ORACLE®

Oracle Retail Merchandising Foundation Cloud Service/Retail Merchandising System Items User Guide, Release 19.0

F23700-01

condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.

Send Us Your Comments

Oracle Retail Merchandising Foundation Cloud Service/Retail Merchandising System Items User Guide, Release 19.0

Oracle welcomes customers' comments and suggestions on the quality and usefulness of this document.

Your feedback is important, and helps us to best meet your needs as a user of our products. For example:

- Are the implementation steps correct and complete?

- Did you understand the context of the procedures?

- Did you find any errors in the information?

- Does the structure of the information help you with your tasks?

- Do you need different information or graphics? If so, where, and in what format?

- Are the examples correct? Do you need more examples?

If you find any errors or have any other suggestions for improvement, then please tell us your name, the name of the company who has licensed our products, the title and part number of the documentation and the chapter, section, and page number (if available).

> **Note:** Before sending us your comments, you might like to check that you have the latest version of the document and if any concerns are already addressed. To do this, access the Online Documentation available on the Oracle Technology Network Web site. It contains the most current Documentation Library plus all documents revised or released recently.

Send your comments to us using the electronic mail address: retail-doc_us@oracle.com

Please give your name, address, electronic mail address, and telephone number (optional).

If you need assistance with Oracle software, then please contact your support representative or Oracle Support Services.

If you require training or instruction in using Oracle software, then please contact your Oracle local office and inquire about our Oracle University offerings. A list of Oracle offices is available on our Web site at **http://www.oracle.com**.

Preface

This document describes the Oracle Retail Merchandising user interface. It provides step-by-step instructions to complete most tasks that can be performed through the user interface.

Audience

This document is for users and administrators of Oracle Retail Merchandising. This includes merchandisers, buyers, business analysts, and administrative personnel.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at
http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit
http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit
http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL:

https://support.oracle.com

When contacting Customer Support, please provide the following:

- Product version and program/module name

- Functional and technical description of the problem (include business impact)

- Detailed step-by-step instructions to re-create

- Exact error message received

- Screen shots of each step you take

Review Patch Documentation

When you install the application for the first time, you install either a base release (for example, 19.0) or a later patch release (for example, 19.0.1). If you are installing the base release, additional patch, and bundled hot fix releases, read the documentation for all releases that have occurred since the base release before you begin installation. Documentation for patch and bundled hot fix releases can contain critical information related to the base release, as well as information about code changes since the base release.

Improved Process for Oracle Retail Documentation Corrections

To more quickly address critical corrections to Oracle Retail documentation content, Oracle Retail documentation may be republished whenever a critical correction is needed. For critical corrections, the republication of an Oracle Retail document may at times not be attached to a numbered software release; instead, the Oracle Retail document will simply be replaced on the Oracle Technology Network Web site, or, in the case of Data Models, to the applicable My Oracle Support Documentation container where they reside.

This process will prevent delays in making critical corrections available to customers. For the customer, it means that before you begin installation, you must verify that you have the most recent version of the Oracle Retail documentation set. Oracle Retail documentation is available on the Oracle Technology Network at the following URL:

http://www.oracle.com/technetwork/documentation/oracle-retail-100266.ht ml

An updated version of the applicable Oracle Retail document is indicated by Oracle part number, as well as print date (month and year). An updated version uses the same part number, with a higher-numbered suffix. For example, part number E123456-02 is an updated version of a document with part number E123456-01.

If a more recent version of a document is available, that version supersedes all previous versions.

Oracle Retail Documentation on the Oracle Technology Network

Oracle Retail product documentation is available on the following Web site:

http://www.oracle.com/technetwork/documentation/oracle-retail-10 0266.html

(Data Model documents are not available through Oracle Technology Network. You can obtain them through My Oracle Support.)

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.

Convention	Meaning
`monospace`	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

1

Item Overview

Merchandising is usually the master of all items for a retail organization. It manages the creation and maintenance of items, as well as the communication of these items to other dependent solutions. The Merchandising item structure is very flexible in order to support items from all retail verticals, including soft-lines, hard-lines, grocery, and so on. The item hierarchy can support up to three levels, with one level being designated as the level at which transactions and inventory occur. For example, a fashion item may use all three levels to represent style, SKU, and barcode; whereas a grocery item may use only two - one to represent the SKU and one to represent the barcode. In addition, ownership type of an item can also be specified as owned, consignment or concession based on the terms with a supplier at the location level.

Merchandising also supports the creation of multiple types of items, which are described below:

Regular Items: this is the most common type of item as it can be used to represent sellable and orderable items across verticals. For soft-lines, regular items are associated with differentiators to represent the colors and sizes that styles are available in. Differentiators can be associated with items in other retail verticals as well to represent other item characteristics such as flavor or scent.

Pack Items: A pack is a way of tracking multiple component items under one item number. Merchandising supports two types of packs - simple and complex. A simple pack contains multiples of one component item, whereas a complex pack can contain many different component items. Simple packs are always orderable and may also be created as sellable. Complex packs can be sellable, orderable, or both.

Deposit Items: a deposit item is an item that has a portion which is returnable by the customer after it has been sold to the customer. A deposit is taken from the customer for the returnable portion. In Merchandising, deposit items are tracked under multiple component items representing the containers, the contents, the returned item, and optionally a crate item. Usually a pack items is created to manage the combination of products together through the supply chain.

Transformable Items: a transformable item is an item that can be ordered as one item and then transformed into multiple sellable components. For example, a cheese wheel may be purchased from the supplier, but cut up into smaller pieces to be sold to customers. There are two types of transformable items that can be created - the orderable component and the sellable component.

This guide includes the following topics to help you understand and manage items:

- Create an Item
- View Item Details
- Add Suppliers

- [Request Tickets](#)
- [Items by User Defined Attribute](#)
- [Scheduled Item Maintenance](#)
- [Creating a Product Restriction](#)
- [Managing Product Restrictions](#)

Item Types

Items can be grouped into a one, two, or three level hierarchy. The naming conventions for the three item levels may vary by organization, but they are referred to here as item levels 1, 2, and 3. All item hierarchies begin at item level 1. The item level names in the System Options screen can be customized. Refer to the ADF Customization Whitepaper for more information.

> **Note:** Throughout this guide you will see these levels referred to with the names, Style, SKU, and Reference Item respectively.

After creating a level 1 item, you can create level 2 as child for level 1 item. If a third level is desired, you can create level 3 item as child for level 2 item.

Regular Item

This section describes the regular item.

Item Groups

An item group is an item hierarchy in which an item is broken into levels. The entire set of items (level 1 - 3) is an item group. The item is broken down in to factors which allow it to be distinguished from the more generic item.

After you have defined the item structure, you must add a supplier to the item, determine item cost, and assign the item to a location.

Diffs

A differentiator (diff) is a characteristic that can be used to make items distinct from one another. You can add levels to an item group if you identify a set of diffs or diff groups. Each unique diff or combination of diffs creates a new level in the item group. If you choose not to use diffs, you can manually create item levels.

Once you have selected the diffs, you can create all of the items for that item level, through Merchandising.

Packs

A pack is a way of tracking multiple items under one item number. The Pack Item Overview contains additional information on simple and complex packs.

Simple Pack

A simple pack contains multiples of one component item.

Complex Pack

A complex pack contains different multiple component items.

Deposit Items

A deposit item is an item that has a portion which is returnable by the customer after it has been sold to the customer. A deposit is taken from the customer for the returnable portion. A deposit item is broken into the components of the item, and each item is tracked separately in Merchandising.

- Deposit Contents Item: The item that is sold to the customer.

- Deposit Container Item: The item for which the deposit is taken. The deposit container item holds the deposit contents item.

- Deposit Crate Item: The item which holds the container and contents items.

- Deposit Returned Item: The item that is returned to the retailer by the customer and for which the deposit is returned to the customer.

Deposit items can be maintained as a complex pack or a single item. Maintaining the deposit items as a complex pack ensures the appropriate components are grouped together and facilitates ordering. If you maintain the deposit items individually, you must associate the item with the appropriate container item.

Transformable Items

A transformable item is an item that can be ordered as one item and broken into smaller items. The smaller items can then be resold in the store. There are two types of transformable items:

- **Transformed Orderable:** The item is ordered from the supplier in one form, but changed by the retailer and sold to the customer in a different form.

- **Transformed Sellable:** The item that is sold to the customer. A transformed sellable item is different from the item ordered from the supplier, it is then broken or modified before selling.

Create an Item

To create an item:

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

Figure 1–1   Create Item Page

2. In the **Type** field, select the following type of items you can create:

   ■ Regular Item

   ■ Simple Pack

   ■ Complex Pack

   ■ Deposit Contents

   ■ Deposit Container

   ■ Deposit Crate

   ■ Deposit Returned Item

   ■ Transformed Orderable

   ■ Transformed Sellable

3. In the **Department** field, enter the ID of the department for the new item, select the department, or search and select the department.

4. In the **Class** field, enter the ID of the class for the new item, select the class, or search and select the class. You must select a department before you can select a class.

5. In the **Subclass** field, enter the ID of the subclass for the new item, select the subclass, or search and select the subclass. You must select a department and class before you can select a subclass.

6. Select the item type indicators:

   ■ **Sellable**: Select this check box to indicate the item is sellable and will be sent to the selling systems (e.g. POS, OMS).

   ■ **Orderable**: Select this check box to indicate the item can be ordered, set up, set up on replenishment, and to set up HTS and expenses.

- **Inventoried**: Select this check box to track inventory and to have stock on hold in Merchandising.

- **Catch Weight**: The Catch Weight functionality allows items that may be purchased and sold in varying weights to be better managed within Merchandising. The Catch Weight items are weighed at the receiving location.

   > **Note:** The indicators that you select for the Level 1 item will be applied to all items in the item group and cannot be changed.

7. In the **Transactional Level** field, select the transaction level for the item.

8. In the **Item Number Type** field, select the type of item number that you want to associate with the item.

9. The **Item** field is the unique number used to identify the product.

10. In the Descriptions area:

    a. In the **Description** field, enter the description of the item.

    b. In the **Short** field, populates with the item description.

    c. In the **Secondary** field, enter alternate description of an item. This field can be used to enter the item description used by the supplier.

11. Then choose one of the following options.

    - Click **OK**. The Item page appears.

      For more information about this page, see the Item Page section.

    - Click **Cancel** to reject all entries close the page.

Creating a One Level Item

To create a one level item, follow the steps below.

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

2. In the **Type** field, select Regular Item.

3. Select the item type indicators:

   - **Sellable**: Select this check box to indicate the item is sellable and will be sent to the selling systems (e.g. POS, OMS).

   - **Orderable**: Select this check box to indicate the item can be ordered, set up, set up on replenishment, and to set up HTS and expenses.

   - **Inventoried**: Select this check box to track inventory and to have stock on hold in Merchandising.

   - **Catch Weight**: The Catch Weight functionality allows items that may be purchased and sold in varying weights to be better managed within Merchandising. The Catch Weight items are weighed at the receiving location.

     > **Note:** The indicators that you select for the Level 1 item will be applied to all items in the item group and cannot be changed.

4. In the **Department, Class,** and **Subclass** fields, enter, select or search for the IDs of the merchandise hierarchy.

5. In the **Transaction Level** field, select transaction level 1.

6. In the **Number Type** field, select the type of item number that you want to associate with the item.

> **Note:** If you select Oracle Retail Item Number or UPC-A in the **Type** field, the item number is automatically added. If you select EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate**. If you select Manual, the description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

7. In the **Description** and **Short** field, enter a description for the item.

8. Click **OK**. The Item page appears.

   For more information about the Item page, see the Item Page section.

9. Add the cost zone group.

   Go to the Cost and Price section. In the **Cost Zone Group** field, enter, select or search for the cost zone group.

10. Add the attributes for the item.

    In the Attributes section, enter, select or search for the attributes as necessary. For more information about attributes, see the Attributes section.

11. Add a supplier and a sourcing country for the item.

    Select **More Actions > Suppliers**. The Item Supplier page appears. For more information about this page, see the Add Suppliers section.

    - Add a supplier by selecting **Actions > Add**, or using the Add icon +.

    - Add a sourcing country for the supplier of the item by select **Actions > Countries of Souring**, or by clicking the **Country of Sourcing** button.

12. Edit the retail price of the item.

    Select **More Actions > Retail by Zone**. The Retail by Zone page appears. For more information about this page, see the Define Initial Prices section.

13. Save you entries.

Creating a Two Level Item without Diffs

To create a two level item without diffs, follow the steps below.

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

2. In the **Type** field, select Regular Item.

3. Select the item type indicators:

   - **Sellable**: Select this check box to indicate the item is sellable and will be sent to the selling systems (e.g. POS, OMS).

   - **Orderable**: Select this check box to indicate the item can be ordered, set up, set up on replenishment, and to set up HTS and expenses.

   - **Inventoried**: Select this check box to track inventory and to have stock on hold in Merchandising.

- **Catch Weight**: The Catch Weight functionality allows items that may be purchased and sold in varying weights to be better managed within Merchandising. The Catch Weight items are weighed at the receiving location.

> **Note:** The indicators that you select for the Level 1 item will be applied to all items in the item group and cannot be changed.

4. In the **Department, Class,** and **Subclass** fields, enter, select or search for the IDs of the merchandise hierarchy.

5. In the **Transaction Level** field, select transaction level 2.

6. In the **Number Type** field, select the type of item number that you want to associate with the item.

> **Note:** If you select Oracle Retail Item Number or UPC-A in the **Type** field, the item number is automatically added. If you select EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate**. If you select Manual, the description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

7. In the **Description** and **Short** field, enter a description for the item.

8. Click **OK**. The Item page appears.

   For more information about the Item page, see the Item Page section.

9. Add the cost zone group.

   Go to the Cost and Price section. In the **Cost Zone Group** field, enter, select or search for the cost zone group.

10. In the Attributes section, enter, select or search for the attributes as necessary. For more information about attributes, see the Attributes section.

11. Add a supplier and a sourcing country for the item.

    In the Item page, select **More Actions > Suppliers**. The Item Supplier page appears. For more information about this page, see the Add Suppliers section

    - Add a supplier by selecting **Actions > Add**, or using the Add icon ✚.

    - Add a sourcing country for the supplier of the item by select **Actions > Countries of Souring**, or by clicking the **Country of Sourcing** button.

12. Edit the retail price of the item.

    In the Item page, select **More Actions > Retail by Zone**. The Retail by Zone page appears. For more information about this page, see the Define Initial Prices section.

13. Add child items to the item.

    In the Item page, click **Create Children**. The Item Children page appears. For more information about this option, see the Item Children section.

14. Save you entries.

Creating a Two Level Item with Diffs

To create a tow level item with diffs, follow the steps below.

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

2. In the **Type** field, select Regular Item.

3. Select the item type indicators:

    ■ **Sellable**: Select this check box to sell the item and send the item to POS.

    ■ **Orderable**: Select this check box to order an item, set up on replenishment, and to set up HTS and expenses.

    ■ **Inventoried**: Select this check box to track inventory and to have stock on hold in Merchandising.

    ■ **Catch Weight**: The Catch Weight functionality allows items that may be purchased and sold in varying weights to be better managed within Merchandising. The Catch Weight items are weighed at the receiving location.

    > **Note:** The indicators that you select for the Level 1 item will be applied to all items in the item group and cannot be changed.

4. In the **Department, Class,** and **Subclass** fields, enter, select or search for the IDs of the merchandise hierarchy.

5. In the **Transaction Level** field, select transaction level 2.

6. In the **Number Type** field, select the type of item number that you want to associate with the item.

    > **Note:** If you select Oracle Retail Item Number or UPC-A in the **Type** field, the item number is automatically added. If you select EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate**. If you select Manual, the description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

7. In the **Description** and **Short** field, enter a description for the item.

8. Click **OK**. The Item page appears.

    For more information about the Item page, see the Item Page section.

9. Add the cost zone group.

    Go to the Cost and Price section. In the **Cost Zone Group** field, enter, select or search for the cost zone group.

10. In the Attributes section, enter, select or search for the attributes as necessary. For more information about attributes, see the Attributes section.

11. Add the differentiators for the item.

    In the Differentiators section, add the diffs for the item. For more information about this section, see the Differentiators section.

12. Add a supplier and a sourcing country for the item.

In the Item page, select **More Actions > Suppliers**. The Item Supplier page appears. For more information about this page, see the Add Suppliers section

- Add a supplier by selecting **Actions > Add**, or using the Add icon ✛.

- Add a sourcing country for the supplier of the item by select **Actions > Countries of Souring**, or by clicking the **Country of Sourcing** button.

13. Edit the retail price of the item.

In the Item page, select **More Actions > Retail by Zone**. The Retail by Zone page appears. For more information about this page, see the Define Initial Prices section.

14. Add child items to the item.

In the Item page, click **Create Children**. The Create Children page appears. For more information about this option, see the Create Children Page section.

15. Save you entries.

Item Page

Once you fill in all the details in the Create Item page and click **OK**, the Item page appears.

The Item page includes the following sections:

- Item Header
- Descriptions
- Pack
- Cost and Price
- Usage and Units
- Attributes
- Differentiators
- Grocery Attributes
- Comments

Figure 1–2   Item Page
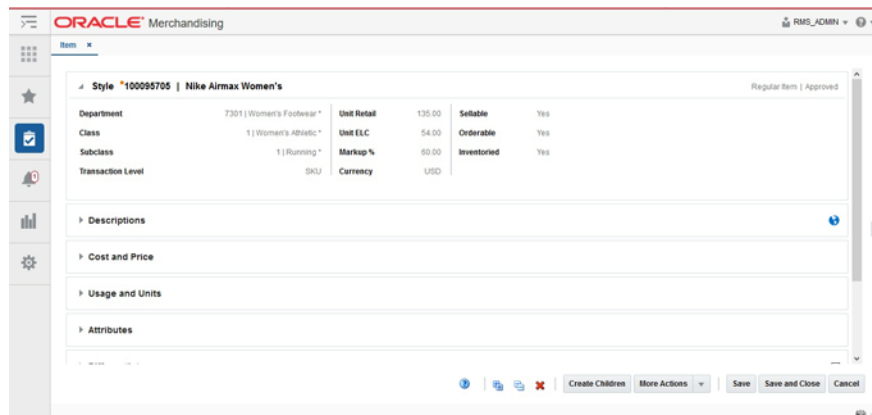

Item Header

The Item Header includes the following fields:

Table 1–1   Item Header - Fields and Description

Fields	Description
Title	The title displays the Item level (SKU/Style/Reference Item), Item ID, and Item Description with a separator between them to the extreme left of the Item page. The type of item and item status is displayed with a separator between them to the extreme right of the Item page. The item number is populated by default.
Item Status	The description of the item status is displayed as text. When you create an item, the status is Worksheet.

The following fields are populated by default: Style, SKU, Department, Class, Subclass, Transaction Level, Unit Retail, Unit ELC, Markup %, Currency, Sellable, Orderable, Inventoried.

Descriptions

Figure 1–3   Descriptions

This section contains a Translate icon in the top right corner. You can create a translation by using the Translate icon 🌐.

The Descriptions section includes the following fields:

Table 1–2   Descriptions - Fields and Description

Fields	Description
Description	Enter the description of the item. This field is a required field.
Short	Enter the short description of the item. This field is a required field.
Secondary	Enter the alternate description of an item. This field can be used to enter the item description used by the supplier.
Number Type	This field is displayed by default.

Pack

Figure 1–4   Pack

The label of the Pack section varies, depending on whether you create a Simple Pack or a Complex Pack.

The top right corner of the section contains the Pack Details icon. If you click the icon, the Pack Item Details page appears. For more information about this page, see the Pack Item Detail section.

The pack section includes the following fields:

Table 1–3   Pack - Fields and Description

Fields	Description
Type	For complex packs, select the pack type from the list. Possible types are Buyer Pack or Vendor Pack.
	For simple pack the field defaults to Vendor Pack.
Order As Type	Only enabled if you select Buyer Pack as Pack Type.
	Select pack or eaches to indicate how the item should be ordered.
Contains Inner	The **Contains Inner** checkbox indicates if the pack contains inner containers.
Store Pack Inventory	The **Store Pack Inventory** checkbox indicates whether inventory is tracked at the pack level in SIM for stores.
SOH Inquiry at Pack Level	The **SOH Inquiry at Pack Level** is used by SIM to determine how to reflect SOH for pack items in the store.

Cost and Price

Figure 1–5   Cost and Price

The Cost and Price section includes the following fields:

Table 1–4   Cost and Price - Fields and Description
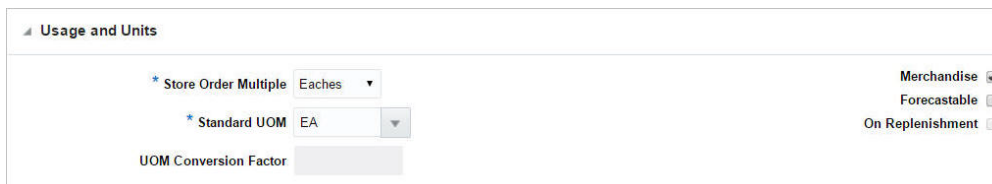

Fields	Description
Cost Zone Groups	Enter the cost zone group ID, or search for and select the cost zone group.
Suggested Retail	Enter the suggested retail price.
Selling Unit Retail	Enter the new retail price.

Table 1–4   (Cont.) Cost and Price - Fields and Description

Fields	Description
Selling UOM	Enter the Selling UOM as necessary.

Usage and Units

Figure 1–6   Usage and Units

The Usage and Units section includes the following fields:

Table 1–5   Usage and Units - Fields and Description

Fields	Description
Store Order Multiple	The unit of measure by which items are shipped to stores.
	The store order multiple may be each, inner, or case. The default store order multiple is set up at the item level. Store order multiples for specific locations are set up at the item/location level. Select the Store Order Multiple from the list.
	This field is a required field.
Standard UOM	Enter the standard UOM, or search for and select the standard UOM.
UOM Conversion Factor	This factor will be used to convert sales and stock data when an item is retailed in eaches and does not have eaches as its standard unit of measure.
Merchandise	If the item is merchandised, select the Merchandise check box.
Forecastable	If the item is forecasted, select the Forecastable check box.
On Replenishment	This indicates if the item is put on replenishment.

Attributes

Figure 1–7   Attributes

The Attributes section includes the following fields:

Table 1–6   Attributes - Fields and Description

Fields	Description
Service Level	Select the service level from the list.
Product Classification	Select the Product Classification from the list.
Brand	Enter the Brand or select from the list.
Gift Wrap	Select Gift Wrap, if this item is available with gift wrap.
Ship Alone	Select Ship Alone if this item is shipped alone and not grouped for shipment.

Differentiators

A differentiator (diff) is a characteristic that can be used to make items distinct from one another. You can add levels to an item group if you identify a set of diffs or diff groups. Each unique diff or unique combination of diffs creates a new level in the item group. If you choose not to use diffs, you can manually create item levels.

Once you have selected the diffs, you can create all of the items for that item level through Merchandising.

Figure 1–8   Differentiators
The Differentiators section includes the following fields.

Table 1–7   Differentiators - Fields and Description

Fields	Description
Diff 1-4	Select the Diff 1 from the list.
	You can select up to four diffs by clicking the Add icon +. You can delete the diffs by clicking the Delete icon ✖.
Group/ID	Select the group or ID from the list.
Diff Value	Select the diff value, or enter, search and select.
Item Aggregate checkbox	This checkbox is only enabled for diff groups.
	■ If you select the **Item Aggregate** checkbox, the **Aggregate** checkbox is added to the diff group rows.
	■ The **Aggregate** checkbox to aggregate inventory and sales for the item.

Grocery Attributes

Figure 1–9   Grocery Attributes

This section is only displayed, if you have the required privilege. The Grocery Attributes section includes the following fields:

Table 1–8   Grocery Attributes - Sections and Description

Sections	Description
Deposit Contents area	Only available, if you create a deposit content item. You have to associate a container item to the deposit content item, in this area.
	▪ In the **Container Item** field, enter or search for the container item.
	▪ In the **Price Per UOM Calculation** field, select the appropriate option from the list.
Package area	▪ In the **Size** field, enter the package size.
	▪ Enter the unit of measure for a retail package of the current item in the **UOM** field, or search and select from the UOM list.
	▪ Select the **Constant Dimensions** check box to indicate that the dimensions of the product are always the same, regardless of the supplier.
Wastage and Perishability area	▪ In the **Wastage Type** field, select the type of wastage.
	▪ In the **Default Daily Wastage %** field, enter the average percentage of spoilage an item is subject to on a daily basis.
	▪ In the **Wastage %** field, enter the average percentage of waste an item is subject to over its shelf life.
	▪ Select the **Perishable** check box to indicate if the item has short shelf life like fruits, vegetables, bakery items and so on
Retail Label area	▪ In the **Type** field, select the type of retail label applied to the package. In the Value field enter the value associated with the retail label type.
	▪ In the **Value** field enter the value associated with the retail label type.

Table 1–8   (Cont.) Grocery Attributes - Sections and Description

Sections	Description
Handling area	■ In the **Sensitivity** field, select the type of sensitivity from the list. ■ In the **Temperature** list, select the type of temperature from the list.
Deposit Container area	Only available, if you create a deposit container item. The table lists the content items associated to the deposit container item.

Comments

In the **Comments** field, enter any additional comments as necessary.

Item - More Actions Menu

The More Actions menu contains the options listed in the table below.

Deposit Items

To create a deposit item, follow the steps below.

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

2. In the **Type** field, select the deposit item you want to create from the list. Possible options are:

   - **Deposit Container:** The item for which the deposit is taken. The deposit container item holds the deposit contents item.

   - **Deposit Contents:** The item that is sold to the customer.

   - **Deposit Crate:** The item which holds the container and contents items.

   - **Deposit Returned Item:** The item that is returned to the retailer by the customer and for which the deposit is returned to the customer.

3. The necessary item type indicators for the selected deposit item are selected by default.

   - **Sellable**: When selected, indicates that the item is sold and is sent to the POS.

   - **Orderable**: When selected, the item can be ordered, set up on replenishment, and can have HTS and expenses set up.

   - **Inventoried**: When selected, indicates that the inventory is tracked and held in Merchandising.

   > **Note:** The indicators that you select for the Level 1 item will be applied to all items in the item group and cannot be changed.

4. In the **Department, Class,** and **Subclass** fields, enter, select or search for the IDs of the merchandise hierarchy.

5. In the **Transaction Level** field, select transaction level 1, 2 or 3.

6. In the **Number Type** field, select the type of item number that you want to associate with the item.

> **Note:** If you select Oracle Retail Item Number or UPC-A in the **Type** field, the item number is automatically added. If you select EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate**. If you select Manual, the description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

7. In the **Description** and **Short** field, enter a description for the item.

8. Click **OK**. The Item page appears.

   For more information about the Item page, see the Item Page section.

9. Add the cost zone group.

   Go to the Cost and Price section. In the **Cost Zone Group** field, enter, select or search for the cost zone group.

10. In the Grocery Attributes section add the attributes as necessary.

Figure 1–11   Grocery Attributes

- If you create a deposit content item, you have to associate a deposit container item to the deposit content item.

- Once associated, the deposit container item lists all associated deposit content items in the Deposit Container table.

  For more information about this section, see the Grocery Attributes section.

11. Add a supplier and a sourcing country for the item.

   In the Item page, select **More Actions > Suppliers**. The Item Supplier page appears. For more information about this page, see the Add Suppliers section

   - Add a supplier by selecting **Actions > Add**, or using the Add icon ✦.

   - Add a sourcing country for the supplier of the item by select **Actions > Countries of Souring**, or by clicking the **Country of Sourcing** button.

12. Edit the retail price of the item.

   In the Item page, select **More Actions > Retail by Zone**. The Retail by Zone page appears. For more information about this page, see the Define Initial Prices section.

13. Save you entries.

Transformable Items

To create a transformable item, follow the steps below.

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

2. In the **Type** field, select the type of the transformable item you are creating from the list.

- **Transformed Orderable:** The item is ordered from the supplier in one form, but is changed by the retailer and sold to the customer in a different form.

- **Transformed Sellable:** The item that is sold to the customer. A transformed sellable item is ordered from the supplier in a different form that it is sold.

3. The necessary item type indicators for the selected transformable items are selected by default. If necessary, select the **Catch Weight** checkbox.

- **Sellable**: When selected, indicates that the item is sold and is sent to the POS.

- **Orderable**: When selected, the item can be ordered, set up on replenishment, and can have HTS and expenses set up.

- **Inventoried**: When selected, indicates that the inventory is tracked and held in Merchandising.

- **Catch Weight**: The Catch Weight functionality allows items that may be purchased and sold in varying weights to be better managed within Merchandising. The Catch Weight items are weighed at the receiving location.

> **Note:** The indicators that you select for the Level 1 item will be applied to all items in the item group and cannot be changed.

4. In the **Department, Class,** and **Subclass** fields, enter, select or search for the IDs of the merchandise hierarchy.

5. In the **Transaction Level** field, select transaction level 1, 2 or 3.

6. In the **Number Type** field, select the type of item number that you want to associate with the item.

> **Note:** If you select Oracle Retail Item Number or UPC-A in the **Type** field, the item number is automatically added. If you select EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate**. If you select Manual, the description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

7. In the **Description** and **Short** field, enter a description for the item.

8. Click **OK**. The Item page appears.

For more information about the Item page, see the Item Page section.

9. Add the cost zone group.

Go to the Cost and Price section. In the **Cost Zone Group** field, enter, select or search for the cost zone group.

10. In the Attributes section, enter, select or search for the attributes as necessary. For more information about attributes, see the Attributes section.

11. In the Grocery Attributes section add the attributes as necessary. For more information about this section, see the Grocery Attributes section.

12. Add a supplier and a sourcing country for the item.

> **Note:** If you are creating a transformed sellable item, you will not be able to select the **Supplier** option from the More Actions menu.

In the Item page, select **More Actions > Suppliers**. The Item Supplier page appears. For more information about this page, see the Add Suppliers section

- Add a supplier by selecting **Actions > Add**, or using the Add icon ✛.

- Add a sourcing country for the supplier of the item by select **Actions > Countries of Souring**, or by clicking the **Country of Sourcing** button.

13. Edit the retail price of the item.

> **Note:** If you are creating a transformed orderable item, you will not be able to select the **Retail by Zone** option from the More Actions menu.

In the Item page, select **More Actions > Retail by Zone**. The Retail by Zone page appears. For more information about this page, see the Define Initial Prices section.

14. Add child items to the item if necessary.

In the Item page, click **Create Children**. For more information about this option, see the Create Children Page section or the Item Children section.

15. For transformed orderable item, enter the item transformation details. In the Item page select **More Actions > Transformation**. The Item Transformation page appears.

   a. In the **Description** field, enter the description of the item transformation.

   b. In the **Production Loss** field, enter the percentage of the orderable item which is wasted in producing the sellable items.

   c. Then add sellable items by selecting **Actions > Add**, or by using the Add icon ✛ in the Sellable Items section.

   d. If the **Multiple Parent** checkbox in the Sellable Items section is selected, the The Yield from Orderable section is displayed. Define the yield details for any sellable items that are associated with multiple orderable items.

   For more detailed information about how to transform an item, see the Item Transformation section.

16. Save you entries.

Item Transformation

The Item Transformation page is only available for items with the item type Transformable Orderable.

The Item Transformation page contains the following sections.

- Header

  The header contains transformable orderable item, unit of measure information, the item transformation type as well as the transformation type.

  In addition the section contains a **Description** field, for the description for the transformation template and **Comments** field. You can create a translation for the transformation template by using the Translate icon ⊕.

- Sellable Items
- Yield from Orderable

Figure 1–12   Item Transformation Page
Sellable Items

In the Sellable Items section you can map transformation sellable item(s) to a transformation orderable item and define the percentage of each sellable item that results from the transformation.

The Production Loss Yield % and the Total Yield % are displayed in right corner of the section. The Production Loss Yield % and the Total Yield % values must add up to 100%.

The table displays the sellable item, the item description, the yield % for each item as well as **Multiple Parent** checkbox.

The **Multiple Parent** checkbox indicates whether or not the sellable item is derived from multiple orderable items. If the checkbox is selected the Yield from Orderable section enables and is populated.

Yield from Orderable

The Yield From Orderable section is used to distribute yield percentages between multiple transformation orderable items for any transformable sellable items derived from multiple orderable items.

This section is available only for items that have the **Multiple Parent** checkbox selected, meaning the sellable item is derived from multiple orderable items and therefore the distribution yield percentages must be defined.

The table lists all of the transform orderable items from which the header level item is derived and allows you to enter a Yield % for each row. The Total Yield % values must add up to 100%.

Transforming an Item

To transform an item, follow the steps listed below.
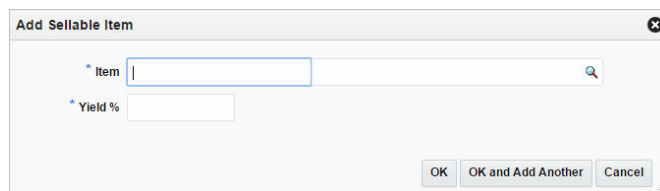

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Restrict your search to the item type Transformed Orderable.

   For more information about how to create a transformable item, see the Transformable Items section.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Select **More Actions > Transformation**. The Item Transformation page appears.

6. In the **Description** field, enter the description of the item transformation.

7. In the **Production Loss** field, enter the percentage of the orderable item which is wasted in producing the sellable items. Then add the sellable items.

8. Then add the sellable items. For more information about how to add sellable items, see the Adding Sellable Items section.

Adding Sellable Items

To add sellable items, follow the steps listed below.

1. In the Sellable Items section, select **Actions > Add**, or use the Add icon ✚. The Add Sellable Item page appears.

Figure 1–13   Add Sellable Item Page

2. In the **Item** field, enter or search for the sellable item that is created from the orderable item.

3. In the **Yield %** field, enter percentage of the orderable item used to create the sellable item.

> **Note:**   The Total Yield % field must equal 100% for the orderable item. The Total Yield % field is calculated by adding the Yield % and the Production Loss % field.

4. Then choose one of the following options.

   - Click **OK** to add the current sellable item to the table.
   - Click **OK and Add Another** to add additional sellable items.
   - Click **Cancel** to reject all entries and close the page.

5. In the Yield from Orderable section, define the yield details for any sellable items that are associated with multiple orderable items.

> **Note:** This section is only available, if the **Multiple Parent** checkbox is selected.

6. Save the entered records.

Simple Packs

To create a simple pack, follow the steps below.

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

2. In the **Type** field, select simple pack from the list.

3. The necessary item type indicators Orderable and Inventorable are selected by default. If necessary, select the **Sellable** and/or the **Catch Weight** checkbox.

   - **Sellable**: When selected, indicates that the item is sold and is sent to the POS.

   - **Orderable**: When selected, the item can be ordered, set up on replenishment, and can have HTS and expenses set up.

   - **Inventoried**: When selected, indicates that the inventory is tracked and held in Merchandising.

   - **Catch Weight**: The Catch Weight functionality allows items that may be purchased and sold in varying weights to be better managed within Merchandising. The Catch Weight items are weighed at the receiving location.

4. In the **Department, Class,** and **Subclass** fields, enter, select or search for the IDs of the merchandise hierarchy.

5. The **Transaction Level** field, defaults to level 1.

6. In the **Number Type** field, select the type of item number that you want to associate with the item.

> **Note:** If you select Oracle Retail Item Number or UPC-A in the **Type** field, the item number is automatically added. If you select EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate**. If you select Manual, the description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

7. In the **Description** and **Short** field, enter a description for the item.

8. Click **OK**. The Item page appears.

   For more information about the Item page, see the Item Page section.

9. Add the cost zone group.

   Go to the Cost and Price section. In the **Cost Zone Group** field, enter, select or search for the cost zone group.

10. In the Attributes section, enter, select or search for the attributes as necessary. For more information about attributes, see the Attributes section.

11. Add a supplier and a sourcing country for the item.

In the Item page, select **More Actions > Suppliers**. The Item Supplier page appears. For more information about this page, see the Add Suppliers section

- Add a supplier by selecting **Actions > Add**, or using the Add icon +.

- Add a sourcing country for the supplier of the item by select **Actions > Countries of Souring**, or by clicking the **Country of Sourcing** button.

12. Add the component item for the simple pack.

 In the Simple Pack section, click the Pack Details icon. The Pack Item Detail page appears. For more information about the Pack Item Detail page, see the Pack Item Detail section.

13. Edit the retail price of the item.

 In the Item page, select **More Actions > Retail by Zone**. The Retail by Zone page appears. For more information about this page, see the Define Initial Prices section.

14. Save you entries.

Note: To create a simple pack from an existing item, see the Creating a Simple Pack from an Existing Item section.

Simple Pack Set Up

In the Simple Pack Set Up page you can create and view simple packs that contain the selected component item. A simple pack is a sellable and/or orderable vendor pack with multiples of only one item number as the component item.

When creating a simple pack for a component item, the following information needs to be provided:

- Type of number, pack number, and pack description

- Number of units of the component item that make up the pack

- Primary supplier and country of sourcing for the pack

- Unit cost of the pack

- Number of packs in a case, cases on a tier, and tiers on a pallet

- Base retail price of the pack if it is sellable as a pack

In addition you can define the dimensions, weights, and volumes of cases and pallets. After defining the attributes of the pack, you can choose to copy other details from the component item. The details may include suppliers, stores, warehouses, seasons, user defined attributes, ticketing, required documents, sales taxes, HTS numbers, and expenses.

Figure 1–14   Simple Pack Setup Page

Table

In the table you can create and maintain the packs for the component item.

Creating a Simple Pack from an Existing Item

To create a simple pack from an existing item, follow the steps below.

1.   From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2.   Search for the item that will be the component of the simple pack.

3.   Click **Search**. The item is displayed in the Results section.

4.   In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✏. The Item page appears.

5.   Then select **More Actions > Simple Pack > Setup**. The Simple Pack Setup page appears.

Adding Pack Information

To add pack information for the selected item, follow the steps below.

1.   In the table, select **Actions > Add**, or use the Add icon. The Add Pack page appears.

Figure 1–15   Add Pack Page

2. In the **Number Type** field, select the type of item number that you want to associate with the pack item. This field is a required field.

3. In the **Pack** field, enter the pack number of the pack item. This field is a required field.

> **Note:**   If you select Oracle Retail Item Number or UPC-A in the Item Type field, the item number is automatically added. It is a 12-digit number starting with 3 that includes check digit validation.

---

4. In the **Description** field, enter a description for the pack item. This field is a required field.

5. In the **Secondary** field, specify the alternate name of the item.

6. In the **Quantity** field, specify the number of component items of the pack. This field is a required field.

7. If you select the **Sellable** checkbox, the item can be sold and sent to the POS.

8. The **Store Pack Inventory** checkbox indicates whether inventory will be tracked at the pack level in SIM for stores.

9. The **Pack Level SOH Inquiry** is used by SIM to determine how to reflect SOH for pack items in the store.

10. The **NIC is static** checkbox indicates if the Negotiated Item Cost (NIC) is static or not.

11. In the Sourcing section enter the following information:

    a. In the **Primary Supplier Site** field, enter, select or search for the primary supplier site. This field is a required field.

    b. In the **Country of Sourcing** field, enter, select or search for the code for the country. This field is a required field.

    c. In the **Country of Manufacture** field, enter, select or search for the country. this field is a required field.

    d. In the **Cost UOM** field, enter, select or search for the unit of measure. This field is a required field.

    e. In the **Unit Cost** field, enter the cost of the item in the indicated currency. This field is a required field.

    f. The **Markup %** field displays the percentage the price marked up, based on the supplier's cost.

    g. The **Unit Retail** field is displayed by default.

    h. The **Supplier Site Label** field is defined to describe the label or brand for the item supplied by the supplier.

    i. In the **VPN** field, specify the vendor product number.

    j. In the **Case Size** field, enter the case size. This field is a required field.

    k. In the **Tier** field, enter the tier. This field is a required field.

    l. In the **Height** field, enter the height. This field is a required field.

12. In the Dimensions section, enter the necessary information about the simple pack.

13. In the Tolerance section, the following fields are available.

    a. **Tolerance Type**: This is the unit of the tolerances for catch weight simple packs. The valid values are A (actual) and % (percentage).

    b. **Min**: This is the minimum tolerance value for the Catch Weight simple pack.

    c. **Max**: This is the maximum tolerance value for the Catch Weight simple pack.

14. In the Grocery Attributes section, the following fields are available.

> **Note:** The Catch Weight and Tolerance areas are enabled only if you select Catch Weight in the Attributes area of the Item page.

    a. Select the **Constant Dimensions** checkbox, if the pack dimensions are fixed.

    b. The **Order Type** field gets enabled only for Catch Weight pack.

    c. The **Sale Type** field gets enabled only for Catch Weight pack.

15. Then choose one of the following options.

- Click **OK** to add the current pack to the table

- Click **OK and Add Another** to add additional packs.

- Click **Cancel** to reject all entries and close the page.

Creating Packs

To create packs follow, follow the steps listed below.

1. In the toolbar, select **Create Packs**. The Create Packs page appears.

Figure 1–16   Create Packs Page
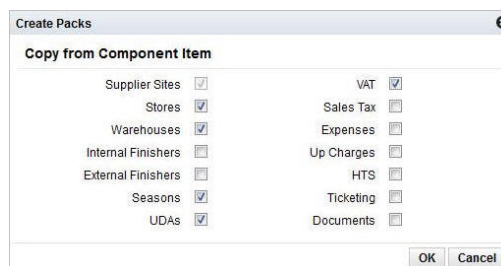

2.   Select which details you want to copy from the component item to the simple pack.

3.   Then choose one of the following options.

   ■   Click **OK** to add the simple pack to the table. The Exists checkbox is automatically selected and the selected component details are copied to the simple pack.

   > **Note:**   When you click Create Packs, component details are copied to the new simple packs. If simple packs already exist, their details are not updated.

   ■   Click **Cancel** to reject all entries and close the page.

Editing Pack Items

To edit a simple pack, follow the steps below.

1.   From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2.   Search for and retrieve a simple pack item.

3.   Click **Search**. The item is displayed in the Results section.

4.   In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5.   Then select **More Actions > Simple Pack > Setup**. The Simple Pack Setup page appears.

6.   In the table, select a record.

7.   Then select **Actions > Edit**, or use the Edit icon ✎. The Edit Pack page appears. The pack information of the selected item is displayed.

8.   Edit the fields as necessary.

9.   Then choose one of the following options.

   ■   Click **OK** to save your changes.

   ■   Click **Cancel** to reject your entries and close the page.

Viewing Pack Items

To view pack item, follow the steps below.

1.   From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Search for and retrieve a simple pack item.

Figure 1–17   Pack Item Detail - Simple Pack
3. Click **Search**. The item is displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit/View** or use the corresponding items. The Item page appears.

5. Then select **More Actions > Simple Pack > View**. The Simple Pack page appears.

6. Click **Done** to close the page.

Complex Packs

To create a complex pack, follow the steps below.

1. From the Tasks menu, select **Items** > **Create Item**. The Create Item page appears.

2. In the **Type** field, select simple pack from the list.

3. The necessary item type indicators are selected by default. If necessary, select the **Catch Weight** checkbox.

   - **Sellable**: When selected, indicates that the item is sold and is sent to the POS.

   - **Orderable**: When selected, the item can be ordered, set up on replenishment, and can have HTS and expenses set up.

   - **Inventoried**: When selected, indicates that the inventory is tracked and held in Merchandising.

   - **Catch Weight**: The Catch Weight functionality allows items that may be purchased and sold in varying weights to be better managed within Merchandising. The Catch Weight items are weighed at the receiving location.

4. In the **Department, Class,** and **Subclass** fields, enter, select or search for the IDs of the merchandise hierarchy.

5. The **Transaction Level** field, defaults to level 1.

6. In the **Number Type** field, select the type of item number that you want to associate with the item.

> **Note:** If you select Oracle Retail Item Number or UPC-A in the **Type** field, the item number is automatically added. If you select EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate**. If you select Manual, the description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

7. In the **Description** and **Short** field, enter a description for the item.

8. Click **OK**. The Item page appears.

    For more information about the Item page, see the Item Page section.

9. Add the cost zone group.

    Go to the Cost and Price section. In the **Cost Zone Group** field, enter, select or search for the cost zone group.

10. In the Complex Pack section, select the pack type from the list and select the necessary checkboxes.

    For more information about this Complex Pack section, see the Pack section.

11. In the Attributes section, enter, select or search for the attributes as necessary. For more information about attributes, see the Attributes section.

12. Add a supplier and a sourcing country for the item.

    In the Item page, select **More Actions > Suppliers**. The Item Supplier page appears. For more information about this page, see the Add Suppliers section

    ■   Add a supplier by selecting **Actions > Add**, or using the Add icon ✛.

    ■   Add a sourcing country for the supplier of the item by select **Actions > Countries of Souring**, or by clicking the **Country of Sourcing** button.

13. Add the component items for the complex pack.

    In the Complex Pack section, click the Pack Details icon. The Pack Item Detail page appears. For more information about the Pack Item Detail page, see the Pack Item Detail section.

14. Edit the retail price of the item.

    In the Item page, select **More Actions > Retail by Zone**. The Retail by Zone page appears. For more information about this page, see the Define Initial Prices section.

15. Save you entries.

Pack Item Detail

In the Pack Item Detail page you can add, edit, delete and view the component items of a pack item. A complex pack may be composed of multiple units of multiple items. A simple pack may be composed of multiple units of one item.

There are some restrictions depending on the how you define the purpose of the pack:

Orderable pack: You cannot add, delete, or edit the component items if the pack is already on order or stocked at any location.

Sellable pack: You cannot add, delete, or edit the component items after the pack item is priced.

The Pack Item Details page varies depending whether you maintain a complex or simple pack.

Simple Pack:

- Header

  The header displays the label **Simple Pack**, the pack number and description. The right hand side displays the Pack Cost and Currency.

- Component

  In this section you can search for a component item. You can add only component item in case of simple packs.

  - In the **Component Item** field, enter, select or search for the component item.

  - In the **Quantity** field, enter the quantity for the component item.

  - The Cost and Retail section displays the **Unit** and **Total** fields. These fields are populated when you enter the item.

Complex Pack:

- Header

  The header displays the label **Complex Pack**, the pack number and description. The right hand side displays the Pack Cost and the Currency.

- Components

- Supplier Pack Template Description

Figure 1–18   Pack Item Detail - Complex Pack
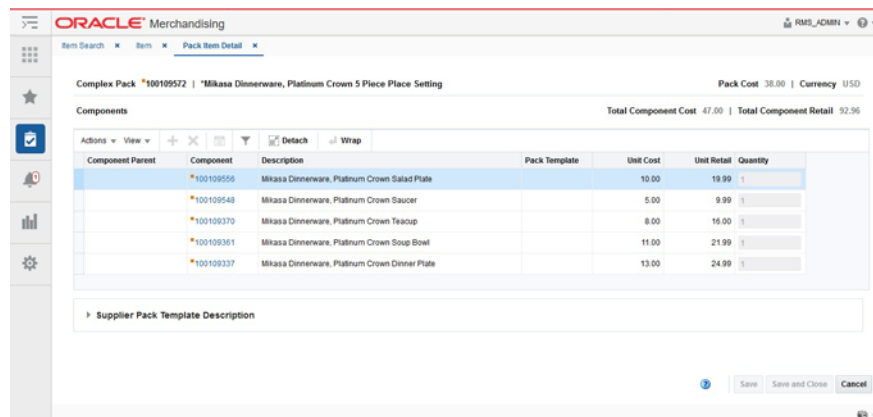

Components

The Components section displays a table which contains all the component items that are part of the complex pack. The title displays the Total Component Cost and Total Component Retail in the in right hand corner.

You can edit the **Quantity** column of the component item directly in the table.

Supplier Pack Template Description

If the pack item is associated with a pack template the table in the Supplier Pack Template Description expands. You can add more suppliers and descriptions in addition to the pack supplier in this section.

You can edit the **Pack Template Description** column directly in the table.

Maintaining Pack Item Details

To maintain pack item details, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Restrict your search to the item type Simple Pack or Complex Pack in Worksheet status.

4. Click **Search**. The items that match the search criteria are displayed in the Results section.

5. In the item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

6. In the Simple/Complex Pack section, select the Pack Item Details icon ▣. The Pack Item Details page appears.

Simple Packs

For simple packs, enter the following details.

1. In the **Component Item** field, enter, select or search for the component item.

2. In the **Quantity** field, enter the quantity for the component item.

3. The Cost and Retail section displays the **Unit** and **Total** fields. These fields are populated when you enter the item.

4. Save your changes.

Complex Packs
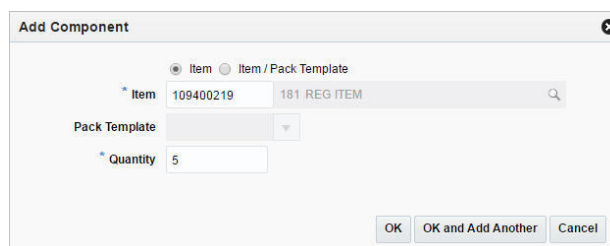

For complex packs, add component items and supplier pack templates.

Adding Components for Complex Packs

To add components for complex packs, follow the steps below.

1. In the Components section, select **Actions > Add**, or use the Add icon ✚. The Add Component page appears.

Figure 1–19   Add Component Page

2. Select if you want to add an item or an item/pack template.

3. In the **Item** field, enter or search for an item. This field is a required field.

4. In the **Pack Template** field, enter, select or search for the template. Only enabled if you select item/pack template.

5. In the **Quantity** field, enter the quantity for the component item.

6. Then choose one of the following options.

   - Click **OK** to add the component to the table.

   - Click **OK and Add Another** to add additional components.

   - Click **Cancel** to reject all entries and close the page.

7. Save your entries.

Adding Supplier Pack Templates

To add supplier pack templates for complex packs, follow the steps below.

1. In the Supplier Pack Templates Description section, select **Actions > Add**, or use the Add icon +. The Add Supplier Pack Template Description page appears.

2. In the **Supplier Site** field, enter or search for the supplier site.

3. In the **Pack Description** field, enter the description for the pack.

4. Then choose one of the following options.

   - Click **OK** to add the supplier pack template to the table.

   - Click **OK and Add Another** to add additional supplier pack templates.

   - Click **Cancel** to reject all entries and close the page.

5. Save your entries.

Add Suppliers

In the Item Supplier page you can add, edit, delete and view the suppliers for an item. By default, the first supplier is marked as the primary supplier for the item. After additional suppliers are added, the primary supplier can be redefined.

The Item Supplier page contains the following sections.

- Header

  The header displays the Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–20   Item Suppliers Page
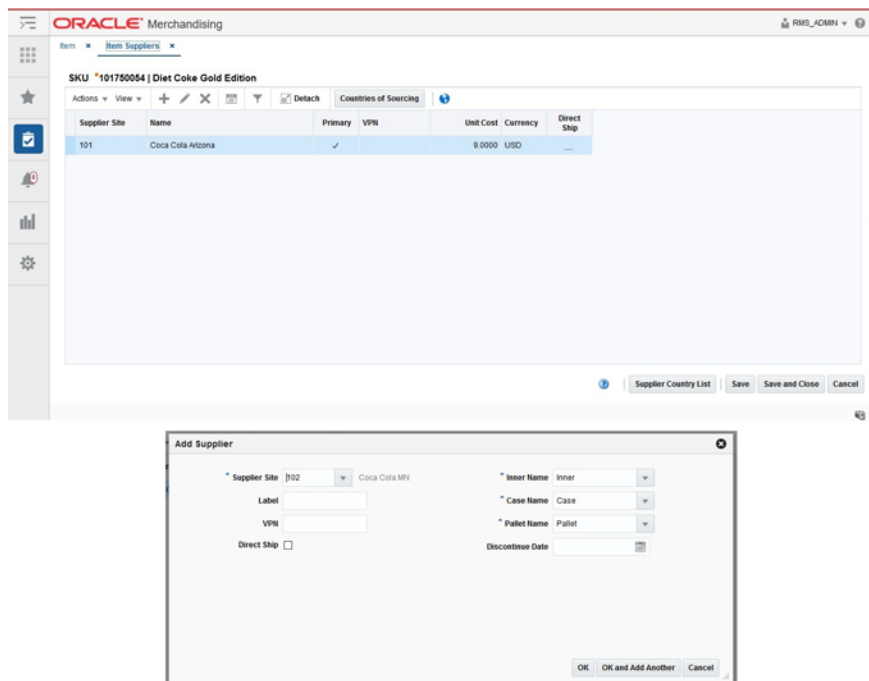

The table header contains the item number and item description. The table displays the supplier site, the supplier site name, the vendor product number (VPN), the unit cost as well as the currency. Additionally the table displays whether or not a direct shipment from the supplier to the customer is eligible.

Maintaining Item Suppliers

To maintain item suppliers, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Restrict the search to items in Worksheet status.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Select **More Actions > Suppliers**. The Item Suppliers page appears.

Adding Item Suppliers

To add item suppliers, follow the steps below.

1. In the Item Suppliers page, select **Actions > Add**, or use the Add icon ✚. The Add Supplier page appears.

Figure 1–21   Add Supplier Page

a. In the **Supplier Site** field, enter, select or search for the supplier site. This field is a required field.

b. In the **Label** field, enter the supplier label for the item.

c. In the **VPN** field, enter the vendor product number.

d. In the **Differentiator** fields, enter the diff values, if applicable.

e. Select the **Direct Ship** checkbox, if direct shipments from the supplier to the customer are permitted.

f. The **Inner Name**, **Case Name** and **Pallet Name** fields, are defaulted to the name used by the supplier to refer to the inner, the case and the pallet. These fields are required fields.

g. In the **Discontinue Date** field, enter the date at which the supplier discontinues the item or use the Calendar icon to select the discontinue date.

h. In the **Primary Case Size** field, select the primary case size from the list.

> **Note:**   This field is only enabled, if the Advanced Inventory Planning application is used.

i. Select the **Apply Modifications to Child Items** checkbox, to update the child items.

j. Then choose one of the following options.

> **Note:**   The first supplier added to the item, is marked as the primary supplier by default. You can change the primary supplier for the item, after you have added additional suppliers.
>
> For more information about how to change the primary supplier for an item, see the Editing Item Suppliers section.
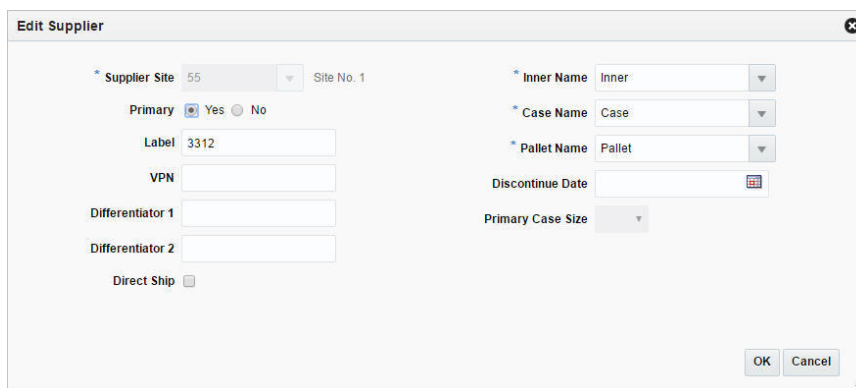

– Click **OK** to save the supplier for the item and close the page.

– Click **OK and Add Another** to add additional suppliers for the item.

– Click **Cancel** to reject all entries and close the page.

Editing Item Suppliers

To edit item suppliers, follow the steps below.

1. In the Items Supplier page, select a record in the table.

2. Then select **Actions > Edit**, or use the Edit icon ✏. The Edit Supplier page appears.

Figure 1–22   Edit Supplier Page

3. Edit the fields, as necessary.

> **Note:**   If you want to define the current supplier as the primary supplier for the item, select the **Primary** option.

4. Then choose one of the following options.

    –   Click **OK** to save your changes and close the page.

    –   Click **Cancel** to reject all entries and close the page.

Item Supplier Countries

The Item Supplier Countries page allows you to add, edit, and view the sourcing countries that are associated with an item supplier combination. You can define a Purchase type that captures the Ownership model agreed upon with the supplier for the specific Item-sourcing country combination. Three types of Ownership models are supported namely Owned Merchandise, Consignment and Concession. Consignment and Concession ownership models can be selectively enabled through system option configuration Based on the ownership model you can enter the costs or costing method negotiated with the supplier. Additionally you can maintain location defaults, ordering, case, and packaging information

You can view all countries associated to the item in the table of the Country of Sourcing section. For each country up to four dimension records can be created.

The Item Supplier Countries page contains the following sections.

■   Header

Depending on the item you have selected, the label of the header varies. The label displays Item Level (SKU/Style/ Reference Item), the item number and item description. Additionally, the header contains the supplier site number and name and indicates whether or not the selected supplier is the primary supplier for the item.

– Click **Cancel** to reject all entries and close the page.

Item Locations

In the Item Locations page you can view and maintain the locations at which an item is stocked. Locations for items at or above the transaction level can be maintained. If the item is above the transaction level, an option to automatically apply changes to child items down to the transaction level can be selected.

Additional information can be added at the item location level that is different at the location than it is for the item.

You can add the following additional information:

■ Item's active status

■ Costing information, for the pack and the unit

■ Tier - Height information

■ Units of measure and the appropriate measure

■ Type of the Unique Identification Number (UIN)

■ Additional attributes, including wastage and inbound handling days

The Item Locations page contains the following sections.

■ Header

The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–33   Item Locations Page

Table

The table label displays the item number and either the item description or indicates whether the selected item is a pack or reference item. Additionally the standard unit of measure is displayed in the top right corner. The table displays the locations information for the selected item.

Maintaining Item Locations

To maintain item locations, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

Access from the **Item** page:

■ Select **More Actions > Locations**. The Item Locations page appears.

Adding Locations To add a new location for an item, follow the steps below.

1. In the Item Locations page, select **Actions > Add**, or use the Add icon ✚. The Add Locations page appears.

Figure 1–34   Add Locations Page

2. In the **Location** field, select the location type from the list. Then choose the location.

3. The system displays the information of the selected location.

4. Add the information at the item location level that is different at the location than at the item level.

   Edit the displayed information in the following sections:

   a. Status of the Item

   b. Sourcing and Handling information

      – **Primary Supplier Site** – Enter or select a primary supplier site for the location if it's different from the one specified at the item level.

      – **Primary Country** – Enter or select a primary country for the location if it's different from the one specified at the item level.

      – **Purchase Type** – This field is available only when consignment/concession functionality is used in the system. Select a value to specify ownership type of item if it's different from what's defined at the item supplier country level.

      – **Calculation Basis** – Only available when purchase type is consignment or concession. Specifies if the costing of the item will be based on per unit cost or a purchase rate.

      – Specify unit cost or purchase rate depending on the calculation basis specified.

      – **Source Method** – Select if the default source method for the location will be supplier or warehouse.

      – **Source Warehouse** – Default source warehouse for the location.

      – **Store Order Multiples** – Specify the multiple in which item needs to be shipped from a warehouse to the location.

      – The **Ranged** checkbox determines if the location is ranged intentionally for replenishment/selling or incidentally ranged by the Merchandising

transaction when the item is not ranged to a specific location on the transaction.

–   **Inbound Handling Days** – Specify inbound handling days for warehouses.

c.   Location Item Description

d.   Tier - Height information

e.   Costing information

Edit the information for the pack and the unit.

f.   Type of the Unique Identification Number Type (UIN)

–   In the **Type** field, select the UIN type from the list. This number is used to identify the instance of the item at the location.

–   In the **Label** field, select the UIN label from the list. This number will be displayed in SIM.

5.   If the selected item is a parent item, the **Apply Modifications to Child Items** checkbox is displayed. The checkbox indicates whether or not the updates are also applied to the child item. The checkbox is selected by default.

6.   The **Process In Background** checkbox determines if the ranging of items to the selected locations happens immediately or the ranging is submitted in the background.

> **Note:**   This checkbox must be checked if the list of locations ranged is big, so that you do not have to wait for the ranging to complete. Submitting the ranging to background disables this page and the Item page goes into View mode.
>
> You can check Asynchronous Job Log for status of the ranging happening in background.

7.   Then choose one of the following options.

–   Click **OK** to add the location for the item and close the page.

–   Click **OK and Add Another** to add additional locations for item.

–   Click **Cancel** to reject all entries and close the page.

Editing Locations To edit locations for an item, follow the steps below.

1.   Select **Actions > Edit**, or use the Edit icon ✎. The Edit Locations page appears.

2.   Edit the fields, as necessary.

3.   Then choose one of the following options.

–   Click **OK** to save your changes and close the page.

–   Click **Cancel** to reject all entries and close the page.

Item Location Traits

The Item Location Traits page is used to define and maintain item attributes at a single location or at multiple locations. Some of these attributes are downloaded at the Point of Service (POS) or a ticketing system, while others are entered for information only and drive no processing.

The Item Location Traits page contains the following sections.

- Header

  The header contains the item number and description.

- Apply Updates To

  This section contains the following subsections:

  > **Note:** Only available if you selected the **Mass Change > Locations Traits** option in the Item Locations page.

  - Customer Order Attributes
  - Grocery Attributes

Figure 1–35   Item Location Traits Page
Table In this table you can add and delete locations for the item attributes.

> **Note:** Only available if you selected the **Mass Change > Locations Traits** option in the Item Locations page.
Maintaining Item Location Traits To define and maintain item location traits, follow the steps listed below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Select **More Actions > Locations**. The Item Locations page appears.

Updating Multiple Locations To updating multiple locations, by using the **Mass Change** option, follow the steps below.

1. In the Item Locations page select **Mass Change > Location Traits**. The Item Location Traits is displayed.

2. In the table of the Apply Updates To section, you can add one or more locations for which location traits may be updated.

3. Select **Actions > Add**, or use the Add icon ✚. The Add Locations page appears.

   a. In the **Location** field, select a location type from the list. Then select the location.

   b. Then choose one of the following options.

      – Click **OK** to add the current location to the table and close the page.

      – Click **OK and Add Another** to add additional locations.

      – Click **Cancel t**o reject your entries and close the page.

4. Enter, select or search the new values for the desired traits.

5. Choose a saving option.

Updating a Single Location To update a single location, follow the steps listed below.

1. In the Item Locations page, select a location in the table.

2. Then select **Actions > Location Traits**. The Location Traits page appears with the highlighted location populated in the header of the Item Location Traits page.

3. Enter, select or search the new values for the desired traits.

4. Choose a saving option.

Viewing Item Location Traits To view item location traits, follow the steps listed below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Results section, mark a record and select **Actions > View**, or use the View icon ∞. The Item page appears.

5. Select **More Actions > Locations**. The Item Locations page appears.

6. In the Item Locations page, select a location in the table.

7. Then select **Actions > Location Traits**. The Location Traits page appears. View the item location traits.

8. Click **Done** to close the page.

Create Child Items

Merchandising provides the option to define three possible levels of hierarchy for items. Names of these levels are configurable. Depending on the industry and type of items, number of levels is utilized while creating items. A child item is an item that exists below another item, called the parent item, in the item hierarchy.

For example, fashion retailers usually utilize all three levels of item hierarchy to represent the style, SKU, and barcode items. In this case, the style is considered the parent item, and the SKU, usually differentiated by color and size, is the child of the parent and the barcode is a child of the SKU. SKU level is generally designated as transaction level, or where inventory and sales are tracked.

Hardline and grocery retailers generally utilize only two levels of item hierarchy where first level is the SKU, or transaction level, and the level below represents one or more barcodes. In this case the SKU is the parent and the barcode is the child item.

Therefore, depending on the business requirements, child items can be created for transaction level items using differentiators, or without differentiators for sub-transaction level items, such as barcodes.

With Diffs

In the Item Children by Diff page you can edit child items created with differentiators, generate EAN13s or create grand children.

You can perform the following actions in this page.

- Edit the description and other details of level 2 or level 3 items that were created with differentiators.

- Generate EAN13s.

- Create children of level 2 transaction level items.

The Item Children by Diff page contains the following sections.

- Header

  The header displays the Item Level (SKU/Style/ Reference Item), the item number and the item description. Additionally the transaction level and the currency are displayed in the right hand corner. The differentiator groups/values associated with the parent item are displayed.

Figure 1–36   Item Children by Diff Page

Table The table lists the child items. The item level description, description, EAN 13, status, unit cost, standard unit retail, markup % andVPN are displayed by default.

You can edit the **Description**, the **EAN 13** and the **VPN** (Vendor Product Number) column directly in the table.

Maintain Item Children by Diff To maintain item children, follow the steps listed below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon . The Item page appears.

5. Click **More Actions > List Children**. The Item Children by Diff page appears.

Mass Update To perform a mass update, follow the steps below.

1. Click **Mass Update**. The Mass Update page appears.

Figure 1–37   Mass Update Page

2. The **Supplier Site** field is populated with the parent item's primary supplier and the **Price Zone** field is populated with the price zone group's base zone.

3. In the **Differentiator** Group field, enter, select or search for a diff group.

4. If a diff group is selected. The **Differentiator** field enables, enter, select or search for the appropriate diff.

5. Select the **Generate EAN 13** checkbox, to generate EAN 13 for the child items.

6. In the Update Supplier Information section, enter the values as necessary.

   a. In the **Unit Cost** field, enter the unit cost, if necessary.

   b. In the **VPN** field, enter the vendor product number, if necessary.

   c. In the **Supplier Diff** fields, enter the diffs. All available diffs are displayed.

7. In the Update Pricing section, enter the values as necessary.

   a. In the **Price Zone** field, edit the price zone, if necessary.

   b. In the **Unit Retail** field, enter the unit retail price.

   > **Note:** When the items are approved, the Update Pricing section is not available. You cannot update the price zone and the unit retail price.

8. Then choose one of the following options.

   ■ Click **OK** to add the item to the table and close the page.

   ■ Click **OK and Add Another** to add additional items.

   ■ Click **Cancel** to reject all entries and close the page.

Item Children

The Item Children page is used to create a subset of items from an item that is already entered into Merchandising. In this screen, you can perform the following actions:

- Edit level 2 or level 3 items that were created without differentiators.

- Edit the description of items at level 2 or level 3 of an item group.

- Use the Actions menu to edit details for the selected level 2 or level 3 item.

The Item Children page contains the following sections.

- Header

  The header displays the Item Level (SKU/Style/ Reference Item),, item number and the item description. Additionally the transaction level is displayed in the right hand corner. If the parent item has differentiators associated, all differentiators are displayed.

Figure 1–38   Item Children Page
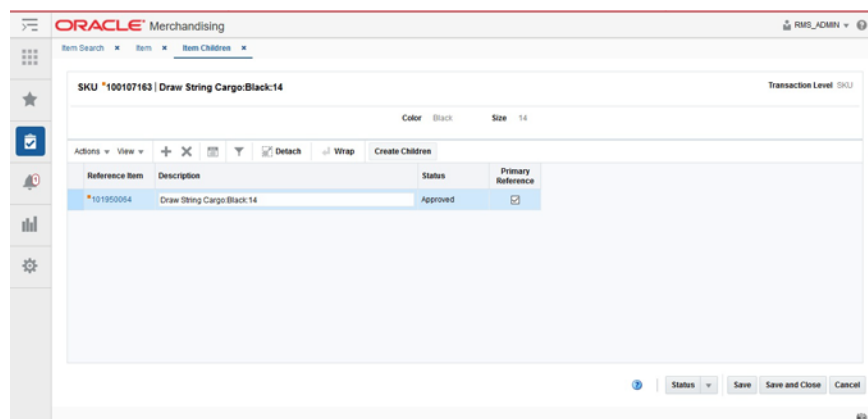

Table The table lists the child items. The columns Reference Item, Description, Status and Primary Reference Item are displayed.

You can edit the **Description** column directly in the table.

Maintain Item Children To maintain item children, follow the steps listed below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Click **More Actions > List Children**. The Item Children page appears.

Adding Items To add items, follow the steps below.

1. Select **Action > Add**, or use the Add icon ✚. The Add Item page appears.

Figure 1–39 Add Item Page

2. In the **Number Type** field, select a number type you want to add from the list. This field is a required field.

   ■ If you select Oracle Retail Item Number or UPC-A, the item number is automatically added.

   ■ If you select EAN/UCC-13, you can automatically generate the EAN number by clicking the **Generate**.

   ■ If you select Manual, the Description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation.

   ■ If you select Variable Weight PLU, the fields Format and Prefix enable.

3. In the **Reference Item** field, enter the item. This field is a required field.

4. In the **Description field**, enter the description of the item. This field is a required field.

5. Then choose one of the following options.

   ■ Click **OK** to add the item to the table and close the page.

   ■ Click **OK and Add Another** to add additional items.

   ■ Click **Cancel** to reject all entries and close the page.

Create Children Page

In the Create Children page you can select differentiators while creating child items for items with differentiators. Differentiators can be applied individually, by differentiator range, or by differentiator group. When two types of diff values are combined, a level 2 or level 3 item is created for each possible combination of the two types. The new child items appear in the Pending Child Items section.

The Create Children page contains the following sections.

■ Header

   The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

■ Ranges

■ Differentiators

■ Pending Child Items

Figure 1–40   Create Children Page

Ranges This section is only available, if there are applicable differentiator ranges. Irrespective of the number of the possible ranges that can be applied, only one differentiator range is displayed by default.

Differentiators The Differentiator section can contain up to four possible differentiator tables, listing all the differentiators for each differentiator group or ID. Only differentiator tables containing values are displayed, therefore the number of visible tables equals to the number of diff group/value of the item.

For group type diffs, the table header contains the diff group description. For value type diffs, the table header contains the diff type description. The tables display the columns diff type description and description.

Pending Child Items The Pending Child Items table only lists new unique child items for further operations.

Create Child Items for Items with Diffs To create children for Items with diffs, follow the steps listed below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon . The Item page appears.

5. Click **Create Children**. The Create Children page appears.

Applying a Diff Range To apply a diff range, follow the steps below.

1. Go to the Range section.

> **Note:** This section is only available, if there are applicable differentiator ranges.

2. In the **Range** field, enter select or search for the first range.

3. Then click the **Apply** button in the top right corner of the section.

4. If there are more possible ranges that can be applied, the Add icon ✚ enables next to the range field.

5. If you click on the Add icon ✚, a second range field appears, with a disabled Add icon ✚ and an enabled Delete icon ✖.

6. Repeat these steps to add up to four diff ranges.

> **Note:** When you have added the fourth differentiator range, only the Delete icon ✖ will be enabled, since you can only add up to four differentiator ranges.
Applying Diffs To apply diffs, follow the steps below.

1. In the **Item Number Type** field, select the type of item number that you want to associate with the item.

   - If you select Oracle Retail Item Number or UPC-A in the **Item Number Type** field, the item number is automatically added and displayed in the Pending Child Items table.

   - If you select EAN/UCC-13 in the **Item Number Type** field, you can automatically generate the EAN number by clicking the **Generate** button in the Edit Pending Child Item page.

     For more information about how to edit pending child items, see the Editing Pending Child Items section.

   - If you select Manual in the **Item Number Type** field, the Description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation

2. Select all diffs or individual diffs rows in the diff tables.

3. Then click **Apply** to generate child items. The Pending Child table is populated with all possible combination of the diffs selected in the Differentiator section.

4. If a range is applied for the diff group/value, the message Applied is displayed in the upper right corner of the individual table header.

Editing Pending Child Items To edit pending child items, follow the steps below.

1. In the Pending Child Items section, select a record in the table.

2. Then select **Actions > Edit**, or use the Edit icon ✎. The Edit Child Item page appears. The data of the selected child item is displayed.

3. If you edit a Variable Weight PLU, the format and prefix values are displayed.

4. Edit the **Item** and/or **Description** field, as necessary.

> **Note:** You can edit the description also directly in the table.
>
> If you edit an item with the item type number EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate** button.

5. Then choose one of the following options.

   - Click **OK** to add your changes to the table and close the page.

   - Click **OK and Edit Next** to edit the next child item in the table.

   - Click **Cancel** to reject your entries and close the page.

Add Up Charges

Item up charges refer to the set of expenses when moving an item from one store or warehouse to another within Merchandising.

Each up charge comprises of a calculation basis, cost basis, component rate and currency. The Item Up Charges page is only available when the Estimated Landed Costs option is set enabled.

The Item Up Charges page contains the following sections.

- Header

  The header varies depending on how you access the page:

  When you access the Item Up Charges page through the Item page, the header displays the item type, item number and item description.

  When you access the Item Up Charges page through the Item List Search page, the header displays the item list number and the item list description.

- Locations

- Up Charges

Figure 1–41 Item Up Charges Page

Locations

The Locations section displays the from and to locations containing expenses for the item or the items of the item list.

Up Charges

The Up Charges section displays the details of the up charges linked to a location.

Maintaining Item Up Charges

To maintain item up charges, follow the steps listed below.

For **Items**:

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. Select a record in the table.

5. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✐. The Item page appears.

6. Then select **More Actions > Item Up Charges**. The Item Up Charges page appears.

For **Item Lists**:

1. From the Tasks menu, select **Foundation Data > Items > Manage Item List**. The Item List Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. Select a record in the table.

5. Then select **Actions > Mass Change > Up Charges**. The Item Up Charges page appears.

Adding Locations To add locations for up charges, follow the steps listed below.

> **Note:**   If you add locations for an item or an item list you must enter an up charge component at the same time.
>
> After you have added locations you can select a location in the Locations section and add more components to this location.

1. In the Locations section select **Actions > Add**, or use the Add icon ✚. The Add Locations page appears.

Figure 1–42   Add Locations Page

2. In the Locations section, enter the following fields.

a. In the **From Group Type** field, select a from location type from the list. This field is a required field.

b. In the **From Group** field, enter, select or search for the from location, if enabled.

c. In the **To Group Type** field, select the to location type from the list. This field is a required field.

d. In the **To Group** field, enter, select or search for the to location, if enabled.

3. In the Up Charges section, enter the following fields.

a. In the **Maintenance Type** field, select if you want to add or delete the component.

> **Note:**   The **Maintenance Type** field is only displayed for item lists. If you select Add and the up charge already exists, the details of the existing up charge will be overridden.

b. In the **Component** field, enter, select or search for the component. This field is a required field.

c. In the **Up Charge Group** field, select an up charge group from the list. This field is a required field.

d. In the **Component Rate** field, enter the rate. This field is a required field.

e. In the **Per Coun**t field, enter the number of counts, if enabled.

f. In the **Per Count Unit of Measure**, enter, select or search for the UOM, if enabled.

g. In the **Component Currency** field, enter, select or search for the currency.

4. Then choose one of the following options.

- Click **OK** to add the location and close the page.

- Click **OK and Add Another** to add additional locations.

- Click **Cancel** to reject all entries and close page.

Adding Components To add more components to a location, follow the steps listed below.

1. In the Locations section, select a location in the table.

2. In the Up Charges section select **Actions > Add**, or use the Add icon ✛. The Add Component page appears.

Figure 1–43   Add Component Page

3. In the **Maintenance Type** field, select a type from the list.

> **Note:**   The **Maintenance Type** field is only displayed for item lists. If you select Add and the up charge already exists, the details of the existing up charge will be overridden.

4. In the **Component** field, enter, select or search for the component. This field is a required field.

5. In the **Up Charge Group** field, select the group from the list.

6. In the **Component Rate** field, enter the rate.

7. In the **Per Coun**t field, enter the number of counts.

8. In the **Per Count Unit of Measure**, enter, select or search for the UOM.

9. In the **Component Currency** field, enter, select or search for the currency.

10. Select the **Update Transfers and Allocations** checkbox to indicate that the transfers and allocations should be updated.

11. Then choose one of the following options.

   - Click **OK** to add the component for the selected location and close the page.

   - Click **OK and Add Another** to add additional components for the location.

   - Click **Cancel** to reject all entries and close the page.

Editing Components To edit existing components, follow the steps listed below.

1. In the Up Charges section, select a record.

2. Then select **Actions > Edit**, or use the Edit icon ✎. The Edit Component page appears. The values of the selected component are displayed.

3. Edit the fields as necessary.

4.   Then choose one of the following options.

   ■   Click **OK** to save your changes and close the page.

   ■   Click **Cancel** to reject all entries and close the page.

Advanced Delete Use the **Advanced Delete** function to specify the desired From/Location combinations from which the selected component should be deleted.

> **Note:**   This function is not available for item lists.

1.   In the Up Charges section, select a record.

2.   Then click the **Advanced Delete** button. The Advanced Delete page appears.

Figure 1–44   Advanced Delete Page

3.   In the **From Group Type** field, select the from location type from the list. This field is a required field.

4.   In the **From Group** field, select the from location, if enabled.

5.   In the **To Group Type** field, select the to location type from the list. This field is a required field.

6.   In the **To Group** field, select the to location, if enabled.

7.   Then choose one of the following options.

   ■   Click **OK** to save your changes and close the page.

   ■   Click **Cancel** to reject all entries and close the page.

Define Substitute Items

In the Substitute Items page you can designate and maintain substitute items with an item and all the related information. Substitute items are associated at the item/location level. Substitution relationship is primarily used by replenishment.

You can indicate whether the main item or the substitute item is primarily used to fill the recommended order quantities. For the warehouse, you can also select multiple substitute items for the main item and enter the order in which they are picked as substitute for the main item.

The Substitute Items page contains the following sections.

■   Header

   The header of the page displays Item Level (SKU/Style/Reference Item), the item number and item description.

■   Locations

■   Substitute Items

Figure 1–45   Substitute Items Page
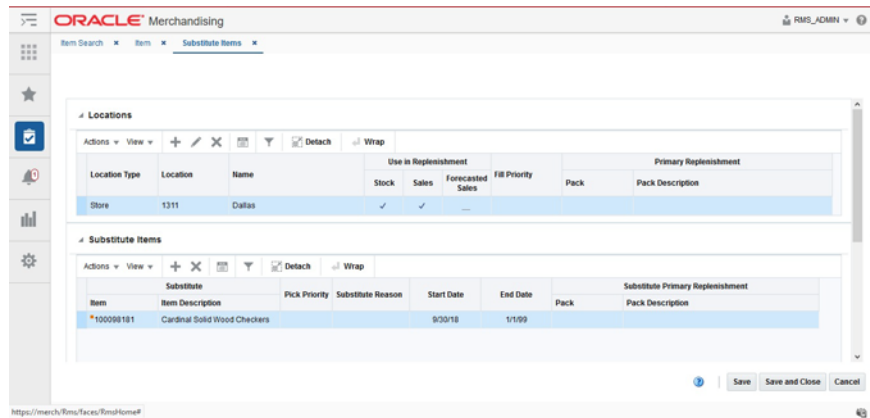

Locations In this section you can maintain locations for substitute items. The table lists the following columns by default.

■   Location Type

■   Location

■   Location Name

■   Use in Replenishment Indicators such as stock, sales and sales forecast

■   Fill Priority

■   Primary Replenishment such as pack and pack description

Substitute Items In this section you can maintain substitute items for an item.

Maintaining Substitute Items To maintain substitute items, follow the steps below.

1.   From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2.   Enter or select search criteria as desired to make the search more restrictive.

3.   Click **Search**. The items that match the search criteria are displayed in the Results section.

4.   In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5.   Select **More Actions > Substitute Items**. The Substitute Items page appears.

Adding a Location To add a location, follow the steps below.

1.   In the Locations section, select **Actions > Add**, or use the Add icon ✚. The Add Locations page appears.

Figure 1–46   Add Locations Page

> **Note:**   Only those locations which are ranged for the primary item can be added to the substitute items.

2. In the **Location** field, select the location type from the list. Then select the location.

3. In the Use in Replenishment section, select the checkbox next to the replenishment calculation indicator. You need to select one of the following options.

   - **Stock**: Indicates that the substitute item is included in determining the net inventory of the main item.

   - **Sales**: Indicates that the sales history for the substitute item is included in determining the maximum stock level.

   - **Forecast Sales**: Indicates that sales forecasts for the substitute items is used in calculating the location demand for the main item.

4. In the Fill Priority section, select whether the main item or the substitute item is primarily used to fill the recommended order quantities.

5. Then choose one of the following options.

   - Click **OK** to add the location.

   - Click **Cancel** to reject all entries and close the page.

Editing a Location   To edit a location, follow the steps below.

1. In the Locations section, select a location.

2. Then select **Actions > Edit**, or use the Edit icon ✏. The Edit Locations page appears.

3. In the **Location** field, the location type and location are displayed.

4. In the Use in Replenishment section, edit the replenishment indicators, as necessary.

5. In the Fill Priority section, edit the options, as necessary.

6. Then choose one of the following options.

   - Click **OK** to save your changes.

   - Click **Cancel** to reject all entries and close the page.

Adding a Substitute Item   To add an item, follow the steps below.

1. In the Substitute Items section, select **Actions > Add**, or use the Add icon ✚. The Add Substitute Item page appears.

Figure 1–47   Add Substitute Item Page

2. In the **Substitute Item** field, enter or search for the item. This field is a required field.

3. In the **Substitute Primary Replenishment Pack** field, enter or search for the substitute primary replenishment pack.

4. In the **Pick Priority** field, enter the priority level of the substitute item.

5. In the **Start Date** field, enter the starting date for the substitute item or use the Calendar icon to select a date. This field is a required field.

6. In the **End Date** field, enter the ending date for the substitute item or use the Calendar icon to select a date. This field is a required field.

7. In the **Substitute Reason** field, select the corresponding reason from the list. This field is a required field.

8. Then choose one of the following options.

   ■ Click **OK** to add the substitute.

   ■ Click **Cancel** to reject all entries and close the page.

Add User Defined Attributes

The Item UDA List page allows you to maintain and view the user defined attributes (UDA) that are associated with an item.

The Item UDAs page contains the following sections.

■ Header

  The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

■ List of Values

■ Dates

■ Free Form Text

Figure 1–48   Item UDAs Page

User Defined Attribute Defaults When you create a new item and enter the Item UDAs page, the system verifies if any defaults are defined for the hierarchy in which the item is created. If defaults are defined, the UDA Defaults page appears.

The page displays the following defaults:

- List of Values

- Dates

- Free Form Text

You can enter UDA values, dates or texts for each required UDA as well as for each non-required UDA directly in the corresponding table.

You can also delete the non-required UDAs by selecting **Actions > Delete**, or using the Delete icon ✕.

To close the page choose one of the following options.

- Click **OK** to add the UDA defaults to the corresponding tables in the Item UDAs page and exit the page.

- Click **Cancel** to exit the UDA Defaults as well as the Item UDAs page.

List of Values This section displays the user defined values for the selected item. You can edit the **UDA Value** field directly in the table.

Dates This section contains the user defined dates for the item. You can edit the **Date** field, directly in the table.
Free Form Text The Free Form Text section displays the user defined text for the item. You can edit the Text field directly in the table.

Maintaining User Defined Values To maintain user defined attributes (UDAs) associated with an item, follow the steps below
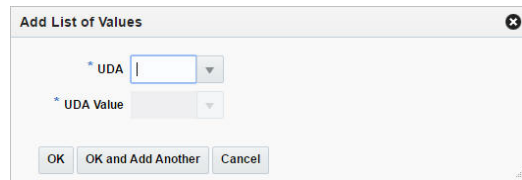

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Select **More Actions > User Defined Attributes**. The Item UDAs page appears.

Adding List of Values To add a new UDA value, follow the steps below.
1. In the List of Values section select **Actions > Add**, or use the Add icon ✛. The Add List of Values page appears.

Figure 1–49   Add List of Values Page
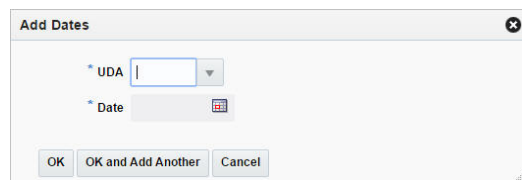

2. In the **UDA** field, enter, select or search for the desired attribute.

3. In the **UDA Value** field, enter, select or search for the value.

4. Then choose one of the following options.

   ■ Click **OK** to add the UDA value to the table and close the page.

   ■ Click **OK and Add Another** to add additional UDA values.

   ■ Click **Cancel** to reject all entries and close the page.

Adding Dates for User Defined Attributes To add dates for user defined attributes, follow the steps below.

1. In the Dates section, select **Actions > Add**, or use the Add icon ✛. The Add Dates page appears.

Figure 1–50   Add Dates Page

2. In the **UDA** field, enter, select or search for the desired attribute. This field is a required field.

3. In the **Date** field, enter the desired date or use the Calendar icon to select a date.This field is a required field.

4. Then choose one of the following options.

   ■ Click **OK** to add the date for the UDA to the table and close the page.

   ■ Click **OK and Add Another** to add additional UDA dates.

   ■ Click **Cancel** to reject all entries and close the page.

Adding Free Form Texts for User Defined Attributes To add free form texts for user defined attributes, follow the steps below.

1. In the Free Form Text section, select **Actions > Add**, or use the Add icon ✚. The Add Free Form Text page appears.

Figure 1–51 Add Free Form Text Page

2. In the **UDA** field, enter, select or search for the desired attribute. This field is a required field.

3. In the **Text** field, enter the desired text. This field is a required field.

4. Then choose one of the following options.

   - Click **OK** to add the UDA text to the table and close the page.

   - Click **OK and Add Another** to add additional UDA texts.

   - Click **Cancel** to reject all entries and close the page.

Add Related Selling Items

In the Related Items page you can to add, delete or view item relationship details. Once the relationship type details have been created, items can be associated by providing an item number or an item list. The functionality of related items is used for the purpose of cross-selling, up-selling or defining substitution items for use by customer order applications, which assist in the selling process. Substitution relationships are also communicated to SIM for use during the fulfillment process.

The Related Items page contains the following sections.

- Header

  The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

- Item Relationship

- Related Items

Figure 1–52   Related Items Page
Item Relationship In the Item Relationships section you can create the relationship. You have to add a relationship to enable the Related Items section.

You can edit the description as well as the **Mandatory** checkbox directly in the table.

Related Items In Related Items section you can add, edit and delete related items. The table displays the item, item description, priority, start an end date by default.

Related Items - Actions Menu and Icons Use the Actions Menu and icons to apply actions to the table. You can perform the actions listed below.

Table 1–10   Related Items- Actions Menu/Icons and Description

Actions Menu/Icons	Description
Add and Add icon ✚	You can add an item by selecting **Actions** > **Add** or by using the Add icon ✚.
	For more information about how to add an item, see the Adding Related Items section.
Edit and Edit icon ✎	Select **Actions > Edit,** or use the Edit icon ✎ to edit the selected item.
	For more information about how to edit a related, see the Editing Related Items section.
Delete and Delete icon ✖	You can delete a related item:
	■ Select a record in the table.
	■ Select **Actions > Delete** or use the Delete icon ✖.
	■ You are prompted, if you want to delete the record. Select **Yes** to confirm the prompt.
	■ The record is deleted from the table.
Export to Excel and Export to Excel icon ▦	You can export the records in the table to a Microsoft Excel spreadsheet by selecting **Actions > Export to Excel** or by using the Export to Excel icon ▦.

Maintaining Related Items To maintain related items, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Items Search page appears.

2. Restrict your search to items in Worksheet status.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Then select **More Actions > Related Items**. The Related Item page appears.

Adding an Item Relationship To add an item relationship, follow the steps below.

1. In the Item Relationship section, select **Actions > Add**, or use the Add icon ✛. The Add Item Relationship page appears.

Figure 1–53   Add Item Relationship Page

2. In the **Type** field, select the relationship type. Possible relationship types are:

    ■ **Cross Sell**: This option is used to associate an item which is related as being an add-on or an accessory to the main item.

    ■ **Up-Sell**: This option is generally used to associate an item of greater quality and value then the item it is being associated to.

    ■ **Substitution**: This option is used to define which items should be considered valid for substitution when fulfilling a customer order in the event that the ordered item is out of stock.

3. In the **Description** field, enter a description for the item relationship.

4. Select the **Mandatory** checkbox to indicate that the relationship is mandatory, meaning the main item cannot be purchased without selecting an item (or items) from the related list.

5. Then choose one of the following options.

    ■ Click **OK** to add the item relationship to the table and enable the Related Items section.

    ■ Click **OK and Add Another** to add additional item relationships.

    ■ Click **Cancel** to reject all entries and close the page.

Adding Related Items To add related items to an item relationship, follow the steps below.

1. Select a record in the Item Relationship section.

2. In the Related Items section, select **Actions > Add**, or use the Add icon ✛. The Add Related Items page appears.

Figure 1–54   Add Related Items Page

3. Select if you want to add a single item or an item list. Then enter or search for an item or enter, select or search for an item list.

4. In the **Priority** field, set the priority for the related item. This field is only enabled when the Relationship Type is Substitute for the selected record in the Item Relationship section.

    You need to set a priority for that item when there is more than one related item.

5. In the **Start Date** field, enter a start date or use the Calendar icon to select a date.

6. In the **End Date** field, enter an end date or use the Calendar icon to select a date.

7. Then choose one of the following options.

    ■   Click **OK** to add the related item to the table.

    ■   Click **OK and Add Another** to add additional related items.

    ■   Click **Cancel** to reject all entries and close the page.

Editing Related Items   To edit related items, follow the steps below.

1. Select a record in the Related Items section.

2. Then select **Actions > Edit**, or use the Edit icon ✎. The Edit Related Items page appears.

Figure 1–55   Edit Related Items Page

3. Edit the enabled fields as necessary.

4. Then choose one of the following options.

    ■   Click **OK** to save your changes for the related item.

    ■   Click **Cancel** to reject all entries and close the page.

Define Import Attributes

The Item Import Attributes page allows you to record and edit import information for a selected item.

The header of the Item Import Attributes page displays the item level description, or indicates if the item is a pack or reference item. Additionally the header displays the item number and the item description.

The attributes stored at the item level are used to describe the item and provide high-level tracking information. These attributes are maintained at the 'header' level of each of the functional item types within Merchandising/RTM.

Figure 1–56   Item Import Attributes Page

To record item import attributes, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Items Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon 🖉. The Item page appears.

5. Then select **More Actions > Import > Attributes**. The Item Import Attributes page appears.

6. Then enter the attributes listed in the table below.

Table 1–11   Item Import Attributes - Fields and Description

Fields	Description
Import Description	Enter the Importer's description associated with the item.
	This description is different from the standard item description, as it must be a minimum of 2000 characters in length to support a more detailed description of the item.

Table 1–11   (Cont.) Item Import Attributes - Fields and Description

Fields	Description
Commodity	Enter a generic entity used to group items together.
	For example, ceramic products might be used to group all ceramic products (including bowls, vases, figurines, and so on) that are imported into the country.
Tooling and Assists:	
Tooling Costs	Displays the tooling/assist costs for the item. When you record import attributes, enter the tooling/assist cost for the item.
First Order	If selected, the checkbox indicates that duty must be paid on the total value of the tooling expense the first time the item is shipped.
	Select or clear the **First Order** checkbox.
Amortize Base	Displays the number of units over which the tooling/assist cost will be amortized. This number is used to calculate the per unit amortization expense for estimated and actual landed cost records until the tooling costs are depleted.
	Enter the number of units over which the tooling cost will be amortized.
Open Balance	Displays the open balance of the number of units yet to be received over which the tooling costs will be amortized. The open balance is the number of units that the tooling costs will be amortized over minus the number of units already received.
	Enter the number of units in the open balance

Eligible Tariff Treatments The Eligible Tariff Treatments page allows you to maintain which tariffs are associated with an item.

Tariff Treatments are used to determine the duty, tax, and fee rates that will apply. Some tariff treatments are conditional and apply to only those items that meet certain eligibility requirements. In this page you can maintain the conditional tariff treatments. These tariff treatments are the ones for which the item is eligible.

The Eligible Tariff Treatments contains the following sections.

- Header

  The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–57   Eligible Tariff Treatments Page
Table   The table displays the tariff treatment and tariff description by default.

Maintain Tariff Treatments at the Item Level   To maintain which tariffs are associated with an item, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Items Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.
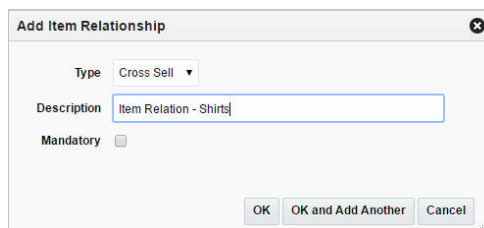

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Then select **More Actions > Import > Eligible Tariff Treatments**. The Eligible Tariff Treatments page appears.

Adding Tariff Treatments   To add tariff treatments, follow the steps below.

1. In the Eligible Tariff Treatments table, select **Actions > Add**, or use the Add icon ✚. The Add Tariff Treatment page appears.

2. In the **Tariff Treatment** field, enter, select or search for the tariff you want to associate with the item. This field is a required field.

3. Then choose one of the following options.

   ■ Click **OK** to add the tariff to the table.

   ■ Click **OK and Add Another** to add additional tariff treatments for the item.

   ■ Click **Cancel** to reject your entries and close the page.

Item HTS   In the Item HTS page you can maintain the Harmonized Tariff Schedule classifications and assessments as well as view HTS details that are associated with an item.

Assessments are calculated at the item, country of sourcing, import country level. The cost components track the pertinent assessments for an item by HTS classification.

They may be included in duty, expense, and actual landed cost calculations. Assessments differ from expenses in that they are defined by a government agency.

The Item HTS page contains the following sections.

- Header

  The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

- HTS

- Details

- Assessments

Figure 1–58   Item HTS Page
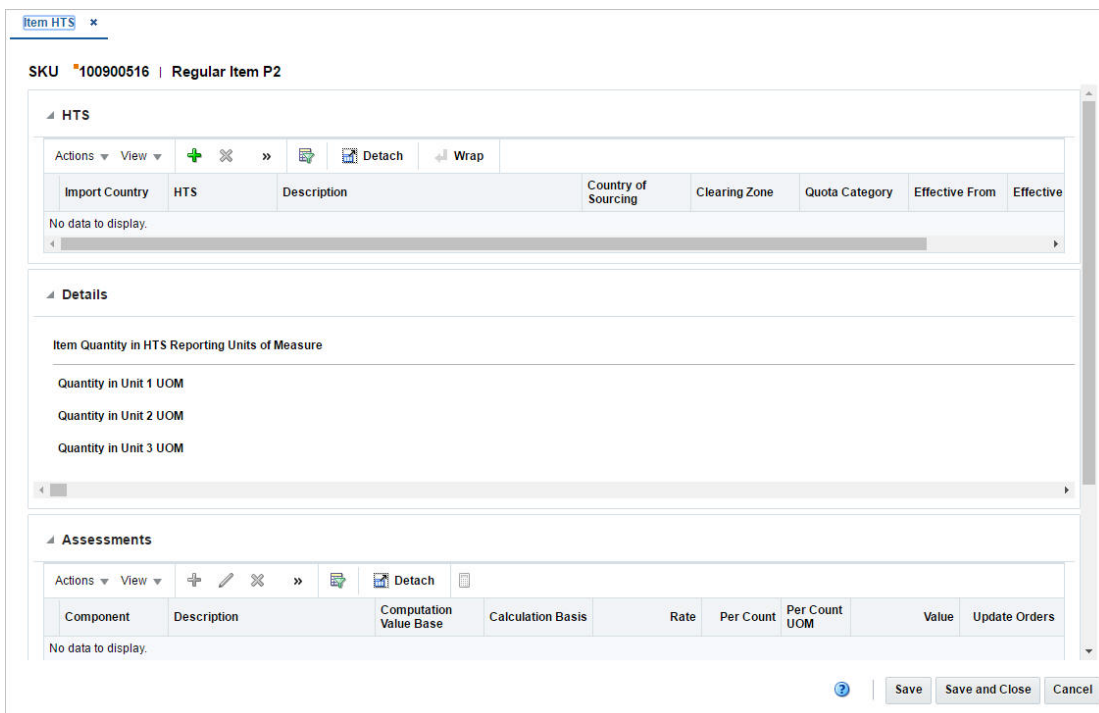

HTS The HTS section contains the HTS records for the selected item. In this section you can add quota categories by import country. You can edit the **Clearing Zone** and the **Status** column directly in the table.

Details The Details section displays the Tariff Treatment in the top right corner of the section. Additionally, the section contains the following three columns.

- Item Quantity in HTS Reporting Units of Measure

  This column lists the applicable units of measure 1-3.

- Tariff Treatment Rates

  This column lists rates, for example, specific or ad valorem rate.

- HTS Details

  This column lists the duty computation code, anti-dumping case and countervailing duty case number.

Assessments The Assessments section displays the currency in the top right corner of the section. You can add, edit or delete assessments in this section.
The Assessments table shows the following columns by default.

- Component and component description

- Computation Value Base

- Calculation Basis Rate

- Per Count and Per Count UOM

- Estimated Value and Estimated Value UOP

- Update Orders
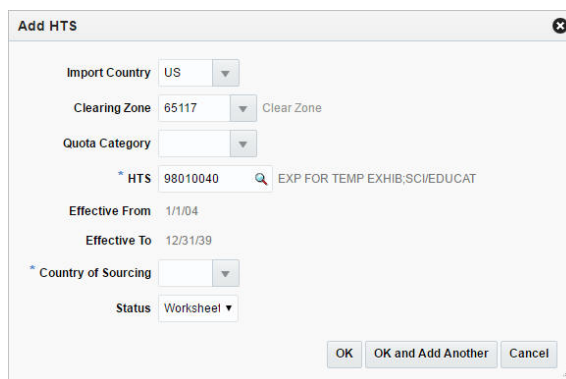

Maintaining HTS Classifications and Assessments for Items To maintain HTS classifications and assessment for an item, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Items Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Then select **More Actions > Import > HTS**. The Item HTSpage appears.

Adding HTS To add a HTS classification for an item, follow the steps below.

1. In the HTS section, select **Actions** > **Add**, or use the Add icon ✛. The Add HTS page opens.

Figure 1–59   Add HTS Page

2. The import country and clearing zone for the selected are displayed by default.

3. The **Quota Category** field is populated automatically, once you select the HTS code.

4. In the **HTS** field, enter, select or search for the HTS code you want to add to the for the item. This field is a required field.

5. The **Effective From** field is populated automatically, once you select the HTS code.

6. The **Effective To** field is populated automatically, once you select the HTS codes.

7. In the **Status** field, select the status of the HTS. For example, select Worksheet. This field is a required field.

8. Then choose one of the following options.

   ■ Click **OK** to add the selected HTS code to the table.

   ■ Click **OK and Add Another** to add additional HTS codes.

   ■ Click **Cancel** to reject all entries and close the page.

Adding Assessment To add an assessment for the selected item, follow the steps below.

1. In the Assessments section, click **Actions** > **Add**, or use the Add icon ✚. The Add Assessment page opens.

2. In the **Component** field, enter or select the cost component. This field is a required field.

3. The **Computation Value Base** field is populated automatically, once you select the cost component.

4. The **Calculation Basis** field is populated automatically, once you select the cost component.

5. The **Rate** field is populated automatically, once you select the cost component. This field is a required field.

6. The **Per Count** field is populated automatically, once you select the cost component.

7. The **Per Count UOM** field is populated automatically, once you select the cost component.

8. Select the **Update Orders** checkbox to update the order with the entered information.

9. In the **Component Nomination** section, the following fields are populated automatically, once you select the cost component. These fields are required fields.

   ■ Nom Flag 1

   ■ In Duty

   ■ Nom Flag 3

   ■ In Exp

   ■ In ALC

10. Then choose one of the following options.

   ■ Click **OK** to add the assessment to the table and close the page.

   ■ Click **OK and Add Another** to add additional assessments.

   ■ Click **Cancel** to reject all entries and close the page.

11. In the Assessments section, select **Actions > Recalculate**, or use the Recalculate icon ▯ to update the values.

Editing Assessment To edit an assessment for the selected purchase order follow the steps below.

1. In the Assessments section, click **Actions** > **Edit** or use the Edit icon ✎ to add assessments. The Edit Assessment page opens.

2. The **Component** field is populated with the selected component of the Assessment table.

3. The **Computation Value Base** field is populated automatically. If necessary edit the value.

4. The **Calculation Basis** field is populated automatically.

5. The **Rate** field is populated automatically. If necessary, edit the value. This field is a required field.

6. The **Per Count** field is populated automatically. If necessary, edit the value.

7. The **Per Count UOM** field is populated automatically. If necessary, edit the value.

8. Select **Update Orders** checkbox to update the order with the entered information.

9. In the **Component Nomination** section, the following fields are populated automatically. Edit the values, if necessary. These fields are required fields.

   - Nom Flag 1

   - In Duty

   - Nom Flag 3

   - In Exp

   - In ALC

   Note: To edit the fields, select the status of the assessment in relation to the other components. Select N/A if the assessment is not included in the calculation of total assessments and estimated landed costs. Select + (plus sign) to add the assessment to the total. Select - (minus sign) to subtract the assessment from the total.

   ---

10. Then choose one of the following options.

    - Click **OK** to save your changes and close the page.

    - Click **Cancel** to reject entries and close the page.

11. In the Assessments section, select **Actions > Recalculate**, or use the Recalculate icon 🗑 to update the values.

Define VAT Rates

The Item VAT page allows you to maintain and view the value added tax (VAT) codes that are associated with an item at or above the transaction level.

An audit record is kept of who added the VAT code to the item and when the VAT code was added.

The Item VAT page contains the following sections.

- Header

  The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–60   Item VAT Page
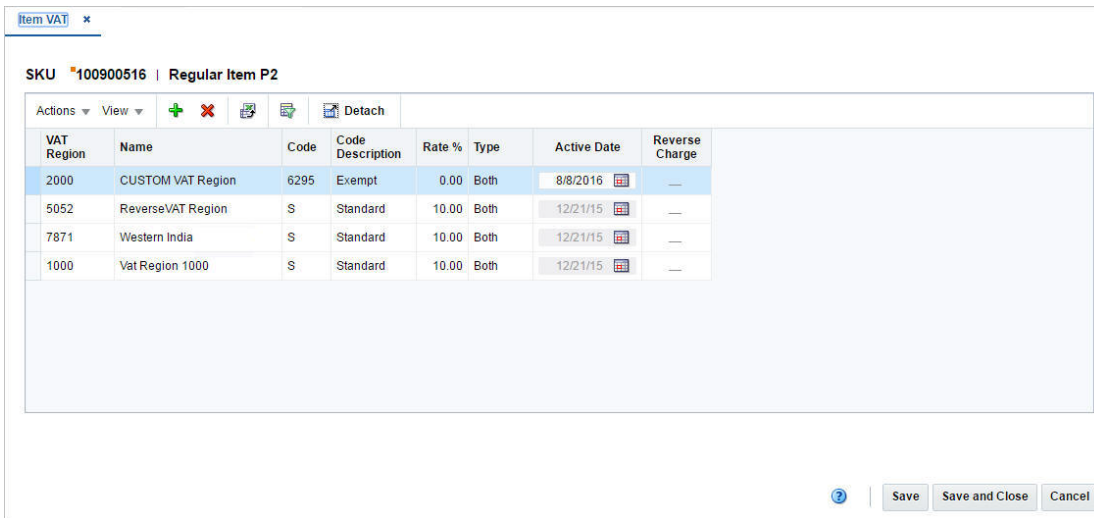

Table The table displays the VAT Region, Name, Code, Code Description, Rate %, Type and Active Date as well as the Reverse Charge column by default.

Maintaining VAT Codes for Items To maintain HTS classifications and assessment for an item, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Items Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✏. The Item page appears.

5. Then select **More Actions > VAT Maintenance**. The Item VAT page appears.

Adding VAT Codes To add VAT code for an item, follow the steps below.

1. Select **Actions** > **Add**, or use the Add icon ➕. The Add VAT Code page appears.

Figure 1–61   Add VAT Code Page
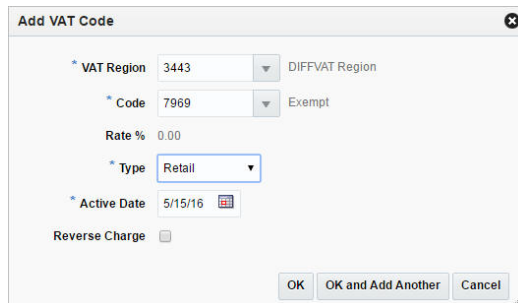

2. The **VAT Region** field, enter, select or search for the VAT region. This field is a required field.

3. In the **Code** field, enter, select or search for the VAT code.This field is a required field.

4. In the **Type** field, select the type of calculations in which VAT amounts should be included

5. The **Active Date** field, enter a date on which the VAT code becomes effective or use the Calendar icon to select a date. This field is a required field.

6. Select the **Reverse Charge** checkbox if reverse charge VAT is applicable for the item.

7. Then choose one of the following options.

   ■ Click **OK** to add the VAT code to the table.

   ■ Click **OK and Add Another** to add additional VAT codes.

   ■ Click **Cancel** to reject all entries and close the page.

Add Seasons and Phases

The Item Season page allow you to add and delete seasons and phases from items. When adding a season to an item, a season and a phase within the season is selected.

The seasons and phases of an item are used to track the sales of the item through reports. Season/phase records for items in a group can be added or overwritten if the passed item is above the item's group transaction level.

The Item Seasons page contains the following sections.

■ Header

  The header of the page displays Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–62   Item Seasons Page

Table The table displays the actions to be performed, the existing seasons and phases to be changed or deleted as well as the new seasons and phases to be added for the selected item.

Maintaining Seasons and Phases To maintain seasons and phases for items, follow the steps below.
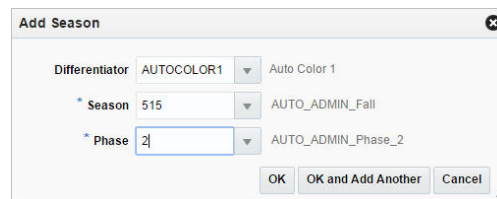

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon . The Item page appears.

5. Then select **More Actions > Season/Phases**. The Item Season page appears.

Adding Seasons and Phases   To add a season and phase, follow the steps listed below.

1. Select **Actions > Add** or use the Add icon. The Add Season page appears.

Figure 1–63   Add Season Page

2. In the **Differentiator** field, enter, select or search for the differentiator. This field is only enabled, if the selected item has differentiators.

3. In the **Season** field, enter, select or search for the season you want to add. This field is a required field.

4. In the **Phase** field, enter, select or search for the phase you want to add. This field is a required field.

5. Then choose one of the following options.

    ■   Click **OK** to add the season and phase to the table and close the page.

    ■   Click **OK and Add Another** to add additional seasons/phases.

    ■   Click **Cancel** to reject all entries and close the page.

Add Tickets

The Item Ticket page allows you to associate ticket types or labels with a single item or multiple items. You can choose the conditions under which the tickets should be printed automatically, such as PO approval, item receipt or a permanent price change.

In case of a requirement for extra tickets, you can enter the percentage of extra tickets to be printed. If you add ticket types to items on an item list, any existing ticket types for those items are deleted and replaced with the new ticket types.

The Item Tickets page contains the following sections.

■   Header

For Items:

The header of the page displays the Item Level (SKU/Style/ Reference Item), the item number and item description.

For Item Lists:

The header contains the item list number and description.

■   Item Tickets Table

Figure 1–64   Item Tickets Page

Item Tickets Table The Item Tickets table displays the ticket type, description as well as when the ticket should be printed automatically.

You can edit the following columns directly in the table.

- **PO Print Type**

  Select when the ticket should be printed.

- **Print on Price Change**

  Select the checkbox to indicate that the ticket should be printed upon a price change.

- **Percentage Over Quantity**

  Enter the percentage of extra tickets, if needed.

Adding a Ticket Type **For Item Lists:**

To add a ticket type to an item list, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Manage Item List**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. Select a record in the table.

5. Then select **Actions > Mass Change > Item Ticket**. The Item Tickets page appears.

For Items:

To add a ticket type to an item, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Select **More Actions > Ticket Type**. The Item Tickets page appears.

To add a ticket type, follow the steps below.

1. Select **Actions > Add**, or use the Add icon. The Add Ticket Type page appears.

2. In the **Ticket Type** field, enter, select or search for the desired ticket type.

3. In the **PO Print Type** field, select when the ticket should be printed.

4. Select the **Print on Price Change** checkbox to indicate that the ticket should be printed in case of a price change.

5. In the **Percentage Over Quantity** field, enter the percentage of the extra tickets needed, if necessary.

6. Then choose one of the following options.

   - Click **OK** to save the ticket type and close the page.

   - Click **OK and Add Another** to add additional ticket types.

   - Click **Cancel** to reject all entries and close the page.

Add Images

The Image page allows you to maintain, and view one or more images for an item. The location for an image must be a URL address. You can maintain images for items at the following levels:

The Item Images page contains the following sections.

- Header

  The header of the page displays the Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–65   Item Images Page
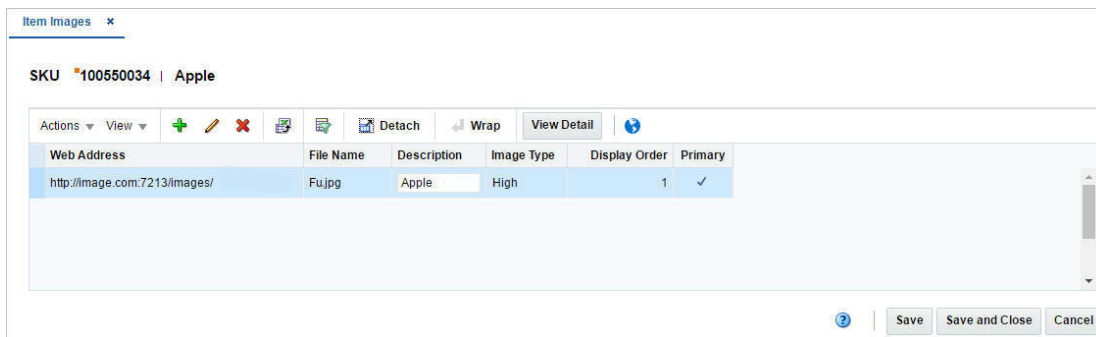

Table The table lists the images for an item. The table displays the Web Address, File Name, Description, Image Type, Display Order and Primary columns by default.

You can edit the **Description** column directly in the table.

Maintaining Item Images To maintain item images, follow the steps below.
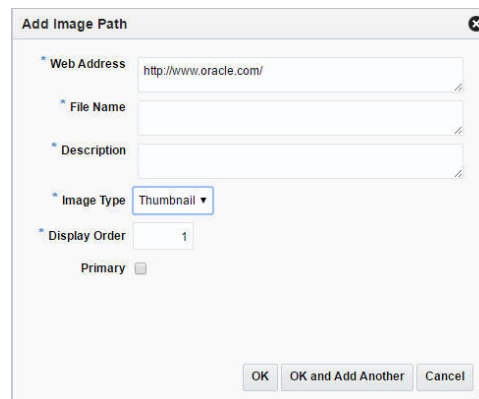

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✎. The Item page appears.

5. Then select **More Actions > Images**. The Item Images page appears.

Adding Item Images To add an item image, follow the steps below.

1. Select **Actions > Add**, or use the Add icon ✛. The Add Image Path page appears.

Figure 1–66   Add Image Path Page

2. In the **Web Address** field, enter the appropriate address.

3. In the **File Name** field, enter the file name and extension.

4. In the **Description** field, enter a brief description of the item image.

5. In the **Image Type** field, select an image type from the list.

6. The **Display Order** field indicates the priority of usage of each image file defined.

7. Select the **Primary** checkbox to indicate that the image is the primary image for the item.

8. Then choose one of the following options.

- Click **OK** to add the current image to the table and close the page.

- Click **OK and Add Another** to add additional images for the item.

- Click **Cancel** to reject all entries and close the page.

Editing Image Details To edit item details, follow the steps below.

1. Select **Actions > Edit**, or use the Edit icon ✎. The Edit Image Details page appears.

2. Edit the fields as necessary.

3. Then choose one of the following options.

- Click **OK** to save your changes to the table and close the page.

- Click **Cancel** to reject all entries and close the page.

Create a Like Item

To create like items:

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. Select a record in the Results section.

5. Select **Actions > Create Like Item**, or click the Create Like Item icon.The Create Like Item page appears.

Figure 1–67   Create Like Item Page

6. In the **Number Type** field, select the number type from the list. This field is a required field.

- If you select Oracle Retail Item Number or UPC-A in the **Item Number Type** field, the item number is automatically added.

- If you select EAN/UCC-13 in the **Item Number Type** field, you can automatically generate the EAN number by clicking the **Generate** button in the Edit Pending Child Item page.

- If you select Manual in the **Item Number Type** field, the Description field accepts alphabetic text and does not validate digit, length, or characters. It is a 12-digit number starting with 3 that includes check digit validation

7. In the **Description** field, enter the description for the new item.

8. In the **Short** field, enter a short description for the new item.

9. In the Attributes to Be Copied section, select all attributes you want to copy from the like item.

10. Then choose one of the following options.

- Click **OK** to navigate to Items page, which opens in edit mode with all the selected attributes copied from the like item.

For more information about the Item page, see the Item Page section.

■ Click Cancel to reject all entries and close the page.

Approve Items

After an item is created in Merchandising, it needs to be first submitted and then approved. Depending on your organization and process, the person to create and approve the item may be different. This workflow is to facilitate accountability and shared responsibility. An item can be submitted by using the status button on the screen. This button label shows the most logical next step in the approval flow. If there are other actions possible, they can be accessed through the dropdown. For example, when an item is in worksheet status, the button label is Submit and there is no other option available. However, when an item is in submitted status, the label of the button changes to Approve and the additional actions available in the dropdown are Worksheet and Submit Children; if the item has child items in worksheet status.

While submitting and approving an item that has child items under it, the option to submit and approve child items are also presented to the user. If such child items are not submitted and approved along with the parent item then it can be done separately from Item Children by Diff or Item Children page, depending on whether the child items are created by using differentiators or not. On these pages, the users have additional options and they can choose to submit and approve only the item selected in the table, or selected item and its children, or all items in the table, or all items in the table along with respective children.

Both at the time when item is submitted and when it is approved, there are a number of validations that are carried out by merchandising to ensure successful creation of item. Errors that prevent successful submission or approval of item can be viewed in Item Approval Errors page. This screen can be accessed by clicking the item status, in case errors are present.

Review Approval Errors

The Item Approval Error page allows you to view the reasons why an item cannot yet be submitted or approved.

To access the page

The Item Approval Errors page contains the following sections.

■ Header

The header of the page displays the Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–68   Item Approval Errors Page

Table The table displays the following columns by default.

- Item
- Description
- Error
- Override
- System Required

 If the details are not required by the system, you can override the error by selecting the **Override** checkbox in order to submit or approve the item.

Managing an Item

The Manage Items option opens the Item Search page. In this page you can perform the following actions.

- Creating an item
- Creating like item
- Editing an item
- Viewing an item
- Cost change
- Mass change item/location

You can assess the Item Search page from the Task menu, select **Items** > **Manage Items**. The Item Search page appears.

In the Item Search page you can search items by specifying various search criteria. You can choose to access items in the search results in edit or view mode depending on security privileges. There are also options for creating a new item or create like item.

The Item Search page includes the following sections:

- Search

   For more information on the Item Search page, see the Searching for an Item section.

- Results

Figure 1–69   Item Search Page
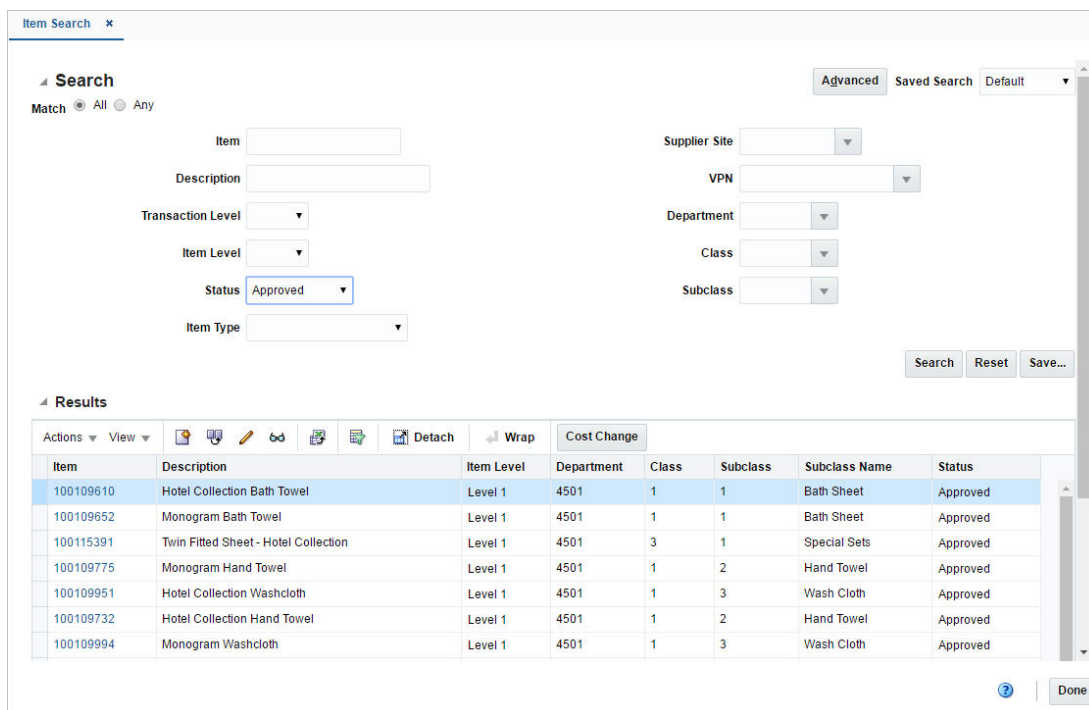

Searching for an Item

To search for an item:

1. From the Tasks menu, select **Items** > **Manage Items**. The Item Search page appears.

2. You can search for an item by providing search criteria in search section. Criteria can be provided either in Basic or Advanced mode, depending on the requirement. Basic is the default mode when the search screen is entered. Click **Advanced** to access the search panel in advanced mode. You can return to Basic mode by clicking **Basic**.

Searching for an Item Through the Basic Search Criteria

To search for an item through the basic search criteria:

1. Enter or select one or all of the following basic search criteria:

Table 1–12   Item Search - Basic Search Criteria and Description

Fields	Description
Item	Enter an item.
Description	Enter a description of an item.
Transaction Level	Select the transaction level from the list.
Item Level	Select the item level from the list.
Status	Select one of the following statuses from the list: Worksheet, Submitted, Approved, Delete Pending.

Table 1–12   (Cont.) Item Search - Basic Search Criteria and Description

Fields	Description
Item Type	Select one of the following item types from the list:
	Regular Item, Simple Pack, Complex Pack, Deposit Contents, Deposit Container, Deposit Crate, Deposit Returned Item, Transformed Orderable, Transformed Sellable.
Supplier Site	Enter the supplier site, select or search for the supplier site and number from the list.
VPN	Enter the VPN number, select or search for the VPN and number from the list.
Department	Enter the department number, select or search for the department name and number from the list.
Class	Enter the class number, select or search for the class name and number from the list.
Sub Class	Enter the sub class number, select or search for the sub class name and number from the list.

2. You can also click on the Saved Search drop down to select one of the saved sets of search criteria. Selecting a saved search populates the criteria section with saved criteria. If the saved search is selected to run automatically then the search will be executed too.

You can also choose to manage and personalize the saved searches by clicking Personalize in the list. The Personalized Saved Search page appears.

For more information on Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. Click **Reset** to clear the search criteria and results.

5. Click the **Save** button to save the current set of search criteria as a Saved Search. The Create Saved Search page appears.

For information on the Create Saved Search page, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

6. Click **Done** to close the page.

Searching for an Item Through the Advanced Search Criteria

To search for an item through the advanced search criteria:

1. Enter or select one or all of the advanced search criteria.

2. To narrow down the search, use the list next to the search fields. For example, determine if the entered value should equal or not equal the search result.

3. Click on the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

You can also personalize your saved searches by selecting **Personalize**. The Personalize Saved Searches page appears.

For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

4. Click **Search**. The items that match the search criteria are displayed in the Results section.

5. Click **Reset** to clear the search section and results.

6. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

    For more information about how to save your search criteria, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

7. Click **Add Fields** to add more fields for the advanced search. To remove the field from the search, click the x right next to the field.

8. Click **Reorder** to change the order of the available search fields. The Reorder Search Fields page appears.

    ■   Select the desired search field and use the up and down arrows to rearrange the order of the fields.

    ■   Click **OK** to confirm the new order of the fields and close the page.

    ■   Click **Cancel** to reject any changes and close the page.

9. Click **Done** to close the page.

Results

The Results section displays the items that match the search criteria.

Creating an Item

To create an item:

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Select **Actions > Create**, or click the Create icon . The Create Item page appears.

Figure 1–70   Create Item Page

For more information on how to create an item, see the Creating an Item section.

Editing an Item

To edit an item:

1. From the Tasks menu, select **Items** > **Manage Item**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The items that match the search criteria are displayed in the Results section.

4. Select a record in the Results section.

5. From the Actions menu, select **Edit** or click the Edit icon. . The Item page appears.

6. Make the necessary changes. For more information about the Item page, see the Item Page section.

View Item Details

The Item Details page displays the passed in item's hierarchy, it's parent and children if they available and any VPNs associated with the passed in item. The VPN section displays the VPNs associated with the highlighted item in the table.

To access the Item Details page:

1. Click the orange square icon in the upper left corner of the item number. The Item Details page appears.

2. View the item details. Click **OK** to close the page.

Figure 1–71 Item Details Page
Table

The Item table shows the parents, siblings and or children of the passed in item

Table - Actions Menu and Icons Use the Actions Menu and icons to apply actions to the table. You can perform the actions listed below.

Table 1–13   Table - Actions Menu/Icons and Description

Actions Menu/Icons	Description
Export to Excel and Export to Excel icon ▦	You can export the records in the table to a Microsoft Excel spreadsheet by selecting **Actions > Export to Excel** or by using the Export to Excel icon ▦.
Wrap icon ↵	You can wrap the values in the table column by using the Wrap icon ↵ option.
View Item Family button	Depending on the passed in item, the displayed item level vary. ■ Transaction Level Item (non-pack) By clicking the **View Item Family** button the passed in item's parent if it available, all siblings and all children are displayed. ■ Sub-Transaction Level Item By clicking the **View Item Family** button the passed in item's siblings, the passed in item's parent if available, all siblings of the parent and its associated grandparent item are displayed. ■ Above transaction level item or a pack item The **View Item Family** button is disabled.

Table 1–13   (Cont.) Table - Actions Menu/Icons and Description

Actions Menu/Icons	Description
View Item Hierarchy button	Depending on the passed in item, the displayed item level vary.
	■ Transaction Level Item (non-pack)
	By clicking the **View Item Hierarchy** button the passed in item's parent if available and any children are displayed in the table with the tree fully expanded and the passed in item highlighted in the table.
	■ Sub-Transaction Level Item
	By clicking the **View Item Hierarchy** button the passed in item's parent items if they exist are displayed in the table with the tree fully expanded and the passed in item highlighted in the table.
	■ Above transaction level item or a pack item
	The **View Item Hierarchy** button is disabled.

Table - View Menu and Icons You can customize the view of the table by using the options in the View Menu.

Table 1–14   Table - View Menu/Icons and Description

View Menu/Icons	Description
Columns	You can manage which of the columns will be shown in the table by clicking the **Show All** and **Manage Columns** options.
Detach and Detach icon 🖼	You can view the tables in the application in a separate page by clicking Detach or by using the Detach icon 🖼.
Collapse	You can collapse the current item level by clicking the Collapse option.
Expand	You can expand the current item level by clicking the Expand option.
Expand All Below	You can expand all levels below the current item level by clicking the Expand All Below option.
Collapse All Below	You can collapse all levels below the current item level by clicking the Collapse All Below option.
Expand All	You can expand all item levels in the table by clicking the Expand All option.
Expand All	You can collapse all item levels in the table by clicking the Collapse All option.
Scroll to First	You can scroll to the first record in the table by clicking the Scroll to First option.
Scroll to Last	You can scroll to the last record in the table by clicking the Scroll to Last option.
Reorder Columns	You can reorder columns by clicking the Reorder Columns option.
Query by Example and Query by Example icon ▼	You can filter the items by one or multiple column values by clicking the Query by Example option or by using the Query by Example icon ▼.

Managing Item Locations

In the Change Item/Loc Attributes page you can modify attribute values for an item, item parent or list of items at a designated location or group of locations.

Whether you change attributes for one item or multiple items depends on how you access the page. When you edit an item, you can change the attributes for the item. When you use an item list, you can change the attributes for all items on the item list.

For **items**:

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The Items that match the search criteria are displayed in the Results section.

4. In the Results section, mark a record and select **Actions > Mass Change Item/Location**. The Change Item/Loc Attributes page appears.

For **item lists**:

1. From the Tasks menu, select **Foundation Data > Items > Manage Item Lists**. The Item List Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. In the Results section, mark a record and select **Actions > Mass Change > Item/Locations**. The Change Item/Loc Attributes page appears.

In a multi-channel environment, all changes at the warehouse level are applied at the virtual warehouse level. Each virtual warehouse within a physical warehouse can have a unique set of attributes.

The Change Item/Loc Attributes page contains the following sections.

- Header

  For **items** the header displays the item level description, or indicates if the item is a pack or reference item. Additionally the item number and item description is displayed.

  For **item lists** the header displays the item list number and name.

- Apply Updates to
- Location Attributes

Figure 1–72   Change Item/Loc Attributes
Apply Updates to

In the Apply Updates to section you can enter a location or group of locations you want to change for the selected item or item list. The table displays the location type, location and location name by default.

Apply Updates to - Actions Menu and Icons Use the Actions Menu and icons to apply actions to the table. You can perform the actions listed below.

Table 1–15   Apply Updates to - Actions Menu/Icons and Description

Actions Menu/Icons	Description
Add and Add icon ✚	You can add new locations by selecting **Actions** > **Add** or by using the Add icon ✚. For more information about how to add a location, see the Adding Locations section.
Delete and Delete icon ✖	You can delete one or more locations from the table: ■ Select one or more records in the table. ■ Select **Actions > Delete** or use the Delete icon ✖. ■ You are prompted, if you want to delete the record. Select **Yes** to confirm the prompt. ■ The record(s) is/are deleted from the table.
Export to Excel and Export to Excel icon ▦	You can export the records in the table to a Microsoft Excel spreadsheet by selecting **Actions > Export to Excel** or by using the Export to Excel icon ▦.

Apply Updates to - View Menu and Icons You can customize the view of the table by using the options in the View Menu.

Table 1–16   Apply Updates to - View Menu/Icons and Description

View Menu/Icons	Description
Columns	You can manage which of the columns will be shown in the table by clicking the **Show All** and **Manage Columns** options.
Detach and Detach icon ▣	You can view the tables in the application in a separate page by clicking Detach or by using the Detach icon ▣.
Sort	You can sort columns by the following options: ■ Ascending ■ Descending ■ Advanced
Reorder Columns	You can reorder columns by clicking the Reorder Columns option.
Query by Example and Query by Example icon ▽	You can filter the items by one or multiple column values by clicking the Query by Example option or by using the Query by Example icon ▽.

Location Attributes

In the Location Attributes section enter the attributes you want to change. The changes to attributes are applied to the locations that remain in the table in the Apply Updates to section.

Table 1–17   Location Attributes - Fields and Description

Fields	Description
Status	Select the item status at the location from the list.
Primary Variant	Enter or search for an item as the primary variant. This field is only available for items higher than transaction level.
Taxable	Indicate if the item is taxable at the location or not.
Sourcing and Handling:	
Primary Supplier Site	Enter, select or search for the supplier who will be the primary supplier for the item/location combination.
Primary Country	Enter, select or search for the primary country for the item/location combination.
Source Method	Select the sourcing method from the list.
Source Warehouse	Enter, select or search for the source warehouse. Only available, if you select Warehouse as the source method.
Costing Location	Enter, select or search for the costing location.
Store Order Multiple	Select the pack size level at which the item is shipped between warehouses and stores.
Ranged	Select if the locations is ranged for replenishment.
Inbound Handling Days	Enter the number of inbound handling days for the item.
Daily Waste %	Enter the average percentage lost form inventory on a daily basis due to natural wastage
Local Item Description:	
Description	Enter the item description.

Table 1–17   (Cont.) Location Attributes - Fields and Description

Fields	Description
Short	Enter a short description for the item
Location Tier Height:	
Tier	Enter the tier.
Height	Enter the height.
Price:	
Ticketing Price	Enter the ticket price.
UIN:	
UIN Type	Select the unique identification number UIN Type for the location from the list.
UIN Label	Select the UIN label for the locations from the list.
Capture Time	Select the capture time from the list.
External UIN	Select the external UIN from the list.

Adding Locations

To add one or more locations want to change for the selected item or item list, follow the steps below.

1. In the Apply Updates to section, select **Actions > Add**, or use the Add icon **+**. The Add Location page appears.

2. In the **Location** field, select a location type from the list. Then enter the location.

3. Then choose one of the following options.

   - Click **OK** to add the current locations to the table.

   - Click **OK and Add Another** to add additional locations to the table.

   - Click **Cancel** to reject all entries and close the page.

View Item Inventory

See View Inventory by Location.

View Unavailable Inventory

See Unavailable Inventory.

View Open Orders

The Open Orders by Item page allows you to view a list of the outstanding orders for a selected item, item parent, or pack item.

To access the Open Orders by Item page, follow the steps below.

1. From the Tasks menu, select **Items > Manage Items**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.
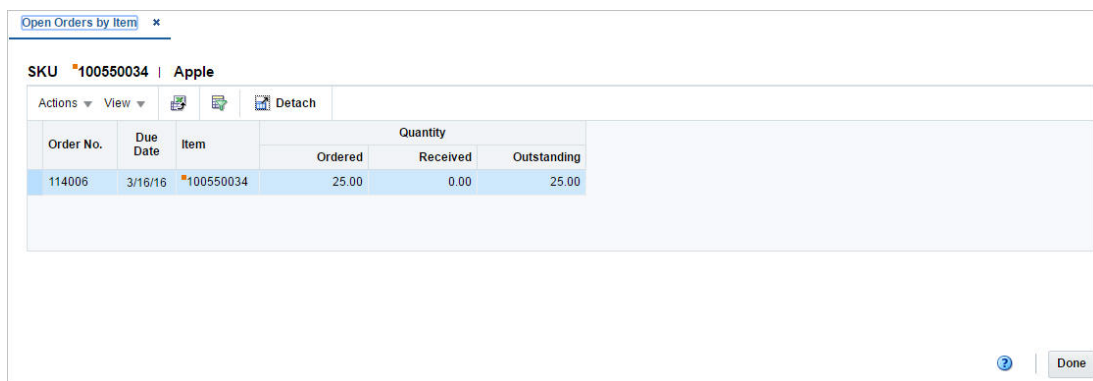

4. In the Item column, click the item link, or mark a record and select **Actions > Edit**, or use the Edit icon ✏. The Item page appears.

5. Then select **More Actions > Order Details**. The Open Orders by Item page appears.

The page contains the following sections.

■ Header

The header of the page displays the Item Level (SKU/Style/ Reference Item), the item number and item description.

Figure 1–73   Open Orders by Item Page

Table

The table displays open orders associated to the item.
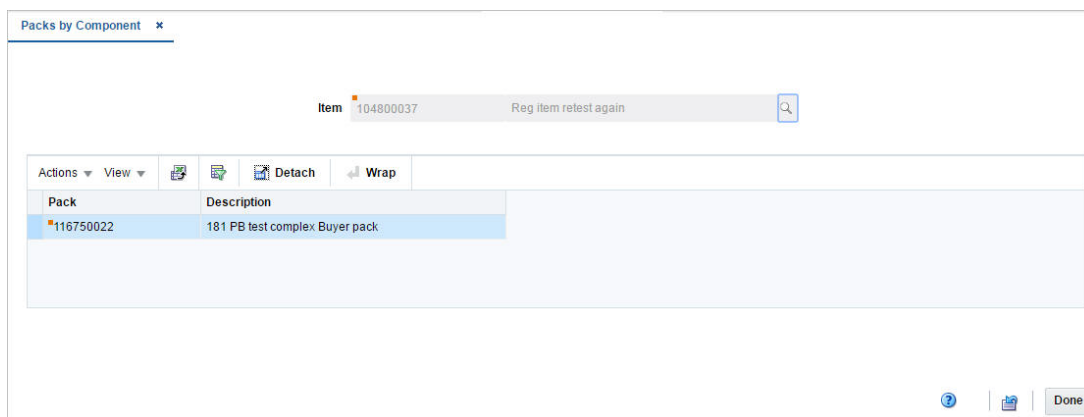

View Packs

In the Packs by Component page you can search for and view all the pack items that contain a specified component item.

To view packs by component:

1. From the Tasks menu, select **Items** > **Packs by Component**. The Packs by Component page appears.

Figure 1–74   Packs by Component Page

2. To search by reference item, enter the item number of the reference item, or click the Search link to search and select the item.

3. The item numbers and descriptions of the item at and above the transaction level appear.

4. Click **Done** to close the page.

Detail

The table displays all pack items that contain the selected component item.

Request Tickets

Items generally have tickets or labels affixed to them in the store. While shoppers may note the price and size, sales clerks may glean quite a bit of additional information from the tickets and labels. An item may have multiple tickets and labels.

You can choose what information is printed on tickets and labels and under what circumstances they should be automatically printed. When necessary, you can choose to print tickets on demand. Ticket requests are transmitted to an external ticketing system for printing.

Before you can use tickets and labels, you must add the types of tickets to the system. After entering a unique ID and description for a ticket type, you choose which attributes of an item are to be printed on the ticket type. You also indicate whether the ticket type is a shelf edge label. If the ticket type is a shelf edge label, only one label per request is printed.

After the ticket types are defined, you can associate one or more ticket types with an item. You can associate ticket types with multiple items by using an item list.

The Ticket Request page allows you to enter what type of information must be printed on the ticket. You can choose from two types of information:

- **Attributes:** System-defined characteristics of an item. For example, you can specify that the department, class, subclass, and retail price be printed on tickets.

- **User Defined Attributes:** User-defined characteristics of an item. For example, you can indicate that a user-defined date, free-form text, or value be printed on tickets.

At this point, you indicate the circumstances under which tickets are automatically printed. The circumstances are:

- When a purchase order is approved

- When an order is received

- When a permanent price change takes effect

If you use an item list, the ticket types that you add to the item list supersede existing ticket types associated with the items on the item list. A message appears requesting if the same ticket types to any subordinate level items.

Should the need arise, you can request tickets on demand. The request may be for a single item, items on an item list, or items on a purchase order. Requests may be edited until the tickets are printed.

Figure 1–75   Ticket Request Page

Table

The table displays the item and ticket information.

Adding Items

To add items:

1. From the Tasks menu, select **Items** > **Ticket Request**. The Ticket Request page appears.

2. From the Actions menu, click **Add** or click the Add icon ✛. The Add Items page appears.

Figure 1–76   Add items Page

3. In the **Add Items By** field, select the items from the list. The options are: Single Item, Item List, Purchase Order. This field is a required field.

4. In the **Item** field, add the item number for which the tickets needs to be generated. This field is a required fiel.d

5. In the **Location Group** field, select the location group from the list.

6. In the **Group Value** field, enter the ID of the location group, select or search for the group.

7. In the **Quantity** field, enter the number of tickets that needs to be generated.

8. In the **Ticket Type** field, select or search for the ticket type. This field is a required field.

9. Then choose one of the following options.

   ■ Click **OK** to add the item to the table and close the page.

   ■ Click **OK and Add Additional** to add additional items.

   ■ Click **Cancel** to reject all entries and close the page.

Manage Product Restrictions

Creating a Product Restriction

The Product Restriction page allows you to create, edit, and copy point of sale (POS) product restriction configurations. With product restriction configurations, you can restrict the sale of items for various reasons. You select the dates on which the configuration is valid at the stores.

To view product restriction:

1. From the Tasks menu, select **Items** > **Create Product Restriction**. The Product Restriction page appears

Figure 1–77   Product Restriction Page

2. In the **Restriction** field, a unique product restriction configuration ID is filled in automatically.

3. In the **Restriction** Type field, you can create product restrictions for the following restriction types:

   ■ **Food stamp:** Customers can use food stamps to purchase the associated items.

   ■ **Minimum age:** Customer must be at least a specified age to purchase the associated items. You specify the minimum age.

   ■ **Container deposit:** Customers must pay a deposit when purchasing the associated items. You specify the amount of the deposit.

   ■ **Container redemption value:** Customers may receive a refund if they return the containers for the associated items. You specify the amount of the refund.

   ■ **Day/time/date:** Customers cannot purchase the associated items before or after a specific time, on a specific day of the week, or on a specific date. You can also specify a combination of these time restrictions.

   ■ **Tender type:** Customers cannot use a specific type of tender to purchase the associated items.

   ■ **Non-discountable:** Customers cannot receive a discount on the associated items.

- **Returnable:** Customers cannot return the associated items.

- **Quantity Limit:** Customers are limited to a maximum quantity of the associated items that they can purchase in a single sale. You specify the quantity limit.

When you copy a configuration, the basic configuration information, such as product restriction type, are copied into a new configuration and assigned a new ID. However, the associated stores and items are not copied, so you must add stores and items to the new configuration.

4. In the **Effective** Date field, enter the date, or select the calendar button and select a date.

5. The **Created** field displays the date and timestamp when the product restriction was created.

Managing Product Restrictions

The Manage Product Restrictions option opens the Product Restriction Search page.

Managing product restriction involves performing one or more of the following tasks:

- Searching for product restriction

- Creating a product restriction from an existing product restriction

- Editing a product restriction

- Viewing a product restriction

You can access the Manage Product Restriction page from the Task Menu, select **Items** > **Manage Product Restrictions**. The Product Restriction Search page appears.

The Manage Product Restriction Search page includes the following sections:

- Search

  For more information on the Product Restriction Search page, see the Searching for a Product Restriction section.

- Results

Figure 1–78   Search Results Section

Searching for a Product Restriction To search for a product restriction:

1. From the Tasks menu, select **Items** > **Manage Product Restrictions**. The Product Restriction Search page appears.

2. You can search product restriction by providing search criteria in search section. Criteria can be provided either in Basic or Advanced mode, depending on the requirement.

    Basic is the default mode when the search screen is entered. Click **Advanced** to access the search panel in advanced mode. You can return to Basic mode by clicking **Basic**.

Searching for a Product Restriction Through the Basic Search Criteria To search for a product restriction through the basic search criteria:

1. Enter or select one or all of the following basic search criteria.

Table 1–18   Product Restriction - Basic Search Criteria and Description

Fields	Description
Match option	Check radio button All or Any.
	All - only product restrictions matching all entered search criteria are shown.
	Any - product restrictions matching any of the entered search criteria are shown.
Product Restriction	Enter the product restriction configuration.
Description	Enter a description for the product restriction configuration.
Type	Select the restriction type.
Effective Date	Enter the date or click the calendar button and select a date.
Store	Enter, select or search for the store.
Department	Enter the department number, select or search for the department name and number from the list.
Class	Enter the class number, select or search for the class name and number from the list.
Sub Class	Enter the subclass number, select or search for the subclass name and number from the list.
Item	Enter the item or search the item by using the search icon.

2. You can also click on the Saved Search drop down to select one of the saved set of search criteria. Selecting a saved search populates the criteria section with saved criteria. If the saved search is selected to run automatically then search will be executed too.

    You can also choose to manage and personalize the saved searches by clicking Personalize in the list. The Personalized Saved Searched page appears.

    For more information on Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. Click **Search**. The product restrictions that match the search criteria are displayed in the Results section.

4. Click **Reset** to clear the search criteria and results.

5. Click **Save..** button to save the current set of search criteria as a Saved Search. The Create Saved Search page appears.

   For information on Create Saved Search page, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

6. Click **Done** to close the page.

Searching for a Product Restriction Through the Advanced Search Criteria To search product restriction through the advanced search criteria:

1. Enter or select one or all of the following advanced search criteria.

Table 1–19 Product Restriction - Advanced Search Criteria and Description

Fields	Description
Match option	Check radio button All or Any.
	All - only product restrictions matching all entered search criteria are shown.
	Any - product restrictions matching any of the entered search criteria are shown.
Product Restriction	Enter the product restriction configuration.
Description	Enter a description for the product restriction configuration.
Type	Select the restriction type.
Effective Date	Enter the effective date for the product restriction or click the calendar button and select a date.
Tender Type	Select the tender type from the list.
Minimum Age	Enter the minimum age for the product restriction.
Store	Enter, select or search for the store.
Department	Enter the department number, select or search for the department name and number from the list.
Class	Enter the class number, select or search for the class name and number from the list.
Sub Class	Enter the subclass number, select or search for the subclass name and number from the list.
Item	Enter the item or search the item by using the search icon.

Figure 1–79 Search Section in Advanced Search Mode

2. To narrow down the search, use the list next to the search fields. For example, determine if the entered value should equal or not equal the search result.

3. Click on the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

   You can also personalize your saved searches by selecting **Personalize**. The Personalize Saved Searches page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

4. Click **Search**. The product restrictions that match the search criteria are displayed in the Results section.

5. Click **Reset** to clear the search section and results.

6. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

   For more information about how to save your search criteria, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

7. Click **Add Fields** to add more fields for the advanced search. To remove the field from the search, click the x right next to the field.

8. Click **Reorder** to change the order of the available search fields. The Reorder Search Fields page appears.

   ■ Select the desired search field and use the up and down arrows to rearrange the order of the fields.

   ■ Click **OK** to confirm the new order of the fields and close the page.

   ■ Click **Cancel** to reject any changes and close the page.

9. Click **Done** to close the page.

Results The Results sections list the retrieved product restrictions.

Creating from an Existing Product Restriction When you copy a configuration, the basic configuration information, such as product restriction type, are copied into a new configuration and assigned a new ID. However, the associated stores and items are not copied, you must add stores and items to the new configuration.

To create from an existing product restriction:

1. From the Tasks menu, select **Items** > **Manage Product Restrictions**. The Product Restriction Search page appears.

2. From the Actions menu, select **Create from Existing** or click the Create from Existing icon 🖥. The Product Restriction page appears.

Figure 1–80   Product Restriction Page in Create from Existing Mode

3. In the **Restriction** field, enter the restriction ID. A unique product restriction configuration ID is filled in automatically.

4. In the Effective Date field, enter the date or click the calendar button and select a date.

   For more information about the Product Restriction page, see the Creating a Product Restriction section.

5. Then choose one of the following options.

   ■ Click **Save** to save the product restriction.

   ■ Click **Save and Close** to save the product restriction and close the page.

   ■ Click **Cancel** to reject all entries and close the page.

Editing Product Restriction To edit product restriction:

1. From the Tasks menu, select **Items** > **Manage Product Restrictions**. The Product Restriction Search page appears.

2. Select the product restriction you want to edit.

3. From the Actions menu, select **Edit** or click the Edit icon. ✎. The Product Restriction page appears.

Figure 1–81   Product Restriction Page in Edit Mode

4. Make the necessary changes and click **Save** to save the changes.

   For more information about the Product Restriction page, see the Creating a Product Restriction section.

5. Then choose one of the following options.

   ■ Click **Save** to save the product restriction.

- Click **Save and Close** to save the product restriction and close the page.
- Click **Cancel** to reject all entries and close the page.

Upload/Download Items from a Spreadsheet

Merchandising supports downloading of items into a spreadsheet to allow you to enrich or perform mass maintenance on the item data. This data can be re-uploaded into a staging area for sequential enrichment or uploaded into Merchandising. New items can also be created through the upload flow. This section summarizes the workflow for both download and upload of item data.

> **Note:** For more detail on the templates available and the template specific validations refer to the *Oracle® Retail Merchandising System Item Induction Overview White Paper Release 16.0* in the Oracle Retail Merchandising Functional Library (Doc ID 1585843.1) on My Oracle Support.

Download from Staging

You can download items either from the staging area or from Merchandising depending on the nature of updates you intend to make. Typically items are downloaded from the staging areas for purposes of enrichment or to correct for errors from an earlier upload. The data set to be downloaded can be selected using the filter criteria, similar to that used in the Item Search function in Merchandising. Alternately, you can also select all data that was part of an earlier upload or download request by selecting the process ID that uniquely identifies the request.

Figure 1–82   Item Download from Staging Page

1. From the Tasks menu, select **Items**> **Download from Staging**. The Item Download from Staging page appears.

2. Search for the items you want to download according to basic or advanced search criteria. The search results are shown in the Result section.

   For more details regards the basic and advanced search function in Merchandising, see Searching for a Deal Through the Basic Search Criteria and Searching for a Deal Through the Advanced Search Criteria in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. To download all items displayed in the Result section, select **Actions** > **Download**, or use the **Download** button. The Download page appears.

Figure 1–83   Download from Staging Page

4. In the **Template** field, select the template you want to download. This field is a required field.

5. The **Process Description** field displays the default process name with the date and timestamp. You can edit the name of the download process in this field. This field is a required field.

6. Then choose one of the following options.

   ■   Click **OK** to open the spreadsheet with the selected items on your desktop.

   ■   Click **Cancel** to reject all entries and close the page.

7. Click **Done** to close the Item Download from Staging page.

Upload from Staging

Data currently available in the staging area can be uploaded into Merchandising. This is typically for cases wherein multiple levels of enrichment have been carried out in the staging area before the upload.

Figure 1–84   Item Upload from Staging

1. From the Tasks menu, select **Items** > **Upload from Staging**. The Item Upload from Staging page appears.

2. Search for the items you want to upload according to basic or advanced search criteria. The search results are shown in the Result section

For more details regards the basic and advanced search function in Merchandising, see Searching for a Deal Through the Basic Search Criteria and Searching for a Deal Through the Advanced Search Criteria in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. To upload all items displayed in the Result section, select **Actions** > **Upload**, or use the **Upload** button. The Upload page appears.

Figure 1–85   Upload from Staging Page
4. In the **Template** field, select the template you want to upload to Merchandising.

5. The **Process Description** field displays the default process name with the date and timestamp. You can edit the name of the upload process in this field.

6. Then choose one of the following options.

   ■ Click **OK** to upload the items to Merchandising. The Result section is cleared.

   ■ Click **Cancel** to cancel the upload and close the Upload page.

7. Click **Done** to close the Item Upload from Staging page.

Download from Merchandising

Similarly data can be downloaded from Merchandising. Item data is typically downloaded for purposes of mass updates, workflow changes or reporting considerations.

Figure 1–86   Item Download from Merchandising
In addition to download of item data, you can also download blank templates in a specified template format that carry just the worksheets and column headers without any data. Such templates are generally used for creating new items manually. Blank Templates can be downloaded from by navigating to Foundation Data > Data Loading

> Download Blank Template. You need to select the Type as Items and one of the Templates from the list available before opting to download the template. See Download Blank Templates.

1. From the Tasks menu, select **Items**> **Download Items from Merchandising**. The Item Download from Merchandising page appears.

2. Search for the items you want to download according to basic or advanced search criteria. The search results are shown in the Result section.

   For more details regards the basic and advanced search function in Merchandising, see Searching for a Deal Through the Basic Search Criteria and Searching for a Deal Through the Advanced Search Criteria in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. To download all items displayed in the Result section, select **Actions** > **Download**, or use the **Download** button. The Download page appears.

Figure 1–87   Download from Merchandising Page

4. In the **Template** field, select the template you want to download. This field is a required field.

5. The **Process Description** field displays the default process name with the date and timestamp. You can edit the name of the download process in this field. This field is a required field.

6. Then choose one of the following options.

   ■ Click **OK** to open the spreadsheet with the selected items on your desktop.

   ■ Click **Cancel** to reject all entries and close the page.

7. Click **Done** to close the Item Download from Merchandising page.

Upload from a File

Once enrichment or updates have been carried out to downloaded data, you can upload the spreadsheet to have your updates applied in Merchandising or to update the staged item data.

Figure 1–88   Item Upload from File Page
1. From the Tasks menu, select **Items** > **Upload from File**. The Item Upload from File page appears.

2. In the **Template** field, select the template you want to upload to Merchandising tables or Staging tables.

3. The **Process Description** field displays the default process name with the date and timestamp. You can edit the name of the upload process in this field.

4. In the **Source** field, click the **Browse** button to upload the file.

5. In the **Destination** field, choose either Merchandising Tables or Staging Tables from the list.

6. Then choose one of the following options:

   ■ Click **Upload** to upload the file to Merchandising Tables or Staging Tables.

   ■ Click **Revert** to undo any changes.

7. Click **Done** to close the Item Upload from File page.

Update Staged Diffs

The Staged Diffs page allows you to add diff to parent items which are either present in Merchandising or in stating.

1. From the Tasks menu, select **Items** > **Update Staged Diffs**. The Staged Diffs page appears.

Figure 1–89   Staged Diffs Page
2. In the **Item Parent** field, enter or search for the item parent.

3. In the **VPN** field, enter or search for the VPN number.

4. Click **Display Diffs**. The sections Item Parent Differentiators, Differentiators and Pending Child Items appear.

Figure 1–90   Sections Staged Diffs Page

Item Parent Differentiators

There are four differentiator fields in the Item Parent Differentiators section and each field will look for a different Diff Group ID or Diff ID. You need to manually select the value from the existing set of diff groups present in Merchandising using the diff values as a basis for the selection, or the Diff Group IDs or Diff IDs which are present in the staging table for the item parent. Specifying a diff group field or a diff value is mandatory to proceed with diff ID selection.

For a given Diff Group, the User Diff Value field will be populated with all Diff value variations available in the staging area for the parent item selected.

The **Aggregate** check box can be selected for three of the four diff groups specified. If any of the diff groups has the aggregate checkbox set, then the aggregate indicator flag should be set for the parent item during finalization.

The Diff ID and Diff Description are populated by the system, if the DIFF_VALUE populated in the result row exactly matches the description of any Diff ID present in Merchandising under the corresponding diff group. The user can also remap a Diff value to a different Diff ID.

Click **Apply**. The Differentiator tables are displayed in the Differentiator section.

Differentiators

In the Differentiator section there are four possible tables listing all the differentiators, one for each Differentiator Group or ID.

Differentiators - Actions Menu and Icons Use the Actions Menu and icons to apply actions to the table. You can perform the actions listed below.

Table 1–20   Differentiators - Actions Menu/Icons and Description

Actions Menu/Icons	Description
Add and Add icon ✚	You can add differentiators by clicking **Add** from the Actions menu or by clicking the Add icon ✚.
	For more information on adding a differentiator, see the Adding Differentiators section.

Table 1–20 (Cont.) Differentiators - Actions Menu/Icons and Description

Actions Menu/Icons	Description
Edit and Edit icon ✎	You can edit a differentiator by clicking **Edit** from the Actions menu or by clicking the Edit icon ✎.
	For more information on editing a differentiator, see the Editing Differentiators section.
Delete and Delete icon ✖	You can delete a differentiator:
	■ Select a record in the table.
	■ Select **Actions > Delete** or use the Delete icon ✖.
	■ You are prompted, if you want to delete the record. Select **Yes** to confirm the prompt.
	■ The record is deleted from the table.

Differentiators - View Menu You can customize the view of the table by using the options in the View Menu.

Table 1–21 Differentiators - View Menu and Description

View Menu	Description
Columns	You can manage which of the columns will be shown in the table by clicking **Show All** and **Manage Columns** options.
Sort	You can sort columns by the following options:
	■ Ascending
	■ Descending
	■ Advanced
Reorder Columns	You can reorder columns by clicking the Reorder Columns option.

Adding Differentiators

To add differentiators:

1. From the Actions menu, click **Add** or click the Add icon ✚. The Add Differentiators page appears.

Figure 1–91 Add Differentiator Page
2. In the **Diff** field, enter, select or search for a diff. This field is a required field.

3. Then choose one of the following options.

   ■ Click **OK** to add the diff to the table and close the page.

   ■ Click **OK and Add Another** add additional diffs to the table.

   ■ Click **Cancel** to reject all entries and return to the Staged Diff Page.

4. In the Differentiator section, select diffs in the tables.

5. The number type is displayed by default.

The field defaults to the parent item's number type if no other children exist in Merchandising. If the parent item already exists in Merchandising with one or more children, the number type is set to the number type of the child items and is disabled. If the item parent is from Staging, then the number type defaults to the item parent's number type, but can be edited.

6. Click **Apply**. The Pending Child Items section expands and displays the child items in the table, based on the diffs that have selected in the diffs table.

Editing Differentiators

To edit differentiator:

1. Select the differentiator you want to edit in one of the diff tables.

2. From the Actions menu, click **Edit** or click the Edit icon ✎. The Edit Differentiator page appears.

3. Edit the enabled fields as necessary.

4. Then choose one of the following options.

- Click **OK** to save the changes and close the page.

- Click **Cancel** to reject all entries and close the page.

Pending Child Items

The Pending Child Items table shows the child items that can be created using the selected Diffs.

You can edit the **Description** column directly in the table.

Pending Child Items - Actions Menu and Icons Use the Actions Menu and icons to apply actions to the table. You can perform the actions listed below.

Table 1–22   Pending Child Items - Actions Menu/Icons and Description

Actions Menu/Icons	Description
Edit and Edit icon ✎	Select **Actions > Edit** or use the Edit icon ✎ to edit the selected pending child item. For more information about how to edit a pending child item, see the Editing Pending Child Items section.
Delete and Delete icon ✖	You can delete a pending child item: - Select a record in the table. - Select **Actions > Delete** or use the Delete icon ✖. - You are prompted, if you want to delete the record. Select **Yes** to confirm the prompt. - The record is deleted from the table.
Export to Excel and Export to Excel icon ▦	You can export the records in the table to a Microsoft Excel spreadsheet by selecting **Actions > Export to Excel** or by using the Export to Excel icon ▦.
Wrap icon ↵	You can wrap the values in the table column by first clicking the column on which you would like the text to wrap and then using the Wrap icon ↵.

Pending Child Items - View Menu and Icons You can customize the view of the table by using the options in the View Menu.

Table 1–23 Pending Child Items - View Menu/Icons and Description

View Menu/Icons	Description
Columns	You can manage which of the columns will be shown in the table by clicking the **Show All** and **Manage Columns** options.
Detach and Detach icon ◫	You can view the tables in the application in a separate page by clicking Detach or by using the Detach icon ◫.
Sort	You can sort columns by the following options: ■ Ascending ■ Descending ■ Advanced
Reorder Columns	You can reorder columns by clicking the Reorder Columns option.
Query by Example and Query by Example icon ▼	You can filter the items by one or multiple column values by clicking the Query by Example option or by using the Query by Example icon ▼.

Editing Pending Child Items To edit pending child items, follow the steps below.

1. In the Pending Child Items section, select a record in the table.

2. Then select **Actions > Edit**, or use the Edit icon ✎. The Edit Child Item page appears. The data of the selected child item is displayed.

3. If you edit a Variable Weight PLU, the format and prefix values are displayed.

4. Edit fields, as necessary.

> **Note:** You can edit the description also directly in the table.
>
> If you edit an item with the item type number EAN/UCC-13, you can automatically generate the EAN number by clicking **Generate** button.

5. Then choose one of the following options.

   ■ Click **OK** to add your changes to the table and close the page.

   ■ Click **OK and Edit Next** to edit the next child item in the table.

   ■ Click **Cancel** to reject your entries and close the page.

View Issues

For downloads that occur in the background or uploads, you will receive a notification when the processing is complete. The notification will specify whether the process was executed successfully or not. Clicking on the link in the notification will take you to the Data Loading Status page in order to see the details. Alternatively, this page can be accessed by navigating to the Data Loading -> Review Status option in the task list. This task flow opens up the Data Loading status page, which lists the status of each upload/download request. Requests that were processed successfully will have their status set to Processed Successfully. Requests that were not processed successfully will have their status set to either Processed with Errors or Processed with Warnings. For such requests, you can access the View Issues page by clicking on the View Issues

button to review details of the errors or warnings associated with a selected upload or download request. See View Data Loading Status.

Figure 1–92   Item Issues Page

The details provided typically include the worksheet in which the error is encountered, the row and column in the spreadsheet that is in error, and the error description. If the errors involved supplier or supplier/country data in the upload, then the table will display those additional details. Issues that are flagged as errors will need to be fixed in order to successfully create or update the item in Merchandising. Issues that are warnings can be ignored, but may also require updates to data depending on the warning.

Errors in download processing are typically due to the inability to access the data or insufficient privileges to create and write to the specified location. These errors can be resolved by removing any constraints that might have placed a lock on the data or ensuring that any constraints on creation of the spreadsheet are relaxed.

Errors in upload request processing are typically data related and likely require data correction. The users can use the error details in the View Issues screen as a guide to make corrections to the originally uploaded spreadsheet or download a new version through the Data Loading Status screen. If using this method, a worksheet containing a list of errors associated with the data set will be included as a separate tab in the downloaded spreadsheet to serve as an offline reference for carrying out the corrections. Once the errors have been corrected, the data can be re-uploaded into the staging area or Merchandising as needed, using the corrected file.

2

Reclassify Items
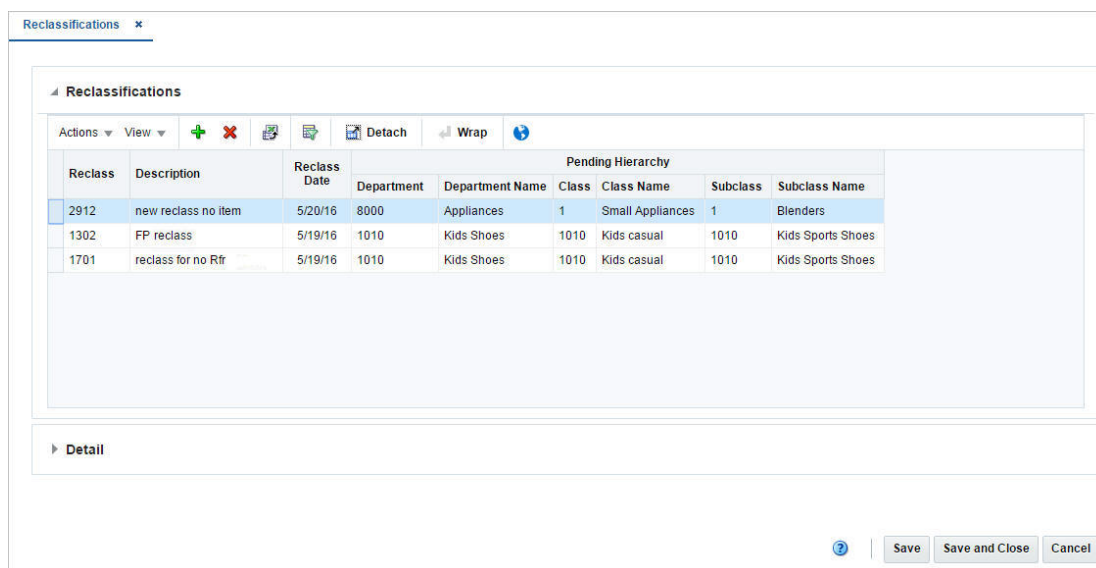

Reclassification page allows you to move an item or item list from one department/class/subclass to another.

You can determine which item or item list needs to be reclassified, under which department, class, subclass, and the effective date. A batch process reclassifies those items whose effective date is the next day.

The Reclassification page contains the following sections.

■ Reclassifications

■ Detail

Figure 2–1 Reclassifications Page

Reclassifications

The Reclassification table lists the reclassification ID, description, date as well as the pending hierarchy level information. In this table you can to add, delete, or view the reclassification events that have not been processed yet.

Detail

The Details section lists the item ID, description and current merchandise hierarchy level information.

Adding a New Reclassification

To add a reclassification, follow the steps below.

1. From Task Menu, select **Foundation Data > Items > Reclassification**. The Reclassification page appears.

2. In the table, select **Actions > Add**, or use the Add icon. The Add Reclassification page appears.

Figure 2–2   Add Reclassification Page

a. In the **Description** field, enter a description for the new reclassification event.

b. In the **Reclass Date** field, enter the date when the item/item list must be reclassified, or use the Calendar icon to select a date.

c. Then select, if you want to reclassify an item or item list.

d. Enter, select or search for the desired item or item list.

e. Then select the new hierarchy for the item or item list. In the **Department** field, enter select, or search for the new department.

f. In the **Class** field, enter, select or search for the new class.

g. In the **Subclass** field, enter, select or search for the new subclass.

h. Then choose one of the following options.

   – Click **OK** to save the new reclassification and close the page.

   – Click **OK and Add Another** to add additional reclassifications.

   – Click **Cancel** to reject all entries and close the page.

The Effects of Reclassifying Items

When items are moved from one department, class, and subclass combination to another, several other modules can be affected.

- **Sales history:** A reclassification event does not rebuild sales history automatically. A reclassification does not affect previously recorded sales history. Merchandising maintains three levels of rolled up sales history: department, class, and subclass. Optional batch programs are available that can be used to rebuild the rolled up sales history.

- **Stock ledger:** Stock ledger transactions are written to move the inventory amount associated with an item from the old department, class, and subclass to the new. Existing stock ledger transactions are not updated to reflect the hierarchy change.

- **Open to buy:** Open to buy (OTB) records are updated for all orders that are approved, but have not yet been received.

- **Forecasts:** If the reclassified item is forecastable and the new hierarchy values move the item to a new forecast domain, then an indicator is reset for the item at the item/store level. This change indicates to the program responsible for extracting sales history that the next time sales history is extracted from Merchandising for that item and store combination, all sales history should be extracted. Normally, only the sales history that occurred since the last data export is extracted.

Reclassification Edit Checks

The following check are preformed when you reclassify an item.

Online Edit Checks

The following edit checks are performed as you set up a reclassification event. The event cannot be created if:

- The item exits in another reclassification event.

- One or more items on the reclassification event exist on approved partially received orders.

Batch Processing Edit Checks

Other edit checks that can cause a reclassification event to fail also occur during the batch processing of the event. A reclassification cannot occur if:

- The item is on a Unit and Value stock count. The items to be counted have already been determined based on the department, class, and subclass specified when the stock count was created. The stock count is scheduled after the effective date of the reclassification event.

- The item is forecastable, but the new hierarchy values with which the item is associated do not have an associated forecast domain.

- The new department, class, and subclass contain a required user defined attribute that must be entered at the item level.

- The new department, class, and subclass contain a user defined attribute that defaults at the item level, but the item does not have this UDA defined.

3

Change Ownership of Items

The Ownership Change page allows you to schedule a change of ownership of items from owned to consignment or concession or vice versa. You can also change primary supplier and primary country of an item/location with the purchase type as consignment or concession.

Items can be added to an ownership change by item or item list and an ownership change can be applicable to a single location or supplier/country level. You can also choose to change the calculation basis of item cost and specify cost per unit or purchase rate. A batch process changes item ownership of those items whose effective date is next day.

Figure 3–1   Ownership Change Search Page

Search Ownership Change

To search for an ownership change list:

1. From the Task menu, select **Item > Consignment/Concession > Manage Ownership Change**. The Ownership Change Search page appears.

2. You can search for an ownership change by using basic or advanced search criteria, depending on the requirement. The basic mode is the default search mode.

   - Click **Advanced** to access the search section in advanced mode.

   - Click **Basic** to return to the basic mode.

Searching for an Ownership Change Through the Basic Search Criteria

To search for an ownership change by using basic search criteria:

1. Enter, select or search for one or all of the following basic search criteria.

Table 3–1   Ownership Change Search - Basic Search Criteria and Description

Fields	Description
Ownership Change	Enter the ownership change ID.
Description	Enter the ownership change transaction description.
Type	Select type of ownership change transaction. Options are: ■ Owned to Consignment ■ Owned to Concession ■ Consignment to Owned ■ Concession to Owned ' ■ Update Primary Supplier
Effective Date	Enter or select the effective date of the ownership change transaction
Status	Enter or select the status of the ownership change transaction.
Supplier Site	Enter or select the supplier site of the ownership change.
Item	Enter or search for an item.
Location	Enter or select the location of the ownership change.
Error Exists	Select whether the ownership change contains errors. Options are Yes or No.

2. Click the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

   You can also personalize your saved searches by selecting **Personalize**. The Personalized Saved Searches page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. Click **Search**. The ownership change lists that match the search criteria are displayed in the Results section.

4. Click **Reset** to clear the search section and results.

5. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

   For more information about how to save your search criteria, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

6. Click **Done** to close the page.

Searching for an Ownership Change Through the Advanced Search Criteria

To search for an ownership change through the advanced search criteria:

1. Enter or select one or all of the advanced search criteria.

2. To narrow down the search, use the list next to the search fields. For example, determine if the entered value should equal or not equal the search result.

3. Click on the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

   You can also personalize your saved searches by selecting **Personalize**. The Personalize Saved Searches page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

4. Click **Search**. The ownership changes that match the search criteria are displayed in the Results section.

5. Click **Reset** to clear the search section and results.

6. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

   For more information about how to save your search criteria, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

7. Click **Add Fields** to add more fields for the advanced search. To remove the field from the search, click the x right next to the field.

8. Click **Reorder** to change the order of the available search fields. The Reorder Search Fields page appears.

   ▪ Select the desired search field and use the up and down arrows to rearrange the order of the fields.

   ▪ Click **OK** to confirm the new order of the fields and close the page.

   ▪ Click **Cancel** to reject any changes and close the page.

9. Click **Done** to close the page.

Create Ownership Change

To create an ownership change:

1. From the Tasks menu, select **Item** > **Consignment/Concession** > **Create Ownership Change**. The Create Ownership Change pop-up appears.

Figure 3–2   Create Ownership Change Pop-up

2. In the **Description** field, enter a description for the ownership change.

3. In the **Effective Date** field, select the date on which the ownership change goes into effect.

4. In the **Change Type** field, select the type of ownership change that is being made. Options are:

   ■ **Owned to Consignment** –

   ■ **Owned to Concession** –

   ■ **Consignment to Owned** –

   ■ **Concession to Owned** –

   ■ **Update Primary Supplier** –

5. Then choose one of the following options.

   ■ Click **OK**. The Create Ownership Change page appears.

Figure 3–3   Create Ownership Change Page
   ■ Click **Cancel** to reject all entries close the page.

Add Items

Adding items varies depending on the change type associated with the ownership change.

Adding Items to Consignment to Owned, Concession to Owned, Owned to Consignment, or Owned to Concession

Perform the following procedure to add items to an ownership change when the change type is set to Consignment to Owned, Concession to Owned, Owned to Consignment, or Owned to Concession:

1. Search for or create an ownership change with a change type of Consignment to Owned, Concession to Owned, Owned to Consignment, or Owned to Concession. The Create Ownership Change page appears.

Figure 3–4   Create Ownership Change Page

2.   From the Actions menu, click **Add** or click the Add icon +. The Add Items page appears.

Figure 3–5   Add Items Pop-up

3.   Enter the following information:

   ■   **Item/Item List** – Select Item or Item List. Only approved parent (level 1), inventoried and orderable items, except pack items are available to be selected.

   ■   **Supplier Site** – Select the supplier sites that are associated with the item

   ■   **Country** – Select the country associated with item and the supplier site entered

4.   Then choose one of the following options.

   ■   Click **OK** to add the item to the table and close the page.

   ■   Click **OK and Add Additional** to add additional items.

   ■   Click **Cancel** to reject all entries and close the page.

Adding Items to Update Primary Supplier

Perform the following procedure to add items to an ownership change when the change type is set to Update Primary Supplier:

1. Search for or create an ownership change with a change type of Update Primary Supplier. The Create Ownership Change page appears.

Figure 3–6   Create Ownership Change Page
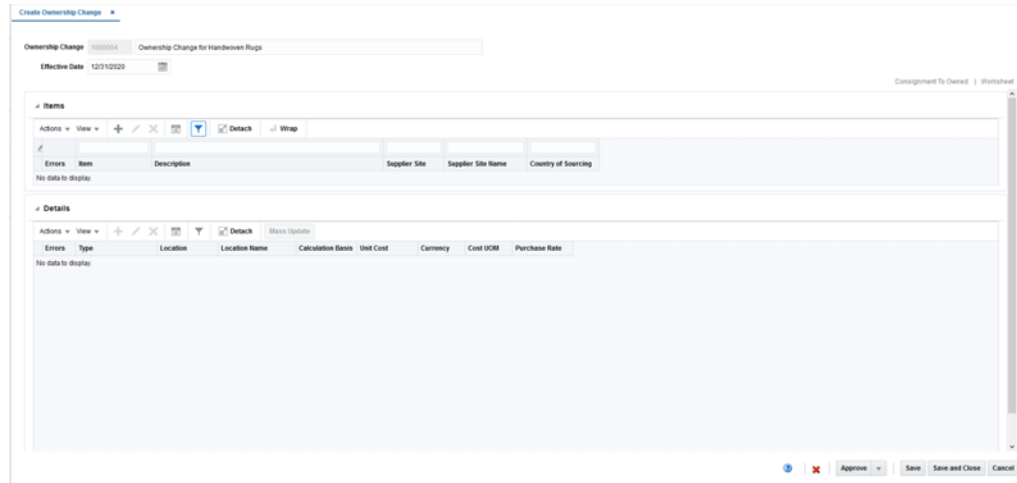

2. From the Actions menu, click **Add** or click the Add icon ✚. The Add Items pop-up appears.

Figure 3–7   Add Items Pop-up
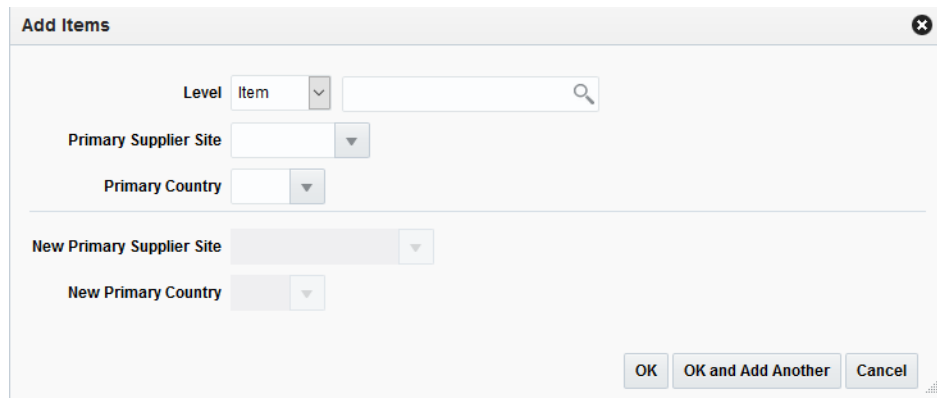

3. Enter the following information:

   ■ **Item/Item List** – Select Item or Item List. Only approved parent (level 1), inventoried and orderable items, except pack items are available to be selected.

   ■ **Primary Supplier Site** – Enter, select, or search for the primary supplier site that is to be change with new primary supplier site.

   ■ **Primary Country** – Enter, selector search for the primary country that is to be changed with new primary country.

   ■ **New Primary Supplier Site** – Enter, select or search for the new supplier site if you intend to update the primary supplier site of the items which are included in ownership change transaction.

   ■ **New Primary Country** – Enter, select, or search for the new primary country of sourcing ID if you intend to modify the primary country of sourcing of the items which are included in ownership change transaction.

4. Then choose one of the following options.

- Click **OK** to add the item to the table and close the page.

- Click **OK and Add Additional** to add additional items.

- Click **Cancel** to reject all entries and close the page.

Add Details

Use the Add option in the Actions menu to add details to the ownership change.

Figure 3–8   Ownership Change Add Details Screen

The following fields are available:

- **Calculation Basis** – This is available when the purchase type of the item is changed from owned to consignment or concession. If the purchase type is being changed to Owned, then this defaults to Cost per Unit and disabled. If the transaction type is Update Primary Supplier then it is hidden. Valid values are Cost per Unit, Purchase Rate, and No change.

  Enter cost per unit or purchase rate according to the selection. In case of cost per unit, the UOM also needs to be specified.

- **Supplier/Country checkbox** – Check this option when you want to create the ownership change at the supplier-country level.

- **All Location Exceptions** – Check this option when you want to create the ownership change for existing item-supplier-country-location records

- **Selected Locations** – Check this option when you want to create the ownership change for selected locations.

- **Level and Location LOV** – This field allows the user to select the level at which the locations are added to the highlighted item in item table.

  > **Note:**   This field is only displayed when the Selected Locations checkbox is checked.

Approve Ownership Change

After an ownership change is created in Merchandising, it needs to be approved. Depending on your organization and process, the person to create and approve the item may be different. In that case it first needs to be submitted and then approved. This workflow facilitates accountability and shared responsibility. An ownership change can be submitted by using the status button on the screen. This button label shows the most logical next step in the approval flow. If there are other actions possible, they can be accessed through the Actions dropdown menu. For example, when an ownership change is in worksheet status, the button label is Approve and the Submit option is available in the dropdown. However, when an ownership change is

in submitted status, the label of the button is Approve and the additional action available in the dropdown is Worksheet. If the ownership change is in Approved status the button label is Worksheet and there are no items in the Action dropdown menu. When the status is Processed, there is no further action possible and there is no button.

When an ownership change is approved, there are a number of validations that are carried out by merchandising to ensure successful creation of such transaction. If any item or location does not fulfill the validation criteria, this will result in Approval Error and such items/locations will be written to the Ownership Change Approval Error screen. The ownership change transaction will remain in the submitted status and there will be an error symbol next to the item/location in the respective table and also next to Ownership Change in the page header as hyperlink to open Ownership Change Approval Errors screen.

Review Approval Errors

The Ownership Change Approval Errors screen allows you to view the reasons why an ownership change cannot yet be approved. This screen will show all the item/locations that do not fulfill the validation criteria or the items that do not have any location specified in the ownership change screen. User can choose and delete item/locations listed here. Once deleted on this screen, they will also be deleted from the Ownership change screen tables.

You can access this screen by clicking the Error icon in the Items or Location table or Error icon at the page header on the Ownership Change screen.

- **From the Items table** – If this screen is accessed by clicking the error icon in the Items table then the table in the screen will list only the items and associated locations for which is error icon was clicked.

- **From the Locations table** – If this screen is accessed by clicking the error icon in the Locations table then the table in the screen will list only the particular location for which is error icon was clicked.

- **From the page header** – If this screen is accessed by clicking the error icon in the page header then the table in the screen will list all the items and associated locations with errors.

Manage Item Lists

The Manage Item Lists option opens the Item List Search page. In the Item List Search page you can perform the following actions.

- Search for an item list by various search criteria

- View the entered search results

- View an item list

- Create an item list

- Create an item list from an already existing item list

- Edit an item list

You can access the Item List Search page from the Task menu, select **Foundation Data > Items > Manage Item Lists**. The Item List Search page appears.

The Item List Search page contains the following sections.

- Search

  For more information about how to search for an item list, see the Searching for an Item List section.

- Results

Figure 4–1   Item List Search Page
Searching for an Item List

To search for an item list:

1. From the Task menu, select **Foundation Data > Item > Manage Item Lists**. The Item List Search page appears.

2. You can search for an item list by using basic or advanced search criteria, depending on the requirement. The basic mode is the default search mode.

    ■   Click **Advanced** to access the search section in advanced mode.

    ■   Click **Basic** to return to the basic mode.

Searching for an Item List Through the Basic Search Criteria

To search for an item list by using basic search criteria:

1. Enter, select or search for one or all of the following basic search criteria.

Table 4–1   Item List Search - Basic Search Criteria and Description

Fields	Description
Match option	Check radio button All or Any.
	All - only item lists matching all entered search criteria are shown.
	Any - item lists matching any of the entered search criteria are shown.
Item List	Enter the item list ID.
Description	Enter the item description.
Type	Select a type from the list.

Table 4–1   (Cont.) Item List Search - Basic Search Criteria and Description

Fields	Description
Created Date	Enter a created date or use the Calendar icon to select a date.
Created By	Select the desired user from the list.
Item	Enter or search for an item.
Item Description	Enter the item description.

2. Click the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

   You can also personalize your saved searches by selecting **Personalize**. The Personalized Saved Searches page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. Click **Reset** to clear the search section and results.

5. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

   For more information about how to save your search criteria, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

6. Click **Done** to close the page.

Searching for an Item List Through Advanced Search Criteria

To search for an item list by using advanced search criteria:

1. To search by using advanced search criteria, enter or select one or all of the advanced search criteria.

Table 4–2   Item List Search - Advanced Search Criteria and Description

Fields	Description
Item List	Enter the item list ID.
Description	Enter the item description.
Type	Select a type from the list.
Created Date	Enter a created date or use the Calendar icon to select a date.
Created By	Select the desired user from the list.
Item	Enter or search for an item.
Item Description	Enter the item description.
Division	Enter, select or search for the division.
Group	Enter, select or search for the group.
Department	Enter, select or search for the department.
Class	Enter, select or search for the class.

Table 4–2   (Cont.) Item List Search - Advanced Search Criteria and Description

Fields	Description
Subclass	Enter select or search for the subclass.

2. To narrow down the search, use the list next to the search fields. For example, determine, if the entered value should be equal or not equal to the search result.

3. Click the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

   You can also personalize your saved searches by selecting **Personalize**. The Personalized Saved Searches page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

4. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

5. Click **Reset** to clear the search section and results.

6. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

   For more information about how to save your search criteria, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

7. Click **Add Fields** to add more fields for the advanced search. To remove the field from the search, click the x right next to the field.

8. Click **Reorder** to change the order of the available search fields. The Reorder Search Fields page appears.

   - Select the desired search field and use the up and down arrows to rearrange the order of the fields.

   - Click **OK** to confirm the new order of the fields and close the page.

   - Click **Cancel** to reject any changes and close the page.

9. Click **Done** to close the page.

Results

The Results section lists the retrieved item lists. The Results table shows the following columns by default.

- Item List ID
- Description
- Type
- Total Items
- Created Date
- Created By

Create an Item List

The Create Item List option opens the Item List page. In the Item List page you can create, edit, and view basic information about an item list.

You can indicate whether the item list is static or dynamic. The ID of the user who created the item list and the date on which it was created are displayed in this page. The number of items that make up the item list are also displayed. You can use this page for mass change or mass creation.

The Item List page contains the following sections.

- Item List Header
- Allowed Hierarchies

> **Note:** This section is only available, if the Data Level Security is enabled.

Figure 4–2   Item List Page

Item List Header

The Item List header contains the following fields.

Table 4–3   Item List Header - Fields and Description

Fields	Description
Item List	The **Item List** field displays the generated item list ID.
	Enter the item list description in the field next to the item list ID.
Comments	Enter comments for the item list, if necessary.
Static checkbox	Select the Static checkbox to indicate that the item list cannot be rebuilt.
Private checkbox	Select the checkbox to indicate that the user level security for an item list is enabled. Only the user who created the item list can select the list for transactions.
Created	Displays the user who created the list as well as the date the list was created.
Last Rebuild Date	Displays the date of the last rebuild of the item list.

Allowed Hierarchies

The Allowed Hierarchies section displays organizational and merchandising hierarchies from which the items can be part of the item list. This section is only available, if the Data Level Security is enabled.

The table displays the following columns by default.

- Department ID and name

- Class ID and name

- Subclass ID and name

Creating Item Lists

To create an item list, follow the steps below.

1. From the Task menu, select **Foundation Data > Items > Create Item List**. The Item List page appears.

2. The **Item List** field displays the generated list ID. Enter the description for the item list in the field next to the item list ID.

3. In the **Comments** field, enter comments for the list, if necessary.

4. Select the **Static** checkbox, as necessary.

> **Note:** If you create a static item list, you cannot rebuild the list on demand.

5. Select the **Private** checkbox to indicate whether the user level security for an item list is enabled or disabled.

    If the user level security is enabled, only the person who created the item list can select the list for transactions.

6. The **Total Items** field, lists the total number of items on the item list.

7. If the Allowed Hierarchy section is enabled. Add a merchandise hierarchy to the item list, for which the list is available.

> **Note:** This section is only available, if the Data Level Security is enabled.

8. In the **Area** field, enter, select or search for the organizational value for which you have access.

9. Then select **Actions > Add**, or use the Add icon. The Allowed Merchandise Hierarchy page appears.

    a. In the **Group Type** field, select a group type from the list.

    b. In the **Department** field, enter, select or search for a department.

    c. In the **Class** field, enter, select or search for a class.

    d. In the **Subclass** field, enter, select or search for a subclass.

    e. Then choose one of the following options.

        – Click **OK** to save the hierarchy and close the page.

- Click **OK and Add Another** to add additional merchandise hierarchies.

- Click **Cancel** to reject all entries and close the page.

10. Then add items to the list. Select **More Actions > Items**. The Item List Items page appears.

    For more information about how to add items to an item list, see the Adding Items to Item Lists, step 6.

11. Add item criteria to the list, if necessary. Select More **Actions > Criteria**. The Item List Criteria page appears.

    For more information about how to add item list criteria, see the Adding Item List Criteria section, step 6.

12. Then choose one of the following options.

    - Click **Save and Close** to save your entries and close the Item List page.

    - Click **Save and Create Another** to create additional item lists.

    - Click **Cancel** to reject all entries and close the Item List page.

Item List Criteria Page

The Item List Criteria page allows you to add, delete and view the criteria by which items are grouped on an item list.

The Item List Criteria page contains the following sections.

- Item List Criteria Header

  The Item List Criteria header displays the item list ID and description.

- Item List Criteria Table

Figure 4–3   Item List Criteria Page

Item List Criteria Table

The Item List Criteria table displays the already defined criteria.

Adding Item List Criteria

To add criteria to an item list, follow the steps below.

1. From the Tasks menu, select **Foundation Data** > **Items > Manage Item Lists**. The Item List Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. In the Item List column, click the item list ID link, or mark a record and select **Actions > Edit**, or use the Edit icon. The Item List page appears.

5. Select **More Actions > Criteria**. The Item List Criteria page appears.

6. Select **Actions > Add**, or use the Add icon. The Add Criteria page appears.

Figure 4–4   Add Criteria Page

a. Select **Include/Exclude** to indicate that items meeting the criteria should be included/excluded from the item list.

b. In the **Merchandise Type** field, select the merchandise type from the list.

c. In the **Department**, **Class** and **Subclass** field, enter, select or search for the corresponding IDs.

d. In the **Season** field, enter, select or search for the season. The Phase field enables.

e. In the **Phase** field, enter, select or search for the phase.

f. In the **UDA** (User-defined Attributes) field, enter, select or search for the attribute.

g. In the **Supplier Site** field, enter, select or search for the supplier site.

h. In the **Purchase Type** field, select purchase type from the list.

i. In the **Diff 1-4** fields, enter, select or search for the desired differentiators.

j. Use the Calculate Item List Count icon to calculate the total of items matching the selected criteria and how many items are already part of the current item list.

k. Then choose one of the following options.

– Click **OK** to include/exclude the items with the selected criteria to/from the item list and close the page.

– Click **OK and Add Another** to include/exclude additional criteria.

– Click **Cancel** to reject all entries and close the page.

Item List Items Page

The Item List Items page allows you to maintain and view the item details for an item list. You can add or remove items individually to/from an item list. Item lists may contain any type of items. However, you cannot add items below transaction level to the item list.

The Item List Items page contains the following sections.

■ Item List Items Header

The Item List Items header displays the item list ID and description.

■ Item List Items Table

Figure 4–5   Item List Items Page
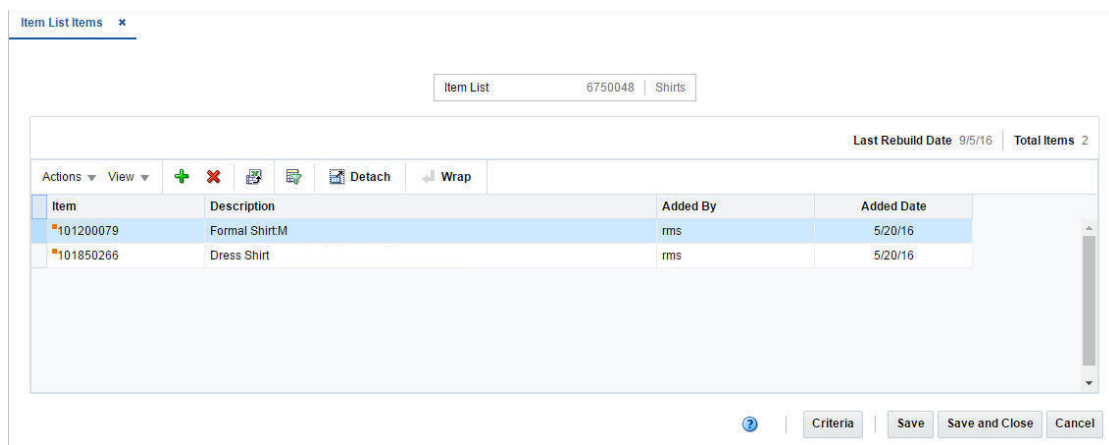

Item List Items Table

The table displays the items of the selected item list.

Adding Items to Item Lists

To add an item to an item list, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Manage Item Lists**. The Item Search List page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. In the Item List column, click the item list ID link, or mark a record and select **Actions > Edit**, or use the Edit icon. The Item List page appears.

5. In the table, select **More Actions > Items**. The Item List Items page appears.

6. Select **Actions > Add**, or use the Add icon. The Add Items page appears.

7. From the Add Items page, you can add items by item, by parent item, or by uploading a data file containing the list of items.

   - Parent Item – enter, select or search for the desired parent item.

   - Item – enter, select or search for the desired item.

   - Upload List – use the browse button to select and upload a previously created data file that contains the items you want to include.

   Note: The upload list must be created and saved as a .csv file.

   ---

8. Then choose one of the following options.

   - Click **OK** to add the item to the list and close the page.

   - Click **OK and Add Another** to add additional items to the list.

   - Click **Cancel** to reject all entries and close the page.

Rebuild Item Lists

To rebuild a location list, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Manage Item Lists**. The Item List Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. In the Item List column, click the item list ID link, or mark a record and select **Actions > Edit**, or use the Edit icon. The Item List page appears.

5. Select **More Actions > Rebuild**. The Item List Rebuild page appears. The item list details are displayed.

Figure 4–6 Item List Rebuild Page
6. Then choose one of the following options.

   - Click **Execute and Close** to rebuild the selected item list and close the page.

   - Click **Cancel** to reject all entries and close the page.

Use Item Lists

Update VAT Rates

The Change VAT Rates page allows you to edit a VAT code for multiple items by item list.

1. From the Tasks menu, select **Foundation Data > Items > Manage Item Lists**. The Item List Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. Select a record in the table.

5. Then select **Actions > Mass Change > VAT Rates**. The Change VAT Rates page appears.

Figure 4–7   Change VAT Rates Page

6. Enter the necessary data.

The page contains the following fields.

Table 4–4   Change VAT Rates - Fields and Description

Fields	Description
VAT Region	Enter, select or search for a VAT region ID.
	This field is a required field.
Type	Select the desired type from the list.
	This field is a required field.
Code	Enter, select or search for the desired VAT code.
	This field is a required field.
Active Date	Enter an active date on which the VAT code becomes effective or use the Calendar icon to select a date.
	This field is a required field.

Table 4–4 (Cont.) Change VAT Rates - Fields and Description

Fields	Description
Reverse VAT checkbox	Select the checkbox, if the reverse charge VAT is applicable for the item.
Rate %	Displays the VAT in percentage.

Update User Defined Attributes

The Change UDAs page allows you to mass update the user defined attributes for all items in an item list.

The Change UDAs page contains the following sections.

- Header

  The header contains the item list ID and description.

- List of Values

- Dates

- Free Form Text

Figure 4–8 Change UDAs Page
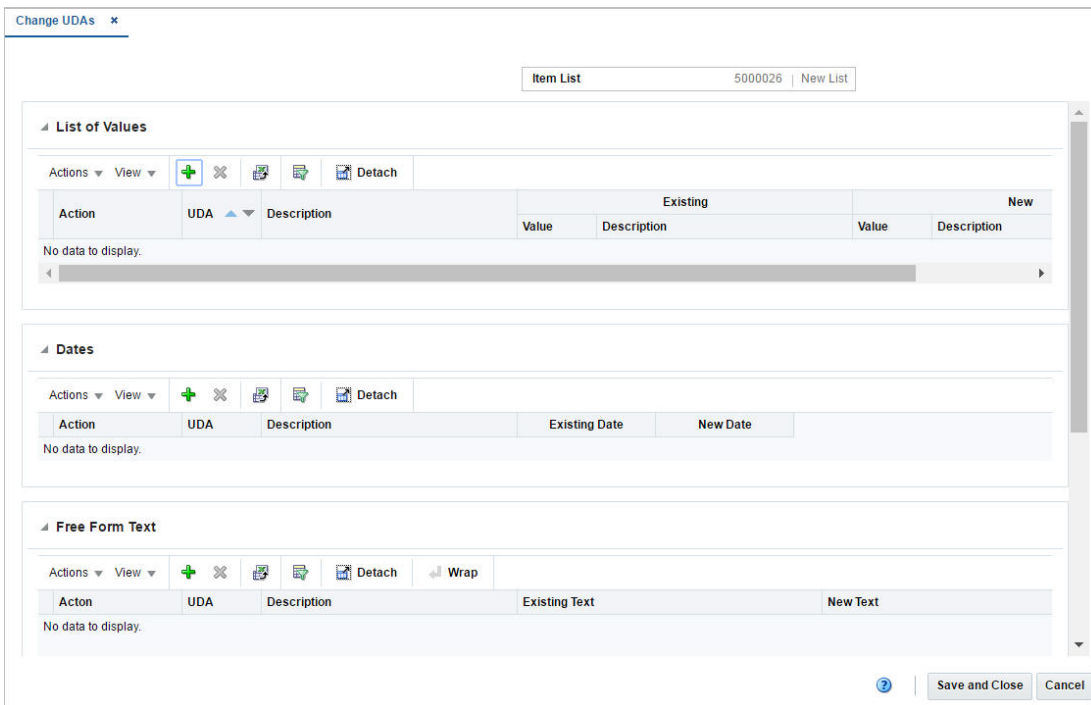

List of Values

This section displays the user defined values for the item list.

Dates

This section contains the user defined dates for the item list.

Free Form Text

The Free Form Text section displays the user defined text for the item list.

Adding User Defined Values

To add, change, or delete UDAs, follow the steps below

1. From the Tasks menu, select **Foundation Data > Items > Manage Item Lists**. The Item List Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. Select a record in the table.

5. Then select **Actions > Mass Change > User Defined Attributes**. The Change UDAs page appears.

6. In the List of Values section select **Actions > Add**, or use the Add icon. The Add, Change, or Delete UDA page appears.

Figure 4–9   Add, Change, or Delete UDA Page

a. Select one of the following actions

   – **Add All**

      Adds the attribute to all items of the selected item list.

   – **Add Where Not Exists**

      Adds the attribute only to items where the attribute does not yet exist.

   – **Change**

      Changes the attribute for the items on the item list.

   – **Delete**

      Deletes the attribute from all items on the item list.

b. In the **UDA** field, enter, select or search for the desired attribute.

c. In the **UDA Value** field, enter, select or search for the value.

d. Then choose one of the following options.

   – Click **OK** to update the attribute in the item list.

- Click **OK and Add Another** to update the attribute and add additional ones.

- Click **Cancel** to reject all entries and close the page.

Adding Dates for User Defined Attributes

To add, change or delete dates for user defined attributes, follow the steps below.

1. In the Dates section, select **Actions > Add**, or use the Add icon. The Add, Change, or Delete page appears.

   a. Select one of the following actions

      - **Add All**

        Adds the date to all attributes.

      - **Add Where Not Exists**

        Adds the date only to attributes where no date yet exists.

      - **Change**

        Changes the dates for the selected attribute.

      - **Delete**

        Deletes the date from the selected attribute.

   b. In the **UDA** field, enter, select or search for the desired attribute.

   c. In the **Date** field, enter the desired date or use the Calendar icon to select a date.

   d. Then choose one of the following options.

      - Click **OK** to update the date in the item list.

      - Click **OK and Add Another** to update the date and add additional ones.

      - Click **Cancel** to reject all entries and close the page.

Adding Text for User Defined Attributes

To add, change, or delete text for user defined attributes, follow the steps below.

1. In the Free Form Text section, select **Actions > Add**, or use the Add icon. The Add, Change, or Delete page appears.

   a. Select one of the following actions

      - **Add All**

        Adds the text to all items on the item list.

      - **Add Where Not Exists**

        Adds the text only to items on the item list where no text yet exists.

      - **Change**

        Changes the text for the items on the selected item list.

      - **Delete**

        Deletes the text from all items of the selected item list.

   b. In the **UDA** field, enter, select or search for the desired attribute.

   c. In the **Text** field, enter the desired text.

    d. Then choose one of the following options.

      – Click **OK** to update the text for the items of the list.

      – Click **OK and Add Another** to update the text and add additional ones.

      – Click **Cancel** to reject all entries and close the page.

Changing Seasons

The Change Seasons page allows you to change the seasons and phases for all items in an item list. You can add, change, or delete existing seasons and phases.

The Change Season page contains the following sections.

■ Header

    The header displays the item list ID and description.

■ Change Seasons Table

Figure 4–10 Change Seasons Page
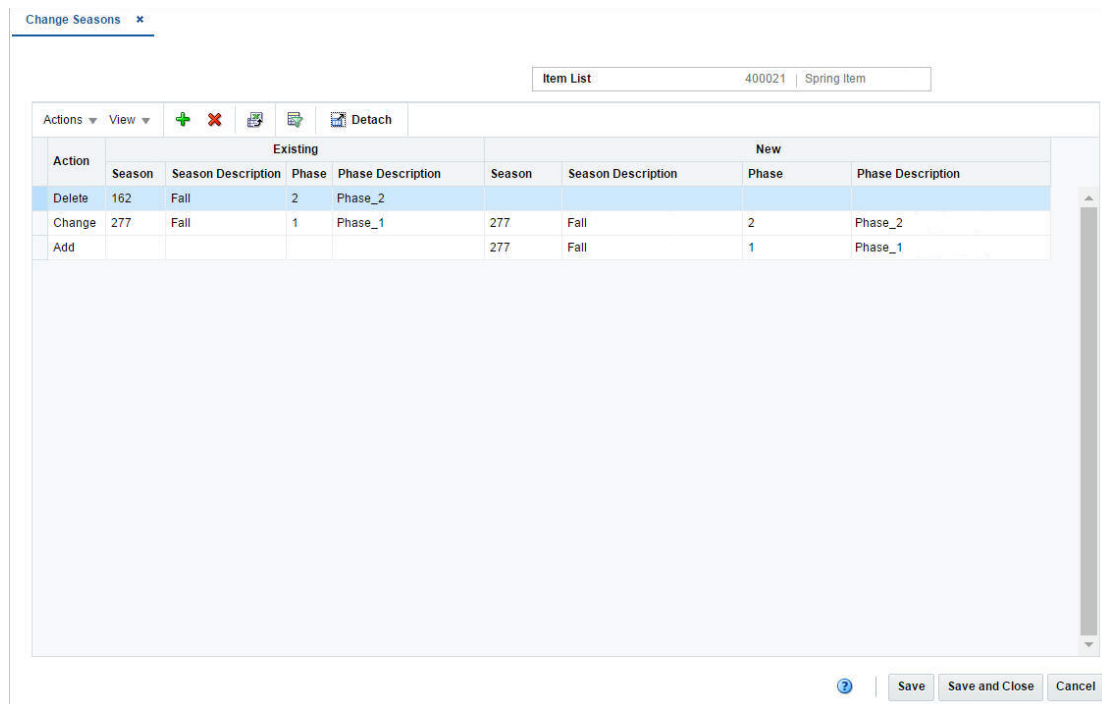

Change Seasons Table

The table displays the actions to be performed, the existing seasons and phases to be changed or deleted as well as the new seasons and phases to be added for all items on the item list.

Maintaining Seasons and Phases

To maintain seasons and phases for an item list, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Manage Item Lists**. The Item Search page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The item lists that match the search criteria are displayed in the Results section.

4. Select a record in the table.

5. Then select **Actions > Mass Change > Seasons/Phases**. The Change Seasons page appears.

Adding Seasons and Phases To add a season and phase, follow the steps listed below.

1. Select **Actions > Add** or use the Add icon. The Add, Change, or Delete Season/Phase page appears.

Figure 4–11 Add, Change, or Delete Season/Phase Page

2. Select **Add**.

3. In the **Season** field, enter, select or search for the season you want to add.

4. In the **Phase** field, enter, select or search for the phase you want to add.

5. Then choose one of the following options.

   - Click **OK** to save the changes and close the page.

   - Click **OK and Add Another** to maintain additional entries.

   - Click **Cancel** to reject all entries and close the page.

Changing Seasons and Phases To change a season/phase, follow the steps below.

1. Select **Actions > Add** or use the Add icon. The Add, Change, or Delete Season/Phase page appears.

2. Select **Change**.

3. Select a Season/Phase you want to change.

   a. In the **Season** field, enter, select or search for the season you want to change.

   b. In the **Phase** field, enter, select or search for the phase.

4. Then select a new season/phase.

   a. In the **Season** field, enter, select or search for the season you want to change.

   b. In the **Phase** field, enter, select or search for the phase.

5. Then choose one of the following options.

   - Click **OK** to save the changes and close the page.

   - Click **OK and Add Another** to maintain additional entries.

   - Click **Cancel** to reject all entries and close the page.

Deleting Seasons and Phases To delete a season and phase, follow the steps listed below.

1. Select **Actions > Add** or use the Add icon. The Add, Change, or Delete Season/Phase page appears.

2. Select **Delete**.

3. In the **Season** field, enter, select or search for the season you want to delete.

4. In the **Phase** field, enter, select or search for the phase you want to delete.

5. Then choose one of the following options.

   ■ Click **OK** to save the changes and close the page.

   ■ Click **OK and Add Another** to maintain additional entries.

   ■ Click **Cancel** to reject all entries and close the page.

Scheduled Item Maintenance

The Scheduled Item Maintenance page is used to view or edit lists of item list/location list links. After linking an item list with a location list, you may specify a date to use the item/location list as part of a scheduled item maintenance update.

Item lists are set up by selecting items either individually or by a group characteristic.At any time you may add items to or delete items from an item list. Item lists may also be linked with Location Lists using the Scheduled Item Maintenance page.

You can add items to a list one by one, or you can enter criteria in order to group the items. It becomes much simpler to apply changes to multiple items when the items are grouped on an item list.

The item list feature allows you to create, copy, edit, view, and use a group of items that are identified by one ID.

Creating a Schedule

The Item/Loc Update page allows you to maintain and view lists of item list/location list links. After linking an item list with a location list, a date to use the item/location list as part of a scheduled item maintenance update should be specified.

To add an item/loc list link:

1. From the Tasks menu, select **Items** > **Scheduled Item Maintenance** > **Create Scheduled Item Update**. The Item/Loc Update page appears.

Figure 4–12   Item/Loc Update Page

2. In the Item Location Link section, enter the following:

    ■   In the **Item/Location Link ID** field, enter a name for the link you are creating. The ID number will be created by Merchandising.

    ■   In the **Item List** field, enter, select or search for an item list.

    ■   In the **Location List** field, enter, select or search for a location list.

    > **Note:**   You will only be able to add item and location lists that do not have user security, or are created by you.

Schedule Detail

In the Schedule Detail section add dates and statuses for the item/location link.

Adding Schedule Detail

To add schedule detail:

1. From the Tasks menu, select **Items** > **Scheduled Item Maintenance** > **Create Scheduled Item Update**. The Item/Loc Update page appears.

2. In the Item/Loc Update page, go to Schedule Detail section.

3. From the Actions menu, select **Add** or click the Add icon +. The Schedule Detail page appears.

4. In the **Effective Date** field, enter the date for this link to become effective in Merchandising or use the Calendar icon to select a date.

5. In the **Status** field, select the status that will be applied to this link on the effective date.

6. Then choose one of the following options.

    ■   Click **OK** to add the schedule detail to the table and close the page.

    ■   Click **OK and Add Another** to add additional effective dates.

    ■   Click **Cancel** to reject all entries and close the page.

Manage Item/Loc Update Page

To maintain an item/loc list link:

1. From the Tasks menu, select **Items** > **Scheduled Item Maintenance** > **Manage Scheduled Item Updates**. The Item/Loc Update page appears.

2. In the Item Location Link section, enter the following details:

   - In the **Item/Location Link ID** field, enter a name for the link you are creating. The ID number will be created by Merchandising.

     If you enter the item/location link, the item list, the location list and scheduled details default to the values of the item/location link.

   - In the **Item List** field, enter an item list ID, select or search for an ID.

   - In the **Location List** field, enter a location list ID, select or search for an ID.

   > **Note:** You will only be able to add item and location lists that do not have user security, or created by you.

3. In the Schedule Detail section the effective dates and statuses are displayed.

   For more information about the Item/Loc Update page, see the Scheduled Item Maintenance section.

5

Item Foundation Data

In the context of item maintenance, there are several attributes that could vary for different retailers and for different product hierarchies. To provide flexibility many of these attribute groups have been made configurable or user defined. Some such groups these include differentiators, pack templates, brands, seasons and phases, user-defined attributes (UDAs), and tickets. More details are available for creating and maintaining these item attributes in the sections below.

Manage Diff Types and Diffs

In Merchandising, differentiators are used as unique identifying features to differentiate an item from its parent. This feature is used primarily for fashion items, where SKU items are differentiated from styles by size, color, fit and so on. However, differentiators can be used for any product type. Diff Types are used to classify differentiators, whereas differentiators represent the components of the diff type. For example, if the diff type is color, then the differentiators could be red, blue, and so on. Differentiators are created, maintained or deleted in Merchandising through spreadsheet upload and download processes. These processes are accessed through the main Merchandising task list under Foundation Data > Download Foundation Data and Foundation Data > Upload Foundation Data.

To add or update diffs, you will select the template type of Items from the Download Data screen and then the template Differentiators. Click the Download button and when prompted, choose to either open the .ods file that is generated or save the file and open it separately in the spreadsheet application of your choice. Once opened, there will be four sheets that can be modified - Diff Types, Diff Type Translations, Diff IDs, and Diff ID Translations.

Add a Diff Type or Diff ID

To add a new diff type, start in the Diff Types tab, and, in a blank line in the template, select the action type of Create. Next enter a unique diff type (up to 6 characters) and the description for the diff type in the primary language (as defined in the Merchandising system options) of up to 120 characters. Next, if you wish to add translations for the diff type in languages other than the primary language, this can be done in the Diff Type Translations tab. Navigate to a blank row and select the action type of Create and the language in which the translated description will be entered. Then, enter the diff type for which the translation applies. Finally, enter the translated description. The translated description can also be up to 120 characters long. This is an optional step.

Next, the diff IDs that belong in this diff type must be added. To do this, move to the Diff IDs tab in the spreadsheet. Again, navigate to a blank row in the sheet and select an action type of Create. Enter the first diff ID (up to 10 characters), along with its

description. The description here should be in the primary language (as defined in the Merchandising system options) and can be up to 120 characters. Then add the diff type that was added in the Diff Type tab. You can optionally choose to add Industry Code (up to 10 characters) and Industry Subgroup (up to 10 characters). The last two columns are used to hold the unique code and sub group thereof used by industry standards to identify the differentiator.   Continue this process until all the new IDs for the type have been added. If you are adding a new diff ID to an existing diff type, this same process would apply, just using an existing diff type instead.

Lastly, if you wish to add translations for the diff IDs in languages other than the primary language, this can be done in the Diff ID Translations tab. Navigate to a blank row and select the action type of Create and the language in which the translated description will be entered. Then, enter the diff ID for which the translation applies. Finally, enter the translated description. The translated description can also be up to 120 characters long. This is an optional step.

Update Diff Type or ID

If you would like to update any details for existing diff types or IDs, a similar process will be followed as that described above for creating new types or IDs. First, download the spreadsheet, and then navigate to the tab where you would like to make your updates.

The following columns can be updated in each tab:

- Diff Types - Description
- Diff Type Translations - Description
- Diff IDs - Diff Description, Industry Code, Industry Subgroup
- Diff ID Translations - Diff Description

In the tab where you are going to make your updates, select the action type of Update, and then correct the value in the spreadsheet.

Deleting a Diff Type or ID

If you wish to delete a Diff Type or ID, update the action column to select Delete in each of the tabs where it occurs. A diff type cannot be deleted if there are diff IDs already created under it. Similarly, a diff ID cannot be deleted if an item is created by using the diff.

Uploading Changes

For all actions defined above, once all the updates have been made to the data in the spreadsheet, save the file and close it. Then, return to the Merchandising screens and select Foundation Data > Upload Foundation Data from the main task list. In this screen, select the template type Items and the template Differentiators. This will generate a process description automatically, but this can be updated if desired. Lastly, select the Browse button and navigate to the directory where you saved the updated spreadsheet.

> **Note:**   Because all the tabs in this spreadsheet have a lot of rows, it's recommended that you delete any you are not updating from the template. This will not remove them from the system, but will make your updates process faster. Worksheets and columns in the spreadsheet cannot be removed, however.

To review the status of the upload and check whether any errors occurred, select the Foundation Data > Review Status task from the main task list.

See also Download/Upload Data from Spreadsheets.

Manage Diff Groups

The Differentiator Groups page is used for maintaining differentiator groups. Differentiator groups are used to simplify associating items with multiple differentiators. Differentiator groups can also be assigned to levels of merchandise or organizational hierarchies. You can add, edit, delete or view differentiator groups in this page.

The Differentiator Groups page contains the following sections.

- Group
- Group Details

Figure 5–1   Differentiator Groups Page

Group

The Groups section displays the available differentiator groups.

Groups - Actions Menu and Icons

Use the Actions Menu and icons to apply actions to the table. You can perform the actions listed below.

Table 5–1   Groups - Actions Menu/Icons and Description

Actions Menu/Icons	Description
Add and Add icon	You can add new groups by selecting **Actions** > **Add** or by using the Add icon.
	For more information about how to add groups, see the Adding a New Differentiator Group section.
Delete and Delete icon	You can delete differentiator groups:
	■ Select a record in the table.
	■ Select **Actions > Delete** or use the Delete icon.
	■ You are prompted, if you want to delete the record. Select **Yes** to confirm the prompt.
	■ The record is deleted from the table.
Edit and Edit icon	Select **Actions > Edit** or use the Edit icon to edit the selected groups.
	For more information about how to edit a group, see the Editing a Differentiator Group section.
Export to Excel and Export to Excel icon	You can export the records in the table to a Microsoft Excel spreadsheet by selecting **Actions > Export to Excel** or by using the Export to Excel icon.
Translate and Translate icon	You can create a translation by selecting **Actions > Translate** or by using the Translate icon.

Groups - View Menu and Icons

You can customize the view of the table by using the options in the View Menu.

Table 5–2   Groups/Group Details- View Menu/Icons and Description

View Menu/Icons	Description
Columns	You can manage which of the columns will be shown in the table by clicking the **Show All** and **Manage Columns** options.
Detach and Detach icon	You can view the tables in the application in a separate page by clicking Detach or by using the Detach icon.
Sort	You can sort columns by the following options:
	■ Ascending
	■ Descending
	■ Advanced
Reorder Columns	You can reorder columns by clicking the Reorder Columns option.
Query by Example and Query by Example icon	You can filter the items by one or multiple column values by clicking the Query by Example option or by using the Query by Example icon.

Group Details

In the Group Details section you can maintain the differentiators that are members of the group and specify their listing order.

Adding a New Differentiator Group

To add a new differentiator group, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Differentiator > Groups**. The Differentiator Groups page appears.

2. In the Groups section, select **Actions > Add**, or use the Add icon. The Add Group page appears.

Figure 5–2   Add Group Page

   a. In the **Group** field, enter the group name. This is a required field.

   b. In the **Group Description** field, enter a more detailed description for the group. This is a required field.

   c. In the **Type** field, enter, select or search for a type ID. This field is a required field.

   d. In the **Area** field, enter, select or search for an area.

   e. In the **Division** field, enter, select or search for a division.

   f. Then choose one of the following options.

      – Click **OK** to add the group and close the page.

      – Click **OK and Add Another** to add additional groups.

      – Click **Cancel** to reject all entries and close the page.

Adding Group Details to Differentiator Groups

To add details to differentiator groups, follow the steps below.

1. In the Group Detail section, select **Actions > Add**, or use the Add icon. The Add Detail page appears.

2. In the **Sequence** field, enter the sequence number for the group detail.

   > **Note:**   You can also add the sequence number for the group detail, directly in the table.

3. In the **Diff Type Description** field, enter, select or search for the diff type description. This field is a required field.

4. Then choose one of the following options.

   ■ Click **OK** to add the detail to the diff group and close the page.

   ■ Click **OK and Add Another** to add additional details to the diff group.

   ■ Click **Cancel** to reject all entries and close the page.

Editing a Differentiator Group

To edit a diff group, follow the steps listed below.

1. From the Tasks menu, select **Foundation Data > Items > Differentiator > Groups**. The Differentiator Groups page appears.

2. In the Groups section, select **Actions > Edit**, or use the Edit icon. The Edit Group page appears.

   a. In the **Group Description** field, change the description for the group, as necessary.

   b. In the **Area** field, enter, select or search for another area, if necessary.

   c. In the **Division** field, enter, select or search for another division, if necessary.

   d. Then choose one of the following options.

      – Click **OK** to edit the group and close the page.

      – Click **Cancel** to reject all entries and close the page.

Manage Diff Ranges

The Manage Diff Ranges option opens the Manage Range page. In this page you can delete a diff range or add, edit, delete or view diff range details.

To manage a diff range, follow the steps below.

For more information about the available fields and functions in this page, see the Creating Differentiator Ranges section.

1. From the Tasks menu, select **Foundation Data > Items > Differentiators > Manage Diff Ranges**. The Manage Range page appears.

2. In the **Range Field**, enter, select or search for the diff range ID you want to edit. The diff range description and range type as well as the diff types and groups are displayed.

3. Change the diff range description, if necessary.

4. In the Details section, add, edit or delete diff range details, as necessary.

   > **Note:** To include diffs in the diff range, see the Adding Diff Group Details section.
   >
   > To edit diffs of a diff range, see the Editing Diff Group Details section.

5. Then select one of the following options.

   ■ Click **Save and Close** to save your changes and close the page.

   ■ Click **Save** to save your changes.

   ■ Click **Save and Edit Another** to save the current change and edit additional diff ranges.

   ■ Click **Cancel** to reject all entries and close the page.

Creating Differentiator Ranges

The Create Diff Range option opens the Differentiator Range page. In this page you can create, edit, delete and view ranges of differentiators.

A differentiator range is a list of differentiators that are grouped under one ID. A differentiator range can be used to apply multiple differentiators to an item with less repetition and effort than applying each differentiator ID individually.

The Differentiator Range page contains the following sections.

- Range
- Detail

Figure 5–3   Differentiator Range Page

Range

The Range section contains the following fields.

Table 5–3   Range - Fields and Description

Fields	Description
Range	Enter a range.
Translate and Translate icon	You can create a translation by using the Translate icon.
Range Type	Select a range type from the list.
Type 1 - 3	Enter, select or search for a type. You can add up to 3 diff types.
Group	Enter, select or search for groups for diff types 1-3.

Detail

In the Detail section you can add, edit, delete and view diffs of the diff range.

> **Note:** If you create a new diff range, press **Add Details** to open this section.

Creating a Differentiator Range

To create a diff range, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Differentiators > Create Diff Range**. The Differentiator Range page appears.

2. In the **Range Field**, enter a range ID and description of the diff range.

3. In the **Range Type** field, select a type from the list.

   > **Note:** After you have entered the diff range ID, description and type, the **Like Range** button enables. Use the button to create a diff range from an existing one.

4. In the **Type** fields, enter, select or search for the desired diff types you want to include in the range.

5. In the **Group** fields, enter, select or search for the desired diff groups you want to include in the range.

   > **Note:** Repeat steps 4 - 5 for up to three diff type/group combinations.
   >
   > To include diffs in the diff range, see the Adding Diff Group Details section.

6. Then select one of the following options.

   - Click **Save and Close** to save the current diff range and close the page.

   - Click **Save** to save the current diff range.

   - Click **Save and Create Another** to save the current entry and create additional diff ranges.

   - Click **Cancel** to reject all entries and close the page.

Adding Diff Group Details To add a diff to a diff range, follow the steps below.

1. In the Differentiator Range page, click **Add Details** to enable the Detail section.

2. Then select **Actions > Add**, or use the Add icon. The Add Detail page appears.

   a. In the **Differentiator Group** field, enter, select or search for a new diff you want to add to the diff range.

   b. In the **Ratio/Percentage** field, enter the rate/percentage for the selected diff.

   c. Then choose one of the following options.

      – Click **OK** to add the diff to the table and close the page.

      – Click **OK and Add Another** to add the current diff and add additional diffs.

      – Click **Cancel** to reject all entries and close the page.

Editing Diff Group Details To edit a diff of a diff range, follow the steps below.

1. In the Differentiator Range page, open the Detail section.

2. Then select **Actions > Edit** or use the Edit icon. The Edit Detail page appears.

    a. In the **Differentiator Group** field(s), enter, select or search for a another diff.

    b. In the **Ratio/Percentage** field, enter the rate/percentage for the selected diff.

    c. Then choose one of the following options.

        – Click **OK** to save the changes and close the page.

        – Click **Cancel** to reject all entries and close the page.

Manage Diff Ratios

In the Differentiator Ratio page you can create, edit, or view a differentiator ratio. The differentiator ratio is based on the sales history for an item in the department, class, and subclass. You can select the type of sales (regular, promotional, or clearance) and the time period to include in the calculation of the differentiator ratio in this page. The ratio is calculated by a batch program.

Figure 5–4   Differentiator Ratio Page

The Differentiator Ratio page contains the following fields.

Table 5–4   Differentiator Ratio - Fields and Description

Fields	Description
Ratio	The ratio ID is generated automatically.
	Enter a description for the ratio.
	This field is a required field.
Translate icon	You can create a translation by using the Translate icon.

Table 5–4   (Cont.) Differentiator Ratio - Fields and Description

Fields	Description
Generated By	Select manual if the diff ratio is calculated manually or system if through a batch program.
	If you select Manual, the **Like Ratio** button is enabled and all the other fields are disabled.
Like Ratio button	Opens the Like Ratio Selection page, to create a diff ratio from an existing ratio.
	This button is only available, if you create a differentiator ratio.
Department	Enter, select or search for the department.
	This field is a required field.
Class	Enter, select or search for the class.
	This field is a required field.
Subclass	Enter, select or search for the subclass.
Group 1 - 3	Enter, select or search for the groups.
Sales Type to Use:	Select the sales type you want to use for the diff ratio.
Regular	Indicates that you want to use regular sales.
Promotional	Indicates that you want to use promotional sales.
Clearance	Indicates that you want to use clearance sales.
Build Time Period:	Select the time period for the diff ratio.
Period Type	Displays the type of period to take the sales history for.
	Select the period type from the list.
From	Displays the starting date for the sales history to be used.
	Enter a from date or use the Calendar icon to select a date.
Back To	Displays the weeks back of sales history to be used.
	Enter a back to date or use the Calendar icon to select a date.
Review Every	Enter the number of weeks.
Last Review Date	Displays the last review date.

Creating a Differentiator Ratio

To create a diff ratio, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Differentiators > Create Diff Ratio**. The Differentiator Ratio page appears.

2. In the **Ratio** field, enter the description of the diff ratio.

3. In the Generated By area, select **System** or **Manual**.

4. If you select **System**:

   a. Enter, select or search for the department, class, and subclass.

   b. Enter, select or search for up to three diff groups to be associated with this ratio.

   c. In the Sales Type area, select the types of sales you want to include in the ratio.

   d. In Build Time Period area, select the type of time period. Then enter the dates.

    e. In the **Review Every** Week(s) field, enter how often the ratio should be reviewed.

5. If you select **Manual:**

    a. The **Like Ratio** button enables, all other fields are disabled.

    b. Select the **Like Ratio** button. The Select Like Ratio page appears.

    c. In the **Ratio** field, enter, select or search for the diff ratio you want to copy from.

    d. Then choose:

        – Click **OK**. The settings of the selected diff ratio are applied to the current diff ratio.

        – Click C**ancel** to reject all entries and close the page.

Editing a Differentiator Ratio

To edit a diff ratio, follow the steps below.

1. From the Tasks menu, select **Foundation Data > Items > Differentiators > Manage Diff Ratios**. The Differentiator Ratio page appears.

2. Enter or select search criteria as desired to make the search more restrictive.

3. Click **Search**. The diff ratios that match the search criteria are displayed in the Results section.

4. In the Ratio column, click the ratio link, or mark a record and select **Actions > Edit**, or use the Edit icon. The Differentiator Ratio page appears.

5. Edit the fields, as necessary.

Differentiator Ratio Detail Page

In the Differentiator Ratio Detail page you can edit and view the results of a differentiator ratio that has been calculated by a batch program. In edit mode, if you select a store that is not yet associated with the current diff ratio, you can base the store's ratios on those for another store. After you select a store or all stores, you can edit the quantity for each diff or diff combination.

The Differentiator Ratio Detail page contains the following sections.

■ Header

The header displays the ratio, department, class and subclass ID and description.

■ Diff Ratio Detail Table

Diff Ratio Detail Table

The table contains the diff IDs and description as well as the quantity.

Editing Diff Ratio Details

To edit diff ratio details, follow the steps below.

1. Edit the description, sales types, and review number as necessary.

2. Click **Detail**. The Differentiator Ratio Detail page appears.

3. In the **Level** field, select if you want to edit the diffs at all stores, or at a specific store. Then enter, select or search for the store ID.

4. Click **Search**.

5. If you select a store that is not yet associated with the diff ratio, you are prompted to add the store using another store as template.

6. Select **Yes** to confirm the prompt. The Create Like Store page appears.

7. In the **Store** field, enter, select or search for the store.

8. Then choose one of the following options.

   ■ Click **OK** to copy the details and close the page.

   ■ Click **Cancel** to reject all entries and close the page.

9. Edit the quantity of each diff as necessary in the table.

10. Click the Recalculate icon to update the ratios in the Ratio column.

11. Then choose one of the following options.

    ■ Click **Save** to save your changes.

    ■ Click **Save and Close** to save your changes and close the page.

    ■ Click **Save and Edit Another** to edit additional diff ratios.

Managing Diff Ratios

The Manage Diff Ratios option opens the Differentiator Ratio Search page. In this page you can perform the following actions.

■ Search for diff ratios by various search criteria

■ View the search results

■ View a diff ratio

■ Create a diff ratio

■ Edit diff ratio

You can access the Differentiator Ratio Search page from the Task menu, select **Foundation Data > Items > Differentiators > Manage Diff Ratios**. The Differentiator Ratio Search page appears.

The Differentiator Ratio Search page contains the following sections.

■ Search

   For more information about how to search for a diff ratio, see the Searching for a Diff Ratio section.

■ Results

Figure 5–5   Differentiator Ratio Search Page

Searching for a Diff Ratio

To search for a diff ratio:

1. From the Task menu, select **Foundation Data > Items > Differentiators > Manage Diff Ratios**. The Differentiator Ratio Search page appears.

2. You can search for a diff ratio by using basic or advanced search criteria, depending on the requirement. The basic mode is the default search mode.

   ■ Click **Advanced** to access the search section in advanced mode.

   ■ Click **Basic** to return to basic mode.

Searching for a Diff Ratio Through the Basic Search Criteria To search for a diff ratio by using basic search criteria:

1. Enter, select or search for one or all of the following basic search criteria.

Table 5–5   Diff Ratio Search - Basic Search Criteria and Description

Fields	Description
Match option	Check radio button All or Any.
	All - only diff ratios matching all entered search criteria are shown.
	Any - diff ratios matching any of the entered search criteria are shown.
Ratio	Enter the ratio ID.
Description	Enter the ratio description.
Last Review Date	Enter the last review date or use the Calendar icon to select a date.

Table 5–5 (Cont.) Diff Ratio Search - Basic Search Criteria and Description

Fields	Description
Department	Enter, select or search for the department.
Class	Enter, select or search for the class.
Subclass	Enter, select or search for the subclass.

2. Click the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

   You can also personalize your saved searches by selecting **Personalize**. The Personalized Saved Searches page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

3. Click **Search**. The diff ratios that match the search criteria are displayed in the Results section.

4. Click **Reset** to clear the search section and results.

5. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

   For more information about how to save your search criteria, see Create Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

6. Click **Done** to close the page.

Searching for Diff Ratios Through Advanced Search Criteria To search for a diff ratio by using advanced search criteria:

1. To search by using advanced search criteria, enter or select one or all of the advanced search criteria.

Table 5–6 Diff Ratio Search - Advanced Search Criteria and Description

Fields	Description
Match option	Check radio button All or Any.
	All - only diff ratios matching all entered search criteria are shown.
	Any - diff ratios matching any of the entered search criteria are shown.
Ratio	Enter the ratio ID.
Description	Enter the ratio description.
Last Review Date	Enter the last review date or use the Calendar icon to select a date.
Department	Enter, select or search for the department.
Class	Enter, select or search for the class.
Subclass	Enter, select or search for the subclass.
Division	Enter, select or search for the division.
Group	Enter, select or search for the group.

2. To narrow down the search, use the list next to the search fields. For example, determine if the entered value should be equal or not equal to the search result.

3. Click the Saved Search list to select one of the saved search criteria. Selecting a saved search populates the search section with the saved search criteria. If the run automatically function is enabled for the search, the search is executed immediately.

   You can also personalize your saved searches by selecting **Personalize**. The Personalized Saved Searches page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

4. Click **Search**. The diff ratios that match the search criteria are displayed in the Results section.

5. Click **Reset** to clear the search section and results.

6. Click **Save As...** to save the current search criteria. The Create Saved Search page appears.

   For more information about the Personalized Saved Search, see Personalize Saved Search in the *Oracle® Retail Merchandising Do the Basics User Guide*.

7. Click **Add Fields** to add more fields for the advanced search. To remove the field from the search, click the x right next to the field.

8. Click **Reorder** to change the order of the available search fields. The Reorder Search Fields page appears.

   - Select the desired search field and use the up and down arrows to rearrange the order of the fields.

   - Click **OK** to confirm the new order of the fields and close the page.

   - Click **Cancel** to reject any changes and close page.

9. Click **Done** to close the page.

Results

The Results section lists the retrieved diff ratios. The Results table shows the following columns by default.

- Ratio

- Description

- Department and Department Name

- Class and Class Name

- Subclass and Subclass Name

- Last Review Date

Manage Pack Templates

Creating Pack Template

A pack template is used to order diffs that are frequently ordered as a set, rather than ordering individual items. When creating a pack item, you must specify a quantity for each combination.

To create a pack template:

1. From the Tasks menu, select **Items** > **Create Pack Template**. The Create Pack Template page appears.

Figure 5–6   Create Pack Template Page
2. In the **Template** field, a Pack Template ID is automatically generated and displayed. Enter a description for the template.

3. In each **Type** field, enter the ID of a diff type you want to assign to this template for up to four diff types, or select the diff type.

4. In each **Group** field, select the diff group you want to assign to this template, for up to four diff groups.

5. For each **Diff** field, enter a diff ID, select or search for a diff for each diff group/type combination. The field label will display the value that you selected in the Diff Type field.

6. Click **Add Details**. The Detail section appears. For more information about adding details, see the Adding Details section.

Figure 5–7   Detail Section

Detail

The detail table displays the differentiator values.

Adding Details

To add details:

1. In the Detail section, select **Actions > Add,** or click the Add icon ✚. The Add Detail page appears.

Figure 5–8   Add Detail Page

2. In the enabled fields, enter, select or search for the diffs.

3. In the **Quantity** field, enter the quantity.

4. Then choose one of the following options.

    ■   Click **OK** to add the diff details to the table and close the page.

    ■   Click **OK and Add Another** to add additional diff details.

    ■   Click **Cancel** to reject all entries and close the page.

Adding a Like Template

The Like Template button is enabled when you enter the value of a group.

To add a like template:

1. In each **Type** field, enter the ID of a diff type you want to assign to this template for up to four diff types, or select the diff type.

2. In each **Group** field, select the diff group you want to assign to this template, for up to four diff groups.

3. Click **Like Template**. The Like Template page appears.

Figure 5–9   Like Template Page

4. Then choose one of the following options.

    ■   Click **OK** to create the like template and close the page.

    ■   Click **Cancel** to reject all entries and close the page.

Managing Pack Templates

To manage pack templates:

1. From the Tasks menu, select **Items** > **Manage Pack Templates**. The Manage Pack Template page appears.

Figure 5–10   Manage Pack Templates Page

2.   In the **Template** field, you can either enter, select or search for a template.

3.   The **Type** and **Group** fields of that particular template gets populated by default.

4.   The columns of the template get populated in the Details table.

Detail

The detail table displays the differentiator values.

Manage Brands

Brand is one of the important item attributes used to help establish an item's unique identity. They can optionally be attached to an item during or after item creation. Further, Brand can be used as search or grouping criteria in Merchandising or allied systems. To upload or maintain brands, a spreadsheet download and upload process is used. This functionality is accessed through the main Merchandising task list under Foundation Data > Download Foundation Data and Foundation Data > Upload Foundation Data.

To upload or modify brands, select the template type of Items from the Download Data screen and then the template Brands. Click the Download button and when prompted, choose to either open the .ods file that is generated or save the file and open it separately in the spreadsheet application of your choice.

Once opened, there will be 2 sheets that can be modified - Brands and Brand Translations. The Brands will show all the brand names along with their long descriptions. This tab supports addition, update and delete of brands. Next, Brand Translations tab will show the brands with their translated description in other languages, as applicable for your implementation. This tab allows for the addition of new rows, removal of existing rows, and update to existing.

Adding a Brand

To add a new brand, select the Brands tab and in a blank line in the template, select the action type of Create and enter the Brand Name. The name can be up to 30 characters. Next, add the description of the brand in the primary language (as defined in the Merchandising system options). The description can be up to 120 characters.

If you wish to add brand description in any other languages, then select the Brand Translations tab and in a blank row select an action type of Create. Then select the language in which you wish to add description in. Next enter brand name which was added in the Brands tab translated description and finally the translated description. The translated description can also be up to 120 characters long. This is an optional step.

Updating a Brand

If you would like to update any details a similar process will be followed as that described above for creating new brand. First, download the Brands spreadsheet, and then navigate to the tab where you would like to make your updates.

The following columns can be updated in each tab:

- Brands – Brand Description

- Brand Translations – Brand Description

In the tab where you are going to make your updates, select the action type of Update, and then correct the value in the spreadsheet. Once your updates are complete, save and close the spreadsheet.

Deleting a Brand

If you wish to delete a Brand, update the action column to select Delete in each of the tabs where it occurs.

Uploading Changes

For all actions defined above, once all the updates have been made to the data in the spreadsheet, save the file and close it. Then, return to the Merchandising screens and select Foundation Data > Upload Foundation Data from the main task list. In this screen, you'll again select the template type Items and the template Brands. This will generate a process description automatically, but this can be updated if desired. Lastly, you'll select the Browse button and navigate to the directory where you saved the updated spreadsheet.

To review the status of the upload and check whether any errors occurred, select the Foundation Data > Review Status task from the main task list.

See also Download/Upload Data from Spreadsheets.

Manage Seasons/Phases

In Merchandising, seasons can be used to define specific time periods of year for which distinct merchandise planning is done. For example - Spring-Summer, Autumn-Winter, Back to School, etc. Seasons can further be divided into Phases for more granular planning. Each item in Merchandising can be attached to a season/phase combination. Seasons and phases are primarily used for replenishment, creating item lists, reporting, and ticketing. Seasons and phases are created, maintained or deleted in Merchandising through spreadsheet upload and download processes. These processes are accessed through the main Merchandising task list under Foundation Data > Download Foundation Data and Foundation Data > Upload Foundation Data.

To add or update seasons or phases, you will select the template type of Items from the Download Data screen and then the template Seasons/Phases. Click the Download button and when prompted, choose to either open the .ods file that is generated or save the file and open it separately in the spreadsheet application of your choice. Once opened, there will be four sheets that can be modified - Seasons, Season Translations, Phases, and Phase Translations.

Add a Season or Phase

To add a new season, start in the Seasons tab, and, in a blank line in the template, select the action type of Create. Next enter a unique season ID (up to 3 numeric characters) and the description for the season in the primary language (as defined in

the Merchandising system options) of up to 120 characters. Next, enter the start date and end date for the season in in the 'DD-MON-YYYY' format. Optionally, you can also enter the organization ID and merchandise ID in the subsequent columns to limit the users who can use the new season created, if data level security has been set up for users in the system. To limit it by the organizational hierarchy, in the Filter Org ID column, enter the ID of organization hierarchy that will be able to use this season at the level that is defined in the security configuration on System Options. This will be a chain, area, region, or district. To limit the use of the season by the merchandise hierarchy, in the Filter Merch ID column enter the ID of merchandise hierarchy that will be able to use this season at the level that is defined in the security configuration on system options. This will be a division, group, department, class, or subclass. If the merchandise hierarchy level defined in the security configuration is class then enter the department ID as the Filter Merch ID, as well as the class in the Filter Merch ID Class. If the merchandise hierarchy level is set to subclass, then the department ID should be entered as the Filter Merch ID, and the class and subclass entered as the Filter Merch ID Class and Filter Merch ID Subclass, respectively.

For more information on how to configure data level security, see the *Merchandising Security white paper, available on My Oracle Support under reference 1585843.1*.

 Next, if you wish to add translations for the season in languages other than the primary language, this can be done in the Season Translations tab. Navigate to a blank row and select the action type of Create and the language in which the translated description will be entered. Then, enter the season for which the translation applies. Finally, enter the translated description. The translated description can also be up to 120 characters long. This is an optional step.

Next, the phases that belong in this season must be added. To do this, move to the Phases tab in the spreadsheet. Again, navigate to a blank row in the sheet and select an action type of Create. Enter the season ID that you added in the Seasons tab. Then enter the first phase ID (up to 3 characters), along with its description. The description here should be in the primary language (as defined in the Merchandising system options) and can be up to 120 characters.   Next, enter the start date and end date for the phase in in the 'DD-MON-YYYY' format. The start and end dates of the phase should be within the start and end dates specified for the season. Continue this process until all the new phases for the season have been added. If you are adding a new phase to an existing season, this same process would apply, just using the existing season instead.

Lastly, if you wish to add translations for the phases in languages other than the primary language, this can be done in the Phase Translations tab. Navigate to a blank row and select the action type of Create and the language in which the translated description will be entered. Then, enter the season and phase for which the translation applies. Finally, enter the translated description. The translated description can also be up to 120 characters long. This is an optional step.

Update Season or Phase

If you would like to update any details for existing seasons or phases, a similar process will be followed as that described above for creating new seasons or phases. First, download the spreadsheet, and then navigate to the tab where you would like to make your updates.

The following columns can be updated in each tab:

- Seasons - Season Description, Start Date, End Date, Filter Org ID, Filter Merch ID, Filter Merch ID Class, Filter Merch ID Subclass

- Season Translations - Season Description

- Phases - Season, Phase Description, Start Date, End Date

- Phase Translations - Phase Description

In the tab where you are going to make your updates, select the action type of Update, and then correct the value in the spreadsheet.

Deleting a Season or Phase

If you wish to delete a season or phase, update the action column to select Delete in each of the tabs where it occurs. A season cannot be deleted if there are phases already created under it. Similarly, a phase cannot be deleted if it's associated with an item in the system.

Uploading Changes

For all actions defined above, once all the updates have been made to the data in the spreadsheet, save the file and close it. Then, return to the Merchandising screens and select Foundation Data > Upload Foundation Data from the main task list. In this screen, select the template type Items and the template Seasons/Phases. This will generate a process description automatically, but this can be updated if desired. Lastly, select the Browse button and navigate to the directory where you saved the updated spreadsheet.

To review the status of the upload and check whether any errors occurred, select the Foundation Data > Review Status task from the main task list.

See also Download/Upload Data from Spreadsheets.

Manage User Defined Attributes

User Defined Attributes (UDAs) are used to capture attribute values that may be specific to a distinct item or item hierarchy such as handling instructions, material composition, import dates, etc. Because these attributes are user defined, they are able to be configured to meet the unique needs of each implementation. UDAs are created, maintained or deleted in Merchandising through spreadsheet upload and download processes. These processes are accessed through the main Merchandising task list under Foundation Data > Download Foundation Data and Foundation Data > Upload Foundation Data.

To add or update UDAs, you will select the template type of Items from the Download Data screen and then the template User Defined Attributes. Click the Download button and when prompted, choose to either open the .ods file that is generated or save the file and open it separately in the spreadsheet application of your choice. Once opened, there will be five sheets that can be modified - UDAs, UDA Translations, UDA Values, UDA Value Translations, and UDA Defaults.

Add a UDA

To add a new UDA, start in the UDAs tab, and, in a blank line in the template, select the action type of Create. Next enter a unique UDA id (up to 5 digits) and the description for the UDA in the primary language (as defined in the Merchandising system options) of up to 120 characters. Next, choose the type of UDA that you are creating by selecting Date, or Free Form Text, or List of Values as the Display Type. Then, select the Data Type that applies for the UDA, date, alphanumeric, or number. The Data Length field can be left blank as it is not used by Merchandising. Next, choose whether the UDA should allow only a single value. UDAs that are specified as single valued will allow the UDA to be added only once to a particular item. A UDA may be associated with an item twice if it is possible for it to have two different values.

For example, a UDA of Fabric may have more than one valid value for an item. (e.g. Cotton and Wool).

Optionally, you can also enter the organization ID and merchandise ID in the subsequent columns to limit the users who can use the new UDA created, if data level security has been set up for users in the system. To limit it by the organizational hierarchy, in the Filter Org ID column, enter the ID of organization hierarchy that will be able to use this UDA at the level that is defined in the security configuration on System Options. This will be a chain, area, region, or district. To limit the use of the UDA by the merchandise hierarchy, in the Filter Merch ID column enter the ID of merchandise hierarchy that will be able to use this UDA at the level that is defined in the security configuration on system options. This will be a division, group, department, class, or subclass. If the merchandise hierarchy level defined in the security configuration is class then enter the department ID as the Filter Merch ID, as well as the class in the Filter Merch ID Class. If the merchandise hierarchy level is set to subclass, then the department ID should be entered as the Filter Merch ID, and the class and subclass entered as the Filter Merch ID Class and Filter Merch ID Subclass, respectively.

> **Note:** For newly UDAs, the ID captured in the UDA definition will be used as a key to cross reference the different UDA worksheets and will be replaced by a system generated value upon upload.

Next, if you wish to add translations for the UDA in languages other than the primary language, this can be done in the UDA Translations tab. Navigate to a blank row and select the action type of Create and the language in which the translated description will be entered. Then, enter the UDA for which the translation applies. Finally, enter the translated description. The translated description can also be up to 120 characters long. This is an optional step.

For List of Values type UDAs, in addition to the above described attributes, the definition should also include the list of valid values that the UDA can take in the UDA Values worksheet. The values defined in this worksheet will be available for selection in the list of values for any given item or hierarchy. To add the values for a newly created UDA, navigate to a blank row in the UDA Values tab and select an action type of Create. Next, enter the UDA ID that you added in the UDAs tab. Then, enter a UDA value ID (up to 5 digits) and description (up to 120 characters) in the primary language. The UDA Value IDs must be unique for the UDA. Repeat these until all valid values have been added for the new UDA. As with the UDA, any translations you wish to add for the values can be entered in the UDA Value Translations tab. If you are adding a new detail to an existing UDA, this same process would apply, just using the existing UDA ID instead.

Add UDA Defaults

As part of the UDA template, defaults can be defined for a department, class, or subclass in the UDA Defaults tab. This is optional functionality, but allows for UDAs to be either automatically defaulted to items created in the hierarchy or make them required before items created in the hierarchy can be approved. For any UDA default defined as "required", if the hierarchy already has items associated to it that do not have the UDA defined, an error will be raised when processing the upload. To add a default, navigate to a blank row in the UDA Defaults tab and select an action type of Create. Next, enter the UDA ID and the department, class, and/or subclass for which the default applies. If it is a List of Values type UDA, then you can optionally specify the value that should default when items are created in the UDA Value column.

Finally, select whether the UDA will be required. Repeat these steps for all departments, classes, or subclasses for which this UDA default will apply.

> **Note:** The New UDA Value column is used for updates only.

Update UDAs

If you would like to update any details for an existing UDA, a similar process will be followed as that described above for creating new UDAs. First, download the spreadsheet, and then navigate to the tab where you would like to make your updates.

The following columns can be updated in each tab:

- UDAs - UDA Description, Single Value, Filter Org ID, Filter Merch ID, Filter Merch ID Class, Filter Merch ID Subclass

- UDA Translations - UDA Description

- UDA Values - UDA Value Description

- UDA Value Translations - UDA Value Description

- UDA Defaults - New UDA Value, UDA Required

In the tab where you are going to make your updates, select the action type of Update, and then correct the value in the spreadsheet.

Deleting a UDA

If you wish to delete a UDA, update the action column to select Delete in each of the tabs where it occurs. A UDA cannot be deleted if it's associated with an item in the system. Translations and default for the UDA or the values associated with a UDA can also be deleted from an existing UDA in a similar manner; however the UDA values likewise cannot be deleted if associated with an item.

Uploading Changes

For all actions defined above, once all the updates have been made to the data in the spreadsheet, save the file and close it. Then, return to the Merchandising screens and select Foundation Data > Upload Foundation Data from the main task list. In this screen, select the template type Items and the template User Defined Attributes. This will generate a process description automatically, but this can be updated if desired. Lastly, select the Browse button and navigate to the directory where you saved the updated spreadsheet.

To review the status of the upload and check whether any errors occurred, select the Foundation Data > Review Status task from the main task list.

## Items by User Defined Attribute

The Item by UDA page allows you to maintain and view the items that are associated with a user defined attribute (UDA). You can edit the default date, text, or value of the user defined attribute for each item.

To access the Items by UDA page, follow the steps below.

1. From the Tasks menu, select **Items** > **Items by UDA**. The Items by UDA page appears.

Figure 5–11 Items by UDA Page

2. To search by user defined attribute, enter the user defined attribute, or click the Search link to search and select the user defined attribute.

3. The item and descriptions of the items by UDA appear.

4. Click **Save and Close** to save your changes and close the page.
Table

The table displays the item, item description and UDA value and description.

Adding UDA to Items

To add a UDA to items:

1. From the Tasks menu, select **Items** > Items by UDA. The Items by UDA page appears.

2. From the Actions menu, click **Add** or click the Add icon ✚. The Add Items Page appears.

Figure 5–12 Add Item Page

3. In the **Item** field, enter, select or search for the item from the list.

4. Add the UDA value, UDA date or UDA text.

5. Then choose one of the following options.

- Click **OK** to add the UDA/Item combination to the table and close the page.

- Click **OK and Add Another** to add additional item/UDA combinations.

- Click **Cancel** to reject your entries and close the page.

Editing UDAs of an Item

To edit UDAs of an item:

1. From the Tasks menu, select **Items** > Items by UDA. The Items by UDA page appears.

2. From the Actions menu, click **Edit** or click the Edit icon. ✎. The Edit Items page appears.

3. The item is displayed by default in the Item field.

4. Edit the UDA value, UDA date or UDA text.

5. Then choose one of the following options.

   - Click **OK** to add your changes and close the page.

   - Click **Cancel** to reject all entries and close the page.

Manage Tickets

Tickets are used for providing multiple points of information about an item in a retail store such as price, description, care, size, or country of sourcing. These can be attached to a product or used as a shelf label. While creating an item in Merchandising, different tickets can be attached to an item along with print timing and quantity. Tickets are created, maintained or deleted in Merchandising through spreadsheet upload and download processes. These processes are accessed through the main Merchandising task list under Foundation Data > Download Foundation Data and Foundation Data > Upload Foundation Data.

To add or update tickets, you will select the template type of Foundation from the Download Data screen and then the template Tickets. Click the Download button and when prompted, choose to either open the .ods file that is generated or save the file and open it separately in the spreadsheet application of your choice. Once opened, there will be three sheets that can be modified - Ticket Type, Ticket Type Translations, and Ticket Items.

Adding a Ticket

To add a new ticket, start in the Ticket Type tab, and, in a blank line in the template, select the action type of Create. Next enter a unique ticket type (up to 4 characters) and the description for the ticket in the primary language (as defined in the Merchandising system options) of up to 120 characters. Next, specify if the ticket is going to be used as shelf edge label. Valid values are Yes and No. Optionally, you can also enter the organization ID and merchandise ID in the subsequent columns to limit the users who can use the new ticket created, if data level security has been set up for users in the system. To limit it by the organizational hierarchy, in the Filter Org ID column, enter the ID of organization hierarchy that will be able to use this ticket at the level that is defined in the security configuration on System Options. This will be a chain, area, region, or district. To limit the use of the ticket by the merchandise hierarchy, in the Filter Merch ID column enter the ID of merchandise hierarchy that will be able to use this ticket at the level that is defined in the security configuration on system options. This will be a division, group, department, class, or subclass. If the merchandise hierarchy level defined in the security configuration is class then enter the department ID as the Filter Merch ID, as well as the class in the Filter Merch ID Class. If the merchandise hierarchy level is set to subclass, then the department ID should be entered as the Filter Merch ID, and the class and subclass entered as the Filter Merch ID Class and Filter Merch ID Subclass, respectively.

For more information on how to configure data level security, see the *Merchandising Security white paper, available on My Oracle Support under reference 1585843.1.*

Next, if you wish to add translations for the ticket in languages other than the primary language, this can be done in the Ticket Type Translations tab. Navigate to a blank row and select the action type of Create and the language in which the translated description will be entered. Then, enter the ticket type for which the translation

applies. Finally, enter the translated description. The translated description can also be up to 120 characters long. This is an optional step.

Next, the details that belong to this ticket must be added. To do this, move to the Ticket Items tab in the spreadsheet. Again, navigate to a blank row in the sheet and select an action type of Create. Enter the ticket type that you added in the Ticket Types tab. Then add the sequence number to make this detail line unique. Next, in the Attribute column, select an attribute which should appear on the ticket or label. The valid values for this field are found in the Codes and Descriptions template with code type as TCKT. Alternately, a user-defined attribute (UDA) ID can be added in the User Defined Attribute column for a particular row. Continue this process until all the details for the ticket type have been added. If you are adding a new detail to an existing ticket type, this same process would apply, just using the existing ticket type instead.

Update a Ticket

If you would like to update any details for an existing ticket, a similar process will be followed as that described above for creating new tickets. First, download the spreadsheet, and then navigate to the tab where you would like to make your updates.

The following columns can be updated in each tab:

- Ticket Type - Ticket Description, Shelf Edge Label, Filter Org ID, Filter Merch ID, Filter Merch ID Class, Filter Merch ID Subclass

- Ticket Type Translations - Ticket Description

- Ticket Items - Attribute, User Defined Attribute

In the tab where you are going to make your updates, select the action type of Update, and then correct the value in the spreadsheet.

Deleting a Ticket

If you wish to delete a ticket, update the action column to select Delete in each of the tabs where it occurs. A ticket cannot be deleted if it's associated with an item in the system. Translations for the ticket or the items associated with a ticket can also be deleted from an existing ticket in a similar manner.

Uploading Changes

For all actions defined above, once all the updates have been made to the data in the spreadsheet, save the file and close it. Then, return to the Merchandising screens and select Foundation Data > Upload Foundation Data from the main task list. In this screen, select the template type Foundation and the template Tickets. This will generate a process description automatically, but this can be updated if desired. Lastly, select the Browse button and navigate to the directory where you saved the updated spreadsheet.

To review the status of the upload and check whether any errors occurred, select the Foundation Data > Review Status task from the main task list.
