

Oracle Retail Pricing

Release Notes

Release 19.0

F26130-01

January 2020

This document highlights the major changes for Release 19.0 of Oracle Retail Pricing.

Overview

Retailers leverage the Oracle Retail Merchandising suite to execute core merchandising activities, including merchandise and inventory management, replenishment, purchasing, sales auditing, and pricing. As a critical part of this suite, the new Oracle Retail Pricing application provides the ability to define, maintain, and review price changes, clearances, and promotions, as well as provides the ability to execute the price events by passing approved price events onto downstream selling systems for execution.

Hardware and Software Requirements

See the *Oracle Retail Pricing Installation Guide* for information about the following:

- Hardware and software requirements
- Oracle Retail application software compatibility

Functional Enhancements

The functional enhancements below are included in this release.

New Pricing Solution

The focus on providing an enhanced user experience through the use of business intelligence (BI) driven workflows, user-centric design, and role-based dashboards, all intended to improve overall user efficiency, has been a theme of the Merchandising suite for the last several releases. With this release the final piece of this transformation is introduced with the new Oracle Retail Pricing. This solution replaces the existing Oracle Retail Price Management (RPM) solution.

Oracle Retail Pricing, which originally was released as part of the cloud service suite, provides support for initial pricing, regular price changes, clearance markdowns, and promotional offers. It also provides for the execution of these price events to update the selling systems, such as the Oracle Retail Xstore Point of Service, and to update the Merchandising item/location price and stock ledger when the price changes go into effect.

Enhanced User Interface

The new Pricing solution is built on the same platform as the other Merchandising suite applications using a Java platform leveraging Oracle's Application Development Framework to provide a modern user experience and enable a new way of interacting with the solution. This transformational user experience includes user-centric persona-driven design, role-based dashboards, and expanded configurability. Like the other products in the Merchandising suite, Pricing now leverages a single model for security and has a common look and feel. Pricing also leverages the notification framework available as part of the platform to provide for exception-management of conflicts which result from the price approval process.

Dashboards and Contextual Reports

Pricing has two dashboards. The first is targeted for a Pricing Analyst and raises exceptions for price changes and clearances that are due to go into effect and are not yet approved. The second is targeted for a promotional planner and provides a view of upcoming promotional events. Contextual reports were also added in several of the key user interfaces to support decision-making when reviewing price events for approval and when looking up pricing information.

Pricing Foundation Data

To support the price event creation and to assist in consistent pricing across locations, Pricing provides functionality for the following:

- **Zone Groups and Zones** allow you to define groupings of locations for pricing purposes and eliminates the need to manage pricing at the most granular, location, level.
- **Rounding Rules** assist retailers in creating a uniform pricing strategy by applying "ends in" logic to retail values. Rounding rules are defined globally, but can also include exceptions or exclusions based on merchandise hierarchy and/or currency.
- **Initial Price Zone Definition** allows you to specify the zone structure that is used when pricing new items added in a particular department, class, or subclass. The functionality also includes the initial markup and type that is used to suggest a retail based on the item's cost, and allows for rounding rules to be defined to ensure it meets pricing standards, if desired.

Regular Price Changes

Regular price change functionality allows the selling price of an item/location to be increased or decreased for a specific date. Pricing supports the ability to create these price changes at the parent item, parent/diff, or transaction item level for one or more zones or locations. It also provides support for multi-unit pricing.

Price change groups are used to group together multiple price change events for easier management of the individual events, such as facilitating mass approval of item/locations in the group.

Clearance Price Changes

Clearance events, which can consist of a single markdown or a series of markdowns, are also enabled by Pricing. Similar to price changes, clearance events can be created for parent items, parent/diffs, or transaction items, and the locations where the markdown applies can be selected by zone or individual location. The functionality also includes the creation of a reset, which can be used to set the item back to regular pricing at the beginning of a season.

Clearance groups are used to group together multiple clearance events for easier management of the individual events. This is particularly helpful for items that have multiple markdowns throughout their lifecycle, to provide visibility to the various markdown prices and dates together for easier management. This can also help facilitate a mass update of the events in the group, such as approving multiple events together.

Promotions

Promotions are a grouping of offers that detail temporary discounts to be given on customer purchases in a particular timeframe. Offers are defined by applying templates that guide the user to specify the conditions under which the customer's purchase would qualify for a reward, as well as the reward itself. Pricing supports the creation of a number of different promotional offers, including simple item level discounts, buy/get discounts, and transaction level discounts.

Similar to price changes and clearance, promotions supports a two-level approval process, as well as a cancellation process that supports the cancellation of items, stores, or the whole offer. Prior to the start date of the offers, promotions are interfaced to the selling solutions in order to be applied to a customer's in-store or online purchases. Cancellations and any other updates that occur during the lifecycle of the offers are similarly communicated.

Translations

Translations for Pricing are provided and supported from Merchandising for key entities, such as items and locations. Also, Pricing supports the 19 languages that are supported by the other Merchandising suite of products, including English, and provides additional support for the following languages by adding your own translations: Czech, Danish, Finnish, Hebrew, Norwegian, Thai, Albanian, Latin Bosnian, Bulgarian, Estonian, Latvian, Cyrillic Serbian, Lithuanian, Romanian, Slovakian, and Slovenian.

See the *Pricing Implementation Guide* for more details on translation capabilities in Pricing.

Integration Enhancements

The integration enhancements described below are included in this release.

Bulk Data Integration to Selling Solutions

Pricing publishes all new and updated pricing events (price changes, clearance markdowns and resets, and promotional offers) to downstream solutions using the Bulk Data Integration component of the Oracle Retail Integration Suite. This includes packaged integration for price changes, clearance, and promotions with the Xstore Suite, as well as price changes and clearance integration with Oracle Retail Store Inventory and Store Inventory Operations Cloud Service (SIOCS) and Oracle Retail Order Management System (OROMS).

Price Event Induction

Pricing provides inbound integration of price events from external pricing solutions for all three price event types: regular price changes, clearance, and promotional offers. This integration provides support for create, update, and delete of these events using

various methods, such as spreadsheet upload, web service, and bulk integration. This integration includes the integration of optimized markdowns and offers from Oracle Retail Offer Optimization.

For more information on price induction methods and functions supported, see the *Oracle Retail Pricing Operations Guide*.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Value-Added Reseller (VAR) Language

Oracle Retail VAR Applications

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

(i) the **MicroStrategy**

Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(ii) the **Wavelink**

component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Mobile Store Inventory Management.

(iii) the software component known as **Access Via™**

licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(iv) the software component known as **Adobe Flex™**

licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

You acknowledge and confirm that Oracle grants you use of only the object code of the VAR Applications. Oracle will not deliver source code to the VAR Applications to you. Notwithstanding any other term or condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.
