Report \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. The system enables you to upload a pay instruction file in the following formats:

- CSV File Format – You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch.
- EDI 820 File Format – You can upload pay instruction files in the EDI 820 file format from the specified location on the server using the **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.

**Note:** The **BPR** tag in the EDI 820 file must be set to **I** to indicate that the file contains pay instructions for reconciliation.

While uploading pay instruction files, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Once a file is successfully validated, the reconciliation is created for the file in the **Draft** status. The reconciliation is immediately transitioned to the **Send Notification** status and the algorithms attached to the Send Notification status are executed. Once the To Do is created, the status of the reconciliation is changed to **Pending**. A pay instruction is created for each record in the file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

You need to then specify the payment ID against which you want to reconcile the billed items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the accounts for which you have received the pay instruction. The status of the reconciliation is changed to **Pending Reconciliation**.

On reconciling the pay instructions, the system finds the bill segment against which the pay instruction must be reconciled using the account identifier, policy

number, plan number, member identifier, and coverage period combination. Once the bill segment is identified, the transfer adjustment is created against the bill segment and offset adjustment is created against the respective reconciliation contract. If all pay instructions in the file are successfully reconciled, the status of the reconciliation is changed to **Completed**. However, if one or more pay instruction in the file could not be successfully reconciled, the status of the reconciliation is changed to **Open**. If a file contains a pay instruction for previous coverage period, then system checks whether there is any open pay instruction for that coverage period in the system and accordingly tries to reconcile the pay instruction. However, if an open pay instruction for that coverage period does not exist in the system, the system tries to reconcile the pay instruction against the billed item.

You may manually reconcile the pay instructions which are in the **Pending Reconciliation** status. Alternatively, you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** batch at regular interval to reconcile the pay instructions.

During reconciliation, a pay instruction also goes through various statuses in its lifecycle. You may configure the following two batches to execute at the regular intervals:

- **Pay Instruction Periodic Monitor (for Pending Status) (C1-PIPMO)** – It monitors whether there are any pay instructions in the **Pending** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.
- **Pay Instruction Periodic Monitor (for Open Status) (C1-PIMDF)** – It monitors whether there are any pay instructions in the **Open** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.

If you cancel the payment tender, the payment and reconciliation associated with the payment are automatically canceled. The status of the reconciliation is changed to **Pending Cancellation**. And, the status of all pay instructions in the reconciliation is changed to **Canceled**. If required, you can manually cancel a reconciliation. However, you can cancel a reconciliation only when it is in the **Open** or **Completed** status. On canceling a reconciliation, the status of the reconciliation is changed to **Pending Cancellation** and the status of all pay instructions in the reconciliation is changed to **Canceled**.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. It monitors whether there are reconciliations in the **Pending Cancellation** status. If there is a reconciliation in the **Pending Cancellation** status, the status of the reconciliation is changed to **Canceled**.

The system enables you to create a copy of reconciliation when it is in the **Canceled** status. If the number of pay instructions in the reconciliation does not exceed the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a copy of the reconciliation and pay instructions is created in the real time (i.e. immediately). The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

However, if the number of pay instructions in the reconciliation exceeds the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a batch job is automatically created using the **Duplicate Reconciliation (C1-RECUD)** batch. A message appears indicating the batch job ID. This batch job creates a copy of the reconciliation and pay instructions. The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

If the policy number, plan number, and member identifier are specified in a pay instruction, then the pay instruction is reconciled at the main subscriber level. If the policy number and plan number are specified in a pay instruction, then the pay instruction is reconciled at the plan level. However, if the policy number is only specified in a pay instruction, then the pay instruction is reconciled at the policy level.

On reconciling, some pay instructions are fully reconciled against the bill segments, some pay instructions are partially reconciled against the bill segments, and some pay instructions are not reconciled against any bill segments. The system enables you to capture such discrepancies for the reporting purposes. If required, you can generate the discrepancy report at the file or account level. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All billed items which were partially reconciled against pay instructions due to rate variance
- All billed items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

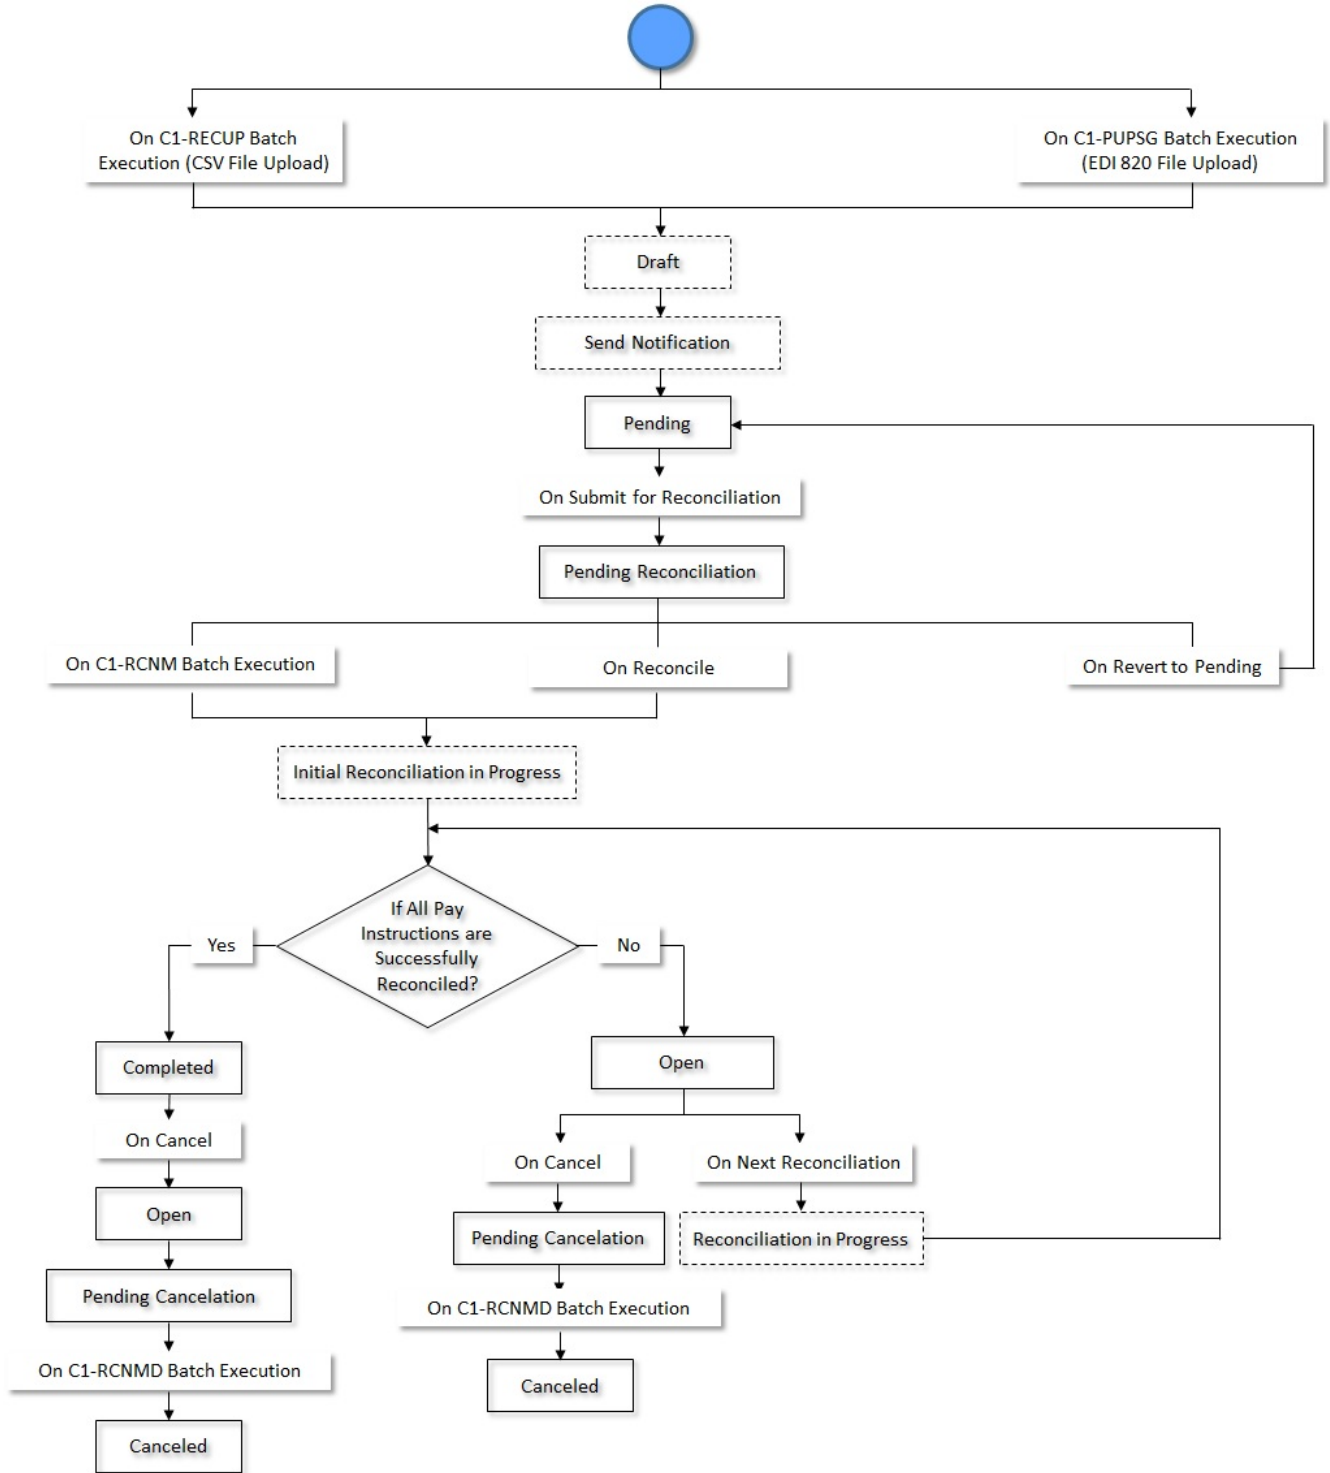

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. Once you review and finalize the discrepancy report, its status is changed to **Completed**. At a time, you can only have one discrepancy report for the file or account in the **Pending** status. Until, you finalize a discrepancy report, you cannot create another discrepancy report for the file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation is in the **Open** status.

The reconciliation process goes through various statuses in its entire lifecycle. For more information about the reconciliation statuses, see...

- [Reconciliation Status Transition](#) on page 2216
- [Pay Instruction Status Transition](#) on page 2217
- [Discrepancy Report Status Transition](#) on page 2219

## Reconciliation Status Transition

The following figure graphically indicates how a reconciliation goes through various statuses in its lifecycle:

---

The following figure graphically indicates how a pay instruction goes through various statuses in its lifecycle:

## Discrepancy Report Status Transition

The following figure graphically indicates how a Discrepancy Report goes through various statuses in its lifecycle:

## EDI 820 File Format For Reconciliation

Before uploading an EDI 820 file, you need to ensure that the EDI 820 file contains the following columns:

Tag	Attribute	Description	Mandatory (Yes or No)
Algo Param	Account Identifier Type	Used to specify the account identifier type. The valid values are: <ul style="list-style-type: none"> <li>Account Name</li> <li>Base Global Account ID</li> <li>Bill Group Identifier</li> <li>Demo Bank Account Number</li> <li>External Account Identifier</li> <li>Flexcube Account ID</li> <li>International Bank Account Number</li> </ul>	Yes (Conditional)  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This data is required when Account Identifier is provided.         </div>

Tag	Attribute	Description	Mandatory (Yes or No)
N1[3]	Account Identifier value	Used to specify the value of the account identifier type.	Yes (Conditional) <b>Note:</b> This data is required when Account Identifier Type is provided.
Batch Param	Member Identifier type	Used to specify the member identifier type.	Yes
RMR[2]	Policy Number	Used to specify the policy number of the member.	Yes
Algo Param	Plan Number	Used to specify the plan number of the member.	No
ENT[4]	Member Identifier Value	Used to specify the value of the member identifier type.	Yes
RMR[4]	Amount	Used to specify the amount that has to be paid to the member.	Yes <b>Note:</b> The data value of this column must be 0, if no amount is provided.
DTM[6]	Coverage Start Date	Used to specify the date of the policy from where the coverage starts. <b>Note:</b> The Coverage Start Date cannot be later than the coverage end date.	Yes
DTM[6]	Coverage End Date	Used to specify the date of the policy till when the coverage ends. <b>Note:</b> The coverage end date cannot be earlier than the coverage start date.	Yes
NM1[4] [5]	Member Name	Used to specify the name of the member.	Yes
REF[2]	Plan Number	Used to specify the plan number of the member.	Yes (Conditional) <b>Note:</b> This data is required when Algo Param tag does not have a value.
Batch Param	Reconciliation Type	Used to specify the type of reconciliation.	Yes
Batch Param	Reconciliation Cancel Status	Used to specify the Reconciliation Cancellation status.	Yes

## Sample EDI 820 File Format

```
ISA*00**00**ZZ*USBANK*ZZ*UHGI*091212*1013*U*00401*000000005*0*P*~

 SE\*1\*000000001~  
 GE\*1\*135260~  
 IEA\*1\*505043666~

Here the tags ISA and IEA resemble Bank Details, whereas LBTEST01 indicates Tender Source information.

Tags like GS and GE, ST and SE are known as Start and End Tags. All of the other tags are embedded inside these Start and End tags.

For more information about the EDI 820 file format, see topic [EDI 820 File Format For Reconciliation](#) on page 2219

## Algorithms Used in C1-MemberReconType

The following table lists the algorithms which are attached to the **C1-MemberReconType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-REOCNPEP	C1-REOCNPEP	Refer to <a href="#">C1-REOCNPEP</a> on page 2221

### C1-REOCNPEP

This algorithm validates a reconciliation type.

It checks the following:

- A duplicate algorithm is not added.
- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a reconciliation type when the corresponding reconciliation is in a status other than **Completed** or **Canceled**.

## Algorithms Used in C1-MemberReconciliation

The following table lists the algorithms which are attached to the **C1-MemberReconciliation** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-RECONINFO	C1-RECONINFO	Refer to <a href="#">C1-RECONINFO</a> on page 2223
Validation	C1-MRECONVAL	C1-MRECONVAL	Refer to <a href="#">C1-MRECONVAL</a> on page 2223

The following table lists the algorithms which are used in the lifecycle of the **C1-MemberReconciliation** business object:

Status	System Event	Algorithm	Algorithm Type	Description

## C1-RECONINFO

This algorithm generates the reconciliation information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Reconciliation Type Description
- Reconciliation Status
- Reconciliation ID

## C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## F1-TDCREATE

This algorithm is invoked when the status of the reconciliation is changed to **Send Notification**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is created for a pay instruction file.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is created for a pay instruction file.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## C1-VALPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Pending**. Once a pay instruction is created, this algorithm validates the following:

- The coverage end date is not earlier than the coverage start date.
- Either the account identifier type and account identifier or the account ID is available in the pay instruction record.
- The member identifier type is available when the member identifier is specified and vice versa.
- A person with the given member identifier type and member identifier combination exists in the system.
- An account with the specified account ID exists in the system.
- The account ID is derived using the account identifier type and account identifier combination when the account ID is not available in the pay instruction record.
- The account is eligible for reconciliation.

If the above mentioned validations are successful, the status of the pay instruction is set to **Pending**. However, if any of the above validation fails, the status of the pay instruction is set to **Error**.

This algorithm contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. This type of characteristic is defined on the account. You must specify a characteristic type where the characteristic entity is set to Account.
- **Maintenance Object for Generating Pay Instruction Logs** – Used to specify the maintenance object using which you want to generate logs for the pay instruction.
- **Pay Instruction Error Status** – Used to specify the status code to which you want to transition the pay instruction when the validation fails.
- **Pay Instruction Pending Status** – Used to specify the status code to which you want to transition the pay instruction when the validation is successful.

All these parameters are mandatory.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.

- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

## C1-MONPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Initial Reconciliation in Progress** or **Reconciliation in Progress**. It monitors or checks whether there are any pay instructions in the following statuses:

- Reconciliation Pending Processing
- Derivation Pending Processing
- Completed

If all pay instructions in the reconciliation are in the **Completed** status, then the status of the reconciliation is changed to **Completed**. However, if there are any pay instructions in the **Reconciliation Pending Processing** or **Derivation Pending Processing** status, then the status of reconciliation is changed to **Open**.

This algorithm contains the following parameters:

- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which the pending pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which the open pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when there is a pay instruction in the status which is specified in the **Pay Instruction Derivation Pending Processing Status** or **Pay Instruction Reconciliation Pending Processing Status** parameter.
- **Reconciliation Completed Status** - Used to specify the status code to which you want to transition the reconciliation when all its pay instructions are in the status which is specified in the **Pay Instruction Completed Status** parameter.

All these parameters are mandatory.

## C1-TRNPAYRCN

This algorithm transfers the payment amount from the payor account's contract to the reconciliation contract of the accounts for which you have received the pay instruction. In this process, the payment against the payor account's contract is canceled and the payment against the payee account's reconciliation contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment on the payor account's contract is canceled.
- **Reconciliation Contract Match Type** – Used to specify the match type using which you want to apply payment against the reconciliation contract.

Both these parameters are mandatory.

## C1-RCOPNPYIN

This algorithm checks whether the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter. If the status of the pay instruction is **Pending** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Derivation Pending Processing Status** parameter.

However, if the status of the pay instruction is **Open** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Reconciliation Pending Processing Status** parameter.

It contains the following parameters:

- **Pay Instruction Pending Status** – Used to specify the status code to which a pay instruction is transitioned when its validation is successful.
- **Pay Instruction Open Status** – Used to specify the status code to which a pay instruction is transitioned when it is not fully reconciled.
- **Pay Instruction Derivation Pending Processing Status** – Used to specify the status code to which you want to transition the pending pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Pay Instruction Reconciliation Pending Processing Status** – Used to specify the status code to which you want to transition the open pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Deferred Processing Threshold** – Used to specify the maximum number of pay instructions that can be reconciled in the real time (i.e. immediately). If the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit, the pay instruction is reconciled in the deferred mode.

All these parameters are mandatory.

## C1-RCNOPNMR

This algorithm initiates the reconciliation process for the past open reconciliation records of the account. It contains the following parameters:

- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.
- **Reconciliation In Progress Status** – Used to specify the status code to which you want to transition the past open reconciliation record when the current reconciliation record of the account is reconciled.

Both these parameters are mandatory.

## C1-RCMONPNCN

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It checks whether the reason is specified while canceling the reconciliation. If the cancel reason is specified, the status of the reconciliation is changed to **Canceled**. However, if the cancel reason is not specified, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch.

It contains the following parameters:

- **Reconciliation Cancel Status Reason** -  
Used to specify the cancel reason. If you specify the value for this parameter, the system will validate whether the cancel reason specified while canceling the reconciliation matches the cancel reason specified in this parameter. If the cancel reason does not match, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch. You must specify a reason which is defined for the **Pending Cancellation** status of the **C1-MemberReconciliation** business object.

## C1-CANPAYINS

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It changes the status of all pay instructions in the reconciliation.

It contains the following parameter:

- **Pay Instruction Canceled Status** – Used to specify the status code to which you want to transition a pay instruction when the reconciliation is canceled. This parameter is mandatory.

## C1-CANRCNPAY

This algorithm transfers the payment amount from the payee account's reconciliation contract to the payor account's contract. In this process, the payment against the reconciliation contract is canceled and the payment against the payor account's contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment against the payee account's reconciliation contract is canceled.
- **On Account Match Type** – Used to specify the match type using which you want to apply the payment against the contract of the payor account.

Both these parameters are mandatory.

## C1-RCNCANLTD

This algorithm is invoked when the status of the reconciliation is changed to **Canceled**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is canceled.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is canceled.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## Algorithms Used in C1-PayInstruction

The following table lists the algorithms which are attached to the **C1-PayInstruction** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-MPAYININF	C1-MPAYININF	Refer to <a href="#">C1-MPAYININF</a> on page 2228

The following table lists the algorithms which are used in the lifecycle of the **C1-PayInstruction** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Derivation In Progress	Enter	C1-PYINDRVAN	C1-PYINDRVAN	Refer to <a href="#">C1-PYINDRVAN</a> on page 2228
Reconciliation In Progress	Enter	C1-PIRECOCIL	C1-PIRECOCIL	Refer to <a href="#">C1-PIRECOCIL</a> on page 2229
Open	-	-	-	-
Complete	-	-	-	-
Cancelled	Enter	C1-PYICNADJ	C1-PYICNADJ	Refer to <a href="#">C1-PYICNADJ</a> on page 2230
Derivation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1257
Reconciliation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1257
Error	-	-	-	-

## C1-MPAYININF

This algorithm generates the pay instruction information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- “Period:” Start Date - End Date
- Pay Instruction Amount
- Pay Instruction Status
- Payor Name
- Pay Instruction ID

## C1-PYINDRVAN

This algorithm is invoked when the status of the pay instruction is changed to **Derivation in Progress**. It derives the following:

- Policy using the policy number
- Plan using the plan number
- Member using the member identifier type and member identifier
- Payee account using the account identifier type and account identifier

If the policy, plan, and member information is available, it validates whether the member is covered under the specified plan of the policy. However, if the policy and plan information is available, it validates whether the plan is included in the specified policy. If the derivation and validation process is successful, the related object information is derived for policy, plan, and/or member from the system.

However, if the derivation and validation process fails, the related object information is not derived for policy, plan, and/or member and the status of the pay instruction remains as **Pending**.

In addition, the system determines whether the pay instruction must be reconciled at the member, plan, or policy level depending on the information available in the pay instruction. If the policy, plan, and member information is available, the pay instruction is reconciled at the member level. If the policy and plan information is available, the pay instruction is reconciled at the policy plan level. However, if the policy information is available, the pay instruction is reconciled at the policy level.

It contains the following parameters:

- **Unsuccessful Processing Status** – Used to specify the status code to which you want to transition the pay instruction when the derivation and validation process fails.
- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy level.

All these parameters are mandatory.

## C1-PIRECOCIL

This algorithm is invoked when the status of the pay instruction is changed to **Reconciliation in Progress**. It searches whether there is an open bill segment with the policy, plan, member, and coverage period combination for the payee account. If such bill segment exists in the system, this algorithm reconciles the pay instruction against the open bill segment. It creates two reconciliation adjustments – one against the payee account’s reconciliation contract and another against the bill segment’s contract.

If the amount on the pay instruction is fully reconciled, then the status of the pay instruction is changed to **Completed**. However, if the amount on the pay instruction is not fully reconciled, then the status of the pay instruction is changed to **Open**.

It contains the following parameters:

- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy level.
- **Adjustment Type for Bill Segment Contract** – Used to specify the adjustment type using which you want to create the adjustment on the bill segment’s contract when the pay instruction is reconciled.
- **Adjustment Type for Reconciliation Contract** – Used to specify the adjustment type using which you want to create the adjustment on the reconciliation contract when the pay instruction is reconciled.
- **Reconciliation Open Status** – Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**.

- **Pay Instruction Open Status** – Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled.
- **Pay Instruction Completed Status** – Used to specify the status code to which you want to transition the pay instruction when it is fully reconciled.
- **Reconciliation Characteristic Type** – Used to specify the characteristic type which you want to use to store the reconciliation ID. This type of characteristic is defined on the adjustments which are created on reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**.
- **Payment Event Characteristic Type** – Used to specify the characteristic type which you want to use to store the payment event ID. This type of characteristic is defined on the reconciliation adjustments to indicate the payment event whose payment is distributed against the bill segment.
- **Adjustment Type for Offsetting Debits against Billed Credits** – Used to specify the adjustment type using which you want to create the adjustments when offsetting billed debit verses billed credits.

All these parameters are mandatory.

## C1-PYICNADJ

This algorithm is invoked when the status of the pay instruction is changed to **Canceled**. It cancels the reconciliation adjustments which are created while reconciling the pay instruction. It cancels the reconciliation adjustment irrespective of whether the status of the pay instruction is **Open** or **Completed**.

It contains the following parameters:

- **Adjustment Cancel Reason** – Used to indicate the reason that you want to use when the reconciliation adjustments are canceled.
- **Pay Instruction Completed Status** – Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Pay Instruction Open Status** – Used to specify the status code to which the pay instruction is transitioned when it is not fully reconciled.
- **Reconciliation Completed Status** – Used to specify the status code to which the reconciliation is transitioned when all its pay instructions are fully reconciled.
- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.

All these parameters are mandatory.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## Algorithms Used in C1-MemberDiscReportType

---

The following table lists the algorithms which are attached to the **C1-MemberDiscReportType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-DISCPEP	C1-DISCPEP	Refer to <a href="#">C1-DISCPEP</a> on page 2231

## C1-DISCPEP

This algorithm validates a discrepancy report type. It checks the following:

- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a discrepancy report type when the corresponding discrepancy report is in a status other than **Completed**.

## Algorithms Used in C1-DiscrepancyReport

The following table lists the algorithms which are attached to the **C1-DiscrepancyReport** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DISRINFO	C1-DISRINFO	Refer to <a href="#">C1-DISRINFO</a> on page 2231

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1257
	Enter	C1-VALNEWDIS	C1-VALNEWDIS	Refer to <a href="#">C1-VALNEWDIS</a> on page 2232
Pending	Enter	C1-CRDSLNTM	C1-CRDSLNTM	Refer to <a href="#">C1-CRDSLNTM</a> on page 2232
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1256
Completed	Enter	C1-VALCMPDIS	C1-VALCMPDIS	Refer to <a href="#">C1-VALCMPDIS</a> on page 2232

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-DISRINFO

This algorithm generates the discrepancy report information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Discrepancy Report Type Description
- Discrepancy Report Status

- Discrepancy Report ID

## C1-VALNEWDIS

This algorithm allows you to create a discrepancy report only when the following conditions are met:

- The account for which discrepancy report is created is eligible for reconciliation.
- A discrepancy report in the **Pending** status does not exist for the account or file.
- A reconciliation record in the **Open** status exists for the account or file.

It contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Account**.
- **Eligible for Reconciliation Characteristic Value** – Used to specify the value of the characteristic type specified in the **Eligible for Reconciliation Characteristic Type** parameter which indicates that the account is eligible for reconciliation.

Both these parameters are mandatory.

## C1-CRDSLNTM

This algorithm is invoked when the status of the discrepancy report is changed to **Pending**. If the discrepancy report is created at the account level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there is an open bill segment for the account and for which there are open and pending pay instructions in the open reconciliation.

However, if the discrepancy report is created at the file level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there are open and pending pay instructions in the open reconciliation. Note that the discrepancy line items are created for each account whose pay instructions are received in the pay instruction file.

It contains the following parameters:

- **Consumer Status Characteristic Type** – Used to specify the characteristic type which stores the consumer status of the member. The system retrieves the consumer status of the member and stores it against the respective discrepancy line item. Here, you must specify a characteristic type where the characteristic entity is set to **Person**. This parameter is mandatory.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-VALCMPDIS

This algorithm is invoked when you click the **Finalize** button. It changes the status of the discrepancy report to **Completed** only when the discrepancy category is specified for each discrepancy line item in the report.

## Reconciliation Type

---

Oracle Revenue Management and Billing allows you to define a reconciliation type using which you can create the reconciliation. It is the reconciliation type which helps the system to determine:

- The business object using which the reconciliation should be created.

- The file format through which the pay instruction records can be uploaded in the system.

In addition, a reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

The **Reconciliation Type** screen allows you to define, edit, copy, and delete a reconciliation type. It contains the following zones:

- [Reconciliation Type List](#) on page 2233
- [Reconciliation Type](#) on page 2233

## Reconciliation Type List

The **Reconciliation Type List** zone lists the reconciliation types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Reconciliation Type	Displays the reconciliation type.
Description	Displays the description of the reconciliation type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Reconciliation Type</b> screen appears where you can edit the details of the reconciliation type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Reconciliation Type</b> screen appears where you can define a new reconciliation type using an existing reconciliation type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the reconciliation type.  <b>Note:</b> You can delete a reconciliation type only when you have not created a reconciliation using the reconciliation type.

On clicking the **Broadcast** () icon corresponding to a reconciliation type, the **Reconciliation Type** zone appears with the details of the respective reconciliation type.

## Reconciliation Type

The **Reconciliation Type** zone displays the details of the reconciliation type. It contains the following sections:

- **Main** - Displays basic information about the reconciliation type. It contains the following fields:

Field Name	Field Description
Reconciliation Type	Displays the reconciliation type.
Reconciliation Business Object	Indicates the business object using which the reconciliation will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the reconciliation type.
Detailed Description	Indicates the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Status	Displays additional information about the reconciliation type.

- **Algorithms** - Lists the algorithms which are associated with the reconciliation type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithms with the same system event should be executed.
System Event	Indicates the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> <li>Upload Pay Instructions</li> </ul>
Algorithm	Indicates the algorithm attached to the system event.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics defined for the reconciliation type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.  <b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b> .

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation type.

Button Name	Button Description
Delete	Used to delete the reconciliation type.  <b>Note:</b> You can delete a reconciliation type only when you have not created a reconciliation using the reconciliation type.
Duplicate	Used to create a new reconciliation type using an existing reconciliation type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Reconciliation Type** zone does not appear in the **Reconciliation Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a reconciliation type in the **Reconciliation Type List** zone.

## Defining a Reconciliation Type

### **Prerequisites**

To define a reconciliation type, you should have:

- Reconciliation business objects defined in the application

### **Procedure**

To define a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Reconciliation Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type Business Object	Used to indicate the business object using which you want to create the reconciliation type.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Reconciliation Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple reconciliation type business objects defined in the application. If there is only one reconciliation type business object defined in the application, the **Reconciliation Type** screen appears.

4. Select the required reconciliation type business object from the respective field.
5. Click **OK**.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Associate algorithms with the reconciliation type, if required.
8. Define characteristics for the reconciliation type, if required.
9. Click **Save**.

The reconciliation type is defined.

### **Related Topics**

<b>Reconciliation Type</b> screen	<a href="#">Reconciliation Type</a> on page 2232
How to associate an algorithm with a reconciliation type	<a href="#">Associating an Algorithm with a Reconciliation Type</a> on page 2237
How to define characteristics for a reconciliation type	<a href="#">Defining Characteristics for a Reconciliation Type</a> on page 2237

## Defining Characteristics for a Reconciliation Type

### Prerequisites

To define characteristics for a reconciliation type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation Type**).

### Procedure

To define characteristics for a reconciliation type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Reconciliation Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the reconciliation type.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the reconciliation type.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the reconciliation type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the reconciliation type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Associating an Algorithm with a Reconciliation Type

You can upload a pay instruction file in the CSV and EDI 820 file formats. While uploading a pay instruction file, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two

algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

### **Prerequisites**

To associate an algorithm with a reconciliation type, you should have:

- Algorithm defined using the **C1-PAYINSUPL** or **C1-RECONPROC** algorithm type depending on whether you want to use the reconciliation type while uploading a pay instruction file in the CSV or EDI 820 file format

### **Procedure**

To associate an algorithm with a reconciliation type:

1. Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithms with the same system event should be executed.	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.
System Event	Used to indicate the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> <li><b>Upload Pay Instructions</b> - Used when you want to execute the attached algorithm while uploading a pay instruction file using the <b>Pay Instruction CSV File Upload (C1-RECUP)</b> or <b>Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)</b> batch.</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.
Algorithm	Used to indicate the algorithm that you want to attach to the system event. <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the reconciliation type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the reconciliation type, click the **Delete**  icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the reconciliation type.

**Related Topics**

**Editing a Reconciliation Type****Prerequisites**

To edit a reconciliation type, you should have:

- Reconciliation business objects defined in the application

**Procedure**

To edit a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the reconciliation type whose details you want to edit.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Displays the reconciliation type.	Not applicable
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a reconciliation type by clicking the **Edit** button in the **Reconciliation Type** zone.

- Modify the required details in the **Main** section.
- Associate or remove an algorithm from the reconciliation type, if required.
- Define, edit, or remove characteristics from the reconciliation type, if required.
- Click **Save**.

The changes made to the reconciliation type are saved.

## Deleting a Reconciliation Type

### Procedure

To delete a reconciliation type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
- Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.
- In the **Reconciliation Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the reconciliation type that you want to delete.  
A message appears confirming whether you want to delete the reconciliation type.

**Note:** You can delete a reconciliation type only when you have not created a reconciliation using the reconciliation type.

**Tip:** Alternatively, you can delete a reconciliation type by clicking the **Delete** button in the **Reconciliation Type** zone.

5. Click **OK**.

The reconciliation type is deleted.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>

## **Copying a Reconciliation Type**

Instead of creating a reconciliation type from scratch, you can create a new reconciliation type using an existing reconciliation type. This is possible through copying a reconciliation type. On copying a reconciliation type, the details including the algorithms and characteristics are copied to the new reconciliation type. You can then edit the details, if required.

### **Prerequisites**

To copy a reconciliation type, you should have:

- Reconciliation type (whose copy you want to create) defined in the application
- Reconciliation business objects defined in the application

### **Procedure**

To copy a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.

A sub-menu appears.

3. Click the **Search** option from the **Reconciliation Type** sub-menu.

The **Reconciliation Type** screen appears.

4. In the **Reconciliation Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the reconciliation type whose copy you want to create.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define characteristics for the reconciliation type.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can copy a reconciliation type by clicking the **Duplicate** button in the **Reconciliation Type** zone.

5. Enter the required details in the **Main** section.
6. Associate or remove an algorithm from the reconciliation type, if required.
7. Define, edit, or remove characteristics from the reconciliation type, if required.
8. Click **Save**.

The new reconciliation type is defined.

## Viewing the Reconciliation Type Details

### Procedure

To view the details of a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.

4. In the **Reconciliation Type List** zone, click the **Broadcast**  icon corresponding to the reconciliation type whose details you want to view.  
The **Reconciliation Type** zone appears.
5. View the details of the reconciliation type in the **Reconciliation Type** zone.

### Related Topics

## Reconciliation (Used for Searching)

The **Reconciliation** screen allows you to search for a reconciliation using various search criteria. It contains the following zone:

- [Search Reconciliation](#) on page 2243

Through this screen, you can navigate to the following screen:

- [Reconciliation \(Used for Viewing\)](#) on page 2247

## Search Reconciliation

The **Search Reconciliation** zone allows you to search for a reconciliation using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a reconciliation using the reconciliation, payee account, or payment tender details. The valid values are: <ul style="list-style-type: none"> <li>• Reconciliation Details</li> <li>• Account Details</li> <li>• Payment Tender Details</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the <b>Reconciliation Details</b> option is selected.</div>	Yes
Reconciliation ID	Used to search a particular reconciliation. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.</div>	No
Reconciliation Type	Used to search reconciliations which are created using a particular reconciliation type. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Created From	Used to search reconciliations which are created from a particular date onwards.  <b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	No
Status	Used to search reconciliations with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul> <b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	No
Created Until	Used to search reconciliations which are created till a particular date.  <b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	No
File Name	Used to search a reconciliation which is created for a particular pay instruction file.  <b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	No
Person Name	Used to search reconciliations which contain a particular member's pay instructions.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No
Account Identifier Type	Used to select the identifier type based on which you want to search reconciliations which contain pay instructions for a particular payee account.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search reconciliations which contain pay instructions for a particular payee account.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No
Account Identifier	Used to specify the value for the account identifier type.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Check Number	Used to search a reconciliation associated with a payment tender which is received through a particular check.  <b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	No
Payor Account ID	Used to search reconciliations which are associated with a particular payor account.  <b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	No
MICR ID	Used to search a reconciliation associated with a payment tender which contains a particular MICR code.  <b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	No
Tender Amount	Used to search reconciliations associated with payment tenders with a particular amount.  <b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for a reconciliation.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the reconciliation is created in the system.
Reconciliation Information	Displays information about the reconciliation.  <b>Note:</b> It has a link. On clicking the link, the <b>Reconciliation</b> screen appears where you can view the details of the respective reconciliation.

Column Name	Column Description
Status	Indicates the status of the reconciliation. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancelation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul>
Payor Account ID	Indicates the payor account to which the reconciliation is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective payor account.
Payment ID	Indicates the payment to which the reconciliation is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Duplicate	Used to create a new reconciliation using an existing reconciliation.  <b>Note:</b> The <b>Duplicate</b> button appears only when the reconciliation is in the <b>Canceled</b> status.

## **Searching for a Reconciliation**

### **Prerequisite**

To search for a reconciliation, you should have:

- Reconciliation types and account identifier types defined in the application.

### **Procedure**

To search for a reconciliation:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Reconciliation**.

The **Reconciliation** screen appears.

3. Enter the search criteria in the **Search Reconciliation** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of reconciliations that meet the search criteria appears in the **Search Results** section.

<b>Reconciliation - Main</b> zone	<a href="#">Reconciliation</a> on page 2248

## Reconciliation - Main

The **Main** tab displays information about the reconciliation. It contains the following zones:

- [Reconciliation](#) on page 2248
- [Pay Instructions](#) on page 2250

### Reconciliation

The **Reconciliation** zone displays the details of the reconciliation. It contains the following sections:

- **Main** - Displays basic information about the reconciliation. It contains the following fields:

Field Name	Field Description
Reconciliation Information	Displays information about the reconciliation.
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Reconciliation Type</b> screen appears where you can view the details of the reconciliation type.
Status	Indicates the status of the reconciliation. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul>
Status Reason	Indicates the reason why the status of the reconciliation is changed.  <b>Note:</b> This field appears only when the reconciliation is in the <b>Pending Cancellation</b> or <b>Canceled</b> status.

Field Name	Field Description
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Payment Information	Indicates the payment to which the reconciliation is associated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment. This field does not appear when the reconciliation is in the <b>Draft</b> or <b>Pending</b> status.</p> </div>
Account Information	Indicates the payor account to which the reconciliation is associated.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field does not appear when the reconciliation is in the <b>Draft</b> or <b>Pending</b> status.</p> </div>

- **Characteristics** - Lists the characteristics defined for the reconciliation. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the reconciliation.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b>.</p> </div>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the reconciliation is in the <b>Pending</b> or <b>Draft</b> status.</p> </div>
Delete	Used to delete the reconciliation.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Delete</b> button appears only when the reconciliation is in the <b>Pending</b> or <b>Draft</b> status.</p> </div>
Submit for Reconciliation	Used to submit the pay instructions for reconciliation.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Submit for Reconciliation</b> button appears only when the reconciliation is in the <b>Pending</b> status.</p> </div>

Button Name	Button Description
Cancel	Used to cancel the reconciliation.  <b>Note:</b> The <b>Cancel</b> button appears only when the reconciliation is in the <b>Completed</b> or <b>Open</b> status.
Reconcile	Used to reconcile the pay instructions in the reconciliation.  <b>Note:</b> The <b>Reconcile</b> button appears only when the reconciliation is in the <b>Pending Reconciliation</b> status.
Revert to Pending	Used to revert the status of the reconciliation to <b>Pending</b> .  <b>Note:</b> The <b>Revert to Pending</b> button appears only when the reconciliation is in the <b>Pending Reconciliation</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the reconciliation status is updated.
Creation Date Time	Displays the date and time when the reconciliation is created.

### Pay Instructions

The **Pay Instructions** zone lists the pay instructions that are received from an external system against the bill segment based on the account identifier, policy number, plan number, member identifier, and coverage period combination. It contains the following columns:

Column Name	Column Description
Sequence No.	Displays a sequential number against each record.
View Payment Instruction	On clicking the <b>View Payment Instruction</b> (🔍) icon, <b>Pay Instruction</b> screen appears where entire pay instruction details are displayed.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Displays the account ID.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Policy Number	Displays the policy number of the member.
Plan Number	Displays the plan number of the member.
Member Identifier Type	Indicates the member identifier type.

Column Name	Column Description
Member Identifier	Displays the value of the member identifier type.
Member Name	Displays the name of the member.
Coverage Start Date	Displays the date from when the coverage is effective.
Coverage End Date	Displays the date till when the coverage is effective.
Amount	Indicates the amount that has to be paid to the member.
Open Amount	Indicates the amount which has not been paid to the member and is still in the open state.
Status	Indicates the status of the pay instruction. The valid values are: <ul style="list-style-type: none"> <li>• Cancelled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation In Progress</li> <li>• Open</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation In Progress</li> </ul>
Pay Instruction ID	Displays the pay instruction ID.

**Note:** You can use the **Previous** and **Next** links to scroll through the pay instructions item list.

## Reconciliation - Log

The **Log** tab contains the following zone:

- [Reconciliation Log](#) on page 2251

### Reconciliation Log

The **Reconciliation Log** zone lists the complete trail of actions performed on the reconciliation. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the reconciliation.
Details	Displays the details about the action performed on the reconciliation.
User	Indicates the user who has performed the action on the reconciliation.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity that is created when the action is performed on the reconciliation.

Column Name	Column Description
Status Reason	Indicates the reason why the status of the reconciliation is changed.  <b>Note:</b> The data appears in this column only when the status of the reconciliation is changed to <b>Pending Cancelation</b> or <b>Canceled</b> .

**Note:** You can manually add a log entry for the reconciliation by clicking the **Add Log Entry** link in the upper right corner of the **Reconciliation Log** zone.

### Related Topics

## Editing a Reconciliation

### Procedure

To edit a reconciliation:

1. Search for the reconciliation in **Reconciliation** screen.  
A list appears.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to edit.  
The **Reconciliation** screen appears.
3. Click the **Edit** button in the **Reconciliation** zone.  
The **Member Reconciliation** screen appears.

**Note:** The **Edit** button appears only when the reconciliation is in the **Pending** status.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Define, edit, or remove characteristics from the reconciliation, if required.
5. Click **Save**.

The changes made to the reconciliation are saved.

## Defining Characteristics for a Reconciliation

### Prerequisites

To define characteristics for a reconciliation, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Reconciliation**)

### **Procedure**

To define characteristics for a reconciliation:

1. Ensure that the **Characteristics** section is expanded when you are editing a reconciliation.

The **Characteristics** section contains the following fields:

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

The **Reconciliation** screen appears.

3. If you want to define more than one characteristic for the reconciliation, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the reconciliation, click the **Delete** (🗑️) icon corresponding to the characteristic.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of reconciliation files that meet the search criteria appear in the **Search Results** section.

5. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the status column.

The **Reconciliation** screen appears.

6. Click **Edit** button from **Record Actions** section.

The **Member Reconciliation** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the reconciliation.
- **Characteristics** - Used to specify the characteristics for the reconciliation. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the reconciliation.	Yes
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Reconciliation</b> .	Yes

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes

### Related Topics

How to edit an reconciliation	<a href="#">Editing a Reconciliation</a> on page 2252

## Deleting a Reconciliation

### Procedure

To delete a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to delete.

The **Reconciliation** screen appears.

3. Click the **Delete** button in the **Reconciliation** zone.

A message appears confirming whether you want to delete the reconciliation.

**Note:** The **Delete** button appears only when the reconciliation is in the **Pending** or **Draft** status.

4. Click **OK**.

The reconciliation object is deleted.

## Submitting Pay Instructions for a Reconciliation

### Prerequisites

To submit pay instructions for reconciliation, you should have:

- Account ID defined in the application.
- Reconciliation BO status as Pending.

## Procedure

To submit pay instructions for a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to submit.

The **Reconciliation** screen appears.

3. Click the **Submit for Reconciliation** button in the **Reconciliation** zone.

The pay instruction is submitted for reconciliation and the reconciliation status gets changed to **Pending Reconciliation**.

**Note:**

The **Submit for Reconciliation** button appears only when the reconciliation is in the **Pending** status.

## Reconciling Pay Instructions

### Prerequisites

To reconcile pay instructions, you should have:

- Account ID defined in the application.
- Reconciliation BO Status must be in Pending Reconciliation.

### Procedure

To reconcile pay instructions:

1. Search for the reconciliation in the **Reconciliation** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to reconcile.

The **Reconciliation** screen appears.

3. Click the **Reconcile** button in the **Reconciliation** zone.

The pay instructions gets reconciled and the reconciliation BO status gets changed to **Completed**.

**Note:**

The **Reconcile** button appears only when the reconciliation is in the **Pending Reconciliation** status.

## Canceling a Reconciliation

### Prerequisites

To cancel a reconciliation, you should have:

- Cancellation reasons defined in the application.

**Note:** While cancelling a reconciliation, you need to specify the reason why you want to cancel the reconciliation. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the **C1-MemberReconciliation** business object in the **Status Reason** screen.

### Procedure

To cancel a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to cancel.

The **Reconciliation** screen appears.

- [Reconciliation - Main](#) on page 2248
- [Reconciliation - Log](#) on page 2251

3. Click the **Cancel** button in the **Reconciliation** zone.

The **Status Reason** window appears. It contains following field:

:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the reconciliation.	Yes

**Note:** The **Cancel** button appears only when the reconciliation is in the **Open** or **Completed** status.

4. Select the cancellation status reason from the **Status Reason** list.
5. Click **Save**.

The status of the reconciliation is changed to **Cancelled**.

### Reconciliation Adjustments

The **Reconciliation Adjustments** zone displays the adjustment information for each pay instruction. It contains the following fields:

Column Name	Column Description
Transfer Adjustment	Indicates the amount to be transferred from a reconciliation contract against a pay instruction.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the transferred adjustment.
Transfer Type	Displays the type of transfer transaction made against a pay instruction or an internal offsetting.
Transfer Financial Transaction ID	Displays the transfer financial transaction ID.
Offset Adjustment	Indicates a reciprocal adjustment that is associated with a transfer adjustment.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the offset adjustment details.
Related Object Type	Displays the related object type whether it is pay instruction / financial transaction.

Column Name	Column Description
Related Object ID	Indicates the ID of the related pay instruction / financial transaction created in reconciliation process..  <b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the financial transaction of reconciliation adjustments.

**Note:** Pagination is used to display limited number of records in the **Reconciliation Adjustments** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

You can filter the adjustments using **Show All Adjustments** available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of the **Reconciliation Adjustments** zone.

### Related Objects

The **Related Objects** zone displays all those business objects based on which reconciliation process takes place. It contains the following fields:

Column Name	Column Description
Related Object Type	Displays the related object type that was used in pay instruction process.
Related Object Information	Displays the details of related object in brief.

**Note:** Pagination is used to display limited number of records in the **Related Topics** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

### Pay Instruction - Log

The **Pay Instruction - Log** tab contains the following zone:

- [Pay Instruction Log](#) on page 2260

### Pay Instruction Log

The **Pay Instruction Log** zone lists the complete trail of actions performed on the pay instructions. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the pay instruction.
Details	Displays the details about the action performed on the pay instruction.
User	Indicates the user who has performed the action on the pay instruction.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the pay instruction.
Status Reason	Displays the status reason of action performed on the pay instruction.

**Note:** You can manually add a log entry for the pay instruction by clicking the **Add Log Entry** link in the upper right corner of the **Pay Instruction Log** zone.

How to define a discrepancy report type	<a href="#">Defining a Discrepancy Report Type</a> on page 2264

### Discrepancy Report Type List

The **Discrepancy Report Type List** zone lists the various types of discrepancy report types. It contains the following columns:

Column Name	Column Description
Discrepancy Report Type	Displays the discrepancy report type.
Description	Displays the description of the discrepancy report type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Discrepancy Report Type</b> screen appears where you can edit the details of the discrepancy report type.

Column Name	Column Description
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Discrepancy Report Type</b> screen appears where you can define a discrepancy report type using an existing discrepancy report type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the discrepancy report type.  <b>Note:</b> You can delete a discrepancy report type only when you have not created a discrepancy report using the discrepancy report type.

On clicking the **Broadcast** () icon corresponding to a discrepancy report type, the **Discrepancy Report Type** zone appears with the details of the respective discrepancy report type.

## Discrepancy Report Type

The **Discrepancy Report Type** zone displays the details of the discrepancy report type. It consists of the following sections:

- **Main** - This section provides basic information about the discrepancy report type. It contains the following fields:

Field Name	Field Description
Discrepancy Report Type	Displays the discrepancy report type.
Discrepancy Report Business Object	Indicates the business object using which the discrepancy report will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the discrepancy report type.
Detailed Description	Displays additional information about the discrepancy report type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Characteristics** - This section lists the characteristics defined for the discrepancy report type. It contains the following columns:.

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Discrepancy Report Type.
Characteristic Value	Displays the value of the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.
Description	Displays detailed description of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the discrepancy report type.
Delete	Used to delete the discrepancy report type.  <b>Note:</b> You can delete a discrepancy report type only when you have not created a discrepancy report using the discrepancy report type.
Duplicate	Used to create a new discrepancy report type using an existing discrepancy report type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Discrepancy Report Type** zone does not appear in the **Discrepancy Report Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a discrepancy report type in the **Discrepancy Report Type List** zone.

## Defining a Discrepancy Report Type

### Prerequisites

To define a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.

- Characteristic Type defined for the discrepancy report.

### **Procedure**

To define a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D**, and then click **Discrepancy Report Type**.  
The sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report Type**.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type Business Object	Indicates the discrepancy report type business object used to create a discrepancy report type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple discrepancy report type business objects defined in the application. If there is only one discrepancy report type business object defined in the application, the **Discrepancy Report Type** screen appears.

4. Select the business object depending on whether you want to create a discrepancy report type.
5. Click **OK**.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Define characteristics for the discrepancy report type, if required.
8. Click **Save**.

The discrepancy report type is defined.

## Defining Characteristics for a Discrepancy Report Type

### Prerequisites

To define characteristics for a discrepancy report type, you should have:

- Characteristic Types defined in the application (where the characteristic entity is set to **Discrepancy Report Type**).

### Procedure

To define characteristics for a discrepancy report type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a discrepancy report type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Discrepancy Report Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the discrepancy report type.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the discrepancy report type.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the discrepancy report type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the discrepancy report type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing a Discrepancy Report Type

### Prerequisites

To edit a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

### Procedure

To edit a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Edit** (  ) icon in the **Edit** column corresponding to the discrepancy report type whose details you want to edit.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Displays the discrepancy report type.	Not applicable
Business Object	Indicates the discrepancy report type business object used while defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	No

**Tip:** Alternatively, you can click the **Edit** button in the **Discrepancy Report Type** zone to edit the details of the discrepancy report type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the discrepancy report type, if required.
7. Click **Save**.

The changes made to the discrepancy report type are saved.

## **Deleting a Discrepancy Report Type**

### **Procedure**

To delete a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
The sub-menu screen appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Delete** (🗑️) icon corresponding to the discrepancy report type that you want to delete.  
A message appears confirming whether you want to delete the discrepancy report type.

**Note:** You can delete a discrepancy report type only when you have not created a discrepancy report using the discrepancy report type.

**Tip:** Alternatively, you can click the **Delete** button in the **Discrepancy Report Type** zone to delete the discrepancy report type

5. Click **OK** .  
The discrepancy report type is deleted.

### **Related Topics**

## **Copying a Discrepancy Report Type**

### **Prerequisites**

To copy a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.

- Characteristic Type defined for the discrepancy report.

Instead of creating a discrepancy report type from scratch, you can create a new discrepancy report type using an existing discrepancy report type. This is possible through copying a discrepancy report type. On copying a discrepancy report type, the details including the characteristics are copied to the new discrepancy report type. You can then edit the details, if required.

### **Procedure**

To copy a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
The sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the discrepancy report type whose copy you want to create.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - The main section contains the following fields:
- **Characteristics** - Used to define characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type	Not applicable
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Indicates the status of discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can create a copy of the **Discrepancy Report Type** zone to create a copy of the discrepancy report type.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics from the discrepancy report type, if required.
7. Click **Save**.

The new discrepancy report type is defined.

## Discrepancy Report (Used for Searching)

The **Discrepancy Report** screen allows you to search for a discrepancy report using various search criteria. Through this screen, you can navigate to the following screen:

- [Discrepancy Report \(Used for Viewing\)](#) on page 2275
- [Search Discrepancy Report](#) on page 2270

### Search Discrepancy Report

The **Search Discrepancy Report** zone allows you to search for a discrepancy report using various search criteria. It contains the following two sections:

**Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for a discrepancy report using the discrepancy or account details. The valid values are:</p> <ul style="list-style-type: none"> <li>Discrepancy Details</li> <li>Account Details</li> </ul> <p><b>Note:</b> By default, the <b>Discrepancy Details</b> option is selected</p>	Yes
Discrepancy Report ID	<p>Used to search a particular discrepancy report..</p> <p><b>Note:</b> This field appears only when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.</p>	No
Discrepancy Report Type	<p>Used to indicate the levels at which the discrepancy report is generated. It has following options:</p> <ul style="list-style-type: none"> <li>Account Level</li> <li>File Level</li> </ul> <p><b>Note:</b> This field appears only when <b>Discrepancy Details</b> is selected from the <b>Search By</b> list.</p>	No
Status	<p>Used to search a particular discrepancy reports with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>Completed</li> <li>Draft</li> <li>Pending</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.</p>	No
File Name	<p>Used to specify the filename that is provided when a discrepancy report is created at file level.</p> <p><b>Note:</b> This field appears only when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.</p>	No
Created From	<p>Used to search discrepancy reports which are created from a particular date onwards.</p> <p><b>Note:</b> This field appears only when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.</p>	No
Created To	<p>Used to search for discrepancy report which is created till a particular date.</p> <p><b>Note:</b> This field appears only when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search discrepancy reports through which a particular person's record is created or updated in the system.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No
Account Identifier Type	Used to select the identifier type based on which you want to search discrepancy reports through which the account details are created or updated in the system. <ul style="list-style-type: none"> <li>Account Name</li> <li>Base Global Account ID</li> <li>Bill Group Identifier</li> <li>Demo Bank Account Number</li> <li>External Account Identifier</li> <li>Flexcube Account ID</li> <li>International Bank Account Number</li> </ul> <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value for the account identifier type.  <b>Note:</b> This field appears only when <b>Account Details</b> is selected from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Account ID	Used to search discrepancy reports that are created by a particular user.  <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No

**Note:** You must specify at least one search criterion while searching for a discrepancy report.

**Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays date and time when the discrepancy report was created.
Discrepancy Report Information	Displays information about the discrepancy report.  <b>Note:</b> It has a link. On clicking the link, the <b>Discrepancy Report</b> screen appears where you can view the details of the respective discrepancy report.

Column Name	Column Description
Status	Indicates the status of the discrepancy report. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Draft</li> <li>• Completed</li> </ul>
Account ID	Displays the account ID of the person who created the discrepancy report.
File Name	Displays the filename given when discrepancy report is created at file level.

## Searching for a Discrepancy Report

### Prerequisites

To search for a discrepancy report, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Discrepancy Report Type defined for discrepancy report.
- Status defined for discrepancy report.

### Procedure

To search for a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Menu** menu, select **Financial** and then click **Discrepancy Report**.  
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report** sub-menu.  
The **Discrepancy Report** screen appears.
4. Enter the search criteria in the **Search Discrepancy Report** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of discrepancy reports that meet the search criteria appear in the **Search Results** section.

## Creating a Discrepancy Report

### Prerequisites

To create a discrepancy report, you should have:

- Discrepancy Report Type defined in the application.
- Report Level defined in the application.

### Procedure

To create a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Discrepancy Report**.  
A sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report** sub-menu.

The **Discrepancy Report** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to indicate the discrepancy report type that you want to use to create the discrepancy report. The valid values are: <ul style="list-style-type: none"> <li>• Discrepancy Report Type</li> <li>• File Discrepancy Report Type</li> </ul>	Yes
Report Level	Used to specify the level at which the discrepancy report is created. The valid values are: <ul style="list-style-type: none"> <li>• At Account Level</li> <li>• At File Level</li> </ul>	Yes
File Name	Used to specify a name for the file when report level is selected as <b>At File Level</b> .	Yes (Conditional)  <b>Note:</b> This field is required when the report level is selected as <b>At File Level</b> while creating a discrepancy report.
Account ID	Used to specify an account ID when report level is selected as <b>At Account Level</b> .	Yes (Conditional)  <b>Note:</b> This field is required when the report level is selected as <b>At Account Level</b> while creating a discrepancy report.

**Tip:** Alternatively, you can access the **Select Discrepancy Report Type** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report** screen.

4. Enter the required details.
5. Click **Save**.

The **Discrepancy Report** is created.

The **Discrepancy Report - Main** tab displays information about the discrepancy report. It contains the following zones:

- [Discrepancy Report](#) on page 2276
- [Discrepancy Line Items](#) on page 2277
- [Discrepancy Line Item Related Objects](#) on page 2278
- [Discrepancy Line Items Characteristics Zone](#) on page 2279

## Discrepancy Report

The **Discrepancy Report** zone displays the details of the discrepancy report. It contains the following sections:

- **Main** - Displays basic information about the discrepancy report. It contains the following fields:

Field Name	Field Description
Discrepancy Report Information	Displays information about the discrepancy report.
Discrepancy Report Type	Indicates the discrepancy report type using which the discrepancy report is created. <b>Note:</b> It has a link. On clicking the link, the <b>Discrepancy Report Type</b> screen appears where you can view the details of the discrepancy report type.
File Name	Displays the filename for which the discrepancy report is generated.
Account Information	Displays the details of the account for which discrepancy report is generated.
Status	Indicates the status of the discrepancy report. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Draft</li> <li>• Completed</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Delete	Used to delete the discrepancy report.  <b>Note:</b> The <b>Delete</b> button appears only when the discrepancy report is in the <b>Pending</b> status.
Finalize	Used to finalize all the changes and process the discrepancy report.  <b>Note:</b> Finalize button appears only when the discrepancy report is in the <b>Pending</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the status of the discrepancy report was defined.
Creation Date Time	Displays the date and time when the discrepancy report was created.

### Discrepancy Line Items

The **Discrepancy Line Items** zone displays the details of the discrepancy report It contains the following columns:

Column Name	Column Description
Account ID	Indicates the account for which the discrepancy line item is created.  <b>Note:</b> This column appears only when you select the discrepancy report information where the filename is provided.
Policy Number	Indicates the policy number.
Plan Number	Indicates the plan number of the policy.
Member Identifier Type	Displays the member identifier type.
Member Identifier	Displays the value of the member identifier type.
Member Name	Displays the name of the member to whom the discrepancy report belongs.
Coverage Start Date	Displays the date from when the coverage starts.
Coverage End Date	Displays the date till when the coverage ends.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill.
Discrepancy Amount	Displays the discrepancy amount.
Discrepancy Category	Displays the discrepancy category.

Column Name	Column Description
Consumer Status	Displays the status of the consumer for its existence in the application.
Comments	Displays the comments, added for the discrepancy line items.
Edit	<p>On clicking the <b>Edit</b> (✎) icon, the <b>Discrepancy Line Item</b> screen appears where you can edit the details of the discrepancy line item.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the discrepancy report is in <b>Pending</b> or <b>Draft</b> status.</p>

**Note:**

On clicking the Broadcast (📡) icon corresponding to the discrepancy line item, the Discrepancy Line Item Related Objects and Discrepancy Line Item Characteristics zones appear.

You can filter the discrepancy line items using Discrepancy Category search criteria available in the Filter area. By default, the Filter area is hidden. You can view the Filter area by clicking the Filters (⌵) icon in the upper right corner of the Discrepancy Line Items zone.

Pagination is used to display limited number of records in the Search Results section. You can change the number of records displayed per page, if required. You can use the navigation links, such as Previous and Next to navigate between pages.

**Discrepancy Line Item Related Objects**

The **Discrepancy Line Item Related Objects** zone lists the related objects for the discrepancy line item. It contains the following columns:

Column Name	Column Description
Related Object Type	Displays <b>Financial Transaction</b> or <b>Member Pay Instruction</b> as the related object type.
Related Object Information	<p>Displays brief information about the related object type.</p> <p><b>Note:</b> It has a link. On clicking the link, the Pay Instruction screen appears with the details of the respective related object.</p>

By default, the Discrepancy Line Item Related Objects zone does not appear in the Discrepancy Report screen. It appears only when you click the Broadcast (📡) icon corresponding to the discrepancy line item in the Discrepancy Line Items zone.

Pagination is used to display limited number of records in the Search Results section. You can change the number of records displayed per page, if required. You can use the navigation links, such as Previous and Next to navigate between pages.

## Discrepancy Report - Log

The **Discrepancy Report - Log** tab contains the following zone:

- [Discrepancy Report Log](#) on page 2279

### Discrepancy Report Log

The **Discrepancy Report Log** zone lists the complete trail of actions performed on the Discrepancy Report. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the discrepancy report.
Details	Displays the details about the action performed on the discrepancy report.
User	Indicates the user who has performed the action on the discrepancy report.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the discrepancy report.
Status Reason	Displays the status reason of the action performed on the discrepancy report object.

**Note:** You can manually add a log entry for the discrepancy report by clicking the **Add Log Entry** link in the upper right corner of the **Discrepancy Report Log** zone.

## Editing a Discrepancy Line Item

### Prerequisites

To edit a discrepancy line item, you should have:

- Discrepancy Line Item status as Pending or Draft.

### **Procedure**

To edit a discrepancy line item:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report, whose details you want to edit.

The **Discrepancy Report Information** screen appears.

3. In the **Discrepancy Line Items** zone, click the **Edit**  icon in the **Edit** corresponding to the discrepancy line item whose details you want to edit.

The **Discrepancy Line Item** screen appears.

**Note:** The **Edit** icon appears only when the discrepancy line item is in the **Pending** or **Draft** status.

The **Discrepancy Line Item** screen contains the following fields:

Field Name	Field Description
Discrepancy Report ID	Displays the discrepancy report ID.
Account ID	Indicates the account for which the discrepancy line item is created.
Policy Number	Indicates the policy number.
Plan Number	Indicates the plan number of the policy.
Member Identifier Type	Displays the member identifier type.
Member Identifier	Displays the value of the member identifier.
Member Name	Displays the name of the member to whom the discrepancy report belongs.
Coverage Start Date	Displays the start date of the coverage cycle.
Coverage End Date	Displays the end date of the coverage cycle.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill amount.
Discrepancy Amount	Displays the amount that highlights the discrepancy value.
Discrepancy Category	Used to specify the discrepancy category. The valid values are: <ul style="list-style-type: none"> <li>• Billed Not Paid</li> <li>• Paid Not Billed</li> <li>• Rate Variance</li> </ul>
Comments	Used to specify additional details about the Discrepancy Line Item.

4. Modify the required details for the discrepancy line item.
5. Click **Save**.

The changes made to the discrepancy line item are saved.

### **Related Topics**

## Deleting a Discrepancy Report

### Procedure

To delete a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report that you want to delete.

The **Discrepancy Report** screen appears.

3. Click the **Delete** button in the **Discrepancy Report** zone.

A message appears confirming whether you want to delete the discrepancy report.

**Note:** The **Delete** button appears only when the discrepancy report is in the **Pending** or **Draft** status.

4. Click **OK**.

The discrepancy report is deleted.

## Finalizing a Discrepancy Report

### Prerequisites

To finalize a discrepancy report, you should have:

- Discrepancy Report status as Pending or Draft.

### Procedure

To finalize a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report that you want to finalize.

The **Discrepancy Report** screen appears.

3. Click the **Finalize** button in the **Discrepancy Report** zone.

The status of the discrepancy report is changed to **Completed**.

**Note:** The **Finalize** button appears only when the discrepancy report is in the **Pending** status.

### Related Topics

## Adding a Log Entry for a Discrepancy Report

### Procedure

To add a log entry for a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report whose log you want to edit.

The **Discrepancy Report** screen is displayed. It consists of following tabs.

- [Discrepancy Report - Main](#) on page 2276
- [Discrepancy Report - Log](#) on page 2279

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Discrepancy Report Log** zone.

The **Add Discrepancy Report Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Information	Displays information about the discrepancy report.	Not applicable
Log Details	Used to specify additional comments on the discrepancy report.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Discrepancy Report Log** zone.

## Self-Funded Pricing

---

### Topics:

- [Prerequisites](#)
- [Approval Workflow for the Self-Funded Pricing Rules](#)
- [Line Item Extendable Lookup](#)
- [Extendable Lookup \(Line Item\)](#)
- [Claim Template Extendable Lookup](#)
- [Extendable Lookup \(Claim Template\)](#)
- [Rate Option Extendable Lookup](#)
- [Extendable Lookup \(Rate Option\)](#)
- [Pricing Group](#)
- [Pricing Rule Type](#)
- [Claim Pricing](#)
- [Specific Stop-Loss \(SSL\) Pricing](#)
- [Aggregate Stop-Loss \(ASL\) Pricing](#)
- [Retention Type Claim Based Pricing](#)
- [Retention Type Enrollment Based Pricing](#)
- [Flat Fee Pricing](#)
- [Ancillary Pricing](#)
- [Discount Pricing](#)
- [Level Funding Pricing](#)
- [Pricing Rule \(Used for Viewing\)](#)

Oracle Revenue Management and Billing introduces a new pricing model for the self-funded health care business. In this pricing model, you can define pricing rules using a pricing rule type. You can define the following pricing rule types in ORMB:

- Claim
- Aggregate Stop-Loss
- Specific Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment

## Prerequisites

To setup the self-funded pricing feature, you need to do the following:

- Define values for claim template extendable lookup
- Define values for rate option extendable lookup
- Define values for line item extendable lookup
- Setup the **C1-ASOBLNG** feature configuration
- Define price items for the pricing rules
- Define parameters for the pricing rules
- Associate parameters to the price items for the pricing rules

### Related Topics

For more information on...	See...
How to setup the <b>C1-ASOBLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLNG Feature Configuration</a> on page 2889

## Approval Workflow for the Self-Funded Pricing Rules

Oracle Revenue Management and Billing enables you to configure the approval workflow process for the claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, flat fees, ancillary, discount, or level funded pricing rules. The following approval workflow groups are shipped with the product:

Approval Workflow Group	Description
C1PRCRLCLM	Claim Pricing Rule
C1PRCSSL	Specific Stop-Loss Pricing Rule
C1PRCASL	Aggregate Stop-Loss Pricing Rule
C1PRETCLM	Retention Type Claim Based Pricing Rule
C1PRRETENR	Retention Type Enrollment Based Pricing Rule
C1PRFLTTEE	Flat Fees Pricing Rule
C1PRCANC	Ancillary Pricing Rule
C1PRCDA	Discount Arrangement Pricing Rule
C1PRCLVLFN	Level Funded Pricing Rule

To enable the approval workflow process for the pricing rules, you need to do the following:

1. Create the required approval workflow chains, approval workflow criterion types, approval workflow group chain linkages, and approval workflow reasons.

**Note:** The **Field Level Approval** feature is not supported for the self-funded pricing rules. Therefore, you should not define field approval rule criteria while creating the approval workflow group chain linkage for the above listed approval workflow groups.

2. Define the approval workflow settings for the respective approval workflow group and set the **Active** field to **Yes**.

3. Ensure that the following value is set in the respective option type of the **C1-ASOBLNG** feature configuration:

Option Type	Value
Approval Workflow Group for Claim	C1PRCRLCLM
Approval Workflow Group for SSL	C1PRCSSL
Approval Workflow Group for ASL	C1PRCASL
Approval Workflow Group for Retention Type Claim Based	C1PRETCLM
Approval Workflow Group for Retention Type Enrollment Based	C1PRRETENR
Approval Workflow Group for Flat Fees	C1PRFLTFFEE
Approval Workflow Group for Ancillary	C1PRCANC
Approval Workflow Group for Discount Arrangement	C1PRCDA
Approval Workflow Group for Level Funded	C1PRCLVLFN

Once the approval workflow process is enabled for the pricing rules of a particular category (for example, Claim), the system creates an approval transaction whenever you define, edit, or delete a pricing rule of the respective category (i.e. whenever you define, edit, or delete a claim pricing rule). You can view the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules in the **Pricing Rule Approval Transactions** zone of the **Customer 360° Information** screen. On clicking the link in the **Approval Transaction ID** column corresponding to an approval transaction, the **Comparison: New versus Existing** screen appears. It allows the approver to review the pricing rule and accordingly approve, reject, or cancel the approval transaction.

**Tip:** Alternatively, you can review the approval transaction and take appropriate action from the **Approval Transaction** screen.

For more information on...	See...
How to setup the <b>C1-ASOBLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLNG Feature Configuration</a> on page 2889

## **Line Item Extendable Lookup**

Different charges, such as consumer-driven amount, traditional healthcare amount, network access fees, and so on are received as part of the claim transaction. These charges which contribute to the total claim amount are defined as the line items in the system. Each line item must be defined in the system using the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. A line item encapsulates the following information:

- Service Quantity Identifier (SQI) which indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the charge.
- Billable charge line type using which you want to create the calculation line for the charge.
- Whether the system should write off the charge when it is not eligible for billing.
- Billable charge line type using which you want to create the write off calculation line for the charge.
- Whether the charge should be considered while calculating the percentage based retention type claim based fee.
- The pricing rule type categories to which the charge is associated.

For example, you can create a line item for the following charges:

Charge	Line Item	Write Off, If Not Eligible for Billing	Pricing Rule Type Category
Consumer-Driven Amount	CDH	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
			Ancillary
Traditional Healthcare Amount	THC	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
Preventive Care Charges	PCC	No	Ancillary

The CDH and THC line items can be included in a claim template. They can also be considered while calculating specific and aggregate stop-loss. The CDH and PCC line items can be considered while defining pricing arrangements in an ancillary pricing rule type. In addition, any charge received for the CDH and THC line items in a claim transaction will be written off when these line items are not eligible for billing.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2288

## Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.

**Note:** It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

### Related Topics

## Searching for the Line Item Extendable Lookup

### Procedure

To search for the **Line Item** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookPricingRuleLineItem** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Line Item** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Line Item Extendable Lookup

### Procedure

To view the values of the **Line Item** extendable lookup:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Line Item** extendable lookup in the **Extendable Lookup Value List** zone.

<b>Extendable Lookup Value List</b> zone	<a href="#">Extendable Lookup Value List</a> on page 2290

## Extendable Lookup (Line Item)

The **Extendable Lookup** screen allows you to view the values of the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. It also allows you to define, edit, copy, and delete a line item. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2290
- [Extendable Lookup Value](#) on page 2291

## Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Line Item** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the line item.
Description	Displays the description of the line item.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Line Item</b> screen appears where you can edit the details of the line item.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Line Item</b> screen appears where you can define a new line item using an existing line item.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the line item. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You can delete a line item only when it is not yet used in the claim template or while defining the self-funded pricing.</p> </div>
Detailed Description	Displays additional information about the line item.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a line item, the **Extendable Lookup Value** zone appears with the details of the respective line item.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the line item. It contains the following sections:

- **Main** – Displays basic information about the line item. It contains the following fields:

Field Name	Field Description
Line Item	Indicates the charge for which the line item is created.
Description	Displays the description of the line item.
Override Description	Displays the overridden description of the line item.
Detailed Description	Displays additional information about the line item.
Status	Indicates the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Service Quantity Identifier	Indicates the service quantity identifier associated with the line item.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge (i.e. line item).
Write Off Billable Charge Line Type	Indicates the billable charge line type using which the write off calculation line is created for the charge (i.e. line item).
Write Off, if Not Eligible for Billing	Indicates whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Retention Claim Based Percentage Calculation	Indicates whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

- **Line Item Usage** – Lists the pricing rule type categories to which the line item is associated. It contains the following field in a grid:

Field Name	Field Description
Pricing Rule Type Category	<p>Indicates the pricing rule type category which is associated with the charge (i.e. line item). The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Ancillary</li> <li>Claim</li> <li>Retention Type Claim Based</li> <li>Specific Stop-Loss</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the line item.
Delete	<p>Used to delete the line item.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> You can delete a line item only when it is not yet used in the claim template or while defining the self-funded pricing.</p> </div>
Duplicate	Used to create a new line item using an existing line item.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	<p>Indicates the extendable lookup business object using which the line item is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> </div>
Owner	<p>Indicates who has created the line item. The valid values are:</p> <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the line item in the **Extendable Lookup Value List** zone.

### **Related Topics**

## Defining a Line Item

### Prerequisites

To define a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

### Procedure

To define a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional healthcare amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the value is set to <b>Active</b>.</div>	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item).  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b> .
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are:  <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <b>Note:</b> By default, the value is set to <b>No</b> .	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are:  <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <b>Note:</b> By default, the value is set to <b>No</b> .	No

4. Enter the required details in the **Main** section.
5. Associate the line item with one or more pricing rule type categories.
6. Click **Save**.

The line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

#### **Related Topics**

For more information on...	See...
How to search for the <b>Line Item</b> extendable lookup	<a href="#">Searching for the Line Item Extendable Lookup</a> on page 2289
<b>Extendable Lookup</b> screen	<a href="#">Extendable Lookup (Line Item)</a> on page 2290
How to associate a line item with a pricing rule type category	<a href="#">Associating a Line Item with a Pricing Rule Type Category</a> on page 2294

## **Associating a Line Item with a Pricing Rule Type Category**

**Procedure**

To associate a line item with a pricing rule type category:

1. Ensure that the **Line Item Usage** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Usage** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)												
Pricing Rule Type Category	<p>Used to indicate the pricing rule type category which you want to associate with the charge (i.e. line item). The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss</li> <li>• Ancillary</li> <li>• Claim</li> <li>• Retention Type Claim Based</li> <li>• Specific Stop-Loss</li> </ul> <p>The following table describes the significance of each category that can be associated with the line item:</p> <table border="1"> <thead> <tr> <th>Pricing Rule Type Category</th> <th>Significance</th> </tr> </thead> <tbody> <tr> <td>Claim</td> <td>Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.</td> </tr> <tr> <td>Specific Stop-Loss</td> <td>Whether the line item can be considered while calculating specific stop-loss.</td> </tr> <tr> <td>Aggregate Stop-Loss</td> <td>Whether the line item can be considered while calculating aggregate stop-loss.</td> </tr> <tr> <td>Retention Type Claim Based</td> <td>Whether the line item can be used while calculating the percentage based retention type claim based fee.</td> </tr> <tr> <td>Ancillary</td> <td>Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.</td> </tr> </tbody> </table> <p><b>Note:</b> At present, the line items are not used in the pricing rule types where the pricing rule type category is set to <b>Retention Type Enrollment Based</b> and <b>Flat Fees</b>.</p>	Pricing Rule Type Category	Significance	Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.	Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.	Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.	Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.	Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating the line item with a pricing rule type category.</p>
Pricing Rule Type Category	Significance													
Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.													
Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.													
Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.													
Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.													
Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.													

2. Enter the required details in the **Line Item Usage** section.

- If you want to associate the line item with more than one pricing rule type category, click the **Add (+)** icon and then repeat step 3.

**Note:** However, if you want to remove a pricing rule type category from the line item, click the **Delete (🗑)** icon corresponding to the pricing rule type category.

- Click **Save**.

The line item is associated with the pricing rule type category.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to define a line item	<a href="#">Defining a Line Item</a> on page 2293
How to edit a line item	<a href="#">Editing a Line Item</a> on page 2296
How to copy a line item	<a href="#">Copying a Line Item</a> on page 2298

## **Editing a Line Item**

### **Prerequisites**

To edit a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

### **Procedure**

To edit a line item:

- Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Edit (✎)** icon in the **Edit** column corresponding to the line item whose details you want to edit.

The **Line Item** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the line item.
- Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Line Item	Indicates the charge for which the line item is created.	Not applicable
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>	Not applicable
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> </div>	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b>.</p> </div>
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No

**Tip:** Alternatively, you can edit the details of a line item by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.

5. Associate or remove a pricing rule type category from the line item, if required.
6. Click **Save**.

The changes made to the line item are saved.

## Copying a Line Item

Instead of creating a line item from scratch, you can create a new line item using an existing line item. This is possible through copying a line item. On copying a line item, the details including the pricing rule type categories to which the line item is associated are copied to the new line item. You can then edit the details, if required.

### Prerequisites

To copy a line item, you should have:

- Line item (whose copy you want to create) defined in the application
- Service quantity identifiers and billable charge line types defined in the application

### Procedure

To copy a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the line item whose copy you want to create.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional healthcare amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> </div>	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b>.</p> </div>
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No

**Tip:** Alternatively, you can copy a line item by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

- Enter the required details in the **Main** section.
- Associate or remove a pricing rule type category from the line item, if required.

## 6. Click **Save**.

The new line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

## Deleting a Line Item

### Procedure

To delete a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the line item that you want to delete.

A message appears confirming whether you want to delete the line item.

**Note:** You can delete a line item only when it is not yet used in the claim template or while defining the Administrative Services Only (ASO) pricing.

**Tip:** Alternatively, you can delete a line item by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The line item is deleted from the **C1-ExtLookPricingRuleLineItem** extendable lookup.

## Viewing the Line Item Details

### Procedure

To view the details of a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Broadcast**  icon corresponding to the line item whose details you want to view.

The **Extendable Lookup Value** zone appears.

4. View the details of the line item in the **Extendable Lookup Value** zone.

## **Claim Template Extendable Lookup**

The ASO service provider may bill different charges for a claim transaction to different employers. The system enables you to create different claim templates for different employers. A claim template contains a set of charges (i.e. line items) which can be billed to a parent customer or bill group. You can define multiple claim templates in the system. Each claim template must be defined in the system using the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. A claim template encapsulates the following information:

- Whether the claim template can be used while defining a claim pricing rule for a policy which is in the **In Force/Active, Post Runout, or Runout** status.
- Line items which can be billed to a parent customer or bill group.
- Whether you want to calculate the markup or markdown on the line items which are included in the claim template.
- Whether you want to specify a flat markup or markdown amount for the line items or the markup or markdown percentage for the line items which are eligible for percentage based markup or markdown
- Whether a line item is eligible for billing or not.
- Whether you want to define rule based billing eligibility for a line item.
- Whether you want to define billing eligibility for a line item while defining a claim pricing rule.
- Rule type which indicates the rules that should be executed to determine whether the line item is eligible for billing.
- Whether the line item is eligible for percentage based markup or markdown when the markup or markdown type is set to **Percentage**.

Once a claim template is defined in the extendable lookup, you can associate the claim template with a claim pricing rule type. You can associate multiple claim templates with a claim pricing rule type. Then, while defining a claim pricing rule for a parent customer, you can use any one of the claim template associated with the respective claim pricing rule type. The system then inherits the line items and the default markup and markdown values in the claim pricing rule from the claim template.

However, while defining a claim pricing rule for a policy of a bill group, you can only use the claim templates which are defined for the respective policy status and associated with the respective claim pricing rule type.

For example, you can create the claim templates with the following line items:

Claim Template	Policy Status	Line Item	Billing Eligibility	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount	Markdown or Markdown Percentage
CT1	In Force/ Active	CDH	Yes	Markup	Flat Amount	\$2	-
		THC	Yes				
		PCC	No				
CT2	Runout	CDH	Yes	Markdown	Percentage	-	2.00
		THC	Yes				
CT3	Post Runout	PCC	Yes	None	-	-	-
		NAF	No				

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2302

## Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.

**Note:** It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

### Related Topics

## Searching for the Claim Template Extendable Lookup

### Procedure

To search for the **Claim Template** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookClaimTemplate** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Claim Template** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Claim Template Extendable Lookup

### Procedure

To view the values of the **Claim Template** extendable lookup:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Claim Template** extendable lookup in the **Extendable Lookup Value List** zone.

## Extendable Lookup (Claim Template)

The **Extendable Lookup** screen allows you to view the values of the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. It also allows you to define, edit, copy, and delete a claim template. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2304
- [Extendable Lookup Value](#) on page 2305

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Claim Template** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the claim template.
Description	Displays the description of the claim template.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Claim Template</b> screen appears where you can edit the details of the claim template.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Claim Template</b> screen appears where you can define a new claim template using an existing claim template.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the claim template. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> You can delete a claim template only when it is not yet used in a claim pricing rule type.</p> </div>
Detailed Description	Displays additional information about the claim template.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a claim template, the **Extendable Lookup Value** zone appears with the details of the respective claim template.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

#### **Related Topics**

How to view the details of a claim template	<a href="#">Viewing the Claim Template Details</a> on page 2317

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the claim template. It contains the following sections:

- **Main** – Displays basic information about the claim template. It contains the following fields:

Field Name	Field Description
Claim Template	Displays the claim template.
Description	Displays the description of the claim template.
Override Description	Displays the overridden description of the claim template.
Detailed Description	Displays additional information about the claim template.
Status	Indicates the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Claim Template Usage** – Indicates when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description
Policy Status	Indicates whether the claim template should be used while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>

- **Default Markup or Markdown Values** – Indicates the default markup or markdown values defined for the line items in the claim template. It contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates whether you want to markup or markdown the line items. The valid values are: <ul style="list-style-type: none"> <li>• None</li> <li>• Markup</li> <li>• Markdown</li> </ul>

Field Name	Field Description
Markup or Markdown Type	<p>Indicates whether you want a flat or percentage based markup or markdown on the line items. The valid values are:</p> <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <p><b>Note:</b> This field appears only when the <b>Markup</b> or <b>Markdown</b> option is selected from the <b>Pricing Strategy</b> list.</p>
Markup or Markdown Amount	<p>Displays the default flat markup or markdown amount for the line items.</p> <p><b>Note:</b> This field appears only when the <b>Flat Amount</b> option is selected from the <b>Markup or Markdown Type</b> list.</p>
Markup or Markdown Percentage	<p>Displays the default percentage of markup or markdown for all line items.</p> <p><b>Note:</b> This field appears only when the <b>Percentage</b> option is selected from the <b>Markup or Markdown Type</b> list.</p>

- **Line Items** – Lists the line items which are added in the claim template. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the calculation line should be generated for the line item.
Line Item	Indicate the line item which is added in the claim template.
Billing Eligibility	<p>Indicates whether the line item is eligible for billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> <li>• Rule Based</li> <li>• Used Defined (Default No)</li> <li>• User Defined (Default Yes)</li> </ul>
Rule Type	<p>Indicates that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.</p> <p><b>Note:</b> The data appears in this column only when the <b>Rule Based</b> option is selected from the <b>Billing Eligibility</b> list.</p>
Markup or Markdown Percentage Eligibility	<p>Indicates whether the line item is eligible for percentage based markup or markdown when the <b>Markup or Markdown Type</b> field is set to <b>Percentage</b>. The valid values are:</p> <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the claim template.

Button Name	Button Description
Delete	Used to delete the claim template.  <b>Note:</b> You can delete a claim template only when it is not yet used in a claim pricing rule type.
Duplicate	Used to create a new claim template using an existing claim template.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the claim template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the claim template in the **Extendable Lookup Value List** zone.

## Defining a Claim Template

### Procedure

To define a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> By default, the value is set to <b>Active</b>.</div>	Yes

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the line items which are added in the claim template.
  - **Line Items** – Used to add the line items in the claim template.
4. Enter the required details in the **Main** section.
  5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in
  6. Add the required line items in the claim template.
  7. Define the default markup or markdown values for the line items, if required.
  8. Click **Save**.

The claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

## Adding a Line Item in a Claim Template

### Prerequisites

To add a line item in a claim template, you should have:

- The line item defined in the **C1-ExtLookPricingRuleLineItem** extendable lookup.
- Rule types defined in the application (where the rule type usage is set to **ASO Billing Line Item Eligibility**) when you want to define rule based billing eligibility for a line item.

### Procedure

To add a line item in a claim template:

1. Ensure that the **Line Items** section is expanded when you are defining, editing, or copying a claim template.

The **Line Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the calculation line should be generated for the line item.	Yes (Conditional) <b>Note:</b> This field is required while adding a line item in the claim template.
Line Item	Used to indicate the line item that you want to include in the claim template. <b>Note:</b> The list includes only those line items which are associated to the <b>Claim</b> pricing rule type category.	Yes (Conditional) <b>Note:</b> This field is required while adding a line item in the claim template.

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility	<p>Used to indicate whether the line item is eligible for billing. If line item is not eligible for billing, the system does not create the calculation line for the line item. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Eligible</b> - Used when the line item is eligible for billing.</li> <li>• <b>Not Eligible</b> - Used when the line item is not eligible for billing.</li> <li>• <b>Rule Based</b> - Used when you want to determine whether the line item is eligible for billing using certain business rules while executing the <b>Update Status (C1-TXNEX)</b> batch.</li> <li>• <b>Used Defined (Default No)</b> - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the <b>User Defined Billing Option</b> option is not selected for the line item in the claim pricing rule.</li> <li>• <b>User Defined (Default Yes)</b> - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the <b>User Defined Billing Option</b> option is selected for the line item in the claim pricing rule.</li> </ul>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required while adding a line item in the claim template.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to indicate that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.  <b>Note:</b> The list includes only those rule types where the rule type usage is set to <b>ASO Billing Line Item Eligibility</b> . The values appear in this list only when you select the <b>Rule Based</b> option from the <b>Billing Eligibility</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you select the <b>Rule Based</b> option from the <b>Billing Eligibility</b> list.
Markup or Markdown Percentage Eligibility	Used to indicate whether the line item is eligible for percentage based markup or markdown when the <b>Markup or Markdown Type</b> field is set to <b>Percentage</b> . The valid values are:  <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required while adding a line item in the claim template.

- Enter the required details in the **Line Items** section.
- If you want to add more than one line item in the claim template, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a line item from the claim template, click the **Delete** (🗑️) icon corresponding to the line item.

- Click **Save**.

The line item is added in the claim template.

## **Defining the Default Markup or Markdown Values for the Line Items**

### **Procedure**

To define the default markup or markdown values for the line items:

- Ensure that the **Default Markup or Markdown Values** section is expanded when you are defining, editing, or copying a claim template.

The **Default Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	<p>Used to indicate whether you want to markup or markdown the line items. The valid values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Markup</li> <li>• Markdown</li> </ul> <p><b>Note:</b> By default, the value is set to <b>Markup</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining the default markup or markdown values for the line items.</p>
Markup or Markdown Type	<p>Used to indicate whether you want a flat or percentage based markup or markdown. The valid values are:</p> <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Markup</b> or <b>Markdown</b> option from the <b>Pricing Strategy</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you select the <b>Markup</b> or <b>Markdown</b> option from the <b>Pricing Strategy</b> list.</p>
Markup or Markdown Amount	<p>Used to specify the default flat markup or markdown amount for the line items. The specified flat amount appears, by default, when you define a claim pricing rule using the claim template. You can change the flat markup or markdown amount for the line items while defining a claim pricing rule using the claim template. In this case, the system will create only one markup or markdown calculation line for all line items.</p> <p><b>Note:</b> This field appears only when you select the <b>Flat Amount</b> option from the <b>Markup or Markdown Type</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you select the <b>Flat Amount</b> option from the <b>Markup or Markdown Type</b> list.</p>

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Percentage	Used to specify the default percentage of markup or markdown for all line items. The specified percentage appears, by default, for all line items when you define a claim pricing rule using the claim template. You can change the percentage of markup or markdown for each line item while defining a claim pricing rule using the claim template. In this case, the system will create a markup or markdown calculation line for each line item which is eligible for percentage based markup or markdown.  <b>Note:</b> This field appears only when you select the <b>Percentage</b> option from the <b>Markup or Markdown Type</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you select the <b>Percentage</b> option from the <b>Markup or Markdown Type</b> list.

- Enter the required details in the **Default Markup or Markdown Values** section.
- Click **Save**.

The default markup or markdown values are defined in the claim template.

## Editing a Claim Template

### Procedure

To edit a claim template:

- Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
  
The **Extendable Lookup** screen appears.
- In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the claim template whose details you want to edit.

The **Claim Template** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Displays the claim template.	Not applicable
Description	Used to specify the description for the claim template.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>	Not applicable

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown value for the line items which are added in the claim template.
- **Line Items** – Used to add the line items in the claim template.

**Tip:** Alternatively, you can edit the details of a claim template by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Modify the policy status in the **Claim Template Usage** section, if required.
6. Add, edit, or remove line items from the claim template, if required.
7. Edit the default markup or markdown values for the line items, if required.
8. Click **Save**.

The changes made to the claim template are saved.

## Copying a Claim Template

Instead of creating a claim template from scratch, you can create a new claim template using an existing claim template. This is possible through copying a claim template. On copying a claim template, the details including the line items and default markup or markdown values are copied to the new claim template. You can then edit the details, if required.

### Prerequisites

To copy a claim template, you should have:

- Claim template (whose copy you want to create) defined in the application

### Procedure

To copy a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the claim template whose copy you want to create.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active, Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown value for the line items which are added in the claim template.
- **Line Items** – Used to add the line items in the claim template.

**Tip:** Alternatively, you can copy a claim template by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Select the **In Force/Active, Post Runout**, or **Runout** option from the **Policy Status** list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Add, edit, or remove line items from the claim template, if required.
7. Edit the default markup or markdown values for the line items, if required.
8. Click **Save**.

The new claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

## Deleting a Claim Template

### Procedure

To delete a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Delete** () icon in the **Delete** column corresponding to the claim template that you want to delete.

A message appears confirming whether you want to delete the claim template.

**Note:** You can delete a claim template only when it is not yet used in a claim pricing rule type.

**Tip:** Alternatively, you can delete a claim template by clicking the **Delete** button in the **Extendable Lookup Value** zone.

- Click **OK**.

The claim template is deleted from the **C1-ExtLookClaimTemplate** extendable lookup.

## Viewing the Claim Template Details

### Procedure

To view the details of a claim template:

- Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Broadcast** () icon corresponding to the claim template whose details you want to view.

The **Extendable Lookup Value** zone appears.

- View the details of the claim template in the **Extendable Lookup Value** zone.

## Rate Option Extendable Lookup

The basic pricing details (such as rate schedule, pricing currency) and the transaction aggregation details may vary from one bill group or parent customer to another and from one price item to another. The basic pricing and transaction aggregation details are defined in the rate option. Each rate option must be defined in the system using the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. A rate option encapsulates the following information:

- The rate schedule that you want to use while defining the price item pricing.
- Currency in which you want to define the price item pricing.
- Whether zero pricing should be displayed in the bill.
- Whether the transactions mapped to the price item should be ignored for billing.
- Whether the transactions mapped to the price item should be aggregated for billing.
- The aggregation schedule using which the transactions should be aggregated for billing.
- How and when you want to rate the transaction legs which are mapped to the price item.
- Whether you want the price item pricing to be applied to all customers or only to the new customers.

Once the rate options are defined in the extendable lookup, you can associate one or more rate options with a price item while adding the price item in a claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, or ancillary pricing rule type. You can then use the rate option while defining pricing rule for the respective price item using the respective pricing rule type. The rate option specified in a pricing rule is used while creating the price item pricing or price assignment for the pricing rule. For example,

Claim Pricing Rule Type	Price Item	Rate Option	Claim Pricing Rule	Price Item Pricing
CPRT1	P1	R1	CPR1 (Price Item: P1, Rate Option: R1)	PA1 is created for P1 using the details specified in R1.
		R2	-	-
		R3	CPR2 (Price Item: P1, Rate Option: R3)	PA2 is created for P1 using the details specified in R3.
	P2	R1	-	-
		R4	CPR3 (Price Item: P2, Rate Option: R4)	PA3 is created for P2 using the details specified in R4.
CPRT2	P1	R1	CPR4 (Price Item: P1, Rate Option: R1)	PA4 is created for P1 using the details specified in R1.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2318

### Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.

**Note:** It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

### Related Topics

## Searching for the Rate Option Extendable Lookup

### Procedure

To search for the **Rate Option** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRetTypeRateOpt** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Rate Option** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Rate Option Extendable Lookup

### Procedure

To view the values of the **Rate Option** extendable lookup:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. View the values of the **Rate Option** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

<b>Extendable Lookup Value List</b> zone	<a href="#">Extendable Lookup Value List</a> on page 2320

## Extendable Lookup (Rate Option)

The **Extendable Lookup** screen allows you to view the values of the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. It also allows you to define, edit, copy, and delete a rate option. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2320
- [Extendable Lookup Value](#) on page 2321

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Option** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate option.
Description	Displays the description of the rate option.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>
Edit	On clicking the <b>Edit</b>  icon, the <b>Rate Option</b> screen appears where you can edit the details of the rate option.

Column Name	Column Description
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Rate Option</b> screen appears where you can define a new rate option using an existing rate option.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rate option. <b>Note:</b> You can delete a rate option only when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate option.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a rate option, the **Extendable Lookup Value** zone appears with the details of the respective rate option.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate option. It contains the following sections:

- **Main** – Displays basic information about the rate option. It contains the following fields:

Field Name	Field Description
Rate Option	Displays the rate option.
Description	Displays the description of the rate option.
Override Description	Displays the overridden description of the rate option.
Detailed Description	Displays additional information about the rate option.
Status	Indicates the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

Field Name	Field Description
Rate Schedule	<p>Indicates the rate schedule that will be used while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the respective rate schedule.</p>
Pricing Currency	Indicates the currency in which the price item pricing will be defined.
Print Zero	<p>Indicates whether zero pricing will be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Ignore Transaction	<p>Indicates whether the transactions mapped to the price item will be ignored for billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregate Transaction	<p>Indicates whether the transactions mapped to the price item will be aggregated for billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregation Schedule	Indicates the aggregation schedule using which the transactions will be aggregated for billing.
Transaction Rating Criteria	<p>Indicates how and when the transaction legs which are mapped to the price item are rated. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines</li> <li>• Rate Transactions</li> </ul>
Apply To	<p>Indicates whether the price item pricing will be applied to all customers or only to the new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate option.
Delete	<p>Used to delete the rate option.</p> <p><b>Note:</b> You can delete a rate option only when it is not yet used in a pricing rule type.</p>

Button Name	Button Description
Duplicate	Used to create a new rate option using an existing rate option.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate option is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the rate option in the **Extendable Lookup Value List** zone.

## Defining a Rate Option

### Prerequisites

To define a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

### Procedure

To define a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	<p>Used to indicate the status of the rate option. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <p><b>Note:</b> By default, the value is set to <b>Active</b>.</p>	Yes
Rate Schedule	<p>Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg.</p> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default, the value is set to <b>Yes</b>.</p>	Yes
Ignore Transaction	<p>Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default, the value is set to <b>No</b>.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregate Transaction	<p>Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div data-bbox="597 415 1127 611" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> By default, the value is set to <b>No</b>. This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b>.</p> </div>	Yes
Aggregation Schedule	<p>Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.</p> <div data-bbox="597 751 1127 835" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b>.</p> </div>	Yes (Conditional)  <div data-bbox="1144 688 1463 835" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> </div>
Transaction Rating Criteria	<p>Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate SQs</li> </ul> <div data-bbox="662 1024 1127 1171" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> </div> <ul style="list-style-type: none"> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines</li> </ul> <div data-bbox="662 1283 1127 1430" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> </div> <ul style="list-style-type: none"> <li>• Rate Transactions</li> </ul> <div data-bbox="662 1493 1127 1640" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to either <b>Yes</b> or <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>No</b>.</p> </div> <div data-bbox="597 1661 1127 1745" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> By default, the value is set to <b>Do Not Rate Transactions</b>.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> By default, the value is set to <b>All Customers</b>. </div>	Yes

4. Enter the required details in the **Main** section.

5. Click **Save**.

The rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

## Editing a Rate Option

### Prerequisites

To edit a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

### Procedure

To edit a rate option:

- Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the rate option whose details you want to edit.

The **Rate Option** screen appears. It contains the following section:

- Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Displays the rate option.	Not applicable
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>	Not applicable
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.</p> </div>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b>.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.  <b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b> .	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Aggregate Transaction</b> field is set to <b>Yes</b> .
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Transactions and Then Rate SQs <b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</li> <li>Do Not Rate Transactions</li> <li>Rate Transaction and Aggregate Calc Lines <b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</li> <li>Rate Transactions <b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to either <b>Yes</b> or <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>No</b>.</li> </ul>	Yes
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a rate option by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Click **Save**.

The changes made to the rate option are saved.

## Copying a Rate Option

Instead of creating a rate option from scratch, you can create a new rate option using an existing rate option. This is possible through copying a rate option. On copying a rate option, the pricing and transaction aggregation details are copied to the new rate option. You can then edit the details, if required.

### Prerequisites

To copy a rate option, you should have:

- Rate option (whose copy you want to create) defined in the application
- Rate schedules, currencies, and aggregation schedules defined in the application

### Procedure

To copy a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the rate option whose copy you want to create.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	<p>Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg.</p> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Ignore Transaction	<p>Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregate Transaction	<p>Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b>.</p>	Yes
Aggregation Schedule	<p>Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.</p> <p><b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p>

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	<p>Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Transactions and Then Rate SQs</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> </div> <ul style="list-style-type: none"> <li>Do Not Rate Transactions</li> <li>Rate Transaction and Aggregate Calc Lines</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> </div> <ul style="list-style-type: none"> <li>Rate Transactions</li> </ul> <div style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to either <b>Yes</b> or <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>No</b>.</p> </div>	Yes
Apply To	<p>Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes

**Tip:** Alternatively, you can copy a rate option by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

- Enter the required details in the **Main** section.
- Click **Save**.

The new rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

## Deleting a Rate Option

### Procedure

To delete a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rate option that you want to delete.

A message appears confirming whether you want to delete the rate option.

**Note:** You can delete a rate option only when it is not yet used in a pricing rule type.

**Tip:** Alternatively, you can delete a rate option by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The rate option is deleted from the **C1-ExtLookRefTypeRateOpt** extendable lookup.

## Pricing Group

Oracle Revenue Management and Billing enables you to create pricing groups for a bill group. It consists of one or more rules. Each rule has a unique priority. A rule contains one or more criteria. Each criterion can contain the following:

- **Source System** - Indicates the external system from where the claim or enrollment transaction is received.
- **Parameter 1, Parameter 2, Parameter 3, and Parameter 4** - Indicates employee attributes based on which you want to define the pricing.

Note that the source system and parameter 1 are mandatory when you are defining a criterion in a rule. In the **Parameter 1** field, you can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone.

You can specify multiple parameter 2, parameter 3, and parameter 4 combinations in the criterion. You can also specify multiple source system, parameter 1, parameter 2, parameter 3, and parameter 4 combinations (i.e. multiple criteria) in a rule. Once a pricing group is defined for a bill group, you can then use the pricing group while defining a pricing rule for the bill group. This enables you to define various rates for employees with different set of attributes. For example, in a claim pricing rule, you can maintain different markup and markdown values for employees who belong to the Western, Eastern, and Central location of United States.

You can define, edit, copy, and delete a pricing group through the **Bill Group Pricing Groups** zone in the **Pricing** tab of the **Customer 360° Information** screen.

## Viewing the Pricing Groups of a Bill Group

### Procedure

To view the pricing groups of a bill group:

1. Search for a bill group whose is associated with a self-funded policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing groups you want to view.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. View the pricing groups which are defined for the bill group and are currently active in the **Bill Group Pricing Groups** zone.

## Defining a Pricing Group for a Bill Group

### Prerequisites

To define a pricing group for a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

### Procedure

To define a pricing group for a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group for whom you want to define a pricing group.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. Click the **Add** link in the upper right corner of the **Bill Group Pricing Groups** zone.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item.  <b>Note:</b> You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the <b>Add</b> (  ) icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define the required rules in the **Pricing Group Rules** section.
8. Click the **Add** (  ) icon in the **Criteria** field corresponding to the pricing group rule for which you want to define the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You can only specify the employee attribute which is defined for the bill group and source system combination in the <b>Bill Group Derivation and Pricing Parameters</b> zone. You must not specify the ampersand (&) character in this field.  The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter 1 List for Bill Group</b> window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

**Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

**Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑️) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

**Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑️) icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

**Note:** However, if you want to remove a rule from the pricing group, click the **Delete** (🗑️) icon corresponding to the pricing group rule.

14. Click **Save**.

The pricing group is defined for the bill group.

## Editing a Pricing Group of a Bill Group

### Prerequisites

To edit a pricing group of a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

### Procedure

To edit a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to edit.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing group whose details you want to edit.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item.  <b>Note:</b> You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Criteria	On clicking the <b>Add</b> (  ) icon, you can define criteria for the pricing group rule.	Not applicable

**Note:** You cannot define, edit, or remove a rule when the pricing group is already used while defining a pricing rule for the bill group.

6. Modify the required details in the **Main** section.
7. Edit the required rules in the **Pricing Group Rules** section.
8. Click the **Add** () icon in the **Criteria** field corresponding to the pricing group rule for which you want to edit the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You can only specify the employee attribute which is defined for the bill group and source system combination in the <b>Bill Group Derivation and Pricing Parameters</b> zone. You must not specify the ampersand (&) character in this field.  The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter 1 List for Bill Group</b> window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No

**Note:** You cannot define, edit, or remove the source system, parameter 1, parameter 2, parameter 3, and parameter 4 from a rule when the pricing group is already used while defining a pricing rule for the bill group.

9. If required, enter the source system and parameter 1 in the pricing group rule criteria.

**Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

**Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑️) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

**Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑️) icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

**Note:** However, if you want to remove a rule from the pricing group, click the **Delete** (🗑️) icon corresponding to the pricing group rule.

14. Click **Save**.

The changes made to the pricing group are saved.

## **Deleting a Pricing Group of a Bill Group**

### **Procedure**

To delete a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to delete.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Delete** () icon in the **Delete** column corresponding to the pricing group that you want to delete.

A message appears confirming whether you want to delete the pricing group.

**Note:** You can delete a pricing group only when it is not yet used while defining a pricing rule for the bill group.

6. Click **OK**.

The pricing group is deleted.

## **Copying a Pricing Group of a Bill Group**

Instead of creating a pricing group from scratch, you can create a new pricing group using an existing pricing group. This is possible through copying a pricing group. On copying a pricing group, the details including the rules are copied to the new pricing group. You can then edit the details, if required.

### **Prerequisites**

To copy a pricing group of a bill group, you should have:

- Pricing group (whose copy you want to create) defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

### **Procedure**

To copy a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Bill Group ASO Policy Information** zone, click the **Broadcast**  icon corresponding to a bill group whose pricing group you want to copy.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

- In the **Bill Group Pricing Groups** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the pricing group whose copy you want to create.

The **Pricing Group** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Description	Used to specify the description for the pricing group.	Yes

- Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> You cannot define multiple rules in the pricing group with the same priority.</div>	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the <b>Add</b>  icon, you can define criteria for the pricing group rule.	Not applicable

- Enter the required details in the **Main** section.
- Define, edit, or remove the required rules from the **Pricing Group Rules** section.
- Click the **Add**  icon in the **Criteria** field corresponding to the pricing group rule for which you want to define or edit the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter 1	<p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p><b>Note:</b> You can only specify the employee attribute which is defined for the bill group and source system combination in the <b>Bill Group Derivation and Pricing Parameters</b> zone. You must not specify the ampersand (&amp;) character in this field. The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter 1 List for Bill Group</b> window appears.</p>	Yes
Parameter 2	<p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p><b>Note:</b> You must not specify the ampersand (&amp;) character in this field.</p>	No
Parameter 3	<p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p><b>Note:</b> You must not specify the ampersand (&amp;) character in this field.</p>	No
Parameter 4	<p>Used to specify the employee attribute based on which you want to define the pricing.</p> <p><b>Note:</b> You must not specify the ampersand (&amp;) character in this field.</p>	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

**Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** () icon corresponding to the **Parameter 2** field and then repeat step 10.

**Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** () icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** () icon corresponding to the **Source System** field and then repeat step 9 and 10.

**Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** () icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** () icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

**Note:** However, if you want to remove a rule from the pricing group, click the **Delete** () icon corresponding to the pricing group rule.

14. Click **Save**.

The new pricing group is defined for the bill group.

## **Pricing Rule Type**

Pricing rules are created using pricing rule types. Following are the pricing rules:

- **Claim** – can be created using the claim pricing rule type.
- **Retention Type Claim Based** – can be created using the retention type claim base pricing rule type.
- **Retention Type Enrollment Based** – can be created using the retention type enrollment base pricing rule type.
- **Specific Stop-Loss** – can be created using the specific stop-loss pricing rule type.
- **Aggregated Stop-Loss** – can be created using the aggregated stop-loss or specific stop-loss pricing rule type.
- **One-Time Flat Fee** – can be created using the one-time flat fee pricing rule type.
- **Bill Period Based Recurring Flat Fee** – can be created using the bill period based recurring flat fee pricing rule type.
- **Frequency Based Recurring Flat Fee** – can be created using the frequency based recurring flat fee pricing rule type.

Pricing rule type has a parent business object, **C1-PricingRuleType** with all the common elements required for all pricing rule types. Elements that are specific to each pricing rule type are configured using the child business object. Following are the child business objects:

- **C1-PricingRuleTypeClaim** business object for Claim Pricing Rule Type.
- **C1-PrcRuleTypRetClaimBase** business object for Retention Claim Based Pricing Rule Type.
- **C1-PrcRuleTypRetEnrollBased** business object for Retention Enrollment Based Pricing Rule Type.

- **C1-PricingRuleTypeASL** business object for Aggregate Stop-Loss Pricing Rule Type.
- **C1-PricingRuleTypeSSL** business object for Specific Stop-Loss Pricing Rule Type.
- **C1-PricingRuleTypeFlatFees** business object for One-Time Flat Fee, Bill Period Based Recurring Flat Fee, Frequency Based Recurring Flat Fee Pricing Rule Types.

The **C1-GetPrcRuleTypeRateOpt** business service returns the list of rate options associated with a pricing rule type and selected price item. The **C1-GetPrcRuleTypeProd** business service returns the list of products associated with the pricing rule type.

This screen consists of the following zones:

- [Pricing Rule Type List](#) on page 2344
- [Pricing Rule Type](#) on page 2347

## Pricing Rule Type List

The **Pricing Rule Type List** zone lists the pricing rule types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description of the pricing rule type.
Pricing Rule Type Category	Indicates the category to which the pricing rule type belongs. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Specific Stop-Loss</li> <li>• Aggregate Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> <li>• Ancillary</li> <li>• Discount Arrangement</li> <li>• Level Funded</li> <li>• Age Based</li> <li>• Tier Based</li> <li>• Pass-Through Billable Charge</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Claim Pricing Rule Type, Specific Stop-Loss (SSL) Pricing Rule Type, Aggregate Stop-Loss (ASL) Pricing Rule Type, Retention Type Claim Based Pricing Rule Type, Retention Type Enrollment Based Pricing Rule Type, Flat Fees Pricing Rule Type, Ancillary Pricing Rule Type, Discount Arrangement Pricing Rule Type, Level Funded Pricing Rule Type, Age Based Pricing Rule Type, Tier Based Pricing Rule Type, or Pass-Through Billable Charge Pricing Rule Type</b> screen appears, based on the pricing rule type category, where you can edit the details of the respective pricing rule type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the pricing rule type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You can delete a pricing rule type only when it is not yet used in the system.</p> </div>

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast**  icon corresponding to a pricing rule type, the **Pricing Rule Type** zone appears with the details of the respective pricing rule type.

You can filter the list using the **Pricing Rule Type Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

## Pricing Rule Type

The **Pricing Rule Type** zone displays the details of the pricing rule type for claim, aggregate stop-loss, specific stop-loss, retention type enrollment based, retention type claim based, one-time flat fee, bill period based recurring flat fee, frequency based recurring flat fee. This zone contains the following sections:

- **Main** – This section provides basic information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description for the pricing rule type.
Detailed Description	Displays additional information about the pricing rule type category.
Pricing Rule Business Object	<p>Indicates the pricing rule business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Business Object	<p>Indicates the pricing rule type business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> <li>• Claim Pricing Rule Type</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule Type</li> <li>• Specific Stop-Loss (SSL) Pricing Rule Type</li> <li>• Retention Type Claim Based Pricing Rule Type</li> <li>• Retention Type Enrollment Based Pricing Rule Type</li> <li>• Flat Fee Pricing Rule Type</li> </ul> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Status	<p>Indicates the status of the pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Primary	Displays whether the pricing rule type is primary or not.

Field Name	Field Description
Pricing Rule Type Category	Indicates the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>

- **Related Pricing Rule Types** – This section lists the pricing rule types which are related to the parent pricing rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order in which pricing rule type is executed.
Pricing Rule Type	Displays the related pricing rule type for the parent rule type. <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule Type</b> screen appears where you can view the details of the respective pricing rule type.

**Note:** This section appears only when the pricing rule type is a primary pricing rule type.

- **Transaction Field Mapping** – This section displays the transaction related data mapped to the pricing rule type. It contains the following fields:

Field Name	Field Description
Source System	Displays the external system from where the transaction data is mapped.
Parameter 1 ... Parameter 4	Displays the parameters mapped for the transactions.
Incurred Date	Displays the date incurred for transaction.
Paid Date	Displays the transaction paid date.
Source of Funds	Displays the source of funds used to make the payment.
Composite	Displays the composite transaction data.
Claim Disposition	Displays the disposition of the claims transaction.
Provider's Tax Identification Number	Displays the tax identification number of the provider.
Member ID	Displays the member ID.
Main Subscriber ID	Displays the customer ID.
Run-in Identifier	Displays the run-in identifier.
Runout Identifier	Displays the runout identifier.
Coverage Start Date	Displays the transaction coverage start date.
Coverage End Date	Displays the transaction coverage end date.

Field Name	Field Description
Retroactivity Indicator	Displays information of the retroactivity indicator.

**Note:** This section appears only when the pricing rule type is a primary pricing rule type.

- **Algorithms** – This section displays the algorithms used for the pricing rule type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm must be executed. The valid values are: <ul style="list-style-type: none"> <li>• Account and Price Item Derivation</li> <li>• Bill After Date Determination</li> <li>• Bill Group Derivation</li> <li>• Pricing Rule Post Processing</li> <li>• Transaction Validation</li> </ul>
Sequence	Displays the order in which the algorithms for each system event must be executed.
Algorithm	Displays the algorithm. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears with the details of the respective algorithm.</p> </div>

- **Additional Data** – This section displays the additional information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Indicates whether the pricing rule type is eligible for level funding or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Eligible for Specific Stop-Loss	Indicates whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when the option selected for the <b>Pricing Rule Type Category</b> is <b>Claim, Retention Type Claim Based</b>, or <b>Retention Type Enrollment Based</b>.</p> </div>
Run-in Identifier Value	Displays the value for run-in identifier.
Runout Identifier Value	Displays the value for runout identifier.

**Note:** This section does not appear only when the pricing rule type category is flat fees.

- **Price Items** – This section displays the price items assigned to the pricing rule type. It contains the following columns:

Column Name	Column Description						
Price Item	<p>Displays the price item information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.</p>						
Rate Option	<p>On clicking the <b>Add</b> (  ) icon, the following column appears:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Indicates the rate option for the price item.</td> </tr> </tbody> </table> <p><b>Note:</b> This column does not appear only when the pricing rule type category is flat fees.</p>	Column Name	Column Description	Rate Option	Indicates the rate option for the price item.		
Column Name	Column Description						
Rate Option	Indicates the rate option for the price item.						
Bill To Account	<p>On clicking the <b>Add</b> (  ) icon, the following columns appear:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Displays the order in which the invoice type was considered while defining a price item.</td> </tr> <tr> <td>Invoice Type</td> <td>Displays the invoice type for the price item.</td> </tr> </tbody> </table>	Column Name	Column Description	Priority	Displays the order in which the invoice type was considered while defining a price item.	Invoice Type	Displays the invoice type for the price item.
Column Name	Column Description						
Priority	Displays the order in which the invoice type was considered while defining a price item.						
Invoice Type	Displays the invoice type for the price item.						

- **Price Item Parameters** – This section displays the price item parameters in the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item Parameter	<p>Displays the parameter associated with the price item.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the respective parameter.</p>
Transaction Field	<p>Displays the additional transaction data.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective transaction field.</p> <p>This column does not appear only when the pricing rule type category is flat fees.</p>
Eligible for Specific Stop-Loss	<p>Displays the parameter eligible for Specific Stop-Loss when the eligibility checkbox was checked.</p> <p><b>Note:</b> This field appears only when the option selected for the <b>Pricing Rule Type Category</b> is <b>Claim</b>, <b>Retention Type Claim Based</b>, or <b>Retention Type Enrollment Based</b>.</p>

Column Name	Column Description
Eligible for Level Funding	Displays the parameter eligible for level funding when the eligibility checkbox was checked.

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Claim Templates** – This section list the pricing rule type for claim template. It contains the following field:

Field Name	Field Description
Claim Template	Indicates the claim template.

**Note:** This section appears only when the **Business Object** is **Claim Pricing Rule Type**.

- **Claim-Specific Additional Data** – This section displays the claim specific additional data. It contains the following fields:

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

**Note:** This section appears only when the **Business Object** is **Claim Pricing Rule Type**.

- **ASL-Specific Additional Data** – This section displays the Aggregated Stop-Loss specific additional data. It contains the following fields:

Field Name	Field Description
ASL Billable Charge Line Type	Displays the Aggregated Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.
ASL Limit Price Item	Displays the Aggregated Stop-Loss limit price item.

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

**Note:** This section appears only when the **Business Object** is **Aggregate Stop-Loss (ASL) Pricing Rule Type**.

- **Enrollment-Specific Additional Data** – This section displays the enrollment specific additional data. It contains the following fields:

Field Name	Field Description
Retroactivity Indicator Value	Displays the value for the retroactivity indicator.

**Note:** This section appears only when the **Business Object** is **Retention Type Enrollment Based Pricing Rule Type**.

- **Claim Disposition Details** – This section displays the details of claim disposition. It contains the following columns:

Column Name	Column Description
Claim Disposition	Indicates the claim disposition.
Disposition Mode	Indicates the claim disposition mode. The valid values are: <ul style="list-style-type: none"> <li>• Align Signage</li> <li>• Zero Out</li> </ul>

**Note:** This section appears only when the **Business Object** is **Retention Type Claim Based Pricing Rule Type**.

- **SSL-Specific Additional Data** – This section displays the Specific Stop-Loss additional data. It contains the following fields:

Field Name	Field Description
SSL Billable Charge Line Type	Displays the Specific Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

**Note:** This section appears only when the **Business Object** is **Specific Stop-Loss (SSL) Pricing Rule Type**.

- **Billable Charge Line Types** – This section list the billable charge line type. It contains the following column:

Column Name	Column Description
Billable Charge Line Type	Indicates the billable charge line type.

**Note:** This section appears only when the **Business Object** is **Flat Fees Pricing Rule Type**.

- **Flat Fees - Specific Additional Data** – This section displays the recurring flat fee that is specific and considered as additional data. It contains the following fields:

Field Name	Field Description
Bill Segment Cancel Reason	Indicates the reason for cancelling the bill segment.
Recurring Fee	Displays whether the recurring flat fee is required or not.
Recurring Method	Indicates the recurring method if recurring fee is required. The valid values are: <ul style="list-style-type: none"> <li>• Bill Period</li> <li>• Frequency</li> </ul> <b>Note:</b> This field appears when the checkbox for <b>Recurring Fee</b> field is selected.

**Note:** This section appears only when the **Business Object** is **Flat Fees Pricing Rule Type**.

This section contains the following sub-section:

- **Bill Periods** – This section displays the bill period for the recurring flat fee. It contains the following column:

Column Name	Column Description
Bill Period	Indicates the bill period.

**Note:** This section appears when the **Recurring Method** is **Bill Period**.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the pricing rule type.
Delete	Used to delete the pricing rule type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the extendable lookup value for pricing rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears with the details of the respective business object.

By default, the **Pricing Rule Type** zone does not appear in the **Pricing Rule Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the pricing rule type in the **Pricing Rule Type List** zone.

## Claim Pricing

The ASO service provider processes the claims as part of the ASO agreement and pays the claim amount to either hospital or main subscriber. The employer, in turn, reimburses the claim amount to the ASO service provider at the end of the bill period (i.e. typically, every month). Apart from charging the claim amount to the employer, the ASO service provider charges various additional fees, such as fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor, and so on.

Oracle Revenue Management and Billing allows the ASO service provider to bill the employers for the claim amount and various additional fees. You can use any custom mechanism or the file upload utility in ORMB to upload the claim transactions. The pricing for the claim transactions can be defined using the claim pricing rules. You can define a claim pricing rule at the parent customer and bill group levels. The claim pricing rule at the bill group level takes precedence over the claim pricing rule at the parent customer level. You can define claim pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a claim pricing rule using a claim pricing rule type.

It is the claim pricing rule type which helps the system to determine:

- Business object using which the claim pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types, such as specific stop-loss, aggregate stop-loss, and retention type claim based pricing rule types, will inherit the attributes.

**Note:** You must select the **Primary** option while defining a claim pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Claim Pricing Rule Type** screen.

- Pricing rule types which are related to claim pricing rule type.
- Transaction fields from where the data for claim, specific stop-loss, aggregate stop-loss, retention type claim based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1\_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define claim pricing rules using the claim pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while accumulating specific stop-loss and aggregate stop-loss and while aggregating transactions.
- Claim templates which can be used while defining claim pricing rules using the claim pricing rule type.
- Additional information, such as:
  - Whether the price items included in the claim pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
  - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.

- Billable charge line type using which you want to create markup or markdown calculation lines.
- Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

Once a claim pricing rule type is defined, you can create claim pricing rules using the claim pricing rule type. While defining a claim pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option and claim template which you want to use while defining the claim pricing.
- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

**Note:** You can override the default markup and markdown values which are retrieved from the claim template.

In addition, while defining a claim pricing rule for a bill group, you need to specify the status of the policy for which you want to define the claim pricing rule. You can also specify a pricing group while defining a claim pricing rule for a bill group. If you specify a pricing group while defining a claim pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Once a claim pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

## Defining a Claim Pricing Rule Type

### Prerequisites

To define a claim pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeClaim** defined for pricing rule type.
- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

### Procedure

To define a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.  <b>Note:</b> You can create a claim pricing rule type using the <b>Claim Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Claim Pricing Rule Type** business object.
- Click **OK**.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the claim pricing rule type.
- Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- Algorithms** – Used to define the algorithms used for the pricing rule type.
- Additional Data** – Used to specify the additional information about the pricing rule type.
- Price Items** – Used to define the price items assigned to the pricing rule type.
- Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- Characteristics** – Used to define the characteristics for the pricing rule type.
- Claim Templates** – Used to define the pricing rule type for claim template.
- Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>Claim Pricing Rule</li> <li>Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>Specific Stop-Loss (SSL) Pricing Rule</li> <li>Retention Type Claim Based Pricing Rule</li> <li>Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note:** **Related Pricing Rule Types** section appears only when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note:** **Transaction Field Mapping** section appears only when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add claim templates in the claim pricing rule type, if required.
- Add the claim-specific data in the pricing rule type, if required.
- Click **Save**.

The claim pricing rule type is defined.

## Adding Claim Templates in a Claim Pricing Rule Type

### Prerequisites

To add claim templates in a claim pricing rule type, you should have:

- Claim templates defined in the application

### Procedure

To add claim templates in a claim pricing rule type:

1. Ensure that the **Claim Templates** section is expanded when you are defining or editing a pricing rule type.

The **Claim Templates** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Claim Template	Used to indicate the claim template.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a claim template for the pricing rule type.

2. Enter the required details in the **Claim Templates** section.
3. If you want to define more than one claim template for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a claim template from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the claim template.

4. Click **Save**.

The claim templates are defined for the pricing rule type.

## Adding the Claim-Specific Data in a Pricing Rule Type

### Procedure

To add the Claim-Specific additional data in a pricing rule type:

1. Ensure that the **Claim-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Claim-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Billing Eligibility Field	<p>Used to specify whether the rule based field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	<p>Used to specify whether the rule based markup or markdown field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to specify the markup or markdown billable charge line type.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	No

2. Enter the required details in the **Claim-Specific Additional Data** section.
3. Click **Save**.

The Claim-Specific Additional data is added in the pricing rule type.

### **Related Topics**

For more information on...	See...
How to define a claim pricing rule type	<a href="#">Defining a Claim Pricing Rule Type</a> on page 2356
How to edit the claim pricing rule type	<a href="#">Editing a Claim Pricing Rule Type</a> on page 2361

## **Editing a Claim Pricing Rule Type**

### **Prerequisites**

To edit the claim pricing rule type, you should have:

- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

### **Procedure**

To edit a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for claim template.
- **Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for claim.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Add, edit, or remove claim templates in the claim pricing rule type, if required.
14. Modify the claim-specific data in the pricing rule type, if required.
15. Click **Save**.

The changes made to the claim pricing rule type are saved.

## Deleting a Claim Pricing Rule Type

### Procedure

To delete a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim pricing rule type that you want to delete.

A message appears confirming whether you want to delete the claim pricing rule type.

**Note:** You can delete a claim pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a claim pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The claim pricing rule type is deleted.

## Defining a Claim Pricing Rule for a Parent Customer

### Prerequisites

To define a claim pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Claim template defined in the application.

### Procedure

To define a claim pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View**  icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a claim pricing rule using the <b>Pricing Rule Type</b> for claim.	Yes

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge lines.
- **Line Items** – Used to associate line items eligible for billing.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Pricing Start Date	Used to specify the pricing rule start date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy Start Date</b> .	Yes
Pricing End Date	Used to specify the pricing rule end date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy End Date</b> .	Yes
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer.  <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define markup or markdown values in a claim pricing rule, if required.

**Note:** The **Markup or Markdown Values** section appears only when an option from **Claim Template** field is selected.

7. Define line items in a claim pricing rule, if required.

**Note:** The **Line Items** section appears only when an option from **Claim Template** field is selected.

8. Define characteristics for a claim pricing rule, if required.
9. Click **Save**.

The claim pricing rule for a parent customer is defined.

## **Defining the Markup or Markdown Values for Line Items in a Claim Pricing Rule**

### **Procedure**

To define the markup or markdown values for line items in a claim pricing rule:

1. Ensure that the **Markup or Markdown Values** and **Line Items** sections are expanded only when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul> <p><b>Note:</b> This field is disabled only when the <b>Post Run Out Claims</b> option is selected from the <b>Claim Template</b> field of <b>Main</b> section.</p>	No
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <p><b>Note:</b> This field is disabled only when the <b>Post Run Out Claims</b> option is selected from the <b>Claim Template</b> field of <b>Main</b> section.</p>	No
Markup or Markdown Amount	Used to specify the markup or markdown amount. <p><b>Note:</b> This field is disabled when you select,</p> <ul style="list-style-type: none"> <li>• the <b>Post Run Out Claims</b> option from the <b>Claim Template</b> field of the <b>Main</b> section.</li> <li>• or the <b>Flat Amount</b> option from the <b>Markup or Markdown Type</b> field.</li> </ul>	Yes (Conditional) <p><b>Note:</b> This field is required when you selecting <b>Percentage</b> option from the <b>Markup or Markdown Type</b> field.</p>

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> <li>• User Defined (Default Yes)</li> <li>• User Defined (Default No)</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
User Defined Billing Option	Used to specify whether the billing option is user defined, eligible or not eligible.  <b>Note:</b> The checkbox for this field is by default checked and disabled for values <b>Eligible</b> or <b>Not Eligible</b> in the <b>Billing Eligibility</b> field. The checkbox for this field is enabled for values <b>User Defined (Default Yes)</b> or <b>User Defined (Default No)</b> in the <b>Billing Eligibility</b> .	Yes
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Used to specify the percentage for markup or markdown value.  <b>Note:</b> This field is enabled only when the <b>Markup or Markdown Percentage Eligibility</b> is <b>Eligible</b> and when the <b>Markup or Markdown Type</b> is <b>Percentage</b> .	Yes

2. Enter the required details in the **Markup or Markdown Values** section.
3. Enter the required details in the **Line Items** section.
4. Click **Save**.

The markup or markdown values for line items are defined for the claim pricing rule.

## Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule

### Procedure

To define the markup or markdown values for line items for each rule in a claim pricing rule:

1. Ensure that sections for each rule are expanded only when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.
2. Expand the **Markup or Markdown Values** and **Line Items** sections relevant to each rule.

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	No
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field is disabled when you select the <b>Flat Amount</b> option from the <b>Markup or Markdown Type</b> field. </div>	Yes (Conditional)  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field is required when you selecting <b>Percentage</b> option from the <b>Markup or Markdown Type</b> field. </div>

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> <li>• User Defined (Default Yes)</li> <li>• User Defined (Default No)</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
User Defined Billing Option	Used to specify whether the billing option is user defined, eligible or not eligible.  <b>Note:</b> The checkbox for this field is by default checked and disabled for values <b>Eligible</b> , <b>Rule Based</b> , or <b>Not Eligible</b> in the <b>Billing Eligibility</b> field.  The checkbox for this field is enabled for values <b>User Defined (Default Yes)</b> or <b>User Defined (Default No)</b> in the <b>Billing Eligibility</b> .	Yes
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Used to specify the percentage for markup or markdown value.  <b>Note:</b> This field is enabled only when the <b>Markup or Markdown Percentage Eligibility</b> is <b>Eligible</b> and when the <b>Markup or Markdown Type</b> is <b>Percentage</b> .	Yes

3. Enter the required details in the **Markup or Markdown Values** section.
4. Enter the required details in the **Line Items** section.
5. Click **Save**.

The markup or markdown values for line items for each rule are defined for the claim pricing rule.

## **Defining Characteristics for a Claim Pricing Rule**

### **Prerequisites**

To define characteristics for a claim pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### **Procedure**

To define characteristics for a claim pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the claim pricing rule.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the claim pricing rule.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the claim pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the claim pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the claim pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the claim pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the claim pricing rule.

## **Editing a Claim Pricing Rule of a Parent Customer**

### **Prerequisites**

To edit a claim pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Claim template defined in the application.

### Procedure

To edit a claim pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for claim whose claim pricing rule details you want to edit.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge lines.
- **Line Items** – Used to associate line items eligible for billing.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Used to specify the pricing rule end date. <b>Note:</b> This field by default displays the <b>Policy End Date</b> .	Yes
Rate Option	Indicates the rate option to edit the claim pricing rule for the price item.	Yes
Claim Template	Indicates the claim template of the claim pricing rule for a parent customer. <b>Note:</b> This field is enabled only when you click the <b>Reapply Claim Template</b> button.	Yes (Conditional) <b>Note:</b> This field is required when you are reapplying for a claim template.

**Note:** This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

4. Modify the details in the **Main** section, if required.
5. Modify the markup or markdown values in a claim pricing rule, if required.
6. Modify the line items in a claim pricing rule, if required.
7. Add, edit, or remove characteristics for a claim pricing rule, if required.
8. Click **Save**.

The changes made to a claim pricing rule for a parent customer are saved.

## **Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group**

### **Prerequisites**

To define a claim pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Claim template defined in the application.

### **Procedure**

To define a claim pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a claim pricing rule using the <b>Pricing Rule Type</b> for claim.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul> <b>Note:</b> Claim pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out End Date is missing.	Yes

#### 4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Pricing Start Date	Used to specify the pricing rule start date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy Start Date</b> .	Yes
Pricing End Date	Used to specify the pricing rule end date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy End Date</b> .	Yes
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a bill group.  <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define markup or markdown values for line items for each rule in a claim pricing rule, if required.

**Note:** The **Markup or Markdown Values** section appears in the rule section and the rule section appears only when an option from **Claim Template** field is selected.

7. Define line items for each rule in a claim pricing rule, if required.

**Note:** The **Line Items** section appears in the rule section and the rule section appears only when an option from **Claim Template** field is selected.

8. Define characteristics for a claim pricing rule, if required.
9. Click **Save**.

The claim pricing rule for a bill group using a pricing group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the claim pricing rule.

## Editing a Claim Pricing Rule of a Bill Group

### Prerequisites

To edit a claim pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Claim template defined in the application.

### Procedure

To edit a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for claim whose claim pricing rule details you want to edit.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge lines.
- **Line Items** – Used to associate line items eligible for billing.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Used to specify the pricing rule end date. <b>Note:</b> This field by default displays the <b>Policy End Date</b> .	Yes
Rate Option	Indicates the rate option to edit the claim pricing rule for the price item.	Yes
Claim Template	Indicates the claim template of the claim pricing rule for a parent customer. <b>Note:</b> This field is enabled only when you click the <b>Reapply Claim Template</b> button.	Yes (Conditional) <b>Note:</b> This field is required when you are reapplying for a claim template.

**Note:** This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

- Modify the details in the **Main** section, if required.
- Modify the markup or markdown values in a claim pricing rule, if required.
- Modify the line items in a claim pricing rule, if required.
- Add, edit, or remove characteristics for the characteristics for a claim pricing rule, if required.
- Click **Save**.

The changes made to a claim pricing rule for a bill group are saved.

## **Viewing a Claim Pricing Rule of a Bill Group**

### **Procedure**

To view a claim pricing rule of a bill group:

- Search for a bill group in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose claim pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the claim pricing rule type whose claim pricing rule bill group you want to view. The **Pricing Rule** screen appears. It contains the following zone:
  - **Claim** – Displays the pricing rule claim details for a bill group. It contains the following sections:
    - **Main** – Displays the basic details about the claim pricing rule.
    - **Markup or Markdown Values** – Displays the markup or markdown values for billable charge lines.
    - **Line Items** – Displays the associated line items eligible for billing.
    - **Characteristics** – Displays the characteristics defined for the claim pricing rule.
6. View the basic details of claim pricing rule in the **Main** section.
7. View the markup or markdown values for billable charge lines in the **Markup or Markdown Values** section.
8. View the associated line items eligible for billing in the **Line Items** section.
9. View the characteristics defined for the claim pricing rule in the **Characteristics** section.

## **Deleting a Claim Pricing Rule of a Bill Group**

### **Procedure**

To delete a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the pricing rule type that you want to delete. A message appears confirming whether you want to delete the claim pricing rule.
4. Click **OK**. The claim pricing rule is deleted.

## Specific Stop-Loss (SSL) Pricing

Stop-Loss coverage provides liability limits on claims for individuals and for the employer group as a whole. Specific Stop-Loss (SSL) is the form of excess risk coverage that provides protection for the employer against a high claim on any one individual. This is protection against abnormal severity of a single member claim rather than abnormal frequency of claims in total. Specific stop-loss is also known as individual stop-loss. The specific stop-loss is calculated on the claim transactions received for an individual.

You can define a specific stop-loss pricing rule at the parent customer and bill group levels. The specific stop-loss pricing rule at the bill group level takes precedence over the specific stop-loss pricing rule at the parent customer level. You can define specific stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a specific stop-loss pricing rule using a specific stop-loss pricing rule type.

It is the specific stop-loss pricing rule type which helps the system to determine:

- Business object using which the specific stop-loss pricing rule should be created in the system.

**Note:** The specific stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the specific stop-loss pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define specific stop-loss pricing rules using the specific stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

**Note:** Ideally, the price item parameters should not be specified in a specific stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating specific stop-loss.

- Additional information, such as:
  - Identifier which helps to determine whether the specific stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - SSL billable charge line type using which you want to create specific stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.

- Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
- Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.

Once a specific stop-loss pricing rule type is defined, you can create specific stop-loss pricing rules using the specific stop-loss pricing rule type. While defining a specific stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss pricing rule must be used for only pricing or for pricing and billing.
- Whether the specific stop-loss must be accumulated at the member or main subscriber level.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately – If you select this option from the list, the bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
  - Never - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
  - Yearly – If you select this option from the list, the bill after date in the specific stop-loss billable charge is set to the pricing end date.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the specific stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for specific stop-loss at the member or main subscriber level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the Aggregate Specific Stop-Loss (ASSL) should be calculated during the C1-BCSSL batch run for each bill group
- The ASSL limit indicating that the aggregate specific stop-loss amount beyond this limit will be paid by the insurance company to the ASSL credit account.
- Whether any member, main subscriber, or provider is excluded during the specific stop-loss calculation Different SSL limit (i.e. laseded amount) for a member, main subscriber, or provider who are expected to have higher claim amount.

However, while defining a specific stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the specific stop-loss pricing rule.
- Price item for which you want to define the pricing.

- Parent customer's SSL pricing rule from which you want to inherit the accumulation parameters and exclusion and lasing information.

**Note:** The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss

**Note:** By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

You can also specify a pricing group while defining a specific stop-loss pricing rule for a bill group. If you specify a pricing group while defining a stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss.

**Note:** By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

Once a specific stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

## Defining a Specific Stop-Loss (SSL) Pricing Rule Type

### Prerequisites

To define a specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeSSL** defined for pricing rule type.
- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss defined in the application

### Procedure

To define a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.  <b>Note:</b> You can create a specific stop-loss pricing rule type using the <b>Specific Stop-Loss (SSL) Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.
5. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss related additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>Claim Pricing Rule</li> <li>Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>Specific Stop-Loss (SSL) Pricing Rule</li> <li>Retention Type Claim Based Pricing Rule</li> <li>Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Indicate the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note: Related Pricing Rule Types** section appears only when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note: Transaction Field Mapping** section appears only when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the SSL-Specific data in the pricing rule type, if required.
- Click **Save**.

The specific stop-loss pricing rule type is defined.

**Adding the SSL-Specific Data in a Pricing Rule Type****Procedure**

To add the SSL-Specific additional data in a pricing rule type:

1. Ensure that the **SSL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **SSL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SSL Billable Charge Line Type	Used to specify the Specific Stop-Loss billable charge line type.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>SSL Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>SSL Billable Charge Line Type</b> field.	No

Field Name	Field Description	Mandatory (Yes or No)
Domestic Provider Claim Billable Charge Line Type	<p>Used to specify the claim billable charge line type for domestic provider.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to specify the markup or markdown billable charge line type.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	No
Rule Based Billing Eligibility Field	<p>Used to specify whether the rule based field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	<p>Used to specify whether the rule based markup or markdown field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	No
Rule Based Domestic Provider Claim Eligibility Field	<p>Used to specify the rule based domestic provider for claim eligibility field.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field.</p>	No

2. Enter the required details in the **SSL-Specific Additional Data** section.
3. Click **Save**.

The SSL-Specific Additional data is added in the pricing rule type.

### **Related Topics**

How to define a specific stop-loss (SSL) pricing rule type	<a href="#">Defining a Specific Stop-Loss (SSL) Pricing Rule Type</a> on page 2386
How to edit the specific stop-loss (SSL) pricing rule type	<a href="#">Editing a Specific Stop-Loss (SSL) Pricing Rule Type</a> on page 2391

## **Editing a Specific Stop-Loss (SSL) Pricing Rule Type**

### **Prerequisites**

To edit the specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss (SSL) defined in the application

### **Procedure**

To edit the specific stop-loss (SSL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss (SSL) whose details you want to edit.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the SSL-Specific data in the pricing rule type, if required.
14. Click **Save**.

The changes made to the specific stop-loss pricing rule type are saved.

## Deleting a Specific Stop-Loss (SSL) Pricing Rule Type

### Procedure

To delete a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the specific stop-loss pricing rule type that you want to delete.

A message appears confirming whether you want to delete the specific stop-loss pricing rule type.

**Note:** You can delete a specific stop-loss pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a specific stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The specific stop-loss pricing rule type is deleted.

## **Defining a Specific Stop-Loss Pricing Rule for a Parent Customer**

### **Prerequisites**

To define a specific stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

### **Procedure**

To define a specific stop-loss pricing rule for a parent customer:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a specific stop-loss pricing rule using the <b>Pricing Rule Type</b> for specific stop-loss.	Yes

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
- **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Pricing Start Date	Used to specify the pricing rule start date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy Start Date</b> .	Yes
Pricing End Date	Used to specify the pricing rule end date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy End Date</b> .	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option which you want to use for defining the specific stop-loss pricing rule for the price item.	Yes
Pricing Rule Usage	<p>Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected.</p> </div>	Yes
SSL Accumulation Level	<p>Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are:</p> <ul style="list-style-type: none"> <li>• Member</li> <li>• Main Subscriber</li> </ul>	
Settlement Frequency	<p>Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCSSL</b> batch is stamped on the specific stop-loss billable charge.</li> <li>• <b>Never</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCSSL</b> batch is stamped on the specific stop-loss billable charge.</li> <li>• <b>Yearly</b> – The bill after date in the specific stop-loss billable charge is set to the pricing end date.</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> This field is disabled when you select <b>Pricing and Billing</b> option from the <b>Pricing Rule Usage</b> field.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected. </div>	Yes

- Enter the required details in the **Main** section.
- Define accumulation parameters in a specific stop-loss pricing rule, if required.

**Note:** The **Accumulation Parameters** section appears only when an option from the **Price Item** field is selected.

- Define run-in parameters in a specific stop-loss pricing rule, if required.

**Note:** The **Run-In Parameters** section appears only when an option from the **Price Item** field is selected.

- Define lasering and exclusion information in a specific stop-loss pricing rule, if required.

**Note:** The **Lasering and Exclusion** section appears only when an option from the **Price Item** field is selected.

- Define characteristics for a specific stop-loss pricing rule, if required.

- Click **Save**.

The specific stop-loss pricing rule for a parent customer is defined.

## **Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule**

### **Procedure**

To define accumulation parameters in a specific stop-loss pricing rule:

- Ensure that the **Accumulation Parameters** section is expanded only when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on which you want to accumulate the specific stop-loss.  <b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Incurred End Date	Used to specify the incurred end date based on which you want to accumulate the specific stop-loss.  <b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
SSL Payout Limit	Used to specify the maximum limit defined for specific stop-loss at the member or main subscriber level.	Yes
Paid Start Date	Used to specify the paid start date based on which you want to accumulate the specific stop-loss.  <b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Paid End Date	Used to specify the paid end date based on which you want to accumulate the specific stop-loss.  <b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date.  <b>Note:</b> Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	Yes
Compute Aggregate SSL (ASSL)	Used to indicate whether the aggregate specific stop-loss (ASSL) should be calculated or not during the <b>C1-BCSSL</b> batch run for each bill group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
ASSL Credit Count	Used to indicate that the aggregate specific stop-loss amount beyond the ASSL limit will be paid by the insurance company to the ASSL credit account.  <b>Note:</b> This field is enabled when you select <b>Yes</b> option from the <b>Compute Aggregate SSL (ASSL)</b> field.	Yes
ASSL Limit	<b>Note:</b> This field is enabled when you select <b>Yes</b> option from the <b>Compute Aggregate SSL (ASSL)</b> field.	Yes

- Enter the required details in the **Accumulation Parameters** section.
- Click **Save**.

The accumulation parameters are defined in the specific stop-loss pricing rule.

## **Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule**

### **Procedure**

To define run-in parameters in a specific stop-loss pricing rule:

- Ensure that the **Run-In Parameters** section is expanded only when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing	No
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the specific stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the specific stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the specific stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the specific stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes

- Enter the required details in the **Run-In Parameters** section.
- Click **Save**.

The run-in parameters are defined in the specific stop-loss pricing rule.

## Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule

### Prerequisites

To define lasering and exclusion information in a specific stop-loss pricing rule, you should have:

- Lasering or exclusion level defined in the application.
- Exception type defined in the application.

### Procedure

To define lasering and exclusion information in a specific stop-loss pricing rule:

- Ensure that the **Lasering and Exclusion** section is expanded only when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Lasering and Exclusion** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Level Identifier	Used to specify the lasering or exclusion level identifier.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Lasering or Exclusion Level	Used to indicate the lasering or exclusion in a specific stop-loss. The valid values are: <ul style="list-style-type: none"> <li>• Main Subscriber</li> <li>• Member</li> <li>• Provider</li> </ul>	Yes
Exception Type	Used to indicate the exception type. The valid values are: <ul style="list-style-type: none"> <li>• Lasering</li> <li>• Exclusion</li> </ul> <p><b>Note:</b> This field displays <b>Exclusion</b> option and is disabled on selection of <b>Provider</b> option from the <b>Lasering or Exclusion Level</b> column.</p>	Yes
Comments	Used to specify the comments.	No
Lasered Amount	Used to specify the lasered amount. <p><b>Note:</b> This field is disabled when <b>Exclusion</b> option is selected from the <b>Exception Type</b> column.</p>	Yes (Conditional) <p><b>Note:</b> This column is mandatory when <b>Lasering</b> option is selected from the <b>Exception Type</b> column.</p>

- Enter the required details in the **Lasering and Exclusion** section.
- If you want to define more than one lasering and exclusion information in a specific stop-loss pricing rule, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a lasering and exclusion information from the specific stop-loss pricing rule, click the **Delete (🗑)** icon corresponding to the level identifier.

- Click **Save**.

The lasering and exclusion information is defined in a specific stop-loss pricing rule.

## **Defining Characteristics for a Specific Stop-Loss Pricing Rule**

### **Prerequisites**

To define characteristics for a specific stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### **Procedure**

To define characteristics for a specific stop-loss pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the specific stop-loss pricing rule.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the specific stop-loss pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the specific stop-loss pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the specific stop-loss pricing rule, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the specific stop-loss pricing rule.

## Editing a Specific Stop-Loss Pricing Rule of a Parent Customer

### Prerequisites

To edit a specific stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

### Procedure

To edit a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to view.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
- **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Pricing Start Date	Used to specify the pricing rule start date.	Yes
Pricing End Date	Used to specify the pricing rule end date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Indicates the rate option used for defining the specific stop-loss pricing rule for the price item.	Not applicable
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> <li>• Member</li> <li>• Main Subscriber</li> </ul>	
Settlement Frequency	Indicates the settlement frequency to determine the bill after date. The valid values are: <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCSSL</b> batch is stamped on the specific stop-loss billable charge.</li> <li>• <b>Never</b> –</li> <li>• <b>Yearly</b> – The bill after date in the specific stop-loss billable charge is set to the pricing end date.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is disabled when you select <b>Pricing and Billing</b> option from the <b>Pricing Rule Usage</b> field.</p> </div>	Not applicable
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in a specific stop-loss pricing rule, if required.
6. Modify the run-in parameters in a specific stop-loss pricing rule, if required.
7. Add, edit, or remove the lasering and exclusion information for the specific stop-loss pricing rule, if required.
8. Add, edit, or remove characteristics for the specific stop-loss pricing rule, if required.

## 9. Click **Save**.

The changes made to a specific stop-loss pricing rule for a parent customer are saved.

## Defining a Specific Stop-Loss Pricing Rule for a Bill Group

### Prerequisites

To define a specific stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

### Procedure

To define a specific stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a specific stop-loss pricing rule using the <b>Pricing Rule Type</b> for specific stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul> <b>Note:</b> Specific stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out end date is missing.	Yes

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. <b>Note:</b> Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date. <b>Note:</b> This field displays the <b>Policy Start Date</b> .	Not applicable
Pricing End Date	Displays the pricing rule end date. <b>Note:</b> This field displays the <b>Policy End Date</b> .	Not applicable
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. <b>Note:</b> Rate options in this field appears for selection, only when you select an option from the <b>Price Item</b> field.	Yes

- Enter the required details in the **Main** section.
- Define accumulation criteria in a specific stop-loss pricing rule, if required.

**Note:**  
The **Accumulation Criteria** section appears only when an option from **Parent Customer's SSL Pricing Rules** field is selected.  
You can also define the **Accumulation Criteria** for each rule in a specific stop-loss pricing rule.

- Define stop-loss eligibility for claim line items, if required.

**Note:**

The **Pricing Information** section appears only when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in a specific stop-loss pricing rule.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

The specific stop-loss pricing rule for a bill group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

**Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule****Procedure**

To define accumulation criteria in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded only when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for a specific stop-loss.	Not applicable
Run-In Maximum Limit	Used to specify the maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.  <b>Note:</b> This field is enabled only when the start date and end date selected from the <b>Parent Customer's SSL Pricing Rules</b> field of <b>Main</b> section is greater than today's date.	Yes

Field Name	Field Description	Mandatory (Yes or No)									
SSL Limit	Used to specify whether the SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.	Yes									
Price Item	Used to specify the price item information.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item</b> field, the <b>Price Item Search</b> window appears.	No									
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="532 611 1031 1791"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Used to specify multiple parameters based on which you want to determine the price item utilization.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.</td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td>Used to specify the value of the parameter.  <b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b>  icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.</td> <td>No</td> </tr> </tbody> </table>	Column Name	Column Description	Mandatory (Yes or No)	Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.	No	Parameter Value	Used to specify the value of the parameter.  <b>Note:</b> On selecting the <b>Price Item Parameter</b> , the <b>Search</b>  icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.	No	No
Column Name	Column Description	Mandatory (Yes or No)									
Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.	No									
Parameter Value	Used to specify the value of the parameter.  <b>Note:</b> On selecting the <b>Price Item Parameter</b> , the <b>Search</b>  icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.	No									

- Enter the required details in the **Accumulation Criteria** section.

- If you want to define more than one price item in the accumulation group, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a price item from the accumulation group, click the **Delete (🗑)** icon corresponding to the price item.

- If you want to define more than one price item parameters for the price item, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from the price item, click the **Delete (🗑)** icon corresponding to the price item parameter.

- Click **Save**.

The accumulation criteria is defined in the specific stop-loss pricing rule.

- You can define accumulation rules for each rule in a specific stop-loss pricing rule.

**Note:** You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

## Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule

### Procedure

To define the stop-loss eligibility for claim line items:

- Ensure that the **Pricing Information** section is expanded only when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
  - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating specific stop-loss.
  - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
  - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

**Note:** The **Reapply Claim Template** button appears only when you are editing a specific stop-loss.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude SSL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the specific stop-loss in percentage to create domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. <b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is <b>Flat Amount</b> .	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for specific stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.

3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.
5. Click **Save**.

The claim line items are defined in the specific stop-loss pricing rule.

6. You can define eligibility claim line items for each rule in a specific stop-loss pricing rule.

**Note:** You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

## Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group

### Prerequisites

To define a specific stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

### Procedure

To define a specific stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a specific stop-loss pricing rule using the <b>Pricing Rule Type</b> for specific stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul> <b>Note:</b> Specific stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out End Date is missing.	Yes

#### 4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. <b>Note:</b> Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. <b>Note:</b> Rate options in this field appears for selection, only when you select an option from the <b>Price Item</b> field.	Yes

- Enter the required details in the **Main** section.
- Define accumulation criteria for each rule in a specific stop-loss pricing rule pricing rule, if required.

**Note:** The **Accumulation Criteria** section appears in the rule section and the rule section appears only when an option from **Parent Customer's SSL Pricing Rules** field is selected.

- Define stop-loss eligibility for claim line items, if required.

**Note:** The **Pricing Information** section appears in the rule section and the rule section appears only when an option from **Parent Customer's SSL Pricing Rules** field is selected.

- Define characteristics for a specific stop-loss pricing rule, if required.
- Click **Save**.

The specific stop-loss pricing rule for a bill group using a pricing group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

## Editing a Specific Stop-Loss Pricing Rule of a Bill Group

### Prerequisites

To edit a specific stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.

### Procedure

To edit a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to view.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details about the specific stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's SSL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.	Not applicable

- Modify the accumulation criteria in a specific stop-loss pricing rule, if required.

**Note:** You can add, edit, or remove price item and its price item parameters in the accumulation criteria for a specific stop-loss, if required.

- Modify the stop-loss eligibility for claim line items, if required.

**Note:** This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

- Add, edit, or remove characteristics for a specific stop-loss pricing rule, if required.
- Click **Save**.

The changes made to a specific stop-loss pricing rule for a bill group are saved.

## Viewing a Specific Stop-Loss Pricing Rule of a Bill Group

### Procedure

To view a claim pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.
- In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose specific stop-loss pricing rule bill group details you want to view.

- In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Specific Stop-Loss** – Displays the pricing rule specific stop-loss details for a bill group. It contains the following sections:
    - **Main** – Displays the basic details about the specific stop-loss pricing rule.
    - **Accumulation Criteria** – Displays the accumulation criteria in a specific stop-loss pricing rule.
    - **Pricing Information** – Displays the stop-loss eligibility for claim line items.
    - **Characteristics** – Displays the characteristics defined for the specific stop-loss pricing rule.
- View the basic details of specific stop-loss pricing rule in the **Main** section.
  - View the accumulation criteria in the **Markup or Markdown Values** section.
  - View the stop-loss eligibility for claim line items in the **Line Items** section.
  - View the characteristics defined for the specific stop-loss pricing rule in the **Characteristics** section.

## Deleting a Specific Stop-Loss Pricing Rule of a Bill Group

### Procedure

To delete a specific stop-loss pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
- Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule you want to delete.  
A message appears confirming whether you want to delete the specific stop-loss pricing rule.
- Click **OK**.  
The specific stop-loss pricing rule is deleted.

## Aggregate Stop-Loss (ASL) Pricing

---

ASL provides a ceiling on the eligible expenses that an employer would pay, in total for all members or subscribers, during a contract period. The amount that exceeds this limit will be paid by the insurance company.

You can define an aggregate stop-loss pricing rule at the parent customer and bill group levels. The aggregate stop-loss pricing rule at the bill group level takes precedence over the aggregate stop-loss pricing rule at the parent customer level. You can define aggregate stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an aggregate stop-loss pricing rule using an aggregate stop-loss pricing rule type. It is the aggregate stop-loss pricing rule type which helps the system to determine:

- Business object using which the aggregate stop-loss pricing rule should be created in the system.

**Note:** The aggregate stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the aggregate stop-loss pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

**Note:** Ideally, the price item parameters should not be specified in an aggregate stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating aggregate stop-loss.

- Additional information, such as:
  - Identifier which helps to determine whether the aggregate stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - ASL billable charge line type using which you want to create aggregate stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
  - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

- Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.
- ASL limit price item whose effective retention type enrollment based pricing should be used to calculate the enrollment based limit when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field is set to Enrollment Based Limit, Enrollment Based or Minimum ASL Limit (Whichever is Greater), or Percentage of Enrollment Based Limit in the aggregate stop-loss pricing rule which is defined for a parent customer.

Once an aggregate stop-loss pricing rule type is defined, you can create aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type. While defining an aggregate stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the settlement frequency, settlement days, accumulation parameters (such as incurred start date, incurred end date, paid start date, and paid end date).

**Note:** The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss and aggregate stop-loss pricing rules for a parent customer should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately – If you select this option from the list, the bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Monthly - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Yearly – If you select this option from the list, the bill after date in the aggregate stop-loss billable charge is set to the pricing end date.
- Account in which the aggregate stop-loss amount should be credited.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the aggregate stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for aggregate stop-loss at the parent customer level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the ASL limit should be set to either of the following during the policy period:
  - Policy Based Limit
  - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
  - Enrollment Based Limit
  - Percentage of Enrollment Based Limit
- Whether the ASL limit should be set to either of the following during the settlement period:
  - Policy Based Limit
  - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
  - Enrollment Based Limit

However, while defining an aggregate stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the aggregate stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's ASL pricing rule from which you want to inherit the pricing date range.

**Note:** The pricing date range is derived from the parent customer's aggregate stop-loss pricing rule because the aggregate stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

**Note:** By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

You can also specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group. If you specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

**Note:** By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

Once an aggregate stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

## Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type

### Prerequisites

To define an aggregate stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeASL** defined for pricing rule type.
- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss defined in the application

### Procedure

To define an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.  <b>Note:</b> You can create an aggregate stop-loss pricing rule type using the <b>Aggregate Stop-Loss (ASL) Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.
- Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- Algorithms** – Used to define the algorithms used for the pricing rule type.
- Additional Data** – Used to specify the additional information about the pricing rule type.
- Price Items** – Used to define the price items assigned to the pricing rule type.
- Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- Characteristics** – Used to define the characteristics for the pricing rule type.
- ASL-Specific Additional Data** – Used to specify the aggregate stop-loss related additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>Claim Pricing Rule</li> <li>Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>Specific Stop-Loss (SSL) Pricing Rule</li> <li>Retention Type Claim Based Pricing Rule</li> <li>Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note:** **Related Pricing Rule Types** section appears only when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note:** **Transaction Field Mapping** section appears only when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the ASL-Specific additional data in the pricing rule type, if required.
- Click **Save**.

The aggregate stop-loss pricing rule type is defined.

## Adding the ASL-Specific Data in a Pricing Rule Type

### Procedure

To add the ASL-Specific additional data in a pricing rule type:

1. Ensure that the **ASL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **ASL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
ASL Billable Charge Line Type	Used to specify the Aggregate Stop-Loss billable charge line type.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>ASL Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>ASL Billable Charge Line Type</b> field.	No
Domestic Provider Claim Billable Charge Line Type	Used to specify the claim billable charge line type for domestic provider.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field.	No

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Billable Charge Line Type	<p>Used to specify the markup or markdown billable charge line type.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	No
Rule Based Billing Eligibility Field	<p>Used to specify whether the rule based field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field.</p>	No
Rule Based Markup or Markdown Eligibility Field	<p>Used to specify whether the rule based markup or markdown field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Domestic Provider Claim Eligibility Field	Used to specify the rule based domestic provider for claim eligibility field.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field, the <b>Field Search</b> window appears.  On specifying the field, the description of the field appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field.	No
ASL Limit Price Item	Used to specify the Aggregated Stop-Loss limit price item.	No

- Enter the required details in the **ASL-Specific Additional Data** section.
- Click **Save**.

The ASL-Specific Additional data is added in the pricing rule type.

### Related Topics

How to define an aggregate stop-loss (ASL) pricing rule type	<a href="#">Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type</a> on page 2422
How to edit the aggregate stop-loss (ASL) pricing rule type	<a href="#">Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type</a> on page 2427

## Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type

### Prerequisites

To edit the aggregate stop-loss (ASL) pricing rule type, you should have:

- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss (ASL) defined in the application

### Procedure

To edit the aggregate stop-loss (ASL) pricing rule type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss (ASL) whose details you want to edit.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **ASL-Specific Additional Data** – Used to specify the aggregate stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the ASL-Specific data in the pricing rule type, if required.
14. Click **Save**.

The changes made to the aggregate stop-loss pricing rule type are saved.

## Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type

### Procedure

To delete an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the aggregate stop-loss pricing rule type.

**Note:** You can delete an aggregate stop-loss pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete an aggregate stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The aggregate stop-loss pricing rule type is deleted.

## Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details

### Procedure

To view the details of an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Broadcast**  icon corresponding to the aggregate stop-loss pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

5. View the details of the aggregate stop-loss pricing rule type in the **Pricing Rule Type** zone.

## **Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer**

### **Prerequisites**

To define an aggregate stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

### **Procedure**

To define an aggregate stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View**  icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create an aggregate stop-loss pricing rule using the <b>Pricing Rule Type</b> for aggregate stop-loss.	Yes

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregation stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.  <b>Note:</b> This field is enabled only when you select an option from the <b>Price Item</b> field.	Yes
Pricing Start Date	Displays the pricing rule start date.  <b>Note:</b> By default it displays the <b>Policy Start Date</b> .	Not applicable
Pricing End Date	Displays the pricing rule end date.  <b>Note:</b> This field displays date only when you select the date range from <b>Parent Customer's SSL or ASL Pricing Rules</b> .	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option which you want to use for defining the aggregate stop-loss pricing rule for the price item.  <b>Note:</b> Options appears in this field only when you select an option from the <b>Price Item</b> field.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Monthly</b> – The bill after date specified in the <b>Manual Settlement Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Yearly</b> – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date.</li> </ul> <b>Note:</b> This field is enabled only when you select an option from the <b>Price Item</b> field.	Yes
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <b>Note:</b> This field is enabled only when you select an option from the <b>Price Item</b> field.	Yes

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in an aggregate stop-loss pricing rule, if required.

**Note:** The **Accumulation Parameters** section appears only when an option from the **Price Item** field is selected.

7. Define run-in parameters in an aggregate stop-loss pricing rule, if required.

**Note:** The **Run-In Parameters** section appears only when an option from the **Price Item** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.

9. Click **Save**.

The aggregate stop-loss pricing rule for a parent customer is defined.

## Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule

**Procedure**

To define accumulation parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded only when you have selected an option from the **Price Item** field of **Main** section while defining an aggregation stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for an aggregation stop-loss.	Not applicable
ASL Credit Account	Used to indicate the account in which the aggregate stop-loss amount should be credited.  <b>Note:</b> This field becomes read only when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b> .	Not applicable
Incurred Start Date	Displays the incurred start date based on which you want to accumulate the aggregate stop-loss.  <b>Note:</b> The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date only when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b> . <b>Incurred Start Date</b> is equal to the pricing rule start date.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Incurred End Date	<p>Displays the incurred end date based on which you want to accumulate the aggregate stop-loss.</p> <div data-bbox="529 323 1027 699" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date only when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b>.</p> <p><b>Incurred End Date</b> is equal to the pricing rule end date.</p> </div>	Not applicable
ASL Payout Limit	Used to specify the maximum limit defined for aggregated stop-loss at the member or main subscriber level.	Yes
Paid Start Date	<p>Used to specify the paid start date based on which you want to accumulate the aggregate stop-loss.</p> <div data-bbox="529 951 1027 1323" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date only when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b>.</p> <p><b>Paid Start Date</b> is equal to the pricing rule start date.</p> </div>	Yes
Paid End Date	<p>Used to specify the paid end date based on which you want to accumulate the aggregate stop-loss.</p> <div data-bbox="529 1463 1027 1835" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date only when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b>.</p> <p><b>Paid End Date</b> is equal to the pricing rule end date.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date.  <b>Note:</b> Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	Yes
ASL Limit (During Policy Period)	Used to indicate the aggregate stop-loss limit set during the policy period. The valid values are: <ul style="list-style-type: none"> <li>• Policy Based Limit</li> <li>• Enrollment Based Limit</li> <li>• Percentage of Enrollment Based Limit</li> <li>• Enrollment Based or Minimum ASL Limit (Whichever is Greater)</li> </ul>	Yes
ASL Limit (During Settlement Period)	Used to indicate the aggregate stop-loss limit set during the settlement period. The valid values are: <ul style="list-style-type: none"> <li>• Policy Based Limit</li> <li>• Enrollment Based Limit</li> <li>• Enrollment Based or Minimum ASL Limit (Whichever is Greater)</li> </ul>	Yes
Minimum ASL Limit	Used to specify the minimum ASL limit.  <b>Note:</b> This field is enabled only when you select the <b>Enrollment Based or Minimum ASL Limit (Whichever is Greater)</b> option from the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> is <b>Enrollment Based or Minimum ASL Limit (Whichever is Greater)</b> .
Percentage of Enrollment Based Limit	Used to specify the percentage of enrollment based limit.  <b>Note:</b> This field is enabled only when you select the <b>Percentage of Enrollment Based Limit</b> option from <b>ASL Limit (During Policy Period)</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>ASL Limit (During Policy Period)</b> is <b>Percentage of Enrollment Based Limit</b> .
Policy Based Limit	Used to specify the policy based limit.  <b>Note:</b> This field is enabled only when you select the <b>Policy Based Limit</b> option from the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> is <b>Policy Based Limit</b> .

2. Enter the required details in the **Accumulation Parameters** section.

### 3. Click **Save**.

The accumulation parameters are defined in the aggregated stop-loss pricing rule.

## Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule

### Prerequisites

To define run-in parameters in an aggregate stop-loss pricing rule, you should have:

- Settlement days defined in the application.
- ASL limit during the policy period defined in the application.
- ASL limit during the settlement period defined in the application.

### Procedure

To define run-in parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded only when you have selected an option from the **Price Item** field of **Main** section while defining an aggregate stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing	No
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for an aggregate stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the aggregate stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the aggregate stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the aggregate stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the aggregate stop-loss.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes
Run-In Maximum Limit	Used to specify the maximum limit of the run-in parameters.  <b>Note:</b> This field is enabled only when you select the checkbox for the <b>Run-In</b> field.	Yes

- Enter the required details in the **Run-In Parameters** section.
- Click **Save**.

The run-in parameters are defined in the aggregate stop-loss pricing rule.

## Defining Characteristics for an Aggregate Stop-Loss Pricing Rule

### Prerequisites

To define characteristics for an aggregate stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define characteristics for an aggregate stop-loss pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the aggregate stop-loss pricing rule.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the aggregate stop-loss pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the aggregate stop-loss pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the aggregate stop-loss pricing rule.

## Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

### Prerequisites

To edit an aggregate stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

### Procedure

To edit an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you v

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option used for defining the aggregate stop-loss pricing rule for the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	<p>Indicates the settlement frequency to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Monthly</b> – The bill after date specified in the <b>Manual Settlement Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Yearly</b> – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date.</li> </ul>	Yes
Underwriter Review	<p>Used to indicate whether the underwriter settlement review flag is on or off. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in an aggregate stop-loss pricing rule, if required.
6. Modify the run-in parameters in an aggregate stop-loss pricing rule, if required.
7. Add, edit, or remove characteristics for the aggregate stop-loss pricing rule, if required.
8. Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a parent customer are saved.

## Viewing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

### Procedure

To view an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule parent customer details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Aggregate Stop-Loss** – Displays the pricing rule aggregate stop-loss details for a parent customer. It contains the following sections:
  - **Main** – Displays the basic details about the aggregate stop-loss pricing rule.
  - **Accumulation Parameters** – Displays the accumulation parameters based on which accumulated aggregate stop-loss for the transactions are processed in the run-in or active period of the policy.
  - **Run-In Parameters** – Displays the run-in parameters in the run-in period of the policy.
  - **Characteristics** – Displays the characteristics defined for the aggregate stop-loss pricing rule.
- 5. View the basic details of aggregate stop-loss pricing rule in the **Main** zone.
- 6. View the accumulated parameters in the **Accumulation Parameters** zone.
- 7. View the run-in parameters in the **Run-In Parameters** zone.
- 8. View the characteristics defined for the aggregate stop-loss pricing rule in the **Characteristics** zone.

## Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group

### Prerequisites

To define an aggregate stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

### Procedure

To define an aggregate stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create an aggregate stop-loss pricing rule using the <b>Pricing Rule Type</b> for aggregate stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul> <b>Note:</b> Aggregate stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out end date is missing.	Yes

#### 4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.  <b>Note:</b> Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.  <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.  <b>Note:</b> This field displays the <b>Policy Start Date</b> .	Not applicable
Pricing End Date	Displays the pricing rule end date.  <b>Note:</b> This field displays the <b>Policy End Date</b> .	Not applicable
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.  <b>Note:</b> Rate options in this field appears for selection, only when you select an option from the <b>Price Item</b> field.	Yes

- Enter the required details in the **Main** section.
- Define accumulation criteria in an aggregate stop-loss pricing rule, if required.

**Note:**  
The **Accumulation Criteria** section appears only when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.  
You can also define the **Accumulation Criteria** for each rule in an aggregate stop-loss pricing rule.

- Define stop-loss eligibility for claim line items, if required.

**Note:**  
The **Pricing Information** section appears only when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.  
You can also define the **Pricing Information** for each rule in an aggregate stop-loss pricing rule.

- Define characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The aggregate stop-loss pricing rule for a bill group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

**Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule****Procedure**

To define accumulation criteria in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded only when you have selected an option from the **Parent Customer’s SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for an aggregate stop-loss.	Not applicable
Price Item	Used to specify the price item information.  <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item</b> field, the <b>Price Item Search</b> window appears.	No

Field Name	Field Description	Mandatory (Yes or No)									
Price Item Parameters	This field contains the following columns:	No									
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Used to specify multiple parameters based on which you want to determine the price item utilization.   <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears. </div> </td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td>Used to specify the value of the parameter.   <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b>  icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears. </div> </td> <td>No</td> </tr> </tbody> </table>		Column Name	Column Description	Mandatory (Yes or No)	Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization.  <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears. </div>	No	Parameter Value	Used to specify the value of the parameter.  <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b>  icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears. </div>	No
	Column Name		Column Description	Mandatory (Yes or No)							
Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization.  <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> On clicking the <b>Search</b>  icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears. </div>	No									
Parameter Value	Used to specify the value of the parameter.  <div style="border: 1px solid black; padding: 5px;"> <b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b>  icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears. </div>	No									

2. Enter the required details in the **Accumulation Criteria** section.
3. If you want to define more than one price item in the accumulation group, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a price item from the accumulation group, click the **Delete**  icon corresponding to the price item.

4. If you want to define more than one price item parameters for the price item, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑️) icon corresponding to the price item parameter.

5. Click **Save**.

The accumulation criteria is defined in the aggregate stop-loss pricing rule.

6. You can define accumulation rules for each rule in an aggregate stop-loss pricing rule.

**Note:** You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

## Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule

### Procedure

To define claim pricing rules in an aggregate stop-loss pricing rule:

1. Ensure that the **Pricing Information** section is expanded only when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
  - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating aggregate stop-loss.
  - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
  - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

**Note:** The **Reapply Claim Template** button appears only when you are editing an aggregate stop-loss.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude ASL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage to create domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is <b>Flat Amount</b>.</p> </div>	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for aggregate stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.

5. Click **Save**.

The claim line items are defined in the aggregate stop-loss pricing rule.

## 6. You can define eligibility claim line items for each rule in an aggregate stop-loss pricing rule.

**Note:** You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

**Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group****Prerequisites**

To define an aggregate stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

**Procedure**

To define an aggregate stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create an aggregate stop-loss pricing rule using the <b>Pricing Rule Type</b> for aggregate stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul> <b>Note:</b> Aggregate stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out End Date is missing.	Yes

#### 4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.  <b>Note:</b> Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.  <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.  <b>Note:</b> Rate options in this field appears for selection, only when you select an option from the <b>Price Item</b> field.	Yes

- Enter the required details in the **Main** section.
- Define accumulation criteria for each rule in an aggregate stop-loss pricing rule pricing rule, if required.

**Note:** The **Accumulation Criteria** section appears in the rule section and the rule section appears only when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define stop-loss eligibility for claim line items, if required.

**Note:** The **Pricing Information** section appears in the rule section and the rule section appears only when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The aggregate stop-loss pricing rule for a bill group using a pricing group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

## Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group

### Prerequisites

To edit an aggregate stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.

### Procedure

To edit an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the

**View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to view.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details about the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.	Not applicable

- Modify the accumulation criteria in an aggregate stop-loss pricing rule, if required.

**Note:** You can add, edit, or remove price item and its price item parameters in the accumulation criteria for an aggregate stop-loss, if required.

- Modify the stop-loss eligibility for claim line items, if required.

**Note:** This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

- Add, edit, or remove characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a bill group are saved.

## Viewing an Aggregate Stop-Loss Pricing Rule of a Bill Group

### Procedure

To view an aggregate stop-loss pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

4. In the **Bill Group ASO Policy Information** zone, click the

**Broadcast** () icon corresponding to the bill group whose aggregate stop-loss pricing rule bill group details you want to view.

5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Aggregate Stop-Loss** – Displays the pricing rule aggregate stop-loss details for a bill group. It contains the following sections:
  - **Main** – Displays the basic details about the aggregate stop-loss pricing rule.
  - **Accumulation Criteria** – Displays the accumulation criteria in an aggregate stop-loss pricing rule.
  - **Pricing Information** – Displays the stop-loss eligibility for claim line items.
  - **Characteristics** – Displays the characteristics defined for the aggregate stop-loss pricing rule.
- 6. View the basic details of aggregate stop-loss pricing rule in the **Main** section.
- 7. View the accumulated criteria in the **Accumulation Criteria** section.
- 8. View the stop-loss eligibility for claim line items in the **Pricing Information** section.
- 9. View the characteristics defined for the aggregate stop-loss pricing rule in the **Characteristics** section.

## Deleting an Aggregate Stop-Loss Pricing Rule of a Bill Group

### Procedure

To delete an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule you want to delete.  
A message appears confirming whether you want to delete the aggregate stop-loss pricing rule.
4. Click **OK**.  
The aggregate stop-loss pricing rule is deleted.

## Retention Type Claim Based Pricing

The ASO service provider provides claim administrative services and pays the claim amount on behalf of the employer. Different charges, such as administration fees, network fees, managed care fees, are typically charged as retention type claim based fees. The system enables you to charge a flat or percentage based retention type claim based fee. The rate schedule defined in the respective rate option indicates whether the retention type claim based fee is a flat fee or percentage based fee. The system considers the claim line items for calculating the percentage based retention type claim based fee only when the **Retention Claim Based Percentage Calculation** field is set to **Yes**.

You can define a retention type claim based pricing rule at the parent customer and bill group levels. The retention type claim based pricing rule at the bill group level takes precedence over the retention type claim based pricing rule at the parent customer level. You can define retention type claim based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type claim based pricing rule using a retention type claim based pricing rule type. It is the retention type claim based pricing rule type which helps the system to determine:

- Business object using which the retention type claim based pricing rule should be created in the system.
- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event. The **C1\_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Algorithm which should be triggered while determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type claim based pricing rules using the retention type claim based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type claim based pricing rules.
- Additional information, such as:
  - Whether the price items included in the retention type claim based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
  - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.

- Indicates how the claim must be disposed. If the **Claim Disposition** field in the transaction is set to Yes, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

**Note:** If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

Once a retention type claim based pricing rule type is defined, you can create retention type claim based pricing rules using the retention type claim based pricing rule type. While defining a retention type claim based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type claim based pricing.
- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

In addition, while defining a retention type claim based pricing rule for a bill group, you need to specify the status of the policy for which you want to define the retention type claim based pricing rule. You can also specify a pricing group while defining a retention type claim based pricing rule for a bill group. If you specify a pricing group while defining a retention type claim based pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat or percentage based fee for different set of price item parameters combination. For example, you can define one flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper and another flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper.

Once a retention type claim based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

## Defining a Retention Type Claim Based Pricing Rule Type

### Prerequisites

To define a retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Business Object **C1-PricingRule** defined for pricing rule.
- Pricing rule type category for the retention type claim defined in the application.

### Procedure

To define a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type claim based pricing rule type  <b>Note:</b> You can create a retention type claim based pricing rule type using the <b>Claim Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Retention Type Claim Based Pricing Rule Type** business object.
- Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the retention type claim based pricing rule type.
- Algorithms** – Used to associate the algorithms with the retention type claim based pricing rule type.
- Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- Price Items** – Used to add the price items for which you can define the retention type claim based pricing rules using the retention type claim based pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- Claim Disposition Details** – Used to define the disposition details of the claims transaction.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the retention type claim based pricing rule type.	Yes
Description	Used to specify the description for the retention type claim based pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the retention type claim based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the retention type claim based pricing rule business object. The valid value is: <ul style="list-style-type: none"> <li>Retention Type Claim Based Pricing Rule</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the retention type claim based pricing rule type business object using which you are defining the retention type claim based pricing rule type.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> You must not select the <b>Primary</b> option while defining the retention type claim based pricing rule type. </div>	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> <li>Retention Type Claim Based</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are defining a retention type claim based pricing rule type.
- Associate the following algorithms with the retention type claim based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Pricing Rule Post Processing	C1-PRCRETPOS	C1-PRCRETPOS	Retention Claim Based - Post Processing
Transaction Validation	C1-RETCLMVAL	C1-RETCLMVAL	Retention Claim Based - Validation

- Define additional data for the retention type claim based pricing rule type.
- Add the required price items for retention type claim based pricing rule type.
- Add price item parameters for the retention type claim based pricing rule type.
- Define characteristics for the retention type claim based pricing rule type.
- Add the claim disposition details for retention type claim based pricing rule type.
- Click **Save**.

The retention type claim based pricing rule type is defined.

## Adding Claim Based Disposition Details in a Pricing Rule Type

### Prerequisites

To add claim based disposition details in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Claim Disposition and Disposition Mode defined in the application.

### Procedure

To add claim based disposition details in a pricing rule type:

1. Ensure that the **Claim Disposition Details** section is expanded when you are defining or editing for a primary pricing rule type.

The **Claim Disposition Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Disposition	Used to specify the type of claim disposition.	No
Disposition Mode	Used to specify the mode of claim disposition.	No

2. Enter the required details in the **Claim Disposition Details** section.

#### **Note:**

If the **Claim Disposition** field in the transaction is set to **Yes**, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

3. If you want to define more than one claim disposition entry for the primary pricing rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a claim disposition entry for the primary pricing rule type, click the **Delete**  icon corresponding to the related pricing rule type.

## Editing a Retention Type Claim Based Pricing Rule Type

### Prerequisites

To edit the retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for the retention type claim based pricing rule type.
- Business Object **C1-PrcRuleTypRetClaimBase** defined for the retention type claim based pricing rule type.
- Pricing rule type category for the retention type claim based pricing rule type defined in the application

### Procedure

To edit a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type claim based pricing rule type.

- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the retention type claim based pricing rule type.
- **Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type claim based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type claim based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for retention type claim based template.
- **Claim-Specific Additional Data** – Used to specify the retention type claim based specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the retention type claim based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	
Primary	Used to select the checkbox if the retention type claim based pricing rule type is primary.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Claim</li> <li>Discounted Agreement</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Specific Stop-Loss</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type claim.

- Modify the details in the **Main** section, if required.
- Add, edit, or remove the related pricing rule types in the retention type claim based pricing rule type, if required.
- Modify the transaction field mapping in the retention type claim based pricing rule type, if required.
- Add, edit, or remove algorithms with the retention type claim based pricing rule type, if required.
- Modify the additional data for the retention type claim based pricing rule type, if required.
- Add, edit, or remove pricing items in the retention type claim based pricing rule type, if required.
- Add, edit, or remove price item parameters in the retention type claim based pricing rule type, if required.
- Add, edit, or remove characteristics for the retention type claim based pricing rule type, if required.
- Add, edit, or remove claim templates in the retention type claim based pricing rule type, if required.
- Modify the claim-specific data in the retention type claim based pricing rule type, if required.
- Click **Save**.

The changes made to the Retention Type Claim Based Pricing Rule Type are saved.

## **Deleting a Retention Type Claim Based Pricing Rule Type**

### **Procedure**

To delete a retention type claim based pricing rule type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the retention type claim based pricing rule type that you want to delete.

A message appears confirming whether you want to delete the retention type claim based pricing rule type.

**Note:** You can delete a retention type claim based pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a retention type claim based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

- Click **OK**.

The retention type claim based pricing rule type is deleted.

## Defining a Retention Type Claim Based Pricing Rule for a Parent Customer

### Prerequisites

To define a retention type claim based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To define a retention type claim based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.

The **Search Result** screen appears.

2. In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values is: <ul style="list-style-type: none"> <li>• Retention Type Claim Based Pricing Rule</li> </ul>	Yes

**Note:** If the pricing rule type is not selected then the application displays an error message.

5. Select the required pricing rule type in the respective field.

6. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays information about the parent customer for whom you are defining the retention type claim based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type claim based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type claim based pricing rule.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the retention type claim based pricing. The valid value is: <ul style="list-style-type: none"> <li>• Admin Fee</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the retention type claim based pricing will be effective for the price item. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> The pricing start date cannot be later than the pricing end date.</div>	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.</div>
Pricing End Date	Used to specify the end date till when the retention type claim based pricing will be effective for the price item. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> The pricing end date cannot be earlier than the pricing start date.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to specify the fee for the price item parameter.	

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer.

7. Add the required details in the main and characteristics section.

8. Click **Save**.

The retention type claim based pricing rule for a parent customer is defined.

**Note:**

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type claim based pricing rule for a parent customer is defined, once the approval transaction is approved.

## Defining Characteristics for a Retention Type Claim Based Pricing Rule

**Prerequisites**

To define characteristics for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

**Procedure**

To define characteristics for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer.	Yes (Conditional)

**Note:** This field is required when you are defining a characteristic for retention type claim based pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	<p>Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer.</p> <p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type claim based pricing rule.

## Editing a Retention Type Claim Based Pricing Rule of a Parent Customer

### Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To edit a retention type claim based pricing rule of a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab. It consists of the following zones:

The **Pricing** tab appears.

4.

In the **Parent Customer Pricing Rules** zone, click the **Edit**  icon in the **Edit** column corresponding to the retention type claim based pricing rule, whose details you want to edit.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays information about the parent customer for whom the retention type claim based pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the discount arrangement pricing rule is defined.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a parent customer.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.  <b>Note:</b> The pricing start date cannot be later than the pricing end date.	Yes (Conditional)  <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.  <b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	No

Field Name	Field Description	Mandatory (Yes or No)									
Rate Option	<p>Used to indicate the rate option that you want to use while defining the pricing for the price item. The valid value is:</p> <ul style="list-style-type: none"> <li>Flat Dollar Per Claim - Agg Daily</li> </ul> <p>On clicking the <b>Add</b> () icon, the following fields appear in a grid:</p> <table border="1" data-bbox="548 472 1247 1686"> <thead> <tr> <th data-bbox="548 472 667 583">Field Name</th> <th data-bbox="672 472 1101 583">Field Description</th> <th data-bbox="1105 472 1247 583">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="548 590 667 1119">Price Item Parameter</td> <td data-bbox="672 590 1101 1119"> <p>Used to specify multiple price item parameters based on which you want to determine the price item utilization.</p> <div data-bbox="678 709 1084 1102" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The Search () icon appears corresponding to the <b>Price Item Parameter</b> field. Price Item Parameter	<p>Used to specify multiple price item parameters based on which you want to determine the price item utilization.</p> <div data-bbox="678 709 1084 1102" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The Search () icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> screen appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Price Item Parameter</b> field.</p> </div>	No									
Parameter Value	<p>Used to specify multiple price item parameter values based on which you want to determine the price item utilization.</p> <div data-bbox="678 1276 1084 1669" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The Search () icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> screen appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Parameter Value Search</b> field.</p> </div>	No									

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to specify the fee for the price item parameter.	Not applicable

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a parent customer.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer.	No
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the Characteristic Value field. On clicking the <b>Search</b> icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> </div>	No

**Note:**

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type claim based pricing rule is edited then an approval transaction is created for that particular parent customer. The retention type claim based pricing rule for a parent customer is defined, once the approval transaction is approved.

5. Click **Save**.

The retention type claim based pricing rule of a parent customer is edited.

## Deleting a Retention Type Claim Based Pricing Rule of a Parent Customer

### Procedure

To delete a retention type claim based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° Information** screen.
2. In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.  
  
The **Person** tab in the **Customer 360° Information** screen.
3. Click the **Pricing** tab. It consists of the following zones:  
  
The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Delete**  icon in the **Delete** column corresponding to the retention type claim based pricing rule that you want to delete.

A message appears confirming whether you want to delete the retention type claim based pricing rule type of a parent customer.

5. Click **OK**.

The retention type claim based pricing rule of a parent customer is deleted.

## Defining a Retention Type Claim Based Pricing Rule for a Bill Group

### Prerequisites

To define a retention type claim based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PricingRuleRefTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, **C1-RETCLMVAL**, **C1-PRRTPREP**, **C1-PRCRLTY** defined for retention type claim based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To define a retention type claim based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the type of the parent customer.  <b>Note:</b> If you are defining the pricing rule type for the parent customer, then the person type will be <b>Parent Customer</b> .	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type claim based pricing rule.  <b>Note:</b> Select the <b>Retention Type Claim Based Pricing Rule Type</b> option, as the pricing rule type.	Yes  <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.  <b>Note:</b> Select the pricing group option only when the retention type claim based pricing rule has to be defined for a bill group using the pricing group.	No
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes (Conditional)  <b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>• Admin Fee</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)  <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Used to specify the rate option for the price item. The valid value are: <ul style="list-style-type: none"> <li>• Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.
9. Click **Save**.

The retention type claim based pricing rule for a bill group is defined.

**Note:**  
If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

## Defining Characteristics for a Retention Type Claim Based Pricing Rule

### Prerequisites

To define characteristics for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define characteristics for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> <li>Eligible for Billing</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b>. </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule. </div>
Characteristic Value	Used to specify the value for the characteristic type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b>  If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.   On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field. </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule. </div>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type claim based pricing rule.

## Editing a Retention Type Claim Based Pricing Rule of a Bill Group

### Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

## Procedure

To edit a retention type claim based pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.  
The **Pricing** tab appears.
4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Edit** () icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Indicates the fee for the price item parameter.	Not applicable

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: <ul style="list-style-type: none"> <li>• Eligible for Billing</li> </ul>	No
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the Characteristic Value field. On clicking the <b>Search</b> icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	No

6. Click **Save**.

The **Approval Transaction Information** pop-up window appears with the Approval Transaction ID that is generated by the application.

7. Click **OK**

The retention type claim based pricing rule of a bill group is edited.

**Note:**

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

**Defining a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group****Procedure**

To define a retention type claim based pricing rule for a bill group using pricing group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul> <p><b>Note:</b> Select the <b>Retention Type Claim Based Pricing Rule</b> option, as the pricing rule type.</p>	Yes <p><b>Note:</b> If the pricing rule type is not selected then the application displays an error message.</p>
Pricing Group	Used to indicate the pricing group for the bill group. <p><b>Note:</b> You must select a pricing group for the bill group on which the retention type claim based pricing rule is to be defined.</p>	Yes
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes (Conditional) <p><b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.</p>

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>• Admin Fee</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Used to specify the rate option for the price item. The valid value are: <ul style="list-style-type: none"> <li>• Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes
Pricing Group Rule Code	Displays the code of the pricing group rule.	Not applicable
Description	Displays the description of the pricing group rule.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. <b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. <b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type claim based pricing rule for a bill group using a pricing group is defined.

**Note:**

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group using a pricing group is defined, once the approval transaction is approved.

## Defining Characteristics for a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group

**Prerequisites**

To define characteristics for a retention type claim based pricing rule for a bill group using a pricing group, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

**Procedure**

To define characteristics for a retention type claim based pricing rule for a bill group using a pricing group:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule for a bill group

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> <li>Eligible for Billing</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b>. </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule for a bill group using a pricing group. </div>
Characteristic Value	Used to specify the value for the characteristic type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field. </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule for a bill group using a pricing group. </div>

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the retention type claim based pricing rule for a bill group using a pricing group.

## Viewing a Retention Type Claim Based Pricing Rule of a Parent Customer

### Procedure

To view a retention type claim based pricing rule for a parent customer:

1. Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Retention Type Claim Based** – Displays Retention Type Claim Based Pricing Rule of a Parent. It contains the following sections:
  - **Main** – Displays the basic details about the retention type claim based pricing rule of a parent customer.
  - **Price Item Parameters** – Displays the price item parameters defined for the retention type claim based pricing rule of a parent customer.
  - **Characteristics** – Displays the characteristics defined for the retention type claim based pricing rule of a parent customer.

5. View the basic details of a retention type claim based pricing rule of a parent customer in the **Main** section.

6. View the price item parameters of a retention type claim based pricing rule of a parent customer in the **Price Item Parameters** section.

7. View the characteristics of a retention type claim based pricing rule of a parent customer in the **Characteristics** section.

## Retention Type Enrollment Based Pricing

Some of the charges, such as stop-loss premium, administrative fees, etc. are typically calculated based on the number of enrollments. In addition, the ASL limit can also be based on the number of enrollments for the month. These charges can be calculated using the retention type enrollment based pricing rules.

You can define a retention type enrollment based pricing rule at the parent customer and bill group levels. The retention type enrollment based pricing rule at the bill group level takes precedence over the retention type enrollment based pricing rule at the parent customer level. You can define retention type enrollment based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type enrollment

based pricing rule using a retention type enrollment based pricing rule type. It is the retention type enrollment based pricing rule type which helps the system to determine:

- Business object using which the retention type enrollment based pricing rule should be created in the system.
- Whether it is the primary pricing rule type.

**Note:** You must select the **Primary** option while defining a retention type enrollment based pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Retention Type Enrollment Based Pricing Rule Type** screen. At present, the system does not allow you to define any pricing rule type which inherits the attributes from the retention type enrollment based pricing rule type.

- Transaction fields from where the data for retention type enrollment based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1\_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the retention type enrollment based pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type enrollment based pricing rules using the retention type enrollment based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type enrollment based pricing rules.
- Additional information, such as:
  - Whether the price items included in the retention type enrollment based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
  - Retroactivity indicator which helps to determine whether the enrollment transaction is retro or non-retro transaction.

Once a retention type enrollment based pricing rule type is defined, you can create retention type enrollment based pricing rules using the retention type enrollment based pricing rule type. While defining a retention type enrollment based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type enrollment based pricing.

- Whether you want to exempt the retrospective transactions while calculating retention type enrollment based fees.
- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Flat fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat fee for different set of price item parameters combination. For example, you can define one flat fee for the enrollment transactions where health coverage class is set to Medical and health coverage tier is set to Family and another flat fee for the enrollment transactions where health coverage class is set to Dental and health coverage tier is set to Employee.

Once a retention type enrollment based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

## Defining a Retention Type Enrollment Based Pricing Rule Type

### Prerequisites

To define a retention type retention based pricing rule type, you should have:

- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Business Object **C1-PricingRuleRetTypeEnroll** defined for pricing rule.
- Pricing rule type category for the retention type enrollment defined in the application.

### Procedure

To define a retention type retention based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type enrollment based pricing rule type.  <b>Note:</b> You can create a retention type enrollment based pricing rule type using the <b>Claim Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.

5. Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the enrollment based parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the enrollment based pricing rule type.
- **Algorithms** – Used to define the algorithms used for the enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the enrollment based pricing rule type.
- **Enrollment-Specific Additional Data** – Used to specify the enrollment specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul>	Yes
Business Object	Indicate the retention type enrollment based pricing rule type business object for the claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	
Primary	Used to select the checkbox if the pricing rule type is primary.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Claim</li> <li>Discount Arrangement</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Specific Stop-Loss</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note: Related Pricing Rule Types** section appears only when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note: Transaction Field Mapping** section appears only when the pricing rule type is primary.

- Associate algorithms with the enrollment based pricing rule type, if required.
- Define additional data for the enrollment based pricing rule type, if required.
- Add pricing items in the enrollment based pricing rule type, if required.
- Add price item parameters in the enrollment based pricing rule type, if required.
- Define characteristics for the enrollment based pricing rule type, if required.
- Add the enrollment-specific data, if required.
- Click **Save**.

The retention type enrollment based pricing rule type is defined.

## Adding the Enrollment Specific Data in a Pricing Rule Type

### Prerequisites

To add enrollment specific data in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Bill Group Derivation Algorithm defined in the application.

### Procedure

To add enrollment specific data in a pricing rule type in a pricing rule type:

1. Ensure that the **Enrollment-Specific Additional Data** section is expanded when you are adding enrollment specific data for a primary pricing rule type.

The **Enrollment-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retroactivity Indicator Value	Used to specify that retroactivity indicator value should not be a part of enrollment based pricing rule type.  <b>Note:</b> Set the retroactivity indicator value to <b>R</b> if the field should be excluded from enrollment based pricing rule types.	No

2. Enter the required details in the **Enrollment-Specific Additional Data** section.
3. Click **Save**.

The enrollment-specific data has been added in the pricing rule type.

## Editing a Retention Type Enrollment Based Pricing Rule Type

### Prerequisites

To edit the retention type enrollment based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeEnroll** defined for the retention type enrollment based pricing rule type.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for the retention type enrollment based pricing rule type.

- Pricing rule type category for retention type enrollment based pricing rule type defined in the application

### **Procedure**

To edit a retention type enrollment based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the retention type enrollment based pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type.
- **Algorithms** – Used to define the algorithms used for the retention type enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the retention type enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type enrollment based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for the retention type enrollment based pricing rule type.
- **Claim-Specific Additional Data** – Used to specify the retention type enrollment based specific additional data.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the retention type enrollment based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	
Primary	Used to select the checkbox if the retention type enrollment based pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss</li> <li>• Claim</li> <li>• Discounted Agreement</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Specific Stop-Loss</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type enrollment.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type enrollment based pricing rule type, if required.
7. Modify the transaction field mapping in the retention type enrollment based pricing rule type, if required.
8. Add, edit, or remove algorithms with the retention type enrollment based pricing rule type, if required.
9. Modify the additional data for the retention type enrollment based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type enrollment based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type enrollment based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type enrollment based pricing rule type, if required.

13. Modify the enrollment-specific data in the retention type enrollment based pricing rule type, if required.

14. Click **Save**.

The changes made to the Retention Type Enrollment Based Pricing Rule Type are saved.

## **Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer**

### **Prerequisites**

To define a retention type enrollment based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### **Procedure**

To define a retention type enrollment based pricing rule for a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.  
The **Search Result** screen appears.
- In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.  
The **Pricing** tab appears.
- Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes  <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.

- Select the required pricing rule type in the respective field.
- Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- Customer Information** - Displays information about the parent customer for whom you are defining the retention type enrollment based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type enrollment based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type enrollment based pricing rule.

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>Administrative Services Fees</li> <li>Administrative Services Fees (No Mandatory Parameters)</li> <li>AS_RET_ENRB</li> <li>Consultant Oversight Fees</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.  <b>Note:</b> The pricing start date cannot be later than the pricing end date.	Yes (Conditional)  <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the retention type enrollment based pricing will be effective for the price item.  <b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	No

Field Name	Field Description	Mandatory (Yes or No)															
Rate Option	<p>Used to specify the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>• Flat Dollar Per Claim - Agg Daily</li> <li>• Retention - Aggregate Monthly</li> <li>• Claims</li> <li>• Percentage of Claim - Agg Daily</li> <li>• Flat Dollar Per Claim - Agg Daily</li> </ul> <p>On selecting an option from the <b>Rate Option</b> field, following fields appear in a grid:</p> <table border="1" data-bbox="558 642 1227 1969"> <thead> <tr> <th data-bbox="558 642 695 758">Field Name</th> <th data-bbox="695 642 1081 758">Field Description</th> <th data-bbox="1081 642 1227 758">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="558 758 695 905">Price Item Parameter</td> <td data-bbox="695 758 1081 905">Used to specify multiple price item parameters based on which you want to determine the price item utilization.</td> <td data-bbox="1081 758 1227 905">No</td> </tr> <tr> <td data-bbox="558 905 695 1367"></td> <td data-bbox="695 905 1081 1367"> <p><b>Note:</b></p> <p>The Search  icon appears corresponding to the <b>Price Item Parameter</b> field. ## **Defining Characteristics for a Retention Type Enrollment Based Pricing Rule**

### **Prerequisites**

To define characteristics for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### **Procedure**

To define characteristics for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type enrollment based pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> <li>Eligible for Billing</li> </ul> <p><b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b>.</p>	Yes (Conditional) <p><b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule.</p>
Characteristic Value	Used to specify the value for the characteristic type. <p><b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	Yes (Conditional) <p><b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule.

## Editing a Retention Type Enrollment Based Pricing Rule of a Parent Customer

### Prerequisites

To edit a retention type enrollment based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

**Procedure**

To edit a retention type enrollment based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** () icon in the **Edit** column corresponding to the retention type enrollment based pricing rule, whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Parent Customer Information	Displays the parent name.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a parent customer.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.</div>
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> The Search () icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.</div>	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Indicates the fee for the price item parameter.	Not applicable

- **Characteristics** - Used to define the characteristics for the Retention Type Enrollment based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type enrollment based pricing rule of a parent customer.	No
Characteristic Type	Used to indicate the characteristic type for the retention type enrollment based pricing rule of a parent customer. The valid values are: <ul style="list-style-type: none"> <li>• Eligible for Billing</li> </ul>	No
Characteristic Value	Used to specify the characteristic value for the retention type enrollment based pricing rule of a parent customer.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the Characteristic Value field. On clicking the <b>Search</b> icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	No

5. Click **Save**.

**Note:**  
If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type enrollment based pricing rule for a parent customer is defined, once the approval transaction is approved.

6. Click **OK**

The retention type enrollment based pricing rule of a parent customer is edited.

## Deleting a Retention Type Enrollment Based Pricing Rule of a Parent Customer

### Procedure

To delete a retention type enrollment based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.

2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the retention type enrollment based pricing rule that you want to delete.

A message appears confirming whether you want to delete the retention type enrollment based pricing rule.

**Note:** You can delete a retention type enrollment based pricing rule only when it is not yet used in the system.

5. Click **OK**.

The retention type enrollment based pricing rule of a parent customer is deleted.

## Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group

### Prerequisites

To define a retention type enrollment based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOSStatusReason** defined for the policy status.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To define a retention type enrollment based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.

2. In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer. <b>Note:</b> If you are defining the pricing rule type for the parent customer, then the person type will be <b>Parent Customer</b> .	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type enrollment based pricing rule. <b>Note:</b> Select the <b>Retention Type Enrollment Based Pricing Rule</b> option, as the pricing rule type.	Yes <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group. <b>Note:</b> Select the pricing group option only when the retention type enrollment based pricing rule has to be defined for a bill group using the pricing group.	No
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes (Conditional) <b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>• Administrative Services Fees</li> <li>• Administrative Services Fees (No Mandatory Parameters)</li> <li>• AS_RET_ENRB</li> <li>• Consultant Oversight Fees</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. <b>Note:</b> If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	No
Rate Option	Used to specify the rate option for the price item. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar Per Claim - Agg Daily</li> <li>Retention - Aggregate Monthly</li> <li>Claims</li> <li>Percentage of Claim - Agg Daily</li> <li>Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the name of the pricing group rule code. <b>Note:</b> If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	No
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule for a bill group.
8. Add the required details in the main and characteristics section.
  9. Click **Save**.

The retention type enrollment based pricing rule for a bill group is defined.

**Note:**

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

## Editing a Retention Type Enrollment Based Pricing Rule of a Bill Group

### Prerequisites

To edit a retention type enrollment based pricing rule of a bill group, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To edit a retention type enrollment based pricing rule of a bill group:

- Search for a bill group in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View**  icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast**  icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Edit**  icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.
Pricing Group	Displays the pricing group information.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the name of the pricing group rule code. <b>Note:</b> If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Indicates the fee for the price item parameter.	Not applicable

**Note:** If you want to define more than one price item parameter information, click the **Add**  icon. However, if you want to remove more than one price item or price item bundle, click the **Delete**  icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: <ul style="list-style-type: none"> <li>• Eligible for Billing</li> </ul>	No
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the Characteristic Value field. On clicking the <b>Search</b> icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	No

**Note:** If you want to define more than one characteristic, click the **Add**  icon. However, if you want to remove more than one characteristic, click the **Delete**  icon corresponding to the characteristic.

6. Click **Save**.

**Note:**

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

7. Click **OK**

The retention type enrollment based pricing rule of a bill group is edited.

## Deleting a Retention Type Enrollment Based Pricing Rule of a Bill Group

### Procedure

To delete a retention type enrollment based pricing rule of a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

5. Click the **Delete** () icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

A message appears confirming whether you want to delete the retention type enrollment based pricing rule of a bill group.

6. Click **OK**.

The retention type enrollment based pricing rule of a bill group is deleted.

## Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

### Procedure

To define a retention type enrollment based pricing rule for a bill group using pricing group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

- Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>Claim Pricing Rule</li> <li>Discount Arrangement Pricing Rule</li> <li>Retention Type Claim Based Pricing Rule</li> <li>Retention Type Enrollment Based Pricing Rule</li> <li>Specific Stop-Loss (SSL) Pricing Rule</li> </ul> <p><b>Note:</b> Select the <b>Retention Type Enrollment Based Pricing Rule</b> option, as the pricing rule type.</p>	Yes  <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.  <b>Note:</b> You must select a pricing group for the bill group on which a retention type enrollment based pricing rule is to be defined.	Yes
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes (Conditional)  <b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

- Select the appropriate fields in the **Main** section.

- Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>Administrative Services Fees</li> <li>Administrative Services Fees (No Mandatory Parameters)</li> <li>AS_RET_ENRB</li> <li>Consultant Oversight Fees</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. <b>Note:</b> If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	No
Rate Option	Used to specify the rate option for the price item. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar Per Claim - Agg Daily</li> <li>Retention - Aggregate Monthly</li> <li>Claims</li> <li>Percentage of Claim - Agg Daily</li> <li>Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the code of the pricing group rule.	Not applicable
Description	Displays the description of the pricing group rule.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.  <b>Note:</b> The Search  icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

**Note:** If you want to define more than one price item parameter information, click the **Add**  icon. However, if you want to remove more than one price item or price item bundle, click the **Delete**  icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.
8. Add the required details in the main and characteristics section.
  9. Click **Save**.

The retention type claim based pricing rule for a bill group using a pricing group is defined.

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group using a pricing group is defined, once the approval transaction is approved.

## Defining Characteristics for a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

### Prerequisites

To define characteristics for a retention type enrollment based pricing rule for a bill group using a pricing group, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define characteristics for a retention type enrollment based pricing rule for a bill group using a pricing group:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule for a bill group using a pricing group.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> <li>Eligible for Billing</li> </ul> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b>.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.</p> </div>
Characteristic Value	Used to specify the value for the characteristic type. <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.</p> </div>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule for a bill group using a pricing group.

## Viewing a Retention Type Enrollment Based Pricing Rule of a Parent Customer

### Procedure

To view a retention type enrollment based pricing rule for a parent customer:

- Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Retention Type Enrollment Based** – Displays Retention Type Enrollment Based Pricing Rule of a Parent. It contains the following sections:
  - **Main** – Displays the basic details about the retention type enrollment based pricing rule of a parent customer.
  - **Price Item Parameters** – Displays the price item parameters defined for the retention type enrollment based pricing rule of a parent customer.
  - **Characteristics** – Displays the characteristics defined for the retention type enrollment based pricing rule of a parent customer.
- 5. View the basic details of a retention type enrollment based pricing rule of a parent customer in the **Main** section.
- 6. View the price item parameters of a retention type enrollment based pricing rule of a parent customer in the **Price Item Parameters** section.
- 7. View the characteristics of a retention type enrollment based pricing rule of a parent customer in the **Characteristics** section.

## Flat Fee Pricing

---

The Administrative Services Only (ASO) provider would like to charge one-time or recurring flat fee to the self-funded employer. Oracle Revenue Management and Billing enables you to process and bill such one-time and recurring charges to the bill group. The system enables you to define one-time or recurring flat fee for a price item. You can define recurring flat fee based on bill period or frequency. The one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee can be defined using the respective flat fee pricing rules. You can only define one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rules for a bill group.

You can define the flat fee pricing rules for bill groups from the **Customer 360° Information** screen. You can define a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule using the respective flat fee pricing rule type. It is the flat fee pricing rule type which helps the system to determine:

- Business object using which the flat fee pricing rule should be created in the system.

**Note:** You must not select the **Primary** option while defining a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule type.

- Price items for which you can define the flat fee pricing rules.
- Rate options that you can use while defining the pricing for the price item.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional flat fee specific data, such as:
  - Bill segment cancel reason which you want to use when the one-time or recurring flat fee bill segment is canceled due to change in the flat fee amount.
  - Whether the pricing rule type is defined for one-time flat fee or recurring flat fee.
  - Recurring method which indicates that the system should create recurring flat fee charge based on bill period or frequency. This information is required when you are defining a recurring flat fee pricing rule type.

- Bill period that you can use while defining a bill period based recurring flat fee pricing rule. This information is required when you are defining a bill period based recurring flat fee pricing rule type.

Once a one-time flat fee pricing rule type is defined, you can define one-time flat fee pricing rules using the one-time flat fee pricing rule type. While defining a one-time flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the one-time flat fee pricing rule is applicable. Note that you cannot define a one-time flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the one-time flat fee billable charge.
- Date which you want to specify as the start and end dates in the one-time flat fee billable charge.
- Billable charge line type using which you want to create the one-time flat fee billable charge.
- Bill after date which you want to stamp on the one-time flat fee billable charge.
- Flat fee amount for which you want to create the one-time flat fee billable charge.
- Override account when you want to create the one-time flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the one-time flat fee pricing rule type.

Once a bill period based recurring flat fee pricing rule type is defined, you can define bill period based recurring flat fee pricing rules using the bill period based recurring flat fee pricing rule type. While defining a bill period based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the bill period based recurring flat fee pricing rule is applicable. Note that you cannot define a bill period based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the bill period based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the bill period based recurring flat fee billable charge.
- Billable charge line type using which you want to create the bill period based recurring flat fee billable charge.
- Bill period using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the bill period based recurring flat fee billable charge.
- Override account when you want to create the bill period based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the bill period based recurring flat fee pricing rule type.

Once a frequency based recurring flat fee pricing rule type is defined, you can define frequency based recurring flat fee pricing rules using the frequency based recurring flat fee pricing rule type. While defining a frequency based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the frequency based recurring flat fee pricing rule is applicable. Note that you cannot define a frequency based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the frequency based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the frequency based recurring flat fee billable charge.
- Billable charge line type using which you want to create the frequency based recurring flat fee billable charge.
- Frequency using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the frequency based recurring flat fee billable charge.
- Override account when you want to create the frequency based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the frequency based recurring flat fee pricing rule type.

Once a one-time flat fee, bill period based recurring flat fee, or frequency based recurring flat fee pricing rule is defined for a bill group, the system creates the one-time or recurring flat fee billable charge, respectively. The system does not create any price assignment, price list, or price list assignment in case of flat fee pricing.

## Defining a One-Time Flat Fee Pricing Rule Type

### Prerequisites

To define a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

### Procedure

To define a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.  <b>Note:</b> You can create a one-time flat fee pricing rule type using the <b>Flat Fee Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>. </div>	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears only when the pricing rule type is primary.  
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define the transaction field mapping in the primary pricing rule type, if required.

**Note:**

**Transaction Field Mapping** section appears only when the pricing rule type is primary.  
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Define billable charge line types in the flat fees pricing rule type, if required.
15. Add the flat fees - specific additional data in the pricing rule type, if required.

**Note:** This section appears only when the **Business Object** is **Flat Fees Pricing Rule Type**.

16. Click **Save**.

The one-time flat fee pricing rule type is defined.

**Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type**

**Procedure**

To add the one-time flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required.  <b>Note:</b> This field cannot be edited.	No
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. The valid values are: <ul style="list-style-type: none"> <li>• Bill Period</li> <li>• Frequency</li> </ul> <b>Note:</b> This field appears only when you select the checkbox for <b>Recurring Fee</b> field. This field cannot be edited.	Yes (Conditional)  <b>Note:</b> This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.

2. Enter the required details in the **Flat Fees - Specific Additional Data** section.
3. Click **Save**.

The Flat Fees - Specific Additional data is added in the pricing rule type.

**Related Topics**

How to define a one-time flat fee pricing rule type	<a href="#">Defining a One-Time Flat Fee Pricing Rule Type</a> on page 2515
How to edit a one-time flat fee pricing rule type	<a href="#">Editing a One-Time Flat Fee Pricing Rule Type</a> on page 2518

**Editing a One-Time Flat Fee Pricing Rule Type****Prerequisites**

To edit a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

**Procedure**

To edit a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the Pricing rule type whose details you want to edit.

The **Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>. </div>	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Flat Fees</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a one-time flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the required details in the **Main** section.
- Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears only when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Modify the details of transaction field mapping, if required.

**Note:**

## **Defining a One-Time Flat Fee Pricing Rule for a Bill Group**

### **Prerequisites**

To define a one-time flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.

- Price item defined in the application.
- Billable Charge Line Type defined in the application.

### **Procedure**

To define a one-time flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a one-time flat fee pricing rule using the <b>Pricing Rule Type</b> for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Runout</li> </ul>	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the one-time flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Runout</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Date	Used to specify the flat fee charge date.  <b>Note:</b> By default this field displays the policy start date or policy runout start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type.  <b>Note:</b> On clicking the <b>Search</b>  icon, the <b>Billable Charge Line Type Search</b> window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	No
Bill After Date	Used to specify the bills after the specific date.	No
Fee	Used to specify the amount of flat fee.  <b>Note:</b> This field appears only when you select the billable charge line type in the <b>Billable Charge Line Type</b> field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override.  <b>Note:</b> On clicking the <b>Search</b>  icon, the <b>Account Search</b> window appears. On specifying the account, the description of the account appears corresponding to the <b>Bill To Account Override</b> field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a one-time flat fee pricing rule, if required.
7. Click **Save**.

The one-time flat fee pricing rule for a bill group is defined.

**Note:** A billable charge is created and assigned to the one-time flat fee pricing rule.

## Defining Characteristics for a One-Time Flat Fee Pricing Rule

### Prerequisites

To define characteristics for a one-time flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define characteristics for a one-time flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the one-time flat fee pricing rule.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the one-time flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the one-time flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the one-time flat fee pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the one-time flat fee pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the one-time flat fee pricing rule, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the one-time flat fee pricing rule.

**Defining a Bill Period Based Recurring Flat Fee Pricing Rule Type****Prerequisites**

To define a bill period based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

**Procedure**

To define a bill period based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.  <b>Note:</b> You can create a bill period based recurring flat fee pricing rule type using the <b>Flat Fee Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.
  - **Bill Periods** – Used to specify the bill periods for specifying intervals for creating recurring bill segments.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears only when the pricing rule type is primary.  
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note:**

**Transaction Field Mapping** section appears only when the pricing rule type is primary.  
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Define billable charge line types in the flat fees pricing rule type, if required.
- Add the flat fees - specific additional data in the pricing rule type, if required.

**Note:**

This section appears only when the **Business Object** is **Flat Fees Pricing Rule Type**.  
Add the bill periods in the pricing rule type, if required.

- Click **Save**.

The bill period based recurring flat fee pricing rule type is defined.

## Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type

### Procedure

To add the recurring flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required.  <b>Note:</b> This field cannot be edited.	No
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the invoice frequency. The valid values are: <ul style="list-style-type: none"> <li>• Bill Period</li> <li>• Frequency</li> </ul> <b>Note:</b> This field appears only when you select the checkbox for <b>Recurring Fee</b> field. This field cannot be edited.	Yes (Conditional)  <b>Note:</b> This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.

The **Flat Fees - Specific Additional Data** section contains the following sub-section:

The **Bill Periods** sub-section contains the following column in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Bill Period	Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes

- Enter the required details in the **Flat Fees - Specific Additional Data** section.
- Enter the details in the **Bill Periods** sub-section, if required.

**Note:** This sub-section appears only when you have selected **Bill Period** as **Recurring Method**.

- Click **Save**.

The Flat Fees - Specific Additional data is added in the pricing rule type.

## Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group

### Prerequisites

To define a bill period based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for bill period based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

### Procedure

To define a bill period based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a bill period based recurring flat fee pricing rule using the <b>Pricing Rule Type</b> for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.
- Main** – Used to specify basic details about the bill period based recurring flat fee pricing rule.
- Characteristics** – Used to define the characteristics for the bill period based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Billable Charge Line Type Search</b> window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	No
Charge End Date	Used to specify the flat fee charge end date.	No
Bill Period	Used to indicate the bill period for flat fee.	Yes
Fee	Used to specify the amount of flat fee.  <b>Note:</b> This field appears only when you select the billable charge line type in the <b>Billable Charge Line Type</b> field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Account Search</b> window appears. On specifying the account, the description of the account appears corresponding to the <b>Bill To Account Override</b> field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a bill period based recurring flat fee pricing rule, if required.
7. Click **Save**.

The bill period based recurring flat fee pricing rule for a bill group is defined.

**Note:** A billable charge is created and assigned to the bill period based recurring flat fee pricing rule.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the Pricing rule type whose details you want to edit.

The **Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>. </div>	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a frequency based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears only when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

**Note:**

**Transaction Field Mapping** section appears only when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics from the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

**Note:** This section appears only when the **Business Object** is **Flat Fees Pricing Rule Type**.

15. Click **Save**.

The changes made to the frequency based recurring flat fee pricing rule type are saved.

## Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type

### Procedure

To delete a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the frequency based recurring flat fee pricing rule type that you want to delete.

A message appears confirming whether you want to delete the frequency based recurring flat fee pricing rule type.

**Note:** You can delete a frequency based recurring flat fee pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a frequency based recurring flat fee pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The frequency based recurring flat fee pricing rule type is deleted.

## Viewing the Frequency Based Recurring Flat Fee Pricing Rule Type Details

### Procedure

To view the details of a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Broadcast**  icon corresponding to the frequency based recurring flat fee pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

5. View the details of the frequency based recurring flat fee pricing rule type in the **Pricing Rule Type** zone.

## Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group

### Prerequisites

To define a frequency based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

### Procedure

To define a frequency based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View**  icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a frequency based recurring flat fee pricing rule using the <b>Pricing Rule Type</b> for flat fees.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the frequency based recurring flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.</p> </div>	No
Charge End Date	Used to specify the flat fee charge end date.	No
Frequency	Used to indicate the frequency for flat fee.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to specify the amount of flat fee.  <b>Note:</b> This field appears only when you select the billable charge line type in the <b>Billable Charge Line Type</b> field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Account Search</b> window appears. On specifying the account, the description of the account appears corresponding to the <b>Bill To Account Override</b> field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a frequency based recurring flat fee pricing rule, if required.
7. Click **Save**.

The frequency based recurring flat fee pricing rule for a bill group is defined.

**Note:** A billable charge is created and assigned to the frequency based recurring flat fee pricing rule.

How to define characteristics for a frequency based recurring flat fee pricing rule	<a href="#">Defining Characteristics for a Frequency Based Recurring Flat Fee Pricing Rule</a> on page 2554

## **Defining Characteristics for a Frequency Based Recurring Flat Fee Pricing Rule**

### **Prerequisites**

To define characteristics for a frequency based recurring flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### **Procedure**

To define characteristics for a frequency based recurring flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the frequency based recurring flat fee pricing rule.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the frequency based recurring flat fee pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the frequency based recurring flat fee pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the frequency based recurring flat fee pricing rule.

## **Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group**

### **Prerequisites**

To edit a frequency based recurring flat fee pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.

### **Procedure**

To edit a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for frequency based recurring flat fee whose frequency based recurring flat

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details about the frequency based recurring flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Charge End Date	Used to specify the flat fee charge end date.	Yes
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Frequency	Indicates the frequency for flat fee.	Not applicable
Fee	Used to specify the amount of flat fee.  <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field appears only when you have added the billable charge line type in the <b>Billable Charge Line Type</b> field. </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details about the frequency based recurring flat fee pricing rule, if required.
5. Add, edit, or remove characteristics for a frequency based recurring flat fee pricing rule, if required.
6. Click **Save**.

<p><b>Note:</b></p> <p>If <b>Fee</b> is modified then,</p> <ul style="list-style-type: none"> <li>• The frequency based recurring flat fee is saved as a one time charge process.</li> </ul> <p>If <b>Charge Start Date</b> is modified then it checks whether bill segment is already created for a period which is not available for the updated duration then,</p> <ul style="list-style-type: none"> <li>• Bill segment is deleted and existing billable charge is updated.</li> <li>• For recurring flat fee bill segments are not created or is in cancelled status.</li> </ul> <p><b>Note:</b> The modified charge start date should be a future date and not past date.</p>
---

The changes made to a frequency based recurring flat fee pricing rule for a bill group are saved.

## Viewing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group

### Procedure

To view a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to the bill group whose frequency based recurring flat fee pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the frequency based recurring flat fee pricing rule type whose frequency based flat fee pricing rule bill group

The **Pricing Rule** screen appears. It contains the following zone:

- **Flat Fee** – Displays the pricing rule frequency based recurring flat fee details for a bill group. It contains the following sections:
    - **Main** – Displays the basic details about the frequency based recurring flat fee pricing rule.
    - **Characteristics** – Displays the characteristics defined for the frequency based recurring flat fee pricing rule.
6. View the basic details of frequency based recurring flat fee pricing rule in the **Main** section.
  7. View the characteristics defined for the frequency based recurring flat fee pricing rule in the **Characteristics** section.

## Ancillary Pricing

The Administrative Services Only (ASO) provider may process some adhoc charges with respect to preventive care, vaccination, diagnostic, and so on. These adhoc charges may also occur due to some corrections in the claim transactions

which are already billed to the customer. Oracle Revenue Management and Billing enables you to process and bill these ancillary transactions to the self-funded employer.

The system enables you to create an ancillary charge in either of the following ways:

- Create a pass through charge without markup or markdown (i.e. flat charge).
- Create a pass through charge with a flat or percentage based markup or markdown.
- Create a rate based charge using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge.

You can use any custom mechanism or the file upload utility in ORMB to upload the ancillary transactions. The pricing for the ancillary transactions can be defined using the ancillary pricing rules. You can define an ancillary pricing rule at the parent customer and bill group levels. The ancillary pricing rule at the bill group level takes precedence over the ancillary pricing rule at the parent customer level. You can define the ancillary pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an ancillary pricing rule using an ancillary pricing rule type. It is the ancillary pricing rule type which helps the system to determine:

- Business object using which the ancillary pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types will inherit the transaction field mapping details.

**Note:** You must select the **Primary** option while defining an ancillary pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Ancillary Pricing Rule Type** screen.

- Rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.
- Transaction fields from where the data from the ancillary transaction should be stored in the respective fields (for example, the data from the **UDF\_CHAR\_1** transaction field must be stored in the **Parameter 1** field which will be used for deriving the bill group and pricing).
- Algorithm which should be triggered for validating an ancillary transaction.

**Note:** An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for an ancillary transaction.

**Note:** You must create an algorithm using the **C1\_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for an ancillary transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective ancillary pricing rule is derived.

**Note:** A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:

- Whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
- Whether the price items included in the ancillary pricing rule type are eligible for level funding.
- Whether the ancillary charges should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the ancillary pricing rule type.
- Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs.
- Value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.
- Price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
- Rate options that you can use while defining the pricing for the ancillary price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Price item parameters based on which you want to define the price item pricing. Two price item parameters are mandatory in the ancillary pricing rule type – one which stores the billable charge line type from the ancillary transaction and another which stores the pricing arrangement from the ancillary transaction. The following pricing arrangements are supported in the ancillary pricing rule:
  - Pass Through Charge Without Markup and Markdown
  - Pass Through Charge With Markup and Markdown
  - Rate Based Charge Without Markup and Markdown
  - Rate Based Charge With Markup and Markdown

**Note:** The price item parameters (for example, BCHGLINETYPE and PRICINGARRANGEMENT) which you include in the ancillary pricing rule type must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLNG** feature configuration, respectively.

- Additional ancillary-specific information, such as:
  - Identifiers which help to determine whether the ancillary transaction is eligible for billing for not.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Billable charge line type using which you want to create billable charges for markup and markdown.
  - Rule type which indicates the rules which should be executed to determine whether the markup or markdown calculation line is eligible for billing.
  - How the system should interpret the value stored in the pricing arrangement price item parameter (i.e. whether the value means the ancillary charge should be a pass through charge without markup or markdown, pass through charge with markup or markdown, or rate based charge with or without markup or markdown). Accordingly, the system will search for the pricing in the effective ancillary pricing rule where:
    - Billable charge line type matches the one specified in the ancillary transaction
    - Line defined for the billable charge line type has the pricing arrangement as mentioned in the ancillary transaction

- Line item which indicates the SQI using which the ancillary charge should be created. You need to specify the line item for each pricing arrangement which is defined in the ancillary pricing rule type.

Once an ancillary pricing rule type is defined, you can create ancillary pricing rules using the ancillary pricing rule type. While defining an ancillary pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the ancillary pricing.
- Whether you want to define the pricing for a pass through charge without markup or markdown. If you select the **Pass Through without Markup or Markdown** option, you cannot define the pricing for a pass through charge with markup or markdown and the pricing for rate based charge with or without markup or markdown in the ancillary pricing rule. However, if the **Pass Through without Markup or Markdown** option is not selected, you can define pricing for different billable charge line types which can be with markup or markdown or which can be rate based with or without markup or markdown. In addition, if the **Pass Through without Markup or Markdown** option is not selected, by default, the system will define the pricing for a pass through charge without markup or markdown. Depending on the billable charge line type and pricing arrangement information in the ancillary transaction, the system will accordingly fetch the appropriate pricing for billing the ancillary charge. For example, if the ancillary transaction contains BCLT1 as the billable charge line type and PASSMK as the pricing arrangement and the effective ancillary pricing rule contains the following pricing:

Ancillary Pricing	Billable Charge Line Type	Pricing Arrangement	Rate	Pricing Strategy	Markup Amount	Markdown Amount
AP1	BCLT0	Pass Through with Markup or Markdown	-	Markup	\$10	-
AP2	BCLT1	Pass Through with Markup or Markdown	-	Markdown	-	\$5
AP3	BCLT2	Rate Based without Markup or Markdown	\$5	-	-	-
AP4	BCLT3	Rate Based with Markup or Markdown	\$5	Markup	\$10	-
AP5	BCLT4	Rate Based with Markup or Markdown	\$5	Markdown	-	\$5
AP6	-	Pass Through without Markup or Markdown	-	-	-	-

In this case, the system will use the AP2 pricing defined in the ancillary pricing rule. The system will markdown the SQI with the specified amount (i.e. \$5).

- Whether the billable charge line type is eligible for billing or not. Accordingly, the system will create billable charge for the ancillary transaction.

In addition, while defining an ancillary pricing rule for a bill group, you need to indicate the policy status for which the ancillary pricing rule is applicable. You can also specify a pricing group while defining an ancillary pricing rule for a bill group. Once an ancillary pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the bill group.

## Defining an Ancillary Pricing Rule Type

### Prerequisites

To define an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.

- Ancillary pricing rule business object defined in the application.

### **Procedure**

To define an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Pricing Rule Type Business Object	<p>Used to indicate the business object using which you want to create an ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule Type</li> <li>• Ancillary Pricing Rule Type</li> <li>• Claim Pricing Rule Type</li> <li>• Discount Arrangement Pricing Rule Type</li> <li>• Flat Fee Pricing Rule Type</li> <li>• Level Funded (LF) Pricing Rule Type</li> <li>• Retention Type Claim Based Pricing Rule Type</li> <li>• Retention Type Enrollment Based Pricing Rule Type</li> <li>• Specific Stop-Loss (SSL) Pricing Rule Type</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary Pricing Rule Type</b> option from the <b>Pricing Rule Type Business Object</b> list while defining an ancillary pricing rule type.</p>	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify the basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:
  1. Specific Stop Loss
  2. Aggregate Stop Loss
  3. Level Funding

**Note:** You can use any of the above specified pricing rule types as the related pricing rule type in an ancillary pricing rule type.

- **Transaction Field Mapping** – Used to map the transaction fields in a ancillary transaction to the appropriate fields in the ancillary pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

**Note:** The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for an ancillary pricing rule type.

- **Algorithms** – Used to associate the algorithms with an ancillary pricing rule type.
- **Additional Data** – Used to specify additional information about the ancillary pricing rule type.
- **Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

**Note:** There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define the ancillary-specific additional data in an ancillary pricing rule type.

**Note:** Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the following pricing arrangements that are used while defining an ancillary pricing rule type.
  - **Pass Through (Markup or Markdown Optional)**
  - **Pass Through Without Markup or Markdown**
  - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the ancillary pricing rule type.	Yes
Description	Used to specify the description for the ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Ancillary Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> <li>• Level Funded (LF) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary Pricing Rule</b> option from the <b>Pricing Rule Business Object</b> list while defining an ancillary pricing rule type.</p>	Yes
Business Object	Indicates the business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.	No
Pricing Rule Type Category	<p>Used to indicate the category to which the ancillary pricing rule type belongs. The valid value are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss</li> <li>• Ancillary</li> <li>• Claim</li> <li>• Discount Arrangement</li> <li>• Flat Fees</li> <li>• Level Funded</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Specific Stop-Loss</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary</b> option from the <b>Pricing Rule Type Category</b> list while defining an ancillary pricing rule type.</p>	Yes

6. Enter the required details in the **Main** section.

7. Select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Select the **Primary** option in the **Main** section.

The **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear.

9. Select the **Ancillary** option from the **Pricing Rule Type Category** list.
10. Add the related pricing rule types in the ancillary pricing rule type, if required.
11. Map the transaction fields of an ancillary transaction to the appropriate fields in the ancillary pricing rule type.
12. Associate the following algorithms with the ancillary pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_TXNBGDRV	C1_TXNBGDRV	Derive Bill Group
Account and Price Item Derivation	C1_ACCPRIDRV	C1_ACCPRIDRV	Account and Price Item Derivation
Bill After Date Determination	C1_BAFTDRV	C1_BAFTDRV	Bill After Date Determination

13. Define additional data for an ancillary pricing rule type, if required.
14. Add the required price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
15. Add the price item parameters based on which you want to define the ancillary pricing, if required.
16. Define the characteristics for an ancillary pricing rule type, if required.
17. Define the required ancillary-specific additional data in the ancillary pricing rule type.
18. Define the pricing arrangements for an ancillary pricing rule type, if required.
19. Click **Save**.

The ancillary pricing rule type is defined.

## Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type

The **Administrative Services Only (ASO)** feature is designed in such a way that all non-primary pricing rule types should inherit the transaction field mapping details from a primary pricing rule type. These non-primary pricing rule types are added in a primary pricing rule type as the related pricing rule types.

### Prerequisites

To add related pricing rule types in an ancillary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.
- Rule types defined in the application (where the rule type usage is set to **Related Pricing Rule Type Eligibility**)

### Procedure

To add related pricing rule type in an ancillary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an ancillary pricing rule type.

**Note:** The **Related Pricing Rule Types** section appears only when the **Primary** option is selected in the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional)
		<b>Note:</b> This field is required when you are adding a related pricing rule type in the ancillary pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Pricing Rule Type	<p>Used to indicate the non-primary pricing rule type which should inherit the transaction field mapping details from the claim pricing rule type. You can add a non-primary pricing rule type of the following categories in the claim pricing rule type:</p> <ol style="list-style-type: none"> <li>1. Retention Type Claim Based</li> <li>2. Discount Arrangement</li> <li>3. Specific Stop-Loss</li> <li>4. Aggregate Stop-Loss</li> <li>5. Level Funding</li> </ol> <p><b>Note:</b> We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Pricing Rule Type</b> field.. On clicking the <b>Search</b>  icon corresponding to the <b>Pricing Rule Type</b> field, the <b>Pricing Rule Type Search</b> window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the <b>Pricing Rule Type</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the corresponding <b>Sequence</b> field is specified for the related pricing rule type.</p>
Eligibility Rule Type	<p>Used to specify the rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.</p> <p><b>Note:</b> The list includes only those rule types where the rule type usage is set to <b>Related Pricing Rule Type Eligibility</b>.</p>	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the ancillary pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a related pricing rule type from the ancillary pricing rule type, click the **Delete**  icon corresponding to the related pricing rule type.

4. Click **Save**.

The related pricing rule type is added in the ancillary pricing rule type.

## Mapping the Transaction Field in an Ancillary Pricing Rule Type

### Prerequisites

To map the transaction field mapping for an ancillary pricing rule type, you should have:

- Transaction fields defined in the application

### Procedure

To map the transaction field mapping for an ancillary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining an ancillary pricing rule type.

#### **Note:**

This section appears only when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to map to a transaction field which indicates the external system from where the ancillary transaction is received. The information stored in this field is then used for deriving the bill group, parent customer, and policy for the ancillary transaction.	Yes
Parameter 1	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes
Parameter 2	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) <b>Note:</b> This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 3	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) <b>Note:</b> This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 4	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) <b>Note:</b> This field is required when you want to derive the bill group using multiple employee attributes.

Field Name	Field Description	Mandatory (Yes or No)
Incurred Date	Used to map to a transaction field which contains the date when the healthcare service was availed by the employee.	Yes (Conditional) <b>Note:</b> This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the claim transaction.
Paid Date	Used to map to a transaction field which contains the date when the claim amount was paid to the employee.	Yes (Conditional) <b>Note:</b> This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the ancillary transaction.
Source of Funds	Used to map to a transaction field which indicates the source of funding. At present, this field is not used in the system.	No
Composite	Used to map to a transaction field which indicates whether the employee is covered under the composite insurance.	No
Claim Disposition	Used to map to a transaction field which helps to determine how the claim based fees should be charged for the positive and negative claim transactions.	Yes (Conditional) <b>Note:</b> This field is required while calculating the retention type claim based fees for the claim transaction.
Provider's Tax Identification Number	Used to map to a transaction field which states the healthcare provider's identification number. The information stored in this field is then used to determine whether the healthcare provider is excluded from the specific stop-loss coverage.	Yes (Conditional) <b>Note:</b> This field is required while calculating specific stop-loss for the ancillary transaction.
Member ID	Used to map to a transaction field which states the member's identification number. The information stored in this field is then used to determine whether the member is excluded from the specific stop-loss coverage.	Yes (Conditional) <b>Note:</b> This field is required while calculating specific stop-loss for the ancillary transaction.
Main Subscriber ID	Used to map to a transaction field which states the main subscriber's identification number. The information stored in this field is then used to determine whether the main subscriber is excluded from the specific stop-loss coverage.	Yes (Conditional) <b>Note:</b> This field is required while calculating specific stop-loss for the ancillary transaction.

Field Name	Field Description	Mandatory (Yes or No)
Run-in Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a run-in ancillary transaction.	Yes (Conditional) <b>Note:</b> This field is required while defining a ancillary pricing rule type.
Runout Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a runout ancillary transaction. At present, this field is not used in the system.	No
Third Party Identifier	Used to specify the third party identifier to determine that the ancillary transaction is received from an external source system while defining an ancillary pricing rule type.	No
Coverage Start Date	Used to map to a transaction field which indicates the coverage start date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a non-retroactive enrollment transaction.	Yes (Conditional) <b>Note:</b> This field is required while defining a retention type enrollment based pricing rule type.
Coverage End Date	Used to map to a transaction field which indicates the coverage end date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a retroactive enrollment transaction.	Yes (Conditional) <b>Note:</b> This field is required while defining a retention type enrollment based pricing rule type.
Retroactivity Indicator	Used to map to a transaction field which indicates whether the enrollment transaction is a retroactive enrollment transaction.	Yes (Conditional) <b>Note:</b> This field is required while defining a retention type enrollment based pricing rule type.
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.	Yes (Conditional) <b>Note:</b> This field is required while defining a discount arrangement pricing rule.
Covered Charge Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.	Yes (Conditional) <b>Note:</b> This field is required while calculating the discount using a discount guarantee pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.	Yes (Conditional) <b>Note:</b> This field is required while calculating the discount using a discount guarantee or discount share pricing rule.
Accumulation Only Identifier	Used to map to a transaction field which indicates that the ancillary transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the ancillary transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the ancillary transaction.	No
Billing Eligibility Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is eligible for billing.	Yes (Conditional) <b>Note:</b> This field is required while defining an ancillary pricing rule type.
Transaction Upload Date	Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.	Yes (Conditional) <b>Note:</b> This field is required while calculating the discount using a discount guarantee or discount share pricing rule.

**Note:**

The **Search**  icon appears corresponding to each field. On clicking the **Search** icon, the **Transaction Field Search** window appears.

On specifying the transaction field, the description of the transaction field appears corresponding to the respective field.

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.

The transaction fields are mapped to the appropriate fields in the claim pricing rule type.

## Associating an Algorithm with an Ancillary Pricing Rule Type

### Prerequisites

To associate algorithms with an ancillary pricing rule type, you should have:

- Algorithms defined using the **C1\_TXNBGDRV**, **C1\_ACCPRIDRV**, and **C1\_BAFTDRV** algorithm types.

### Procedure

To associate an algorithm with an ancillary pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to invoke the algorithm. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account and Price Item Derivation</b> - Used to derive the account and price item for the ancillary transaction.</li> <li>• <b>Accumulation Billable Charge Post Proc</b> - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the <b>C1-BCDA (Create Billable Charge for Discount)</b> batch.</li> <li>• <b>Accumulation Billable Charge Pre Proc</b> - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the <b>C1-BCDA (Create Billable Charge for Discount)</b> batch.</li> <li>• <b>Accumulation Post Processing</b> - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the <b>C1-ACDA (Accumulate Discount Arrangement)</b> batch.</li> <li>• <b>Accumulation Pre Processing</b> - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the <b>C1-ACDA (Accumulate Discount Arrangement)</b> batch.</li> <li>• <b>Bill After Date Determination</b> - Used to determine the bill after date for the ancillary transaction.</li> <li>• <b>Bill Group Derivation</b> - Used to derive the bill group, parent customer, and policy for the ancillary transaction.</li> <li>• <b>Pricing Rule Post Processing</b> - Used to introduce a custom logic once the effective ancillary pricing rule is derived for the ancillary transaction.</li> <li>• <b>Transaction Validation</b> - Used to introduce a custom validation for the ancillary transaction.</li> </ul> <p><b>Note:</b> You must specify <b>Account and Price Item Derivation</b> and <b>Bill Group Derivation</b> algorithms when you are associating the algorithms with an ancillary pricing rule type.</p>	<p>Yes</p> <p><b>Note:</b> This field is required when you are associating an algorithm with the ancillary pricing rule type.</p>
Sequence	<p>Used to specify the order in which the algorithms with the same system event should be executed.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating an algorithm with the ancillary pricing rule type.</p>

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	<p>Used to indicate the algorithm that you want to execute on the system event.</p> <p><b>Note:</b></p> <p>Once you select the system event, the <b>Search</b>  icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b>  icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating an algorithm with the ancillary pricing rule type.</p>

2. Enter the required details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDRV	Yes	<a href="#">Account and Price Item Derivation (for the Claim Pricing Rule Type Category)</a> on page 2736
Accumulation Billable Charge Post Proc	- <b>Note:</b> An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Billable Charge Pre Proc	- <b>Note:</b> An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Post Processing	- <b>Note:</b> An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Pre Processing	- <b>Note:</b> A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Bill After Date Determination	C1_BAFTDRV	Yes	<a href="#">Bill After Date Determination</a> on page 2785

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Bill Group Derivation	C1_TXNBGDRV	Yes	<a href="#">Bill Group Derivation</a> on page 2733
Pricing Rule Post Processing	- <b>Note:</b> A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Transaction Validation	- <b>Note:</b> An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.	No	-

3. If you want to associate more than one algorithm with an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with an ancillary pricing rule type.

## Defining Additional Data in an Ancillary Pricing Rule Type

### Procedure

To define additional data in an ancillary pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining or editing an ancillary pricing rule type.

**Note:** This section does not appear only when the **Pricing Rule Type Category** is **Flat Fees**.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	<p>Used to indicate whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>This field appears only when the <b>Pricing Rule Type Category</b> is either <b>Ancillary, Claim, Retention Type Claim Based,</b> or <b>Retention Type Enrollment Based.</b></p> <p>If you do not specify the value for this field, by default, it is set to <b>No</b></p> </div>	No
Eligible for Level Funding	<p>Used to indicate whether the price items included in the ancillary pricing rule type are eligible for level funding. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received from an external source system.	No
Accumulation Only Identifier Value	Used to specify the value when received in an ancillary transaction indicates that the ancillary transaction should only be considered for calculating specific stop-loss and aggregate stop-loss. In such case, a transaction leg is not derived for the ancillary transaction.	No
Eligible for Write-Off in Post Runout	<p>Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p>For more information, refer to the <a href="#">Write-Off Charges during Post Runout</a> section.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> By default, the value is set to <b>No.</b></p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Post Runout Write-Off Adjustment Type	<p>Used to specify the adjustment type using which the post runout write-off adjustments must be created.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Post Runout Write-Off Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the <b>Eligible for Write-Off in Post Runout</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>.</p>
Rule Based Price Item Eligibility Field	<p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing. For more information, refer to the <a href="#">Price Item Eligibility</a> on page 2726.</p> <p><b>Note:</b></p> <p>This field appears when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Rule Based Price Item Eligibility Field</b> field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the <b>Rule Based Price Item Eligibility Field</b>.</p>	No
Rule Based Related Pricing Rule Type Eligibility Field	<p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs. For more information, refer to <a href="#">Related Pricing Rule Type Eligibility</a> on page 2724.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Rule Based Related Pricing Rule Type Eligibility Field</b> field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Related Pricing Rule Type Eligibility Field</b> field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.	Yes (Conditional)  <b>Note:</b> This field is required when a value is specified in the <b>Rule Based Price Item Eligibility Field</b> or <b>Rule Based Related Pricing Rule Type Eligibility Field</b> field.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.

The additional data is defined in the ancillary pricing rule type.

#### Related Topics

For more information on...	See...
How to define an ancillary pricing rule type	<a href="#">Defining an Ancillary Pricing Rule Type</a> on page 2561
How to edit an ancillary pricing rule type	<a href="#">Editing an Ancillary Pricing Rule Type</a> on page 2586

## Adding a Price Item in an Ancillary Pricing Rule Type

### Prerequisites

To add a price item in an ancillary pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

### Procedure

To add a price item in an ancillary pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in an ancillary pricing rule type.</p> <p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> () icon, the <b>Price Item Search</b> window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Price Items</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the <b>Add</b> () icon, the following field appears in a grid:</p> <table border="1" data-bbox="462 714 1227 913"> <thead> <tr> <th data-bbox="462 714 602 793">Field Name</th> <th data-bbox="602 714 1031 793">Field Description</th> <th data-bbox="1031 714 1227 793">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="462 793 602 913">Rate Option</td> <td data-bbox="602 793 1031 913">Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td data-bbox="1031 793 1227 913">Yes</td> </tr> </tbody> </table> <p><b>Note:</b></p> <p>If you want to define more than one rate option to the price item in an ancillary pricing rule type, click the <b>Add</b> () icon.</p> <p>However, if you want to remove a price item from an ancillary pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Rate Option</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the <b>Add</b> () icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to the <b>Invoice Type</b> field. On clicking the <b>Search</b> icon, the <b>Invoice Type Search</b> window appears.</p> <p><b>Note:</b> If you want to define more than one invoice type to the price item in an ancillary pricing rule type, click the <b>Add</b> () icon. However, if you want to remove a invoice type from the price item in an ancillary pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Priority</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item for an ancillary pricing rule type, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a price item from an ancillary pricing rule type, click the **Delete** () icon corresponding to the price item.

- Click **Save**.

The price items are added for an ancillary pricing rule type.

## Adding a Price Item Parameter in an Ancillary Pricing Rule Type

### Prerequisites

To add a price item parameter in an ancillary pricing rule type, you should have:

- Parameters defined in the application where parameter usage is set to **Price Item**.
- Parameters associated with the price item.
- Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** defined in the application.
- Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** set as option types in the **C1-ASOBLLNG** feature configuration.
- Transaction fields defined in the application.

### Procedure

To add a price item parameter in an ancillary pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an ancillary pricing for the price item.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Price Item Parameter</b> field, the <b>Parameter Search</b> window appears.  On specifying the parameter, the description of the price item parameter appears corresponding to the <b>Price Item Parameter</b> field.	Yes (Conditional)  <b>Note:</b> This field is required while adding a price item parameter in an ancillary pricing rule type.
Transaction Field	Used to map to a transaction field which contains the parameter value.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Transaction Field</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Transaction Field</b> field, the <b>Transaction Field Search</b> window appears.  On specifying the transaction field, the description of the transaction field appears corresponding to the <b>Transaction Field</b> .	Yes (Conditional)  <b>Note:</b> This field is required while adding a price item parameter in an ancillary pricing rule type.

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level-funding pricing rules at the bill group level.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from an ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added in the ancillary pricing rule type.

## Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type

### Procedure

To add the ancillary-specific additional data in an ancillary pricing rule type:

- Ensure that the **Ancillary-Specific Additional Data** section is expanded when you are defining or editing an ancillary pricing rule type.

The **Ancillary-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility Identifier Value	Used to specify the billing eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) <b>Note:</b> This field is required when you are adding the ancillary-specific additional data.
Billing Non-Eligibility Identifier Value	Used to specify the billing non-eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) <b>Note:</b> This field is required when you are adding the ancillary-specific additional data.

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	<p>Used to specify the transaction field that you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the Markup or Markdown Eligibility Rule Type field is specified.</p>
Markup or Markdown Billable Charge Line Type	<p>Used to specify the billable charge line type using which you want to create the billable charges for markup and markdown.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b>  icon corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	No
Markup or Markdown Eligibility Rule Type	<p>Used to specify the markup or markdown eligibility rule type for the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Rule 1</li> </ul> <p><b>Note:</b> The <b>Markup or Markdown Eligibility Rule Type</b> list includes only those rule-types where the rule type eligibility is <b>ASO Billing Mark Up / Down Eligibility</b>.</p>	No

2. Enter the required details in the **Ancillary-Specific Additional Data** section.
3. Define pricing arrangements for ancillary-specific data in the **Ancillary-Specific Additional Data** section.
4. Click **Save**.

The ancillary-specific additional data is added in the ancillary pricing rule type.

## Defining Pricing Arrangements in an Ancillary Pricing Rule Type

### Prerequisites

To define pricing arrangements in an ancillary pricing rule type, you should have:

- Line Items where category is set to **Ancillary**, as defined in the application.

### Procedure

To add pricing arrangements in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Data** and **Pricing Arrangements** section is expanded when you are defining or editing a pricing rule type.

The **Pricing Arrangements** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Pricing Arrangement Identifier	Used to indicate the pricing arrangement identifier that you can define through an ancillary pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Pass Through (Markup or Markdown Optional)</li> <li>Pass Through without Markup or Markdown</li> <li>Rate Based (Markup or Markdown Optional)</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Pricing Arrangement Identifier Value	Used to specify the value for the pricing arrangement identifier. The valid values are: <ul style="list-style-type: none"> <li>Pass Through (Markup or Markdown Optional)</li> <li>Pass Through without Markup or Markdown</li> <li>Rate Based (Markup or Markdown Optional)</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Line Item	Used to indicate the line item which using the billable charge is created for a pricing arrangement.	Yes (Conditional) <b>Note:</b> This field is required when you are defining pricing arrangements for an ancillary pricing rule type.

2. Enter the required details in the **Pricing Arrangements** section.
3. If you want to define more than one pricing arrangement in an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a pricing arrangement from the ancillary pricing rule type, click the **Delete** (🗑️) icon corresponding to the pricing arrangement identifier.

4. Click **Save**.

The pricing arrangements are defined for the ancillary pricing rule type.

**Defining a Characteristic for a Ancillary Pricing Rule Type****Prerequisites**

To define a characteristic for an ancillary pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

**Procedure**

To define a characteristic for an ancillary pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining an ancillary pricing rule type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for an ancillary pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for an ancillary pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an ancillary pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from an ancillary pricing rule type, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for an ancillary pricing rule type.

## Editing an Ancillary Pricing Rule Type

### Prerequisites

To edit an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

### Procedure

To edit an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to an ancillary pricing rule type whose details you want to edit.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:
  1. Retention Type Claim Based
  2. Discount Arrangement
  3. Specific Stop-Loss
  4. Aggregate Stop-Loss
  5. Level Funding

**Note:** We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.

- **Transaction Field Mapping** – Used to map the transaction fields in a claim transaction to the appropriate fields in the claim pricing rule type. This helps the system to determine the field where the data from the

transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

**Note:** The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for the ancillary pricing rule type.

- **Algorithms** – Used to associate the algorithms with the ancillary pricing rule type.
- **Additional Data** – Used to specify the additional information about the ancillary pricing rule type.
- **Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

**Note:** There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define characteristics for the ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define ancillary-specific additional data.

**Note:** Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the pricing arrangements for the ancillary pricing rule type.
  - **Pass Through (Markup or Markdown Optional)**
  - **Pass Through Without Markup or Markdown**
  - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the ancillary pricing rule type.	Not applicable
Description	Used to specify the description for an ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create an ancillary pricing rule. The valid value is:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Ancillary Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> <li>• Level Funded (LF) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary Pricing Rule</b> option from the <b>Pricing Rule Business Object</b> list while defining an ancillary pricing rule type.</p>	Yes
Business Object	Indicates the ancillary pricing rule type business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	<p>Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.</p> <p><b>Note:</b> This field is disabled when you select the <b>Flat Fees</b> option from the <b>Pricing Rule Type Category</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	<p>Indicates the category to which the ancillary pricing rule type belongs. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss</li> <li>• Ancillary</li> <li>• Claim</li> <li>• Discount Arrangement</li> <li>• Flat Fees</li> <li>• Level Funded</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Specific Stop-Loss</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary</b> option from the <b>Pricing Rule Type Category</b> list while defining an ancillary pricing rule type.</p>	No

**Tip:** Alternatively, you can edit the details of an ancillary pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for ancillary.

5. Modify the required details in the **Main** section, if required.
6. Ensure that the **Ancillary Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
7. Ensure that the **Primary** option is selected in the **Main** section.
8. Add, edit, or remove the related pricing rule types in the ancillary pricing rule type, if required.

**Note:** The **Related Pricing Rule Types** section appears only when the **Primary** option is selected from the **Main** section.

9. Modify the transaction field mapping in the ancillary pricing rule type, if required.

**Note:** The **Transaction Field Mapping** section appears only when the **Primary** option is selected from the **Main** section.

10. Add, edit, or remove algorithms from the ancillary pricing rule type, if required.

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

11. Edit generic additional data for the ancillary pricing rule type, if required.
12. Add, edit, or remove price items in an ancillary pricing rule type, if required.
13. Add, edit, or remove price item parameters in an ancillary pricing rule type, if required.
14. Add, edit, or remove characteristics in an ancillary pricing rule type, if required.
15. Modify the ancillary-specific data in an ancillary pricing rule type, if required.
16. Modify the pricing arrangements in an ancillary pricing rule type, if required.
17. Click **Save**.

The changes made to the ancillary pricing rule type are saved.

## **Deleting an Ancillary Pricing Rule Type**

### **Procedure**

To delete an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the ancillary pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the ancillary pricing rule type.

**Note:** You can delete an ancillary pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete an ancillary pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The ancillary pricing rule type is deleted.

## Defining an Ancillary Pricing Rule for a Parent Customer

### Prerequisites

To define an ancillary pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

### Procedure

To define an ancillary pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create an ancillary pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> <li>• Parent Customer</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> If you are defining the pricing rule type for the parent customer, then the person type will be <b>Parent Customer</b>.         </div>	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the parent customer. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining an ancillary pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining an ancillary pricing rule.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define an ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> The pricing start date cannot be later than the pricing end date.         </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.  <b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge.  <b>Note:</b> This field is enabled when the <b>Rate Option</b> field is selected.	Yes (Conditional)  <b>Note:</b> This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear only when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.  <b>Note:</b> The Search  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	Yes (Conditional)  <b>Note:</b> This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)  <b>Note:</b> This field is required while creating a pricing arrangement with or without the <b>Markup or Markdown Type</b> field and the <b>Rate Based</b> option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)  <b>Note:</b> This field is required while creating a pricing arrangement with the <b>Rate Based</b> option.

Field Name	Field Description	Mandatory (Yes or No)
Rate	Used to indicate the rate for calculating the ancillary charge.  <b>Note:</b> This field is enabled when the <b>Rate Based</b> option is selected.	Yes (Conditional)  <b>Note:</b> This field is required when <b>Rate Based</b> option is selected.
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Markup</li> <li>• Markdown</li> <li>• None</li> </ul>	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <b>Note:</b> This field is enabled when the <b>Pricing Strategy</b> field is selected.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Pricing Strategy</b> field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Markup or Markdown Type</b> field is selected.

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.

The ancillary pricing rule is defined for a parent customer.

## **Defining Characteristics for an Ancillary Pricing Rule**

### **Prerequisites**

To define characteristics for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

### Procedure

To define characteristics for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the ancillary pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the ancillary pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for an ancillary pricing rule.

## Editing an Ancillary Pricing Rule of a Parent Customer

### Prerequisites

To edit an ancillary pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

### Procedure

To edit a ancillary pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.  
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.  
The **Pricing** screen appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** () icon in the **Parent Customer Pricing Rules** zone, corresponding to the ancillary pricing rule whose details you want to edit.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.

Field Name	Field Description
Parent Customer Information	Displays the parent customer for whom the ancillary pricing rule is created.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item that is used to create ancillary pricing rule.	Not applicable
Pricing Start Date	Displays the date from when the ancillary pricing rule is effective.	Not applicable
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	Not applicable
Rate Option	Displays the rate option that you want to use while defining the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pass Through without Markup or Markdown	<p>Indicates that markup or markdown should not be calculated for the ancillary charge.</p> <p><b>Note:</b> This field is enabled when the <b>Rate Option</b> field is selected.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.</p>

The following fields appear only when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	<p>Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.</p> <p><b>Note:</b></p> <p>The Search  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while creating a pricing arrangement with or without rate based billable charge line type.</p>
Billable	<p>Used to indicate whether the ancillary charge is eligible for billing or not.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while creating a pricing arrangement with or without the <b>Rate Based</b> option.</p>
Rate Based	<p>Used to indicate whether the ancillary charge is calculated using a particular rate.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while creating a pricing arrangement with the <b>Rate Based</b> option.</p>
Rate	<p>Used to indicate the rate for calculating the ancillary charge.</p> <p><b>Note:</b> This field is enabled when the <b>Rate Based</b> option is selected.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when <b>Rate Based</b> option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Markup</li> <li>• Markdown</li> <li>• None</li> </ul>	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <p><b>Note:</b> This field is enabled when the <b>Pricing Strategy</b> field is selected.</p>	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Pricing Strategy</b> field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Markup or Markdown Type</b> field is selected.

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

5. Modify the details in the **Main** section.
6. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
7. Click **Save**.

The changes made to an ancillary pricing rule for a parent customer are saved.

## Defining an Ancillary Pricing Rule for a Bill Group

### Prerequisites

To define an ancillary pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

### Procedure

To define an ancillary pricing rule for a bill group:

- Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone appears.

- Click the **Add** link in the upper-right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the type of the parent customer.  <b>Note:</b> If you are defining the pricing rule type for the parent customer, then the person type will be <b>Parent Customer</b> .	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule.  <b>Note:</b> Select the <b>Ancillary Pricing Rule Type</b> option, as the pricing rule.	Yes  <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group which is used while defining the pricing.	No
Policy Status	Used to indicate the policy status for the pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul> <b>Note:</b> An ancillary pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out end date is missing.	Yes

6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the bill group. It contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

- **Main** – Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges.

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item that is used to create ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective.	Yes
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option that you want to use while defining the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge.  <b>Note:</b> This field is enabled when the <b>Rate Option</b> field is selected.	Yes (Conditional)  <b>Note:</b> This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear only when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	Yes (Conditional)  <b>Note:</b> This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)  <b>Note:</b> This field is required while creating a pricing arrangement with or without the <b>Markup or Markdown Type</b> field and the <b>Rate Based</b> option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional)  <b>Note:</b> This field is required while creating a pricing arrangement with the <b>Rate Based</b> option.
Rate	Used to indicate the rate for calculating the ancillary charge.  <b>Note:</b> This field is enabled when the <b>Rate Based</b> option is selected.	Yes (Conditional)  <b>Note:</b> This field is required when <b>Rate Based</b> option is selected.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Markup</li> <li>• Markdown</li> <li>• None</li> </ul>	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <p><b>Note:</b> This field is enabled when the <b>Pricing Strategy</b> field is selected.</p>	Yes (Conditional) <p><b>Note:</b> This field is required when the <b>Pricing Strategy</b> field is selected.</p>
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional) <p><b>Note:</b> This field is required when the <b>Markup or Markdown Type</b> field is selected.</p>

- **Characteristics** – Used to define the characteristics for the ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.

The ancillary pricing rule for a bill group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the ancillary pricing rule.

## Discount Pricing

The Administrative Services Only (ASO) provider may offer some discounts to its network hospitals and providers. A portion of these discounts is then charged to the self-funded employer. Oracle Revenue Management and Billing enables you to calculate and bill the discount share or discount guarantee amount to the self-funded employer. The system enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 2608
- [Discount Guarantee](#) on page 2608

The pricing for the share or guarantee discount can be defined using the respective discount pricing rules. You can define a share or guarantee discount pricing rule only at the parent customer level. You can define the share or guarantee discount pricing rules for parent customers from the **Customer 360° Information** screen. You can define a share or guarantee discount pricing rule using a discount arrangement pricing rule type.

Once a discount arrangement pricing rule type is defined, you can create discount pricing rules using the discount arrangement pricing rule type. Once a discount pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the parent customer.

The following new batches are introduced in this release:

- **C1-ACDA** – Once the transaction legs and calculation lines are created for discount, this batch is used to accumulate the discount. It also calculates the required minimum or maximum limit on the contract. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.

- **C1-BCDA** – Once the discount is accumulated, this batch is used to create the credit (if any) and discount billable charges. It is also used to calculate the bill after date. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.

## Types of Discount Arrangement

The Oracle Revenue Management and Billing enables you to calculate the discount using the following methods:

- [Discount Share](#) on page 2608
- [Discount Guarantee](#) on page 2608

### Discount Share

In the discount share method, the discount is calculated while processing the claim transaction. It is calculated as follows:

**Billable Discount Amount = Discount Savings Amount \* Discount Percentage**

Note that the discount share percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

### Discount Guarantee

In the discount guarantee method, the discount is calculated while processing the claim transaction. It is calculated as follows:

**Targeted Guaranteed Amount = Covered Charge Amount \* Discount Guarantee Percentage**

**Billable Discount Amount = Discount Savings Amount - Targeted Guaranteed Amount**

Note that the discount guarantee percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

## Defining a Discount Arrangement Pricing Rule Type

### Prerequisites

To define a discount arrangement pricing rule type, you should have:

- Discount Arrangement pricing rule type business object defined in the application
- Discount Arrangement pricing rule business object defined in the application

### Procedure

To define a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	<p>Used to indicate the business object using which you want to create a discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Stop-Loss (ASL) Pricing Rule Type</li> <li>Ancillary Pricing Rule Type</li> <li>Claim Pricing Rule Type</li> <li>Discount Arrangement Pricing Rule Type</li> <li>Flat Fee Pricing Rule Type</li> <li>Level Funded (LF) Pricing Rule Type</li> <li>Retention Type Claim Based Pricing Rule Type</li> <li>Retention Type Enrollment Based Pricing Rule Type</li> <li>Specific Stop-Loss (SSL) Pricing Rule Type</li> </ul> <p><b>Note:</b> You must select the <b>Discount Arrangement Pricing Rule Type</b> option from the <b>Pricing Rule Type Business Object</b> list while defining a discount arrangement pricing rule type.</p>	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Discount Arrangement Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
- Click **OK**.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the discount arrangement pricing rule type.
- Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define characteristics for the discount arrangement pricing rule type.
- DA – Specific Additional Data** – Used to specify discount arrangement-specific additional data in the discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the discount arrangement pricing rule type.	Yes
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value are:</p> <ul style="list-style-type: none"> <li>• <b>Aggregate Stop-Loss (ASL) Pricing Rule</b></li> <li>• <b>Ancillary Pricing Rule</b></li> <li>• <b>Claim Pricing Rule</b></li> <li>• <b>Discount Arrangement Pricing Rule</b></li> <li>• <b>Flat Fee Pricing Rule</b></li> <li>• <b>Level Funded (LF) Pricing Rule</b></li> <li>• <b>Retention Type Claim Based Pricing Rule</b></li> <li>• <b>Retention Type Enrollment Based Pricing Rule</b></li> <li>• <b>Specific Stop-Loss (SSL) Pricing Rule</b></li> </ul> <p><b>Note:</b> You must select the <b>Discount Arrangement Pricing Rule</b> option from the <b>Pricing Rule Business Object</b> list while defining a discount arrangement pricing rule type.</p>	Yes
Business Object	Indicates the business object using which you are defining the discount arrangement pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	<p>Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type.</p> <p><b>Note:</b> You must not select the <b>Primary</b> option while defining a discount arrangement pricing rule type.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	<p>Used to indicate the category to which the discount arrangement pricing rule type belongs. The valid value is:</p> <ul style="list-style-type: none"> <li>• <b>Aggregate Stop-Loss</b></li> <li>• <b>Ancillary</b></li> <li>• <b>Claim</b></li> <li>• <b>Discount Arrangement</b></li> <li>• <b>Flat Fees</b></li> <li>• <b>Level Funded</b></li> <li>• <b>Retention Type Claim Based</b></li> <li>• <b>Retention Type Enrollment Based</b></li> <li>• <b>Specific Stop-Loss</b></li> </ul> <p><b>Note:</b> You must select the <b>Discount Arrangement</b> option from the <b>Pricing Rule Type Category</b> list while defining a discount arrangement pricing rule type.</p>	Yes

6. Enter the required details in the **Main** section.
7. Select the **Discount Arrangement Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Ensure that **Primary** option is not selected when you are defining a discount arrangement pricing rule type.
9. Select the **Discount Arrangement** option from the **Pricing Rule Type Category** list.
10. Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRDIS	C1_ACCPRDIS	Account and Priceitem Derivation For Discount Arrangement

11. Define additional data for a discount arrangement pricing rule type, if required.
12. Add the required price items in the discount arrangement pricing rule type.
13. Add the price item parameters in the discount arrangement pricing rule type, if required.
14. Define characteristics for a discount arrangement pricing rule type, if required.
15. Add discount arrangement-specific additional data in the discount arrangement pricing rule type.
16. Click **Save**.

The discount arrangement pricing rule type is defined.

## Associating Algorithms with a Discount Arrangement Pricing Rule Type

### Prerequisites

To associate algorithms with a discount arrangement pricing rule type, you should have:

- An algorithm defined using the **C1\_ACCPRIDIS** algorithm type.

### Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a *discount arrangement pricing rule type*.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	<p>Used to indicate the system event when you want to execute the algorithm. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account and Price Item Derivation</b> - Used to derive the account and price item for the discount arrangement transaction.</li> <li>• <b>Accumulation Billable Charge Post Proc</b> - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the <b>C1-BCDA (Create Billable Charge for Discount)</b> batch.</li> <li>• <b>Accumulation Billable Charge Pre Proc</b> - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the <b>C1-BCDA (Create Billable Charge for Discount)</b> batch.</li> <li>• <b>Accumulation Post Processing</b> - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the <b>C1-ACDA (Accumulate Discount Arrangement)</b> batch.</li> <li>• <b>Accumulation Pre Processing</b> - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the <b>C1-ACDA (Accumulate Discount Arrangement)</b> batch.</li> <li>• <b>Pricing Rule Post Processing</b> - Used to introduce a custom logic once the effective discount arrangement pricing rule is derived for the discount arrangement transaction.</li> <li>• <b>Transaction Validation</b> - Used to introduce a custom validation for the discount arrangement transaction.</li> </ul>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p> </div>
Sequence	<p>Used to specify the order in which the algorithms with the same system event must be executed.</p>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	<p>Used to specify the algorithm that you want to execute on the system event.</p> <p><b>Note:</b></p> <p>Once you select the system event, the <b>Search</b> (🔍) icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b> (🔍) icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating an algorithm with the discount arrangement pricing rule type.</p>

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDIS	Yes	Information will be available soon...
Accumulation Billable Charge Post Proc	-	No	-
	<p><b>Note:</b> An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Billable Charge Pre Proc	-	No	-
	<p><b>Note:</b> An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Post Processing	-	No	-
	<p><b>Note:</b> An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accumulation Pre Processing	-	No	-
	<p><b>Note:</b> A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Pricing Rule Post Processing	- <b>Note:</b> A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Transaction Validation	- <b>Note:</b> An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.	No	-

- If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.
- Click **Save**.

The algorithms are associated with the discount arrangement pricing rule type.

## Defining Additional Data in a Discount Arrangement Pricing Rule Type

### Procedure

To define additional data in a discount arrangement pricing rule type:

- Ensure that the **Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Level Funding	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> If you do not specify the value for this field, by default, it is set to <b>No</b>.</div>	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received from an external source system. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> At present, this field is not used in the system.</div>	Not applicable
Accumulation Only Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the discount charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> For more information, refer to the <a href="#">Write-Off Charges during Post Runout</a> section. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> By default, the value is set to <b>No</b>.</div>	No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which you want to create post runout write-off adjustment. <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field appears when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>. The <b>Search</b>  icon appears corresponding to the <b>Post Runout Write-Off Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the <b>Post Runout Write-Off Adjustment Type</b> field.</div>	Yes (Conditional) <div style="border: 1px solid black; padding: 2px;"><b>Note:</b> This field is required when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>.</div>

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Price Item Eligibility Field	<p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.</p> <p><b>Note:</b> For more information, refer to the <a href="#">Price Item Eligibility</a> on page 2726 section.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Rule Based Price Item Eligibility Field</b> field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the <b>Rule Based Price Item Eligibility Field</b>.</p>	No
Rule Based Eligibility Value	<p>Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.</p>	Yes (Conditional) <p><b>Note:</b> This field is required when a value is specified in the <b>Rule Based Price Item Eligibility Field</b> field.</p>

- Enter the required details in the **Additional Data** section.
- Click **Save**.

The additional data is defined in the discount arrangement pricing rule type.

## Adding a Price Item in a Discount Arrangement Pricing Rule Type

### Prerequisites

To add a price item in a discount arrangement pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

### Procedure

To add a price item in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in the discount arrangement pricing rule type.</p> <p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears. On specifying the price item, the description of the price item appears corresponding to the <b>Price Item</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the <b>Add</b> () icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b></p> <p>If you want to define more than one rate option to the price item in the discount arrangement pricing rule type, click the <b>Add</b> () icon. However, if you want to remove a price item from a discount arrangement pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Rate Option</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the <b>Add</b> () icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to the <b>Invoice Type</b> field. On clicking the <b>Search</b> icon, the <b>Invoice Type Search</b> window appears.</p> <p><b>Note:</b> If you want to define more than one invoice type to the price item in a discount arrangement pricing rule type, click the <b>Add</b> () icon. However, if you want to remove a invoice type from the price item in a discount arrangement pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Priority</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in a discount arrangement pricing rule type, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a price item from a discount arrangement pricing rule type, click the **Delete** () icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a discount arrangement pricing rule type.

## Adding a Price Item Parameter in a Discount Arrangement Pricing Rule Type

### Prerequisites

To add a price item parameter in a discount arrangement pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

### Procedure

To add a price item parameter in a discount arrangement pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	<p>Used to specify the parameter which you can use while defining a discount arrangement pricing for the price item.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Price Item Parameter</b> field, the <b>Parameter Search</b> window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the <b>Price Item Parameter</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while adding a price item parameter in a discount arrangement pricing rule type.</p>
Transaction Field	<p>Used to map to a transaction field which contains the parameter value.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Transaction Field</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Transaction Field</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the transaction field, the description of the transaction field appears corresponding to the <b>Transaction Field</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while adding a price item parameter in a discount arrangement pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level-funding pricing rules at the bill group level.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from a discount arrangement pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added in the discount arrangement pricing rule type.

## **Defining a Characteristic for a Discount Arrangement Pricing Rule Type**

### **Prerequisites**

To define characteristics for a discount arrangement pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

### **Procedure**

To define characteristics for a discount arrangement pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for a discount arrangement pricing rule type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	<p>Used to specify the value for the characteristic type.</p> <p><b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining a characteristic for a discount arrangement pricing rule type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for a discount arrangement pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from a discount arrangement pricing rule type, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for a discount arrangement pricing rule type.

## Defining the Discount Specific Data in a Discount Arrangement Pricing Rule Type

### Procedure

To add the discount-specific data in a discount arrangement pricing rule type:

- Ensure that the **DA - Specific Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **DA - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Guaranteed Discount	<p>Used to indicate whether the discount arrangement pricing rule type is defined for discount guarantee or discount share. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Yes</b> - Used when you want to create a discount guarantee pricing rule type.</li> <li><b>No</b> - Used when you want to create a discount share pricing rule type.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Discount Billable Charge Line Type	<p>Used to indicate a billable charge line type using which you want to create the charge line for discount.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Discount Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Discount Billable Charge Line Type</b> field.</p>	Yes
Credit Billable Charge Line Type	<p>Used to indicate a billable charge line type using which you want to create the charge line for any credit to the customer.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Credit Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Credit Billable Charge Line Type</b> field.</p>	Yes
Minimum Limit Pricing Rule Type	<p>Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the minimum limit for the discount.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Minimum Limit Pricing Rule Type</b> field. On clicking the <b>Search</b> icon, the <b>Pricing Rule Type Search</b> window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the <b>Minimum Limit Pricing Rule Type</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.</p>

Field Name	Field Description	Mandatory (Yes or No)
Minimum Limit Price Item	<p>Used to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Minimum Limit Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Details</b> window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Minimum Limit Price Item</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.</p>
Maximum Limit Pricing Rule Type	<p>Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the maximum limit for the discount.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Maximum Limit Pricing Rule Type</b> field. On clicking the <b>Search</b> icon, the <b>Pricing Rule Type Search</b> window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the <b>Maximum Limit Pricing Rule Type</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.</p>
Maximum Limit Price Item	<p>Used to indicate the price item whose pricing you want to use while calculating the maximum limit for the discount. Used to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Maximum Limit Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Details</b> window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Maximum Limit Price Item</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.</p>

2. Enter the required details in the **DA - Specific Additional Data** section.
3. Click **Save**.

The discount-specific data is added in the discount arrangement pricing rule type.

### **Related Topics**

## Editing a Discount Arrangement Pricing Rule Type

### Prerequisites

To edit a discount arrangement pricing rule type, you should have:

- Discount arrangement pricing rule type business object defined in the application.
- Discount arrangement pricing rule business object defined in the application.

### Procedure

To edit a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with the discount arrangement pricing rule type.
- **Additional Data** – Used to specify additional information in the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define characteristics for the discount arrangement pricing rule type.
- **DA-Specific Additional Data** – Used to specify discount arrangement-specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the discount arrangement pricing rule type.	Not applicable
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value is:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Ancillary Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> <li>• Level Funded (LF) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul> <p><b>Note:</b> You must select the <b>Discount Arrangement Pricing Rule</b> option from the <b>Pricing Rule Business Object</b> list while defining a discount arrangement pricing rule type.</p>	Yes
Business Object	Indicates the business object used while defining the discount arrangement pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the discount arrangement pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	<p>Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type.</p> <p><b>Note:</b> You must not select the <b>Primary</b> option while defining the discount arrangement pricing rule type.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	<p>Indicates the category to which the discount arrangement pricing rule type belongs. The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Ancillary</li> <li>Claim</li> <li>Discount Arrangement</li> <li>Flat Fees</li> <li>Level Funded</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Specific Stop-Loss</li> </ul>	No
<p><b>Note:</b> You must select the <b>Discount Arrangement</b> option from the <b>Pricing Rule Type Category</b> list while defining a discount arrangement pricing rule type.</p>		

**Tip:** Alternatively, you can edit the details of a discount arrangement pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the required details in the **Main** section.
- Ensure that the **Discount Arrangement Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
- Ensure that **Primary** option is not selected when you are editing a discount arrangement pricing rule type.
- Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

- Modify the additional data for a discount arrangement pricing rule type, if required.
- Add, edit, or remove price items in the discount arrangement pricing rule type, if required.
- Add, edit, or remove price item parameters in the discount arrangement pricing rule type, if required.
- Add, edit, or remove characteristics in the discount arrangement pricing rule type, if required.
- Modify the discount arrangement-specific data in the discount arrangement pricing rule type, if required.
- Click **Save**.

The changes made to the discount arrangement pricing rule type are saved.

## Deleting a Discount Arrangement Pricing Rule Type

### Procedure

To delete a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the discount arrangement pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the discount arrangement pricing rule type.

**Note:** You can delete a discount arrangement pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a discount arrangement pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The discount arrangement pricing rule type is deleted.

## Defining a Discount Arrangement Pricing Rule for a Parent Customer

### Prerequisites

To define a discount arrangement pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Discount Arrangement**.
- Price items associated with the discount arrangement pricing rule type.

### Procedure

To define a discount arrangement pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.  
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.  
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.  
The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> <li>Parent Customer</li> </ul>	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a discount arrangement pricing rule.	Yes

- Select the required pricing rule type in the respective field.
- Click **OK**.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays information about the parent customer for whom you are defining the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the discount arrangement pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the discount arrangement pricing rule.

- Main** – Used to specify basic details about the discount arrangement pricing rule.
- Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.
- Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- Characteristics** – Used to define characteristics for the discount arrangement pricing rule.

**Note:** The **Discount Details**, **Discount Limits**, and **Exclusion** sections appear only when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> The pricing start date cannot be later than the pricing end date. </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective.  <b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> <li>• <b>Manually (At Regular Intervals)</b> - If you select this option from the list, the bill after date which is specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCDA</b> batch is stamped on the credit billable charge.</li> <li>• <b>Yearly</b> - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date.</li> </ul> <b>Note:</b> The bill after date is stamped on the credit billable charges and not on the discount billable charges.	Yes

7. Enter the required details in the **Main** section.
8. Add the required discount details in the discount arrangement pricing rule.
9. Define the minimum and maximum discount limits on the contract in the discount arrangement pricing rule, if required.
10. Add the exclusion details of a network or a provider in the discount arrangement pricing rule, if required.
11. Define characteristics for the discount arrangement pricing rule, if required.
12. Click **Save**.

The discount arrangement pricing rule is defined for the parent customer.

## Adding the Discount Details in a Discount Arrangement Pricing Rule

### Prerequisites

To add the discount details in a discount arrangement pricing rule, you should have:

- Parameters defined in the application
- Parameters associated with the price item.

### Procedure

To add the discount details in a discount arrangement pricing rule:

1. Ensure that the **Discount Details** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	<p>Used to indicate the parameter using which you want to define an eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the <b>Price Item Parameter</b> field.</p> <p>You can only select those price item parameters which are effective during the date range specified in the discount arrangement pricing rule.</p> <p>If a parameter associated with the price item is mandatory, then by default, the parameter appears in the <b>Price Item Parameter</b> field.</p>	No
Parameter Value	<p>Used to specify the value for the price item parameter.</p> <p><b>Note:</b></p> <p>If you select a predefined parameter, the <b>Search</b>  icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> window appears.</p> <p>On specifying the parameter value, the description of the parameter value appears corresponding to the <b>Parameter Value</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the parameter associated with the price item is mandatory.</p>
Discount Percentage	Used to specify the discount share or discount guarantee percentage.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Discount Per Claim	Used to specify the maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	No

**Note:** The **Discount Details** section appears only when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Details** section.
- If you want to define a discount percentage for another price item parameter and parameter value combination, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a discount percentage for a price item parameter and parameter value combination from the discount arrangement pricing rule, click the **Delete (🗑)** icon corresponding to the combination.

- Click **Save**.

The discount details are added in the discount arrangement pricing rule.

## **Defining the Discount Limits in a Discount Arrangement Pricing Rule**

### **Prerequisites**

To define the discount limits in a discount arrangement pricing rule, you should have:

- An account, to which you want to credit the discount, defined in the application
- Minimum limit pricing rule type and minimum limit price item defined in the respective discount arrangement pricing rule type when you want to define minimum discount limit on the contract
- Maximum limit pricing rule type and maximum limit price item defined in the respective discount arrangement pricing rule type when you want to define maximum discount limit on the contract

### **Procedure**

To define the discount limits in a discount arrangement pricing rule:

- Ensure that the **Discount Limits** section appears when you are defining or editing a discount arrangement pricing rule.

The **Discount Limits** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Used to indicate whether you want to define minimum or maximum discount limit on the contract.	No

Field Name	Field Description	Mandatory (Yes or No)
Discount Credit Account	Used to indicate the account to which you want to credit the discount when the minimum or maximum discount limit is defined on the contract.  <b>Note:</b> This field is enabled only when the <b>No Limit</b> option is not selected.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>No Limit</b> option is not selected.
Settlement Days	Used to specify the number of days which helps to calculate the final settlement date (which is pricing end date + the settlement days). The valid values: <ul style="list-style-type: none"> <li>• 30 Days</li> <li>• 60 Days</li> <li>• 90 Days</li> <li>• 120 Days</li> <li>• 150 Days</li> <li>• 180 Days</li> </ul>	Yes

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount Limit	Displays the type of discount limit. The valid values are: <ul style="list-style-type: none"> <li>• Minimum</li> <li>• Maximum</li> </ul>	Not applicable
Select	On clicking the check box corresponding to the type of discount limit, you can define minimum or maximum discount limit on the contract.  <b>Note:</b> This field is enabled only when the <b>No Limit</b> option is not selected.	Yes
Limit Type	Used to indicate whether you want to define a flat limit or an enrollment based limit. The valid values are: <ul style="list-style-type: none"> <li>• Enrollment Based</li> <li>• Flat</li> </ul> <b>Note:</b> This field is enabled only when the <b>No Limit</b> option is not selected.  If you select the check box corresponding to the <b>Minimum</b> discount limit, the <b>Limit Type</b> field corresponding to the <b>Minimum</b> discount limit is enabled.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a minimum or maximum discount limit in the discount arrangement pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Amount Limit	Used to specify the flat minimum or maximum discount amount.  <b>Note:</b> This field is enabled only when: <ul style="list-style-type: none"> <li>The <b>No Limit</b> option is not selected.</li> <li>The minimum or maximum limit type is set to <b>Flat</b>.</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when the minimum or maximum limit type is set to <b>Flat</b> .

**Note:** The **Discount Limits** section appears only when you specify a price item in the **Main** section.

- Enter the required details in the **Discount Limits** section.
- Click **Save**.

The discount limits are defined in the discount arrangement pricing rule.

## Excluding a Network or Provider in a Discount Arrangement Pricing Rule

### Procedure

To exclude a network or provider in a discount arrangement pricing rule:

- Ensure that the **Exclusion** section appears when you are defining or editing a discount arrangement pricing rule.

The **Exclusion** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Used to indicate whether you want to exclude the discount offered to certain network hospitals and providers during the discount share or discount guarantee calculation. The valid values are: <ul style="list-style-type: none"> <li>Network</li> <li>Provider</li> </ul> <b>Note:</b> The system creates the transaction legs and calculation lines for such excluded network hospitals and providers, but does not accumulate the discount.	Yes (Conditional)  <b>Note:</b> This field is required while excluding a network or provider in the discount arrangement pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Level Identifier	Used to specify the network or provider ID.	Yes (Conditional)  <b>Note:</b> This field is required while excluding a network or provider in the discount arrangement pricing rule.

- Enter the required details in the **Exclusion** section.
- If you want to exclude more than one network or provider in the discount arrangement pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a network or provider from the exclusion list, click the **Delete** (🗑️) icon corresponding to the network or provider.

- Click **Save**.

The network or provider is excluded in the discount arrangement pricing rule.

## Defining a Characteristic for a Discount Arrangement Pricing Rule

### Prerequisites

To define a characteristic for a discount arrangement pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

### Procedure

To define a characteristic for a discount arrangement pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the discount arrangement pricing rule.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the discount arrangement pricing rule.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the discount arrangement pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the discount arrangement pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the discount arrangement pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the discount arrangement pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the discount arrangement pricing rule.

## **Editing a Discount Arrangement Pricing Rule of a Parent Customer**

### **Procedure**

To edit a discount arrangement pricing rule of a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discount arrangement pricing rule, whose details you want to edit.

The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays information about the parent customer for whom the discount arrangement pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the discount arrangement pricing rule is defined.
Pricing Rule Type	Indicates the discount arrangement pricing rule type using which the discount arrangement pricing rule is defined.

- Main** – Used to specify basic details in the discount arrangement pricing rule.
- Discount Details** – Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- Discount Limits** – Used when you want to define minimum and maximum discount limit on the contract.
- Exclusion** – Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- Characteristics** – Used to define characteristics for the discount arrangement pricing rule.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective.  <b>Note:</b> The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective.  <b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	<p>Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Manually (At Regular Intervals)</b> - If you select this option from the list, the bill after date which is specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCDA</b> batch is stamped on the credit billable charge.</li> <li>• <b>Yearly</b> - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date.</li> </ul> <p><b>Note:</b> The bill after date is stamped on the credit billable charges and not on the discount billable charges.</p>	Yes

5. Modify the required details in the **Main** section.
6. Modify the required discount details in the discount arrangement pricing rule.
7. Modify the minimum or maximum discount limit on the contract in the discount arrangement pricing rule, if required.
8. Modify the exclusion list in the discount arrangement pricing rule, if required.
9. Define, edit, or remove characteristics from the discount arrangement pricing rule, if required.
10. Click **Save**.

The changes made to the discount arrangement pricing rule are saved.

## Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

## Level Funding Pricing

Level funding is a type of self-funding. It offers all benefits of traditional self-funding. However, it provides one additional benefit which helps to stabilize monthly costs of the self-funded employer to pay off the claim, ancillary, claim based fee, enrollment based fee, and discount charges.

Oracle Revenue Management and Billing enables you to process and bill the funds charges to the self-funded employer in either of the following ways:

- Pay the fixed flat amount in every bill period
- Pay the amount based on the enrollment based limit in every bill period

The system enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level-funding. If the price items are eligible for level-funding, you can then include them in the level-funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some surplus or deficit in funds at the time of settlement which is ideally at the end of year. In such case, the

system enables you configure whether a flat amount or percentage of surplus should be retained by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer.

The pricing for the level-funding can be defined using the level-funding pricing rules. You can define a level-funding pricing rule at the parent customer and bill group levels. The level-funding pricing rule at the bill group level takes precedence over the level-funding pricing rule at the parent customer level. You can define the level-funding pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a level-funding pricing rule using a level-funding pricing rule type. It is the level-funding pricing rule type which helps the system to determine:

- Business object using which the level-funding pricing rule should be created in the system.

**Note:** You must not select the **Primary** option while defining a level-funding pricing rule type.

- Algorithm which should be triggered for deriving the account and price item while creating the funds transaction legs.

**Note:** You must create an algorithm using the **C1\_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective level-funding pricing rule is derived.

**Note:** A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:
  - Whether the funds charge should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the level-funding pricing rule type.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
  - Value which the output parameter in the rule should return when the price item in the level-funding pricing rule type should be considered for processing.
- Price items for which you can define level-funding pricing rules using the level-funding pricing rule type.
- Rate options that you can use while defining the pricing for the level-funded price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional level-funding specific information, such as:
  - Whether the level-funding premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule.
  - Bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the level-funded premium.
  - Price item whose pricing you want to use for calculating the level-funded premium.
  - LF billable charge line type using which you want to create billable charges for level-funded premium.
  - GL only contract type which indicates the contract against which the claim, ancillary, claim based fees, enrollment based fees, and discount charges that are settled against the funds must be debited. The distribution code on the GL only contract type will indicate the GL account against which charges settled against the funds must be debited.

- Liability distribution code will indicate the GL account against which charges settled against the funds must be credited.
- Number of days before which you want to create a To Do for reminding the self-funded employer to renew the level-funded agreement.
- Surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.
- Deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.
- Domestic provider billable charge line type using which you want to create billable charges for the claim, claim based fees, enrollment based fees, ancillary, and discount charges which are settled against the funds for a domestic provider.
- Markup or markdown billable charge line type using which you want to create billable charges for markup or markdown which are settled against the funds.
- Rule type which indicates the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
- Rule type which indicates the rules that should be executed to determine whether the level-funded premium is for a domestic provider.
- Transaction field which you want to use in the rules as the output parameter to determine whether the level-funded premium is for a domestic provider.

Once a level-funding pricing rule type is defined, you can create level-funding pricing rules using the level-funding pricing rule type. While defining a level-funding pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Specific stop-loss pricing rule of the parent customer whose accumulation parameters you want to inherit for the level-funding. On selecting a specific stop-loss pricing rule, the level-funding pricing date range is set automatically. The level-funding pricing date range is same as the specific stop-loss pricing rule.
- Rate option which you want to use while defining the level-funding pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - **Immediately** – If you select this option from the list, the bill after date is not calculated. The funds billable charge is billed immediately in the next bill cycle.
  - **Manually (At Required Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
  - **Never** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
  - **Yearly** – If you select this option from the list, the bill after date is set to the pricing end date in the funds billable charge.
  - **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the funds billable charge.

**Note:** The accumulation parameters, such as incurred start date, incurred end date, paid start date, paid end date, and settlement days are automatically inherited from the parent customer's specific stop-loss pricing rule. You cannot change any accumulation parameter except the settlement days.

- Settlement days which helps to calculate the settlement date (which is pricing end date, incurred end date, or paid end date whichever is later + the settlement days)
- Whether the customer would like to renew or cancel the level-funded agreement.
- Whether a flat amount or percentage of surplus should be retained by the ASO provider at the time of settlement.
- Whether a flat amount or percentage of deficit should be offered as discount to the self-funded employer at the time of settlement.

However, while defining a level-funding pricing rule for a bill group, you need to specify the following:

- The policy status in which the level-funding pricing rule is applicable.
- Price item for which you want to define the pricing.
- Parent customer's level-funding pricing rule from which you want to inherit the accumulation parameters.

**Note:**

The pricing date range is derived from the parent customer's level-funding pricing rule because the level-funding pricing rules for parent customer and bill group should have the same date range.

The settlement fund price item is derived from the level-funding pricing rule type using which the level-funding pricing rule is created.

- Rate option which you want to use while defining the level-funding pricing.
- Price items whose charges should be accumulated against the level funded price items so that it can be settled against the funds.
- Whether the line items and markup or markdown in a particular claim pricing rule should be accumulated.

**OR**

Whether the line items which are associated with the **Level Funded** pricing rule type category should be accumulated.

- Whether the charges created using the billable charge line types in a particular ancillary pricing rule should be accumulated.

**OR**

Whether the charges created using the billable charge line types where the **Pricing Rule Type Category** characteristic is set to **Ancillary** should be accumulated.

- Whether the discount calculated using a particular discount arrangement pricing rule should be accumulated.
- Whether the charges calculated using the retention type claim based or retention type enrollment based pricing for a price item should be accumulated.

You can also specify a pricing group while defining a level-funding pricing rule for a bill group. Once a level-funding pricing rule is defined for a bill group, the system creates a price assignment in a price list and assigns the price list to the bill group.

The following new batches are introduced in this release:

- **C1-ACLF** – This batch is used to accumulate the charges which are to be settled against the funds. During the accumulation post-processing, the level funded billable charges (which are created through the TFM process) are posted against the GL accounts which are derived using the GL only contract type and liability distribution code information in the level-funding pricing rule type. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCLF** – Once the level funded billable charges are accumulated, this batch is used to create the accumulated level funded billable charges. It is also used to calculate the bill after date. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Defining a Level Funded Pricing Rule Type

### Prerequisites

To define a level funded pricing rule type, you should have:

- Level Funded Pricing Rule Type business object defined in the application.
- Level Funded Pricing Rule business object defined in the application.

### Procedure

To define a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a level funded pricing rule type.  <b>Note:</b> You can create a discount arrangement pricing rule type using the <b>Level Funded Pricing Rule Type (C1-PricingRuleTypeDA)</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Level Funded (LF) Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify the basic details about the level funded pricing rule type.
- **Algorithms** – Used to associate the algorithms with a level funded pricing rule type.
- **Additional Data** – Used to specify the additional information about the level funded pricing rule type.
- **Price Items** – Used to add the price items for which you can define the level funded pricing rules using the level funded pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a level funded pricing rule type.
- **DA – Specific Additional Data** – Used to define the level funded - specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the level funded pricing rule type.	Yes
Description	Used to specify the description for the level funded pricing rule type.	Yes
Detailed Description	Used to specify additional information about the level funded pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is: <ul style="list-style-type: none"> <li>Level Funded (LF) Pricing Rule</li> </ul>	Yes
Business Object	Indicates the business object using which you are defining the level funded pricing rule type.	Not applicable
Status	Used to indicate the status of the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> You must not select the <b>Primary</b> option while defining a level funded pricing rule type. </div>	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> <li>Level Funded</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Ensure that **Primary** option is not selected when you are defining a level funded pricing rule type.
8. Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRISL	C1_ACCPRISL	Account and Priceitem Derivation For Level Funded
Accumulation Post Processing	C1-LFACPOST	C1-LFACPOST	Level Funded Accumulation Post Processing

9. Define additional data for a level funded pricing rule type, if required.
10. Add the required price items in the level funded pricing rule type.
11. Add the price item parameters in the level funded pricing rule type, if required.
12. Define characteristics for a level funded pricing rule type, if required.
13. Add level funded-specific additional data in the level funded pricing rule type.
14. Click **Save**.

The level funded pricing rule type is defined.

## Associating an Algorithm with a Level Funded Pricing Rule Type

### Prerequisites

To associate algorithms with a level funding pricing rule type, you should have:

- An algorithm defined using the **C1\_ACCPRIDIS** algorithm type.

### Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the discount arrangement pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> <li>• Account and Price Item Derivation</li> <li>• Accumulation Billable Charge Post Proc</li> <li>• Accumulation Billable Charge Pre Proc</li> <li>• Accumulation Post Processing</li> <li>• Accumulation Pre Processing</li> <li>• Pricing Rule Post Processing</li> <li>• Transaction Validation</li> </ul>	Yes  <b>Note:</b> This field is required when you are associating an algorithm with the discount arrangement pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the discount arrangement pricing rule type.
Algorithm	Used to specify the algorithm.  <b>Note:</b> Once you select the system event, the <b>Search</b>  icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b>  icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the discount arrangement pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Sequence	Algorithm
Account and Price Item Derivation	10	C1_ACCPRIDIS

3. If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to disassociate an algorithm from the discount arrangement pricing rule type, click the **Delete**  icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the discount arrangement pricing rule type.

## **Defining Additional Data in a Level Funded Pricing Rule Type**

### **Procedure**

To define additional data in a level funded pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining or editing a level funded pricing rule type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether price items included in the level funded pricing rule type are eligible for specific stop-loss. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Eligible for Level Funding	Used to indicate whether price items included in the level funded pricing rule type are eligible for level funding. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the level funded transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the level funded transaction is received from an external source system.	No
Accumulation Only Identifier Value	Used to specify the identifier value to determine whether the level funded transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the level funded charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> For more information, refer to the <a href="#">Write-Off Charges during Post Runout</a> section. </div>	No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which you want to create post runout write-off adjustment. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b>  This field appears when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>.   The <b>Search</b>  icon appears corresponding to the <b>Post Runout Write-Off Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.   On specifying the adjustment type, the description of the adjustment type appears corresponding to the <b>Eligible for Write-Off in Post Runout</b> field. </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <b>Note:</b> This field is required when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>. </div>

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Price Item Eligibility Field	<p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.</p> <p><b>Note:</b></p> <p>For more information, refer to the <a href="#">Price Item Eligibility</a> on page 2726 section.</p> <p>This field appears when the <b>Eligible for Write-Off in Post Runout</b> field is set to <b>Yes</b>.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Rule Based Price Item Eligibility Field</b> field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears.</p> <p>On specifying the field name, the description of the field name appears corresponding to the <b>Rule Based Price Item Eligibility Field</b>.</p>	No
Rule Based Eligibility Value	<p>Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.</p>	Yes (Conditional)

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.

The additional data is defined for the pricing rule type.

## Adding a Price Item in a Level Funded Pricing Rule Type

### Prerequisites

To add a price item in a level funded pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration

- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

### **Procedure**

To add a price item in a level funded pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a level funded pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in the level funded pricing rule type.</p> <p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Price Item</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a rate option and bill to account in the level funded pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the <b>Add</b> () icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b></p> <p>If you want to define more than one rate option to the price item in the level funded pricing rule type, click the <b>Add</b> () icon.</p> <p>However, if you want to remove a price item from a level funded pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Rate Option</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the <b>Add</b> () icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.</td> <td>Yes</td> </tr> </tbody> </table> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to the <b>Invoice Type</b> field. On clicking the <b>Search</b> icon, the <b>Invoice Type Search</b> window appears.</p> </div> <div style="background-color: #f0f0f0; padding: 10px; margin-top: 10px;"> <p><b>Note:</b></p> <p>If you want to define more than one invoice type to the price item in a level funded pricing rule type, click the <b>Add</b> () icon.</p> <p>However, if you want to remove a invoice type from the price item in a level funded pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Priority</b> field.</p> </div>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.	No									

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in a level funded pricing rule type, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a price item from a level funded pricing rule type, click the **Delete** () icon corresponding to the **Price Item** field.

4. Click **Save**.

The price items are added for a level funded pricing rule type.

### Related Topics

## Adding a Price Item Parameter in a Level Funded Pricing Rule Type

### Prerequisites

To add a price item parameter in a level funded pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

### Procedure

To add a price item parameter in a level funded pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a level funded pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	<p>Used to specify the parameter which you can use while defining a level funded pricing for the price item.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Price Item Parameter</b> field, the <b>Parameter Search</b> window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the <b>Price Item Parameter</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a price item parameter in a level funded pricing rule type.</p>
Transaction Field	<p>Used to specify the transaction field from where the data should be retrieved.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Transaction Field</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Transaction Field</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the transaction field, the description of the transaction field appears corresponding to the <b>Transaction Field</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a price item parameter in a level funded pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rule.	No
Eligible for Level Funding	Used to specify whether the price item parameter can be used in level funding.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from a level funded pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added for a level funded pricing rule type.

### Related Topics

For more information on...	See...
How to define a level funded pricing rule type	<a href="#">Defining a Level Funded Pricing Rule Type</a> on page 2644
How to edit a level funded pricing rule type	<a href="#">Editing a Level Funded Pricing Rule Type</a> on page 2658

## Defining Characteristics for a Level Funded Pricing Rule Type

### Prerequisites

To define characteristics for a level funded pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

### Procedure

To define characteristics for a level funded pricing rule type:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a discount arrangement pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule type.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from a level funded pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for a level funded pricing rule type.

## Defining the Level Funded Specific Additional Data in a Level Funded Pricing Rule Type

### Prerequisites

To define level funded specific additional data in a level funded pricing rule type, you should have:

- A rule type defined for **Markup or Markdown Eligibility Rule Type** and **Domestic Provider Eligibility Rule Type** field.

### Procedure

To add the level-funded data in a level funded pricing rule type:

- Ensure that the **Level Funded - Specific Additional Data** section is expanded when you are defining or editing a level funded pricing rule type.

The **Level Funded - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Arrangement	<p>Used to indicate whether the level-funded premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule. The valid values are:</p> <ul style="list-style-type: none"> <li>• Enrollment Based Premium</li> <li>• Flat Rate Based Premium</li> </ul>	Yes
Settlement Fund Pricing Rule Type	<p>Used to indicate the bill period based recurring flat fee pricing rule type or the retention type enrollment based pricing rule type which you want to use for calculating the level-funded premium.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Settlement Fund Pricing Rule Type</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Settlement Fund Pricing Rule Type</b> field, the <b>Contract Type Search</b> window appears.</p> <p>On specifying the contract type, the description of the contact type appears corresponding to the <b>Settlement Fund Pricing Rule Type</b> field.</p> </div>	Yes
Settlement Fund Price Item	<p>Used to indicate the price item that you want to use for calculating the level-funded premium.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Settlement Fund Price Item</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Settlement Fund Price Item</b> field, the <b>Price Item Details</b> window appears.</p> <p>On specifying the price item details, the description of the price item details appears corresponding to the <b>Settlement Fund Price Item</b> field.</p> </div>	Yes
LF Billable Charge Line Type	<p>Used to indicate the level funded billable charge line type using which you want to create the billable charges for level-funded settlement purposes.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>LF Billable Charge Line Type</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>LF Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type Search</b> field.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
GL Only Contract Type	<p>Used to indicate the contract against which the level-funded billable charges for claim, ancillary, claim based fees, enrollment based fees, discount, specific stop-loss, and aggregate stop-loss must be debited.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>GL Only Contract Type</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>GL Only Contract Type</b> field, the <b>Contract Type Search</b> window appears.</p>	Yes
Liability Distribution Code	<p>Used to indicate the GL account against which the level-funded billable charges (that are settled against the level-funded premium billable charge) must be credited.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Liability Distribution Code</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Liability Distribution Code</b> field, the <b>Distribution Code Search</b> window appears.</p> <p>On specifying the distribution code, the description of the distribution code appears corresponding to the <b>Liability Distribution Code</b> field.</p>	Yes
Renewal Decision Lead Time	<p>Used to specify the number of days before which you want to create a To Do for reminding the self-funded employer to renew the level-funded agreement.</p>	Yes
Surplus Billable Charge Line Type	<p>Used to indicate the surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Surplus Billable Charge Line Type</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Surplus Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Surplus Billable Charge Line Type</b> field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Deficit Billable Charge Line Type	<p>Used to indicate the deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Deficit Billable Charge Line Type</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Deficit Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Deficit Billable Charge Line Type</b> field.</p>	Yes
Domestic Provider Billable Charge Line Type	<p>Used to indicate the domestic provider billable charge line type using which you want to create level-funded settlement billable charge for a domestic provider.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Domestic Provider Billable Charge Line Type</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Domestic Provider Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Domestic Provider Billable Charge Line Type</b> field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to indicate the markup or markdown billable charge line type using which you want to create the billable charges for markup or markdown which are settled against the level-funded premium.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	No
Markup or Markdown Eligibility Rule Type	Used to indicate the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	<p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Rule Based Markup or Markdown Eligibility Field Type</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the eligibility field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are specifying a markup or markdown eligibility rule type in a level funded pricing rule type.</p>
Domestic Provider Eligibility Rule Type	Used to indicate the rules that should be executed to determine whether the level-funded premium is for a domestic provider.	No
Rule Based Domestic Provider Claim Eligibility Field	<p>Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the level-funded premium is for a domestic provider.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the eligibility field, the description of the field appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are specifying a domestic provider eligibility rule type in a level funded pricing rule type.</p>

2. Enter the required details in the **Level Funded - Specific Additional Data** section.
3. Click **Save**.

The level funded-specific data is added in the level funded pricing rule type.

## **Editing a Level Funded Pricing Rule Type**

### **Prerequisites**

To edit a level funded pricing rule type, you should have:

- Level funded pricing rule type business object defined in the application.
- Level funded pricing rule business object defined in the application.

### **Procedure**

To edit a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** – Used to associate the algorithms with a discount arrangement pricing rule type.
- **Additional Data** – Used to specify the additional information about the discount arrangement pricing rule type.
- **Price Items** – Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define characteristics for a discount arrangement pricing rule type.
- **Level Funded - Specific Additional Data** – Used to define the discount arrangement - specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Pricing Rule Type	Displays the level funded pricing rule type.	Not applicable
Description	Used to specify the description for the level funded pricing rule type.	Yes
Detailed Description	Used to specify additional information about the level funded pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is: <ul style="list-style-type: none"> <li>• Level Funded (LF) Pricing Rule</li> </ul>	Yes
Business Object	Indicates the business object used while defining the level funded pricing rule type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to indicate whether the pricing rule type is primary. <b>Note:</b> You must not select the <b>Primary</b> option while defining the level funded pricing rule type.	Not applicable
Pricing Rule Type Category	Indicates the pricing rule type category for the level funded pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Level Funded</li> </ul>	No

**Tip:** Alternatively, you can edit the details of a level funded pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the following algorithms with the level funded pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIS	C1_ACCPRID	Account and Priceitem Derivation For Level Funded
Accumulation Post Processing	C1-LFACPOST	C1-LFACPOST	Level Funded Accumulation Post Processing

- Modify the additional data for a level funded pricing rule type, if required.
- Add, edit, or remove the required price items in the level funded pricing rule type.
- Add, edit, or remove the price item parameters in the level funded pricing rule type, if required.
- Add, edit, or remove characteristics for a level funded pricing rule type, if required.
- Modify the level funded-specific additional data in the level funded pricing rule type, if required.
- Click **Save**.

The changes made to the level funded pricing rule type are saved.

## Deleting a Level Funded Pricing Rule Type

### Procedure

To delete a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the level funded pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the level funded pricing rule type.

**Note:** You can delete a level funded pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a level funded pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The level funded pricing rule type is deleted.

## Viewing the Level Funded Pricing Rule Type Details

### Procedure

To view the details of a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Broadcast**  icon corresponding to the level funded pricing rule type whose details you want to view.  
The **Pricing Rule Type** zone appears.
- View the details of the level funded pricing rule type in the **Pricing Rule Type** zone.

## Defining a Level Funded Pricing Rule for a Parent Customer

### Prerequisites

To define a level funded pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Level Funded**.
- Price items associated with the level funded pricing rule type.
- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level-funding.

### Procedure

To define a level funded pricing rule for a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View**  icon corresponding to the parent customer whose pricing details you want to view.  
The **Person** tab appears in the **Customer 360° Information** screen.
- Click the **Pricing** tab.  
The **Pricing** tab appears.
- Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.  
The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a level funded pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: <ul style="list-style-type: none"> <li><b>Parent Customer</b></li> </ul>	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a level funded pricing rule.	Yes

- Select the required pricing rule type in the respective field.

6. Click **OK**.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the parent customer for whom you are defining the level funded pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the level funded pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the level funded pricing rule.

- **Main** – Used to specify basic details in the level funding pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters in a level funded pricing rule.
- **Final Settlement Rules** – Used to define the final settlement rules when the customer decides to renew or cancel the level-funded agreement.
- **Characteristics** – Used to define characteristics for the level funded pricing rule.

**Note:**

The **Accumulation Parameters** and **Final Settlement Rules** section appear only when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the level funded pricing rule.	Yes
Parent Customer's Pricing Rule	Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer.  <b>Note:</b> On selecting the specific stop-loss pricing rule of the parent customer, the level funded <b>Pricing Start Date</b> and <b>Pricing End Date</b> field is set automatically.	Yes
Pricing Start Date	Used to specify the date from when the level funded pricing rule is effective.  <b>Note:</b> The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the level funded pricing rule is effective.  <b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	<p>Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Immediately</b> - If you select this option from the list, the bill after date is not calculated. The level-funded settlement billable charge is billed immediately in the next bill cycle.</li> <li>• <b>Manually (At Regular Intervals)</b> - If you select this option from the list, the bill after date which is specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCLF</b> batch is stamped on the level-funded settlement billable charge.</li> <li>• <b>Monthly</b> - If you select this option from the list, the bill after date is set to the last day of the month.</li> <li>• <b>On Settlement</b> - If you select this option from the list, the bill after date is set to the settlement date in the level-funded settlement billable charge.</li> <li>• <b>Yearly</b> - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date in the level-funded settlement billable charge.</li> </ul>	Yes
Underwriter Review	<p>Used to indicate whether the underwriter settlement review flag is on or off. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default the value of this option type is set to <b>Yes</b>.</p>	No

7. Enter the required details in the **Main** section.
8. Define the accumulation parameters in the level funded pricing rule.
9. Define the final settlement rules in the level funded pricing rule.
10. Define characteristics for the level funded pricing rule, if required.
11. Click **Save**.

The level funded pricing rule is defined for the parent customer.

## Defining Accumulation Parameters in a Level Funded Pricing Rule

### Procedure

To define accumulation parameters in a level funding pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining a level funded pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays a blank field. An accumulation group ID is generated when accumulation parameter values are defined for a level funded pricing rule.  <b>Note:</b> It is a read-only field.	Not applicable
Settlement Account ID	Used to indicate the account ID to whom the settlement amount is credited.	Yes
Incurred Start Date	Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.  <b>Note:</b> It is a read-only field.	Not applicable
Incurred End Date	Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.  <b>Note:</b> It is a read-only field.	Not applicable
Paid Start Date	Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.  <b>Note:</b> It is a read-only field.	Not applicable
Paid End Date	Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.  <b>Note:</b> It is a read-only field.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Settlement Days	<p>Used to indicate the number of days as the settlement days which help in calculating the settlement date. The valid values are:</p> <ul style="list-style-type: none"> <li>• 30 Days</li> <li>• 60 Days</li> <li>• 90 Days</li> <li>• 120 Days</li> <li>• 150 Days</li> <li>• 180 Days</li> </ul> <p><b>Note:</b> Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later plus the settlement days.</p>	Not applicable

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.

The accumulation parameters are defined in the level funded pricing rule.

## Defining the Final Settlement Rules in a Level Funded Pricing Rule

### Procedure

To define the final settlement rules in a level funded pricing rule:

1. Ensure that the **Final Settlement Rules** section is expanded when you are defining or editing a level funded pricing rule type.

The **Final Settlement Rules** section contains the following sub-sections:

- **Customer Renews** - Used to define the final settlement rules when the customer renews the contract.
- **Customer Cancels** - Used to define the final settlement rules when the customer cancels the contract.
- **Renewal Decision** - Used to indicate the status for the upcoming level funded contract.

The **Customer Renews** sub-section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>									
Final Settlement Mode	Displays the final settlement mode when the customer renews the level funded agreement. The valid values are: <ul style="list-style-type: none"> <li>Final Settlement Surplus</li> <li>Final Settlement Deficit</li> </ul>	Not applicable									
Final Settlement Option	Used to indicate the final settlement option when the customer renews the level funded agreement. <table border="1" data-bbox="480 512 1260 825"> <thead> <tr> <th><b>Field Name</b></th> <th><b>Field Description</b></th> <th><b>Mandatory (Yes or No)</b></th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to indicate the final settlement option in case of surplus.</td> <td>Yes</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to indicate the final settlement option in case of deficit.</td> <td>Yes</td> </tr> </tbody> </table>	<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>	Final Settlement Surplus	Used to indicate the final settlement option in case of surplus.	Yes	Final Settlement Deficit	Used to indicate the final settlement option in case of deficit.	Yes	Not applicable
<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>									
Final Settlement Surplus	Used to indicate the final settlement option in case of surplus.	Yes									
Final Settlement Deficit	Used to indicate the final settlement option in case of deficit.	Yes									
Flat/ Percentage	Used to indicate the final settlement payment type when the customer renews the level funded agreement. <table border="1" data-bbox="480 940 1260 1457"> <thead> <tr> <th><b>Field Name</b></th> <th><b>Field Description</b></th> <th><b>Mandatory (Yes or No)</b></th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to indicate the payment type in case of surplus. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar</li> <li>Percentage</li> </ul> </td> <td>Yes</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to indicate the payment type in case of deficit. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar</li> <li>Percentage</li> </ul> </td> <td>Yes</td> </tr> </tbody> </table>	<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>	Final Settlement Surplus	Used to indicate the payment type in case of surplus. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar</li> <li>Percentage</li> </ul>	Yes	Final Settlement Deficit	Used to indicate the payment type in case of deficit. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar</li> <li>Percentage</li> </ul>	Yes	Not applicable
<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>									
Final Settlement Surplus	Used to indicate the payment type in case of surplus. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar</li> <li>Percentage</li> </ul>	Yes									
Final Settlement Deficit	Used to indicate the payment type in case of deficit. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar</li> <li>Percentage</li> </ul>	Yes									

Field Name	Field Description	Mandatory (Yes or No)									
Percentage Retained	Used to specify the percentage retained by the ASO provider when the customer renews the level funded agreement.	Not applicable									
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to specify the percentage of surplus that should be retained by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Percentage</b>.</td> <td>Yes (Conditional)</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to specify the percentage of deficit that should be offered as a discount by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Percentage</b>.</td> <td>Yes (Conditional)</td> </tr> </tbody> </table>		Field Name	Field Description	Mandatory (Yes or No)	Final Settlement Surplus	Used to specify the percentage of surplus that should be retained by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Percentage</b> .	Yes (Conditional)	Final Settlement Deficit	Used to specify the percentage of deficit that should be offered as a discount by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Percentage</b> .	Yes (Conditional)
	Field Name		Field Description	Mandatory (Yes or No)							
Final Settlement Surplus	Used to specify the percentage of surplus that should be retained by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Percentage</b> .	Yes (Conditional)									
Final Settlement Deficit	Used to specify the percentage of deficit that should be offered as a discount by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Percentage</b> .	Yes (Conditional)									
Final Settlement Deficit	Used to specify the percentage of deficit that should be offered as a discount by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Percentage</b> .	Yes (Conditional)									
Flat Effective Payout	Used to specify the actual amount which should be retained by the ASO provider or offered as a discount, when the customer renews the level funded agreement.	Not applicable									
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Final Settlement Surplus</td> <td>Used to specify the actual amount of surplus that should be retained by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Flat Dollar</b>.</td> <td>Yes (Conditional)</td> </tr> <tr> <td>Final Settlement Deficit</td> <td>Used to specify the actual amount of deficit that should be offered as a discount by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Flat Dollar</b>.</td> <td>Yes (Conditional)</td> </tr> </tbody> </table>		Field Name	Field Description	Mandatory (Yes or No)	Final Settlement Surplus	Used to specify the actual amount of surplus that should be retained by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Flat Dollar</b> . Yes
	Field Name		Field Description	Mandatory (Yes or No)				
Final Settlement Surplus	Used to specify the actual amount of surplus that should be retained by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Flat Dollar</b> .	Yes						
Final Settlement Deficit	Used to specify the actual amount of deficit that should be offered as a discount by the ASO provider. <b>Note:</b> This field appears when the <b>Flat/Percentage</b> field is <b>Flat Dollar</b> .	Yes						

The **Renewal Decision** sub-section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Renewal Decision	Used to indicate the upcoming status of the level funded contract. The valid values are: <ul style="list-style-type: none"> <li>Cancelled</li> <li>Renewed</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field appears only when the level funded current contract date is exceeded.</p> </div>	No

- Enter the required details in the **Final Settlement Rules** section.
- Click **Save**.

The final settlement rules are added in the level funded pricing rule.

## Defining a Characteristic for a Level Funded Pricing Rule

### Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

### Procedure

To define a characteristic for a level funded pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a level funded pricing rule.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for a level funded pricing rule.	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule.</p> </div>

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the level funded pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the level funded pricing rule.

## Defining a Level Funded Pricing Rule for a Bill Group

### Prerequisites

To define a level funded pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Level Funded**.

- Price items associated with the level funded pricing rule type.
- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level-funding.
- Policy status defined in the application.

### **Procedure**

To define a level funded pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.  <b>Note:</b> If you are defining the pricing rule type for the parent customer, then the person type will be <b>Parent Customer</b> .	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a level funded pricing rule.  <b>Note:</b> Select the <b>Level Funded Pricing Rule Type</b> option, as the pricing rule.	Yes  <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group which is used while defining the pricing.	No
Policy Status	Used to indicate the policy status for the pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Runout</li> </ul>	Yes (Conditional)  <b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

6. Click **OK**.

The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the information about the bill group. It contains the following columns:

Column Name	Column Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type for whom the level funded pricing rule is created.

- **Main** – Used to specify basic details in the level funding pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a level funded pricing rule.
- **Pricing Information for rule type category : Claim** – Used to define the line items in a particular claim pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Ancillary** – Used to define the line items in a particular ancillary pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Discount** – Used to define the discount arrangement pricing rule which is effective for level-funding calculations.
- **Pricing Information for rule type category : Retention** – Used to define the retention pricing rule which is effective for level-funding calculations.
- **Characteristics** – Used to define characteristics for the level funded pricing rule.

<p><b>Note:</b></p> <p>The <b>Accumulation Criteria, Pricing Information for rule type category: Claim, Pricing Information for rule type category: Ancillary, Pricing Information for rule type category: Discount, and Pricing Information for rule type category: Retention</b> section appear only when you specify a price item in the <b>Main</b> section.</p>
--

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the level funded pricing rule.	Yes
Parent Customer's Pricing Rule	Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer.  <b>Note:</b> On selecting the specific stop-loss pricing rule of the parent customer, the level funded <b>Pricing Start Date</b> and <b>Pricing End Date</b> field is set automatically.	Yes
Pricing Start Date	Used to specify the date from when the level funded pricing rule is effective.  <b>Note:</b> The pricing start date cannot be later than the pricing end date.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the date till when the level funded pricing rule is effective.  <b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	Not applicable
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Fund Price Item	Used to indicate the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.	Not applicable

7. Enter the required details in the **Main** section.
8. Define the accumulation criteria in the level funded pricing rule for a bill group.
9. Define the pricing information for the claim rule type category for a bill group.
10. Define the pricing information for the ancillary rule type category for a bill group, if required.
11. Define the pricing information for the discount rule type category for a bill group, if required.
12. Define the pricing information for the retention rule type category for a bill group, if required.
13. Define characteristics for the level funded pricing rule for a bill group, if required, if required.
14. Click **Save**.

The level funded pricing rule is defined for a bill group.

## Defining Claim Pricing Information in a Level Funded Pricing Rule

### Procedure

To define the claim pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Claim** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Claim** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the claim pricing rule type effective for level funded pricing.	Yes
Derive Using	Used to indicate the method through which the claim pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> <li>• LF Line Items</li> <li>• Pricing Rules</li> </ul>	Yes

If **LF Line Items** option is selected from the **Derive Using** field, the following sub-sections appear:

- **Domestic Provider Claims** – Used to specify the domestic provider claims while calculating the level funding line items.
- **Markup or Markdown Values** – Used to define the markup or markdown values for level funding line items.
- **Line Items** – Used to associate the line items which are eligible for billing.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude LF (Percentage)	Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy for the claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	Not applicable
Markup or Markdown Type	Used to indicate the markup or markdown value type for the claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Amount	Used to specify the markup or markdown amount for the claim line items.  <b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is set as <b>Flat Amount</b> .	Not applicable
Markup / Markdown Included in Settlement?	Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <b>Note:</b> This field is required when <b>Flat Amount</b> option is selected from the <b>Markup or Markdown Type</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when <b>Flat Amount</b> option is selected from the <b>Markup or Markdown Type</b> field.

The **Line Items** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to indicate the line item which is eligible for level funded pricing.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Line Item</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Line Item</b> field, the <b>Pricing Rule Line Item Search</b> window appears. On specifying the pricing rule line item, the description of the pricing rule line item appears corresponding to the <b>Line Item</b> field.	No

If **Pricing Rule Type** option is selected from the **Derive Using** field, following sub-sections appear:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
  - **Domestic Provider Claims** – Used to specify the domestic provider claims while calculating the level funded pricing.
  - **Markup or Markdown Values** – Used to define the markup or markdown values for the billable charge line items.
  - **Line Items** – Used to associate the line items which are eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for level funded pricing.	No

**Note:** If you are editing a bill group's level funded pricing rule for the **Claim** rule type category (where the bill group's pricing has ended), a **Reapply** button appears corresponding to the **Effective Claim Pricing Rule** field. You can select an effective claim pricing rule and click the **Reapply** button to set a new pricing for the claim rule type that is eligible for level funding.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude (Percentage) LF	Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy for the claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	Not applicable
Markup or Markdown Type	Used to indicate the markup or markdown value type for the claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	Not applicable
Markup or Markdown Amount	Used to specify the markup or markdown amount for the claim line items. <p><b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is set as <b>Flat Amount</b>.</p>	Not applicable
Markup / Markdown Included in Settlement?	Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field is required when <b>Flat Amount</b> option is selected from the <b>Markup or Markdown Type</b> field.</p>	Yes (Conditional) <p><b>Note:</b> This field is required when <b>Flat Amount</b> option is selected from the <b>Markup or Markdown Type</b> field.</p>

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Include in Settlement	Used to indicate whether the line item should be included in the level funded claim pricing settlement.	No
Markup or Markdown Included in Settlement	Used to indicate whether markup or markdown should be included in the level funded claim settlement.	No
Markup or Markdown Percentage Eligibility	Used to indicate whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>Eligible</li> <li>Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Used to indicate the percentage for markup or markdown value.	Not applicable

- Enter the required details in the appropriate sections, based on the option that is selected from the **Derive Using** field.
- If you want to add information for more than one claim pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove information of more than one claim pricing rule type from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the pricing rule type field.

- Click **Save**.

The claim line items are defined in the level funded pricing rule.

## Defining Ancillary Pricing Information in a Level Funded Pricing Rule

### Procedure

To define the ancillary pricing information in the level funded pricing rule:

- Ensure that the **Pricing Information for rule type category : Ancillary** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Ancillary** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the ancillary pricing rule type effective for level funded pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Derive Using	Used to indicate the method through which the ancillary pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> <li>Ancillary Billable Charge Line Type</li> <li>Pricing Rules</li> </ul>	Yes

If **Ancillary Billable Charge Line Type** option is selected from the **Derive Using** field, the following sub-sections appear:

- Billable Charge Line Types** – Used to associate the billable charge line items which are eligible for billing.

The **Billable Charge Line Types** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.</p> </div>	Yes
Rate Based	Used to indicate that the billable charge line type is rate based.	No
Rate	Used to specify the rate for the billable charge line type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is enabled when the <b>Rate Based</b> option is selected.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required when the <b>Rate Based</b> option is selected.</p> </div>
Markup / Markdown Included in Settlement?	Used to indicate that markup or markdown amount must be included in the level funding settlement.	No
Pricing Strategy	Used to indicate the pricing strategy for the billable charge line items. The valid values are: <ul style="list-style-type: none"> <li>Markdown</li> <li>Markup</li> <li>None</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Type	Used to indicate the markup or markdown type for the billable line items. The valid values are: <ul style="list-style-type: none"> <li>Flat Amount</li> <li>Percentage</li> </ul> <p><b>Note:</b> This field is enabled when the <b>Pricing Strategy</b> option is selected either as <b>Markup</b> or <b>Markdown</b>.</p>	Yes (Conditional) <p><b>Note:</b> This field is required when the <b>Rate Based</b> option is selected either as <b>Markup</b> or <b>Markdown</b>.</p>
Amount/Percentage	Used to specify the amount or percentage for markup or markdown value. <p><b>Note:</b> This field appears only when the <b>Markup or Markdown Type</b> option is selected.</p>	Yes (Conditional) <p><b>Note:</b> This field is required when the <b>Markup or Markdown Type</b> option is selected.</p>

If **Pricing Rule Type** option is selected from the **Derive Using** field, the following zone appears:

- Ancillary Pricing Rule** - Used to indicate the ancillary pricing rule. It contains the following sub-section:
  - The **Billable Charge Line Types** - Used to define the billable charge line types for an ancillary pricing rule, eligible for level funding.

The **Ancillary Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Ancillary Pricing Rule	Used to indicate the ancillary pricing rule effective for level funded pricing.	No

**Note:** If you are editing a bill group's level funded pricing rule for the **Ancillary** rule type category (where the bill group's pricing has ended), a **Reapply** button appears corresponding to the **Effective Ancillary Pricing Rule** field. You can select an effective ancillary pricing rule and click the **Reapply** button to set a new pricing for the ancillary rule type that is eligible for level funding.

The **Billable Charge Line Types** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.</p>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Include in Settlement	Used to indicate whether the billable charge line item should be included in the level funded ancillary pricing settlement.	Not applicable
Rate Based	Indicates that the billable charge line type is rate based.	Not applicable
Rate	Displays the rate for the billable charge line type.	Not applicable
Markup / Markdown Included in Settlement?	Used to indicate that markup or markdown amount must be included in the level funding settlement.	Not applicable
Pricing Strategy	Displays the pricing strategy for the billable charge line items. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	Not applicable
Markup or Markdown Type	Indicates the markup or markdown type for the billable charge line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field is enabled when the <b>Pricing Strategy</b> option is selected either as <b>Markup</b> or <b>Markdown</b>. </div>	Not applicable
Amount/ Percentage	Displays the amount or percentage which is specified as the markup or markdown value.	Not applicable

- Enter the required details in the appropriate sections, based on the option selected from the **Derive Using** field.
- If you want to add information for more than one ancillary pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove information of more than one ancillary pricing rule type from the level funded pricing rule, click the **Delete** (🗑️) icon corresponding to the pricing rule type field.

- Click **Save**.

The ancillary line items are defined in the level funded pricing rule.

## **Defining Discount Arrangement Pricing Information in a Level Funded Pricing Rule**

### **Procedure**

To define the discount arrangement pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Discount** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Discount** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the discount arrangement pricing rule type which is effective for level-funding.	Yes
Derive Using	Used to indicate the method through which the discount arrangement pricing rule information is derived. The valid values are: <ul style="list-style-type: none"> <li>• Pricing Rules</li> </ul>	Yes

On selecting the **Pricing Rule Type** option from the **Derive Using** field, the following sub-section appears:

- **Discount Pricing Rule** - Used to indicate the discount arrangement pricing rule. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discount Pricing Rule	Used to indicate the discount arrangement pricing rule which is effective for level funding.	Yes

2. Select the appropriate discount arrangement pricing rule from the **Discount Pricing Rule** section.

**Note:**

On selecting the discount arrangement pricing rule, the system does not generate any line items for the discount arrangement pricing information. This discount arrangement pricing rule is used at the time of level-funding calculations in the TFM module.

3. If you want to add information for more than one discount pricing rule type to the level funded pricing rule, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove information of more than one discount pricing rule type from the level funded pricing rule, click the **Delete (🗑)** icon corresponding to the pricing rule type field.

4. Click **Save**.

The discount arrangement pricing information is defined in the level funded pricing rule.

## Defining Retention Type Claim Based and/or Retention Type Enrollment Based Pricing Rule Information in a Level Funded Pricing Rule

### Procedure

To define the retention type claim based and/or retention type enrollment based pricing rule information in a level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Retention** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

The **Pricing Information for rule type category : Retention** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retention Rule Type	Used to indicate the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule.	Yes
Price Item	Used to indicate the price item for the level funded pricing rule.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Price Item</b> field, the <b>Get Retention Type Pricing Rules</b> window appears.</p> <p>On specifying the retention type pricing rule, the description of the retention type pricing rule appears corresponding to the <b>Price Item</b> field.</p> </div>	Yes

2. Select the appropriate **Retention Rule Type** and **Price Item** from the **Pricing Information for rule type category : Retention** zone.

**Note:**

Once the retention type claim based and/or retention type enrollment based pricing rule type is selected along with the price item, the system does not generate line items for the retention type claim/enrollment based pricing rule. This retention type claim/enrollment based pricing rule is used at the time of level-funding calculations in the TFM module.

3. If you want to add more than one retention type claim based and/or retention type enrollment based pricing rule type to the level funded pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove more than one retention type claim based and/or retention type enrollment based pricing rule type from the level funded pricing rule, click the **Delete**  icon corresponding to the pricing rule type field.

4. Click **Save**.

The retention type claim based and/or retention type enrollment based pricing rules eligible for level-funding are defined in the level funded pricing rule.

## Defining a Characteristic for a Level Funded Pricing Rule

### Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

### Procedure

To define a characteristic for a level funded pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a level funded pricing rule.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for a level funded pricing rule.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a level funded pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the level funded pricing rule, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the level funded pricing rule.

## **Pricing Rule (Used for Viewing)**

The **Pricing Rule** screen allows you to:

- View the details of a claim pricing rule of a parent customer
- View the details of a claim pricing rule of a bill group
- View the details of an aggregate stop-loss pricing rule of a parent customer
- View the details of an aggregate stop-loss pricing rule of a bill group
- View the details of a specific stop-loss pricing rule of a parent customer
- View the details of a specific stop-loss pricing rule of a bill group
- View the details of a retention type claim based pricing rule of a parent customer
- View the details of a retention type claim based pricing rule of a bill group
- View the details of a retention type enrollment based pricing rule of a parent customer
- View the details of a retention type enrollment based pricing rule of a bill group
- View the details of a one-time flat fee pricing rule of a bill group
- View the details of a bill period based recurring flat fee pricing rule of a bill group
- View the details of a frequency based recurring flat fee pricing rule of a bill group
- View the details of an ancillary pricing rule of a parent customer
- View the details of an ancillary pricing rule of a bill group
- View the details of a discount arrangement pricing rule of a parent customer
- View the details of a level funded pricing rule of a parent customer
- View the details of a level funded pricing rule of a bill group

This screen consists of the following zones:

- [Claim](#) on page 2689
- [Aggregate Stop-Loss](#) on page 2691
- [Specific Stop-Loss](#) on page 2697
- [Retention Type Claim Based](#) on page 2703
- [Retention Type Enrollment Based](#) on page 2704
- [Flat Fee](#) on page 2705
- [Ancillary](#) on page 2707
- [Discount Arrangement](#) on page 2709
- [Level Funded](#) on page 2712

## Claim

The **Claim** zone displays the details of the claim pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details about the claim pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the parent customer. This field appears only when the claim pricing rule is viewed for parent customer.</p>
Bill Group Information	<p>Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the bill group. This field appears only when the claim pricing rule is viewed for bill group.</p>
Policy Information	<p>Displays the policy information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the policy.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	<p>Indicates the price item information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.</p>

Field Name	Field Description
Pricing Start Date	Displays the claim pricing rule start date.
Pricing End Date	Displays the claim pricing rule end date.
Rate Option	Indicates the rate option of the claim pricing rule for the price item.
Claim Template	Indicates the claim template of the claim pricing rule.
Pricing Group	Displays the pricing group of the claim pricing rule.  <b>Note:</b> This field appears only when the claim pricing rule is viewed for pricing group.

- **Markup or Markdown Values** – Lists the markup or markdown values for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>
Markup or Markdown Type	Indicates the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>
Markup or Markdown Amount	Displays the markup or markdown amount.

- **Line Items** – This section contains the following fields:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> <li>• User Defined (Default Yes)</li> <li>• User Defined (Default No)</li> </ul>
User Defined Billing Option	Displays whether the billing option is user defined, eligible or not eligible.

Column Name	Column Description
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>Eligible</li> <li>Not Eligible</li> </ul>
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

- **Characteristics** – Lists the characteristics defined for the claim pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the claim pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

## Aggregate Stop-Loss

The **Aggregate Stop-Loss** zone displays the details of the aggregate stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details about the aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person</b>, <b>Account</b> or <b>Policy</b> screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the aggregate stop-loss pricing rule is viewed for parent customer.</p> </div>

Field Name	Field Description
Bill Group Information	<p>Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the bill group. This field appears only when the aggregate stop-loss pricing rule is viewed for bill group.</p>
Policy Information	<p>Displays the policy information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the policy. This field appears only when the aggregate stop-loss pricing rule is viewed for bill group.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	<p>Indicates the price item information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.</p>
Parent Customer's SSL or ASL Pricing Rules	Displays the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.
Pricing Start Date	Displays the pricing rule start date.
Pricing End Date	Displays the pricing rule end date.
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.
Settlement Frequency	<p>Indicates the settlement frequency that helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> <li>• Immediately</li> <li>• Manually (At Required Intervals)</li> <li>• Monthly</li> <li>• Yearly</li> </ul> <p><b>Note:</b> This field appears only when the aggregate stop-loss pricing rule is viewed for parent customer.</p>

Field Name	Field Description
Underwriter Review	<p>Indicates whether the underwriter settlement review flag is on or off. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field appears only when the aggregate stop-loss pricing rule is viewed for parent customer.</p>
Pricing Group	<p>Displays the pricing group of the aggregate stop-loss pricing rule.</p> <p><b>Note:</b> This field appears only when the aggregate stop-loss pricing rule is viewed for pricing group.</p>

- **Accumulation Parameters** – Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..
ASL Credit Account	Indicates the account in which the aggregate stop-loss amount is credited.

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
ASL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.
ASL Limit (During Policy Period)	<p>Indicates the aggregate stop-loss limit that was set during the policy period. The valid values are:</p> <ul style="list-style-type: none"> <li>• Policy Based Limit</li> <li>• Enrollment Based Limit</li> <li>• Percentage of Enrollment Based Limit</li> <li>• Enrollment Based or Minimum ASL Limit (Whichever is Greater)</li> </ul>
ASL Limit (During Settlement Period)	<p>Indicates the aggregate stop-loss limit that was set during the settlement period. The valid values are:</p> <ul style="list-style-type: none"> <li>• Policy Based Limit</li> <li>• Enrollment Based Limit</li> <li>• Enrollment Based or Minimum ASL Limit (Whichever is Greater)</li> </ul>

Column Name	Column Description
Minimum ASL Limit	Displays the minimum ASL limit.  <b>Note:</b> This field displays value only when the <b>Enrollment Based or Minimum ASL Limit (Whichever is Greater)</b> option appears for the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> field.
Percentage of Enrollment Based Limit	Displays the percentage of enrollment based limit.  <b>Note:</b> This field displays value only when the <b>Percentage of Enrollment Based Limit</b> option appears for the <b>ASL Limit (During Policy Period)</b> field.
Policy Based Limit	Displays the policy based limit.  <b>Note:</b> This field displays value only when the <b>Policy Based Limit</b> option appears for the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> field.

**Note:** This section appears only when the aggregate stop loss is created for parent customer.

- **Accumulation Criteria** – This section contains the following columns:

Column Name	Column Description						
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a aggregate stop-loss.						
Price Item Information	Displays the price item information.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.						
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="574 1234 1183 1688"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
Column Name	Column Description						
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.						
Parameter Value	Displays the value of the parameter.						

**Note:**

This section appears only when the aggregate stop-loss is created for a bill group.

Accumulation criteria for each rule appears only when the aggregate stop-loss is created for a bill group using a pricing group.

- **Pricing Information** – This section contains the following sub-section:
  - **Claim Pricing Rule** – This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** – Displays the domestic provider claim while calculating aggregate stop-loss. This section contains the following field:

Field Name	Field Description
Exclude ASL (Percentage)	Displays the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** – Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>
Markup or Markdown Amount	Displays the markup or markdown amount. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is <b>Flat Amount</b>.</p> </div>

- **Line Items** – Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Aggregate Stop-Loss	Displays whether the line item is eligible or not eligible for aggregate stop-loss.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>

Field Name	Field Description
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

**Note:**

This section appears only when the aggregate stop-loss is created for a bill group.

Claim line items for each rule appears only when the aggregate stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** – This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing
Accumulation Group ID	Displays the accumulation group ID that is generated when the accumulation parameter values were defined for an aggregate stop-loss.
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the aggregate stop-loss. <b>Note:</b> This field displays value only when the checkbox for the <b>Run-In</b> field is selected.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the aggregate stop-loss. <b>Note:</b> This field displays value only when the checkbox for the <b>Run-In</b> field is selected.
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the aggregate stop-loss. <b>Note:</b> This field displays value only when the checkbox for the <b>Run-In</b> field is selected.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the aggregate stop-loss. <b>Note:</b> This field displays value only when the checkbox for the <b>Run-In</b> field is selected.
Run-In Maximum Limit	Displays the maximum limit of the run-in parameters. <b>Note:</b> This field displays value only when the checkbox for the <b>Run-In</b> field is selected.

**Note:** This section appears only when the specific stop loss is created for parent customer.

- **Characteristics** – Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the aggregate stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

## **Specific Stop-Loss**

The **Specific Stop-Loss** zone displays the details of the specific stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details about the specific stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the parent customer. This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>
Bill Group Information	<p>Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the bill group. This field appears only when the specific stop-loss pricing rule is viewed for bill group.</p>

Field Name	Field Description
Policy Information	<p>Displays the policy information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the policy. This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	<p>Indicates the price item information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.</p>
Parent Customer's SSL Pricing Rule	<p>Displays the pricing date range derived from the parent customer's specific stop-loss pricing rule.</p> <p><b>Note:</b> This field appears only when the specific stop-loss pricing rule is viewed for bill group.</p>
Pricing Start Date	Displays the specific stop-loss pricing rule start date.
Pricing End Date	Displays the specific stop-loss pricing rule end date.
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.
Pricing Rule Usage	<p>Indicates whether the pricing rule is used only for pricing or for pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul> <p><b>Note:</b> This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>
Accumulation Level	<p>Indicate whether the specific stop-loss is accumulated at the member or main subscriber level. The valid values are:</p> <ul style="list-style-type: none"> <li>• Member</li> <li>• Main Subscriber</li> </ul> <p><b>Note:</b> This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>

Field Name	Field Description
Settlement Frequency	<p>Indicates the settlement frequency that helps to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> <li>• Immediately</li> <li>• Manually (At Required Intervals)</li> <li>• Never</li> <li>• Yearly</li> </ul> <p><b>Note:</b> This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>
Underwriter Review	<p>Indicates whether the underwriter settlement review flag is on or off. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>
Pricing Group	<p>Displays the pricing group of the specific stop-loss pricing rule.</p> <p><b>Note:</b> This field appears only when the specific stop-loss pricing rule is viewed for pricing group.</p>

- **Accumulation Parameters** – Lists the accumulation parameters in a specific stop-loss pricing rule. It contains the following field:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
SSL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.
Compute Aggregate SSL (ASL)	<p>Indicates whether the aggregate specific stop-loss (ASSL) is calculated or not during the <b>C1-BCSSL</b> batch run for each bill group. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

Column Name	Column Description
ASSL Credit Account	Indicates that the aggregate specific stop-loss amount beyond the ASSL limit paid by the insurance company to the ASSL credit account.
ASSL Limit	

**Note:** This section appears only when the specific stop loss is created for parent customer.

- **Accumulation Criteria** – This section contains the following columns:

Column Name	Column Description						
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a specific stop-loss.						
Run-In Maximum Limit	Displays the maximum specific stop-loss limit defined for the member when the claim transactions were received in the run-in period of the policy.						
SSL Limit	Displays whether the SSL limit indicating the specific stop-loss amount beyond this limit is paid by the insurance company.						
Price Item Information	Displays the price item information. <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.						
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="574 995 1463 1318"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization. <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
Column Name	Column Description						
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.						
Parameter Value	Displays the value of the parameter.						

**Note:**

This section appears only when the specific stop-loss is created for a bill group.

Accumulation criteria for each rule appears only when the specific stop-loss is created for a bill group using a pricing group.

- **Pricing Information** – This section contains the following sub-section:
  - **Claim Pricing Rule** – This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** – Displays the domestic provider claim while calculating specific stop-loss. This section contains the following field:

Field Name	Field Description
Exclude SSL (Percentage)	Displays the domestic provider claim billable charge line excluding the specific stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** – Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>
Markup or Markdown Amount	Displays the markup or markdown amount. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is <b>Flat Amount</b>.</p> </div>

- **Line Items** – Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Specific Stop-Loss	Displays whether the line item is eligible or not eligible for specific stop-loss.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

**Note:**  
This section appears only when the specific stop-loss is created for a bill group.  
Claim line items for each rule appears only when the specific stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** – This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the specific stop-loss.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the specific stop-loss.
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the specific stop-loss.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the specific stop-loss.

**Note:** This section appears only when the specific stop loss is created for parent customer.

- **Lasering and Exclusion** – Lists the lasering and exclusion information in a specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation parameter values were defined for the specific stop-loss.
Level Identifier	Displays the lasering or exclusion level identifier.
Lasering or Exclusion Level	Indicates the lasering or exclusion level of the specific stop-loss. The valid values are: <ul style="list-style-type: none"> <li>• Main Subscriber</li> <li>• Member</li> <li>• Provider</li> </ul>
Exception Type	Indicates the exception type. The valid values are: <ul style="list-style-type: none"> <li>• Lasering</li> <li>• Exclusion</li> </ul>
Comments	Displays the comments.
Lasered Amount	Displays the lasered amount.

**Note:** This section appears only when the specific stop loss is created for parent customer.

- **Characteristics** – Lists the characteristics defined for the specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the specific stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

## Retention Type Claim Based

The **Retention Type Claim Based** zone displays the details of the Retention Type Claim Based Pricing Rule. This zone contains the following sections:

- **Main** – This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the parent customer. This field appears only when the retention type claim based pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Displays the pricing rule type.
Price Item Information	<p>Displays the price item.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.</p>
Rate Option	Displays the rate option of the retention type claim based pricing rule.
Pricing Start Date	Displays the date from when the pricing is effective for retention type claim based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type claim based pricing rule.

- **Parameters** – This section lists the parameters which are defined for retention type claim based pricing rule. It contains the following columns:

Column Name	Column Description										
Price Item Parameters	Displays the parameter item information for retention type claim based pricing rule.										
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameters</td> <td>Displays multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.	Parameter Description	Displays the description of the parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
	Column Name	Column Description									
	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.									
	Parameter Description	Displays the description of the parameter.									
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee that is applicable for which price item parameters are defined.										

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

## Retention Type Enrollment Based

The **Retention Type Enrollment Based** zone displays the details of the Retention Type Enrollment Based Pricing Rule. This zone contains the following sections:

- **Main** – This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the retention type enrollment based pricing rule is viewed for parent customer.</p> </div>
Pricing Rule Type	Displays the pricing rule type.

Field Name	Field Description
Price Item Information	Displays the price item. <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.
Rate Option	Displays the rate option of the retention type enrollment based pricing rule.
Pricing Start Date	Displays the date from when the pricing is effective for retention type enrollment based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type enrollment based pricing rule.
Exempt Retro Transactions	Indicates whether retro transactions should be a part of retention type enrollment based pricing rule.

- **Parameters** – This section lists the parameters which are defined for retention type enrollment based pricing rule. It contains the following columns:

Column Name	Column Description										
Price Item Parameters	Displays the parameter item information for retention type enrollment based pricing rule. <table border="1" data-bbox="521 869 1463 1220"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameters</td> <td>Displays multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.	Parameter Description	Displays the description of the parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
Column Name	Column Description										
Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.										
Parameter Description	Displays the description of the parameter.										
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee that is applicable for which price item parameters are defined.										

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

## Flat Fee

The **Flat Fee** zone displays the details of the one-time, bill period, and frequency based recurring flat fee pricing rule for bill group. It contains the following sections:

- **Main** – Displays basic details about the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following fields:

Field Name	Field Description
Bill Group Information	<p>Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account or Policy</b> screen appears where you can view the details of the bill group.</p>
Policy Information	<p>Displays the policy information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the policy.</p>
Price Item Information	<p>Indicates the price item information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.</p>
Charge Date	<p>Displays the flat fee charge date.</p> <p><b>Note:</b> This field appears only for the one-time flat fee pricing rule for bill group.</p>
Charge Start Date	<p>Displays the flat fee charge start date.</p> <p><b>Note:</b> This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.</p>
Charge End Date	<p>Displays the flat fee charge end date.</p> <p><b>Note:</b> This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.</p>
Bill To Account Override	<p>Displays the account to which the bill is override. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the account.</p>
Billable Charge Line Type	<p>Displays the billable charge line type.</p>
Fee	<p>Displays the amount of flat fee.</p> <p><b>Note:</b> This field appears only when a value is displayed in the <b>Billable Charge Line Type</b> field.</p>
Bill Period	<p>Indicates the bill period for flat fee.</p> <p><b>Note:</b> This field appears only for the bill period based recurring flat fee pricing rule for bill group.</p>

Field Name	Field Description
Frequency	Indicates the frequency for flat fee.  <b>Note:</b> This field appears only for the frequency based recurring flat fee pricing rule for bill group.
Billable Charge Information	Displays the billable charge information.  <b>Note:</b> It has a link. On clicking the link, the <b>Bill Charge ID</b> screen appears where you can view the details of the billable charge.

- **Characteristics** – Lists the characteristics defined for the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the one-time, bill period, and frequency based recurring flat fee pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

#### Ancillary

The **Ancillary** zone displays the details of the ancillary pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details about the ancillary pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person, Account or Policy</b> screen appears where you can view the details of the parent customer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person, Account or Policy</b> screen appears where you can view the details of the bill group.	Not applicable
Policy Information	Displays the policy information.  <b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the policy.	Not applicable
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item information.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.	Not applicable
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable
Rate Option	Indicates the rate option of the ancillary pricing rule for the price item.	Not applicable
Pass Through without Markup or Markdown	Indicates that markup or markdown should not be calculated for the ancillary charge.	Not applicable

- **Ancillary Charges** – Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Indicates the billable charge line type using which the ancillary pricing rule type is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge Line Type</b> screen appears where you can view the details of the billable charge line type.	Not applicable
Billable	Indicates whether the ancillary billable charge is eligible for billing or not.	Not applicable
Rate Based	Indicates whether the ancillary charge is calculated using a particular rate or not.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Rate	Indicates the rate for calculating the ancillary charge.	Not applicable
Pricing Strategy	Indicates the price calculation strategy that is applied while defining the ancillary pricing rule.	Not applicable
Markup or Markdown Type	Indicates the type of charge that is applied while defining the ancillary pricing rule.	Not applicable
Amount / Percentage	Displays the actual proportion of the charge that is applied while defining the ancillary pricing rule.	Not applicable

- **Characteristics** – Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the ancillary pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

## Discount Arrangement

The **Discount Arrangement** zone displays the details of the discount arrangement pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details about the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person, Account or Policy</b> screen appears where you can view the details of the parent customer.</p> </div>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the bill group.	Not applicable
Policy Information	Displays the policy information.  <b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the policy.	Not applicable
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item for which the pricing rule is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.	Not applicable
Rate Option	Indicates the rate option of the discount arrangement pricing rule for the price item.	Not applicable
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.	Not applicable

- **Discount Details** – Displays the eligibility criteria for a discount percentage and maximum discount amount that is allowed per claim. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Displays the parameter using which an eligibility criteria is defined for a discount percentage and maximum amount that is allowed per claim.	Not applicable
Parameter Information	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Not applicable
Parameter Value	Indicates the value of the parameter.	Not applicable
Parameter Value Description	Displays the description of the value, defined as a parameter.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Discount Percentage	Displays the discount share or discount guarantee percentage.	Not applicable
Maximum Discount Per Claim	Displays maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	Not applicable

- **Discount Limits** – Displays the minimum and maximum discount limit defined on the contract. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Indicates the type of discount limit (minimum or maximum) on the contract.	Not applicable
Discount Credit Account	Indicates the account to which the discount is credited, when the minimum or maximum discount limit is defined on the contract.	Not applicable
Settlement Days	Indicates the number of days which help in calculating the final settlement date.	Not applicable

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount	Displays the type of discount.	Not applicable
Select	Indicates the type of discount that is applied on the contract.	Not applicable
Limit Type	Indicates the type of limit defined in the discount arrangement pricing rule.	Not applicable
Amount Limit	Indicates the amount limit (flat minimum or maximum discount) on the contract.	Not applicable

- **Exclusion** – Displays the entity (network or provider) which is excluded in the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Indicates the entity (network hospitals or providers) that are excluded during the discount share or discount guarantee calculation.	Not applicable
Level Identifier	Displays the network or provider ID.	Not applicable

- **Characteristics** – Displays the characteristics defined for the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Displays the date from when the characteristic is effective for the discount arrangement pricing rule.	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Indicates the characteristic type.	Not applicable
Characteristic Value	Displays the value of the characteristic type.	Not applicable

How to define a discount arrangement pricing rule for a parent customer	<a href="#">Defining a Discount Arrangement Pricing Rule for a Parent Customer on page 2629</a>

## Level Funded

The **Level Funded** zone displays the details of the level funded pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details about the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the parent customer.</p>
Bill Group Information	<p>Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account</b> or <b>Policy</b> screen appears where you can view the details of the bill group.</p>
Policy Information	<p>Displays the policy information.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the policy.</p>
Pricing Rule Type	Indicates the type of the pricing rule.
Status	Indicates the status of the pricing rule.
Price Item Information	<p>Indicates the price item for which the pricing rule is created.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.</p>
Parent Customer's Pricing Rule	Displays the pricing rule of the parent customer.

Column Name	Column Description
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option of the level funded pricing rule for the price item.
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.
Settlement Fund Price Item	Indicates the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.  <b>Note:</b> The settlement fund price item appears only when the level funded pricing rule is created for a bill group.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off.

- **Accumulation Parameters** – Displays the accumulation parameters for a parent customer in the level funded pricing rule. It contains the following fields:

Column Name	Column Description
Accumulation Group ID	Displays an accumulation group ID which is generated when accumulation parameter values are defined for a level funded pricing rule.
Settlement Account ID	Indicates the account ID to whom the settlement amount is credited.
Incurred Start Date	Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Incurred End Date	Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid Start Date	Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid End Date	Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Settlement Days	Indicates the number of days as the settlement days which help in calculating the settlement date.

**Note:**

The above section appears only when the level funded pricing rule is created for a parent customer.

- **Accumulation Criteria** – Displays the accumulation criteria for a bill group in the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a level funding pricing rule type.
Price Item Information	Displays the price item information.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the price item.

Column Name	Column Description						
Price Item Parameters	This field contains the following columns:						
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
	Column Name	Column Description					
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the parameter.						
Parameter Value	Displays the value of the parameter.						
Parameter Value	Displays the value of the parameter.						

**Note:**

The above section appears only when the level funded pricing rule is created for a bill group.

The accumulation criteria for each rule appears only when the level funded pricing rule is created for a bill group using a pricing group.

- The **Pricing Information for rule type category : Claim** zone contains the following sections:
  - The **Claim Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the claim pricing rule type effective for the level funded pricing.
Derive Using	Indicates the method through which the claim pricing rule information is derived.
Effective Claim Pricing Rule	Displays the claim pricing rule effective for pricing.

- The **Domestic Provider Claims** section contains the following columns:

Column Name	Column Description
Exclude LF (Percentage)	Displays the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.

- The **Markup or Markdown Values** section contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy for the claim line items.
Markup or Markdown Type	Indicates the markup or markdown value type for the claim line items.
Markup or Markdown Amount	Displays the markup or markdown amount for the claim line items.  <b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is set as <b>Flat Amount</b> .
Markup / Markdown Included in Settlement?	Displays whether the markup or markdown amount should be included in the level funding settlement. The valid values are:

- The **Line Items** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Include in Settlement	Indicates whether the line item should be included in the level funded claim pricing settlement.
Markup or Markdown Included in Settlement	Indicates whether markup or markdown should be included in the level funded claim settlement.
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible or not eligible for markup or markdown percentage.
Markup or Markdown Percentage	Indicates the percentage for markup or markdown value.

**Note:**

The above section appears only when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Ancillary** zone contains the following sections:
  - The **Ancillary Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the ancillary pricing rule type effective for level funded pricing.
Derive Using	Indicates the method through which the ancillary pricing rule information is derived.
Effective Ancillary Pricing Rule	Displays the ancillary pricing rule effective for pricing.

- The **Billable Charge Line Types** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Billable Charge Line Type	Indicates the billable charge line type using which you want to create the calculation line for the charge (i.e. line item)
Include in Settlement	Indicates whether the billable charge line item should be included in the level funded ancillary pricing settlement.
Rate Based	Indicates that the billable charge line type is rate based.
Rate	Displays the rate for the billable charge line type.
Markup / Markdown Included in Settlement?	Indicates that markup or markdown amount must be included in the level funding settlement.
Pricing Strategy	Displays the pricing strategy for the billable charge line items.
Markup or Markdown Type	Indicates the markup or markdown type for the billable charge line items.
Amount/Percentage	Displays the amount or percentage which is specified as the markup or markdown value.

**Note:**

The above section appears only when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Discount** zone contains the following section:

Column Name	Column Description
Pricing Rule Type	Indicates the discount arrangement pricing rule type which is effective for level-funding.
Derive Using	Indicates the method through which the discount arrangement pricing rule information is derived.

- Discount Pricing Rule** - Indicates the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description
Discount Pricing Rule	Indicates the discount arrangement pricing rule which is effective for level funding.

**Note:**

The above section appears only when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Retention** zone contains the following section:

Column Name	Column Description
Retention Rule Type	Indicates the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule.  <b>Note:</b> It has a link. On clicking the link, <b>Pricing Rule Type</b> screen appears where you can view the details of the rule type.
Price Item	Indicates the price item for the level funded pricing rule.  <b>Note:</b> It has a link. On clicking the link, <b>Price Item</b> screen appears where you can view the details of the price item.

**Note:**

The above section appears only when the level funded pricing rule is created for a bill group.

- Final Settlement Rules** – Displays the final settlement rules when the customer renews or cancels the contract. It contains the following columns:

Column Name	Column Description
Final Settlement Mode	Displays the final settlement mode when the customer renews the level funded agreement
Final Settlement Option	Indicates the final settlement option when the customer renews the level funded agreement.
Flat/Percentage	Indicates the final settlement payment type when the customer renews the level funded agreement.

Column Name	Column Description
Percentage Retained	Displays the percentage retained by the ASO provider when the customer renews the level funded agreement.
Flat Effective Payout	Displays the actual amount which should be retained by the ASO provider or offered as a discount, when the customer renews the level funded agreement.

The **Renewal Decision** sub-section contains the following columns:

Column Name	Column Description
Renewal Decision	Indicates the upcoming status of the level funded contract.

- **Characteristics** – Displays the characteristics defined for the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the level funded pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Administrative Services Only (ASO) is an arrangement in which an organization funds its own employee benefit plan such as a health plan but hires an outside firm to perform specific administrative services. For example, an organization may hire an insurance company to evaluate and process claims under its employee health plan, while maintaining the responsibility to pay the claims itself.

Self-Funded plan specifics vary depending on the agreement a company establishes with insurance companies and third-party administrators (TPA). In the self-funded plan, the insurance company may provide little to no degree of insurance protection. ASO services are gaining popularity because many employers, particularly larger ones, explore that the self-funded plan provides the potential financial advantages at an acceptable cost.

Oracle Revenue Management and Billing (ORMB) provides a complete solution in terms of pricing, billing, and revenue management to support the self-funded plans. It also provides risk coverage for offering self-funded plans through the stop-loss services, such as specific stop-loss and aggregate stop-loss. The specific stop-loss solution in ORMB helps the employer in mitigating high-cost claims for individual members. And, the aggregate stop-loss helps the employer in mitigating risk against high-volume claims.

The **Transaction Feed Management (TFM)** module is enhanced to support the self-funded billing. You can upload the claim, enrollment, and ancillary transactions in the system using the **File Upload Interface** feature. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Once the claim, enrollment, and ancillary transaction data files are uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Price Item
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values

- Clean-up Unwanted Data

The system provides the flexibility to rate the claim, enrollment, and ancillary transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to a price item can be rated at a frequency which is different from the account's billing frequency. For example, daily, weekly, etc.

A new pricing model is introduced for the self-funded health care business which enables you to create pricing rules for:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Claim Based Fees
- Enrollment Based Fees
- One-time and Recurring Flat Fees
- Ancillary Charges

Once you create the required pricing structure, you can bill for the claim, enrollment, and ancillary transactions. Once the billable charges for claims, claim based fees, enrollment based fees, and ancillary are created through the transaction aggregation process, you can accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the required billable charges are created, you can bill them using the charge-based billing batches.

## Pre-requisites

---

To setup the Self-Funded Billing feature, you need to do the following:

- Define the parent customers and bill groups in the system.
- Define the required pricing rule types for different pricing rule type categories, such as **Claim**, **Specific Stop-Loss**, **Aggregate Stop-Loss**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, **Flat Fees**, and **Ancillary**.
- Map the transaction fields appropriately in the primary pricing rule types.
- Attach an algorithm created using the **C1\_TXNBGDRV** algorithm type to the **Bill Group Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim** or **Retention Type Enrollment Based**.
- Attach an algorithm created using the **C1\_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **C1\_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.
- Attach an algorithm created using the **C1\_BAFTDRV** algorithm type to the **Bill After Date Determination** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **SA\_DERV\_POPC** algorithm type to the **TFM - Contract Derivation** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1-VRPR\_POPC** algorithm type to the **TFM - Verify Pricing Post-Processing** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1\_BCHG\_POPC** algorithm type to the **TFM - Billable Charge Post-Processing** algorithm spot of the required divisions.
- Map each transaction record type to either the required rule type or primary pricing rule type.
- Define the pricing groups for the required bill groups.
- Define the required pricing rules for the parent customer and bill groups.
- Define the rate schedules with the following calculation algorithms for different price items:

Price item related to....	Calculation Algorithm
Claim	C1-CLAIMCALC
Specific Stop-Loss	C1-SSLRTCALC
Aggregate Stop-Loss	C1-ASLRTCALC
Retention Type Enrollment Based	None
Flat Fees	None
Ancillary	C1-ANCICALC

- Attach an algorithm created using the **C1-RETFLAT** algorithm type to the **TFM – Rate Pre-Processing** algorithm spot of the required divisions.
- Define the TFM information in the rating option for different price items in the following manner:

Price item related to....	Rate Option			
	Aggregate Transaction	Aggregation Schedule	Ignore Transaction	Rating Criteria
Claim	Yes	As Required	No	RITA
Specific Stop-Loss	No	-	Yes	RITX
Aggregate Stop-Loss	No	-	Yes	RITX
Retention Type Claim Based	Yes	As Required	No	RITA
Retention Type Enrollment Based	Yes	As Required	No	RITA
Ancillary	Yes	As Required	No	RITA

- Define the derivation and pricing parameters for each bill group.
- Set the following option types in the **C1-ASOBLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Invoice Type Characteristic Type
  - Pricing Group Rule Parameter
  - Billable Charge Line Type Parameter
  - Pricing Arrangement Parameter

### **Related Topics**

For more information on...	See...
How to set up the <b>C1-ASOBLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLNG Feature Configuration</a> on page 2889

## **Bill Group Derivation and Pricing Parameters**

An employer may have different bill groups. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group. These parameters are used to derive the bill group against which the billable charges created for the claim, enrollment, and ancillary transactions should be billed in the system. The derived bill group is also used for billing the claim based fees, one-time or recurring fees, specific stop-loss credits, and aggregate stop-loss credits. You can define multiple derivation and pricing parameters for a bill group, but the derivation and pricing parameter combination must be unique for a particular duration.

For example, if you want bill group 1 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Western location of the city
- Who belong to Grade A
- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 1:

Bill Group Name	Sort ID	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 1	111	X	Western	Grade A	-	-

### Example 1: Derivation and Pricing Parameters for Bill Group 1

Similarly, if you want bill group 2 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Eastern location of Mumbai
- Who are the person of Indian origin
- Who belong to Grade A
- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 2:

Bill Group Name	Sort ID	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 2	123	X	Eastern	Grade A	Mumbai	India

### Example 2: Derivation and Pricing Parameters for Bill Group 2

In the example 1 and 2, the bill group is derived based on the specified employee attributes only when the source system, parameter 1, parameter 2, parameter 3, and parameter 4 are mapped to the appropriate transaction fields in the primary pricing rule type using which the pricing rules are defined for the bill group. For example,

Pricing Rule Type	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
PR1	External System	Location	Designation	City	Country

### Example 3: Transaction Field Mapping in Primary Pricing Rule Type

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4. For example,

Pricing Group	Rule	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
PG1	R1	X	Eastern	Grade A	Mumbai	India
	R2	X	Western	Grade A	-	-

### Example 4: Rules Defined in a Pricing Group

If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees. For example,

Pricing Rule	Pricing Group	Rule	Rule Criteria	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount
PRRR1	PG1	R1	Source System = X, Parameter 1 = Eastern, Parameter 2 = Grade A, Parameter 3 = Mumbai, Parameter 4 = India	Markup	Flat Amount	\$20
		R2	Source System = X, Parameter 1 = Western, Parameter 2 = Grade A	Markdown	Flat Amount	\$10

### Example 5: Defining a Pricing Rule Using a Pricing Group

In the example 5, the system will use the markup strategy on the claim line items for the employees who satisfy the criteria specified in R1. On the other hand, the system will use the markdown strategy on the claim line items for the employees who satisfy the criteria specified in R2.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group. The source system and parameter 1 are mandatory while defining the derivation and pricing parameters for a bill group.

You can define and edit the derivation and pricing parameters for the bill group and sort ID combination from the **Customer 360° Information** screen. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for the bill group and sort ID combinations from the **Customer 360° Information** or **Upload Request** screen. Note that you can upload the derivation and pricing parameters for the bill group and sort ID only using the CSV file format.

## Related Pricing Rule Type Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a related pricing rule type in a primary pricing rule type. If the eligibility rule type is defined of a related pricing rule type, the system checks whether the related pricing rule type is eligible for deriving the transaction legs when it is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution. The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the primary pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

**Note:** At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met in a rule, the system calls the respective related pricing rule type for deriving the transaction legs. If none of the rules created using the rule type are satisfied, the system does not call the respective related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_15 is set Employee

- UDF\_DATE\_1 is set to 11-05-2018
- Transaction Record Type is set to TR1

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Eligibility Rule Type	Rule	Rule's Effective Start Date	Rule's Effective End Date	Priority	Rule Criteria	Output Parameter	Output Parameter Value
TR1	CLAIM	CLAIM BASED FEES	RT1	R1	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
				R2	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
				R3	01-04-2018	30-06-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
				R4	01-07-2018	31-12-2018	4	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
		SPECIFIC STOP-LOSS	RT2	R5	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
				R6	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Eastern	UDF_CHAR_15	Employee
				R7	01-04-2018	31-12-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
		AGGREGATE STOP-LOSS	RT3	R8	01-04-2018	31-12-2018	1	UDF_CHAR_1 = Eastern	UDF_CHAR_15	Employee
				R9	01-04-2018	31-12-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_15	Director

**Note:** Here, the paid date is mapped to the UDF\_DATE\_1 field in the CLAIM pricing rule type. In addition, the Rule Based Related Pricing Rule Type Eligibility Field field is set to UDF\_CHAR\_15 and the Rule Based Eligibility Value field is set to Employee in the CLAIM pricing rule type.

### Example 1: Related Pricing Rule Type Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for the CLAIM BASED FEES pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the Rule Based Eligibility Value field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the Rule Based Related Pricing Rule Type Eligibility Field and Rule Based Eligibility Value fields, respectively. Therefore, the system considers the CLAIM BASED FEES pricing rule type for deriving the transaction legs.

The rules which are created using the RT2 rule type are invoked for the SPECIFIC STOP-LOSS pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the Rule Based Eligibility Value field. Therefore, the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the Rule Based Related Pricing Rule Type Eligibility Field and Rule Based Eligibility Value fields, respectively. Therefore, the system considers the SPECIFIC STOP-LOSS pricing rule type for deriving the transaction legs.

Similarly, the rules which are created using the RT3 rule type are invoked for the AGGREGATE STOP-LOSS pricing rule type in the specified priority. The claim transaction does not meet the eligibility criteria defined in the R8 rule. Therefore, the system executes the rule with the next priority (i.e. R9). The claim transaction meets the eligibility criteria defined in the R9 rule. But, the output parameter's value specified in the R9 rule does not match the value specified in

the **Rule Based Eligibility Value** field. As none of the rules created using the rule type met the criteria, the system does not consider the AGGREGATE STOP-LOSS pricing rule type for deriving the transaction legs.

## Price Item Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a price item in a pricing rule type. If the eligibility rule type is defined of a price item, the system checks whether the price item is eligible for billing when the pricing rule type is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution. The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

**Note:** At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met, the system searches for an effective pricing rule for the respective price item. If none of the rules created using the rule type are satisfied, the system does not map the transaction to the price item. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_20 is set to Employee
- UDF\_DATE\_1 is set to 05-03-2018
- Transaction Record Type is set to TR1

Transaction Record Type	Primary Pricing Rule Type	Price Item	Eligibility Rule Type	Rule	Rule's Effective Start Date	Rule's Effective End Date	Priority	Rule Criteria	Output Parameter	Output Parameter Value
TR1	CLAIM	P1	RT1	R1	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_20	Director
				R2	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee
				R3	01-04-2018	30-06-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee
				R4	01-07-2018	31-12-2018	4	UDF_CHAR_1 = Western	UDF_CHAR_20	Director
	P2	RT2	R5	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_20	Director	
			R6	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Eastern	UDF_CHAR_20	Employee	
			R7	01-04-2018	31-12-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee	

**Note:** Here, the paid date is mapped to the **UDF\_DATE\_1** field in the CLAIM pricing rule type. In addition, the **Rule Based Related Pricing Rule Type Eligibility Field** field is set to **UDF\_CHAR\_20** and the **Rule Based Eligibility Value** field is set to **Employee** in the CLAIM pricing rule type.

### Example 1: Price Item Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for P1 in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers P1 for billing and maps the claim transaction to P1 if an effective pricing rule, account, and active contract are available for P1.

Similarly, the rules which are created using the RT2 rule type are invoked for P2 in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers P2 for billing and maps the claim transaction to P2 if an effective pricing rule, account, and active contract are available for P2.

## Self-Funded Billing Process

---

The **Self-Funded Billing** process consists of the following sub-processes:

- [Transaction Aggregation](#) on page 2727
- [Stop Loss Calculation](#) on page 2732
- [Bill Generation](#) on page 2732

### Transaction Aggregation

Once the claim, enrollment, and ancillary transactions are uploaded, you can create billable charges for the following using the **Transaction Aggregation** process in the **Transaction Feed Management (TFM)** module:

- Claim
- Claim Based Fees
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- Ancillary

The transaction calculation lines for specific stop-loss and aggregate stop-loss are created during the **Transaction Aggregation** process. Earlier, the **Transaction Aggregation** process was designed to meet the requirements of the **Payments** and **Financial Services** industries. Now, in addition, it is tuned slightly to meet the requirements of the self-funded health care business. The changes are made in the following batches which are executed in the **Transaction Aggregation** process:

- **Validate Transaction and Derive Price Item (C1-TXNIP)** - During this batch execution, the system validates the transaction. If the transaction validation fails due to any reason, the status of the transaction is changed to **Error**. If the transaction validation is successful, the system checks whether a primary pricing rule type is specified in the respective transaction record type. If a primary pricing rule type is not specified in the transaction record type, the system maps the transaction to one or more price item, price item parameters, and account combinations using the rules which are invoked through the rule type. However, if a primary pricing rule type is specified in the transaction record type, the system calls the primary pricing rule type and invokes the algorithms which are attached to the following system events of the primary pricing rule type in the specified sequence:
  1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.

2. **Bill Group Derivation** - For more information, refer to the [Bill Group Derivation](#) on page 2733 section.
3. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a primary pricing rule types with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Claim	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Claim Pricing Rule Type Category)</a> on page 2736
Retention Type Enrollment Based	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)</a> on page 2766
Ancillary	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)</a> on page 2776

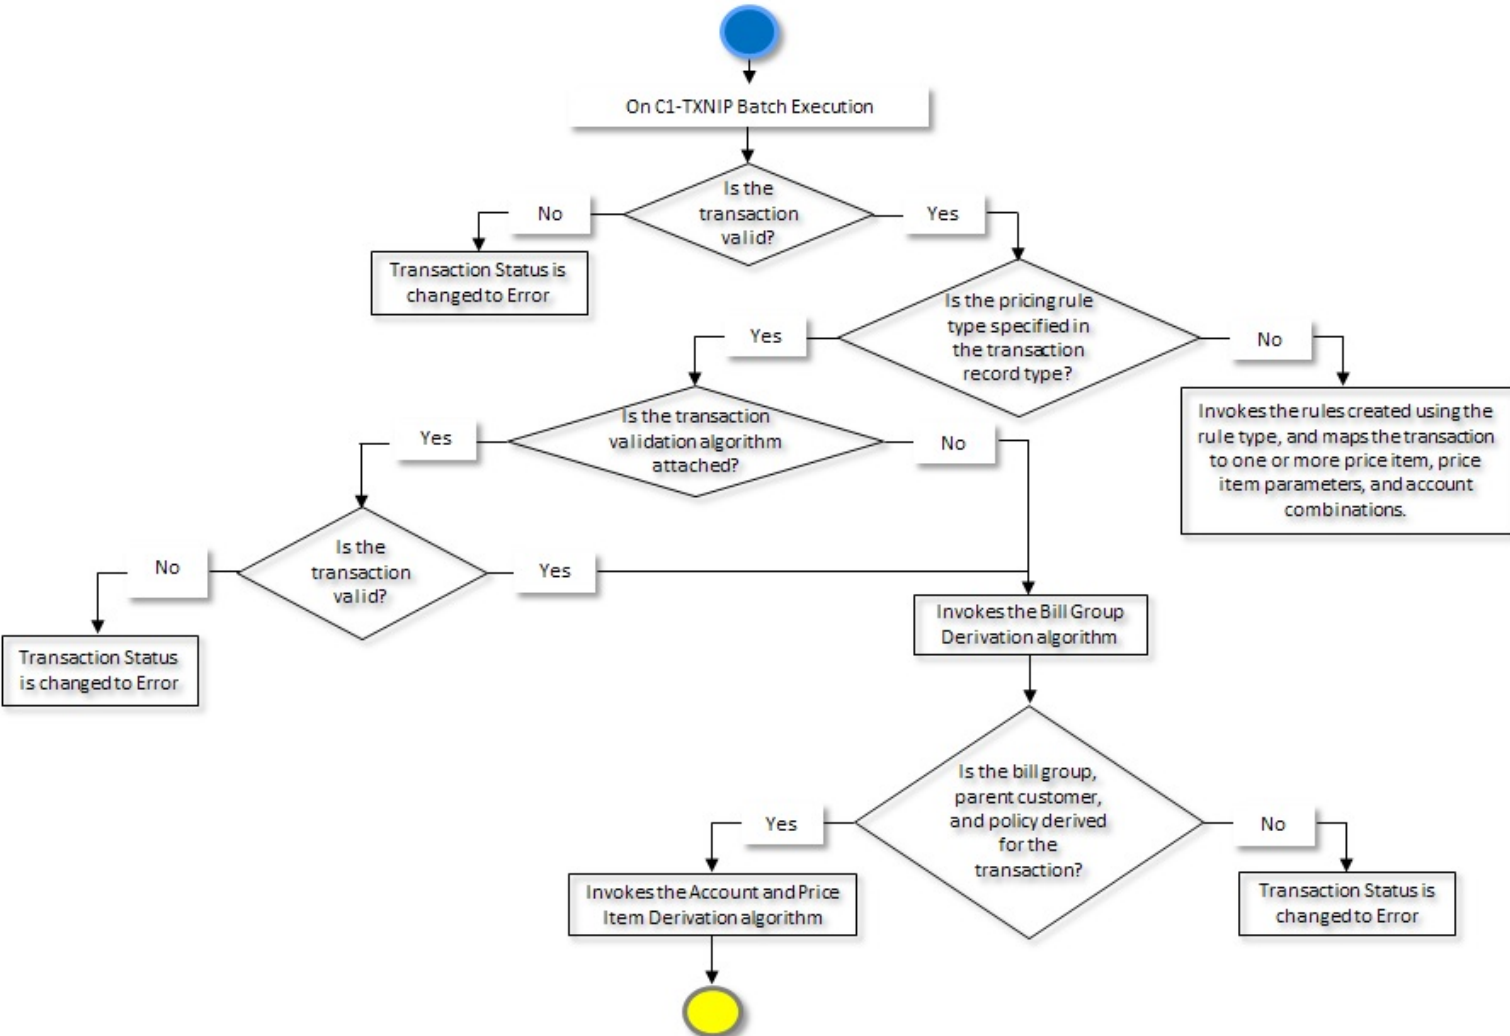

This batch then calls the eligible related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. The system invokes the algorithms which are attached to the following system events of the related pricing rule type in the specified sequence:

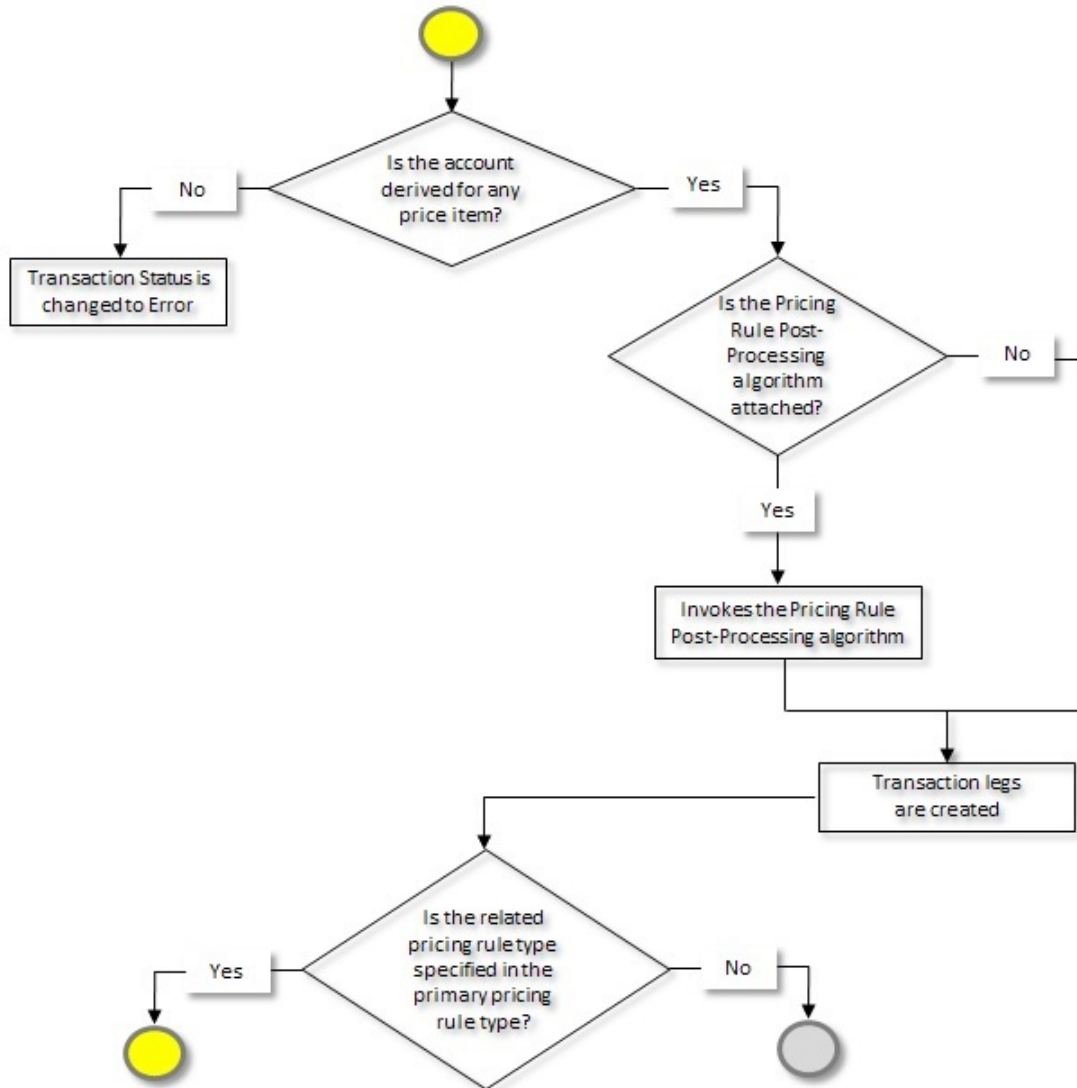

1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
2. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a related pricing rule type with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Specific Stop-Loss	C1_ACCPRISL	<a href="#">Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</a> on page 2741
Aggregate Stop-Loss	C1_ACCPRISL	<a href="#">Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</a> on page 2741
Retention Type Claim Based	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)</a> on page 2754

The following figure graphically explains the execution process of the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch:

- **Price Item Pricing Verification (C1-TXNVP)** - During this batch execution, the system derives an effective pricing for each transaction leg on the processing date. For more information, refer to the [Price Item Pricing Verification](#) on page 870 section. In addition, the system invokes the algorithms attached to the following algorithm spots of the derived account's division in the specified sequence for the self-funded health care business:

1. **TFM - Contract Derivation** - You can attach an algorithm created using the SA\_DERV\_POPC algorithm type to this algorithm spot. If the account has multiple active contracts of the contract type which is associated with the price item, this algorithm derives the contract which is associated with the policy and

maps it to the transaction leg. The manner in which the system derives the active contract for the account differs in the following scenarios:

If the effective pricing rule stamped against the transaction leg is defined at ...	Then...
The bill group level	The system first fetches the policy derived for the transaction and then derives the active contract which is associated with the policy.
The parent customer level	The system first fetches the bill group to which the account belongs and then the policy where the bill group is associated with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration. Once the policy is derived, the system derives the active contract which is associated with the policy.

2. **TFM - Verify Pricing Post-Processing** - You can attach an algorithm created using the **C1-VRPR\_POPC** algorithm type to this algorithm spot. This algorithm removes the price assignment ID and price item parameter group ID from the summary ID column of each transaction leg.
- **Service Quantity Calculation (C1-TXNSQ)** - During this batch execution, the system aggregates the transaction legs, creates a billable charge, and updates the SQI values in the billable charge. For more information, refer to the [Aggregation](#) on page 875 section. In addition, the system invokes the algorithm attached to the following algorithm spot of the derived account's division for the self-funded health care business:
    - **TFM - Billable Charge Post Processing** - You can attach an algorithm created using the **C1\_BCHG\_POPC** algorithm type to this algorithm spot. This algorithm invokes the algorithm which is attached to the **Bill After Date Determination** system event of the respective pricing rule type. For more information, refer to the [Bill After Date Determination](#) on page 2785 section.

## Stop Loss Calculation

Oracle Revenue Management and Billing enables you to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the transaction calculation lines for specific stop-loss and aggregate stop-loss are created using the transaction aggregation process, you need to execute the following batches in the specified sequence:

1. Stamp Accumulate After Date Batch (C1-STAAD)
2. Accumulate Specific Stop Loss (C1-ACSSL)
3. Create Specific Stop-Loss Billable Charge (C1-BCSSL)
4. Accumulate Aggregate Stop Loss (C1-ACASL)
5. Create Aggregate Stop-Loss Billable Charge (C1-BCASL)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

## Bill Generation

Once the billable charges are created for claim, claim based fees, specific stop-loss credits, aggregate stop-loss credits, enrollment based fees, and ancillary, you need to execute the following charge-based billing batches in the specified sequence to generate bills for the self-funded employer:

1. Pending Bill Generation (C1-PNDBL)
2. Bill Segment Generation (C1-BLGEN)

### 3. Bill Completion (C1-BLPPR)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

## Bill Group Derivation

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch derives the bill group, parent customer, and policy for the claim, enrollment, and ancillary transactions. This is possible only when an algorithm created using the **C1\_TXNBGDRV** algorithm type is attached to the **Bill Group Derivation** system event of the primary pricing rule type. The derived bill group is used for billing the following (if any):

- Claim Charges
- Claim Based Fees
- Specific Stop-Loss (SSL) Credits
- Aggregate Stop-Loss (ASL) Credits
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- One-time or Recurring Fees
- Ancillary Charges

To derive a bill group, the system first determines the derivation date. The paid date is considered as the derivation date while processing the claim transactions. The coverage end date is considered as the derivation date while processing the retroactive enrollment transactions. And, the coverage start date is considered as the derivation date while processing the non-retroactive enrollment transactions. If the system cannot determine the derivation date, the status of the transaction is changed to **Error**.

Depending on the transaction fields which are mapped to source system, parameter 1, parameter 2, parameter 3, and parameter 4 in the primary pricing rule type, the system derives the data from the transaction. For example, if the source system is mapped to the **External System** field, parameter 1 is mapped to the **Location** field, parameter 2 is mapped to the **Designation** field, parameter 3 is mapped to the **Employee Group** field, and parameter 4 is mapped to the **Nationality** field, the system derives these details from the transaction. Based on the data available in the transaction, the system derives a bill group using the derivation and pricing parameters which are defined for the bill group. Note that the system considers the derivation and pricing parameters which are effective on the derivation date. For example, if the following derivation and pricing parameters are defined for the Bill Group 1 and Bill Group 2:

Bill Group Name	Sort ID	Effective Date	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 1	123	01-01-2018	X	Eastern	Senior Manager	BG1	Indian
Bill Group 1	132	01-04-2018	X	Western	Senior Manager	-	-
Bill Group 1	156	01-07-2018	Y	Eastern	Senior Manager	BG1	Indian
Bill Group 1	163	01-10-2018	Y	Western	Senior Manager	-	-
Bill Group 2	172	01-01-2018	Y	Eastern	-	-	-
Bill Group 2	181	01-04-2018	Y	Western	-	-	-
Bill Group 2	122	01-07-2018	X	Eastern	-	-	-
Bill Group 2	112	01-10-2018	X	Western	-	-	-

Now, if the system receives a claim transaction with the following details:

- External System is set to X
- Location is set to Western
- Designation is set to Senior Manager
- Paid Date is set to 12-05-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 132 (sort ID) combination are effective on the paid date, and therefore the system derives Bill Group 1 for billing the claim transaction. Let us take another example where the system receives a retroactive enrollment transaction with the following details:

- External System is set to X
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 123 (sort ID) combination are effective on the coverage end date, and therefore the system derives Bill Group 1 for billing the retroactive enrollment transaction.

In the above two examples, the system could find the exact match for the bill group in the system. However, if the exact match is not available, the system finds the bill group using the best fit match. For example, if the system receives a claim transaction with the following details:

- External System is set to Y
- Location is set to Western
- Designation is set to Senior Manager
- Employee Group is set to BG2
- Nationality is set to Indian
- Paid Date is set to 01-06-2018

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Western, Designation = Senior Manager, Employee Group = BG2, and Nationality = Indian) on the paid date. Therefore, it searches for the best fit match.

While searching for the best fit match, the system first rules out the optional parameter 4 (i.e. Nationality = Indian) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, Designation = Senior Manager, and Employee Group = BG2, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 3 (i.e. Employee Group = BG2) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, and Designation = Senior Manager, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 2 (i.e. Designation = Senior Manager) and then checks whether the effective derivation and pricing parameters, where Source System = Y and Location = Western, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the status of the transaction is changed to **Error**.

In this example, the derivation and pricing parameters, where Source System = Y and Location = Western, defined for the Bill Group 2 and 181 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the claim transaction. Let us take another example where the system receives a non-retroactive enrollment transaction with the following details:

- External System is set to Y
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Eastern, Designation = Senior Manager, Employee Group = BG1, and Nationality = Indian) on the coverage start date. Therefore, it searches for the best fit match. The derivation and pricing parameters, where Source System = Y and Location = Eastern, defined for the Bill Group 2 and 172 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the non-retroactive enrollment transaction.

Once the bill group is derived, the system derives the parent customer of the bill group. Once the parent customer is derived, the system derives the policy for the transaction in the following manner:

If the transaction is a...	Then...
Claim Transaction	<p>The system checks whether the paid date of the claim transaction falls within the policy start date and runout end date of any policy where:</p> <ul style="list-style-type: none"> <li>• The bill group is associated with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</li> <li>• The status of the policy is set to either of the following: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Runout</li> <li>• Post Runout</li> </ul> </li> </ul>
Retroactive Enrollment Transaction	<p>The system checks whether the coverage end date falls within the policy start date and policy end date of any policy where:</p> <ul style="list-style-type: none"> <li>• The bill group is associated with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</li> <li>• The status of the policy is set to <b>In Force/Active</b>.</li> </ul>
Non-retroactive Enrollment Transaction	<p>The system checks whether the coverage start date falls within the policy start date and policy end date of any policy where:</p> <ul style="list-style-type: none"> <li>• The bill group is associated with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</li> <li>• The status of the policy is set to <b>In Force/Active</b>.</li> </ul>

If the system cannot derive the policy for the transaction, the status of the transaction is changed to **Error**.

## Account and Price Item Derivation (for the Claim Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible only when an algorithm created using the **C1\_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

**Note:** If you have specified the price item parameters (for which the parameter usage is set to **Pricing**) in the pricing rule types where the pricing rule type category is set to **Claim**, the system does not use these price item parameters while searching for an effective pricing rule for the respective price items. However, you can use these price item parameters while defining the accumulation criteria in the related pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.

This algorithm fetches the effective pricing rule for each price item specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date while fetching the effective pricing rules for the claim transactions. This algorithm first searches for the effective pricing rule for a price item which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF\_DATE\_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR1	CLAIM	P1	C1P1	01-01-2018	31-12-2018	Parent Customer
			C2P1	01-01-2018	31-12-2018	Bill Group
			C3P1	01-01-2019	30-06-2019	Bill Group
		P2	C1P2	01-06-2017	31-12-2017	Bill Group
			C2P2	01-01-2018	31-12-2018	Parent Customer
			C3P2	01-01-2019	30-06-2019	Bill Group

**Note:** Here, the paid date is mapped to the **UDF\_DATE\_1** field in the CLAIM pricing rule type.

### Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the paid date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

### Example 2: Priority Based Account Derivation

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

**Note:** The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the claim transaction is mapped to the following price item and account combinations:

Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
P1	PR1	A1	C1	TL1
P2	PR2	A2	C2	TL2
P3	PR3	A3	C3	TL3

### Example 3: Transaction Leg Derivation

In the example 3, the system creates three transaction legs — TL1, TL2, and TL3 for the transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Claim**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg — TL1, TL2, and TL3.

**Note:** A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction only when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.

- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_DATE\_1 is set to 04-06-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Rule 1	Rule 2
TR1	CLAIM	PP1	PR1	01-01-2018	31-12-2018	PG1	Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent	Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, and the paid date is mapped to the **UDF\_DATE\_1** field in the CLAIM pricing rule type.

#### Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 04-06-2018) of the claim transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Location = Western, Nationality = Indian, Employee Department = HR, and Employee Status = Permanent)

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In the example 4, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_DATE\_1 is set to 04-06-2018
- Transaction Record Type is set to TR2

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Rule 1	Rule 2
TR2	CLM	PP1	PR1	01-01-2018	31-12-2018	PG1	Source System = X and Parameter 1 = Western	Source System = X and Parameter 1 = Eastern
		PP2	PR2	01-01-2018	31-12-2018	PG2	Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent	Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, and the paid date is mapped to the **UDF\_DATE\_1** field in the CLM pricing rule type.

#### Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match, and therefore fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

**Note:** We recommend that you should only include the optional aggregation price item parameters in the pricing rule types where the pricing rule type category is set to **Claim**. Otherwise, erroneous results might occur.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PP1	-	-	-	-
PP2	PR2	-	-	-
PP3	PR3	A3	C3	TL1
PP4	-	-	-	-
PP5	PR5	A2	C1	TL2
PP6	PR6	A1	-	-

#### Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs — TL1 and TL2 for the claim transaction.

If the eligibility rule type is defined of a price item, the system maps the claim transaction to the price item only when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

#### Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the claim transaction. For more information, refer to the [Price Item Eligibility](#) on page 2726 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

## Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type
CLAIM	10	SPECIFIC STOP-LOSS
	20	AGGREGATE STOP-LOSS

### Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the SPECIFIC STOP-LOSS pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs only when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type	Eligibility Criteria Met
CLAIM	10	SPECIFIC STOP-LOSS	Yes
	20	AGGREGATE STOP-LOSS	No

### Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible only when you attach an algorithm created using the **C1\_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

**Note:** Ideally, the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss** should not have price item parameters for which the parameter usage is set to **Pricing**. This is because the system will not use these price item parameters while searching for an effective pricing rule for the respective price items.

This algorithm fetches an effective pricing rule for each price item specified in the related pricing rule type. It searches for an effective pricing rule for a price item at the bill group level. It derives an effective pricing rule for each price item using the incurred and paid dates specified in the claim transaction. It fetches an effective pricing rule where the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).
- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For run-in claim transactions, this algorithm fetches an effective pricing rule where the following conditions are met:

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer's pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For example, if the system receives a claim transaction with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_2 is set to BG1
- UDF\_DATE\_1 is set to 18-02-2018
- UDF\_DATE\_2 is set to 28-02-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)		
TR1	CLAIM	SPECIFIC STOP-LOSS	S1	C1S1	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1
				C2S1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1
							Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1
			S2	C1S2	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)		
				C2S2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1

**Note:**

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF\_CHAR\_1 and Employee Group = UDF\_CHAR\_2.

Here, the incurred date is mapped to the **UDF\_DATE\_1** field and the paid date is mapped to the **UDF\_DATE\_2** field in the CLAIM pricing rule type.

**Example 3: SSL and ASL Effective Pricing Rule Derivation for Claim Transaction**

In the example 3, the system fetches the C2S1 and C2S2 pricing rules for S1 and S2, respectively, because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C2S1 and C2S2 pricing rules:
  - Price Item: CLM, Price Item Parameters: Location = Western and Employee Group = BG1

Let us take another example where the system receives a run-in claim transaction with the following details:

- UDF\_CHAR\_1 is set to Eastern
- UDF\_CHAR\_3 is set to Active
- UDF\_DATE\_3 is set to 18-06-2017
- UDF\_DATE\_4 is set to 01-07-2017
- Transaction Record Type is set to TR2

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Run-in Incurred Date Range in Associated Parent Customer's Pricing Rule	Run-in Paid Date Range in Associated Parent Customer's Pricing Rule	Accumulation Criteria
					(i.e. in Run-in Accumulation Group)		
TR2	CLAIM	AGGREGATE STOP-LOSS	AS1	C1AS1	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
				C2AS1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
			AS2	C1AS2	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active
				C2AS2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active

**Note:**

Price Items in Primary Pricing Rule Type: CLAIM and CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF\_CHAR\_1 and Employee Status = UDF\_CHAR\_3. Here, the run-in incurred date is mapped to the UDF\_DATE\_3 field and the run-in paid date is mapped to the UDF\_DATE\_4 field in the CLAIM pricing rule type.

**Example 4: SSL and ASL Effective Pricing Rule Derivation for Run-in Claim Transaction**

In the example 4, the system fetches the C1AS1 and C1AS2 pricing rules for AS1 and AS2, respectively, because of the following reasons:

- Run-in incurred date mentioned in the claim transaction falls within the run-in incurred date range (i.e. 01-01-2017 - 31-12-2017) defined in the run-in accumulation group.
- Run-in paid date mentioned in the claim transaction falls within the run-in paid date range (i.e. 01-01-2017 - 28-02-2018) defined in the run-in accumulation group.
- An effective pricing rule exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C1AS1 and C1AS2 pricing rules:
  - Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
  - Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active

The system then checks whether the ASSL Credit Account (in case of specific stop-loss pricing rule) and ASL Credit Account (in case of aggregate stop-loss pricing rule) is specified in the associated parent customer's pricing rule. If so, the system considers the respective account for billing. Otherwise, the system derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type. For example,

Related Pricing Rule Type	Price Item	Priority	Invoice Type	Account
SPECIFIC STOP-LOSS	S1	10	Standard	A1
		20	Retention	A2
	S2	10	Retention	A2
		20	Standard	A1

#### Example 5: Priority Based Account Derivation

In the example 5, while mapping the claim transaction to S1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to S2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

**Note:** The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the claim transaction is mapped to the following price item and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR1	CLAIM	SPECIFIC STOP-LOSS	S3	PRS3	A1	C3	TL3
			S4	PRS4	A2	C4	TL4

#### Example 6: Transaction Leg Derivation

In the example 6, the system creates two transaction legs — TL3 and TL4 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** and **Aggregate Stop-Loss**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg — TL3 and TL4.

**Note:** A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction only when the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).
- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Similarly, the system will fetch the pricing rule for a run-in claim transaction only when the following conditions are met:

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer's pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the run-in claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_CHAR\_6 is set to Senior Manager
- UDF\_CHAR\_7 is set to BG1
- UDF\_DATE\_1 is set to 31-12-2018

- UDF\_DATE\_2 is set to 28-02-2019
- Transaction Record Type is set to TR1

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
TR1	CLAIM	SPECIFIC STOP-LOSS	S1	PR1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1
								Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG2

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG2

**Note:**

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF\_CHAR\_6 and Employee Group = UDF\_CHAR\_7.

Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, the incurred date is mapped to the **UDF\_DATE\_1** field, and the paid date is mapped to the **UDF\_DATE\_2** field in the CLAIM pricing rule type.

**Example 7: Effective Pricing Rule is Defined Using a Pricing Group**

In the example 7, the system considers the PR1 pricing rule for S1 because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:
  - Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In the example 7, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 7, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_CHAR\_6 is set to Senior Manager
- UDF\_CHAR\_7 is set to BG1
- UDF\_DATE\_1 is set to 06-06-2018
- UDF\_DATE\_2 is set to 27-06-2018
- Transaction Record Type is set to TR2

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
TR2	CLAIM	SPECIFIC STOP-LOSS	S1	PR1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1
								Rule 1 (where Source System = X and Parameter 1 = Western)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
			S2	PR2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG2	<p>Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)</p> <p>Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)</p> <p>Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)</p>	<p>Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2</p> <p>Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1</p> <p>Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2</p>

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
					(i.e. in Parent Accumulation Group)				
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1

**Note:**

Price Item in Primary Pricing Rule Type: CLAIM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF\_CHAR\_6 and Employee Group = UDF\_CHAR\_7.

Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, the incurred date is mapped to the **UDF\_DATE\_1** field, and the paid date is mapped to the **UDF\_DATE\_2** field in the CLAIM pricing rule type.

**Example 8: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters**

In the example 8, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for S1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 8, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for S1. In addition, a transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:

- Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1

Therefore, the system fetches PR1 as the effective pricing rule for S1. In addition, the system fetches PR2 as the effective pricing rule for S2. The system creates two price item parameter groups — One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created,

the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Related Pricing Rule Type	Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
AGGREGATE STOP-LOSS	AS11	-	-	-	-
	AS12	PR12	A1	C1	TL11
	AS13	PR13	-	-	-
	AS14	PR14	A2	-	-
	AS15	PR15	-	-	-
	AS16	-	-	-	-
	AS17	PR17	A2	C2	TL12

#### Example 9: No. of Transaction Legs Derived

In the example 9, the system could not find the effective pricing rule for AS11 and AS16, the required account for AS13 and AS15, and the active contract for AS14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item only when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Sequence	Related Pricing Rule Type	Rule Type Eligibility Criteria Met	Price Item	Price Item Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
10	SPECIFIC STOP-LOSS	Yes	SS1	Yes	PR1	A1	C1	TL1
			SS2	-	PR2	A2	C2	TL2
			SS3	No	-	-	-	-
20	AGGREGATE STOP-LOSS	No	AS4	-	-	-	-	-
			AS5	-	-	-	-	-
			AS6	-	-	-	-	-

#### Example 10: Price Item Eligibility for Transaction Leg Derivation

In the example 10, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for SS1 was satisfied, but the eligibility criteria for SS3 was not satisfied. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the [Related Pricing Rule Type Eligibility](#) on page 2724 and [Price Item Eligibility](#) on page 2726 sections, respectively.

Once a transaction leg is created, the effective pricing rule's start date is set as the processing date corresponding to the transaction leg.

## Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type
CLAIM	10	RETENTION TYPE CLAIM BASED
	20	SPECIFIC STOP-LOSS
	30	AGGREGATE STOP-LOSS

### Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the RETENTION TYPE CLAIM BASED pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs only when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type	Eligibility Criteria Met
CLAIM	10	RETENTION TYPE CLAIM BASED	Yes
	20	CLAIM BASED FEES	-
	30	CLAIM FEE CHARGES	No

### Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible only when you attach an algorithm created using the **C1\_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the related pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF\_DATE\_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR1	CLAIM	RETENTION TYPE CLAIM BASED	P3	C1P3	01-01-2018	31-12-2018	Parent Customer
				C2P3	01-01-2018	31-12-2018	Bill Group
			P4	C1P4	01-01-2018	31-12-2018	Parent Customer
				C2P4	01-01-2019	30-06-2019	Bill Group

**Note:** Here, the paid date is mapped to the UDF\_DATE\_1 field in the CLAIM pricing rule type.

### Example 3: Effective Pricing Rule Derivation

In the example 3, the system fetches C2P3 and C1P4 pricing rules for P3 and P4 respectively, which are effective on the paid date. Note that the effective pricing rule for P3 is derived at the bill group level, whereas the effective pricing rule for P4 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for the exact match for the price item parameters at both the levels. For example, if the system receives a claim transaction with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_2 is set to Active
- UDF\_DATE\_1 is set to 20-03-2018
- Transaction Record Type is set to TR4

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR4	CLAIM	CLAIM BASED CHARGES	P1	Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2	C1P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Parent Customer
								Location = Eastern and Employee Status = Active	\$12	

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
								Location = Eastern and Employee Status = Retired	\$11	
								Location = Western and Employee Status = Retired	\$9	
					C2P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$8	Bill Group
								Location = Eastern and Employee Status = Active	\$9	
								Location = Eastern and Employee Status = Retired	\$10	
								Location = Western and Employee Status = Retired	\$9	

**Note:** Here, the paid date is mapped to the UDF\_DATE\_1 field in the CLAIM pricing rule type.

#### Example 4: Exact Match for Price Item Parameters

In the example 4, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The paid date (i.e. 20-03-2018) of the claim transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

If the system cannot find the exact match for the price item parameters at both the levels, it searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a claim transaction with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_2 is set to Active
- UDF\_CHAR\_3 is set to HR
- UDF\_CHAR\_4 is set to Indian
- UDF\_DATE\_1 is set to 07-06-2018
- Transaction Record Type is set to TR5

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR5	CLAIM	RETENTION CLAIM BASED FEES	P3	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	C1P3	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Bill Group
								Location = Eastern and Employee Status = Active	\$12	
								Location = Eastern and Employee Status = Retired	\$11	
								Location = Western and Employee Status = Retired	\$9	

**Note:** Here, the paid date is mapped to the **UDF\_DATE\_1** field in the CLAIM pricing rule type.

#### Example 5: Best Fit Match for Price Item Parameters

**Note:** The **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

In the example 5, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While fetching the effective pricing rule, the system considers only those price item parameters specified in the related pricing rule type for which the parameter usage is set to **Pricing**.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type. For example,

Related Pricing Rule Type	Price Item	Priority	Invoice Type	Account
RETENTION TYPE CLAIM BASED	P3	10	Standard	A1
	P4	10	Retention	A2
		20	Standard	A1

#### Example 6: Priority Based Account Derivation

In the example 6, while mapping the claim transaction to P3, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P4, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

**Note:** The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a claim transaction with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_2 is set to Active
- UDF\_CHAR\_3 is set to HR
- UDF\_DATE\_1 is set to 03-01-2018
- Transaction Record Type is set to TR5

Let us assume that the claim transaction is mapped to the following price item, price item parameters, and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR5	CLAIM	CLAIM BASED FEES	P1	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	PR1	Location = Western and Employee Status = Active	A1	C1	TL1

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
			P2		PR2	Location = Western and Employee Status = Active	A2	C2	TL2
			P3		PR3	Location = Western and Employee Status = Active	A3	C3	TL3

**Note:** Here, the paid date is mapped to the **UDF\_DATE\_1** field in the CLAIM pricing rule type.

### Example 7: Transaction Leg Derivation

In the example 7, the system maps the claim transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

**Note:** The nationality information of an employee is not received in the **UDF\_CHAR\_4** field, and therefore the claim transaction is not mapped to the **Nationality** price item parameter.

In the example 7, the system creates three transaction legs — TL1, TL2, and TL3 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 7, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

**Note:** The price item parameter group contains only those price item parameters included in the related pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction only when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

- The employee attributes specified in the claim transaction match the price item parameters defined within the satisfied rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_CHAR\_6 is set to Senior Manager
- UDF\_CHAR\_7 s set to BG1
- UDF\_DATE\_1 03-01-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
TR6	CLAIM	CLAIM BASED FEES	PP1	Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$10
									Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$12

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
									Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$8
									Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$9

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, and the paid date is mapped to the **UDF\_DATE\_1** field in the CLAIM pricing rule type.

#### Example 8: Effective Pricing Rule is Defined Using a Pricing Group

In the example 8, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 03-01-2018) of the claim transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The employee attributes specified in the claim transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 8, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective

pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_CHAR\_6 is set to Senior Manager
- UDF\_CHAR\_7 is set to BG1
- UDF\_DATE\_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
TR6	CLAIM	CLAIM BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG1	\$20
									Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG2	\$21
									Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG1	\$18

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
									Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG2	\$19
			PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$5
									Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$5
									Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$6

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
									Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$9

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, and the paid date is mapped to the **UDF\_DATE\_1** field in the CLAIM pricing rule type.

#### Example 9: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 9, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 9, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the claim transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within the Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Related Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
RETENTION TYPE CLAIM BASED	PP11	Designation = UDF_CHAR_6, Employee Status = UDF_CHAR_7	-	-	-	-
	PP12		PR12	A1	C1	TL11
	PP13		PR13	-	-	-
	PP14		PR14	A2	-	-
	PP15		PR15	-	-	-
	PP16		-	-	-	-
	PP17		PR17	A2	C2	TL12

### Example 10: No. of Transaction Legs Derived

In the example 10, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item only when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Sequence	Related Pricing Rule Type	Rule Type Eligibility Criteria Met	Price Item	Price Item Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
10	RETENTION TYPE CLAIM BASED	Yes	PE1	Yes	PR1	A1	C1	TL1
			PE2	-	PR2	A2	-	-
			PE3	No	-	-	-	-
20	CLAIM BASED FEES	-	PE4	-	PR3	A1	C2	TL2
			PE5	Yes	PR4	-	-	-
			PE6	No	-	-	-	-
30	CLAIM FEE CHARGES	No	PE7	-	-	-	-	-
			PE8	-	-	-	-	-
			PE9	-	-	-	-	-

### Example 11: Price Item Eligibility for Transaction Leg Derivation

In the example 11, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for PE1 and PE5 was satisfied, but the eligibility criteria for PE3 and PE6 was not satisfied. Further, the system could not find the required account for PE5 and the active contract for PE2 on A2. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the [Related Pricing Rule Type Eligibility](#) on page 2724 and [Price Item Eligibility](#) on page 2726 sections, respectively.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

## Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps the retroactive and non-retroactive enrollment transactions to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible only when an algorithm created using the **C1\_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the coverage end date and coverage start date as the derivation date while fetching the effective pricing rules for the retroactive and non-retroactive enrollment transactions, respectively. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF\_DATE\_1 is set to 01-02-2018
- UDF\_DATE\_2 is set to 28-02-2018
- Transaction Record Type is set to TR3

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR3	RETENTION TYPE ENROLLMENT BASED	P1	C1P1	01-01-2018	31-12-2018	Parent Customer
			C2P1	01-01-2018	31-12-2018	Bill Group
			C3P1	01-01-2019	30-06-2019	Bill Group
		P2	C1P2	01-06-2017	31-12-2017	Bill Group
			C2P2	01-01-2018	31-12-2018	Parent Customer
			C3P2	01-01-2019	30-06-2019	Bill Group

**Note:** Here, the coverage start date is mapped to the **UDF\_DATE\_1** field and the coverage end date is mapped to the **UDF\_DATE\_2** field in the RETENTION TYPE ENROLLMENT BASED pricing rule type.

### Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the coverage start date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for exact match for the price item parameters at both the levels. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_2 is set to Active

- UDF\_DATE\_1 is set to 01-03-2018
- UDF\_DATE\_2 is set to 31-03-2018
- Transaction Record Type is set to TR4

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level	
TR4	ENROLLMENT BASED FEES	P1	Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2	C1P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Parent Customer	
							Location = Eastern and Employee Status = Active	\$12		
							Location = Eastern and Employee Status = Retired	\$11		
							Location = Western and Employee Status = Retired	\$9		
				C2P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$8		Bill Group
							Location = Eastern and Employee Status = Active	\$9		
							Location = Eastern and Employee Status = Retired	\$10		
							Location = Western and Employee Status = Retired	\$9		

**Note:** Here, the coverage start date is mapped to the **UDF\_DATE\_1** field and the coverage end date is mapped to the **UDF\_DATE\_2** field in the ENROLLMENT BASED FEES pricing rule type.

### Example 2: Exact Match for Price Item Parameters

In the example 2, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

If the system cannot find the exact match for the price item parameters at both the levels, the system searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_2 is set to Active
- UDF\_CHAR\_3 is set to HR
- UDF\_CHAR\_4 is set to Indian
- UDF\_DATE\_1 is set to 01-03-2018
- UDF\_DATE\_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR5	ENROLLMENT BASED CHARGES	P3	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	C1P3	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	\$10	Bill Group
							Location = Eastern and Employee Status = Active	\$12	
							Location = Eastern and Employee Status = Retired	\$11	
							Location = Western and Employee Status = Retired	\$9	

**Note:**

Here, the coverage start date is mapped to the **UDF\_DATE\_1** field and the coverage end date is mapped to the **UDF\_DATE\_2** field in the ENROLLMENT BASED CHARGES pricing rule type.

Here, the **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

**Example 3: Best Fit Match for Price Item Parameters**

In the example 3, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item

parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 3, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While fetching the effective pricing rule, the system considers only those price item parameters specified in the primary pricing rule type for which the parameter usage is set to **Pricing**. For retroactive enrollment transactions, the system considers only those effective pricing rules where the **Exempt Retro Transactions** option is not selected.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

#### Example 4: Priority Based Account Derivation

In the example 4, while mapping the enrollment transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the enrollment transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

**Note:** The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF\_CHAR\_1 is set to Western
- UDF\_CHAR\_2 is set to Active
- UDF\_CHAR\_3 is set to HR
- UDF\_DATE\_1 is set to 01-03-2018
- UDF\_DATE\_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

Let us assume that the non-retroactive enrollment transaction is mapped to the following price item, price item parameters, and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR5	ENROLLMENT BASED FEES	P1	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	PR1	Location = Western and Employee Status = Active	A1	C1	TL1
		P2		PR2	Location = Western and Employee Status = Active	A2	C2	TL2
		P3		PR3	Location = Western and Employee Status = Active	A3	C3	TL3

**Note:** Here, the coverage start date is mapped to the **UDF\_DATE\_1** field and the coverage end date is mapped to the **UDF\_DATE\_2** field in the ENROLLMENT BASED FEES pricing rule type.

#### Example 5: Transaction Leg Derivation

In the example 5, the system maps the non-retroactive enrollment transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

**Note:** The nationality information of an employee is not received in the **UDF\_CHAR\_4** field, and therefore the non-retroactive enrollment transaction is not mapped to the **Nationality** price item parameter.

In the example 5, the system creates three transaction legs — TL1, TL2, and TL3 for the non-retroactive enrollment transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 5, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

**Note:** The price item parameter group contains only those price item parameters included in the pricing rule type for which the parameter usage is set to **Pricing**.

The following table describes how the system fetches a pricing rule when a pricing group is used while defining the pricing rule for a bill group:

If the transaction is a...	Then the system fetches the pricing rule only when the following conditions are met...
Retroactive enrollment transaction	<ul style="list-style-type: none"> <li>• The coverage end date of the retroactive enrollment transaction falls within the pricing rule's date range.</li> <li>• The exact or best fit match is available for the price item parameters in the effective pricing rule.</li> <li>• The retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule.</li> </ul>
Non-retroactive enrollment transaction	<ul style="list-style-type: none"> <li>• The coverage start date of the non-retroactive enrollment transaction falls within the pricing rule's date range.</li> <li>• The exact or best fit match is available for the price item parameters in the effective pricing rule.</li> <li>• The non-retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule.</li> </ul>

Let us understand this with the help of an example. A retroactive enrollment transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_CHAR\_6 is set to Senior Manager
- UDF\_CHAR\_7 is set to BG1
- UDF\_DATE\_1 is set to 01-03-2018
- UDF\_DATE\_2 is set to 31-03-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
TR6	ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$10
								Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$12
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	\$8
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	\$9

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, the coverage start date is mapped to the **UDF\_DATE\_1** field, and the coverage end date is mapped to the **UDF\_DATE\_2** field in the ENROLLMENT BASED FEES pricing rule type.

### Example 6: Effective Pricing Rule is Defined Using a Pricing Group

In the example 6, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the retroactive enrollment transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)
- The employee attributes specified in the retroactive enrollment transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 6, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A non-retroactive enrollment transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_CHAR\_6 is set to Senior Manager
- UDF\_CHAR\_7 is set to BG1
- UDF\_DATE\_1 is set to 01-05-2018
- UDF\_DATE\_2 is set to 31-05-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
TR6	ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG1	\$20
								Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG2	\$21
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG1	\$18
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG2	\$19
		PP2	PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$5	
							Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$5	

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	\$6
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	\$9

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, the coverage start date is mapped to the **UDF\_DATE\_1** field, and the coverage end date is mapped to the **UDF\_DATE\_2** field in the ENROLLMENT BASED FEES pricing rule type.

#### Example 7: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 7, the system could not find exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 7, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the non-retroactive enrollment transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter

group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Status = UDF_CHAR_7	-	-	-	-
	PP2		PR2	-	-	-
	PP3		PR3	A3	C3	TL1
	PP4		-	-	-	-
	PP5		PR5	A2	C1	TL2
	PP6		PR6	A1	-	-

#### Example 8: No. of Transaction Legs Derived

In the example 8, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs — TL1 and TL2 for the enrollment transaction.

If the eligibility rule type is defined of a price item, the system maps the enrollment transaction to the price item only when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

#### Example 9: Price Item Eligibility for Transaction Leg Derivation

In the example 9, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the enrollment transaction. For more information, refer to the [Price Item Eligibility](#) on page 2726 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

## Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps an ancillary transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible only

when an algorithm created using the **C1\_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives an ancillary transaction with the following details:

- UDF\_CHAR\_6 is set to BC1
- UDF\_CHAR\_7 is set to PASS
- UDF\_DATE\_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Arrangement	Assignment Level
TR1	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	C1P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Parent Customer
				C2P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Bill Group
				C3P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Bill Group
		P2		C1P2	01-06-2017	31-12-2017	Pass Through without Markup or Markdown	Bill Group
				C2P2	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Parent Customer
				C3P2	01-01-2019	30-06-2019	Pass Through without Markup or Markdown	Bill Group

**Note:**

Here, the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type. This means that the system will consider only effective pricing rules where the pricing arrangement is set to **Pass Through without Markup or Markdown** when the ancillary transaction is received where **UDF\_CHAR\_7** is set to **PASS**.

Here, the paid date is mapped to the **UDF\_DATE\_1** field in the ANCILLARY pricing rule type.

**Example 1: Effective Pricing Rule Derivation**

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, because of the following reasons:

- The paid date (i.e. 15-03-2018) of the ancillary transaction falls within the C2P1 and C2P2 pricing rules' date range (i.e. 01-01-2018 to 31-12-2018).
- The pricing arrangement is set to **Pass Through without Markup or Markdown** in the C2P1 and C2P2 pricing rules.

Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

**Note:** The price item parameters (i.e. BCHGLINETYPE and PRICINGARRANGEMENT) must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLLNG** feature configuration, respectively. Otherwise, erroneous results might occur.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

**Example 2: Priority Based Account Derivation**

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

**Note:** The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters,

and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives an ancillary transaction with the following details:

- UDF\_CHAR\_6 is set to BC1
- UDF\_CHAR\_7 is set to PASS
- UDF\_DATE\_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

Let us assume that the ancillary transaction is mapped to the following price item, price item parameters, and account combinations:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Pricing Arrangement	Account	Active Contract	Transaction Leg
TR1	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	Pass Through without Markup or Markdown	A1	C1	TL1
		P2		PR2	Pass Through without Markup or Markdown	A2	C2	TL2
		P3		PR3	Pass Through without Markup or Markdown	A3	C3	TL3

**Note:** Here, the paid date is mapped to the **UDF\_DATE\_1** field and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

### Example 3: Transaction Leg Derivation

In the example 3, the system maps the ancillary transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A1
- Price Item: P2; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A2
- Price Item: P3; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A3

In the example 3, the system creates three transaction legs — TL1, TL2, and TL3 for the ancillary transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 3, the system creates one price item parameter group which contains the following price item parameters:

- BCHGLINETYPE = BC1
- PRICINGARRANGEMENT = PASS

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

**Note:** The price item parameter group contains only those price item parameters included in the primary pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for an ancillary transaction only when the following conditions are met:

- The paid date of the ancillary transaction falls within the pricing rule's date range.
- The employee attributes specified in the ancillary transaction match the criteria defined in any one of the pricing group rule.
- The pricing arrangement specified in the ancillary transaction matches the pricing arrangement specified in the pricing rule.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- UDF\_CHAR\_1 is set to X
- UDF\_CHAR\_2 is set to Western
- UDF\_CHAR\_3 is set to Indian
- UDF\_CHAR\_4 is set to HR
- UDF\_CHAR\_5 is set to Permanent
- UDF\_CHAR\_6 is set to BC1
- UDF\_CHAR\_7 is set to PASS
- UDF\_DATE\_1 is set to 26-01-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
TR6	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, the paid date is mapped to the **UDF\_DATE\_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the **ANCILLARY** pricing rule type.

#### Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for PI because of the following reasons:

- The paid date (i.e. 26-01-2018) of the ancillary transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the ancillary transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains **BCHGLINETYPE = BC1**, **PRICINGARRANGEMENT = PASS**, and **Pricing Group Rule Parameter = Rule 1**.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- **UDF\_CHAR\_1** is set to X
- **UDF\_CHAR\_2** is set to Western
- **UDF\_CHAR\_3** is set to Indian
- **UDF\_CHAR\_4** is set to HR
- **UDF\_CHAR\_5** is set to Permanent
- **UDF\_CHAR\_6** is set to BC1
- **UDF\_CHAR\_7** is set to PASS

- UDF\_DATE\_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

Let us assume that the following pricing structure is defined in the system:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
TR6	ANCILLARY	PP1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Pass Through without Markup or Markdown
								Rule 1 (where Source System = X and Parameter 1 = Western)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Pass Through without Markup or Markdown
		PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
								Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

**Note:** Here, the source system is mapped to the **UDF\_CHAR\_1** field, the parameter 1 is mapped to the **UDF\_CHAR\_2** field, the parameter 2 is mapped to the **UDF\_CHAR\_3** field, the parameter 3 is mapped to the **UDF\_CHAR\_4** field, the parameter 4 is mapped to the **UDF\_CHAR\_5** field, the paid date is mapped to the **UDF\_DATE\_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the **ANCILLARY** pricing rule type.

#### Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter

3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups — One contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 1 and another contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
ANCILLARY	PP11	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	-	-	-	-
	PP12		PR12	A1	C1	TL11
	PP13		PR13	-	-	-
	PP14		PR14	A2	-	-
	PP15		PR15	-	-	-
	PP16		-	-	-	-
	PP17		PR17	A2	C2	TL12

#### Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs — TL11 and TL12 for the transaction.

If the eligibility rule type is defined of a price item, the system maps the ancillary transaction to the price item only when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

#### Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the ancillary transaction. For more information, refer to the [Price Item Eligibility](#) on page 2726 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

## Bill After Date Determination

Once the billable charges are created for claim, claim based fees, enrollment based fees, and ancillary, the system enables you to automatically stamp the bill after date in these billable charges. The system can automatically stamp the bill after date in these billable charges only when an algorithm created using the **C1\_BAFTDRV** algorithm type is attached to the **Bill After Date Determination** system event of the respective pricing rule type. This algorithm sets the bill after date to the end date of the aggregation schedule period in which the transaction date falls. Note that the system considers the aggregation schedule specified in the rate option which is defined for the respective price item. Let us understand this with the help of an example. If the claim transaction with the transaction date set to 25-06-2018 is mapped to the following price item and account combinations:

Pricing Rule Type	Price Item	Rate Option	Aggregate Transaction	Aggregation Schedule	Schedule Period	Account	Billable Charge	
CLAIM	P1	R01	Yes	Monthly	01-01-2018 — 31-01-2018	A1	BC1	
					01-02-2018 — 28-02-2018			
					01-03-2018 — 31-03-2018			
					01-04-2018 — 30-04-2018			
					01-05-2018 — 31-05-2018			
					01-06-2018 — 30-06-2018			
					01-07-2018 — 31-07-2018			
					01-08-2018 — 31-08-2018			
	P2	R01				01-09-2018 — 30-09-2018	A2	BC2
						01-10-2018 — 31-10-2018		

Pricing Rule Type	Price Item	Rate Option	Aggregate Transaction	Aggregation Schedule	Schedule Period	Account	Billable Charge
					01-11-2018 — 30-11-2018		
					01-12-2018 — 31-12-2018		
	P3	R02	Yes	Yearly	01-01-2018 — 31-12-2018	A3	BC3

#### Example 1: Bill After Date Determination Using the Aggregation Schedule

In the example 1, the system stamps 30-06-2018 as the bill after date in the BC1 and BC2 billable charges. This is because the transaction date (i.e. 25-06-2018) falls in the 01-06-2018 — 30-06-2018 period of the R01 aggregation schedule.

However, the system stamps 31-12-2018 as the bill after date in the BC3 billable charge. This is because the transaction date (i.e. 25-06-2018) falls in the 01-01-2018 — 31-12-2018 period of the R02 aggregation schedule.

**Note:** The bill after date for the specific stop-loss and aggregate stop-loss billable charges is calculated using the settlement frequency in the **Create Specific Stop-Loss Billable Charge (C1-BCSSL)** and **Create Aggregate Stop-Loss Billable Charge (C1-BCASL)** batches, respectively.

## Fully-Insured Pricing

---

### Topics:

- [Age Based Pricing](#)
- [Tier Based Pricing](#)
- [Pass-Through Billable Charge](#)

A new pricing model is introduced for the fully-insured business. In this pricing model, you can define pricing rules using the pricing rule types. At present, you can define the following pricing rule types for the fully-insured business:

- Age Based Pricing Rule Type
- Tier Based Pricing Rule Type
- Pass-Through Billable Charge Pricing Rule Type

**Note:** You cannot define pricing rules using the pass-through billable charge pricing rule types. However, you can directly create SQI based billable charges using a pass-through billable charge pricing rule type. For more information, refer to the [Pass-Through Billable Charge](#) on page 2819 section.

## Age Based Pricing

---

The base fee for a price item can vary based on the age, employee attributes (such as employee type, employee status, etc.) and modifiers (such as tobacco usage, gender, alcohol usage, etc.). Oracle Revenue Management and Billing enables you to offer an age based pricing to a fully-insured customer. In the Age Based pricing, the premium is calculated for each eligible member person based on age, employee attributes and modifiers, and then aggregated to derive the total premium for the membership. An age based pricing can be defined using the age based pricing rule. You can define an age based pricing rule for a price item on the policy plan. If the age based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the age based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define an age based pricing rule using an age based pricing rule type. It is the age based pricing rule type which helps the system to determine:

- Business object using which the age based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

**Note:** You must create an algorithm using the **C1\_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for a membership.

**Note:** You must create an algorithm using the **C1\_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for identifying eligible member persons for premium calculation.

**Note:** You must create an algorithm using the **C1\_AGEDELG** algorithm type and attach it to the **Pricing Rule Pre Processing** system event.

- Algorithm which should be triggered for calculating the premium for each eligible member person.

**Note:** You must create an algorithm using the **C1\_AGEPREM** algorithm type and attach it to the **Pricing Rule Premium Calculation** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

**Note:** You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

**Note:** You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can define age based pricing rules using the age based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership and C1-PERSON business objects using which the audit event should be created whenever a membership or member person is added, updated, or removed from the policy plan.

- Elements of the C1-Membership and C1-PERSON business objects for which audit event should be created.

**Note:** You must ensure that either the **Update All** option is selected or the elements listed in the age based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

- Members, such as main subscriber, spouse, or children in a membership which are eligible for premium calculation. The system will only consider the member with the specified relationship type during premium calculation.
- Characteristic types to identify a list of eligible children for premium calculation. The following characteristic types must be specified in the age based pricing rule type:
  - **Maximum Number of Dependents** – This characteristic type stores the maximum number of children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
  - **Maximum Age Limit for Maximum Dependent Count** – This characteristic type stores the maximum age limit for children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
  - **Maximum Number of Dependents Order Priority** – This characteristic type indicates whether the youngest or eldest children should be considered during premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
  - **Age Calculation Date Basis** – This characteristic type indicates whether the member person's age should be calculated using the member person's enrollment date or policy's start or renewal date. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
  - **Newborn Gift Days** – This characteristic type stores the number of days you want to offer as gift days from the new born child's enrollment date. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
  - **Newborn Gift Days Applicability** – This characteristic type indicates whether the gift days should be offered in case of a new born. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
  - **Young Adult Max Age Limit** – This characteristic type stores the maximum age limit for young adults which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.
  - **Young Adult Inclusion Applicability** – This characteristic type indicates whether the young adults should be considered during the premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person, Membership, Policy Plan, Policy, and State**.

Once an age based pricing rule type is defined, you can define age based pricing rules using the age based pricing rule type. Note that, at present, you can define age based pricing rules only through a healthcare inbound message and not from the user interface. However, you can view the age based pricing rules defined for a policy plan from the **Customer 360° Information** screen. While creating an age based pricing rule through a healthcare inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the age based pricing rule
- Start and end dates of the age based pricing rule
- Age based pricing rule type using which you want to create the age based pricing rule
- Price Item for which you want to define age based pricing
- Rate option using which the price assignment should be created for the age based pricing rule

**Note:** If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option – Flat** or **Default Rate Option – Percentage** option type of the **C1-ASOBLNG** feature configuration depending on whether the modifier method is set to **FLAT**, **EXPT** or **INPT**.

- Whether you want to increase or decrease the premium of an eligible member by a flat amount or in percentage based on some modifier attributes (such as tobacco usage, alcohol usage, and so on).
- Age limit and employee attributes for which the base fee is applicable

**Note:**

The system defines the lower age limit and upper age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLNG** feature configuration.

The employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

- Modifiers based on which you want to charge additional or offer discount to an eligible member

**Note:** The modifiers can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the age based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

## Defining an Age Based Pricing Rule Type

### Prerequisites

To define an age based pricing rule type, you should have:

- Age based pricing rule type business object defined in the application.
- Age based pricing rule business object defined in the application.

### Procedure

To define an age based pricing rule type pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a age based pricing rule type.  <b>Note:</b> You can create a age based pricing rule type using the <b>Age Based Pricing Rule Type (C1-PrcRuleTypeAgeBased)</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Fully Insured Age Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Fully Insured Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an age based pricing rule type.
- **Algorithms** – Used to associate the algorithms with an age based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for an age based pricing rule type.
- **Event Management** – Used to configure the audit in an age based pricing rule type.
- **Age Based-Specific Additional Data** – Used to define age based-specific additional data in an age based pricing rule type.
- **Attributes Characteristic Mapping** – Used to map a characteristic attribute in an age based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify an age based pricing rule type.	Yes
Description	Used to specify the description for an age based pricing rule type.	Yes
Detailed Description	Used to specify additional information about an age based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Fully Insured Age Based Pricing Rule</li> </ul>	Yes
Business Object	Indicates the business object using which you are defining an age based pricing rule type.	Not applicable
Status	Used to indicate the status of an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> <li>• Age Based</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Associate the following algorithms with the age based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule Pre Processing	C1_AGEBDELG	C1_AGEBDELG	Get eligible member details from membership.
Pricing Rule Premium Calculation	C1_AGEPREM	C1_AGEPREM	Age Based Premium Calculation
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for memberships

8. Add the required price items in an age based pricing rule type.
9. Add the price item parameters in age based pricing rule type, if required.
10. Define characteristics for an age based pricing rule type, if required.
11. Configure the audit in an age based pricing rule type.
12. Define age based-specific additional data in an age based pricing rule type.
13. Map a characteristic attribute in an age based pricing rule type
14. Click **Save**.

The age based pricing rule type is defined.

## **Associating an Algorithm with an Age Based Pricing Rule Type**

### **Prerequisites**

To associate algorithm with an age based pricing rule type, you should have:

- An algorithm defined using the **C1\_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1\_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1\_AGEBDELG** algorithm type.
- An algorithm defined using the **C1\_AGEPREM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

### Procedure

To associate algorithms with a fully-insured age based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the age based pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> <li>• <b>Bill Group Derivation</b> - Used to derive the bill group, parent customer, and policy for a membership.</li> <li>• <b>Account and Price Item Derivation</b> - Used to derive the account and price item for a membership.</li> <li>• <b>Pricing Rule Pre Processing</b> - Used to identify the eligible member persons for premium calculation.</li> <li>• <b>Pricing Rule Premium Calculation</b> - Used to calculate the premium for each eligible member person.</li> <li>• <b>Pricing Rule BC Creation Pre Processing</b> - Used to derive the bill period for the account.</li> <li>• <b>Pricing Rule Billable Charge Creation</b> - Used to derive the price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type.</li> </ul>	Yes  <b>Note:</b> This field is required when you are associating an algorithm with the age based pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the fully-insured age based pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Used to specify the algorithm.  <b>Note:</b> Once you select the system event, the <b>Search</b>  icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b>  icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the fully-insured age based pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule Pre Processing	C1_AGEBDELG	C1_AGEBDELG	Get eligible member details from membership.
Pricing Rule Premium Calculation	C1_AGEPREM	C1_AGEPREM	Age Based Premium Calculation
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for Memberships

3. If you want to associate more than one algorithm with the age based pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to disassociate an algorithm from the age based pricing rule type, click the **Delete**  icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the age based pricing rule type.

### **Related Topics**

## **Adding a Price Item in an Age Based Pricing Rule Type**

### **Prerequisites**

To add a price item in an age based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

### Procedure

To add a price item in an age based pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an age based pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Price Item	<p>Used to indicate the price item that you want to include in the age based pricing rule type.</p> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears. On specifying the price item, the description of the price item appears corresponding to the <b>Price Item</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a rate option and bill to account in an age based pricing rule type.</p>						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the <b>Add</b> () icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b> If you want to define more than one rate option to the price item in an age based pricing rule type, click the <b>Add</b> () icon. However, if you want to remove a price item from an age based pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Rate Option</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the <b>Add</b> () icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 55 section.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to the <b>Invoice Type</b> field. On clicking the <b>Search</b> icon, the <b>Invoice Type Search</b> window appears.</p> <p><b>Note:</b> If you want to define more than one invoice type to the price item in an age based pricing rule type, click the <b>Add</b> () icon. However, if you want to remove a invoice type from the price item in an age based pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Priority</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 55 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 55 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item in an age based pricing rule type, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a price item from an age based pricing rule type, click the **Delete** () icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for an age based pricing rule type.

## Adding a Price Item Parameter in an Age Based Pricing Rule Type

### Prerequisites

To add a price item parameter in an age based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

### Procedure

To add a price item parameter in an age based pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an age based pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an age based pricing for the price item.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Price Item Parameter</b> field, the <b>Parameter Search</b> window appears.  On specifying the parameter, the description of the price item parameter appears corresponding to the <b>Price Item Parameter</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are adding a price item parameter in an age based pricing rule type.

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for an age based pricing rule type.

## Defining Characteristics for an Age Based Pricing Rule Type

### Prerequisites

To define characteristics for an age based pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

### Procedure

To define characteristics for an age based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an age based pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for an age based pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for an age based pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an age based pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from an age based pricing rule type, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for an age based pricing rule type.

## Adding Elements for Audit in an Age Based Pricing Rule Type

### Prerequisites

To add elements for audit in an age based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

### Procedure

To add elements for audit in an age based pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing an age based pricing rule type.

The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in an age based pricing rule type.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Audit Event Type</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Audit Event Type</b> field, the <b>Audit Event Type Search</b> window appears.  On specifying the audit event type, the description of the audit event type appears corresponding to the <b>Audit Event Type</b> field.	Yes
Element Type	Used to indicate the type of audit element for an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Business Object Status</li> <li>• Characteristic</li> <li>• Field</li> </ul>	Not applicable
Element Name	Used to specify the element name for an age based pricing rule type.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Element Name</b> field. On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Element Name</b> field, the <b>Audit Event Type Element Name Search</b> window appears.	Yes
Element Value	Used to specify the value for an element name.	Not applicable

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added for an age based pricing rule type.

## **Defining Additional Data in an Age Based Pricing Rule Type**

### **Procedure**

To define additional data in an age based pricing rule type:

- Ensure that the **Age Based - Specific Additional Data** section is expanded when you are defining or editing an age based pricing rule type.

The **Age Based - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate the relation of the member in an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Children</li> <li>Main Subscriber</li> <li>Spouse</li> </ul>	No
Relationship Type	Used to indicate the type of relationship for an age based pricing rule type.	No

- Enter the required details in the **Additional Data** section.
- If you want to add more than one age based specific data in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove an age based specific data from an age based pricing rule type, click the **Delete** (🗑️) icon corresponding to the **Relation** field.

- Click **Save**.

The age based - specific additional data is defined for the age based pricing rule type.

### **Related Topics**

## Editing an Age Based Pricing Rule Type

### Prerequisites

To edit an age based pricing rule type, you should have:

- Age Based pricing rule type business object defined in the application.
- Age Based pricing rule business object defined in the application.

### Procedure

To edit an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Fully Insured Age Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about an age based pricing rule type.
- **Algorithms** – Used to associate the algorithms with an age based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define characteristics for an age based pricing rule type.
- **Event Management** – Used to configure the audit in an age based pricing rule type.
- **Age Based-Specific Additional Data** – Used to define age based-specific additional data in an age based pricing rule type.
- **Attributes Characteristic Mapping** – Used to map a characteristic attribute in an age based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the age based pricing rule type.	Not applicable
Description	Used to specify the description for an age based pricing rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about an age based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Fully Insured Age Based Pricing Rule</li> </ul>	Yes
Business Object	Indicates the business object using which you are defining an age based pricing rule type.	Not applicable
Status	Used to indicate the status of an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Pricing Rule Type Category	Indicates the pricing rule type category for an age based pricing rule type. The valid values is: <ul style="list-style-type: none"> <li>Age Based</li> </ul>	No

**Tip:** Alternatively, you can edit the details of an age based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the following algorithms with the age based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule Pre Processing	C1_AGEBDELG	C1_AGEBDELG	Get Eligible Member Details from Membership
Pricing Rule Premium Calculation	C1_AGEPREM	C1_AGEPREM	Age Based Premium Calculation
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for memberships

- Add, edit, or remove the required price items in an age based pricing rule type.
- Add, edit, or remove the price item parameters in an age based pricing rule type, if required.
- Add, edit, or remove characteristics for an age based pricing rule type, if required.
- Add, edit, or remove the configuration details of the audit in an age based pricing rule type.
- Add, edit, or remove the age based-specific additional data in an age based pricing rule type.
- Add, edit, or remove a characteristic attribute in an age based pricing rule type

**13. Click Save.**

The changes made to the age based pricing rule type are saved.

**Deleting an Age Based Pricing Rule Type****Procedure**

To delete an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the age based pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the age based pricing rule type.

**Note:** You can delete an age based pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete an age based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The age based pricing rule type is deleted.

## Viewing the Age Based Pricing Rule Type Details

### Procedure

To view the details of an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast**  icon corresponding to the age based pricing rule type whose details you want to view.  
The **Pricing Rule Type** zone appears.
5. View the details of the age based pricing rule type in the **Pricing Rule Type** zone.

## Tier Based Pricing

The standard tier based pricing structure contains different tiers, such as Employee Only (E), Employee + Spouse (ES), Family (F), Employee + Children (EC). A main subscriber can subscribe his/her dependents to a policy plan and may fall in one of the tier. The fee for a price item can vary based on the membership tier level and employee attributes (such as employee type, employee status, etc.). Oracle Revenue Management and Billing enables you to offer a tier based pricing to a fully-insured customer. In the Tier Based pricing, the premium for the membership is derived based on tier level and employee attributes.

A tier based pricing can be defined using the tier based pricing rule. You can define a tier based pricing rule for a price item on the policy plan. If the tier based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the tier based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define a tier based pricing rule using a tier based pricing rule type. It is the tier based pricing rule type which helps the system to determine:

- Business object using which the tier based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

**Note:** You must create an algorithm using the **C1\_MEMBDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for a membership.

**Note:** You must create an algorithm using the **C1\_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for calculating the premium for membership.

**Note:** You must create an algorithm using the **C1\_TIERPREM** algorithm type and attach it to the **Pricing Rule Premium Calculation** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

**Note:** You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

**Note:** You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can define tier based pricing rules using the tier based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership business object using which the audit event should be created whenever a membership is added, updated, or removed from the policy plan.
- Elements of the C1-Membership business object for which audit event should be created.

**Note:** You must ensure that either the **Update All** option is selected or the elements listed in the tier based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

Once a tier based pricing rule type is defined, you can define tier based pricing rules using the tier based pricing rule type. Note that, at present, you can define tier based pricing rules only through a healthcare inbound message and not from the user interface. However, you can view the tier based pricing rules defined for a policy plan from the **Customer 360° Information** screen. While creating a tier based pricing rule through a healthcare inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the tier based pricing rule
- Start and end dates of the tier based pricing rule
- Tier based pricing rule type using which you want to create the tier based pricing rule
- Price Item for which you want to define tier based pricing
- Rate option using which the price assignment should be created for the tier based pricing rule

**Note:** If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option – Flat** option type of the **C1-ASOBLNG** feature configuration when the modifier method is set to **FLAT** or **NULL**.

- Tier level and employee attributes for which the fee is applicable

**Note:** The tier level and employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the tier based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

## Defining a Tier Based Pricing Rule Type

### Prerequisites

To define a tier based pricing rule type, you should have:

- Tier based pricing rule type business object defined in the application.
- Tier based pricing rule business object defined in the application.

### Procedure

To define a tier based pricing rule type pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a tier based pricing rule type.  <b>Note:</b> You can create a tier based pricing rule type using the <b>Tier Based Pricing Rule Type (C1-PricingRuleTierBased)</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Fully Insured Tier Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Fully Insured Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about a tier based pricing rule type.
- **Algorithms** – Used to associate the algorithms with a tier based pricing rule type.
- **Price Items** – Used to add the price items for which you can define the tier pricing rules using the tier based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for a tier based pricing rule type.

- **Event Management** – Used to configure the audit in a tier based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the tier based pricing rule type.	Yes
Description	Used to specify the description for the tier based pricing rule type.	Yes
Detailed Description	Used to specify additional information about the tier based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the tier based pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Fully Insured Tier Based Pricing Rule</li> </ul>	Yes
Business Object	Indicates the business object using which you are defining the tier based pricing rule type.	Not applicable
Status	Used to indicate the status of an age based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> <li>• Tier Based</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Associate the following algorithms with the tier based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule Premium Calculation	C1_TIERPREM	C1_TIERPREM	Tier Based Premium Calculation
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for memberships

8. Add the required price items in the tier based pricing rule type.
9. Add the price item parameters in the tier based pricing rule type, if required.
10. Define characteristics for the tier based pricing rule type, if required.
11. Configure the audit in the tier based pricing rule type.
12. Click **Save**.

The tier based pricing rule type is defined.

## Associating an Algorithm with a Tier Based Pricing Rule Type

### Prerequisites

To associate an algorithm with a tier based pricing rule type, you should have:

- An algorithm defined using the **C1\_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1\_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1\_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

### Procedure

To associate an algorithm with a tier based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the tier based pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> <li>• <b>Bill Group Derivation</b> - Used to derive the bill group, parent customer, and policy for a membership.</li> <li>• <b>Account and Price Item Derivation</b> - Used to derive the account and price item for a membership.</li> <li>• <b>Pricing Rule Premium Calculation</b> - Used to calculate the premium for membership.</li> <li>• <b>Pricing Rule BC Creation Pre Processing</b> - Used to derive the bill period for the account.</li> <li>• <b>Pricing Rule Billable Charge Creation</b> - Used to create the SQI based billable charges for each membership and price item combination.</li> </ul>	Yes  <b>Note:</b> This field is required when you are associating an algorithm with the tier based pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the tier based pricing rule type.
Algorithm	Used to specify the algorithm.  <b>Note:</b> Once you select the system event, the <b>Search</b>  icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b>  icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the tier based pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule Premium Calculation	C1_AGEPREM	C1_AGEPREM	Age Based Premium Calculation
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for Memberships

- If you want to associate more than one algorithm with the tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to disassociate an algorithm from the tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The algorithms are associated with the tier based pricing rule type.

## **Adding a Price Item in a Tier Based Pricing Rule Type**

### **Prerequisites**

To add a price item in a tier based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

### **Procedure**

To add a price item in a tier based pricing rule type:

- Ensure that the **Price Items** section is expanded when you are defining or editing a tier based pricing rule type.

The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	<p>Used to indicate the price item that you want to include in a tier based pricing rule type.</p> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears. On specifying the price item, the description of the price item appears corresponding to the <b>Price Item</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a rate option and bill to account in a tier based pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the <b>Add</b> () icon, the following field appears in a grid:</p> <table border="1" data-bbox="472 426 1187 653"> <thead> <tr> <th data-bbox="472 426 610 537">Field Name</th> <th data-bbox="610 426 1045 537">Field Description</th> <th data-bbox="1045 426 1187 537">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="472 537 610 653">Rate Option</td> <td data-bbox="610 537 1045 653">Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td data-bbox="1045 537 1187 653">Yes</td> </tr> </tbody> </table> <p><b>Note:</b></p> <p>If you want to define more than one rate option to the price item in a tier based pricing rule type, click the <b>Add</b> () icon.</p> <p>However, if you want to remove a price item from a tier based pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Rate Option</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)						
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes						

Field Name	Field Description	Mandatory (Yes or No)									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the <b>Add</b> () icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 55 section.</td> <td>Yes</td> </tr> </tbody> </table> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to the <b>Invoice Type</b> field. On clicking the <b>Search</b> icon, the <b>Invoice Type Search</b> window appears.</p> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b></p> <p>If you want to define more than one invoice type to the price item in a tier based pricing rule type, click the <b>Add</b> () icon.</p> <p>However, if you want to remove a invoice type from the price item in a tier based pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Priority</b> field.</p> </div>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 55 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <i>Bill Group's Account</i> on page 55 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in a tier based pricing rule type, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a price item from a tier based pricing rule type, click the **Delete** () icon corresponding to the **Price Item** field.

4. Click **Save**.

The price items are added for a tier based pricing rule type.

## Adding a Price Item Parameter in a Tier Based Pricing Rule Type

### Prerequisites

To add a price item parameter in a tier based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

### Procedure

To add a price item parameter in a tier based pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a tier based pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	<p>Used to specify the parameter which you can use while defining a tier based pricing for the price item.</p> <p><b>Note:</b></p> <p>The Search  icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the Search  icon corresponding to the <b>Price Item Parameter</b> field, the <b>Parameter Search</b> window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the <b>Price Item Parameter</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a price item parameter in a tier based pricing rule type.</p>

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a tier based pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from a tier based pricing rule type, click the **Delete**  icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a tier based pricing rule type.

## Defining Characteristics for a Tier Based Pricing Rule Type

### Prerequisites

To define characteristics for a tier based pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

### Procedure

To define characteristics for a tier based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a tier based pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a tier based pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a tier based pricing rule type.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for a tier based pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from a tier based pricing rule type, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for a tier based pricing rule type.

## Adding Elements for Audit in a Tier Based Pricing Rule Type

### Prerequisites

To add elements for audit in a tier based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

### Procedure

To add elements for audit in a tier based pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining or editing a tier based pricing rule type.

The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in an age based pricing rule type.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Audit Event Type</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Audit Event Type</b> field, the <b>Audit Event Type Search</b> window appears.  On specifying the audit event type, the description of the audit event type appears corresponding to the <b>Audit Event Type</b> field.	Yes
Element Type	Used to indicate the type of audit element for a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Business Object Status</li> <li>• Characteristic</li> <li>• Field</li> </ul>	Not applicable
Element Name	Used to specify the element name for a tier based pricing rule type.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Element Name</b> field. On clicking the <b>Search</b>  icon corresponding to the <b>Element Name</b> field, the <b>Audit Event Type Element Name Search</b> window appears.	Yes
Element Value	Used to specify the value for an element name.	Not applicable

2. Enter the required details in the **Price Item Parameters** section.

- If you want to add more than one price item parameter in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from a tier based pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The price item parameter is added for a tier based pricing rule type.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to define a tier based pricing rule type	<a href="#">Defining a Tier Based Pricing Rule Type</a> on page 2806

## **Editing a Tier Based Pricing Rule Type**

### **Prerequisites**

To edit a tier based pricing rule type, you should have:

- Tier Based pricing rule type business object defined in the application.
- Tier Based pricing rule business object defined in the application.

### **Procedure**

To edit a tier based pricing rule type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Fully Insured Tier Based Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about a tier based pricing rule type.
- Algorithms** – Used to associate the algorithms with a tier based pricing rule type.
- Price Items** – Used to add the price items for which you can define the tier based pricing rules using the tier based pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define characteristics for a tier based pricing rule type.
- Event Management** – Used to configure the audit in a tier based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the tier based pricing rule type.	Not applicable
Description	Used to specify the description for a tier based pricing rule type.	Yes
Detailed Description	Used to specify additional information about a tier based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create a tier based pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Fully Insured Tier Based Pricing Rule</li> </ul>	Yes
Business Object	Indicates the business object using which you are defining a tier based pricing rule type.	Not applicable
Status	Used to indicate the status of a tier based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Pricing Rule Type Category	Indicates the pricing rule type category for a tier based pricing rule type. The valid values is: <ul style="list-style-type: none"> <li>Age Based</li> </ul>	No

**Tip:** Alternatively, you can edit the details of a tier based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

- Modify the details in the **Main** section.
- Associate the following algorithms with a tier based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule Premium Calculation	C1_AGEPREM	C1_AGEPREM	Age Based Premium Calculation
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for memberships

- Add, edit, or remove the required price items in a tier based pricing rule type.
- Add, edit, or remove the price item parameters in a tier based pricing rule type, if required.
- Add, edit, or remove characteristics for a tier based pricing rule type, if required.
- Add, edit, or remove the configuration details of the audit in a tier based pricing rule type.
- Click **Save**.

The changes made to the tier based pricing rule type are saved.

## Deleting a Tier Based Pricing Rule Type

### Procedure

To delete a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the tier based pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the tier based pricing rule type.

**Note:** You can delete a tier based pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a tier based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The tier based pricing rule type is deleted.

## Viewing the Tier Based Pricing Rule Type Details

### Procedure

To view the details of a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast**  icon corresponding to the tier based pricing rule type whose details you want to view.  
The **Pricing Rule Type** zone appears.
5. View the details of the tier based pricing rule type in the **Pricing Rule Type** zone.

## Pass-Through Billable Charge

At times, the system might receive pre-calculated premium for the membership through a healthcare inbound message. If the price item, account identifier type, and account identifier are given in the billable charge information of a healthcare inbound message, the system directly creates an SQI based billable charge when you process the healthcare inbound message. The pre-calculated premium amount is stored as a pass through line in the SQI based billable charge. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**. If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). It is the pass-through billable charge pricing rule type which helps the system to determine:

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

**Note:** You must create an algorithm using the **C1\_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for a membership.

**Note:** You must create an algorithm using the **C1\_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for the account.

**Note:**

You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.

If the bill period or frequency is given in the billable charge information of the healthcare inbound message, the system does not derive the bill period for the account.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

**Note:** You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type.

**Note:** You can add multiple price items in a pass-through billable charge pricing rule type. But, you cannot add the same price item in multiple pass-through billable charge pricing rule types.

- Type of account to which the respective price item should be billed based on the specified priority.

## Defining a Pass-Through Billable Charge Pricing Rule Type

### Prerequisites

To define a pass-through billable charge pricing rule type, you should have:

- Pass-through billable charge pricing rule type business object defined in the application.
- Pass-through billable charge pricing rule business object defined in the application.

### Procedure

To define a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a pass-through billable charge pricing rule type.  <b>Note:</b> You can create a pass-through billable charge pricing rule type using the <b>Pass-Through Billable Charge Pricing Rule Type (C1-FIPassthroughBcRuleType)</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Pass-Through Billable Charge Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Pass-Through Billable Charge Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pass-through billable charge pricing rule type.
- **Algorithms** – Used to associate the algorithms with the pass-through billable charge pricing rule type.
- **Price Items** – Used to add the price items for which you can define the pass-through billable charge pricing rules using the age based pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** – Used to define the characteristics for the pass-through billable charge pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pass-through billable charge pricing rule type.	Yes
Description	Used to specify the description for the pass-through billable charge pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pass-through billable charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Pass-Through Billable Charge Pricing Rule</li> </ul>	Yes
Business Object	Indicates the business object using which you are defining the pass-through billable charge pricing rule type.	Not applicable
Status	Used to indicate the status of the pass-through billable charge pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> <li>• Pass-Through Billable Charge</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Associate the following algorithms with the pass-through billable charge pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDR	C1_MEMBGDR	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIME	C1_ACCPRIME	Account and Price Item Derivation for Membership

System Event	Algorithm	Algorithm Type	Description
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for Memberships

8. Add the required price items in the pass-through billable charge pricing rule type.
9. Add the price item parameters in the pass-through billable charge pricing rule type, if required.
10. Define characteristics for the pass-through billable charge pricing rule type, if required.
11. Click **Save**.

The pass-through billable charge pricing rule type is defined.

## **Associating an Algorithm with a Pass-Through Billable Charge Pricing Rule Type**

### **Prerequisites**

To associate an algorithm with a pass-through billable charge pricing rule type, you should have:

- An algorithm defined using the **C1\_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1\_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

### **Procedure**

To associate an algorithm with a pass-through billable charge pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the pass-through billable charge pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: <ul style="list-style-type: none"> <li>• <b>Bill Group Derivation</b> - Used to derive the bill group, parent customer, and policy for a membership.</li> <li>• <b>Account and Price Item Derivation</b> - Used to derive the account and price item for a membership.</li> <li>• <b>Pricing Rule BC Creation Pre Processing</b> - Used to derive the bill period for the account.</li> <li>• <b>Pricing Rule Billable Charge Creation</b> - Used to derive the price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type.</li> </ul>	Yes  <b>Note:</b> This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.
Algorithm	Used to specify the algorithm.  <b>Note:</b> Once you select the system event, the <b>Search</b>  icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b>  icon, the <b>Algorithm Search</b> window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for Memberships

3. If you want to associate more than one algorithm with a pass-through billable charge pricing rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to disassociate an algorithm from a pass-through billable charge pricing rule type, click the **Delete** () icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with a pass-through billable charge pricing rule type.

## **Adding a Price Item in a Pass-Through Billable Charge Pricing Rule Type**

### **Prerequisites**

To add a price item in a pass-through billable charge pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRefTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

### **Procedure**

To add a price item in a pass-through billable charge pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Price Items** section contains the following fields in a grid:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Price Item	<p>Used to indicate the price item that you want to include in a pass-through billable charge pricing rule type.</p> <p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Price Item</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a rate option and bill to account in a pass-through billable charge pricing rule type.</p>

Field Name	Field Description	Mandatory (Yes or No)									
Rate Option	<p>Used to indicate one or more rate options which are valid for a price item.</p> <p>On clicking the <b>Add</b> () icon, the following field appears in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b> If you want to define more than one rate option to the price item in a pass-through billable charge pricing rule type, click the <b>Add</b> () icon. However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Rate Option</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes	Not applicable			
Field Name	Field Description	Mandatory (Yes or No)									
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes									
Bill To Account	<p>Used to indicate a order in which the account should be considered while deriving a transaction leg.</p> <p>On clicking the <b>Add</b> () icon, the following fields appear in a grid:</p> <table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Used to specify the order in which the invoice type is considered for a price item.</td> <td>Yes</td> </tr> <tr> <td>Invoice Type</td> <td>Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.</td> <td>Yes</td> </tr> </tbody> </table> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to the <b>Invoice Type</b> field. On clicking the <b>Search</b> icon, the <b>Invoice Type Search</b> window appears.</p> <p><b>Note:</b> If you want to define more than one invoice type to the price item in a pass-through billable charge pricing rule type, click the <b>Add</b> () icon. However, if you want to remove a invoice type from the price item in a pass-through billable charge pricing rule type, click the <b>Delete</b> () icon corresponding to the <b>Priority</b> field.</p>	Field Name	Field Description	Mandatory (Yes or No)	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes	Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes	Not applicable
Field Name	Field Description	Mandatory (Yes or No)									
Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes									
Invoice Type	Used to indicate the type which is considered for billing. For more information, refer to the <a href="#">Bill Group's Account</a> on page 55 section.	Yes									
Eligibility Rule Type	Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.	No									

- Enter the required details in the **Price Items** section.

- If you want to define more than one price item in a pass-through billable charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the **Delete (🗑)** icon corresponding to the **Price Item** field.

- Click **Save**.

The price items are added for a pass-through billable charge pricing rule type.

## **Adding a Price Item Parameter in a Pass-Through Billable Charge Pricing Rule Type**

### **Prerequisites**

To add a price item parameter in a pass-through billable charge pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

### **Procedure**

To add a price item parameter in a pass-through billable charge pricing rule type:

- Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	<p>Used to specify the parameter which you can use while defining a pass-through billable charge pricing for the price item.</p> <p><b>Note:</b></p> <p>The <b>Search (🔍)</b> icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search (🔍)</b> icon corresponding to the <b>Price Item Parameter</b> field, the <b>Parameter Search</b> window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the <b>Price Item Parameter</b> field.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are adding a price item parameter in a pass-through billable charge pricing rule type.</p>

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter in a pass-through billable charge pricing rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from a pass-through billable charge pricing rule type, click the **Delete** () icon corresponding to the price item parameter.

4. Click **Save**.

The price item parameter is added for a pass-through billable charge pricing rule type.

### **Related Topics**

## **Defining Characteristics for a Pass-Through Billable Charge Pricing Rule Type**

### **Prerequisites**

To define characteristics for a pass-through billable charge pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

### **Procedure**

To define characteristics for a pass-through billable charge pricing rule type:

1. Ensure that the

**Characteristics** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (  ) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type.

2. Enter the required details in the **Characteristics** section.

- If you want to define more than one characteristic for a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from a pass-through billable charge pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for a pass-through billable charge pricing rule type.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>

## **Editing a Pass-Through Billable Charge Pricing Rule Type**

### **Prerequisites**

To edit a pass-through billable charge pricing rule type, you should have:

- Pass-Through Billable Charge pricing rule type business object defined in the application.
- Pass-Through Billable Charge pricing rule business object defined in the application.

### **Procedure**

To edit a pass-through Billable Charge pricing rule type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

The **Pass-Through Billable Charge Age Based Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about a pass-through billable charge pricing rule type.
- Algorithms** – Used to associate the algorithms with a pass-through billable charge pricing rule type.
- Price Items** – Used to add the price items for which you can define the pass-through billable charge pricing rules using the pass-through billable charge pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define characteristics for a pass-through billable charge pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pass-through billable charge pricing rule type.	Not applicable
Description	Used to specify the description for a pass-through billable charge pricing rule type.	Yes
Detailed Description	Used to specify additional information about a pass-through billable charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create a pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Pass-Through Billable Charge</li> </ul>	Yes
Business Object	Indicates the business object using which you are defining a pass-through billable charge pricing rule type.	Not applicable
Status	Used to indicate the status of a pass-through billable charge pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Pricing Rule Type Category	Indicates the pricing rule type category for a pass-through billable charge pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Pass-Through Billable Charge</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> It is a read-only field, and cannot be edited.</div>	No

**Tip:** Alternatively, you can edit the details of a pass-through billable charge pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the details in the **Main** section.
6. Associate the following algorithms with the pass-through billable charge pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge creation for Memberships

7. Add, edit, or remove the required price items in a pass-through billable charge pricing rule type.
8. Add, edit, or remove the price item parameters in a pass-through billable charge pricing rule type, if required.
9. Add, edit, or remove characteristics for a pass-through billable charge pricing rule type, if required.
10. Click **Save**.

The changes made to the a pass-through billable charge pricing rule type are saved.

**Deleting a Pass-Through Billable Charge Pricing Rule Type****Procedure**

To delete a pass-through billable charge pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the pass-through billable charge pricing rule type that you want to delete.

A message appears confirming whether you want to delete the pass-through billable charge pricing rule type.

**Note:** You can delete a pass-through billable charge pricing rule type only when it is not yet used in the system.

**Tip:** Alternatively, you can delete a pass-through billable charge pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The pass-through billable charge pricing rule type is deleted.

# Chapter 35

---

## Fully-Insured Billing

---

### Topics:

- *Audit Framework for Fully-Insured Health Care Billing*
- *Bill Group Derivation for Membership*
- *Account and Price Item Derivation for Membership*
- *State of Issue*
- *Membership Premium Calculation*
- *Repricing*
- *Fully Insured Billable Charge Creation*

This chapter explains how the billing is done for fully-insured health care business in Oracle Revenue Management and Billing. It contains the following topics:

- Audit Framework for Fully-Insured Health Care Billing
- Bill Group Derivation for Membership
- Account and Price Item Derivation for Membership
- State of Issue
- Membership Premium Calculation
- Repricing
- Fully Insured Billable Charge Creation

## Audit Framework for Fully-Insured Health Care Billing

Oracle Revenue Management and Billing calculates the membership premium when you add a membership to a policy plan. It also enables you to recalculate the membership premium in the following scenarios:

- A member person is added or removed from the membership.
- The fields, characteristics, or statuses which are monitored for the auditing purposes are updated at the membership, member person, or pricing rule level.
- A pricing rule is added or updated for the policy plan.

The membership premium calculation and recalculation (i.e. repricing) is implemented using the **Entity Audit** feature. The entity audit framework is already configured for the following business objects:

- C1-Membership
- C1\_PERSON\_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

But, the entity audit framework will work only when you define an active audit event type for the above listed business objects. Apart from configuring the entity audit framework and creating an active audit event type for the following business objects, you need to do the following:

Business Object	You need to...
C1-PricingRuleTierBased	Attach an algorithm created using the <b>C1-AUDEVMPR</b> algorithm type to the <b>Audit Event Processing</b> system event of the respective audit event type.
C1-PricingRuleAgeBased	Attach an algorithm created using the <b>C1-AUDEVMPR</b> algorithm type to the <b>Audit Event Processing</b> system event of the respective audit event type.
C1-Membership	Do not attach an algorithm created using the <b>C1-REAUDEVNT</b> algorithm type to the <b>Audit</b> system event of the <b>C1-Membership</b> business object.  <b>Note:</b> An algorithm created using the <b>C1-FIAUDEV</b> algorithm type is already attached to the <b>Audit</b> system event of the <b>C1-Membership</b> business object.
C1_PERSON_BO	Do not attach an algorithm created using the <b>C1-REAUDEVNT</b> algorithm type to the <b>Audit</b> system event of the <b>C1_PERSON_BO</b> business object.  <b>Note:</b> An algorithm created using the <b>C1-FIAUDEV</b> algorithm type is already attached to the <b>Audit</b> system event of the <b>C1_PERSON_BO</b> business object.

In addition, you need to list the following in the pricing rule types where the category is set to **Age Based** and **Tier Based**:

- Audit event types of the **C1-Membership** and **C1\_PERSON\_BO** business objects using which the audit event should be created whenever a membership and member person is added, updated, or removed from the policy plan, respectively.
- Elements of the **C1-Membership** and **C1\_PERSON\_BO** business objects for which auditing is required.

**Note:**

At present, you cannot use an audit event type of the **C1-Membership** and **C1\_PERSON\_BO** business objects in the **Age Based** and **Tier Based** pricing rule types when the **Update All** option is selected in the audit event type. Therefore, we recommend you to select an audit event type of the **C1-Membership** and **C1\_PERSON\_BO** business objects where the **Update All** option is not selected.

The system creates an audit event whenever the membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age based or tier based pricing rule types.

You can also configure the entity audit feature for any custom membership or person business objects.

The way in which the audit events are created and processed for a pricing rule, membership, and member person is different. To view how the audit events are created and processed for an age based or tier based pricing rule, refer to [Age Based and Tier Based Pricing Rules Audit Process](#) on page 2835. To view how the audit events are created and processed for a membership, refer to [Membership Audit Process](#) on page 2836. However, to view how the audit events are created and processed for a person, refer to [Person Audit Process](#) on page 2839.

## Age Based and Tier Based Pricing Rules Audit Process

If you add, edit, or delete an age based or tier based pricing rule, the system checks whether an active audit event type exists for the **C1-PricingRuleAgeBased** or **C1-PricingRuleTierBased** business object, respectively. If so, it creates an audit event for the pricing rule using the audit event type. The audit event is created in the **Pending** status. Note that the system creates one audit event for the pricing rule irrespective of the number of changes made to the pricing rule. In addition, an effective date is stamped corresponding to the audit event which later helps in deriving the timeline during premium calculation. Note that the effective date is set to the pricing rule's start date.

On executing the **Audit Event Process Monitor (C1-AUDEV)** batch, the system considers the audit events in the **Pending** or **Error** status. By default, it considers the audit events in the **Pending** status. The system checks whether the **C1-AUDEVMPR** algorithm is attached to the respective audit event type. If the **C1-AUDEVMPR** algorithm is attached to the audit event type, it identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates a repricing entity detail record for each membership, pricing rule type, and effective date combination in the **CI\_REPRC\_ENTITY\_DTL** table. The status of the repricing entity detail record is set to **P**.

For example, an audit event is created while adding the following pricing rule:

<b>Audit Event</b>	AE1	AE2
<b>Pricing Rule</b>	AGBD	AFTG
<b>Pricing Rule Type Using which the Pricing Rule is Created</b>	PRT1	PRT3
<b>Pricing Rule Start Date</b>	01-01-2019	01-01-2019
<b>Policy Plan for which the Pricing Rule is Defined</b>	PP1	PP2
<b>Pricing Rule Types Associated with the Policy Plan</b>	PRT1, PRT2, PRT3	PRT3
<b>Memberships which Belong to the Policy Plan</b>	M1, M2, M3, and M4	M11 and M12

For the AE1 audit event, the system creates four repricing entity detail records with the following combinations in the **CI\_REPRC\_ENTITY\_DTL** table:

- M1, PRT1, 01-01-2019

- M2, PRT1, 01-01-2019
- M3, PRT1, 01-01-2019
- M4, PRT1, 01-01-2019

And, for the AE2 audit event, the system creates two repricing entity detail records with the following combinations in the **CI\_REPRC\_ENTITY\_DTL** table:

- M11, PRT3, 01-01-2019
- M12, PRT3, 01-01-2019

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**. However, if an error occurs while creating the repricing entity detail records for an audit event, the status of the audit event is set to **Error**.

## Membership Audit Process

If you add, edit, or delete a membership, the system checks whether an active audit event type exists for the **C1-Membership** business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a membership is added to a policy plan and member person is added to a membership. It also creates the audit event whenever the membership and member person details are updated. However, note that the audit events are created in the update scenario only when the element listed for auditing in the age based or tier based pricing rule types is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. membership or member person whichever is updated) date range.

The audit event is created in the **Pending** status. Note that the system creates distinct audit events in the following scenarios:

Scenario	System Behavior
A membership is added to the policy plan.	One audit event is created for the membership. Here, the effective date in the audit event is set to the membership's start date.
A member person is added to the membership.	One audit event is created for the membership. Here, the effective date in the audit event is set to the member person's start date.
A member person is removed from the membership.	One audit event is created for the membership. Here, the effective date in the audit event is set to the member person's start date.
Membership characteristics are added or updated in the system.	Multiple audit events are created for the membership – one for each set of membership characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the membership's characteristic is effective.
Member person characteristics are added or updated in the system.	Multiple audit events are created for the membership – one for each set of member person's characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the member person's characteristic is effective.
A set of membership fields except membership end date is updated in the system.	One audit event is created for the membership. Here, the effective date in the audit event is set to the membership's start date.
The membership end date is updated in the system.	One audit event is created for the membership. Here, the effective date in the audit event is set to membership's end date.
A set of member person's fields except member person start and end dates is updated in the system.	One audit event is created for the membership. Here, the effective date in the audit event is set to the member person's start date.

Scenario	System Behavior
<p>The member person's start date is updated in the system.</p>	<p>Three audit events are created for the membership – one where the effective date is set to the member person's previous start date, another where the effective date is set to the member person's new start date, and third where the effective date is set to member person's end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the third audit event for the membership. In such scenario, it simply creates first two audit events.</p> <p>For example, the Mike's effective date range is changed from 04-01-2019 – 09-30-2019 to 01-15-2019 – 09-30-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create three audit events – one with effective date as 04-01-2019, another with effective date as 01-15-2019, and third with effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to <b>Person</b>. Let us assume that in the above example a characteristic for Mike was effective from 02-01-2019. In such case, the system creates three audit events for membership (with the effective dates as mentioned above) and one audit event for the person (i.e. Mike) where the effective date is set to 02-01-2019.</p>
<p>The member person's end date is updated in the system.</p>	<p>Two audit events are created for the membership – one where the effective date is set to member person's previous end date + 1 Day and another where the effective date is set to member person's new end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the second audit event for the membership. In such scenario, it simply creates first audit event.</p> <p>For example, the Garry's effective date range is changed from 04-01-2019 – 09-30-2019 to 04-01-2019 – 12-31-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create one audit event with the effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day). It will not create another audit event because the derived effective date is later than membership end date.</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to <b>Person</b>. Let us assume that in the above example a characteristic for Garry was effective from 11-01-2019. In such case, the system creates one audit event for membership (with the effective date as mentioned above) and one audit event for the person (i.e. Garry) where the effective date is set to 11-01-2019.</p>

Scenario	System Behavior
<p>The member person's start and end dates are updated in the system.</p>	<p>Four audit events are created for the membership – one where the effective date is set to the member person's previous start date, another where the effective date is set to the member person's new start date, third where the effective date is set to member person's previous end date + 1 Day, and fourth where the effective date is set to member person's new end date + 1 Day. However, if the derived effective date is later than the membership end date, the system does not create the fourth audit event for the membership. In such scenario, it simply creates first three audit events.</p> <p>For example, the Juliet's effective date range is changed from 04-01-2019 – 09-30-2019 to 01-01-2019 – 11-30-2019 in the M1 membership which is effective from 01-01-2019 to 12-31-2019. In such case, the system will create four audit events – one with effective date as 04-01-2019, another with effective date as 01-01-2019, third with effective date as 10-01-2019 (i.e. 09-30-2019 + 1 Day), and fourth with effective date as 12-01-2019 (i.e. 11-30-2019 + 1 Day).</p> <p>In addition, if there is a characteristic for the person whose effective date falls with the new enrollment date range, the system creates an audit event for the person where the effective date is set to characteristic's effective date. Note that the system considers those effective characteristics where the characteristic entity is set to <b>Person</b>. Let us assume that in the above example two characteristics of Juliet were effective from 03-01-2019 and 10-01-2019, respectively. In such case, the system creates four audit events for membership (with the effective dates as mentioned above), fifth audit event for the person (i.e. Juliet) where the effective date is set to 03-01-2019, and sixth audit event for the person (i.e. Juliet) where the effective date is set to 10-01-2019.</p>

For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. A repricing entity detail record is created for each membership, pricing rule type, and effective date combination in the **CI\_REPRC\_ENTITY\_DTL** table. The status of the repricing entity detail record is set to **P**.

For example, an audit event is created while adding the following memberships:

<b>Audit Event</b>	AE11	AE12
<b>Membership</b>	M1	M2
<b>Membership Start Date</b>	01-03-2019	01-02-2019
<b>Policy Plan to which Membership Belongs</b>	PP11	PP12
<b>Pricing Rules Defined on the Policy Plan</b>	PR1 (PRT1), PR2 (PRT2), PR3 (PRT3)	PR11 (PRT1), PR13 (PRT2)
<b>Pricing Rule Types Associated with the Policy Plan</b>	PRT1, PRT2, PRT3	PRT1, PRT2

For the AE11 audit event, the system creates three repricing entity detail records with the following combinations in the **CI\_REPRC\_ENTITY\_DTL** table:

- M1, PRT1, 01-03-2019
- M1, PRT2, 01-03-2019

- M1, PRT3, 01-03-2019

And, for the AE12 audit event, the system creates two repricing entity detail records with the following combinations in the **CI\_REPRC\_ENTITY\_DTL** table:

- M2, PRT1, 01-02-2019
- M2, PRT2, 01-02-2019

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**.

## Person Audit Process

If you add, edit, or delete a person, the system checks whether an active audit event type exists for the **C1\_PERSON\_BO** business object. If so, it creates an audit event for the person using the audit event type. The audit event is created in the **Pending** status. Note that the system creates distinct audit events in the following scenarios:

Scenario	System Behavior
Person characteristics are added or updated in the system.	Multiple audit events are created for the person – one for each set of person characteristics with the same effective date. Here, the effective date in the audit event is set to the date from when the person’s characteristic is effective.
Person fields are updated in the system.	One audit event is created for the person. Here, the effective date in the audit event is set to the member person’s start date.

For each audit event, the system identifies the memberships in which the person is added as a member person. It then identifies the policy plan to which each membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. A repricing entity detail record is created for each membership, pricing rule type, and effective date combination in the **CI\_REPRC\_ENTITY\_DTL** table. The status of the repricing entity detail record is set to **P**. For example, an audit event named AE1 is created while updating the P1 person:

Audit Event	AE1		
Membership to which P1 belongs	M1	M2	M3
Member Person’s Start Date	01-01-2019	01-01-2019	01-07-2019
Policy Plan to which Membership Belongs	PP1	PP2	PP3
Pricing Rules Defined on the Policy Plan	PR1 (PRT1), PR2 (PRT2)	PR3 (PRT3), PR4 (PRT3)	PR5 (PRT5), PR6 (PRT6)
Pricing Rule Types Associated with the Policy Plan	PRT1, PRT2	PRT3, PRT4	PRT5, PRT6

For the AE1 audit event, the system creates five repricing entity detail records with the following combinations in the **CI\_REPRC\_ENTITY\_DTL** table:

- M1, PRT1, 01-01-2019
- M1, PRT2, 01-01-2019
- M2, PRT3, 01-01-2019
- M3, PRT5, 01-07-2019
- M3, PRT6, 01-07-2019

Once the repricing entity detail records are created successfully, the status of the audit event is set to **Complete**.

**Note:**

If the audit event's effective date is earlier than the member person's start date, the system sets the effective date in the repricing entity detail record to the member person's start date. Therefore, in such scenarios, the effective date of the audit event and repricing entity detail records will be different.

While creating an audit event, the system checks whether an audit event for the entity with the same effective date exists in the **Pending** status. If so, the system does not create a new audit event for the entity. Instead, the system adds a log in the existing audit event.

## Bill Group Derivation for Membership

---

A new algorithm type named **C1\_MEMBGDRV** is added in this release. You need to attach an algorithm created using the **C1\_MEMBGDRV** algorithm type to the **Bill Group Derivation** system event in a pricing rule type where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.

This algorithm derives the policy from the policy plan to which the membership belongs. Once the policy is derived, the system derives the source system from the policy. The Bill Level 1, Bill Level 2, Bill Level 3, and Bill Level 4 characteristics defined on the membership indicate the Parameter 1, Parameter 2, Parameter 3, and Parameter 4. The system derives a bill group using the derivation and pricing parameters (i.e. Source System, Parameter 1, Parameter 2, Parameter 3, and Parameter 4) which are defined for the bill group. Note that the system considers the derivation and pricing parameters which are effective on the effective date (which is available corresponding to the record in the **CI\_REPRC\_ENTITY\_DTL** table). It first searches for the bill group using the exact match. If the exact match is not available, the system finds the bill group using the best fit match. Note that while searching for a bill group, the source system and Parameter 1 (i.e. Bill Level 1) are mandatory.

This algorithm contains the following parameters:

- **Characteristic Type for Bill Level 1** – Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 1 for the membership.
- **Characteristic Type for Bill Level 2** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 2 for the membership.
- **Characteristic Type for Bill Level 3** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 3 for the membership.
- **Characteristic Type for Bill Level 4** - Used to indicate the characteristic type. This characteristic type must be defined on the membership. It is used to store the derivation and pricing parameter 4 for the membership.

Once the bill group is derived, the system derives the parent customer of the bill group. If the system could not derive the policy, bill group, or parent customer, the status of the record is changed to **Error (E)** in the **CI\_REPRC\_ENTITY\_DTL** table.

## Account and Price Item Derivation for Membership

---

A new algorithm type named **C1\_ACCPRIMEM** is added in this release. You need to attach an algorithm created using the **C1\_ACCPRIMEM** algorithm type to the **Account and Price Item Derivation** system event in a pricing rule type where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.

This algorithm fetches the effective pricing rule for each price item specified in the pricing rule type on the effective date. It first searches for effective pricing rules on the policy plan to which the membership belongs. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level. The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type. Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. If the system could not derive the

effective pricing rule for any price item or if the account or active contract for the account could not be derived, the status of the record is changed to **Error (E)** in the CI\_REPRC\_ENTITY\_DTL table.

## State of Issue

---

The State of Issue feature enables you to search for the following characteristics on a state:

- Maximum Number of Dependents
- Maximum Age Limit for Maximum Dependent Count
- Maximum Number of Dependents Order Priority
- Age Calculation Date Basis
- Newborn Gift Days
- Newborn Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Inclusion Applicability

It helps in identifying a list of eligible children in a membership. To enable the State of Issue feature, you need to do the following:

1. Define a predefined characteristic type named **State of Issue** where the characteristic entity is set to **Membership, Policy Plan** and **Policy**.
2. Define the required states as the predefined values for the **State of Issue** characteristic type.
3. Set the **State of Issue** characteristic type in the **State of Issue Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration.

If the State of Issue feature is enabled, the system checks whether the **State of Issue** characteristic is defined for the membership when any of the above required characteristic is not defined at the membership person and membership levels. If the **State of Issue** characteristic is defined for the membership, the system checks whether the above required characteristic is defined on the state where the membership is issued. For example, if the **State of Issue** characteristic on the M1 membership is set to **California**, then the system will search for any of the above required characteristic on the **California** state. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

If the required characteristic is not defined at the membership person, membership, state where the membership is issued and policy plan levels, the system checks whether the **State of Issue** characteristic is defined for the policy plan. If the **State of Issue** characteristic is defined for the policy plan, the system checks whether the above required characteristic is defined on the state where the policy plan is issued. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

However, if the required characteristic is not defined at the membership person, membership, state where membership is issued, policy plan, state where the policy plan is issued, and policy levels, the system checks whether the **State of Issue** characteristic is defined for the policy. If the **State of Issue** characteristic is defined for the policy, the system checks whether the above required characteristic is defined on the state where the policy is issued. If the required characteristic is defined for the state, the system considers it while identifying a list of eligible children in the membership.

## Membership Premium Calculation

---

The membership premium is calculated differently using the following pricing:

- **Age-Based Pricing** – The system first identifies a list of members which are eligible for premium calculation in a membership. It derives the main subscriber and member persons (i.e. Spouse and Children) which are related to the main subscriber using the relationship type specified in the **Age Based** pricing rule type. To identify a list of eligible children for premium calculation, the system uses the following characteristics:

- **Maximum Number of Dependents** – Used to indicate the maximum number of children which are eligible for premium calculation.
- **Maximum Age Limit for Maximum Dependent Count** – Used to indicate the maximum age limit for children which are eligible for premium calculation.
- **Maximum Number of Dependents Order Priority** – Used to indicate whether you want to consider the youngest or eldest children during premium calculation. The valid values are - **YOUNGEST** and **ELDEST**.
- **Age Calculation Date Basis** – Used to indicate whether the member person’s age should be calculated using the member person’s enrollment date or policy’s start or renewal date.
- **Newborn Gift Days** – Used to indicate the number of days you want to offer as gift days from the new born child’s birth date. As a result, no premium will be calculated for this period.
- **Newborn Gift Days Applicability** – Used to indicate whether you want to offer gift days in case of a new born. The valid values are - **Y** and **N**.
- **Young Adult Max Age Limit** – Used to indicate the maximum age limit for young adults which are eligible for premium calculation.
- **Young Adult Inclusion Applicability** – Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Y** and **N**.

**Note:** Only the **Age Calculation Date Basis (C1-AGCAL)** characteristic type is shipped with the product. You need to create the remaining characteristic types in the system and set their characteristic entity to the following - **Membership Person, Membership, Policy Plan, Policy,** and/or **State**.

The system searches for these characteristics on the following entities in the specified sequence:

1. Membership Person
2. Membership
3. State where the Membership is issued
4. Policy Plan
5. State where the Policy Plan is Issued
6. Policy
7. State where the Policy is Issued

For example, if the **Maximum Number of Dependents** characteristic is defined for all entities, the system considers the characteristic which is defined at the Member Person level because it is the lowest level. However, if the **Newborn Gift Days Applicability** characteristic is defined at the Policy Plan and Policy levels, the system considers the characteristic which is defined at the Policy Plan level because it is the lowest level. In other words, the system crawls from the lowest to the highest level while searching for the above characteristics. You can also define the above characteristics on the state where the membership, policy plan and/or policy are issued. For more information, refer to the State of Issue section.

Once the eligible members for premium are identified, the system derives the base fee and applicable modifier fee which are defined in the pricing rules. The system then calculates the timeline for each membership and price item combination. The timeline is basically calculated to understand the period for which the premium is applicable. For example, if a policy plan named **P1** has the following membership:

<b>Membership</b>	M1
<b>Member Persons</b>	P1 and P2
<b>Membership Start Date</b>	01-01-2019

<b>Membership End Date</b>	31-12-2019
<b>P0 Main Subscriber's Start Date</b>	01-01-2019
<b>P0 Main Subscriber's End Date</b>	31-12-2019
<b>P1 Member's Start Date</b>	01-01-2019
<b>P1 Member's End Date</b>	30-06-2019
<b>P2 Member's Start Date</b>	01-10-2019
<b>P2 Member's End Date</b>	31-12-2019

The **P1** policy plan is associated with an Age Based pricing rule type which contains the **Premium Fee** price item. The Age Based pricing rule for the **Premium Fee** price item is effective from 01-01-2019 to 31-12-2019.

In this case, the system will create the following timelines when you add **P2** member person in the **M1** membership:

<b>Membership</b>	<b>Price Item</b>	<b>Timeline Start Date (Effective Date)</b>	<b>Timeline End Date</b>
M1	Premium Fee	01-01-2019	30-06-2019 (i.e. P1 Member's End Date)
M1	Premium Fee	01-07-2019	30-09-2019
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019

It creates timelines using the membership's start and end dates, member person's start and end dates, and effective date. For each timeline, the system calculates the premium for all eligible member persons in the membership. Let us assume that the effective pricing rule is configured in the following manner:

<b>Age Band</b>	<b>Fee</b>
0-21	\$50
21-65	\$100
>65	\$150

P0 belongs to the 21-65 age band and P1 and P2 belongs to the 0-21 age band. Therefore, the premium is calculated using the following base fee:

<b>Membership</b>	<b>Price Item</b>	<b>Timeline Start Date (Effective Date)</b>	<b>Timeline End Date</b>	<b>Base Fee</b>
M1	Premium Fee	01-01-2019	30-06-2019 (i.e. P1 Member's End Date)	P0: \$100 P1: \$50
M1	Premium Fee	01-07-2019	30-09-2019	P0: \$100
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019	P0: \$100 P2: \$50

Now, let us assume the following characteristics are defined on the **P1** policy plan which offers gift days to a new born child:

Effective Date	Characteristic Type	Characteristic Value
01-01-2019	Newborn Gift Days Applicability	Y
01-01-2019	Newborn Gift Days	30

Now, if the main subscriber adds his child named **C1** who is born on 05-03-2019, the system will create the following timelines:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	30-06-2019 (i.e. P1 Member's End Date)
M1	Premium Fee	01-07-2019	30-09-2019
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019

It creates timelines using the membership's start and end dates, member person's start and end dates, and effective date. For each timeline, the system calculates the premium for all eligible member persons in the membership. In this case, the premium is calculated using the following base fee:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date	Base Fee
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)	P0: \$100 P1: \$50
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	30-06-2019 (i.e. P1 Member's End Date)	P0: \$100 P1: \$50 C1: \$50
M1	Premium Fee	01-07-2019	30-09-2019	P0: \$100 C1: \$50
M1	Premium Fee	01-10-2019 (i.e. P2 Member's Start Date)	31-12-2019	P0: \$100 P2: \$50 C1: \$50

- Tier Based Pricing** – The system first derives the base fee which is defined in the pricing rules. It then calculates the timeline for each membership and price item combination. The timeline is basically calculated to understand the period for which the premium is applicable. For example, if a policy plan named **P2** has the following membership:

<b>Membership</b>	M1
<b>Member Persons</b>	P1 and P2

<b>Membership Start Date</b>	01-01-2019
<b>Membership End Date</b>	31-12-2019
<b>Membership Tier</b>	ES (Employee + Spouse)

The **P2** policy plan is associated with a Tier Based pricing rule type which contains the **Premium Fee** price item. The Tier Based pricing rule for the **Premium Fee** price item is effective from 01-01-2019 to 31-12-2019.

The system will create the following timeline when the **M1** membership is added to the **P2** policy plan:

<b>Membership</b>	<b>Price Item</b>	<b>Timeline Start Date (Effective date)</b>	<b>Timeline End Date</b>
M1	Premium Fee	01-01-2019	31-12-2019

It creates timelines using the membership's start and end dates and effective date. For each timeline, the system calculates premium for the membership. Let us assume that the effective pricing rule is configured in the following manner:

<b>Tier Level</b>	<b>Fee</b>
E (Employee Only)	\$100
ES (Employee + Spouse)	\$200
F (Family)	\$350
EC (Employee+ Children)	\$150

The **M1** membership belongs to the **ES (Employee + Spouse)** tier. Therefore, the premium is calculated using the following base fee:

<b>Membership</b>	<b>Price Item</b>	<b>Timeline Start Date (Effective Date)</b>	<b>Timeline End Date</b>	<b>Base Fee</b>
M1	Premium Fee	01-01-2019	31-12-2019	\$200

Now, let us assume the following characteristics are defined on the **P2** policy plan which offers gift days to a new born child:

<b>Effective date</b>	<b>Characteristic Type</b>	<b>Characteristic value</b>
01-01-2019	Newborn Gift Days Applicability	Y
01-01-2019	Newborn Gift Days	30

Now, if the main subscriber adds his child named **C1** who is born on 05-03-2019, the system will create the following timelines:

<b>Membership</b>	<b>Price Item</b>	<b>Timeline Start Date (Effective date)</b>	<b>Timeline End Date</b>
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	31-12-2019

In this case, the premium is calculated using the following base fee considering the membership tier has changed from **ES (Employee + Spouse)** to **F (Family)**:

Membership	Price Item	Timeline Start Date (Effective Date)	Timeline End Date	Base Fee
M1	Premium Fee	01-01-2019	03-04-2019 (i.e. 05-03-2019 +30 Days)	200
M1	Premium Fee	04-04-2019 (New Born Considered for Premium Calculation)	31-12-2019	350

## Repricing

Oracle Revenue Management and Billing extends the Repricing feature for the insurance domain. To enable this feature for fully insured line of business, you need to setup the audit framework for membership and age based and tier based pricing rules. For more information, refer to the Audit Framework for Membership and Fully Insured Pricing Rules section.

To recalculate the membership premium, you need to execute the following batches in the specified order:

1. **Identify Entities for Repricing (C1-REPC1)** - Until now, this batch identified a set of accounts which were impacted due to change in a price list and then created a repricing request for such accounts. In this release, new parameters named **Repricing Mode** and **Membership ID** are added in this batch. If the **Repricing Mode** parameter is set to **ACCT**, this batch identifies a set of accounts which were impacted due to change in a price list and then creates a repricing request for such account. However, if the **Repricing Mode** parameter is set to **MEMB**, this batch considers the records in the **Pending (P)** and **Error (E)** status from the CI\_REPRC\_ENTITY\_DTL table. For each record, the system invokes the algorithms attached to the following system events of the pricing rule type in the specified order:
  - a. **Bill Group Derivation** – Used to derives the policy, bill group, and parent customer of the bill group.
  - b. **Account and Price Item Derivation** – Used to derive the pricing rules for the price items (which are present in the pricing rule type) on the policy plan (to which the membership belongs).

Once the pricing rules are derived, the system creates a repricing request for the membership, pricing rule, and effective date combination. Finally, the status of the corresponding record is set to **Complete (C)** in the CI\_REPRC\_ENTITY\_DTL table. If any error occurs while creating a repricing request, the status of the corresponding record is set to **Error (E)** in the CI\_REPRC\_ENTITY\_DTL table.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

2. **Process Repricing Request (C1-REPC2)** - Until now, this batch calculated and persisted the rate for the account, price item, and effective date combination in the CI\_PRCE\_CALC table. In this release, new parameters named **Repricing Mode** and **Membership ID** are added in this batch. If the **Repricing Mode** parameter is set to **ACCT**, this batch calculates and persist the rate for the account, price item, and effective date combination in the CI\_PRCE\_CALC table. However, if the **Repricing Mode** parameter is set to **MEMB**, this batch considers the records in the **Pending (P)** and **Error (E)** status from the CI\_REPRC\_REQ\_DTL table. If the pricing rule in the record is **Age Based**, the system invokes the algorithms attached to the following system events of the pricing rule type in the specified order:
  - a. **Pricing Rule Pre Processing** – Used to identify the eligible member persons for premium calculation.

**b. Pricing Rule Premium Calculation** – Used to calculate the premium for the membership.

Once these algorithms are executed, the premium is calculated for each eligible member person and stored in the CI\_PRCE\_CALC\_LN table and the total premium for the membership is stored in the CI\_PRCE\_CALC table. Finally, the status of the corresponding record is set to **Complete (C)** in the CI\_REPRC\_REQ\_DTL table.

However, if the pricing rule in the record is **Tier Based**, the system invokes the algorithm attached to the following system event of the pricing rule type:

- **Pricing Rule Premium Calculation** – Used to calculate the premium for the membership.

Once the algorithm is executed, the premium is calculated for the membership and stored in the CI\_PRCE\_CALC table. Finally, the status of the corresponding record is set to **Complete (C)** in the CI\_REPRC\_REQ\_DTL table.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Fully Insured Billable Charge Creation

Oracle Revenue Management and Billing enables you to create billable charges for pre-calculated premium amount (which is received through a healthcare inbound message) and calculated premium amount (which is derived using a pricing rule defined at the policy plan level). Before creating an SQI based billable charge, the system derives the bill period for the account using the **Invoice Day (C1OFFRST)** characteristic defined on the account.

While creating a billable charge for the pre-calculated premium amount through a healthcare inbound message, the system creates an SQI based billable charge for the membership and price item combination. Note that if the bill period or frequency is given in the billable charge information in the healthcare inbound message, the system does not derive the bill period for the account.

However, for creating a billable charge for the calculated premium amount, you need to execute the **Fully Insured Billable Charge Creation (C1-FIBCR)** batch. It creates an SQI based billable charge for calculated premium amount. It considers the timelines in the **Pending (P)** and **Error (E)** status from the CI\_PRCE\_CALC table. Note that it considers only those timelines where the entity type is set to **Membership**. For each timeline, membership and price item combination, the system does the following:

1. Derives the bill period for the account using the **Invoice Day (C1OFFRST)** characteristic defined on the account.
2. Creates an SQI based billable charge. Here, the start and end dates on the billable charge are set to the timeline start and end dates.

If the premium amount of the two consecutive timelines of a membership and price item combination is same, this algorithm does not create a new billable charge. Instead, it extends the end date of the previous timeline's billable charge. If the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge exists for the membership and price item combination with the same start date and amount, then the system behaves in the following manner:

If...	Then...
Bill segments for the 01-01-2019 to 31-12-2019 period are not yet generated in the system	The end date in the existing billable charge is updated to 31-10-2019.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the <b>Freezable</b> status	The bill segments for the 01-11-2019 to 31-12-2019 period are deleted and the end date in the existing billable charge is updated to 31-10-2019.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the <b>Frozen</b> or <b>Pending Cancel</b> status	The bill segments for the 01-11-2019 to 31-12-2019 period are canceled and the end date in the existing billable charge is updated to 31-10-2019.

However, if the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge exists for the

membership and price item combination with the same start date, but different amount, then the system behaves in the following manner:

<b>If...</b>	<b>Then...</b>
Bill segments for the 01-01-2019 to 31-12-2019 period are not yet generated in the system	The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the <b>Freezable</b> status	The bill segments for the 01-01-2019 to 31-12-2019 period are deleted. The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period.
Bill segments for the 01-01-2019 to 31-12-2019 period are in the <b>Frozen</b> or <b>Pending Cancel</b> status	The bill segments for the 01-01-2019 to 31-12-2019 period are canceled. The existing billable charge is canceled and a new billable charge is created for the 01-01-2019 to 31-10-2019 period.

And, if the membership end date is set to a date which is earlier than the previous date (for example, Old Membership End Date: 31-12-2019 and New Membership End Date: 31-10-2019) and a billable charge does not exist for the membership and price item combination with the same start date, then a billable charge is created for the 01-01-2019 to 31-10-2019 period. Note that if there are billable charges for the membership and price item combination whose date range is within the timeline, such billable charges are canceled and their corresponding bill segments (if any) are either deleted or canceled in the system.

The pre-calculated or calculated premium amount is stored as a pass through line in the SQI based billable charge. Note that these pass through lines are memo only and no general ledger entries will be created for these pass through lines. This algorithm fetches SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. The SQI value is set to the total amount of the pass through lines in the billable charge. The system prorates the amount only when the SQ rule specified in the rate schedule attached to the active contract contains the SQI which is specified in the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration.

Once the billable charge is created, the membership ID is stamped as characteristic on the billable charge. This indicates that the billable charge is created for the respective membership. This algorithm fetches the characteristic type, which must be defined on the billable charge, from the **Characteristic Type For Membership Id** option type of the **C1-ASOBLLNG** feature configuration.

Finally, the status of the corresponding timeline is set to **Complete (C)** in the **CI\_PRCE\_CALC** table. If any error occurs while creating a billable charge, the status of the corresponding timeline is set to **Error (E)** in the **CI\_PRCE\_CALC** table. In addition, if an error occurs, a To Do is created using the **C1-FIBCR** To Do type and assigned to all users with a To Do role which is specified as characteristic on the parent customer. The system considers the characteristic on the parent customer which is specified in the **To Do Role Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Note that the system does not create a To Do for each error record. Instead, the system creates distinct To Do for each membership and pricing rule combination.

This batch is a multi-threaded batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

# Chapter 36

---

## Entity Audit

---

### Topics:

- [Audit Event Status Transition](#)
- [Prerequisites](#)
- [Entity Audit Process](#)
- [Algorithms Used in the Entity Audit Process](#)
- [Audit Event Type](#)
- [Audit Event \(Used for Searching\)](#)
- [Audit Event \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides a mechanism wherein auditors can track various actions, such as add, update, and delete for an entity. If the entity audit feature is enabled for a business object, the system creates audit events whenever you define, edit, or delete an entity (which is created using the respective business object). For example, if the entity audit feature is enabled for the **C1-Membership** business object, the system creates an audit event whenever you define, edit, or delete a membership in a policy plan or whenever you add or remove persons from a membership. For more information on how to enable the entity audit feature for a business object, see [Prerequisites](#) on page 2850.

The entity audit process is a two-step process, wherein the system creates the audit events and then processes them whenever the **Audit Event Processing (C1-AUDEV)** batch is executed. For more information about these processes, see the following sections:

- [Audit Event Creation](#) on page 2851
- [Audit Event Processing](#) on page 2852

During the entity audit process, each audit event goes through various statuses in its lifecycle. For more information about the audit event statuses, see [Audit Event Status Transition](#) on page 2850.

## Audit Event Status Transition

The following figure graphically indicates how an audit event moves from one status to another in its lifecycle:

## Prerequisites

To setup the entity audit feature for a business object, you need to do the following:

- Set the **Eligible for Audit Event** option type of the entity business object to **Y**.

**Note:** The **Eligible for Audit Event** option type is available for the entity business object only when the **Valid BO Option Type** option type of the respective maintenance object is set to **C1AT**.

- Attach an algorithm created using the **C1-READEVNT** algorithm type to the **Audit** system event of the entity business object.

**Note:**

At present, this algorithm is designed to work with the following business objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1\_PERSON\_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

If you want to use the audit algorithm for the business objects which are not listed above, you need to create a custom audit algorithm.

- Define an active audit event type for the entity business object in the system.
- Define the required algorithm types where the algorithm entity is set to **Audit Event Processing**.
- Create the required algorithms and attach them to the **Audit Event Processing** system event of the audit event type.

**Note:** The **C1-AUDEVMPR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the audit event types which are defined for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects.

- Define the values for the **AUDIT\_USAGE\_FLG** lookup field
- Define the required characteristic types where the characteristic entity is set to **Audit Event Type**.

## Entity Audit Process

---

The entity audit process consists of the following two sub-processes:

- [Audit Event Creation](#) on page 2851
- [Audit Event Processing](#) on page 2852

### Audit Event Creation

If you add, edit, or delete an entity which is created using a business object for which the entity audit feature is enabled, the system checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

For more information about the audit event type, see [Audit Event Type](#) on page 2853.

The audit event is created in the **Pending** status. Note that the system creates one audit event for the entity irrespective of the number of changes made during the entity update. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. For example, if the audit event is created

while adding or updating a pricing rule, then the entity type is set to **Pricing Rule** and entity ID is set to the pricing rule ID. In addition, an effective date is stamped corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

At a time, you can have only two audit events for the entity in the **Pending** status — one audit event which is created during the **Add** action and another audit event which is created during the **Update** action.

**Note:** Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

## Audit Event Processing

On executing the **Audit Event Processing (C1-AUDEV)** batch, the system checks whether there are any audit events in the **Pending** status. If there is an audit event in the **Pending** status, the system checks whether an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type. If an algorithm is not attached to the **Audit Event Processing** system event of the respective audit event type, the status of the audit event is set to **Complete**.

However, if an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type, the system executes the algorithm and accordingly changes the status of the audit event to **Complete**. For example, while processing the audit events of the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects, the system checks whether an algorithm is attached to the **Audit Event Processing** system event of the respective audit event type. If the **C1-AUDEVMPR** algorithm is attached to the audit event type, the system identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates an entry for each membership, pricing rule type, and effective date combination in the **CI\_REPRC\_ENTITY\_DTL** table. The status of these entries is set to **P**. Finally, the status of the audit event is set to **Complete**.

If any error occurs, the status of the audit event is set to **Error**. The system enables you to either reprocess or cancel the audit events which are in the **Error** status. On canceling an audit event, the status of the audit event is changed to **Canceled**.

For more information about the **Audit Event Processing (C1-AUDEV)** batch and its parameters, see *Oracle Revenue Management and Billing Batch Guide*.

## Algorithms Used in the Entity Audit Process

The following table lists the algorithms which are designed to implement the entity audit process:

Algorithm	Algorithm Type	Attached To	System Event	Algorithm Description
C1- REAUDEVNT	C1- REAUDEVNT	Entity Business Object	Audit	Refer to <a href="#">C1-REAUDEVNT</a> on page 2852.
C1- AUDEVMPR	C1- AUDEVMPR	Audit Event Type of the <b>C1-PricingRuleAgeBased</b> and <b>C1-PricingRuleTierBased</b> business objects	Audit Event Processing	Refer to <a href="#">C1-AUDEVMPR</a> on page 2853.

### C1-REAUDEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1\_AUDIT\_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

**Note:** Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

At present, this algorithm is designed to work with the following business objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1\_PERSON\_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

If you want to use the audit algorithm for the business objects which are not listed above, you need to create a custom audit algorithm.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

## C1-AUDEVMPR

You must attach this algorithm to the **Audit Event Processing** system event while creating an audit event type for the **C1-PricingRuleAgeBased** and **C1-PricingRuleTierBased** business objects.

This algorithm is invoked when the **Audit Event Processing (C1-AUDEV)** batch is executed. If this algorithm is attached to the **Audit Event Processing** system event of the respective audit event type, the system identifies the policy plan where the pricing rule is defined. Once the policy plan is identified, it extracts a list of membership defined on the policy plan and the pricing rule type using which the pricing rule is created. Then, the system creates an entry for each membership, pricing rule type, and effective date combination in the **CI\_REPRC\_ENTITY\_DTL** table. The status of these entries is set to **P** in the **CI\_REPRC\_ENTITY\_DTL** table.

## Audit Event Type

---

Oracle Revenue Management and Billing enables you to define an audit event type for an entity business object. However, at a time, only one audit event type of the entity business object can be in the **Active** status. The system

creates an audit event using the active audit event type whenever you define, edit, or delete the respective entity. The audit event type helps the system to determine:

- **Entity Business Object** – The business object for which you want to define the audit event type.
- **Audit Usage** – The usage indicates the purpose of auditing an entity which is created using the entity business object. For example, membership premium charges might change due to change in pricing and therefore you may want to audit the pricing rules for premium calculation.
- **Audit Actions** – The various options, such as **Add Action**, **Delete Action**, and **Update All** are available while defining an audit event type. The system creates an audit event while defining, editing or deleting an entity depending on whether the respective option is selected in the audit event type. For example, if you create the active audit event types for the following entity business objects where the below listed options are selected:

Audit Event Type	Entity Business Object	Add Action	Update All	Delete Action
AETY1	C1-POLICY	Y	N	N
AETY2	C1-ASOPolicy	Y	Y	Y

Then, the system will create an audit event using the **AETY1** audit event type when you define a fully-insured policy. But, the system will not create an audit event when you edit or delete a fully-insured policy. However, the system will create an audit event using the **AETY2** audit event type when you define, edit, or delete a self-funded policy.

- **Audit Elements During Update** – Alternatively, you can list the elements of the entity business object which should be monitored for the auditing purpose while editing an entity in the audit event type. You can list the elements of the entity business object only when the **Update All** option is not selected. The system enables you to monitor a set of the business object statuses, characteristic types, and fields and accordingly creates an audit event while editing an entity. For example, if you create the audit event types for the following entity business objects:

Audit Event Type	Entity Business Object	Update All	Audit Elements During Update
AETY3	C1_PERSON_BO	Y	Not applicable
AETY4	C1-PricingRuleTierBased	N	Pricing Start Date, Rate Option, Base Fee for a Price Component
AETY5	C1-PricingRuleAgeBased	N	Rate Option, Base Fee for a Price Component

Then, the system will create an audit event using the **AETY3** audit event type when you edit any details of a person. But, the system will create an audit event using the **AETY4** audit event type only when the following fields in a tier based pricing rule are edited:

- Pricing Start Date
- Rate Option
- Base Fee for a Price Component

Similarly, the system will create an audit event using the **AETY5** audit event type only when the following fields in an age based pricing rule are edited:

- Rate Option
- Base Fee for a Price Component

The **Audit Event Type** screen allows you to define, edit, copy, and delete an audit event type. It contains the following zones:

- [Audit Event Type List](#) on page 2855
- [Audit Event Type](#) on page 2856

## Audit Event Type List

The **Audit Event Type List** zone lists the audit event types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Audit Event Type	Displays the audit event type.
Description	Displays the description of the audit event type.
Entity Business Object	Indicates the business object for which the audit event type is created. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status	Indicates the status of the audit event type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Audit Usage	Indicates the purpose of auditing the entity business object. The valid value is: <ul style="list-style-type: none"> <li>Premium Calculation</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Audit Event Type</b> screen appears where you can edit the details of the audit event type.  <b>Note:</b> You can edit an audit event type only when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following: <ul style="list-style-type: none"> <li>Change the status from <b>Active</b> to <b>Inactive</b> and vice-versa</li> <li>Attach algorithms (if required) to the audit event type</li> <li>Define, edit, or remove characteristics from the audit event type</li> </ul>
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Audit Event Type</b> screen appears where you can define a new audit event type using an existing audit event type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the audit event type.  <b>Note:</b> You can delete an audit event type only when an audit event is not yet created using the audit event type.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status** and **Entity Business Object**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to an audit event type, the **Audit Event Type** zone appears with the details of the respective audit event type.

**Related Topics**

For more information on...	See...
How to edit an audit event type	<a href="#">Editing an Audit Event Type</a> on page 2866
How to copy an audit event type	<a href="#">Copying an Audit Event Type</a> on page 2868
How to delete an audit event type	<a href="#">Deleting an Audit Event Type</a> on page 2870
How to view the details of an audit event type	<a href="#">Viewing the Audit Event Type Details</a> on page 2871

**Audit Event Type**

The **Audit Event Type** zone displays the details of the audit event type. It contains the following sections:

- **Main** - Displays basic information about the audit event type. It contains the following fields:

Field Name	Field Description
Audit Event Type	Displays the audit event type.
Description	Displays the description of the audit event type.
Detailed Description	Displays additional information about the audit event type.
Status	Indicates the status of the audit event type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Entity Business Object	Indicates the business object for which the audit event type is defined. In addition, this field has a context menu which helps in navigating to other screens in the application. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> </div>
Audit Usage	Indicates the purpose of auditing the entity business object. The valid value is: <ul style="list-style-type: none"> <li>• Premium Calculation</li> </ul>
Update All	Indicates whether an audit event must be created whenever any field, characteristic, or status of the entity is updated.
Add Action	Indicates whether an audit event must be created whenever an entity is added.
Delete Action	Indicate whether an audit event must be created whenever an entity is deleted.

- **Algorithms** - Lists the algorithms associated with the audit event type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event when the algorithm must be triggered. The valid value is: <ul style="list-style-type: none"> <li>• Audit Event Processing</li> </ul>
Sequence	Indicates the order in which the algorithms with the same system event must be triggered.

Column Name	Column Description
Algorithm	Indicates the algorithm attached to the system event.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.

- **Audit Elements for Entity Update** - Lists the elements which must be monitored for auditing while updating the entity. It contains the following columns:

Column Name	Column Description						
Element Type	Indicates the type of element. The valid values are: <ul style="list-style-type: none"> <li>• Business Object Status</li> <li>• Characteristic</li> <li>• Field</li> </ul>						
Element Name	Displays the element which must be monitored for auditing.  <b>Note:</b> If the element is a part of a group or list, the system displays the element name along with the element group and/or list. For example, if you select the <b>policyPerRole</b> element of the <b>C1-ASOPolicy</b> business object, the system displays the <code>policyPersons/policyPerRole</code> in the <b>Element Name</b> field. Here, the <b>policyPersons</b> is the element list.						
Element Value	The following table lists the element value depending on the element type: <table border="1" data-bbox="643 1026 1463 1274"> <thead> <tr> <th>Element Type</th> <th>Element Value</th> </tr> </thead> <tbody> <tr> <td>Business Object Status</td> <td>Indicates the status of the entity business object which must be monitored for auditing.</td> </tr> <tr> <td>Characteristic</td> <td>Indicates the characteristic type which must be monitored for auditing.</td> </tr> </tbody> </table> <b>Note:</b> The data does not appear in this column when the element type is set to <b>Field</b> .	Element Type	Element Value	Business Object Status	Indicates the status of the entity business object which must be monitored for auditing.	Characteristic	Indicates the characteristic type which must be monitored for auditing.
Element Type	Element Value						
Business Object Status	Indicates the status of the entity business object which must be monitored for auditing.						
Characteristic	Indicates the characteristic type which must be monitored for auditing.						

- **Characteristics** - Lists the characteristics which are defined for the audit event type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the audit event type.  <b>Note:</b> You can edit an audit event type only when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following: <ul style="list-style-type: none"> <li>• Change the status from <b>Active</b> to <b>Inactive</b> and vice-versa</li> <li>• Attach algorithms (if required) to the audit event type</li> <li>• Define, edit, or remove characteristics from the audit event type</li> </ul>
Delete	Used to delete the audit event type.  <b>Note:</b> You can delete an audit event type only when an audit event is not yet created using the audit event type.
Duplicate	Used to create a new audit event type using an existing audit event type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the audit event type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Audit Event Type** zone does not appear in the **Audit Event Type** screen. It appears only when you click the **Broadcast**  icon corresponding to an audit event type in the **Audit Event Type List** zone.

## Defining an Audit Event Type

### Prerequisites

To define an audit event type, you should have:

- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object (for which you want to define an audit event type) set to **Y**

**Note:** The **Eligible for Audit Event** option type is available for the entity business object only when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

- Values defined for the **AUDIT\_USAGE\_FLG** lookup field

### **Procedure**

To define an audit event type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Audit Event Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

**Note:** The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define characteristics for the audit event type.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Audit Event Type	Used to specify the audit event type.  <b>Note:</b> You cannot specify any special characters except hyphen and underscore in the audit event type.	Yes
Business Object	Indicates the business object using which you are defining the audit event type.	Not applicable
Description	Used to specify the description for the audit event type.	Yes
Detailed Description	Used to specify additional information about the audit event type.	No
Status	Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <b>Note:</b> You can create only one audit event type in the <b>Active</b> status for an entity business object.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate the business object for which you want to define the audit event type.  <b>Note:</b> The list includes only those business objects where the <b>Eligible for Audit Event</b> option type is set to <b>Y</b> .	Yes
Audit Usage	Used to indicate the purpose of auditing the entity business object. The valid value is: <ul style="list-style-type: none"> <li>Premium Calculation</li> </ul>	Yes
Update All	Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated.	No
Add Action	Used to indicate whether you want to create an audit event whenever the entity is added.	Yes (Conditional)  <b>Note:</b> This field is required when you want to create an audit event while adding the entity.
Delete Action	Used to indicate whether you want to create an audit event whenever the entity is deleted.	Yes (Conditional)  <b>Note:</b> This field is required when you want to create an audit event while deleting the entity.

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Audit Event Type** screen.

- Enter the required details in the **Main** section.
- Associate the required algorithms with the audit event type.
- Add elements (such as, field, characteristic, or status) which you want to monitor for auditing while updating the entity.

**Note:** You can list the elements for auditing only when the **Update All** option is not selected in the **Main** section.

- Define characteristics for the audit event type, if required.
- Click **Save**.

The audit event type is defined.

## Associating an Algorithm with an Audit Event Type

### Prerequisites

To associate an algorithm with an audit event type, you should have:

- Algorithms defined in the application (which are created using an algorithm type where the algorithm entity is set to **Audit Event Processing**)

**Note:** The **C1-AUDEVMPR** algorithm type is shipped with the product. You must attach an algorithm created using the **C1-AUDEVMPR** algorithm type to the audit event types which are defined for the **C1-PricingRuleTierBased** and **C1-PricingRuleAgeBased** business objects.

### Procedure

To associate an algorithm with an audit event type:

- Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying an audit event type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to trigger the algorithm. The valid value is: <ul style="list-style-type: none"> <li><b>Audit Event Processing</b> - Used when you want to trigger the attached algorithm while executing the <b>Audit Event Process Monitor (C1-AUDEV)</b> batch.</li> </ul>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the audit event type.</p> </div>
Sequence	Used to indicate the order in which the algorithms with the same system event should be triggered.	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the audit event type.</p> </div>
Algorithm	Used to indicate the algorithm that you want to attach to the system event. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b></p> <p>Once you select the system event, the <b>Search</b>  icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.</p> </div>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> This field is required when you are associating an algorithm with the audit event type.</p> </div>

- Enter the required details in the **Algorithms** section.
- If you want to associate more than one algorithm with the audit event type, click the **Add**  icon, and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the audit event type, click the **Delete**  icon corresponding to the algorithm.

## Adding an Element for Auditing in an Audit Event Type

### Prerequisites

To add an element for auditing in an audit event type, you should have:

- Required elements defined in the entity business object schema
- Required statuses defined in the lifecycle of the entity business object
- Required characteristic types defined in the application (where the characteristic entity is set to the respective entity)

### Procedure

To add an element for auditing in an audit event type:

1. Ensure that the **Audit Elements for Entity Update** section is expanded when you are defining, editing, or copying an audit event type.

The **Audit Elements for Entity Update** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Element Type	Used to indicate the type of element. The valid values are: <ul style="list-style-type: none"> <li>• Business Object Status</li> <li>• Characteristic</li> <li>• Field</li> </ul>	Yes (Conditional) <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b> This field is required when you want to create an audit event whenever the specified element is updated.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)								
Element Name	<p>Used to specify the element which you want to monitor while updating the entity. The following table lists the elements which you must select for the respective element type:</p> <table border="1" data-bbox="545 359 1182 1226"> <thead> <tr> <th data-bbox="545 359 776 411">Element Type</th> <th data-bbox="776 359 1182 411">Element Name</th> </tr> </thead> <tbody> <tr> <td data-bbox="545 411 776 495">Business Object Status</td> <td data-bbox="776 411 1182 495">boStatus</td> </tr> <tr> <td data-bbox="545 495 776 579">Characteristic</td> <td data-bbox="776 495 1182 579">characteristics/characteristicsList/ characteristicType</td> </tr> <tr> <td data-bbox="545 579 776 1226">Field</td> <td data-bbox="776 579 1182 1226">           Any field from the entity business object schema           <div data-bbox="792 663 1166 1205" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Here, you must not specify an element whose type is set to <b>group</b> or <b>list</b>. If the element is a part of a group or list, the system displays the element name along with the element group and/or list. For example, if you select the <b>policyPerRole</b> element of the <b>C1-ASOPolicy</b> business object, the system displays the <b>policyPersons/policyPerRole</b> in the <b>Element Name</b> field. Here, the <b>policyPersons</b> is the element list.</p> </div> </td> </tr> </tbody> </table>	Element Type	Element Name	Business Object Status	boStatus	Characteristic	characteristics/characteristicsList/ characteristicType	Field	Any field from the entity business object schema <div data-bbox="792 663 1166 1205" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Here, you must not specify an element whose type is set to <b>group</b> or <b>list</b>. If the element is a part of a group or list, the system displays the element name along with the element group and/or list. For example, if you select the <b>policyPerRole</b> element of the <b>C1-ASOPolicy</b> business object, the system displays the <b>policyPersons/policyPerRole</b> in the <b>Element Name</b> field. Here, the <b>policyPersons</b> is the element list.</p> </div>	<p>Yes (Conditional)</p> <div data-bbox="1206 296 1463 470" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is required when you want to create an audit event whenever the specified element is updated.</p> </div>
Element Type	Element Name									
Business Object Status	boStatus									
Characteristic	characteristics/characteristicsList/ characteristicType									
Field	Any field from the entity business object schema <div data-bbox="792 663 1166 1205" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> Here, you must not specify an element whose type is set to <b>group</b> or <b>list</b>. If the element is a part of a group or list, the system displays the element name along with the element group and/or list. For example, if you select the <b>policyPerRole</b> element of the <b>C1-ASOPolicy</b> business object, the system displays the <b>policyPersons/policyPerRole</b> in the <b>Element Name</b> field. Here, the <b>policyPersons</b> is the element list.</p> </div>									
<div data-bbox="545 1251 1182 1526" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Element Name</b> field. On clicking the <b>Search</b> icon, the <b>Schema</b> window appears.</p> <p>The <b>Schema</b> window does not appear when the entity business object is not specified in the <b>Main</b> section.</p> </div>										

Field Name	Field Description	Mandatory (Yes or No)						
Element Value	<p>Used to specify the element value depending on the element type. The following table lists the element value that you must specify depending on the element type:</p> <table border="1"> <thead> <tr> <th>Element Type</th> <th>Element Value</th> </tr> </thead> <tbody> <tr> <td>Business Object Status</td> <td>Used to indicate the status of the entity business object which you want to monitor for auditing. The system then creates an audit event whenever the entity is transitioned to the specified status.</td> </tr> <tr> <td>Characteristic</td> <td> <p>Used to indicate the characteristic type which you want to monitor for auditing. Here, you must specify a characteristic type where the characteristic entity is set to the respective entity. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p> </td> </tr> </tbody> </table> <p><b>Note:</b> This field does not appear when the <b>Field</b> option is selected from the <b>Element Type</b> list.</p>	Element Type	Element Value	Business Object Status	Used to indicate the status of the entity business object which you want to monitor for auditing. The system then creates an audit event whenever the entity is transitioned to the specified status.	Characteristic	<p>Used to indicate the characteristic type which you want to monitor for auditing. Here, you must specify a characteristic type where the characteristic entity is set to the respective entity. The system then creates an audit event whenever the specified characteristic is defined, edited, or removed from the entity.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Element Value</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to create an audit event whenever the specified element is updated.</p>
Element Type	Element Value							
Business Object Status	Used to indicate the status of the entity business object which you want to monitor for auditing. The system then creates an audit event whenever the entity is transitioned to the specified status.							
Characteristic	<p>Used to indicate the characteristic type which you want to monitor for auditing. Here, you must specify a characteristic type where the characteristic entity is set to the respective entity. The system then creates an audit event whenever the specified characteristic is defined, edited, or removed from the entity.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Element Value</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p>							

**Note:** The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- Enter the required details in the **Audit Elements for Entity Update** section.
- If you want to add more than one element for auditing in the audit event type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove an element from the audit event type, click the **Delete**  icon corresponding to the element.

## Defining a Characteristic for an Audit Event Type

### Prerequisites

To define a characteristic for an audit event type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Audit Event Type**)

### Procedure

To define a characteristic for an audit event type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an audit event type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Audit Event Type</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the audit event type.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears where you can search for a predefined characteristic value.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the audit event type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the audit event type, click the **Add** (+) icon, and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the audit event type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to define an audit event type	<a href="#">Defining an Audit Event Type</a> on page 2858
How to edit an audit event type	<a href="#">Editing an Audit Event Type</a> on page 2866
How to copy an audit event type	<a href="#">Copying an Audit Event Type</a> on page 2868

## Editing an Audit Event Type

You can edit an audit event type only when an audit event is not yet created using the audit event type. However, if an audit event is created using the audit event type, you can only do the following:

- Change the status from **Active** to **Inactive** and vice-versa
- Attach algorithms (if required) to the audit event type
- Define, edit, or remove characteristics from the audit event type

### Prerequisites

To edit an audit event type, you should have:

- Values defined for the **AUDIT\_USAGE\_FLG** lookup field

### Procedure

To edit an audit event type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Audit Event Type**.

A sub-menu appears.

3. Click the **Search** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears.

4. In the **Audit Event Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the audit event type whose details you want to edit.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

**Note:** The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define characteristics for the audit event type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Displays the audit event type.	Not applicable
Business Object	Indicates the business object which is used while defining the audit event type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the audit event type.	Yes
Detailed Description	Used to specify additional information about the audit event type.	No
Status	Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> You can create only one audit event type in the <b>Active</b> status for an entity business object.</div>	Yes
Entity Business Object	Indicates the business object for which the audit event type is defined.	Not applicable
Audit Usage	Used to indicate the purpose of auditing the entity business object. The valid value is: <ul style="list-style-type: none"> <li>Premium Calculation</li> </ul>	Yes
Update All	Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated.	No
Add Action	Used to indicate whether you want to create an audit event whenever the entity is added.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field is required when you want to create an audit event while adding the entity.</div>
Delete Action	Used to indicate whether you want to create an audit event whenever the entity is deleted.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"><b>Note:</b> This field is required when you want to create an audit event while deleting the entity.</div>

**Tip:** Alternatively, you can access this screen by clicking the **Edit** button in the **Audit Event Type** zone.

- Modify the required details in the **Main** section.
- Associate or disassociate the required algorithms from the audit event type.

**Note:** If an audit event is created using the audit event type, you cannot edit or remove algorithms from the audit event type. In such case, you can only associate additional algorithms with the audit event type.

- Add, edit, or remove elements from the audit event type, if required.

**Note:**

The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

You cannot add, edit, or remove elements from the **Audit Elements for Entity Update** section when an audit event is already created using the audit event type.

- Define, edit, or remove characteristics from the audit event type, if required.

**Note:** You cannot define, edit, or remove characteristics from the **Characteristics** section when an audit event is already created using the audit event type.

- Click **Save**.

The changes made to the audit event type are saved.

How to define a characteristic for an audit event type	<a href="#">Defining a Characteristic for an Audit Event Type</a> on page 2865

## **Copying an Audit Event Type**

Instead of creating an audit event type from scratch, you can create a new audit event type using an existing audit event type. This is possible through copying an audit event type. On copying an audit event type, the details including the algorithms, audit elements, and characteristics are copied to the new audit event type. You can then edit the details, if required.

### **Prerequisites**

To copy an audit event type, you should have:

- Audit event type (whose copy you want to create) defined in the application
- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object (for which you want to define an audit event type) set to **Y**

**Note:** The **Eligible for Audit Event** option type is available for the entity business object only when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

- Values defined for the **AUDIT\_USAGE\_FLG** lookup field

### **Procedure**

To copy an audit event type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **A** and then click **Audit Event Type**.  
A sub-menu appears.
- Click the **Search** option from the **Audit Event Type** sub-menu.  
The **Audit Event Type** screen appears.

4. In the **Audit Event Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the audit event type whose copy you want to create.

The **Audit Event Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic information about the audit event type.
- **Algorithms** - Used to associate algorithms with the audit event type.
- **Audit Elements for Entity Update** - Used to list the elements from the entity business object which you want to monitor for auditing while updating the entity.

**Note:** The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- **Characteristics** - Used to define characteristics for the audit event type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type.  <b>Note:</b> You cannot specify any special characters except hyphen and underscore in the audit event type.	Yes
Business Object	Indicates the business object which is used while defining the audit event type.	Not applicable
Description	Used to specify the description for the audit event type.	Yes
Detailed Description	Used to specify additional information about the audit event type.	No
Status	Used to indicate the status of the audit event type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <b>Note:</b> You can create only one audit event type in the <b>Active</b> status for an entity business object.	Yes
Entity Business Object	Used to indicate the business object for which you want to define the audit event type.  <b>Note:</b> The list includes only those business objects where the <b>Eligible for Audit Event</b> option type is set to <b>Y</b> .	Yes
Audit Usage	Used to indicate the purpose of auditing the entity business object. The valid value is: <ul style="list-style-type: none"> <li>• Premium Calculation</li> </ul>	Yes
Update All	Used to indicate whether you want to create an audit event whenever any field, characteristic, or status of the entity is updated.	No

Field Name	Field Description	Mandatory (Yes or No)
Add Action	Used to indicate whether you want to create an audit event whenever the entity is added.	Yes (Conditional) <b>Note:</b> This field is required when you want to create an audit event while adding the entity.
Delete Action	Used to indicate whether you want to create an audit event whenever the entity is deleted.	Yes (Conditional) <b>Note:</b> This field is required when you want to create an audit event while deleting the entity.

**Tip:** Alternatively, you can copy an audit event type by clicking the **Duplicate** button in the **Audit Event Type** zone.

- Enter the required details in the **Main** section.
- Associate or disassociate the required algorithms from the audit event type.
- Add, edit, or remove elements from the audit event type, if required.

**Note:** The **Audit Elements for Entity Update** section is enabled only when the **Update All** option is not selected in the **Main** section.

- Define, edit, or remove characteristics from the audit event type, if required.
- Click **Save**.

The new audit event type is defined.

## Deleting an Audit Event Type

### Procedure

To delete an audit event type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **A** and then click **Audit Event Type**.

A sub-menu appears.

- Click the **Search** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears.

- In the **Audit Event Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the audit event type that you want to delete.

A message appears confirming whether you want to delete the audit event type.

**Note:** You can delete an audit event type only when an audit event is not yet created using the audit event type.

**Tip:** Alternatively, you can delete an audit event type by clicking the **Delete** button in the **Audit Event Type** zone.

- Click **OK**.

The audit event type is deleted.

## Viewing the Audit Event Type Details

### Procedure

To view the details of an audit event type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Audit Event Type**.

A sub-menu appears.

- Click the **Search** option from the **Audit Event Type** sub-menu.

The **Audit Event Type** screen appears.

- In the **Audit Event Type List** zone, click the

**Broadcast** () icon corresponding to the audit event type whose details you want to view.

The **Audit Event Type** zone appears.

- View the details of the audit event type in the **Audit Event Type** zone.

## Search Audit Event

The **Search Audit Event** zone allows you to search for an audit event using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an audit event using the audit event or entity details. The valid values are: <ul style="list-style-type: none"> <li>• Audit Event Details</li> <li>• Entity Details</li> </ul> <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> By default, the <b>Audit Event Details</b> option is selected.         </div>	Yes
Audit Event ID	Used to search for a particular audit event. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <b>Note:</b> This field appears only when the <b>Audit Event Details</b> option is selected from the <b>Search By</b> list.         </div>	No
Created From	Used to search audit events which are created from a particular date onwards.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search audit events with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Complete</li> <li>• Error</li> <li>• Pending</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field appears only when the <b>Audit Event Details</b> option is selected from the <b>Search By</b> list. </div>	No
Created To	Used to search audit events which are created till a particular date.	No
Audit Action	Used to search audit events which are created while adding, updating, or deleting an entity. The valid values are: <ul style="list-style-type: none"> <li>• Add Row</li> <li>• Change Row</li> <li>• Delete Row</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> This field appears only when the <b>Audit Event Details</b> option is selected from the <b>Search By</b> list. </div>	No
Entity Business Object	Used to search audit events which are created for a particular entity business object. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b>  The list includes only those business objects where the <b>Eligible for Audit Event</b> option type is set to <b>Y</b>.   This field appears only when the <b>Entity Details</b> option is selected from the <b>Search By</b> list. </div>	No

**Note:** You must specify at least one search criterion while searching for an audit event.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the audit event is created.
Audit Event Information	Displays information about the audit event. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <b>Note:</b> It has a link. On clicking the link, the <b>Audit Event</b> screen appears where you can view the details of the respective audit event. </div>

Column Name	Column Description
Status	Indicates the status of the audit event. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Complete</li> <li>• Error</li> <li>• Pending</li> </ul>
Audit Action	Indicates the action due to which the audit event is created for the entity. The valid values are: <ul style="list-style-type: none"> <li>• Add Row</li> <li>• Change Row</li> <li>• Delete Row</li> </ul>
Maintenance Object	Indicates the maintenance object of the entity business object for which the audit event is created. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This column appears only when the <b>Entity Details</b> option is selected from the <b>Search By</b> list.</p> </div>

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### Related Topics

For more information on...	See...
How to search for an audit event	<a href="#">Searching for an Audit Event</a> on page 2874
How to view the details of an audit event	<a href="#">Viewing the Audit Event Details</a> on page 2875

## Searching for an Audit Event

### Prerequisites

To search for an audit event, you should have:

- Entity business objects defined in the application
- The **Eligible for Audit Event** option type of the entity business object set to **Y**

**Note:** The **Eligible for Audit Event** option type is available for the entity business object only when the **Valid BO Option Type** option type of the respective maintenance object is set to **CIAT**.

### Procedure

To search for an audit event:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Audit Event**.  
The **Audit Event** screen appears.
3. Enter the search criteria in the **Search Audit Event** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

A list of audit events that meet the search criteria appears in the **Search Results** section.

## Viewing the Audit Event Details

#### Procedure

To view the details of an audit event:

1. Search for the audit event in the **Audit Event** screen.
2. In the **Search Results** section, click the link in the **Audit Event Information** column corresponding to the audit event whose details you want to view.

The **Audit Event** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the audit event in the **Audit Event** zone.

## Audit Event - Main

The **Main** tab displays information about the audit event. It contains the following zone:

- [Audit Event](#) on page 2876

### Audit Event

The **Audit Event** zone displays the details of the audit event. It contains the following sections:

- **Main** - Displays basic information about the audit event. It contains the following fields:

Field Name	Field Description
Audit Event Information	Displays information about the audit event.
Audit Event Type	Indicates the audit event type using which the audit event is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Audit Event Type</b> screen appears where you can view the details of the respective audit event type.
Status	Indicates the status of the audit event. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Complete</li> <li>• Error</li> <li>• Pending</li> </ul>
Effective Date	Displays the effective date which is stamped corresponding to the audit event in the <b>C1_AUDIT_EVENT</b> table.  <b>Note:</b> If the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.
Audit Action	Indicates the action due to which the audit event is created for the entity. The valid values are: <ul style="list-style-type: none"> <li>• Add Row</li> <li>• Change Row</li> <li>• Delete Row</li> </ul>
Maintenance Object	Indicates the maintenance object of the entity business object for which the audit event is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Maintenance Object</b> screen appears where you can view the details of the respective maintenance object.

- **Characteristics** - Lists the characteristics defined for the audit event. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Cancel	Used to cancel the audit event.  <b>Note:</b> The <b>Cancel</b> button appears only when the audit event is in the <b>Error</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the audit event is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the audit event status is updated.
Create Date/Time	Displays the date and time when the audit event is created.

### **Related Topics**

## **Audit Event - Log**

The **Log** tab contains the following zone:

- [Audit Event Log](#) on page 2877

### **Audit Event Log**

The **Audit Event Log** zone lists the complete trail of actions performed on the audit event. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the audit event.
Details	Displays the details about the action performed on the audit event.
User	Indicates the user who has performed the action on the audit event.
Log type	Indicates the type of the log.
Related Object	Indicates the object or entity which is created when the action is performed on the audit event.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the status of the audit event is changed.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

## Canceling an Audit Event

There might be situations when an erroneous audit event is created in the system. In such case, the system provides you with an ability to cancel such audit events. However, note that you can cancel an audit event only when the audit event is in the **Error** status.

### Prerequisites

To cancel an audit event, you should have:

- Cancel reasons defined in the application

**Note:** While cancelling an audit event, you need to specify the reason why you want to cancel the audit event. You can select the appropriate cancel reason only when you have defined the reasons for the **Canceled** status of the **C1-AuditEvent** business object in the **Status Reason** screen.

### Procedure

To cancel an audit event:

1. Search for the audit event in the **Audit Event** screen.
2. In the **Search Results** section, click the link in the **Audit Event Information** column corresponding to the audit event which you want to cancel.

The **Audit Event** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Cancel** button in the **Audit Event** zone.

The **Status Reason** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the audit event.	Yes

**Note:** The **Cancel** button appears only when the audit event is in the **Error** status.

5. Select the cancel reason from the **Status Reason** list.
6. Click **Save**.

The status of the audit event is changed to **Canceled**.

## Viewing the Log of an Audit Event

### **Procedure**

To view the log of an audit event:

1. Search for the audit event in the **Audit Event** screen.
2. In the **Search Results** section, click the link in the **Audit Event Information** column corresponding to the audit event whose log you want to view.

The **Audit Event** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the audit event in the **Audit Event Log** zone.

## Most Commonly Used Tasks

---

**Topics:**

- [Changing the Layout](#)

This section lists some of the common tasks that are performed while using various functionality in the application.

## Changing the Layout

---

You can change the layout of the zone by:

- [Removing a Column from the Zone](#) on page 2882
- [Adding a Column to the Zone](#) on page 2882
- [Rearranging Columns in the Zone](#) on page 2882

### Adding a Column to the Zone

Once you have removed the columns from the zone, you can add them back to the zone. To add a column to the zone:

1. Click the **Column Configuration**  icon in the upper right corner of the zone.

A panel appears at the bottom of the zone with a list of column names.

**Note:** The column names with the white background in the panel are currently not displayed in the zone.

2. Drag and drop the column name from the panel to the location where you want to add the column in the zone.  
The white background of the column name in the panel changes to the grey background indicating that the column is currently displayed in the zone.
3. If you want to add another column name from the panel to the zone, repeat the second step. Click the **Refresh** button, data will be displayed to the columns added in the zone.

#### Related Topics

For more information on...	See...
How to change the layout of the zone	<a href="#">Changing the Layout</a> on page 2882

### Rearranging Columns in the Zone

You can change the order in which the columns are displayed in the zone. To change the position of a column in the zone:

1. Click the column name whose position you want to change in the zone.
2. Drag and drop the column name between the columns where you want to place the selected column.

The position of the column changes in the zone.

#### Related Topics

For more information on...	See...
How to change the layout of the zone	<a href="#">Changing the Layout</a> on page 2882

### Removing a Column from the Zone

To remove a column from the zone:

Click the **Delete**  icon corresponding to the column name that you want to remove from the zone.

The column is removed from the zone and is currently displayed with white background in the panel.

**Note:** Alternatively you can remove the column from the zone by clicking the Delete (🗑️) icon corresponding to the column name in the panel.

### **Related Topics**

# Appendix

# B

---

## Administration

---

**Topics:**

- [UI Maps](#)
- [Feature Configurations](#)

This section lists some of the administrative tasks.

## UI Maps

---

This section explains how to create the UI maps for viewing and modifying data of the business objects within the approval workflow group.

### Creating Display UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group.

#### **Procedure**

To create a Display UI map manually:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.  
A sub-menu appears.

3. Click the **Search** option from the **UI Map** sub-menu.  
The **UI Map** screen appears.

4. In the **Main** tab, enter the name and description of the Display UI map.

**Note:** The system uses the CM\_<Approval Workflow Group Code>\_AppTxn\_Display naming convention while automatically generating a Display UI map. Therefore, do not use this naming convention while creating a Display UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.  
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create a Display UI map for account, you must use the following schema:

```
<schema>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

8. Click the **Save** link in the **Actions/Navigation** area.  
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Display Only** button.  
The HTML code is generated in the **HTML Editor** zone.
10. Click the **Save** link in the **Actions/Navigation** area.  
The changes are saved.

**Related Topics**

For more information on...	See...
How to define an approval workflow group	<a href="#">Defining an Approval Workflow Group</a> on page 710
How to edit an approval workflow group	<a href="#">Editing an Approval Workflow Group</a> on page 720

**Creating Input UI Map for an Approval Workflow Group**

The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group.

**Procedure**

To create an Input UI map manually:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.  
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.  
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Input UI map.

**Note:** The system uses the CM\_<Approval Workflow Group Code>\_AppTxn\_Input naming convention while automatically generating an Input UI map. Therefore, do not use this naming convention while creating an Input UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.  
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create an Input UI map for account, you must use the following schema:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

The `<approvalTransactionId/>` tag is used in the schema to retrieve the approval transaction ID of the respective business object. The `<action/>` tag is used in the schema to retrieve the action performed by the submitter.

- Click the **Save** link in the **Actions/Navigation** area.

The **Display Only** and **Input Map** buttons are enabled on the dashboard.

- Click the **Input Map** button.

The HTML code is generated in the **HTML Editor** zone.

- Add the following tag in the head tag:

```
<script language="javascript" type="text/javascript" src="code/
approvalWorkflow.js"></script>
```

- Add the text highlighted in bold within the tag as shown below:

```
<td>
<input onClick="performAction('<Approval Workflow Group Code>');"
oraMdLabel="SAVE_BTN_LBL" class="oraButton" type="button">
<input onClick="oraSubmitMap('CANCEL', false);" oraMdLabel="CANCEL_LBL"
class="oraButton" type="button">
</td>
```

In the above HTML code, you must replace `<Approval Workflow Group Code>` with the code of the approval workflow group for which you are creating a UI map.

- Click the **Save** link in the **Actions/Navigation** area.

The changes are saved.

### **Related Topics**

## **Feature Configurations**

---

This section explains how to set various feature configurations which are required for implementing various features in the Banking module.

### **Setting the C1\_ACCTINFO Feature Configuration**

#### **Prerequisites**

To set the **C1\_ACCTINFO** feature configuration, you should have:

- Account Type characteristic type defined in the application (where the characteristic entity is set to Account)
- Invoice Group Account characteristic type defined in the application (where the characteristic entity is set to Account)

#### **Procedure**

To set the **C1\_ACCTINFO** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1\_ACCTINFO** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Type	Used to specify the characteristic type. This characteristic type is used to define the type of account in the <b>Account</b> screen.  <b>Note:</b> By default, the <b>C1_F_ATY</b> characteristic type is specified. If you want to use account types other than the ones defined in the <b>C1_F_ATY</b> characteristic type, you need to create a new predefined characteristic type and add the required account types as its characteristic values. Then, specify the newly created characteristic type as the value for this option type.	Yes
Invoice Group Account	Used to specify the characteristic type. This characteristic type is used to indicate whether the account is a master or member account in the <b>Account</b> screen.  <b>Note:</b> By default, the <b>C1_F_IGA</b> characteristic type is specified. If you want to use any other characteristic type other than <b>C1_F_IGA</b> , you need to create a new predefined characteristic type and add two characteristic values — Y and N. Then, specify the newly created characteristic type as the value for this option type.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

### **Related Topics**

For more information on...	See...
Invoicing Group	<a href="#">Invoicing Group</a>

## **Setting the C1-ASOBLNG Feature Configuration**

The **C1-ASOBLNG** feature configuration enables the system to determine the following:

- Whether the approval transaction should be created while defining, editing, or deleting a self-funded pricing rule
- Various parameters, characteristic types, and extendable lookup business objects which should be used while creating or editing the self-funded or fully-insured pricing rules
- Person relationship type using which the bill group should be related to the parent customer
- Policy person roles using which the parent customer and bill groups should be associated with the self-funded or fully-insured group policies
- Status to which a policy should be transitioned on terminating or reinstating the policy
- Status to which a membership and member person should be transitioned on inactivating the membership and member person, respectively

### **Prerequisites**

To set the **C1-ASOBLLNG** feature configuration, you should have:

- Required policy person roles and person relationship types defined in the application
- Approval workflow settings configured for the **C1PRCANC**, **C1PRCASL**, **C1PRCRLCLM**, **C1PRCDA**, **C1PRFLTFEE**, **C1PRCLVLFN**, **C1PRETCLM**, **C1PRRETENR**, and **C1PRCSSL** approval workflow groups
- Required characteristic types defined in the application
- Values defined for the **C1-ExtLookClaimTemplate**, **C1-ExtLookPricingRuleLineItem**, and **C1-ExtLookRetTypeRateOpt** extendable lookups
- Predefined values defined for the **C1INVTYP** characteristic type
- Required SQIs defined in the application
- Pricing arrangement parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- Billable charge line type parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)
- Pricing group rule parameter defined in the application (where the value type is set to **Adhoc**, source entity is set to **Transaction**, and the parameter usage is set to **Price Item**)

### **Procedure**

To set the **C1-ASOBLLNG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1-ASOBLLNG** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.  
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Age Based Parameter	<p>Used to specify the parameter using which you want to define the lower age limit and upper age limit pricing eligibility criteria in an age based pricing.</p> <p><b>Note:</b> The <b>AGEBASED</b> parameter is shipped with the product. By default, the value is set to <b>AGEBASED</b>. You can change the value, if required. However, note that you must specify an adhoc parameter where source entity is set to <b>Algorithm</b>, source type code is set to <b>Calculate membership person's age</b>, and the parameter usage is set to <b>Pricing Eligibility Criteria</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining an age based pricing rule.</p>
Approval Workflow Group for Ancillary	<p>Used to specify the approval workflow group for an ancillary pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting an ancillary pricing rule.</p> <p><b>Note:</b> The <b>C1PRCANC</b> approval workflow group for an ancillary pricing rule is shipped with the product. By default, the value is set to <b>C1PRCANC</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for an ancillary pricing rule.</p>
Approval Workflow Group for ASL	<p>Used to specify the approval workflow group for an aggregate stop-loss pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting an aggregate stop-loss pricing rule.</p> <p><b>Note:</b> The <b>C1PRCASL</b> approval workflow group for an aggregate stop-loss pricing rule is shipped with the product. By default, the value is set to <b>C1PRCASL</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for an aggregate stop-loss pricing rule.</p>

Option Type	Description	Mandatory (Yes or No)
Approval Workflow Group for Claim	<p>Used to specify the approval workflow group for a claim pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a claim pricing rule.</p> <p><b>Note:</b> The <b>CIPRCRLCLM</b> approval workflow group for a claim pricing rule is shipped with the product. By default, the value is set to <b>CIPRCRLCLM</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for a claim pricing rule.</p>
Approval Workflow Group for Discount Arrangement	<p>Used to specify the approval workflow group for the discount share and discount guarantee pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the discount share and discount guarantee pricing rules.</p> <p><b>Note:</b> The <b>CIPRCDA</b> approval workflow group for the discount share and discount guarantee pricing rules is shipped with the product. By default, the value is set to <b>CIPRCDA</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for the discount share and discount guarantee pricing rules.</p>
Approval Workflow Group for Flat Fees	<p>Used to specify the approval workflow group for the one-time and recurring flat fees pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the one-time and recurring flat fees pricing rules.</p> <p><b>Note:</b> The <b>CIPRFLTFEE</b> approval workflow group for the one-time and recurring flat fees pricing rules is shipped with the product. By default, the value is set to <b>CIPRFLTFEE</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for the one-time and recurring flat fees pricing rules.</p>

Option Type	Description	Mandatory (Yes or No)
Approval Workflow Group for Level Funded	<p>Used to specify the approval workflow group for the enrollment based premium and flat rate based premium level funded pricing rules. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting the enrollment based premium and flat rate based premium level funded pricing rules.</p> <p><b>Note:</b> The <b>C1PRCLVLFN</b> approval workflow group for the enrollment based premium and flat rate based premium level funded pricing rules is shipped with the product. By default, the value is set to <b>C1PRCLVLFN</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for the enrollment based premium and flat rate based premium level funded pricing rules.</p>
Approval Workflow Group for Retention Type Claim Based	<p>Used to specify the approval workflow group for a retention type claim based pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a retention type claim based pricing rule.</p> <p><b>Note:</b> The <b>C1PRETCLM</b> approval workflow group for a retention type claim based pricing rule is shipped with the product. By default, the value is set to <b>C1PRETCLM</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for a retention type claim based pricing rule.</p>
Approval Workflow Group for Retention Type Enrollment Based	<p>Used to specify the approval workflow group for a retention type enrollment based pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a retention type enrollment based pricing rule.</p> <p><b>Note:</b> The <b>C1PRRETENR</b> approval workflow group for a retention type enrollment based pricing rule is shipped with the product. By default, the value is set to <b>C1PRRETENR</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for a retention type enrollment based pricing rule.</p>

Option Type	Description	Mandatory (Yes or No)
Approval Workflow Group for SSL	<p>Used to specify the approval workflow group for a specific stop-loss pricing rule. It helps the system to determine whether the approval transaction should be created while defining, editing, or deleting a specific stop-loss pricing rule.</p> <p><b>Note:</b> The <b>CIPRCSSL</b> approval workflow group for a specific stop-loss pricing rule is shipped with the product. By default, the value is set to <b>CIPRCSSL</b>. You can change the value, if required.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while enabling the approval workflow process for a specific stop-loss pricing rule.</p>
Base Fee Price Component Sequence Characteristic	<p>Used to specify the characteristic type where you want to store the sequence number of the eligible base fee's price component. This characteristic is then passed to the rating engine for further processing.</p> <p><b>Note:</b> The <b>CIBSFESE</b> characteristic type is shipped with the product. By default, the value is set to <b>CIBSFESE</b>. You can change the value, if required. However, note that you must specify an adhoc characteristic type where the characteristic entity is set to <b>Rate Component</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while billing fully-insured health care plans.</p>
Bill Group Policy Person Role	<p>Used to specify the policy person role using which a bill group should be associated with a self-funded or fully-insured group policy when the policy information is given for the bill group in an inbound message.</p> <p><b>Note:</b> You must specify a policy person role which is already defined in the system.</p>	<p>Yes</p>
Billable Charge Line Type Parameter	<p>Used to specify the parameter in which you want to store the billable charge line type. This parameter can then be used while defining an ancillary pricing rule type.</p> <p><b>Note:</b> You must specify an adhoc parameter where the source entity is set to <b>Transaction</b> and the parameter usage is set to <b>Price Item</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining an ancillary pricing rule type.</p>

Option Type	Description	Mandatory (Yes or No)
Claim Template Extendable Lookup Business Object	<p>Used to specify the claim template extendable lookup business object. The system displays the values of the specified extendable lookup in the <b>Claim Template</b> list while defining or editing a claim pricing rule type.</p> <p><b>Note:</b> The <b>C1-ExtLookClaimTemplate</b> extendable lookup for claim template is shipped with the product. By default, the value is set to <b>C1-ExtLookClaimTemplate</b>. You can change the value, if required.</p>	Yes
Customer Registration ID Characteristic for Inbound Log	<p>Used to specify the characteristic type where you want to store the customer registration ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the customer registration object which is created through the health care inbound message.</p> <p><b>Note:</b> The <b>C1CRLOG</b> characteristic type is shipped with the product. By default, the value is set to <b>C1CRLOG</b>. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to <b>Inbound Message Log</b>.</p>	Yes (Conditional)  <b>Note:</b> This data is required while creating a person, account, policy, and/or policy plan through a health care inbound message.
Default Flat Rate Option	<p>Used to specify the rate option which must be used by default when the rate option is not given and the modifier method is set to either <b>FLAT</b> or <b>NULL</b> in the pricing rule data of a health care inbound message.</p> <p><b>Note:</b> You must specify a rate option where the rate schedule is set to <b>HC_FRTSC</b>.</p>	Yes (Conditional)  <b>Note:</b> This data is required while creating an age based and tier based pricing.
Default Percentage Rate Option	<p>Used to specify the rate option which must be used by default when the rate option is not given and the modifier method is set to either <b>EXPT</b> or <b>INPT</b> in the pricing rule data of a health care inbound message.</p> <p><b>Note:</b> You must specify a rate option where the rate schedule is set to <b>HC_PRTSC</b>.</p>	Yes (Conditional)  <b>Note:</b> This data is required while creating an age based and tier based pricing.

Option Type	Description	Mandatory (Yes or No)
Invoice Type Characteristic Type	<p>Used to specify the characteristic type which indicates the type of account. This characteristic type is defined for the account. The system then uses this characteristic type to determine the account on which the claim, specific stop-loss credits, aggregate stop-loss credits, claim based fee, enrollment based fee, one-time flat fees, recurring flat fees, ancillary, discount, level funded, or membership billable charge should be created in the system. For more information, refer to <a href="#">Bill Group's Account</a> on page 55.</p> <div data-bbox="586 575 1122 898" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>CIINVTYP</b> characteristic type is shipped with the product.</p> <p>By default, the value is set to <b>CIINVTYP</b>. You can change the value, if required. However, note that you must specify a predefined characteristic type where the characteristic entity is set to <b>Account</b>.</p> </div>	Yes
Line Item Extendable Lookup Business Object	<p>Used to specify the line item extendable lookup business object. The system displays the values of the specified extendable lookup in the <b>Line Item</b> list while defining, editing, or copying a claim template.</p> <div data-bbox="586 1100 1122 1388" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The <b>C1-ExtLookPricingRuleLineItem</b> extendable lookup for line item is shipped with the product.</p> <p>By default, the value is set to <b>C1-ExtLookPricingRuleLineItem</b>. You can change the value, if required.</p> </div>	Yes
Membership Characteristic ID for Billable Charge	<p>Used to specify the characteristic type where you want to store the membership ID. During the fully-insured billable charge creation process, this characteristic is stamped on a billable charge which indicates the membership for which the billable charge is created.</p> <div data-bbox="586 1629 1122 1738" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> You must specify a foreign key characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p> </div>	<p>Yes (Conditional)</p> <div data-bbox="1143 1472 1468 1581" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This data is required while billing fully-insured health care plans.</p> </div>

Option Type	Description	Mandatory (Yes or No)
Membership Characteristic Inbound Log ID for	<p>Used to specify the characteristic type where you want to store the membership ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the membership which is created through the health care inbound message.</p> <p><b>Note:</b> The <b>CIMBRLOG</b> characteristic type is shipped with the product. By default, the value is set to <b>CIMBRLOG</b>. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to <b>Inbound Message Log</b>.</p>	Yes (Conditional)  <p><b>Note:</b> This data is required while creating a membership through a health care inbound message.</p>
Membership Status Inactive	<p>Used to specify the status to which the membership must be transitioned when the main subscriber is inactivated.</p> <p><b>Note:</b> You must specify a status which is defined in the lifecycle of the <b>C1-Membership</b> business object.</p>	Yes (Conditional)  <p><b>Note:</b> This data is required while inactivating a membership.</p>
Membership Inactive Status Person	<p>Used to specify the status to which the member persons must be transitioned when the membership is inactivated.</p> <p><b>Note:</b> You must specify a status which is defined in the <b>MEMBER_PER_STATUS_FLG</b> lookup field.</p>	Yes (Conditional)  <p><b>Note:</b> This data is required while inactivating a membership.</p>
Override Applicability Characteristic Type Proration	<p>Used to specify the characteristic type which indicates whether the proration rule should be overridden for a member person. At present, the override proration feature is used for a new born when the gift days are offered to a new born. This characteristic type can be defined for the membership, policy plan, policy, and state.</p> <p><b>Note:</b> You must specify a characteristic type where the characteristic entity is set to <b>Membership, Policy Plan, Policy, and State</b>. Here, the predefined values for the characteristic type can be <b>Y</b> and <b>N</b>.</p>	Yes (Conditional)  <p><b>Note:</b> This data is required when you want to override the proration rule.</p>

Option Type	Description	Mandatory (Yes or No)
Override Proration Effective Date Characteristic Type	<p>Used to specify the characteristic type where you want to store the date from when the premium should be calculated for the new born. This characteristic is used during the bill segment generation to determine the bill period in which the date falls. The system then accordingly prorates the premium amount for the new born.</p> <p><b>Note:</b> You must specify a characteristic type where the characteristic entity is set to <b>Membership Person</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when you want to override the proration rule.</p>
Override Proration Rule Characteristic Type	<p>Used to specify the characteristic type where you want to store the override SQ rule for a new born. This characteristic type can be defined for the membership, policy plan, policy, and state. If this characteristic is not defined at any level, the system uses the SQ rule of the rate schedule attached to the active contract to prorate the premium amount of a new born child.</p> <p><b>Note:</b> You must specify a characteristic type where the characteristic entity is set to <b>Membership, Policy Plan, Policy, and State</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when you want to override the proration rule.</p>
Parent Customer Policy Person Role	<p>Used to specify the policy person role using which the parent customer should be associated with a self-funded or fully-insured group policy when the policy information is given for the bill group or parent customer in an inbound message.</p> <p><b>Note:</b> You must specify a policy person role which is already defined in the system.</p>	<p>Yes</p>
Person ID Characteristic for Inbound Log	<p>Used to specify the characteristic type where you want to store the person ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the person whose record is created through the health care inbound message.</p> <p><b>Note:</b></p> <p>The <b>CIPERLOG</b> characteristic type is shipped with the product.</p> <p>By default, the value is set to <b>CIPERLOG</b>. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to <b>Inbound Message Log</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a person through a health care inbound message.</p>

Option Type	Description	Mandatory (Yes or No)
Person Relationship Type	<p>Used to indicate how a bill group should be related to a parent customer. The system uses the person relationship type while:</p> <ul style="list-style-type: none"> <li>• Creating a bill group for a parent customer through an inbound message</li> <li>• Viewing the 360° information of a parent customer</li> </ul> <p><b>Note:</b> You must specify a person relationship type which is already defined in the system.</p>	Yes
Policy Status      Reinstatement	<p>Used to specify the status to which the policy must be transitioned when it is reinstated.</p> <p><b>Note:</b> You must specify a status which is defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes (Conditional)  <b>Note:</b> This data is required while reinstating a fully-insured group policy.
Policy Status      Termination	<p>Used to specify the status to which the policy must be transitioned when it is terminated.</p> <p><b>Note:</b> You must specify a status which is defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes (Conditional)  <b>Note:</b> This data is required while terminating a fully-insured group policy.
Pricing Parameter      Arrangement	<p>Used to specify the parameter in which you want to store the pricing arrangement. This parameter can then be used while defining an ancillary pricing rule type.</p> <p><b>Note:</b> You must specify an adhoc parameter where the source entity is set to <b>Transaction</b> and the parameter usage is set to <b>Price Item</b>.</p>	Yes (Conditional)  <b>Note:</b> This data is required while defining an ancillary pricing rule type.
Pricing Parameter      Group Rule	<p>Used to specify the parameter in which you want to store the pricing group rule. The system stamps this parameter on the price assignment which is created through a pricing rule using a pricing group. It indicates that the price assignment is created using the respective rule in the pricing group.</p> <p><b>Note:</b> You must specify an adhoc parameter where the source entity is set to <b>Transaction</b> and the parameter usage is set to <b>Price Item</b>.</p>	Yes (Conditional)  <b>Note:</b> This data is required while defining a claim, specific stop-loss, aggregate stop-loss, retention type claim based, or retention type enrollment based pricing rule for a bill group using a pricing group.

Option Type	Description	Mandatory (Yes or No)
Pricing Rule ID Characteristic for Inbound Log	<p>Used to specify the characteristic type where you want to store the pricing rule ID. This characteristic type is used while creating a log entry for a health care inbound message. The log entry then indicates the pricing rule which is created through the health care inbound message.</p> <p><b>Note:</b> The <b>CIPRLOG</b> characteristic type is shipped with the product. By default, the value is set to <b>CIPRLOG</b>. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to <b>Inbound Message Log</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating a pricing rule through a health care inbound message.</p>
Pricing Rule Type Category Characteristic	<p>Used to specify the characteristic type which indicates the pricing rule type category. This characteristic type is defined for a billable charge line type. The system uses this characteristic to lists the billable charge line types which are valid while defining a pricing rule type or pricing rule of a particular category.</p> <p><b>Note:</b> The <b>CIPRTCAT</b> characteristic type is shipped with the product. By default, the value is set to <b>CIPRTCAT</b>. You can change the value, if required. However, note that you must specify a foreign key characteristic type where the characteristic entity is set to <b>Billable Charge Line Type</b>.</p>	<p>Yes</p>
Proration SQI	<p>Used to specify the SQI using which you want to create an SQI based billable charge for pre-calculated or calculated premium amount. If the SQ rule of the rate schedule attached to the active contract contains the specified SQI, the system prorates the SQI amount whenever required.</p> <p><b>Note:</b> You must specify an SQI which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while billing fully-insured health care plans.</p>

Option Type	Description	Mandatory (Yes or No)
Rate Component Base Fee Characteristic	<p>Used to specify the characteristic type which indicates whether the rate component is a base fee rate component. This characteristic type is defined for the rate component.</p> <p><b>Note:</b> The <b>C1RCBFMA</b> characteristic type is shipped with the product. By default, the value is set to <b>C1RCBFMA</b>.</p>	Yes
Rate Option Extendable Lookup Business Object	<p>Used to specify the rate option extendable lookup business object. The system displays the values of the specified extendable lookup in the <b>Rate Option</b> list while defining, editing, or copying a pricing rule type.</p> <p><b>Note:</b> The <b>C1-ExtLookRetTypeRateOpt</b> extendable lookup for rate option is shipped with the product. By default, the value is set to <b>C1-ExtLookRetTypeRateOpt</b>. You can change the value, if required.</p>	Yes
State of Issue Characteristic Type	<p>Used to specify the characteristic type where you want to store the state for which the membership, policy plan, or policy is issued. This characteristic type can be defined for the membership, policy plan, or policy. This characteristic is used while identifying a list of eligible children in a membership for premium calculation.</p> <p><b>Note:</b> You must specify a characteristic type where the characteristic entity is set to <b>Membership, Policy Plan, and Policy</b>.</p>	Yes (Conditional)  <p><b>Note:</b> This data is required while identifying a list of eligible children for premium calculation.</p>

Option Type	Description	Mandatory (Yes or No)
To Do Role Characteristic Type	<p>Used to specify the characteristic type where you want to store the To Do role. This characteristic type is defined for the parent customer. The system uses this characteristic to determine the users to whom the To Dos created using the <b>C1-REPC1</b>, <b>C1-REPC2</b>, and <b>C1-FIBCR</b> To Do types should be assigned.</p> <p><b>Note:</b> A To Do is created using the <b>C1-REPC1</b> To Do type when an error occurs while creating a repricing request. A To Do is created using the <b>C1-REPC2</b> To Do type when an error occurs while calculating membership premium. And, a To Do is created using the <b>C1-FIBCR</b> To Do type when an error occurs while creating a billable charge for a membership. You must specify an adhoc characteristic type where the characteristic entity is set to <b>Person</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while billing fully-insured health care plans.</p>

6. Enter the values for the required option types in the **Feature Configuration** screen.

7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1\_AXENTITY Feature Configuration

### Procedure

To set the **C1\_AXENTITY** feature configuration:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
- Enter **C1\_AXENTITY** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Compare New or Missing Entry Color	Used to indicate the color in which the new additions must be highlighted. This helps in comparing the existing and new data while approving, rejecting, or cancelling approval workflow requests. You must specify hexadecimal value in this option type.	Yes
Approval Transaction Compare Value Changed Color	Used to indicate the color in which the existing data modifications must be highlighted. This helps in comparing the existing and new data while approving, rejecting, or cancelling approval workflow requests. You must specify hexadecimal value in this option type.	Yes
Approval Transaction Entity Access Algorithms	Used to specify the algorithm which controls access to the existing and new maintenance objects based on the access group and division. By default, the C1-APPTXN algorithm is specified. If you create new maintenance objects and want the access control for these new maintenance objects to be based on the access group and division, you have to create a custom algorithm and then attach it to this option type. In such case, you would define this option type twice — one with the default algorithm (that is, C1-APPTXN) and another with the custom algorithm.	Yes
Approval Transaction Fields to be Disabled in Input UI Maps	Used to indicate the fields that you want to disable whenever the input UI maps are regenerated.	Yes
Approval Transaction Resolve To Do Type	Used to indicate the type of To Do that must be created when an approver at any level in the hierarchy rejects a request.	Yes
Display UI XSL	Used to indicate the XSL file that you want to use while regenerating the Display UI maps.	Yes
Input UI XSL	Used to indicate the XSL file that you want to use while regenerating the Input UI maps.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1-BILLADJSQ Feature Configuration

### Prerequisites

To set the **C1-BILLADJSQ** feature configuration, you should have:

- Service quantity identifiers (SQIs) defined in the application

### Procedure

To set the **C1-BILLADJSQ** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1-BILLADJSQ** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Billable Charge SQI	Used to specify the service quantity identifier (SQI) which you want to use while creating a billable charge for the state assessment fee.  <b>Note:</b> You must specify an SQI which is already defined in the system.	Yes (Conditional)  <b>Note:</b> This data is required when you want to create billable charges for the state assessment fee.

Option Type	Description	Mandatory (Yes or No)
Coverage End Date SQI	Used to specify the service quantity identifier (SQI) which you want use to derive the coverage end date from the account's last billed charge. The system uses the derived coverage end date in calculating the future retro adds (debits) for the respective account.  <b>Note:</b> You must specify an SQI which is already defined in the system.	Yes
Premium Amount SQI	Used to specify the service quantity identifier (SQI) based on which you want to calculate the catch up premium for each eligible billable charge. The value derived is finally used to calculate the future retro adds (debits) for the respective account.  <b>Note:</b> You must specify an SQI which is already defined in the system.  The future retro adds (debits) appears in the <b>Billing and Adjustment Summary</b> zone of the <b>Account</b> tab on the <b>Customer 360° Information</b> screen.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1-BILLCYCLE Feature Configuration

On executing the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch, the system validates whether the bill cycle specified in the customer inbound message exists in the **C1-BILLCYCLE** feature configuration. Therefore, you need to ensure that the specified bill cycle exists in the **C1-BILLCYCLE** feature configuration before processing the customer inbound message.

#### Prerequisites

To set the **C1-BILLCYCLE** feature configuration, you should have:

- Values defined for the **C1BC\_OPT\_TYP\_FLG** lookup field

#### Procedure

To set the **C1-BILLCYCLE** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1-BILLCYCLE** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
<Value from the <b>C1BC_OPT_TYP_FLG</b> lookup field>	Used to specify the bill cycle. <b>Note:</b> You must specify a bill cycle which is already defined in the system.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## **Setting the C1\_CMO Feature Configuration**

### **Prerequisites**

To set the **C1\_CMO** feature configuration, you should have:

- Contract types defined in the application

### **Procedure**

To set the **C1\_CMO** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1\_CMO** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Administrative Contract Type	Used to specify the contract type. The contracts of the specified contract type are then listed in the <b>Administrative Contracts</b> zone of the <b>Account</b> tab on the <b>Customer 360° Information</b> screen.	Yes
On Account Contract Type	Used to specify the contract type. The excess credit transactions on the contracts of the specified contract type are then listed in the <b>Billed Vs Paid</b> zone of the <b>Account</b> tab on the <b>Customer 360° Information</b> screen.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1\_DIVFUNCT Feature Configuration

### Procedure

To set the **C1\_DIVFUNCT** feature configuration:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
- Enter **C1\_DIVFUNCT** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Enforce division-specific validations	Used to indicate whether the division-specific validations must be triggered on the <b>Person</b> , <b>Account</b> and <b>Contract</b> screens. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1\_EXCHRATE Feature Configuration

### **Procedure**

To set the **C1\_EXCHRATE** feature configuration:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
- Enter **C1\_EXCHRATE** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
End Date Required for Division Override	Used to indicate whether the end date is mandatory for a division-specific exchange rate. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> By default, the value of this option type is set to <b>N</b> .	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

### **Related Topics**

## Setting the C1\_EXP\_OVRD Feature Configuration

### **Procedure**

To set the **C1\_EXP\_OVRD** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1\_EXP\_OVRD** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Expire Override Switch	Used to indicate whether you want to automatically expire an agreed pricing when the agreed pricing of a person or an account without end date is overridden. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

## Setting the C1\_FINTRANOP Feature Configuration

### Procedure

To set the **C1\_FINTRANOP** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1\_FINTRANOP** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Bill Segment Regeneration on Freeze	<p>Used to indicate whether you want to regenerate the bill segments before freezing them. The valid value is:</p> <ul style="list-style-type: none"> <li>• Y</li> </ul> <p>If you do not want to regenerate the bill segments before freezing them, you must leave this option type blank.</p> <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> If the <b>Freeze and Complete</b> check box is selected for the bill cycle and the <b>Bill Segment Regeneration on Freeze</b> option type is set to <b>Y</b>, then the bill segments are regenerated and the status of the bill segments is set to <b>Frozen</b>. However, if the <b>Freeze and Complete</b> check box is not selected for the bill cycle, then the bill segments are always regenerated irrespective of whether the <b>Bill Segment Regeneration on Freeze</b> option type is set to <b>Y</b> or not.</p> </div>	No
Billable Charges Date	<p>Used to indicate whether you want to consider the billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>S</b> — Used when you want to consider the billable charges whose start date is earlier than or equal to the cut-off date.</li> <li>• <b>E</b> — Used when you want to consider the billable charges whose end date is earlier than or equal to the cut-off date.</li> </ul> <p>If you do not set the value of this option type, by default, the system considers the billable charges whose start date is earlier than or equal to the cut-off date.</p>	No

6. Enter the values for the required option types in the **Feature Configuration** screen.

7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1\_FM Feature Configuration

### Procedure

To set the **C1\_FM** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1\_FM** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
First Batch in Transaction Aggregation Cycle	Used to specify the first mandatory batch that you want to be executed in the transaction aggregation cycle.  <b>Note:</b> At present, the system does not support any value other than <b>C1-TXNIP</b> for this option type.	Yes
Last Batch in Transaction Aggregation Cycle	Used to specify the last mandatory batch that you want to be executed in the transaction aggregation cycle.  <b>Note:</b> At present, the system does not support any value other than <b>C1-TXNCU</b> for this option type.	Yes
Disaggregation - Price Assignment	Used to indicate whether the disaggregation request should be automatically created for a person or account when a price item is assigned to the person or account or the existing price item pricing assigned to the person or account is modified. The valid values are:  <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <b>Note:</b> You can use this feature only when an algorithm which is created using the <b>TXNDISAGGPRA</b> algorithm type is attached to the <b>Post-Processing</b> system event of the <b>C1_PRASGN_BO</b> business object.	No

Option Type	Description	Mandatory (Yes or No)
Allow Duplicate Summary ID	<p>Used to indicate whether the transaction legs can have duplicate summary ID while creating an aggregated billable charge using the <b>Service Quantity Calculation (C1-TXNSQ)</b> batch. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>If you set this option type to <b>false</b>, the system does not create the aggregated billable charge when one or more transaction legs have the same summary ID.</p> <p>If you do not specify the value for this option type, by default, the value is set to <b>false</b>.</p> </div>	No

Option Type	Description	Mandatory (Yes or No)
Parallel Query Degree	<p>Used to specify the degree of parallelism that you want to use while creating chunks (i.e. work units) in various Transaction Feed Management (TFM) batches. The valid values are:</p> <ul style="list-style-type: none"> <li>• 1</li> <li>• 2</li> <li>• 3</li> <li>• 4</li> <li>• 5</li> <li>• 6</li> <li>• 7</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>With the parallel query feature, multiple threads on the database can work together simultaneously to process a single SQL statement which is used to create chunks. This helps to improve the batch performance.</p> <p>The system calculates the number of threads on the database that can be used to execute the SQL statement by setting 2 to the power of the specified parallel query degree. For example, if you set the parallel query degree to 4, the system uses 16 (i.e. 2<sup>4</sup>) threads on the database to create work units.</p> <p>You must set the parallel query degree depending on the infrastructure available on the site. If you do not specify the value for this option type, by default, the parallel query degree is set to 2.</p> </div>	No
Price Item Determination Batch Description	Used to specify the description for the batch which is used for validating the transaction and deriving the price item in the transaction aggregation cycle. For example, <b>Validate Transaction and Derive Price Item</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes

Option Type	Description	Mandatory (Yes or No)
Remove Duplicates from Accumulated Rule Output	<p>Used to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> If you do not specify the value for this option type, by default, the value is set to <b>false</b>.</p>	No
Rule Output Accumulation	<p>Used to indicate whether the system should accumulate the output parameters of all rules where the criteria returns <b>Rule Is True</b> irrespective of whether the rule true action is set to <b>Next Dependent</b>, <b>Next Rule by Priority</b>, or <b>Success</b> and then create transaction legs using the accumulated output parameters. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> If you do not specify the value for this option type, by default, the value is set to <b>false</b>.</p>	No
Show Default Values in Price Item Pricing	<p>Used to indicate whether the default values must appear in the <b>Ignore Transaction</b>, <b>Aggregate Transaction</b>, and <b>Aggregation Schedule</b> fields while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	Yes
Use Materialized Views	<p>Used to indicate whether the price item pricing information must be cached in the <b>CI_PRC_AGRD</b>, <b>CI_PRC_PL</b>, and <b>CI_PRC_INH_PL</b> tables. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Yes
Maximum Price Item Parameters Cache Size	<p>Used to indicate the maximum number of price items whose parameter information can be cached in the memory.</p>	Yes
Maximum Price Item Parameter Groups Cache Size	<p>Used to indicate the maximum number of price item parameter groups whose information can be cached in the memory.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
SQ Recalculation Required	<p>Used to indicate whether the SQIs in an aggregated billable charge must be recalculated while executing the <b>CI-TXNCU</b> batch. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify the value for this option type or if you set the value to <b>N</b>, the system will not recalculate the SQIs in an aggregated billable charge.</p>	No
Transaction Detail Account Validation	<p>Used to indicate whether the account must be validated during the transaction validation process. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b></p> <p>If you set this option type to <b>N</b>, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.</p> <p>If you do not specify the value for this option type, the system will validate the account during the transaction validation process.</p>	No
Populate Summary Table Batch Description	<p>Used to specify the description for the batch which is used for adding a summary record in the <b>CI_TXN_DTL_PRITM_SUMMARY</b> table. For example, <b>Populate CI_TXN_DTL_PRITM_SUMMARY Table</b>. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when the <b>Use CI-TXNPS During Transaction Aggregation</b> option type is set to <b>true</b>.</p>
Find Price Item Pricing Batch Description	<p>Used to specify the description for the batch which is used for finding the price item pricing for transactions in the transaction aggregation cycle. For example, <b>Price Item Pricing Verification</b>. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Update Transaction Status Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions (for which the error has occurred) in the transaction aggregation cycle. For example, <b>Update Status</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Service Quantity Calculation Batch Description	Used to specify the description for the batch which is used for creating the billable charges for transactions in the transaction aggregation cycle. For example, <b>Service Quantity Calculation</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Transaction Completion Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions in the transaction aggregation cycle. For example, <b>Mark Completion</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Cleanup Unwanted Data Batch Description	Used to specify the description for the batch which is used for updating or deleting billable charges created for transactions in the transaction aggregation cycle. For example, <b>Clean Up</b> . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes

Option Type	Description	Mandatory (Yes or No)
Use C1-TXNPS During Transaction Aggregation	<p>Used to indicate whether you want to use an alternative transaction aggregation process when the aggregation ratio is low. The valid values are:</p> <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul> <p><b>Note:</b> If you set this option type to <b>true</b>, you need to execute the following batches in the specified order in the transaction aggregation cycle:</p> <ol style="list-style-type: none"> <li>1. Flush All Caches (F1-FLUSH)</li> <li>2. Refresh Pricing (C1-TXNRP)</li> <li>3. Header Validation (C1-TXNHV)</li> <li>4. Validate Transaction and Derive Price Item (C1-TXNIP)</li> <li>5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)</li> <li>6. Price Item Pricing Verification (C1-TXNVP)</li> <li>7. Update Status (C1-TXNEX)</li> <li>8. Service Quantity Calculation (C1-TXNSQ)</li> <li>9. Mark Completion (C1-TXNCM)</li> <li>10. Clean Up (C1-TXNCU) with the <b>Request Type</b> parameter set to <b>EROR</b></li> </ol>	No

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1-OFFSETREQ Feature Configuration

The **C1-OFFSETREQ** feature configuration enables the system to determine whether the completed debit or credit bills of the effective child persons of the main customer (whose bill is added as the primary bill in the offset request) should be listed when you search for a bill in the offset request.

### Procedure

To set the **C1-OFFSETREQ** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1-OFFSETREQ** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Offsetting Across Persons	Used to indicate whether you want to offset bills across main customer's hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• <b>Y</b> - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer or against one or more bills of the accounts of its effective child persons.</li> <li>• <b>N</b> - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer.</li> </ul>	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

How to add a debit or credit bill to an offset request	<a href="#">Adding a Debit or Credit Bill to an Offset Request</a> on page 1298

## **Setting the C1-PAYPORTAL Feature Configuration**

### **Procedure**

To set the **C1-PAYPORTAL** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.

4. Enter **C1-PAYPORTAL** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Overpayment	Used to indicate whether you want to allow overpayment against an entity while editing the payment amount. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	Yes
FK Reference for Bill	Used to indicate the foreign key reference which generates the information string for a bill in the <b>Edit Payment Amount</b> screen. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> The C1-BLACT foreign key reference for bill is shipped with the product. You can also create a custom foreign key reference, if required.</p> </div>	Yes
FK Reference for Bill Segment	Used to indicate the foreign key reference which generates the information string for a bill segment in the <b>Edit Payment Amount</b> screen. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> The C1-BSEG foreign key reference for bill segment is shipped with the product. You can also create a custom foreign key reference, if required.</p> </div>	Yes
FK Reference for Contract	Used to indicate the foreign key reference which generates the information string for a contract in the <b>Edit Payment Amount</b> screen. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> The C1_F_SA foreign key reference for contract is shipped with the product. You can also create a custom foreign key reference, if required.</p> </div>	Yes
FK Reference for Settlement	Used to indicate the foreign key reference which generates the information string for a settlement ID in the <b>Edit Payment Amount</b> screen. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p><b>Note:</b> At present, no foreign key reference for settlement ID is shipped with the product. Only the settlement ID appears in the information string. You can create a foreign key reference for settlement ID and specify it in this field.</p> </div>	No

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>

## Setting the C1\_PERACCT Feature Configuration

### Procedure

To set the **C1\_PERACCT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1\_PERACCT** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Create Person Account Together	Used to indicate whether you want to create a person and account for that person simultaneously. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

## Setting the C1\_PERSTYPE Feature Configuration

The **C1\_PERSTYPE** feature configuration enables the system to determine whether the entities should be created directly or through a customer registration object whenever a health care inbound message is processed. If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1\_PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type, the system creates or updates the person and its other entities directly and not through a customer registration object.

### Prerequisites

To set the **C1\_PERSTYPE** feature configuration, you should have:

- Values defined for the **PER\_OR\_BUS\_FLG** lookup field

### **Procedure**

To set the **C1\_PERSTYPE** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1\_PERSTYPE** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Bill Group Person Type	Used to specify the person type which indicates that the person is a bill group.  <b>Note:</b> You must specify a value which is already defined in the <b>PER_OR_BUS_FLG</b> lookup field. It must be in the <b>Active</b> status.	Yes (Conditional)  <b>Note:</b> This data is required when you want to process a health care inbound message.
Parent Person Type	Used to specify the person type which indicates that the person is a parent customer.  <b>Note:</b> You must specify a value which is already defined in the <b>PER_OR_BUS_FLG</b> lookup field. It must be in the <b>Active</b> status.	Yes (Conditional)  <b>Note:</b> This data is required when you want to process a health care inbound message.

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.  
The changes made to the feature configuration are saved.

Health Care Inbound Message	<a href="#">Health Care Inbound Message</a> on page 1863

## **Setting the C1\_PER\_REL Feature Configuration**

You can define person to person relationship type sequence in the **C1\_PER\_REL** feature configuration. This sequence is used while searching for effective price item pricing at the parent customer level.

### **Procedure**

To set the **C1\_PER\_REL** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1\_PER\_REL** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Person to Person Relationship Type	Used to indicate the person to person relationship type.  <b>Note:</b> If you want to define more than one relationship type in the feature configuration, you need to specify the sequence in which the relationship type should be considered while searching effective price item pricing at the parent customer level.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

### **Related Topics**

<b>Person to Person Relationship Type Sequence</b> screen	<a href="#">Person to Person Relationship Type Sequence</a> on page 598

## **Setting the C1\_PPARM\_FLG Feature Configuration**

### **Procedure**

To set the **C1\_PPARM\_FLG** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1\_PPARM\_FLG** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Multi Price Parameter	Used to indicate whether you want to use the multi parameter based pricing feature. The valid values are: <ul style="list-style-type: none"> <li>• <b>True</b> — Indicates that you want to enable the multi parameter based pricing feature.</li> <li>• <b>False</b> — Indicates that you want to disable the multi parameter based pricing feature.</li> </ul>	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

### Related Topics

<b>Multi Parameter Based Pricing</b> feature	<a href="#">Multi Parameter Based Pricing</a> on page 273

## Setting the C1\_PRASNORDR Feature Configuration

### Procedure

To set the **C1\_PRASNORDR** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.  
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.  
The **Feature Configuration Search** window appears.
4. Enter **C1\_PRASNORDR** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:
