Introduction

Oracle Data Integrator (ODI) Enterprise Edition 12c delivers unique next-generation, Extract Load and Transform (E-LT) technology that improves performance, and reduces data integration costs, even across heterogeneous systems. Unlike conventional ETL tools, Oracle Data Integrator EE offers the productivity of a declarative design approach, as well as the benefits of an active integration platform for seamless batch and real-time integration. In addition, hot-pluggable Knowledge Modules provide modularity, flexibility, and extensibility. ODI addresses multiple enterprise data integration needs including:

- Data Warehousing and Business Intelligence
- Service-Oriented Architecture
- Master Data Management (MDM)
- Migration and Consolidations

- Modernization Initiatives

The demonstration highlights how ODI can be used to populate a Data Warehouse schema. Several facts and dimensions are loaded to demonstrate key ETL capabilities (complex transformations, slowly changing dimensions, incremental updates, constraints checking, and others), ease-of-use and productivity.

Oracle Data Integrator "Getting Started" Virtual Machine

The virtual machine (entitled ODI 12c Getting Started) is a stand-alone environment for running Oracle Data Integration products. It is used to provide a complete environment for learning and demonstrating key Oracle Data Integration technologies.

The virtual machine includes the following products:

- Oracle Database 11g Enterprise Edition (11.2.0.4)
- JVM 1.7.0_15
- Oracle Data Integrator (12.2.1.0.0)
- Oracle GoldenGate (12.1.2.0.0)

Technical Deployment

The ODI virtual machine is delivered as an Oracle VirtualBox appliance and requires both the ODI 12c Getting Started archive and an installation of the Oracle VirtualBox product. In this document, the terms VM (Virtual Machine) and appliance are synonymous.

Oracle VirtualBox Introduction

VirtualBox is a cross-platform virtualization application. What does that mean? For one thing, it installs on your existing Intel or AMD-based computers, whether they are running Windows, Mac, Linux or Solaris operating systems. Secondly, it extends the capabilities of your existing computer so that it can run multiple operating systems (inside multiple virtual machines) at the same time. For example, you can run Windows and Linux on your Mac, run Windows Server 2008 on your Linux server, run Linux on your Windows PC, and so on, all alongside your existing applications. You can install and run as many virtual machines as you like; the only practical limits are disk space and memory.

For more information, see <https://www.virtualbox.org/manual/ch01.html>

Installation and Configuration

This section details the steps necessary to install and configure VirtualBox.

Download VirtualBox Software and User Manual

Go to the following URL to download the appropriate VirtualBox binary and documentation:

<https://www.virtualbox.org/wiki/Downloads>

Figure Oracle VirtualBox Download

To install the VirtualBox software, click the link for the appropriate platform (such as Windows hosts), and you will be guided to install the software.

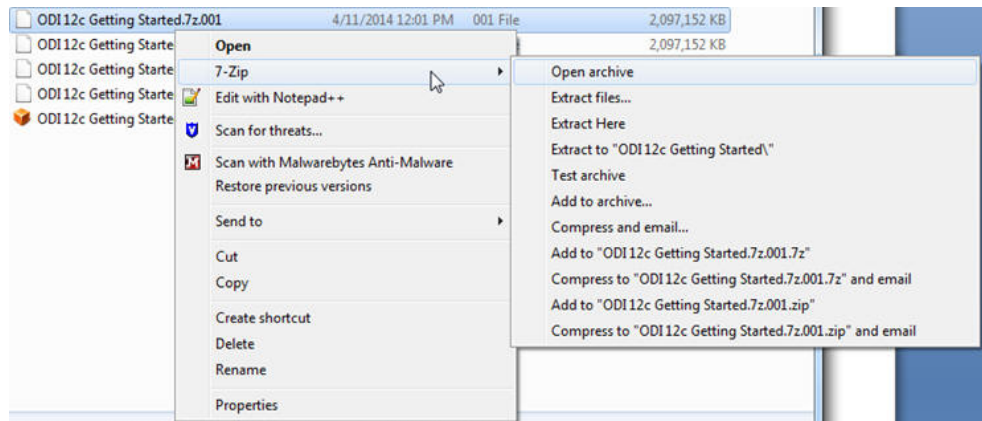

Extract the VirtualBox VM

After downloading the archive files, extract the first archive file (for example, using 7-Zip). The remaining archive files will automatically unzip. The extracted file, ODI_12c_Getting_Started.ova will be used to create the virtual machine through a VirtualBox appliance import.

Here is an example using 7-Zip to extract the VM (only need to extract the first file).

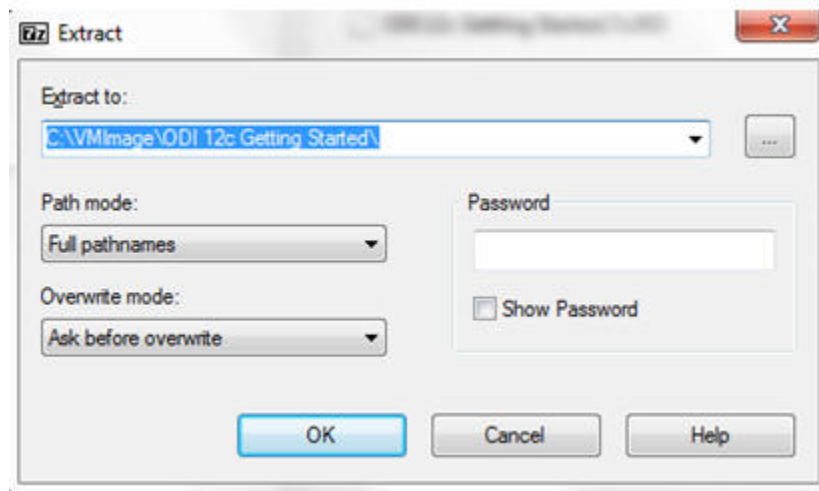

1. From Windows Explorer, select the first file of the archive and right-click to select the extraction tool, such as 7-Zip.

2. Select a target directory for the VirtualBox appliance:

Figure Extraction location

The extracted VirtualBox appliance import will be created in the designated directory.

Import the Appliance into VirtualBox

1. Start Oracle VM VirtualBox Manager
2. Click **File** and then **Import Appliance**.

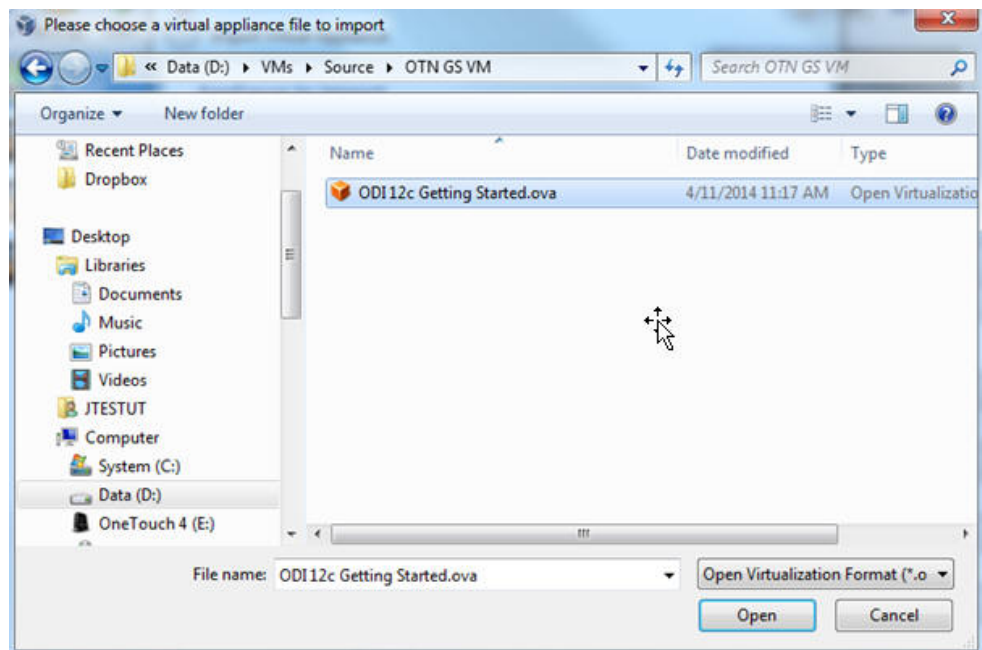

The Appliance Import Wizard window appears.

Figure VirtualBox Import

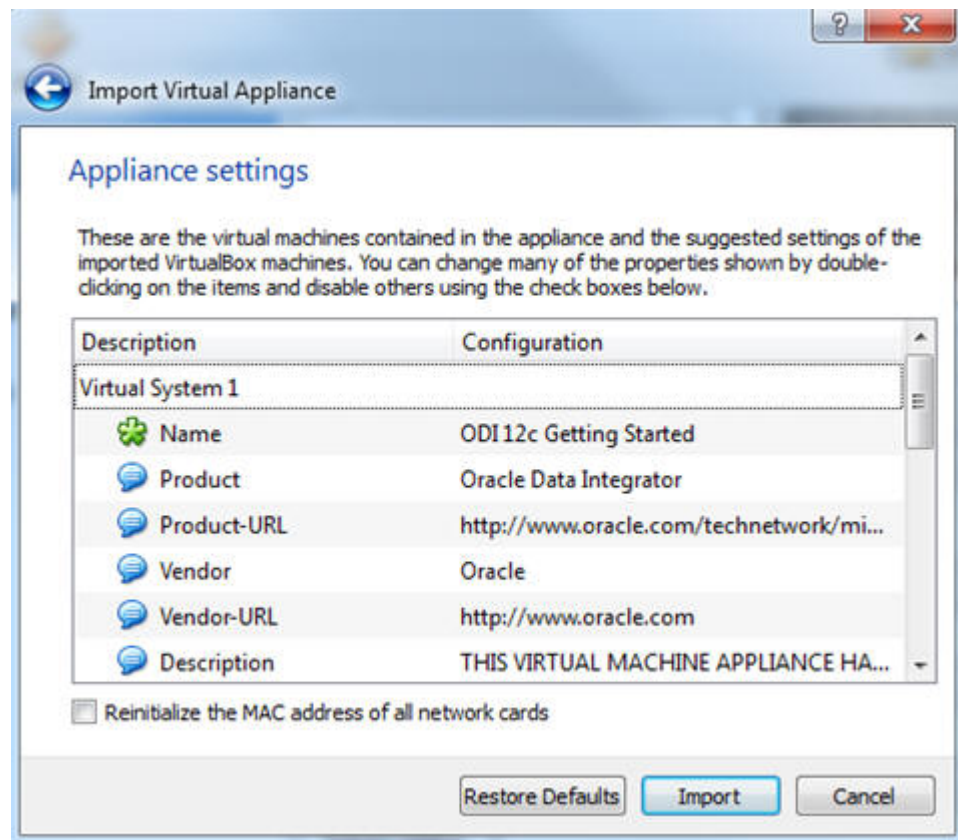

3. Click **Open Appliance**.
4. Specify the OVA file location and click **Open** to choose the VirtualBox file.

Figure VirtualBox Import Selection

5. Confirm the file selection and click **Next**.
6. Confirm the Appliance (VM) settings and click **Import**.

Figure Appliance (VM) settings

7. Click **Agree** in the *Software License Agreement* window to start the import process. The license terms are available at: <http://www.oracle.com/technetwork/licenses/odi-vm-license-2035237.html>

The import is complete and the appliance (virtual machine) is now available in the VirtualBox Manager. The appliance may be started by clicking **Start**, or customized further for your environment.

Customize VirtualBox Appliance Settings

Depending on the host operating system limitations, network configuration or file sharing requirements, VirtualBox appliance settings may be modified. For further information about VirtualBox, see the VirtualBox documentation:

<https://www.virtualbox.org/wiki/Documentation>

To continue to customize settings for the appliance, highlight the **ODI 12c Getting Started appliance** and click the **Settings** icon in the menu bar.

Memory (Optional)

The recommended amount of memory for the VirtualBox is 4GB.

 **Note:**

In situations where less memory is available on the physical host, the memory for the ODI Getting Started appliance may be reduced to 2GB with some additional shared memory settings in the unix appliance itself. Use the following command to create a shared memory space to enable an Oracle database to start in low memory situations:

```
$ mount -t tmpfs shmfs -o size=2g /dev/shm
```

To change the appliance memory setting, click **System**.

Shared Folders (Optional)

Shared Folders may be used to move files between the host operating system and the VirtualBox Appliance (for example, moving future ODI projects into the appliance). The project could potentially be another ODI tutorial, which is delivered as a separately downloadable ODI Smart Import.

Use of shared folders begins with defining a locally-available directory on your computer (host) and one on the VirtualBox appliance, along with a share name.

 **Note:**

Use the same string for the share name and folder names, for example *ODIshared*.

To configure a shared folder:

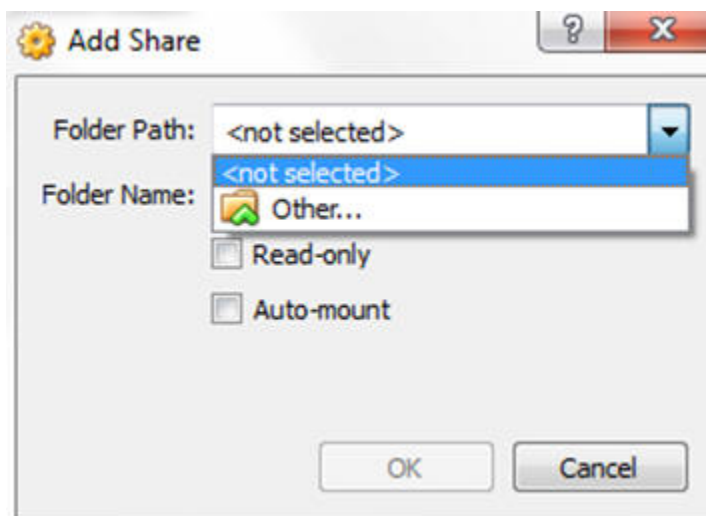

1. Click the **Shared Folders** shortcut on the left panel.
2. Click the **Add Folder** icon on the right:

Figure Configuring Shared Folders

3. The *Add Share* dialog appears, select **Other...** for the *Folder Path* and the following options.

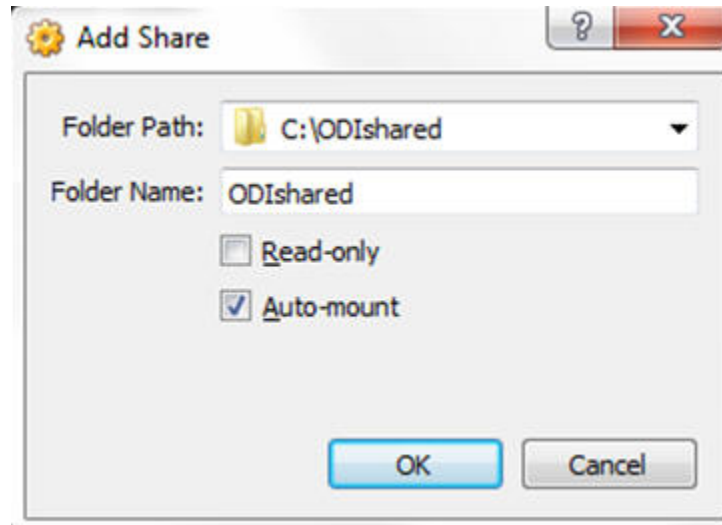

Figure Shared Folder Options

In this example, the following values are used:

- **Folder Path:** *C:\ODIshared*
- **Folder Name:** *ODIshared*
- **Auto-mount:** checked

Figure Using ODIshared as the local folder and share name

4. The Virtual Box share has been configured. You must create a directory in the ODI Getting Started Appliance (VM).

 **Note:**

Log on instructions to the Appliance (VM) are available in [Table 1](#).

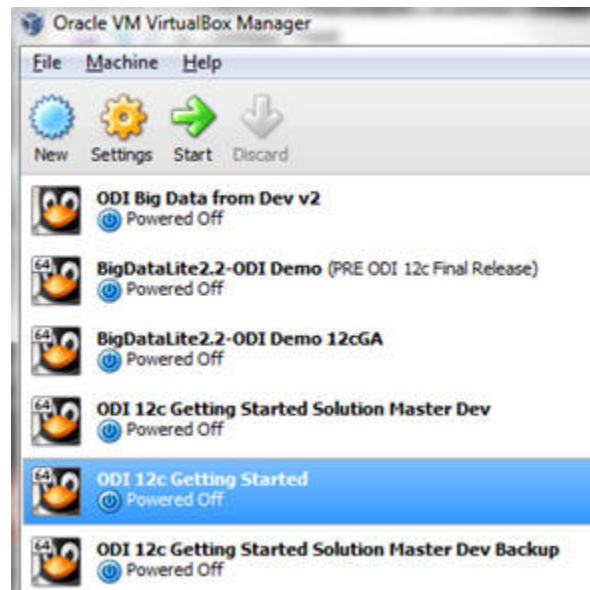

- Start the ODI Getting Started VM.
- In the VM, open a terminal window.
- su to super user (root) – password *oracle*
- Create the directory, for example: `$ mkdir ODIshared`

 **Note:**

Examine the permissions of the directory and modify accordingly. As this is a tutorial, sharing to all users and groups may be appropriate

```
$chmod -777 ODIshared
```

Figure Creating a directory

5. To access the shared directory from the Getting Started Appliance, a Unix mount must be performed from a terminal shell (as root):

Mount follows the syntax:

```
$ mount [-t fstype] something somewhere
```

The mount for the ODI Getting Started Appliance and the example in this document would be:

```
$ mount -t vboxsf ODIsdared ODIsdared
```

The shared folder is now available between the host operating system and the ODI Getting Started virtual box appliance.

Starting the ODI Getting Started Appliance

To start the appliance from within the Oracle VirtualBox client, do ONE of the following:

- Double-click on the ODI 12c Getting Started entry in the list within the Manager window.

OR

- Select its entry in the list in the Manager window and click **Start**.

Once started, the appliance will boot into Oracle Linux and the desktop will be displayed.

Beginning the Getting Started Tutorial

The Getting Started appliance desktop includes the objects detailed in [Table 1](#).

Table ODI Getting Started 12c Desktop Objects

Object	Purpose
ODI 12c Getting Started	This document provides the introduction and exercises to drive the tutorial. Open this first. http://www.oracle.com/technetwork/middleware/data-integrator/overview/index.html
ODI 12c Studio	Double-click this launcher to start ODI Studio. The ODI Studio will load; multiple clicks may result in more than one Studio loading.
ORACLE_HOME	A shortcut to the default user's directory.
Demo	A shortcut to the demo directory located in ODI_HOME. <code>/home/oracle/Oracle/Middleware/Oracle_Home_1221/odi/demo</code> The directory structure and objects are defined in the Getting Started guide. For the purpose of running the tutorial from the Appliance, you should not need to open this directory.
Information about this machine	A text file listing basic attributes of the machine.

1. To begin with the ODI Getting Started Tutorial, open the ODI 12c *Getting Started Guide* on the desktop and follow the self-paced instructions.
2. Start ODI Studio using the desktop launcher.

Note:

The startup script for ODI may alternatively be found in:

```
/home/oracle/Oracle/Middleware/Oracle_Home_1221/odi/studio/bin/  
odi.sh
```

The ODI 12c Getting Started Appliance and tutorial is now ready to be used!
