

**Oracle® Communications
LSMS**

Incremental Upgrade/Installation Guide

Release 13.4

F23725-02 Revision 2

August 2020

Copyright © 1997, 2020, Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notices are applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

CAUTION: Use only the guide downloaded from the Oracle Technology Network (OTN) (<http://www.oracle.com/technetwork/indexes/documentation/oracle-comms-tekelec-2136003.html>). Before upgrading your system, access the My Oracle Support web portal (<https://support.oracle.com>) and review any Knowledge Alerts that may be related to the System Health Check or the Upgrade.

Before beginning this procedure, contact My Oracle Support and inform them of your upgrade plans.

Refer to Appendix D for instructions on accessing My Oracle Support.

1. INTRODUCTION

1.1 Purpose and Scope

This document describes methods utilized and procedures executed to perform the following tasks:

- a. An initial installation of the LSMS 13.4 application software if it is not currently installed on an in-service E5-APP-B-02 system running a release of 64-bit version of TPD 7.6.x.
- b. A split-mirror software upgrade on an in-service E5-APP-B-02 system running a release equal to 64-bit version of TPD 7.0.3 and LSMS Release 13.2.0.
- c. An incremental software upgrade on an in-service E5-APP-B-02 system running a release equal to 64-bit version of TPD 7.4.x and LSMS Release 13.2.1.

The audience for this internal document consists of Oracle customers and the following groups: Software System, Product Verification, Documentation, and Customer Service including Software Operations and NPI. This document provides step-by-step instructions to execute any MPS split mirror upgrade or installation using an ISO image.

This document does not address requirements relating to the interaction, if any, between Oracle Communication EAGLE and MPS upgrades. This document does not address feature activation.

1.2 References

1.2.1 External

None

1.2.2 Internal (Oracle)

The following are references internal to Oracle. They are provided here to capture the source material used to create this document. Internal references are only available to Oracle's personnel.

- [1] Software Upgrade Procedure Template, TM005074, Latest version, Oracle
- [2] TPD Initial Product Manufacture User's Guide, 909-2130-001, Latest revision, Oracle
- [3] LSMS 13.4 Maintenance Manual, Latest version, Oracle
- [4] LSMS 13.4 Configuration Manual, Latest version, Oracle
- [5] Full Upgrade to LSMS 13.4, Latest Version, Oracle

1.3 Software Release Numbering

Refer to Engineering Release Notes or other appropriate document with the most recent build numbers in order to identify the proper components (software loads etc.) that comprise the product's software release.

1.4 Acronyms

An alphabetized list of acronyms used in the document that are not included in [1]:

Table 1. Acronyms

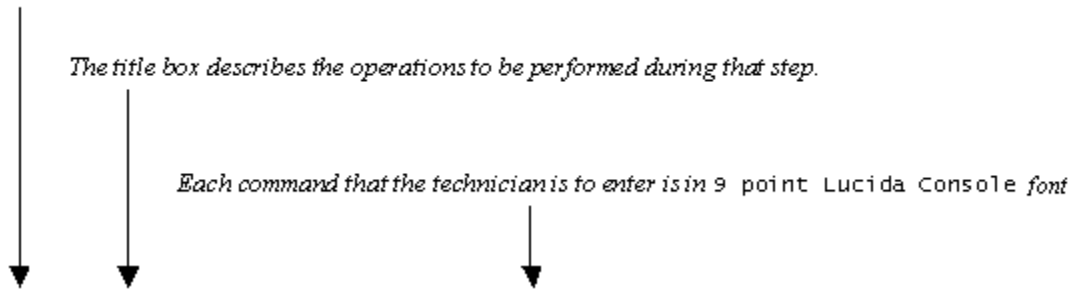

E5-APP-B	E5 Based Application Card
E5-APP-B-02	E5 Based Application Card with 480GB Disk
GA	General Availability
IPM	Initial Product Manufacture
LA	Limited Availability
LSMS	Local Service Management System
OCELAP	Oracle Communications EAGLE LNP Application Processor
OCLSMS	Oracle Communication Local Service Management System
MPS	Multi-Purpose System
NPAC	Number Portability Administration Centre

NPI	New Product Introduction
NTP	Network Time Protocol
SCP	Secure Copy
SERVDI	Support ELAP Reload Via Database Image
SM	Service Module
TPD	Tekelec Platform Distribution
UTC	Universal Time Coordinated

1.5 Terminology

Multiple servers may be involved with the procedures in this manual. Therefore, most steps in the written procedures begin with the name or type of server to which the step applies. For example:

Each step has a checkbox for every command within the step that the technician should check to keep track of the progress of the procedure.

1	<input type="checkbox"/>	MPS A: Verify all materials required are present	Materials are listed in Material List (Section 3.1)
---	--------------------------	--------------------------------------------------	-----------------------------------------------------

Figure 1: Example of a step that indicates the Server on which it needs to be executed

1	<input type="checkbox"/>	MPS X: Execute syscheck	#syscheck
---	--------------------------	-----------------------------------	-----------

Figure 2: Example of a step that needs to be executed on both MPS A and MPS B server

Other terminology follows.

Table 2. Terminology

Backout (abort)	The process to take a system back to a Source Release prior to completion of upgrade to Target release. Includes preservation of databases and system configuration.
Incremental Upgrade	The process to upgrade a system from Source Release to a Target Release including preservation of databases and system configuration.
Split Mirror Upgrade	Systems that use software RAID instead of hardware RAID can use the software RAID mirrors as a backout mechanism. Conceptually in a software RAID1 with two disks there are two sides to the mirror; let them be side A and side B. For a system with multiple software RAID devices, each device will have an A side and a B side. For an upgrade with a BACKOUT_TYPE=SPLIT_MIRROR the upgrade will break the mirrors at the beginning of the upgrade and perform the upgrade on the <i>Asides</i> of the mirrors. The other sides of the mirrors (<i>Bsides</i>) are left intact in their pre-upgrade state throughout the duration of the upgrade.

	When a backout is performed the system is rebooted into the same 'backout environment'. Inside this 'backout environment' the RAID mirrors are rebuilt from the <i>Bsides</i> of the arrays, thus restoring the system to the pre-upgrade state.
Non-preserving upgrade	"Upgrade" that does not adhere to the standard goals of software upgrade methodology. The outcome of the execution is that the system is running on the Target Release, however the Source Release database is not preserved.
Rollback	The process to take a system from a Target Release back to a Source Release including preservation of databases and system configuration.
Source release	Software release to split mirror upgrade from.
Target release	Software release to split mirror upgrade to.
Upgrade media	USB media or ISO image for E5-APP-B.

1.6 Recommendations

This procedure should be followed thoroughly utilizing the steps as written. **When planning to upgrade the server, contact My Oracle Support at least 48 hours before the split mirror upgrade process has been planned to be initiated.** In the event any unexpected results are returned while executing steps in this procedure halt the activity and contact Oracle My Oracle Support for assistance.

Please read the following notes on procedures:

- Any procedure completion times are estimates. Times may vary due to differences in database size, user experience, and user preparation.
- The shaded area within response steps must be verified in order to successfully complete that step.
- Output displayed in the procedures' response steps is presented. Actual output varies depending on system. Output is presented for reference only.
- Where possible, command response outputs are shown as accurately as possible. However, exceptions may include the following:
 - Information such as *time* and *date*.
 - ANY information marked with "XXXX." Where appropriate, instructions are provided to determine what output should be expected in place of "XXXX."
- After completing each step and **at each point where data is recorded from the screen, the technician performing the split mirror upgrade must check each step.** A checkbox has been provided beneath each step number for this purpose.
- Captured data is required for future support reference if My Oracle Support is not present during the split mirror upgrade.
- In procedures that require a command to be executed on a specific LSMS, the command is prefaced with "MPS A:" or "MPS B:"
- User Interface menu items displayed in this document were correct at the time the document was published but may appear differently at time that this procedure is executed.

1.7 Requirements

- Screen logging is required throughout the procedure. These logs should be made available to My Oracle Support in the event their assistance is needed.
- Target-release USB media or ISO image

2. GENERAL DESCRIPTION

This document defines the step-by-step actions performed to execute a software split mirror upgrade of an in-service MPS running the LSMS application from the source release to the target release on **E5-APP-B 02**.

The LSMS application can be installed and upgraded based on the table below.

Table 3. Install-Upgrade paths

TPD Release for IPM	LSMS Initial Installation Release
7.6.2.0.0_88.58.0 (64-bit)	13.4.y
Split Mirror Upgrade Source Release	Split Mirror Upgrade Destination Release
13.2.0.x/13.2.1.x/13.3.0.x/13.3.1.x	13.4.y

		TARGET RELEASE			
		13.2.1 (TPD 7.4)	13.3.0 (TPD 7.5)	13.3.1 (TPD 7.6.0)	13.4.0 (TPD 7.6.2)
SOURCE RELEASE	13.2.0 (TPD 7.0.3)	Split Mirror Upgrade	Split Mirror Upgrade	Split Mirror Upgrade	Split Mirror Upgrade
	13.2.1 (TPD 7.4)	NA	Incremental upgrade	Split Mirror Upgrade	Split Mirror Upgrade
	13.3.0 (TPD 7.5)	NA	NA	Split Mirror Upgrade	Split Mirror Upgrade
	13.3.1 (TPD 7.6.0)	NA	NA	NA	Split Mirror Upgrade

The LSMS upgrade paths are shown in the figures below. The general timeline for all processes to perform an upgrade, from pre-upgrade backups to a final system health check, is also included below.

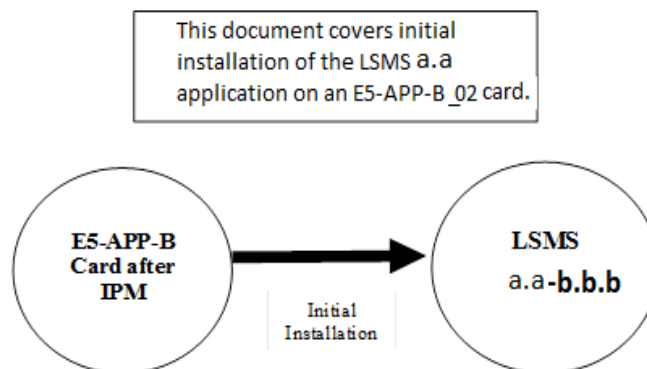

Figure 3: Initial Application Installation Path – Example shown

Figure 4: Split Mirror Upgrade Path - LSMS

Note: Same procedure of split mirror upgrade will be followed for all intermediate releases of 13.2.0.

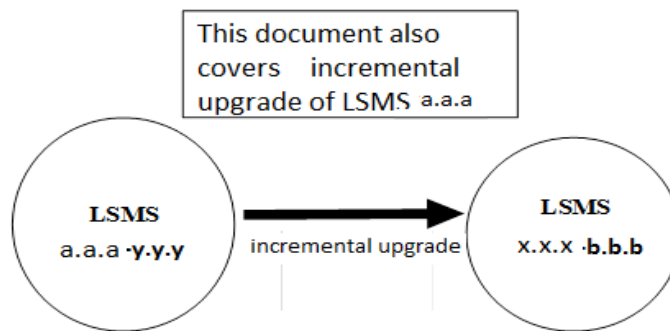

Figure 5: Incremental Upgrade Path - LSMS

Note: Same procedure of incremental upgrade will be followed for all intermediate releases.

Note: The only difference between split mirror upgrade and incremental upgrade is an extra step to add BACKOUT_TYPE=SPLIT_MIRROR in upgrade.conf. Only difference is the way backend is performed there is no difference how upgrade is performed. Same steps will be followed for split mirror upgrade and incremental upgrade.

3. INSTALL UPGRADE OVERVIEW

The general installation strategy is to IPM on the E5-APP-B server, and then install the application.

3.1 Required Materials

- Target-release TPD-USB media and a target-release LSMS ISO file.
- A terminal and null modem cable to establish a serial connection.

System configuration information like NTP Server IP, App IP, ELAP IP etc. Write down the system configuration information.

App IP: _____
 App Gateway: _____
 NTP Server IPs: _____
 ELAP Server IPs: _____
 NPAC Server IPs: _____
 Other IPs required: _____

- Passwords for users on the local system:

LSMS USERS		
login	MPS A password	MPS B password
lsmsmgr		
lsmsadm		
root		
mysql dbroot user		
admusr		

Table 4: User Password Table

3.2 Installation Phases

The general installation strategy is to IPM the E5-APP-B server and then install the application.

The following table illustrates the progression of the installation process by procedure with estimated times. The estimated times and the phases that must be completed may vary due to differences in typing ability and system configuration. The phases outlined in Table 5 are to be executed in the order they are listed.

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS Servers.	Procedure 1
Verify install	5	20	Verify this should be an install.	Procedure 2
Pre-install check	15	35	Verify requirements for install are met.	Procedure 3
Pre-install health check	5	40	Run the syscheck utility to verify that all servers are operationally sound.	Procedure 4
Configure Server 1A	5	45	Set hostname, designation, function and time.	Procedure 5
Configure Server 1B	5	50	Set hostname, designation, function and time.	Procedure 6
Install Servers	30	80	Install software on sides 1A and 1B simultaneously.	Procedure 7 Procedure 8

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Post-install application processing	15	95	Perform first time configuration and configure time zone and clock.	Procedure 9 Procedure 10
Network Configuration for LSMS Cards.	10	105	Perform the Network Configuration on MPS A server. *Note: For Single Subnet Configuration execute Procedure 11 and for Segmented Subnet Configuration execute Procedure 12 .	Procedure 11 OR Procedure 12
Install TMN Toolkit and Marben OSI License Installation	10	115	Install TMN Toolkit and Marben OSI License	Procedure 13
Run switch_NANC528 script	5	120	Run switch_NANC528 script to switch to older npacagent binary which is not having NANC 528 changes. Note: Executing this step will take the LSMS to older npacagent, which will not have NANC 528 changes. Skip this step if you do not want to move to older npacagent version. <u>Read the NOTE provided in the Procedure 33 for more details.</u>	Procedure 33
Starting LSMS services	10	130	Start LSMS services	Procedure 19
Post-upgrade health check	5	135	Run the syscheck utility to verify all servers are operationally sound.	Procedure 20
Accept upgrade	5	140	Accept the upgrade on both sides 1A and 1B. Note: This is not a mandatory procedure but this needs to be executed if further split mirror upgrade is required.	Procedure 27
The following steps only need to be performed on the customer site.				

Table 5. Installation Phases

3.3 Split Mirror Upgrade Phases

The following table illustrates the progression of the split mirror upgrade process by procedure with estimated times and may vary due to differences in typing ability and system configuration. Split mirror upgrade should be done on Server 1B first and then on Server 1A. The phases outlined in Table 6 are to be executed in the order they are listed.

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS servers.	Procedure 1
Verify split mirror upgrade	5	20	Verify this a split mirror upgrade	Procedure 2
Pre-upgrade check	15	35	Verify requirements for upgrade are met.	Procedure 3
Pre-upgrade health check	5	40	Run the syscheck utility to verify that all servers are operationally sound.	Procedure 4
Pre-upgrade LSMS Node status	5	45	Run the LSMS Node Status to verify that the server's HA states are operationally sound.	Procedure 14
Split Mirror Upgrade on Server B	30	75	Execute the Split Mirror upgrade procedure on MPS B.	Procedure 15
Split Mirror Upgrade on Server A	30	105	Execute the Split Mirror upgrade procedure on MPS A.	Procedure 16
Run switch_NANC528 script	5	110	Run switch_NANC528 script to switch to older npacagent binary which is not having NANC 528 changes. Note: Executing this step will take the LSMS to older npacagent, which will not have NANC 528 changes. Skip this step if you do not want to move to older npacagent version. <u>Read the NOTE provided in the Procedure 33 for more details.</u>	Procedure 33
Start LSMS Services	10	120	Start LSMS Services	Procedure 19
Post-upgrade health check	5	125	Run the syscheck utility to verify that all servers are operationally sound.	Procedure 20
Accept upgrade on both servers A and B	5	130	Accept the upgrade on both servers. Note: This is not mandatory procedure. Once Accept Upgrade is executed, backout cannot be performed.	Procedure 26

Table 6. Split Mirror Upgrade Phases

3.4 Incremental Upgrade Phases

The following table illustrates the progression of the incremental upgrade process by procedure with estimated times and may vary due to differences in typing ability and system configuration. Incremental upgrade should be done on Server 1B first and then on Server 1A. The phases outlined in Table 7 are to be executed in the order they are listed.

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS servers.	Procedure 1
Verify upgrade	5	20	Verify this is an incremental upgrade.	Procedure 2
Pre-upgrade check	15	35	Verify requirements for upgrade are met.	Procedure 3
Pre-upgrade health check	5	40	Run the syscheck utility to verify that all servers are operationally sound.	Procedure 4
Pre-upgrade LSMS Node status	5	45	Run the LSMS Node Status to verify that the server's HA states are operationally sound.	Procedure 14
Upgrade on Server B	30	75	Execute the upgrade procedure on MPS B.	Procedure 17
Upgrade on Server A	30	105	Execute the upgrade procedure on MPS A.	Procedure 18
Run switch_NANC528 script	5	110	Run switch_NANC528 script to switch to older npacagent binary which is not having NANC 528 changes. Note: Executing this step will take the LSMS to older npacagent, which will not have NANC 528 changes. Skip this step if you do not want to move to older npacagent version. <u>Read the NOTE provided in the Procedure 33 for more details.</u>	Procedure 33
Start LSMS Services	10	120	Start LSMS Services	Procedure 19
Post-upgrade health check	5	125	Run the syscheck utility to verify that all servers are operationally sound.	Procedure 20
Accept upgrade on both servers A and B	5	130	Accept the upgrade on both servers. Note: This is not mandatory procedure. Once Accept Upgrade is executed, backout cannot be performed.	Procedure 27

Table 7. Incremental Upgrade Phases

3.5 Backout Phases

The following table illustrates the progression of the backout process by procedure with estimated times and may vary due to differences in typing ability and system configuration. The phases outlined in Table 8 are to be executed in the order they are listed.

Phase	Elapsed Time (Hours or Minutes)		Activity	Impact	Procedure
	This Step	Cum.			
Determine state of system	15-30	15-30	Investigate and determine the state of the LSMS system.	Cannot proceed with backout until failure analysis is complete. Some hand-fixes may be required before proceeding with backout.	Contact MY ORACLE SUPPORT following the instructions on the front page or the instructions on the Appendix D.
Backout MPS B server only.	30	45-60	If required, backout MPS B. If backout of MPS A and B is required, execute Procedure 22 . Otherwise, if backout required only on MPS B, then execute Procedure 21 .		Procedure 21
Backout MPS Servers A and B	100	145-160	Backout MPS A and B.		Procedure 22
Post-backout health check	5	150-165	Run the syscheck utility to verify the MPS server is operationally sound.	Verify that the backout was successful.	Procedure 23
Start LSMS services	10	160-175	Start LSMS services		Procedure 19

Table 8. Backout Procedure Overview

3.6 Log Files

All commands executed during upgrade or installation, are logged in the “/var/TKLC/log/upgrade/upgrade.log” file. This log file is automatically initiated when installation is invoked. This log file is rolled every time an upgrade is initiated. A total of up to five upgrade log files are stored on the server.

The upgrade wrapper script, ugwrap, logs its actions also to the “/var/TKLC/log/upgrade/ugwrap.log” file. This log file is rolled every time ugwrap is initiated. A total of up to five ugwrap log files are stored on the server.

4. UPGRADE PREPARATION

Procedure 1 Setting up the upgrade environment

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SPPPORT AND ASK FOR UPGRADE ASSISTANCE.

Procedure 1: Setting up the upgrade environment

S T E P #	This procedure sets up the split mirror upgrade environment. Windows are opened for both the MPS servers. Estimated time: 15 minutes NOTE: Call My Oracle Support for assistance if modem access is the method use for incremental/split mirror upgrade.	
1. <input type="checkbox"/>	Verify all materials required are present	Required materials: * Target-release USB or ISO image if software is being provided electronically. * The capability to log into a server, such as a PC with null modem cable for connection to serial port.
2. <input type="checkbox"/>	Establish a connection to MPS A.	If access to the LSMS servers is not available through an IP network, connect to the E5-APP-B card via the serial port as follows: For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx
3. <input type="checkbox"/>	Create a terminal window for MPS A.	Create a terminal window, establish a serial connection to the E5APPB MPS console port ttyS0 with the properties - 115200,N,8,1 and give it a title of "MPS A"
4. <input type="checkbox"/>	MPS A: Enable capture file and verify the correspondent file is created.	Enable the data capture and verify that the data capture file is created at the path specified.
5. <input type="checkbox"/>	MPS A: Login as a root user.	Login: root Password: <root_password>
6. <input type="checkbox"/>	MPS A: Start screen Session.	Execute the following command to start screen and establish a console session with MPS A. # screen -L
7. <input type="checkbox"/>	Establish a connection to MPS B.	If access to the LSMS servers is not available through an IP network, connect to the E5-APP-B card via the serial port as follows: For connecting the E5-APP-B B card, disconnect the console cable from the serial port on the E5-APP-B A card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B A card's adapter and use it for serial access. Cable part numbers - 830-1220-xx
8. <input type="checkbox"/>	Create a terminal window for MPS B.	Create a terminal window, establish a serial connection to the E5APPB MPS console port ttyS0 with the properties - 115200,N,8,1 and give it a title of "MPS B"

9. <input type="checkbox"/>	MPS B: Enable capture file and verify a correspondent file is created.	Enable the data capture and verify that the data capture file is created at the path specified.
10. <input type="checkbox"/>	MPS B: Login as a root user.	Login: root Password: <root_password>
11. <input type="checkbox"/>	MPS B: Start screen Session.	Execute the following command to start screen and establish a console session with MPS B. # screen -L
12. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

Procedure 2 Determine if upgrade or installation is required

Procedure 2: Determine if split mirror upgrade or incremental upgrade or installation is required

S T E P #	This procedure provides instructions to determine if this will be an initial installation or an incremental/split mirror upgrade of existing software. Estimated time: 5 minutes	
1. <input type="checkbox"/>	MPS B: Log in as the user "root"	Login: root Password: <root_password>
2. <input type="checkbox"/>	<p>MPS B: Determine if the application is correctly installed on the server.</p> <p>(MPS B will be used to determine the current state of the servers. We will assume the state of the A server is the same.)</p>	<p>Execute an rpm query command and examine the output:</p> <pre># rpm -qi TKLClsms</pre> <pre>[root@lsmspri ~]# rpm -qi TKLClsms Name : TKLClsms Relocations: (not relocatable) Version : 13.30.0 Vendor: Tekelec Release : 13.2.0.0.0_132.6.0 Build Date: wed 13 Apr 2016 01:57:12 PM EDT Install Date: wed 20 Apr 2016 04:20:09 PM EDT Build Host: diablo-9.tekelec.com Group : TKLC/Application Source RPM: TKLClsms- 13.30.0-13.2.0.0.0_132.6.0.src.rpm Size : 217882134 License: © TEKELEC 2004-2016 Signature : (none) Packager : <Open Systems> URL : http://www.tekelec.com/ Summary : Oracle Communications LSMS Package Description : This is the Oracle Communications LSMS Package. The package installs LSMS software. Local Service Management System (LSMS) is a secure and reliable Local Number Portability (LNP) system.</pre> <p>If the output similar to the above example is displayed, then proceed with next step. Otherwise, proceed to step 4.</p>

Procedure 2: Determine if split mirror upgrade or incremental upgrade or installation is required

3. <input type="checkbox"/>	MPS B: Determine the LSMS release currently installed.	Execute the following command and examine the output # cat /usr/TKLC/lsmc/bin/LSMSversion; ssh mate "cat /usr/TKLC/lsmc/bin/LSMSversion" [root@lsmcspri root]# cat /usr/TKLC/lsmc/bin/LSMSversion; ssh mate "cat /usr/TKLC/lsmc/bin/LSMSversion" 13.2.0.0_132.6.0 Tekelec build 2016-04-13-13-49 13.2.0.0_132.6.0 Tekelec build 2016-04-13-13-49 If the output similar to the above example is displayed, then skip to step 5.
4. <input type="checkbox"/>	MPS B: Initiate an installation if the application is not present on the server	If the application is not currently installed, output similar to the examples below will be returned from the rpm -qi command in the previous step. If this is the case, then an application installation is required. Refer to section no. 3.2 for LSMS installation. # rpm -qi TKLC\lsmc package TKLC\lsmc is not installed Skip to step 7.
5. <input type="checkbox"/>	MPS B: Determine which version of the application is present.	If the application is currently installed, get the Release number from step 3. Write down the release level now if this is a split mirror upgrade. Release Level: _____
6. <input type="checkbox"/>	MPS B: Determine if it is a Full Upgrade or Incremental upgrade or split mirror Upgrade.	If the current release for example is 13.0.x or 13.1.y and target release is 13.3.z, it is a Full Upgrade. Refer to document [5] for the LSMS FULL UPGRADE procedure, instead of this document. If the current release is for example 13.2.x and target release is 13.3.y, it is a Split Mirror Upgrade . If the current release is for example 13.2.x and target release is 13.3.y, it is an Incremental Upgrade . For exact paths, refer to Table 3.
7. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

Procedure 3 Pre-upgrade requirements

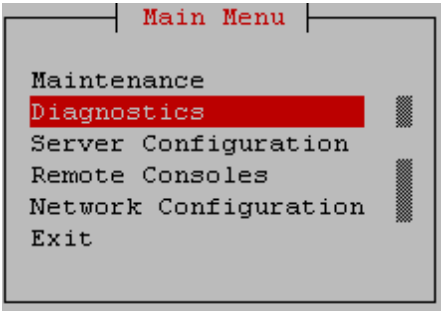

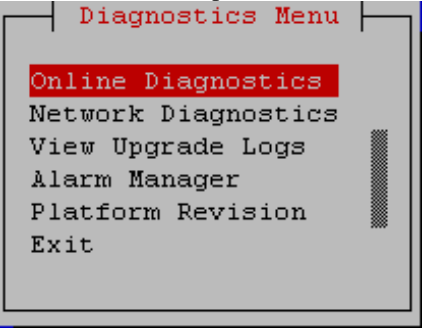

Procedure 3: Verifying Pre-Upgrade Requirements

S T E P #	This procedure verifies that all pre-upgrade requirements have been met. Estimated time: 15 minutes	
1. <input type="checkbox"/>	MPS X: Verify all required materials are present.	Verify that the materials listed in Upgrade Material List (Section3.1) are present.

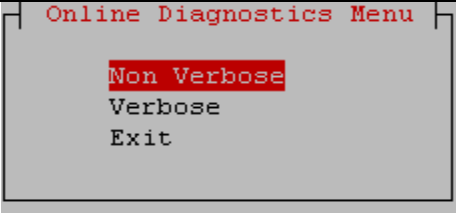

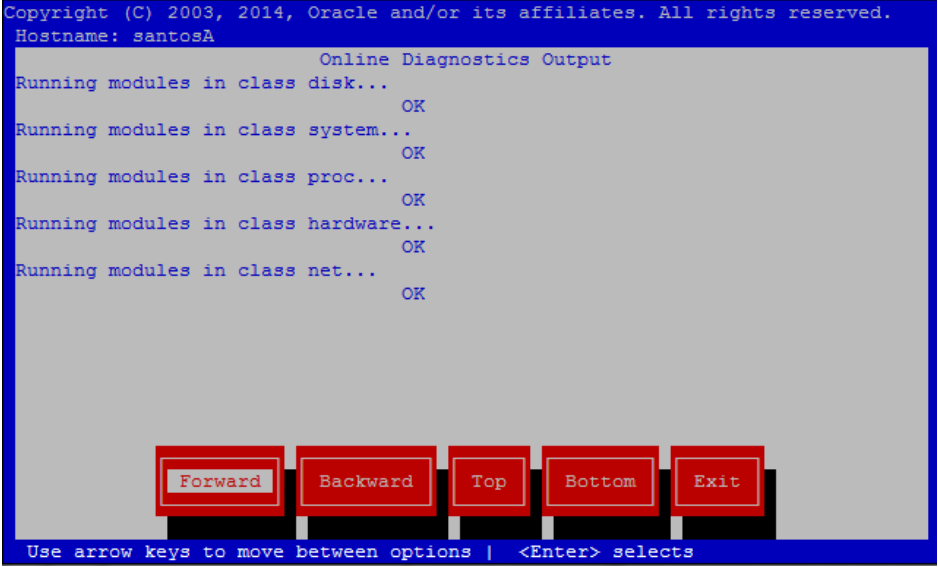

2. <input type="checkbox"/>	MPS X: Verify the availability of passwords for MPS systems.	Refer to Table 4 for the list of users.
3. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

Procedure 4 System Health check

Procedure 4: Perform System Health Check

S T E P #	This procedure performs a system health check on any MPS server. Estimated time: 5 minutes	
	1. <input type="checkbox"/>	MPS X: Log in as the root user. <hostname> console login: root Password: <root_password>
	2. <input type="checkbox"/>	MPS X: Execute the platcfg menu. # su - platcfg
	3. <input type="checkbox"/>	MPS X: Select the Diagnostics submenu. The platcfg Main Menu appears. On the Main Menu , select Diagnostics and press [ENTER]. <div style="text-align: center;">  <pre> Main Menu ----- Maintenance Diagnostics Server Configuration Remote Consoles Network Configuration Exit </pre> </div>
	4. <input type="checkbox"/>	MPS X: Select the Online Diagnostics submenu. Select the Online Diagnostics submenu and press [ENTER]. <div style="text-align: center;">  <pre> Diagnostics Menu ----- Online Diagnostics Network Diagnostics View Upgrade Logs Alarm Manager Platform Revision Exit </pre> </div>
5. <input type="checkbox"/>	MPS X: Select the Non-Verbose option. Select the Non-Verbose option and press [ENTER].	

Procedure 4: Perform System Health Check

		
<p>6.</p> <p><input type="checkbox"/></p>	<p>MPS X: Examine the output of the Online Diagnostics.</p>	<p>Example output shown below. Examine the actual output of the Online Diagnostics.</p> 
<p>7.</p> <p><input type="checkbox"/></p>	<p>MPS X: System Check Successful.</p> <p>System Check Failure.</p>	<p>Exit from the above menu.</p> <p>If the System Check was successful, return to the procedure that you came here from.</p> <p>If the “Server Disk Space Shortage Error” was there in the output, proceed to step 8 to clean up the ‘/’ directory.</p> <p>If any other failures were detected by System Check, contact My Oracle Support following the instructions on the front page or the instructions on the 7.2Appendix D.</p>
<p>8.</p> <p><input type="checkbox"/></p>	<p>MPS X: Server clean-up to create space.</p>	<p>Execute the following command:</p> <pre># df -h /var/TKLC</pre> <p>The output may look like:</p> <pre>[root@hostname ~]\$ df -h /var/TKLC Filesystem Size Used Avail Use% Mounted on /dev/md7 3.9G 1.2G 2.6G 32% /var/TKLC</pre> <p>Verify that there is at least 600M in the Avail column. If not, clean up files until there is space available.</p> <p>CAUTION: Make sure you know what files you can remove safely before cleaning up. It is recommended that you only clean up files in the /var/TKLC/upgrade directory as this is a platform owned directory that should only contain ISO images. This directory should not be expected to contain images for any length of time as they can get purged.</p>

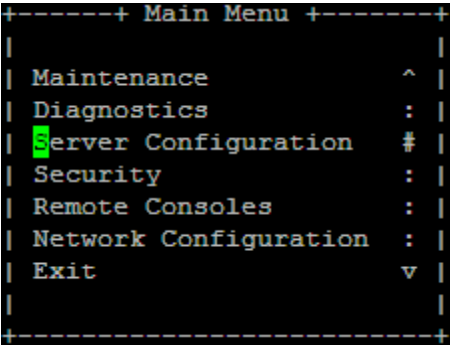

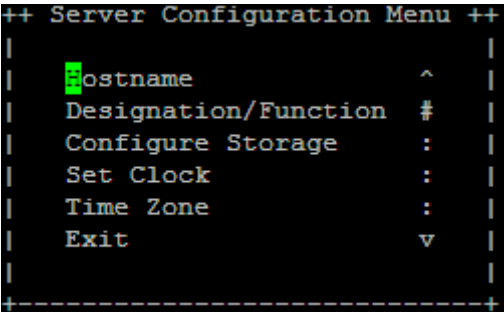

Procedure 4: Perform System Health Check

		<p>Also, execute the following command to check space in '/lib/module' directory.</p> <pre># df -h /lib/modules</pre> <pre>[root@hostname ~]\$ df -h /lib/modules</pre> <table><thead><tr><th>Filesystem</th><th>Size</th><th>Used</th><th>Avail</th><th>Use%</th><th>Mounted on</th></tr></thead><tbody><tr><td>/dev/md2</td><td>996M</td><td>353M</td><td>592M</td><td>38%</td><td>/</td></tr></tbody></table> <p>Verify that the Use% column does not exceed the value 80%.</p>	Filesystem	Size	Used	Avail	Use%	Mounted on	/dev/md2	996M	353M	592M	38%	/
Filesystem	Size	Used	Avail	Use%	Mounted on									
/dev/md2	996M	353M	592M	38%	/									
9. <input type="checkbox"/>	Procedure complete.	This procedure is complete.												

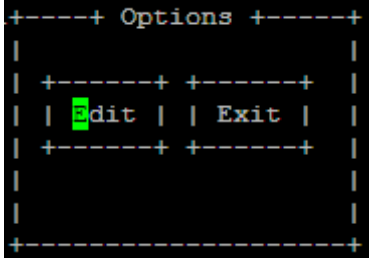

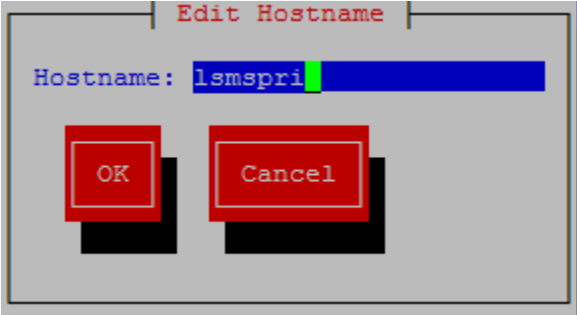

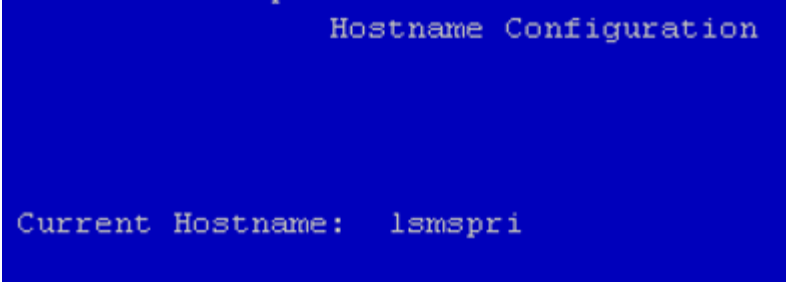

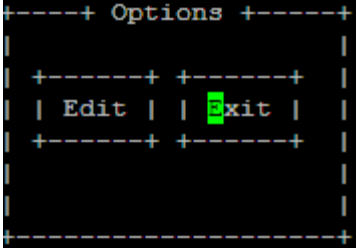

5. SOFTWARE INSTALLATION PROCEDURES

Procedure 5 Pre-Install configuration on server A

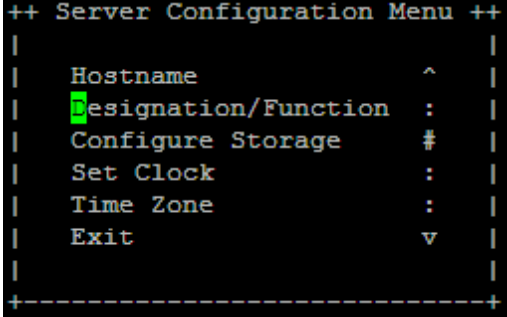

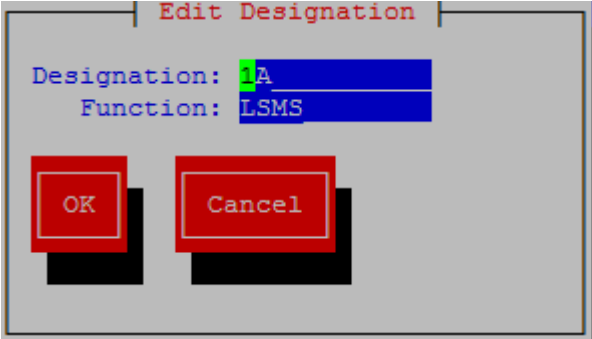

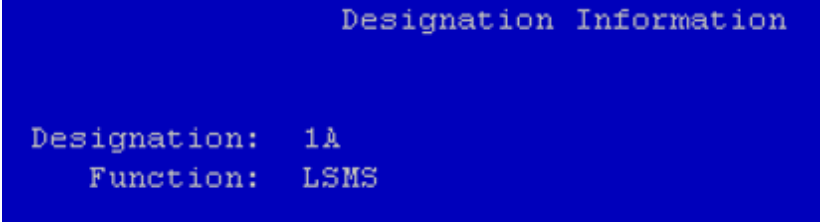

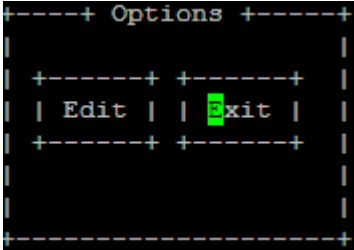

Procedure 5: Pre-Install configuration on server A

S T E P #	This procedure provides instructions to perform pre configuration for an initial install of the application. Estimated time: 5 minutes	
IMPORTANT: Installation of the Operating System on an Oracle Application Server should be completed before starting installation procedure. Refer to Procedure 29 or [2] for TPD installation guide.		
1. <input type="checkbox"/>	Connect to the Server.	If not already connected, connect to the E5-APP-B card via the serial port. For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx
2. <input type="checkbox"/>	MPS A: Log in as "admusr" user.	If not already logged in, then login as "admusr": [hostname] consolelogin: admusr password: <admusr_password>
3. <input type="checkbox"/>	MPS A: Start platcfg utility.	\$ sudo su - platcfg
4. <input type="checkbox"/>	MPS A: Select "Server Configuration" Menu	Select Server Configuration and press [ENTER]. 
5. <input type="checkbox"/>	MPS A: Navigate to the Hostname screen.	Select Hostname and press[ENTER] 
6. <input type="checkbox"/>	MPS A: Change the host name.	Select Edit and press[ENTER]

Procedure 5: Pre-Install configuration on server A

		 <p>Type in the host name. For example change hostname to lsmspri on A server.</p>  <p>Select OK and press [ENTER].</p> <p>Note: While connected to the serial console, some console output might come when the user is using the serial console to configure the LSMS. Those serial output are harmless and can be ignored.</p> <p>Note: Only lsmspri is allowed as hostname for A server</p>
<p>7. <input type="checkbox"/></p>	<p>MPS A: Verify that the Hostname is correct then select and press “Exit”.</p> <p>Otherwise repeat the step above.</p>	 
<p>8. <input type="checkbox"/></p>	<p>MPS A: Navigate to the Designation Information screen.</p>	<p>Select Designation/Function and press[ENTER]</p>

Procedure 5: Pre-Install configuration on server A

		 <pre> ++ Server Configuration Menu ++ Hostname ^ Designation/Function : Configure Storage # Set Clock : Time Zone : Exit v +-----+ </pre>
<p>9. <input type="checkbox"/></p>	<p>MPS A: 1) Select “Edit” from the options dialogue box.</p> <p>2) Set the Designation as “1A” on Server A, Function as “LSMS” and press “OK”.</p> <p>NOTE:</p> <p>Designation and Function should be entered in UPPERCASE.</p>	
<p>10. <input type="checkbox"/></p>	<p>MPS A: Verify that the Designation and Function is correct then select and press “Exit”.</p> <p>Otherwise repeat the step above.</p>	  <pre> +-----+ Options +-----+ -----+ +-----+ Edit Exit -----+ +-----+ </pre>
<p>11. <input type="checkbox"/></p>	<p>MPS A: Exit from platcfg menu</p> <p>NOTE:</p> <p>DO NOT set the time zone in platcfg.</p>	<p>Select EXIT until the platcfg menu is closed and the command line is displayed.</p>

Procedure 5: Pre-Install configuration on server A

	The time zone will be set later in initial configurations.	
12. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

Procedure 6 Pre-Install configuration on server B

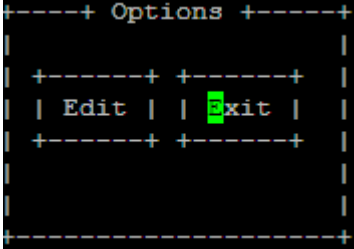

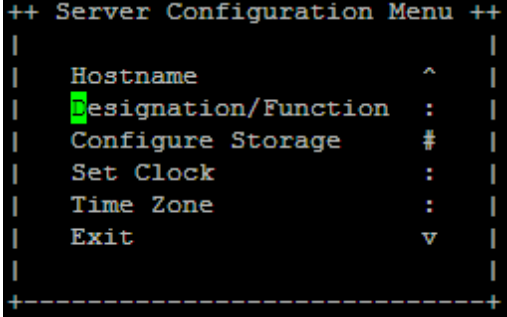

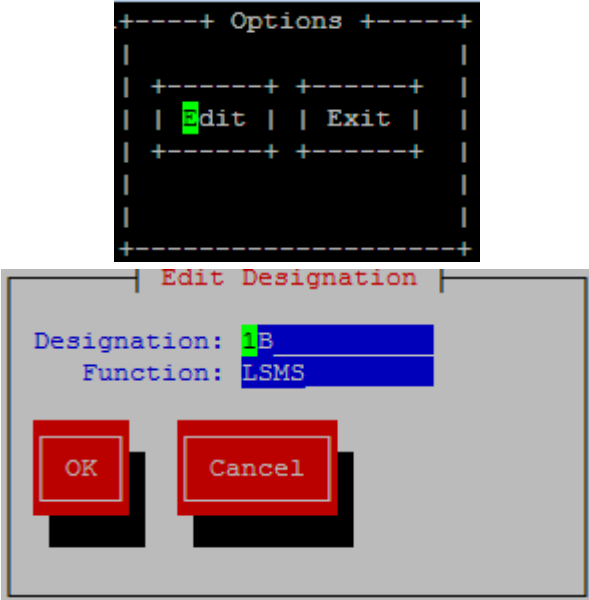

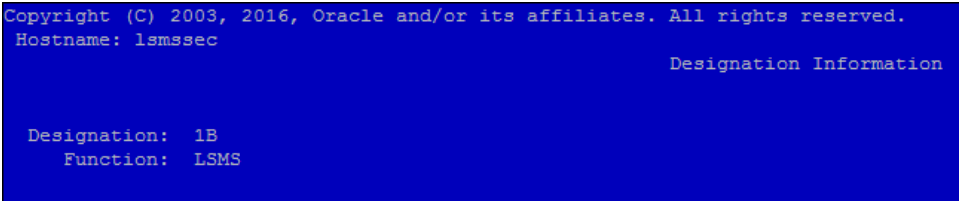

Procedure 6: Pre-Install configuration on server B

S T E P #	This procedure provides instructions to perform pre configuration for an initial install of the application. Estimated time: 5 minutes	
IMPORTANT: Installation of the Operating System on an Oracle Application Server should be completed before starting installation procedure. Refer to Procedure 29.or [2] for TPD installation guide.		
1. <input type="checkbox"/>	Connect to the Server.	If not already connected, connect to the E5-APP-B card via the serial port. For connecting the E5-APP-B card, disconnect the console cable from the serial port on the E5-APP-B A card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B A cards' adapter and use it for serial access. Cable part numbers - 830-1220-xx
2. <input type="checkbox"/>	MPS B: Log in as "admusr" user.	If not already logged in, then login as "admusr": [hostname] consolelogin: admusr password: <admusr_password>
3. <input type="checkbox"/>	MPS B: Start platcfg utility.	\$sudo su - platcfg
4. <input type="checkbox"/>	MPS B: Navigate to the Server Configuration screen.	Select Server Configuration and press[ENTER] 
5. <input type="checkbox"/>	MPS B: Navigate to the Hostname screen.	Select Hostname and press[ENTER]

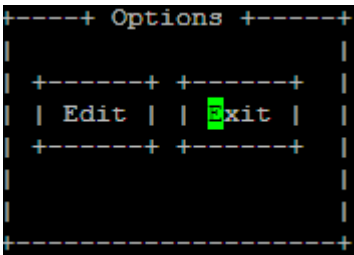

Procedure 6: Pre-Install configuration on server B

		
<p>6. <input type="checkbox"/></p>	<p>MPS B: Select Edit to edit the host name.</p>	<p>Select Edit and press[ENTER]</p>  <p>Type in the host name. For example change hostname to lsmssec on B server.</p>  <p>Select OK and press [ENTER].</p> <p>Note: While connected to the serial console, some console output might come when the user is using the serial console to configure the LSMS. Those serial output are harmless and can be ignored. Note: Only lsmssec is allowed as hostname for B server</p>
<p>7. <input type="checkbox"/></p>	<p>MPS B: Verify that the Hostname is correct then select and press “Exit”.</p> <p>Otherwise repeat the step above.</p>	

Procedure 6: Pre-Install configuration on server B

		
<p>8. <input type="checkbox"/></p>	<p>MPS B: Navigate to the Designation Information screen.</p>	<p>Select Designation/Function and press[ENTER]</p> 
<p>9. <input type="checkbox"/></p>	<p>MPS B: 1) Select "Edit" from the options dialogue box.</p> <p>2) Set the Designation as "1B" on Server B, Function as "LSMS" and press "OK".</p> <p>NOTE:</p> <p>Designation and Function should be entered in UPPERCASE.</p>	
<p>10. <input type="checkbox"/></p>	<p>MPS B: Verify that the Designation and Function is correct then select and press "Exit".</p> <p>Otherwise repeat the step above.</p>	

Procedure 6: Pre-Install configuration on server B

		
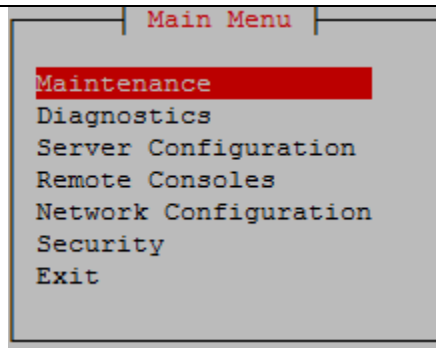

11. <input type="checkbox"/>	<p>MPS B: Exit the platcfg menu</p> <p>NOTE: DO NOT set the time zone in platcfg. The time zone will be set later in initial configurations.</p>	Select EXIT until the platcfg menu is closed and the command line is displayed.
12. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

Procedure 7 Install Application on server A

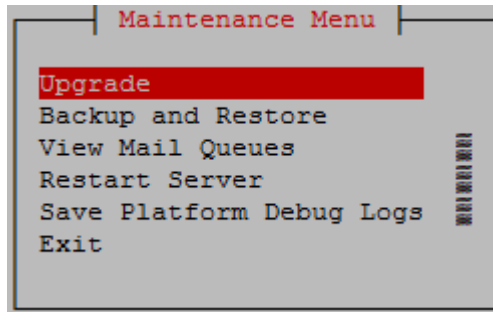

Procedure 7: Install Application on server A

S	This procedure installs the application on the server.	
T	Estimated time: 30 minutes	
E		
P		
#	NOTE: Application can be installed simultaneously on both A and B servers	
1. <input type="checkbox"/>	MPS A: Install LSMS on 1A.	Perform Procedure in Procedure 24 or copy LSMS 13.3 ISO to /var/TKLC/upgrade directory.
2. <input type="checkbox"/>	Create a terminal window and log into MPS A.	If not already connected, connect to the E5-APP-B card via the serial Port. For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx
3. <input type="checkbox"/>	MPS A: Login prompt is displayed.	<hostname> console login: Note: Hit enter if no login prompt is displayed.
4. <input type="checkbox"/>	MPS A: log in as "admusr" user.	[hostname] consolelogin: admusr password: password
5. <input type="checkbox"/>	MPS A: Start platcfg utility.	\$ sudo su - platcfg
6. <input type="checkbox"/>	MPS A: Early upgrade checks	The platcfg Main Menu appears. On the "Main Menu", select Maintenance and press [ENTER].

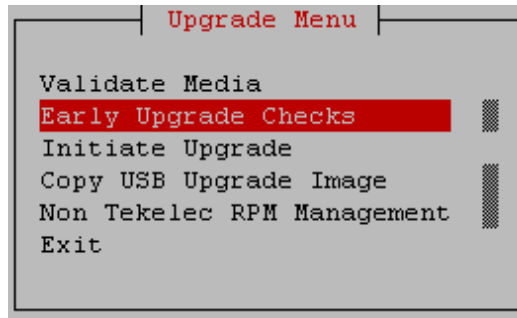

Procedure 7: Install Application on server A

Select the “Upgrade” menu and press [ENTER].

Select the “Early Upgrade Checks” menu to verify that the system is ready for upgrade.

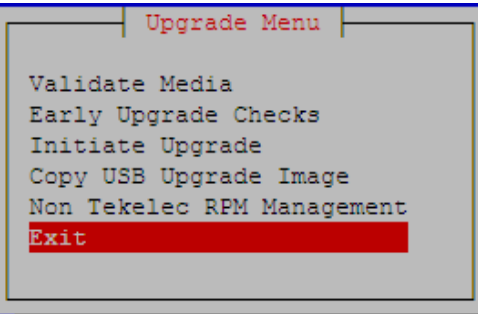

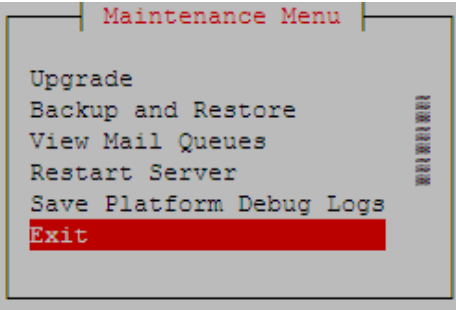

Select the desired upgrade media and press [ENTER].

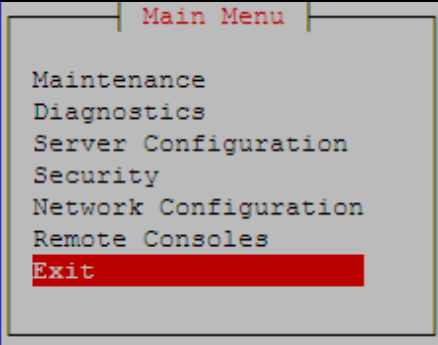

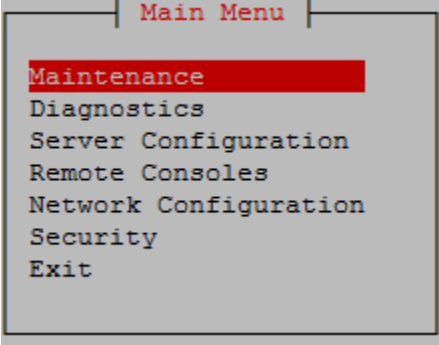

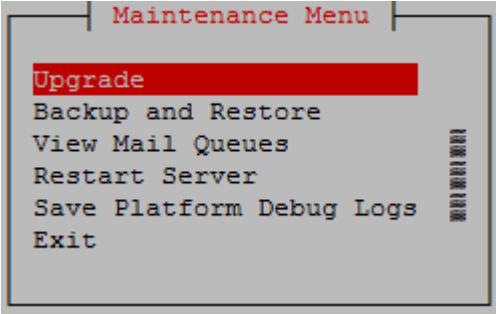

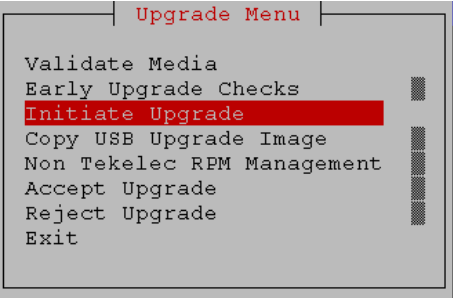

If the Early Upgrade Checks fail due to the ongoing syncing of raid mirrors, then please wait for the disk mirroring to be completed.

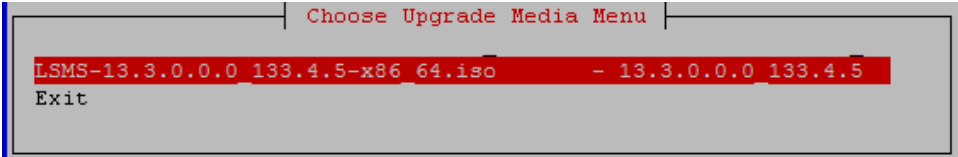

Procedure 7: Install Application on server A

		<pre> Early Checks failed for the next upgrade Look at earlyChecks.log for more info tarting Early Upgrade Checks at 1011413059 Running earlyUpgradeChecks() for Upgrade::EarlyPolicy::TPDEarlyChecks upgrade policy... Procedure 8 Install Application on server B

Procedure 8: Install Application on server B

S	This procedure installs the application on the server.
----------	--------------------------------------------------------

Procedure 8: Install Application on server B

T E P #	Estimated time: 30 minutes	
1. <input type="checkbox"/>	MPS B: Install LSMS on 1B.	Perform Procedure 24 or copy LSMS 13.3 ISO to /var/TKLC/upgrade directory.
2. <input type="checkbox"/>	Create a terminal window and log into MPS A.	If not already connected, connect to the E5-APP-B card via the serial Port. For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card’s adapter. The cable should be disconnected at the point where it connects to the serial port labeled ‘S1’ on the E5-APP-B B card’s adapter and use it for serial access. Cable part numbers - 830-1220-xx
3. <input type="checkbox"/>	MPS B: Login prompt is displayed.	<hostname> console login: Note: Hit enter if no login prompt is displayed.
4. <input type="checkbox"/>	MPS B: log in as “admusr” user.	[hostname] consolelogin: admusr password: <admusr_password>
5. <input type="checkbox"/>	MPS B: Start platcfg utility by logging in as platcfg user.	\$ sudo su - platcfg
6. <input type="checkbox"/>	MPS B: Navigate to the Maintenance Menu	The platcfg Main Menu appears. On the Main Menu , select Maintenance and press [ENTER]. 
7. <input type="checkbox"/>	MPS B: Navigate to the Upgrade menu.	Select the Upgrade menu and press [ENTER]. 
8. <input type="checkbox"/>	MPS B: Select Early Upgrade Checks	Select the “Early Upgrade Checks” menu to verify that the system is ready for upgrade.

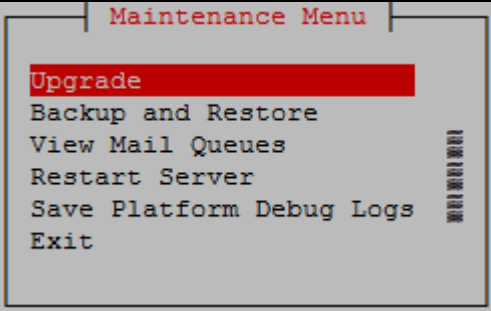

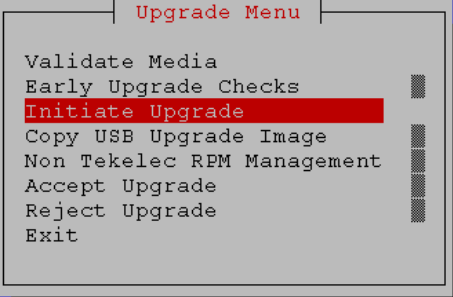

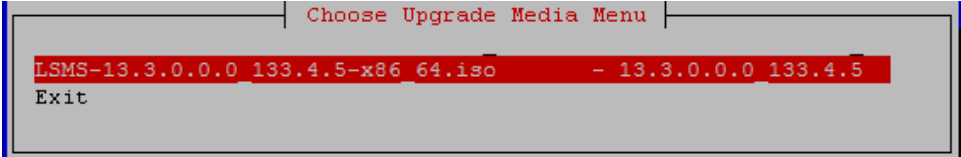

Procedure 8: Install Application on server B

		<div data-bbox="711 178 1227 491" data-label="Image"> </div> <p>Select the desired upgrade media and press [ENTER].</p> <div data-bbox="516 579 1471 737" data-label="Image"> </div> <p>If the Early Upgrade Checks fail due to the ongoing syncing of raid mirrors, then please wait for the disk mirroring to be completed.</p> <pre> Early Checks failed for the next upgrade Look at earlyChecks.log for more info Starting Early Upgrade Checks at 1011413059 Running earlyUpgradeChecks() for Upgrade::EarlyPolicy::TPDEarlyChecks upgrade policy... Procedure 13 TMN Toolkit and Marben OSI License Installation

Note: Valid Licenses need to be installed on both A and B LSMS servers. Initially, temporary license keys will be used for the TMN Toolkit and the Marben OSI software. These keys will be replaced later with permanent license keys for licensed customers.

Download the temporary license keys from the Oracle Software Delivery Cloud, <https://edelivery.oracle.com> in the same manner that you obtained the LSMS software ISO images. Install the temporary license keys using the procedure below. The same set of temporary license keys can be installed on both A and B LSMS servers.

Note: After the LSMS software has been installed, if you are a licensed customer request the permanent license keys by going to <https://licensecodes.oracle.com> and provide the following information:

1. host name, which is lsmspri for A and lsmsec for B; and
2. hostid, obtained by running the command “/usr/local/netech/bin/flexnet/lmhostid”; and
3. Mac address for Ethernet interface eth01 (interface name after IPMed but before LSMS installation) or eth0 (interface name after LSMS installation).

You will receive the permanent license keys via email. It may take several days before you receive your permanent license keys. Once you receive the permanent license keys, repeat this procedure to install them.

Procedure 13: TMN Toolkit and Marben OSI License Installation

S T E P #	This procedure will install the TMN Toolkit License and the Marben OSI License to both A and B LSMS servers.	
	Estimated time: 10 minutes	
1. <input type="checkbox"/>	MPS X: Log in to the server as the user “root”	console login: root password: <root_password>
2. <input type="checkbox"/>	MPS X: Install the TMN toolkit license file	Copy the TMN Toolkit license file to /usr/local/netech/etc/license and the Marben OSI license file to /usr/TKLC/osi/conf/license following the steps mentioned in Procedure 31 .
3. <input type="checkbox"/>	MPS X: Reboot the server	Reboot the system to take effect of the installed license # reboot
4. <input type="checkbox"/>	Procedure complete.	Procedure is complete.

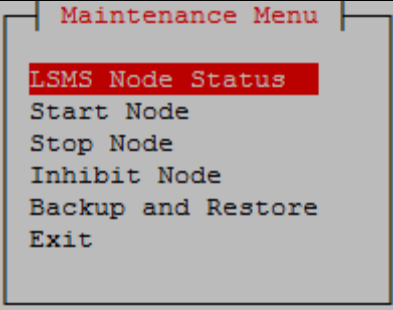

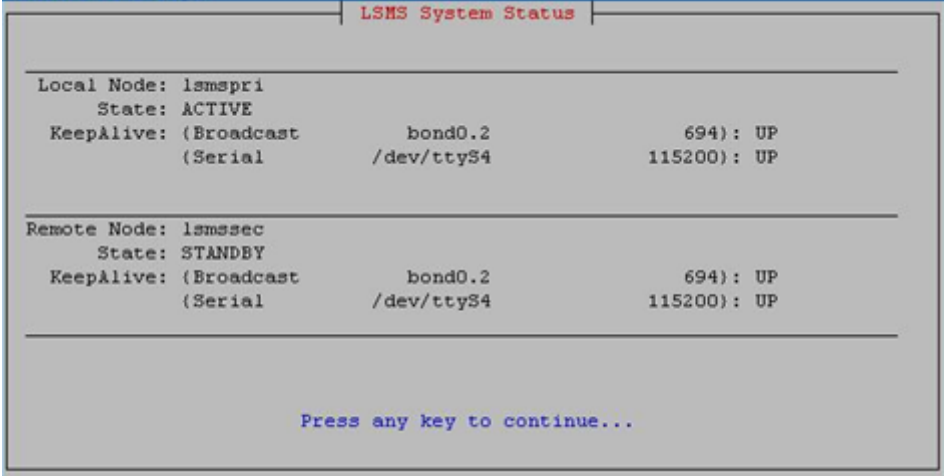

6. SOFTWARE UPGRADE PROCEDURES

Procedure 14 Pre-Upgrade LSMS Node Status

Procedure 14: Pre-Upgrade LSMS Node Status

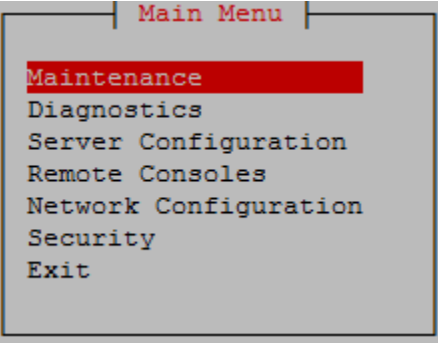

S T E P #	<p>This procedure performs a Node Status on any MPS running the LSMS application.</p> <p>Estimated time: 5 minutes</p> <p>NOTE: This procedure verifies that the 1A server is in the ACTIVE state and the 1B server is in the STANDBY state prior to beginning the split mirror upgrade. If it is determined that the servers are not in the previously described states, please contact MY ORACLE SUPPORT and ask for assistance in performing a system failover. This procedure also disables LSMS backup on both A and B servers. Please make sure to re-enable it after the upgrade is done.</p> <p>WARNING: If a system failover is to be performed then it <i>must</i> be verified that replication between the ACTIVE and STANDBY servers is functioning correctly before attempting the failover.</p>	
1.	<input type="checkbox"/> MPS A and B: Log in to the server as the user “root”.	Login: root Password: <root_password>
2.	<input type="checkbox"/> MPS A and B: Disable LSMS backup on both A and B servers	Execute the following command on both LSMS A and B to disable LSMS backup <pre># sed -i '/^#!/ {/lsmbkp_wrapper/ s/^#!/}' /etc/cron.d/lsmbkp.cron</pre>
3.	<input type="checkbox"/> LSMS Active server: Log in to the server as the user “root”.	Login: root Password: <root_password>
4.	<input type="checkbox"/> LSMS Active server: Start the lsmsmgr utility by logging in as the lsmsmgr user.	<pre># su - lsmsmgr</pre>
5.	<input type="checkbox"/> LSMS Active server: Make selections on the Main Menu of the Platform Configuration Utility.	<p>On the Main Menu, select the Maintenance submenu, and press [ENTER].</p> <div style="border: 1px solid black; padding: 10px; width: fit-content; margin: 10px auto;"> <pre> Main Menu ----- Initial Configuration Maintenance Diagnostics Server Configuration Network Configuration Exit </pre> </div> <p>Select LSMS Node Status, and press [ENTER].</p>

Procedure 14: Pre-Upgrade LSMS Node Status

		
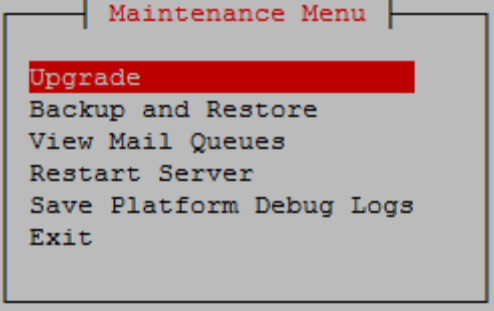

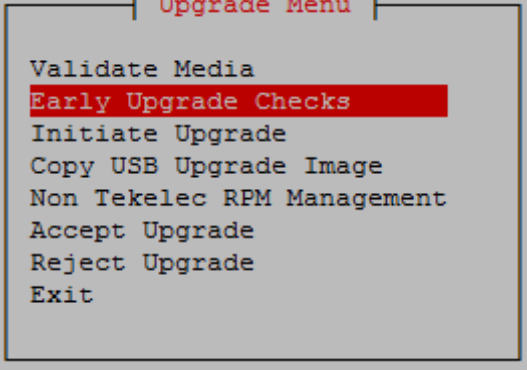

<p>6. <input type="checkbox"/></p>	<p>LSMS Active server: Examine the output of the LSMS Node Status and verify that the states of the Server lsmspri and lsmssec LSMS servers are “ACTIVE” and “STANDBY” respectively.</p>	<p>The LSMS System Status results appear on the screen, the “State:” information <i>must</i> match exactly with the following example. The following screen shot is an example of acceptable states for continuing an split mirror upgrade:</p>  <p>The following are examples of unacceptable states for continuing a split mirror upgrade: ACTIVE “\lsmssec->TO_STANDBY” STANDBY “\lsmssec->TO_STANDBY”</p>
<p>7. <input type="checkbox"/></p>	<p>LSMS System Status Successful LSMS System Status Failure</p>	<p>If the LSMS System Status was successful return to Table 6. If LSMS System Status detected any failures, please contact MY ORACLE SUPPORT following the instruction on the 7.2Appendix D and ask for assistance.</p>
<p>8. <input type="checkbox"/></p>	<p>Procedure Complete.</p>	<p>This procedure is complete.</p>

Procedure 15 Split Mirror Upgrade on Server B

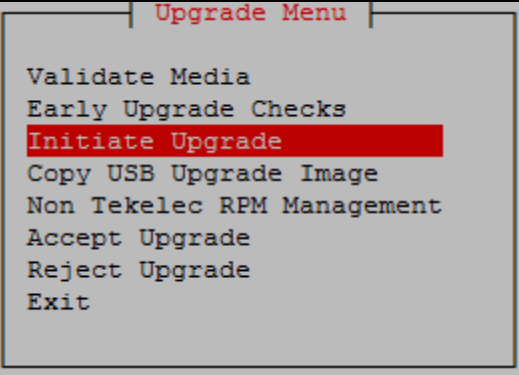

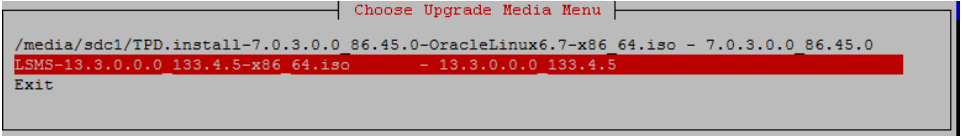

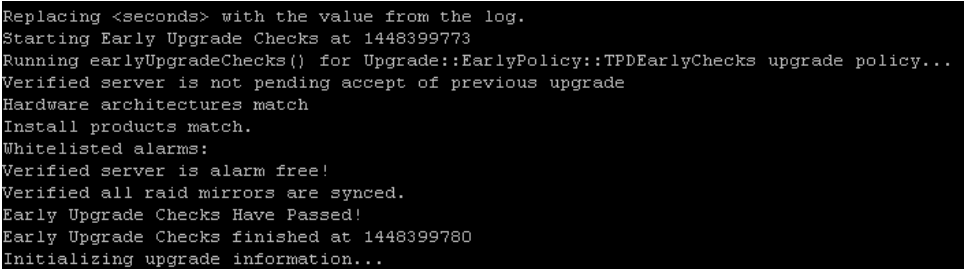

Procedure 15: Split mirror upgrade on Server B

S T E P #	<p>This procedure performs the split mirror upgrade on the MPS-B server.</p> <p>Estimated time: 30 minutes</p>	
1. <input type="checkbox"/>	<p>MPS B: Split Mirror upgrade MPS server B</p>	<p>Perform Procedure in Procedure 24 or copy LSMS 13.3 ISO to /var/TKLC/upgrade directory.</p>
2. <input type="checkbox"/>	<p>MPS B: : Create upgrade.conf for splitting mirrors. Use root user</p>	<p>Create a file and add the line “BACKOUT_TYPE=SPLIT_MIRROR” (to trigger the split mirror upgrade) by executing the following command:</p> <pre># echo "BACKOUT_TYPE=SPLIT_MIRROR" >/usr/TKLC/plat/etc/upgrade/upgrade.conf</pre> <p>Execute the following command to verify that the above command has been executed successfully:</p> <pre># cat /usr/TKLC/plat/etc/upgrade/upgrade.conf</pre> <p>The output should be:</p> <pre>[root@MPS-B ~]# cat /usr/TKLC/plat/etc/upgrade/upgrade.conf BACKOUT_TYPE=SPLIT_MIRROR</pre> <p>NOTE: Not performing this step will prevent any successful backout.</p>
3. <input type="checkbox"/>	<p>MPS B: Start platcfg utility by logging in as platcfg user</p>	<pre># su - platcfg</pre> <p>On the Main Menu, select Maintenance and press [ENTER].</p>  <p>The screenshot shows a terminal window titled "Main Menu" with a list of options: Maintenance, Diagnostics, Server Configuration, Remote Consoles, Network Configuration, Security, and Exit. The "Maintenance" option is highlighted with a red bar.</p>
4. <input type="checkbox"/>	<p>MPS B: Select the Upgrade submenu.</p>	<p>Select the Upgrade menu and press [ENTER].</p>

Procedure 15: Split mirror upgrade on Server B

		
<p>5. <input type="checkbox"/></p>	<p>MPS B: Select Early Upgrade Checks</p>	<p>Select the “Early Upgrade Checks” menu to verify that the system is ready for upgrade.</p>  <p>NOTE: If the Early Upgrade Checks fail due to the NTP related alarms, then execute step 6 , otherwise skip to step 7.</p> <p>Contact My Oracle Support following the instructions on the front page or the instructions on the Appendix D, if the early upgrade checks fail due to the reason other than NTP related alarms.</p>
<p>6. <input type="checkbox"/></p>	<p>MPS B: White List NTP Alarms</p>	<p>If the Early Upgrade Checks fail due to the NTP related alarms, then ignore the NTP alarms using the following commands:</p> <ol style="list-style-type: none"> a. Exit the platcfg menu b. Change to root user using the “su –“ command. c. vim /usr/TKLC/plat/etc/upgrade/upgrade.conf d. Edit the following line to include the NTP related alarms. EARLY_CHECK_ALARM_WHITELIST=TKSPLATMI2 <p>For example – To whitelist the NTP alarm “tpdNTPDaemonNotSynchronizedWarning” which has the alarm code TKLCPLATMI10, the above mentioned line should be edited as EARLY_CHECK_ALARM_WHITELIST=TKSPLATMI2,TKSPLATMI10</p> <p>Note: There should not be any space between two alarms i.e. between TKSPLATMI2 and TKSPLATMI10</p>
<p>7. <input type="checkbox"/></p>	<p>MPS B: Navigate to the Initiate Upgrade menu.</p>	<p>Select the Initiate Upgrade menu and press [ENTER].</p>

Procedure 15: Split mirror upgrade on Server B

		
<p>8. <input type="checkbox"/></p>	<p>MPS B: Select the Upgrade Media</p>	<p>The screen displays a message that it is searching for upgrade media. When the upgrade media is found, an Upgrade Media selection menu appears similar to the example below. Select the desired upgrade media and press [ENTER].</p> 
<p>9. <input type="checkbox"/></p>	<p>MPS B: Split Mirror upgrade proceeds</p>	<p>The screen displays the following, indicating that the split mirror upgrade software is first running the upgrade checks, and then proceeding with the split mirror upgrade.</p>  <p>Many informational messages appear on the terminal screen as the split mirror upgrade proceeds. The messages are not shown here for clarity sake.</p> <p>When split mirror upgrade is complete, the server reboots.</p>
<p>10. <input type="checkbox"/></p>	<p>MPS B: Upgrade completed</p>	<p>After the final reboot, the screen displays the login prompt as in the example below.</p> <pre>1503471288: Upstart Job alarmMgr: started ##### 1503471288: Upstart Job tpdProvd: started ##### 1503471289: Upstart Job syscheck: started ##### 1503471290: Upstart Job ntdMgr: started #####</pre>

Procedure 15: Split mirror upgrade on Server B

		<p>Oracle Linux Server release 6.8 Kernel 2.6.32-642.15.1.el6prere17.4.0.0.0_88.37.0.x86_64 on an x86_64</p> <p>lsmssec login:</p>
11. <input type="checkbox"/>	MPS B: : Log in to the server as the user "root".	<p>Login: root Password: <root_password></p>
12. <input type="checkbox"/>	MPS B: Verify the upgrade.	<p>Examine the upgrade logs in the directory /var/TKLC/log/upgrade.</p> <pre># grep -i error /var/TKLC/log/upgrade/upgrade.log</pre> <p>Following Errors are expected: 1462270310::Master 'bond0', Slave 'eth2': Error: Change active failed 1462270311::ERROR: Could not change current interface. 1462270311::Master 'bond0', Slave 'eth2': Error: Change active failed 1462270311::ERROR: Could not change interface of lsmspri. 1462270685::Master 'bond0', Slave 'eth2': Error: Change active failed 1462270686::ERROR: Could not change current interface. 1462270686::Master 'bond0', Slave 'eth2': Error: Change active failed 1462270687::ERROR: Could not change interface of lsmspri. 1465475856::ERROR: Config file is currently checked out! 1465475858::ERROR: LOCKED BY: root 1465475858::ERROR: CONFIG: /etc/motd 1465475858::ERROR: ELEMENT: /var/TKLC/rcs/etc/motd,v 1503473419::ERROR: Command returned non-zero exit code 768 (/sbin/service TKLCpldhcp start) <p>If upgrade fails with an error message "Backup in progress", then execute Procedure 28 to stop the LSMS backup that is in progress.</p> <p>Contact My Oracle Support following the instructions on the front page or the instructions on the Appendix D, if the output contains any error other than the above mentioned errors.</p> <p>Also note that sometime a carriage return is inserted in the log file causing some of the error messages to appear truncated. 8.	<input type="checkbox"/> Procedure Complete.	This procedure is complete.

Procedure 20 Post-Upgrade Health Check

Procedure 20: Post-Upgrade Health Check

<p>S T E P #</p>	<p>This procedure determines the health of the Server after a split mirror upgrade. This procedure will perform a syscheck on each LSMS server, verify that MySQL replication is functioning correctly between the two LSMS servers, and capture command output to be used later.</p> <p>This procedure also enables LSMS backup on both A and B servers if it was disabled prior to upgrade.</p> <p>Estimated time: 5 minutes</p>	
1.	<input type="checkbox"/> MPS A and B: Login to the server as the user "root".	Login: root Password: <root_password>
2.	<input type="checkbox"/> MPS A and B : Verify Health of the Server	Execute Procedure 23 on the 1A and 1B servers to verify the health of the server. NOTE: If this upgrade is an initial installation of the LSMS application. Some errors will be present until the system is fully configured and installed at the customer site. Only verify that the following syscheck classes pass (the first 3 classes in the output): <ul style="list-style-type: none"> • disk • hardware • net

Procedure 20: Post-Upgrade Health Check

<p>3. <input type="checkbox"/></p>	<p>MPS A and B: Enable LSMS backup on both A and B servers</p>	<p>Execute the following command on both LSMS A and B if LSMS backup was disabled prior to upgrade. Otherwise skip to next step.</p> <pre># sed -i '/^#/ {/lsmbkp_wrapper/ s/^#//}' /etc/cron.d/lsmbkp.cron</pre>
<p>4. <input type="checkbox"/></p>	<p>MPS A and B: Execute the “hastatus” command to verify the HA state of this server.</p>	<p>Execute the following command on both LSMS A and B to verify the HA state of mated LSMS pair.</p> <pre># hastatus</pre> <p>Verify that the hastatus of one of the servers is Active and the other is Standby.</p> <p>WARNING: If the output from the above command is anything else other than “ACTIVE” and “STANDBY”, do not proceed with this procedure and contact My Oracle Support following the instructions on the Appendix D.</p>
<p>5. <input type="checkbox"/></p>	<p>LSMS Standby Server: Verify that the STANDBY server’s MySQL replication is functioning properly</p>	<p>Execute the following command to verify that MySQL replication is working correctly on the STANDBY LSMS server:</p> <pre># tail /var/TKLC/lsms/logs/dbrep1mon.log</pre> <p>If MySQL replication is functioning correctly then the following output will be observed, make sure that at least the last line of your output matches the lines below.</p> <pre>Thu Dec 07 05:58:12 2017 All tests passed on STANDBY FIPS integrity verification test failed. FIPS integrity verification test failed. Thu Dec 07 05:59:19 2017 All tests passed on STANDBY FIPS integrity verification test failed. FIPS integrity verification test failed. Thu Dec 07 06:00:25 2017 All tests passed on STANDBY FIPS integrity verification test failed. FIPS integrity verification test failed. Thu Dec 07 06:01:32 2017 All tests passed on STANDBY</pre> <p>WARNING: If at least the last line of your output does not match the lines above then do not proceed with this upgrade and contact My Oracle Support for assistance.</p>
<p>6. <input type="checkbox"/></p>	<p>LSMS Active Server: Login as the user “lsmsadm” on the ACTIVE server.</p>	<pre># su - lsmsadm</pre>
<p>7. <input type="checkbox"/></p>	<p>LSMS Active Server: Capture the output of the “lsmsdb –c counts” command.</p>	<p>Execute the following command on the ACTIVE LSMS server to display the current LSMS database counts:</p> <pre># lsmsdb -c counts</pre> <p>NOTE: Capture the output from this command and make it available to My Oracle Support if required.</p>

Procedure 20: Post-Upgrade Health Check

8. <input type="checkbox"/>	LSMS Active Server: Capture the output of the “lsmsdb -c features” command.	Execute the following command on the ACTIVE LSMS server to display the current LSMS feature configuration: # lsmsdb -c features NOTE: Capture the output from this command and make it available to My Oracle Support if required.
9. <input type="checkbox"/>	LSMS Active Server: Capture the output of the “sentry status” command.	Execute the following command on the ACTIVE LSMS server to display the current LSMS sentry status: # sentry status NOTE: Verify that the output displays a Status of “running” for all processes; the regional processes (npacagents) may or may not be associated in the Comment field. If the output from this command displays any other Status than “running” contact My Oracle Support and ask for assistance. Capture the output from this command and make it available to My Oracle Support if required.
10. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

7. SOFTWARE RECOVERY PROCEDURES

Execute this section only if there is a problem and it is desired to revert back to the pre-upgrade version of the software.

Warning: Do not attempt to perform these backout procedures without first contacting the MY ORACLE SUPPORT

following the instruction on the front page or the instructions on the 7.2Appendix D.

NOTE: These recovery procedures are provided for the backout of a split mirror upgrade ONLY (i.e., from an split mirror upgraded system). Backout of an initial installation is not supported.

7.1 Backout Setup

The reason to execute a backout has a direct impact on any backout preparation that must be done. Since the reason cannot be known ahead of time, no definitive procedure can be written.

My Oracle Support personnel will have to have login access to the affected MPS server, probe the server for the root cause of the problem, and execute whatever setup or cleanup is necessary in order to prepare the MPS server for backout.

7.2 Perform Backout

No matter the initial cause of the upgrade problem, once all necessary corrective steps have been taken to prepare for the backout, then the following procedure can be executed to perform a backout.

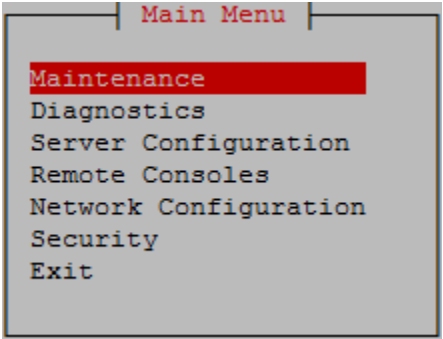

Note: Procedure for backout will remain same whether upgrade was incremental or split mirror, only output will be different.

Procedure 21 Server B Backout

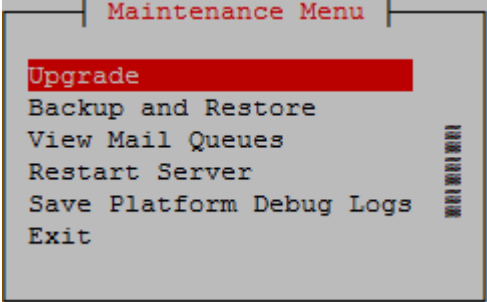

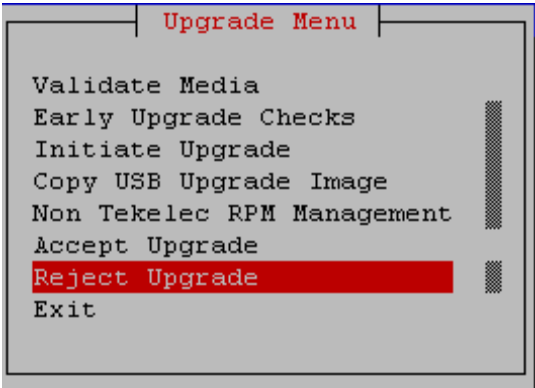

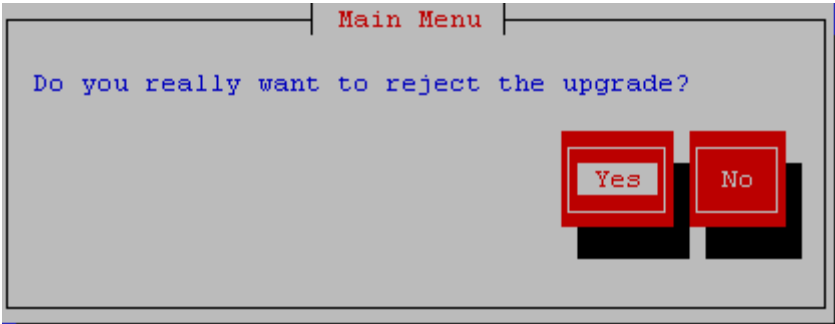

Procedure 21: Server B Backout

S T E P #	This procedure provides instructions to perform backout on MPS B server.	
	Estimated time: 30 minutes	
	Note: Execute this procedure if only MPS B has been upgraded or partially upgraded and MPS A is still at the pre-upgrade release. Note: If the upgrade has been accepted, this procedure cannot be executed. Note: Make sure USB is not connected with the setup before running this procedure.	
1. <input type="checkbox"/>	Terminate all previous connections (ssh).	If not already connected, connect to the E5-APP-B card via the serial port. For connecting the E5-APP-B B card, disconnect the console cable from the serial port on the E5-APP-B A card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B A cards adapter and use it for serial access. Cable part numbers - 830-1220-xx

Procedure 21: Server B Backout

		Skip to step 5 if connected through serial console.
2. <input type="checkbox"/>	Create a terminal window and establish a connection by logging into MPS A. Log in to MPS A.	In a newly created terminal window labeled “MPS B – from MPS A”, connect directly into MPS A. # ssh root@<MPS A> Password: <password>
3. <input type="checkbox"/>	MPS A: Start screen session MPS A: Connect to the console MPS B.	Execute the following commands to start screen and establish a console session to MPS B. # screen -L Execute the following command on MPS: # minicom mate OR # cu -l /dev/ttyS1 -s 115200
4. <input type="checkbox"/>	MPS B: Login prompt is displayed.	<hostname> console login: Note: Hit enter if no login prompt is displayed
5. <input type="checkbox"/>	MPS B: Log in to the server as user “root”.	If not already logged-in, then log in. Login: root Password: <root_password>
6. <input type="checkbox"/>	MPS B: Check if upgrade was incremental upgrade or split mirror	If output of below command is as mentioned below it was an incremental upgrade. # cat /usr/TKLC/plat/etc/upgrade/upgrade.conf cat: /usr/TKLC/plat/etc/upgrade/upgrade.conf: No such file or directory If output of below command is as mentioned below it was a split mirror upgrade. # cat /usr/TKLC/plat/etc/upgrade/upgrade.conf BACKOUT_TYPE=SPLIT_MIRROR
7. <input type="checkbox"/>	MPS B: Execute the platcfg menu.	# su - platcfg
8. <input type="checkbox"/>	MPS B: Select the Maintenance submenu.	The platcfg Main Menu appears. On the Main Menu , select Maintenance and press [ENTER]. 
9. <input type="checkbox"/>	MPS B: Select the Upgrade submenu.	Select the Upgrade menu and press [ENTER].

Procedure 21: Server B Backout

		
<p>10. <input type="checkbox"/></p>	<p>MPS B: Reject Split Mirror upgrade</p>	<p>Select the “Reject Upgrade” menu and press [ENTER].</p>  
<p>11. <input type="checkbox"/></p>	<p>MPS B: Backout proceeds.</p>	<p>Many informational messages will come across the terminal screen as the backout proceeds. After Backout a message “Backout is Complete System will reboot now” will be displayed on screen wait for system to reboot. After reboot disk will start to sync incase upgrade was split mirror, wait for sync to complete. If upgrade was incremental upgrade system will be in backed out state post reboot.</p>
<p>12. <input type="checkbox"/></p>	<p>MPS B: Verify that raid is repaired Note: Skip this step if upgrade was incremental upgrade</p>	<pre>[root@lsmsec ~]# cat /proc/mdstat Personalities : [raid1] md1 : active raid1 sdb2[2] sda2[0] 262080 blocks super 1.0 [2/2] [UU] md2 : active raid1 sdb1[1] sda1[0] 468447232 blocks super 1.1 [2/2] [UU] bitmap: 1/4 pages [4KB], 65536KB chunk unused devices: <none></pre>
<p>13. <input type="checkbox"/></p>	<p>MPS B: Verify the Backout</p>	<p>Examine the logs in the directory /var/TKLC/log/upgrade and verify that no errors were reported.</p>

Procedure 21: Server B Backout

		<pre># grep -i error /var/TKLC/log/upgrade/upgrade.log</pre> <pre># grep -i error /var/TKLC/log/upgrade/ugwrap.log</pre> <p>Examine the output of the above commands to determine if any errors were reported.</p> <p>Refer to section 3.6to know more about logging.</p>
14. <input type="checkbox"/>	MPS B: Verify the Backout.	<p>If the backout was <i>not</i> successful and errors were recorded in the logs, then contact My Oracle Support following the instructions on the front page or the instructions on the Appendix D for further instructions.</p> <p>If the backout <i>was</i> successful, then continue with the following step.</p>
15. <input type="checkbox"/>	MPS B: Reboot the MPS.	<p>Perform the following commands to reboot the MPS:</p> <pre># init 6</pre>
16. <input type="checkbox"/>	MPS B: Login to MPS B.	<p>If the login prompt appears, continue on to step17.</p> <p>If the login prompt does not appear due to disconnect, go to step15.</p>
17. <input type="checkbox"/>	<p>Create a terminal window and establish a connection by logging into MPS A.</p> <p>Log into MPS A.</p>	<p>In a newly created terminal window labeled “MPS B – from MPS A”, connect directly into MPS A.</p> <pre># ssh root@<MPS A></pre> <pre>Password: <password></pre>
18. <input type="checkbox"/>	MPS A: Rejoin previous screen session on MPS B.	<p>Execute the following command to disconnect and then rejoin previous screen session:</p> <pre># screen -dr</pre>
19. <input type="checkbox"/>	MPS B: Verify Health of MPS B.	Execute Procedure 23 on MPS B to verify the health of the server
20. <input type="checkbox"/>	Reconnect console cable.	On E5-APP-B card, reconnect the console cable between the serial port labeled 'S0' on E5-APP-B B card's adapter and the serial port labeled 'S1' on the E5-APP-B A card's adapter. Cable part numbers - 830-1220-xx
21. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

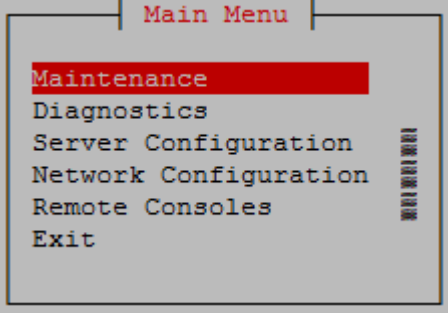

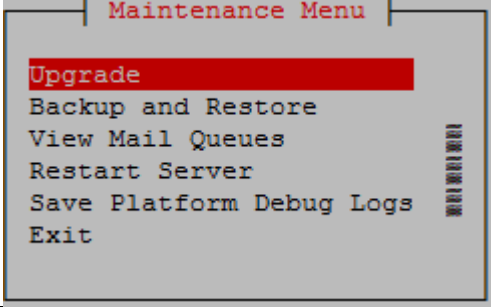

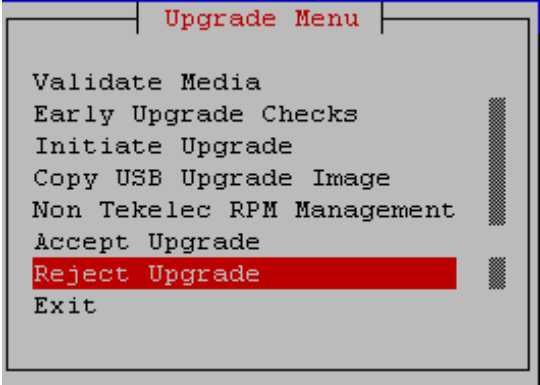

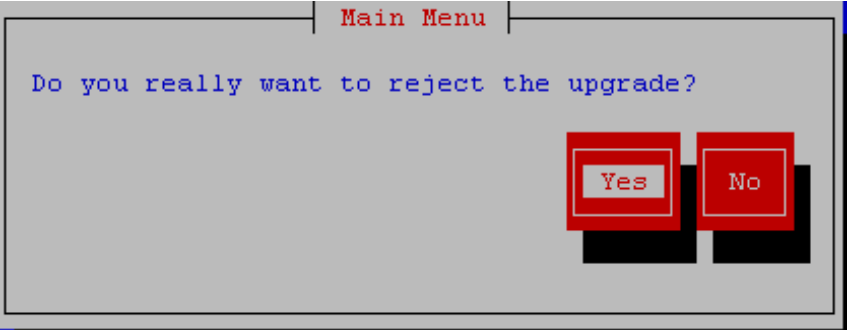

The application should now be running at the original software release level

Procedure 22 Backout both Server A and B

Procedure 22: Backout both Server A and B

S T E P #	<p>This procedure provides instructions to perform backout on both servers MPS A and B.</p> <p>Estimated time: 100 minutes</p> <p>Note: Execute this procedure only if both MPS A and MPS B have been upgraded or partially upgraded and you wish to backout both servers to the previous version.</p> <p>Note: If the upgrade has been accepted, this procedure cannot be performed.</p> <p>Note: Make sure USB is not connected with the setup before running this procedure.</p>	
1. <input type="checkbox"/>	<p>Terminate all previous connections (ssh).</p>	<p>If not already connected, connect to the E5-APP-B card via the serial port.</p> <p>For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx</p> <p>Skip to step 5 if connected through serial console.</p>
2. <input type="checkbox"/>	<p>Create a terminal window and establish a connection by logging into MPS B.</p> <p>Log into MPS B.</p>	<p>In a newly created terminal window labeled "MPS A – from MPS B", connect directly into MPS B.</p> <pre># ssh root@< MPS B> Password: <root_password></pre>
3. <input type="checkbox"/>	<p>MPS B: Start screen session.</p> <p>MPS B: Connect to the console of MPS A.</p>	<p>Execute the following commands to start screen and establish a console session to MPS A.</p> <pre># screen -L</pre> <p>Execute the following command on MPS:</p> <pre># minicom mate OR # cu -l /dev/ttyS1 -s 115200</pre>
4. <input type="checkbox"/>	<p>MPS A: Login prompt is displayed.</p>	<pre><hostname> console login:</pre> <p>Note: Hit enter if no login prompt is displayed.</p>
5. <input type="checkbox"/>	<p>MPS A: Log in to the server as user "root".</p>	<pre>Login: root Password: <root_password></pre>
6. <input type="checkbox"/>	<p>MPS A: Check if upgrade was incremental upgrade or split mirror</p>	<p>If output of below command is as mentioned below it was an incremental upgrade.</p> <pre># cat /usr/TKLC/plat/etc/upgrade/upgrade.conf cat: /usr/TKLC/plat/etc/upgrade/upgrade.conf: No such file or directory</pre> <p>If output of below command is as mentioned below it was a split mirror upgrade.</p> <pre># cat /usr/TKLC/plat/etc/upgrade/upgrade.conf BACKOUT_TYPE=SPLIT_MIRROR</pre>

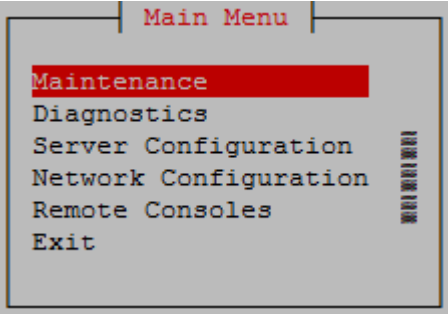

Procedure 22: Backout both Server A and B

7. <input type="checkbox"/>	MPS A: Execute the platcfg menu.	# su - platcfg
8. <input type="checkbox"/>	MPS A: Select the Maintenance submenu.	<p>The platcfg Main Menu appears. On the Main Menu, select Maintenance and press [ENTER].</p> 
9. <input type="checkbox"/>	MPSA: Select the Upgrade submenu.	<p>Select the Upgrade menu and press [ENTER].</p> 
10. <input type="checkbox"/>	MPS A: Reject Split Mirror Upgrade	<p>Select the “Reject Upgrade” menu and press [ENTER].</p>  

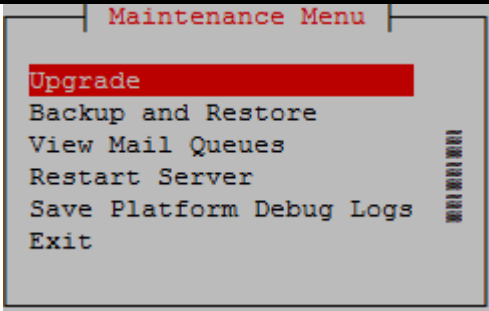

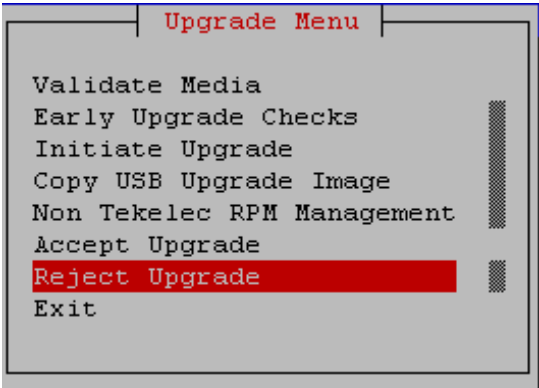

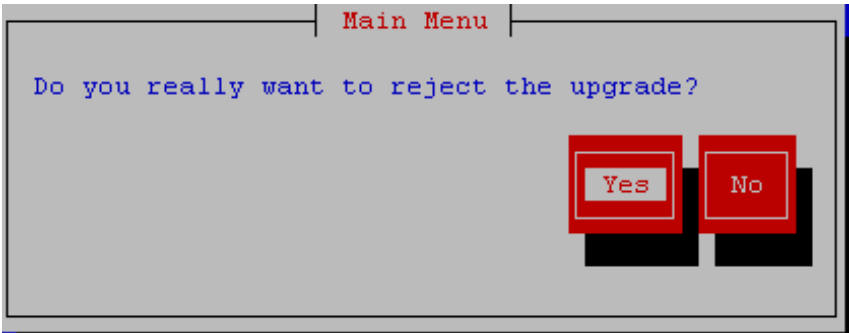

Procedure 22: Backout both Server A and B

<p>11. <input type="checkbox"/></p>	<p>MPS A: Backout proceeds.</p>	<p>Many informational messages will come across the terminal screen as the backout proceeds.</p> <p>After Backout a message “Backout is Complete System will reboot now” will be displayed on screen wait for system to reboot.</p> <p>After reboot disk will start to sync incase upgrade was split mirror, wait for sync to complete. If upgrade was incremental upgrade system will be in backed out state post reboot.</p>
<p>12. <input type="checkbox"/></p>	<p>MPS A: Verify that raid is repaired Note: Skip this step if upgrade was incremental upgrade</p>	<pre>[root@lsmstri ~]# cat /proc/mdstat Personalities : [raid1] md1 : active raid1 sdb2[2] sda2[0] 262080 blocks super 1.0 [2/2] [UU] md2 : active raid1 sdb1[1] sda1[0] 468447232 blocks super 1.1 [2/2] [UU] bitmap: 1/4 pages [4KB], 65536KB chunk unused devices: <none></pre>
<p>13. <input type="checkbox"/></p>	<p>MPS A: Verify the Backout.</p>	<p>Examine the logs in the directory /var/TKLC/log/upgrade and verify that no errors were reported.</p> <pre># grep -i error /var/TKLC/log/upgrade/upgrade.log # grep -i error /var/TKLC/log/upgrade/ugwrap.log</pre> <p>Examine the output of the above commands to determine if any errors were reported.</p> <p>Refer to section 3.6to know more about logging.</p>

34. <input type="checkbox"/>	MPS B: Reboot the MPS.	<p>Perform the following commands to reboot the MPS:</p> <pre># init 6</pre>
35. <input type="checkbox"/>	MPS B: Login to MPS B.	<p>If the login prompt appears, skip to step 38 .</p> <p>If the login prompt does not appear due to disconnect, go to step 36</p>
36. <input type="checkbox"/>	<p>Create a terminal window and establish a connection by logging into MPS A.</p> <p>Log into MPS A</p>	<p>In a newly created terminal window labeled “MPS B – from MPS A”, connect directly into MPS A.</p> <pre># ssh root@< MPS A> Password: <root_password></pre>
37. <input type="checkbox"/>	MPS A: Rejoin previous screen session on MPS B	<p>Execute the following command to disconnect and then rejoin previous screen session:</p> <pre># screen -dr</pre>
38. <input type="checkbox"/>	MPS B: Log in to the server as user “root”.	<pre><hostname> console login: root Password: <root_password></pre>
39. <input type="checkbox"/>	MPS B: Verify Health of MPS B	Execute Procedure 23on MPS B to verify the health of the server.
40. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

The application should now be running at the original software release level.

APPENDIX A. GENERIC PROCEDURES

Procedure 23 Perform System Health Check

Procedure 23: Perform System Health Check

S T E P #	This procedure performs a system health check on any MPS. Estimated time: 5 minutes	
1. <input type="checkbox"/>	MPS X: Execute syscheck	<pre> # syscheck Running modules in class disk... OK Running modules in class services... OK Running modules in class system... OK Running modules in class lsmshc... OK Running modules in class hardware... OK Running modules in class proc... OK Running modules in class net... OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log In case of Split Mirror Upgrade below error will be observed in syscheck output: Running modules in class disk... * meta: FAILURE:: MAJOR::3000000000000002 -- Server Internal Disk Error * meta: FAILURE:: md status check failed. * meta: FAILURE:: MAJOR::3000000000000002 -- Server Internal Disk Error * meta: FAILURE:: md configuration check failed. Active md config doesn't match /etc/raidtab. One or more module in class "disk" FAILED </pre>
2. <input type="checkbox"/>	MPS X: Verify contents of survMon last state file.	Execute the following command to verify that the last state/status of the "lsmsurv" process is stop: <pre> [root@lsmspri ~]# cat /usr/TKLC/lsms/config/lsmsSurv.last STOP </pre>
3. <input type="checkbox"/>	MPS X: Start Surveillance (survMon).	Execute the following command to "lsmsurv" process, this will start the LSMS survMon: <pre> [root@lsmspri ~]# /usr/TKLC/lsms/bin/lsmsurv start LSMS Surveillance feature started </pre>

Procedure 23: Perform System Health Check

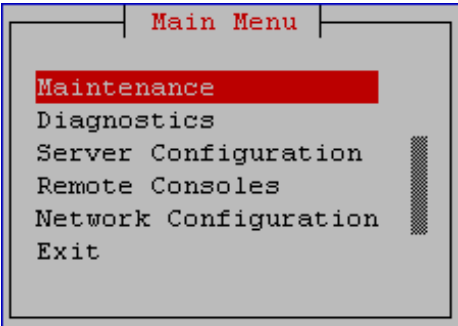

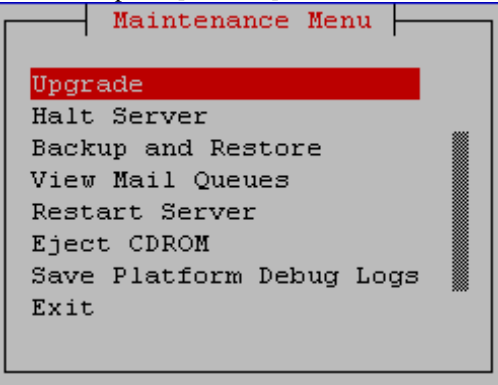

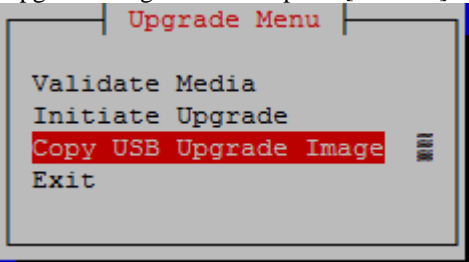

<p>4. <input type="checkbox"/></p>	<p>MPS X: Verify contents of survMon last state file.</p>	<p>Execute the following command to verify that the last state/status of the “lsmssurv” process is start, this will ensure that the crond daemon will restart it upon a failure:</p> <pre>[root@lsmspri ~]# cat /usr/TKLC/lsms/config/lsmsSurv.last START</pre> <p>You have successfully completed this procedure, return to the procedure from which you came.</p>
	<p>MPS X: System Check Failure</p>	<p>.If System Check detected any failures, please contact the My Oracle Support and ask for assistance. Any errors must be well understood before proceeding with the upgrade, errors concerning core files may be ignored.</p> <p>Note: that if no application is installed, the message "No alarm dispatch utility available" is not a failure.</p>
<p>5. <input type="checkbox"/></p>	<p>Procedure Complete.</p>	<p>This procedure is complete.</p>

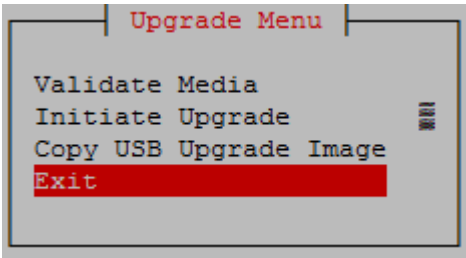

Procedure 24 ISO Image copy from USB Media

Procedure 24: ISO Image copy from USB Media

<p>S T E P #</p>	<p>This procedure provides instructions to copy an ISO image from an USB media.</p> <p>Estimated time: 5 minutes</p>	
<p>1. <input type="checkbox"/></p>	<p>MPS X: Insert USB.</p>	<p>Insert media in USB drive</p>
<p>2. <input type="checkbox"/></p>	<p>MPS X: Log in to the server as the “root” user.</p>	<pre>[hostname] console login: root password: password</pre>
<p>3. <input type="checkbox"/></p>	<p>MPS X: Run syscheck to make sure there is no error.</p>	<p>Execute the following command:</p> <pre># syscheck</pre> <p>The output should look like:</p> <pre>[root@hostname ~]# syscheck Running modules in class proc... OK Running modules in class services... OK Running modules in class system... OK Running modules in class disk... OK Running modules in class hardware... OK Running modules in class net... OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log</pre>
<p>4. <input type="checkbox"/></p>	<p>MPS X: Verify ISO image doesn't already exist.</p>	<p>Execute the following command to perform directory listing:</p> <pre># ls -al /var/TKLC/upgrade</pre> <p>The output should look like:</p>

		<pre>[root@hostname ~]# ls -al /var/TKLC/upgrade total 16 dr-xr-xr-x 2 root root 4096 Oct 22 16:31 . dr-xr-xr-x 21 root root 4096 Oct 18 13:40 ..</pre> <p>If an ISO image exists, remove it by executing the following command:</p> <pre># rm -f /var/TKLC/upgrade/<ISO image></pre>
5. <input type="checkbox"/>	MPS X: Delete unwanted ISOs from USB media.	<p>Execute the following command to create a directory to mount the USB media:</p> <pre># mkdir -p /mnt/usb</pre> <p>Execute the following command to get the USB drive name:</p> <pre># fdisk -l grep FAT</pre> <p>The output should look like:</p> <pre>/dev/sdc1 * 1 812 831472 6 FAT16</pre> <p>Execute the following command to mount the USB media using the USB drive name from the output above:</p> <pre># mount /dev/sdc1 /mnt/usb</pre> <p>Execute the following command to perform directory listing and verify the file name format is as expected:</p> <pre># ls -al /mnt/usb</pre> <p>The output should look like:</p> <pre>[root@hostname ~]# # ls -al /mnt/usb total 629400 dr-xr-xr-x 2 root root 4096 Dec 5 13:33 . dr-xr-xr-x 22 root root 4096 Dec 5 13:55 .. -rw-r--r-- 1 root root 853002240 Dec 5 16:20 LSMS- 13.2.1.0.0_132.18.0-x86_64.iso</pre> <p>Only one ISO file should be listed, if additional files are listed, execute the following command to remove unwanted ISOs:</p> <pre># rm -f /mnt/usb/<ISO_NAME>.iso</pre> <p>For e.g.,</p> <pre># rm -f /mnt/usb/LSMS-13.3.0.0.0_133.4.0-x86_64.iso</pre>
6. <input type="checkbox"/>	MPS X: Verify space exists for ISO.	<p>Execute the following command to verify the available disk space:</p> <pre># df -h /var/TKLC</pre> <p>The output should look like:</p> <pre>[root@lsmspri log]# df -h /var/TKLC Filesystem Size Used Avail Use% Mounted on /dev/mapper/vgroot-plat_var_tklc 3.9G 1.2G 2.5G 32% /var/TKLC</pre> <p>Verify that there is at least 1G in the Avail column. If not, clean up files until there is space available.</p> <p>CAUTION: Make sure you know what files you can remove safely before cleaning up. It is recommended that you only clean up files in the /var/TKLC/upgrade directory as this is a platform owned directory that should only contain ISO images. This directory should not be expected to contain images for any length of time as they can get purged. Contact My Oracle Support beforehand if removing files other than the /var/TKLC/upgrade directory as removing files is dangerous.</p>

7. <input type="checkbox"/>	MPS X: Start platcfg utility.	Execute the following command to change the user: # su - platcfg
8. <input type="checkbox"/>	MPS X: Select the Maintenance submenu.	On the Main Menu of the Platform Configuration Utility, select Maintenance and press [ENTER]. 
9. <input type="checkbox"/>	MPS X: Select the Upgrade submenu.	Select the Upgrade menu and press [ENTER]. 
10. <input type="checkbox"/>	MPS X: Select Copy USB Upgrade Image submenu.	Select the Copy USB Upgrade Image menu and press [ENTER]. 
11. <input type="checkbox"/>	MPS X: The ISO will be copied from the USB media to /var/TKLC/upgrade. Press any key to return to Upgrade menu.	Copying /mnt/upgrade/ LSMS-13.3.0.0.0_133.4.0-x86_64.iso PRESS ANY KEY TO RETURN TO THE PLATCFG MENU.
12. <input type="checkbox"/>	MPS X: Exit platcfg.	Select Exit and press [ENTER] repeatedly until the “platcfg” utility terminates.

		
13. <input type="checkbox"/>	MPS X: Unmount USB media	Execute the following command to unmount the USB media: # umount /mnt/usb
14. <input type="checkbox"/>	MPS X: Verify ISO image exists.	Execute the following command to perform directory listing: # ls -al /var/TKLC/upgrade The output should look like: [root@lsmspri log]# ls -al /var/TKLC/upgrade total 895152 drwxrwxr-x. 2 root admgrp 4096 Apr 20 17:16 . dr-xr-xr-x. 20 root root 4096 Apr 20 18:01 .. -r----- 1 admusr admgrp 916621312 Apr 20 17:16 LSMS-13.3.0.0.0_133.4.0-x86_64.iso Repeat this procedure from step 5 if LSMS ISO file is not as expected.
15. <input type="checkbox"/>	MPS X: Logout from server.	Logout from the server by executing the following command: # logout
16. <input type="checkbox"/>	MPS X: Remove USB media.	Remove media from USB drive.
17. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

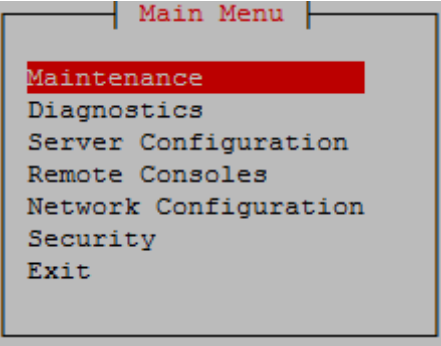

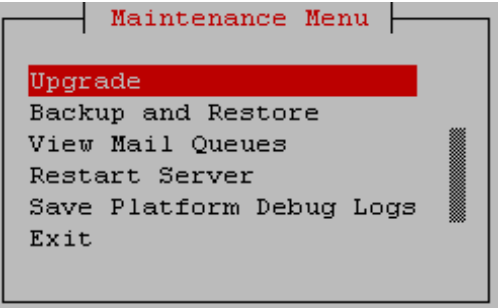

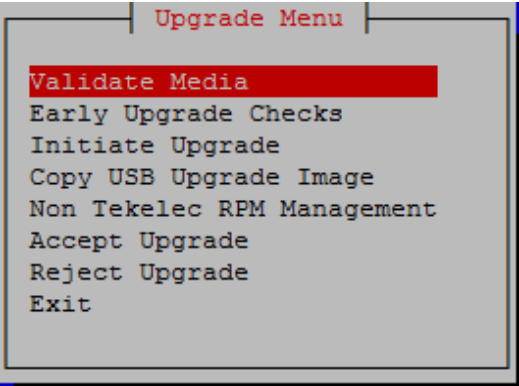

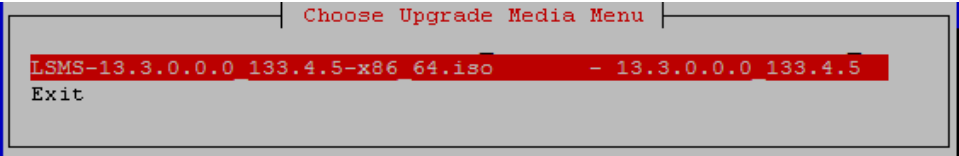

Procedure 25 Validate Upgrade Media

This procedure is used to execute a validation of the Upgrade Media (typically an ISO image) separately from executing an upgrade. The upgrade process automatically validates the upgrade media. However, sometime the user may wish to perform just a validation before proceeding with upgrade, thus the reason for this separate process.

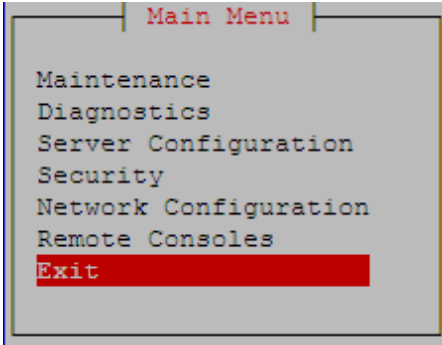

Procedure 25: Validate Upgrade Media

S T E P #	This procedure provides instructions to perform a validation of the upgrade media on the server. This procedure assumes that the E5-APP-B IPM procedure has been executed and the user has LSMS Upgrade ISO image available. Estimated time: 5 minutes	
1. <input type="checkbox"/>	MPS X: Start platcfg utility by logging in as platcfg user.	# su - platcfg

Procedure 25: Validate Upgrade Media

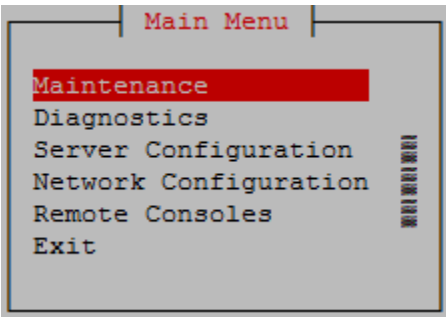

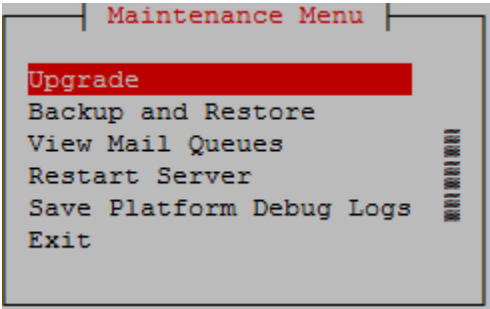

<p>2. <input type="checkbox"/></p>	<p>MPS X: Select the Maintenance submenu</p>	<p>On the Main Menu of the Platform Configuration Utility, select Maintenance and press [ENTER].</p> 
<p>3. <input type="checkbox"/></p>	<p>MPS X: Navigate to the media validation function.</p>	<p>Select the Upgrade menu and press [ENTER].</p>  <p>Select the Validate Media menu and press [ENTER].</p> 
<p>4. <input type="checkbox"/></p>	<p>MPS X: Output from the Validate Media selection.</p>	<p>The screen displays a message that it is searching for upgrade media. Once the upgrade media is found, an Upgrade Media selection menu appears similar to the example below. Select the desired upgrade media and press [ENTER]. There should only be one selection available, as in the example below.</p> 
<p>5. <input type="checkbox"/></p>	<p>MPS X: View the Validation results</p>	<p>The results of the validation are displayed, similar to the example below. Press [ENTER] to continue.</p>

Procedure 25: Validate Upgrade Media

		
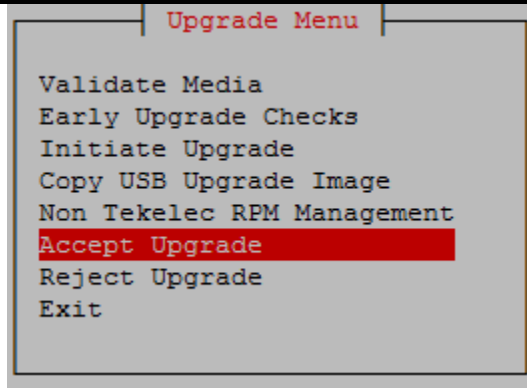

7. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

Procedure 26 Accept Split Mirror Upgrade

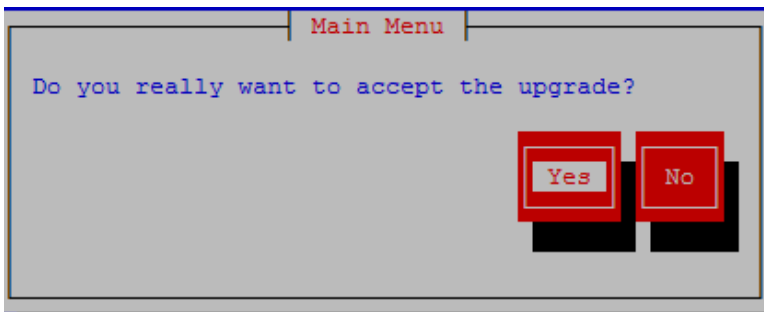

Procedure 26: Accept Split Mirror Upgrade

S T E P #	<p>This procedure provides instructions to accept an upgrade with split-mirror</p> <p>Estimated time: 5 minutes</p> <p>Note: There is no need to accept the upgrade immediately after upgrade. Check the system for a couple of days to verify that the system is working fine after the upgrade. After finding that the system is working fine, accept the upgrade. If something not working as intended or breaking frequently (Should not be the case), then after a couple of days one can reject the upgrade to go back to the previous release.</p>	
1. <input type="checkbox"/>	MPS A: Accept Upgrade	<pre># su - platcfg</pre>  

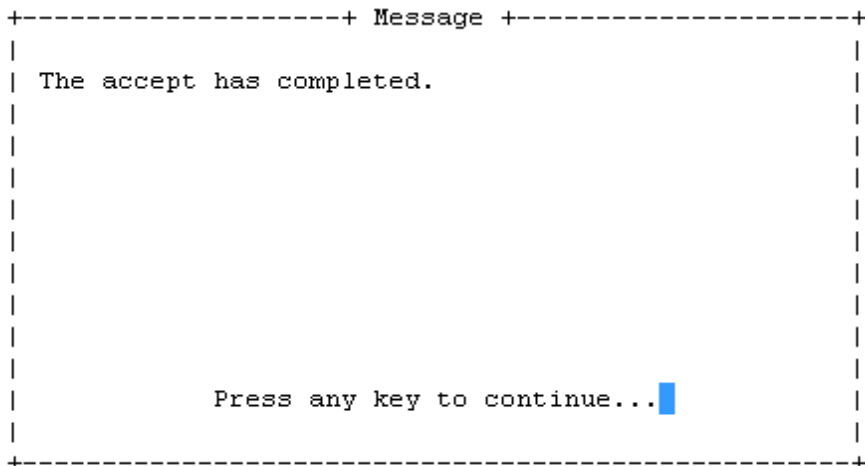

Procedure 26: Accept Split Mirror Upgrade

Note: The “Reject Upgrade” menu is also available after the LSMS installation. However, this option should not be used after the first installation of application. It should be used in subsequent upgrades to return to a previous application release.

```
Called with options: --accept
Loading Backout::BackoutType::SPLIT_MIRROR
Accepting Upgrade
Re-joining raid mirrors.
    Adding /dev/sdb2 to /dev/md1
mdadm: added /dev/sdb2
    Adding /dev/sdb1 to /dev/md2
```

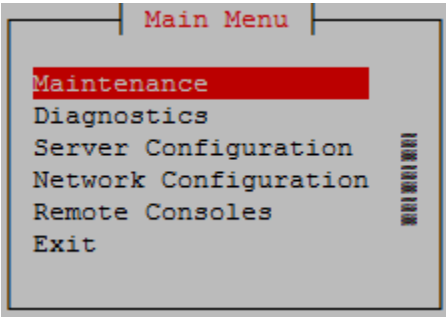

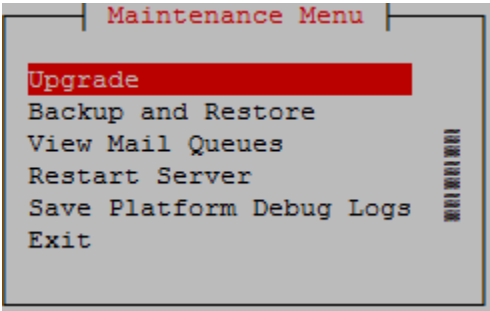

Procedure 26: Accept Split Mirror Upgrade

2. <input type="checkbox"/>	MPS A: Verify that raid is repaired	<pre>[root@lsmstri ~]# cat /proc/mdstat Personalities : [raid1] md1 : active raid1 sdb2[2] sda2[0] 262080 blocks super 1.0 [2/2] [UU] md2 : active raid1 sdb1[1] sda1[0] 468447232 blocks super 1.1 [2/2] [UU] bitmap: 1/4 pages [4KB], 65536KB chunk unused devices: <none></pre>
3. <input type="checkbox"/>	Repeat the steps for MPS B.	Repeat the above steps 1 and 2 on MPS B to accept upgrade.
4. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

Procedure 27 Accept Incremental Upgrade

Procedure 27: Accept Incremental Upgrade

S T E P #	<p>This procedure provides instructions to accept an upgrade with split-mirror</p> <p>Estimated time: 5 minutes</p> <p>Note: There is no need to accept the upgrade immediately after upgrade. Check the system for a couple of days to verify that the system is working fine after the upgrade. After finding that the system is working fine, accept the upgrade. If something not working as intended or breaking frequently (Should not be the case), then after a couple of days one can reject the upgrade to go back to the previous release.</p>	
1. <input type="checkbox"/>	MPS A: Accept Upgrade	<pre># su - platcfg</pre> <div style="text-align: center;">  <p>The screenshot shows a terminal window titled 'Main Menu'. The menu items are: Maintenance (highlighted with a red bar), Diagnostics, Server Configuration, Network Configuration, Remote Consoles, and Exit. A vertical bar is visible on the right side of the menu.</p> </div> <div style="text-align: center;">  <p>The screenshot shows a terminal window titled 'Maintenance Menu'. The menu items are: Upgrade (highlighted with a red bar), Backup and Restore, View Mail Queues, Restart Server, Save Platform Debug Logs, and Exit. A vertical bar is visible on the right side of the menu.</p> </div>

Procedure 27: Accept Incremental Upgrade

		<div data-bbox="732 174 1256 554" data-label="Image"> </div> <p data-bbox="516 611 1398 699">Note: The “Reject Upgrade” menu is also available after the LSMS installation. <p>2. <input type="checkbox"/></p>	<p>Repeat the steps for MPS B.</p>	<p>Repeat the above step on MPS B to accept upgrade.</p>
<p>3. <input type="checkbox"/></p>	<p>Procedure complete.</p>	<p>This procedure is complete.</p>

Procedure 28 Stopping an LSMS backup in progress

Procedure 28: Stopping an LSMS backup in process

S T E P #	<p>This procedure explains how to terminate an LSMS backup if one is running prior to performing an upgrade. The backup cannot be stopped currently via a stop command or specific signal but will have to be manually terminated. If the user reboots the server prior to executing steps 2-6 that will terminate the backup, but then steps 7-17 should be executed immediately after the reboot to ensure things are properly cleaned up.</p> <p>Estimated time: 5 minutes</p> <p>Note: The user should perform all of the following commands as the LSMS root user. The snapshot is only mounted during the db portion of the backup but this phase will consume the majority of the time required to perform a backup. The snapshot will not be mounted during the platform and logs portion of the backup but terminating it may leave TOC file and backup server LOCK file cleanup necessary as described in step 11, 13, and 16 below.</p>	
<input type="checkbox"/>	1. MPS X: Login as the user "root".	<pre>[hostname] console login: root password: <root_password></pre>
<input type="checkbox"/>	2. MPS X: Determine the PID of the "lsmsbkp" process.	<p>Execute the following command to determine if the "lsmsbkp" process is actively running:</p> <pre>[root@lsmsssec ~]# ps -ef grep lsmsbkp grep -v grep root 25938 11126 0 15:08 pts/3 00:00:00 /bin/bash /usr/TKLC/lsmss/tools/lsmsbkp_wrapper root 25976 25938 0 15:08 pts/3 00:00:00 /bin/sh /usr/TKLC/lsmss/tools/lsmsbkp</pre> <p>If a LSMS backup is in progress the output will show two processes running. Record the PID(process id) of the "lsmsbkp" process and proceed to the next step of this procedure.</p> <p>PID: _____</p> <p>If the above command returns no output then proceed to Step 7 of this procedure to verify that the logical volume does not exist and is not mounted.</p>
<input type="checkbox"/>	3. MPS X: Terminate the "lsmsbkp" process.	<p>Execute the following command to terminate the "lsmsbkp" process:</p> <pre>[root@lsmsssec ~]# kill -9 <lsmsbkp PID></pre>
<input type="checkbox"/>	4. MPS X: Monitor the "lsmsbkp_wrapper" process until it terminates.	<p>After the lsmsbkp process is terminated the lsmsbkp_wrapper should also terminate. Execute the following command to monitor this until no output is displayed.</p> <pre>[root@lsmsssec ~]# ps -ef grep lsmsbkp_wrapper grep -v grep</pre> <p>If after several minutes the "lsmsbkp_wrapper" process does not terminate then it can be terminated using the method described previously in step 3 this time for the "lsmsbkp_wrapper" process.</p>
<input type="checkbox"/>	5. MPS X: Check the "netbackup" process	<p>Most likely the backup will be terminated during the database phase of the backup as this is the longest running phase. We need to check for and terminate the netbackup routine which is actually doing the work:</p> <p>Execute the following command to determine if the "netbackup" process is actively running:</p> <pre>[root@lsmsssec mnt]# ps -ef grep netbackup grep -v grep</pre>

Procedure 28: Stopping an LSMS backup in process

		<pre>root 14937 13435 5 15:35 pts/3 00:00:00 /usr/bin/perl -T /usr/TKLC/plat/bin/netbackup -- config=/usr/TKLC/plat/etc/BackupTK/lmsdb.xml --repository=db</pre>
6.	<input type="checkbox"/> MPS X: Terminate the “netbackup” process.	<p>Execute the following command to terminate the “netbackup” process:</p> <pre>[root@lmssec mnt]# kill -9 <netbackup PID></pre>
7.	<input type="checkbox"/> MPS X: Verify the mount point for the backup snapshot exists.	<p>Execute the following command to verify that the dbbackup logical volume is mounted at the mount point /mnt/backup/var/TKLC/lms/db :</p> <pre>[root@lmssec ~]# df -h Filesystem Size Used Avail Use% Mounted on /dev/mapper/vgroot-plat_root 976M 287M 639M 31% / tmpfs 3.9G 0 3.9G 0% /dev/shm /dev/md1 244M 48M 184M 21% /boot /dev/mapper/vgroot-plat_tmp 976M 1.7M 924M 1% /tmp /dev/mapper/vgroot-plat_usr 3.9G 2.4G 1.3G 65% /usr /dev/mapper/vgroot-plat_var 976M 210M 716M 23% /var /dev/mapper/vgroot-plat_var_tklc 3.9G 1.2G 2.5G 32% /var/TKLC /dev/mapper/vgroot-lms_root 3.9G 8.2M 3.7G 1% /var/TKLC/lms /dev/mapper/vgroot-lms_db 210G 63M 199G 1% /var/TKLC/lms/db /dev/mapper/vgroot-lms_external 2.0G 3.0M 1.9G 1% /var/TKLC/lms/external /dev/mapper/vgroot-lms_free 138G 61M 131G 1% /var/TKLC/lms/free /dev/mapper/vgroot-lms_logs 36G 49M 34G 1% /var/TKLC/lms/logs /dev/sdc1 1.1G 1.1G 7.5M 100% /media/sdc1/dev/mapper/vgroot-dbbbackup 82G 1.2G 77G 2% /mnt/backup/var/TKLC/lms/db</pre> <p>If /mnt/backup/var/TKLC/lms/db is not mounted proceed to Step 9 of this procedure.</p>
8.	<input type="checkbox"/> MPS X: Umount the mount point for the backup snapshot.	<p>Execute the following command to un-mount the mount point for the snapshot:</p> <pre>[root@lmssec mnt]#umount /mnt/backup/var/TKLC/lms/db</pre> <p>Execute the following command to verify that the mount point for the snapshot has been unmounted. The commands output will look like the following when mount point for the snapshot has been unmounted:</p> <pre>[root@lmssec ~]# df -h Filesystem Size Used Avail Use% Mounted on /dev/mapper/vgroot-plat_root 976M 287M 639M 31% / tmpfs 3.9G 0 3.9G 0% /dev/shm /dev/md1 244M 48M 184M 21% /boot /dev/mapper/vgroot-plat_tmp 976M 1.7M 924M 1% /tmp /dev/mapper/vgroot-plat_usr 3.9G 2.4G 1.3G 65% /usr /dev/mapper/vgroot-plat_var 976M 210M 716M 23% /var /dev/mapper/vgroot-plat_var_tklc 3.9G 1.2G 2.5G 32% /var/TKLC /dev/mapper/vgroot-lms_root</pre>

Procedure 28: Stopping an LSMS backup in process

		<pre> 3.9G 8.2M 3.7G 1% /var/TKLC/lsms /dev/mapper/vgroot-lsms_db 210G 63M 199G 1% /var/TKLC/lsms/db /dev/mapper/vgroot-lsms_external 2.0G 3.0M 1.9G 1% /var/TKLC/lsms/external /dev/mapper/vgroot-lsms_free 138G 61M 131G 1% /var/TKLC/lsms/free /dev/mapper/vgroot-lsms_logs 36G 49M 34G 1% /var/TKLC/lsms/logs /dev/sdc1 1.1G 1.1G 7.5M 100% /media/sdc1 </pre>
<p>9. <input type="checkbox"/></p>	<p>MPS X: Verify that the dbbackup logical volume exists.</p>	<p>Execute the following command to verify that the backup snapshot logical volume exists:</p> <pre> [root@lsmsec ~]# lvsdisplay --- Logical volume --- LV Name plat root . (output omitted) . --- Logical volume --- LV Name plat swap . (output omitted) . --- Logical volume --- LV Name plat_var . (output omitted) . --- Logical volume --- LV Name plat_usr . Procedure 29: IPM with TPD 7.5.x

<p>12.</p> <p><input type="checkbox"/></p>	<p>MPS X:</p> <p>"Execute command 'TPDlvm scrub' as shown, and it will start IPM process."</p>	
<p>13.</p> <p><input type="checkbox"/></p>	<p>MPS X:</p> <p>After a few seconds, additional messages will begin scrolling by on the screen as the Linux kernel boots, and then the drive formatting and file system creation steps will begin.</p>	<pre>mounting /dev/pts (unix98 pty) filesystem... done mounting /sys filesystem... done anaconda installer init version 13.21.239 using a serial console trying to remount root filesystem read write... done mounting /tmp as tmpfs... done running install... running /sbin/loader detecting hardware... waiting for hardware to initialize...</pre>
<p>14.</p> <p><input type="checkbox"/></p>	<p>MPS X:</p> <p>Once the drive formatting and file system creation steps are complete, the screen at right will appear indicating that the package installation has begin.</p>	

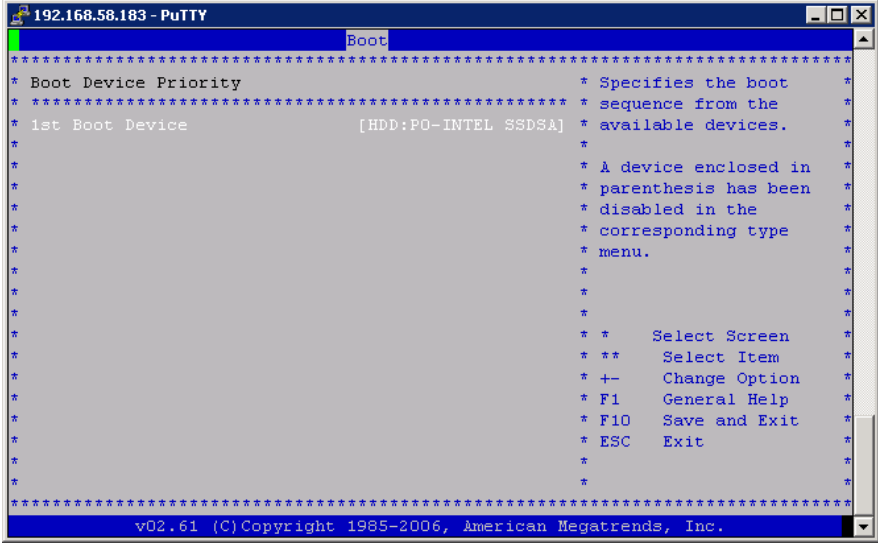

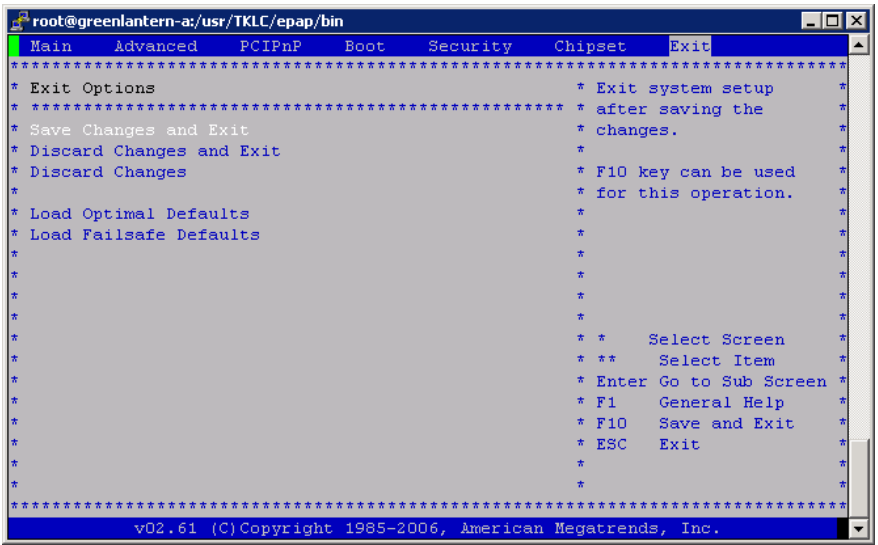

Procedure 29: IPM with TPD 7.5.x

<p>15. <input type="checkbox"/> MPS X: Once all the packages have been successfully installed, the screen at right will appear letting you know the installation process is complete.</p> <p>Remove USB media before Reboot.</p> <p>Press <ENTER> to reboot the system and continue with the next step.</p>	
<p>16. <input type="checkbox"/> MPS X: Press 'del' key to enter the BIOS</p>	
<p>17. <input type="checkbox"/> MPS X: Select <i>Boot</i> → <i>Hard Disk Drives</i> option</p>	

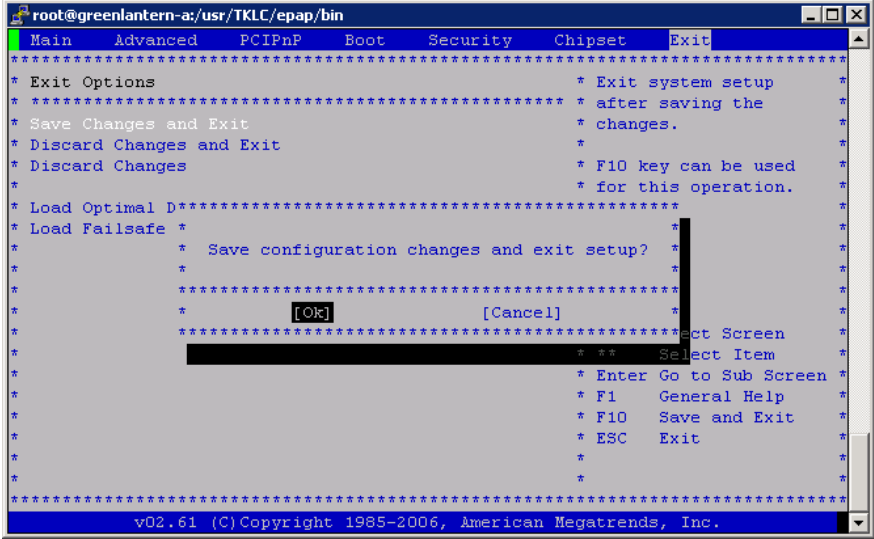

Procedure 29: IPM with TPD 7.5.x

<p>18.</p> <p><input type="checkbox"/></p>	<p>MPS X:</p> <p>Press 'Enter' key and select HDD:P0 as the 1st Drive</p>	
<p>19.</p> <p><input type="checkbox"/></p>	<p>MPS X:</p> <p>Press 'Esc' key and select Boot Device Priority</p>	
<p>20.</p> <p><input type="checkbox"/></p>	<p>MPS X:</p> <p>Verify that the 1st Boot Device is set to HDD:P0.</p>	

Procedure 29: IPM with TPD 7.5.x

		
<p>21. <input type="checkbox"/></p>	<p>MPS X: Press 'Esc' key and select <i>Exit</i> → <i>Save Changes and Exit</i> option</p>	
<p>22. <input type="checkbox"/></p>	<p>MPS X: Select [OK] to save the configuration changes. The server will reboot. Remove USB media from USB drive.</p>	

Procedure 29: IPM with TPD 7.5.x

		 <p>When the message "Upstart Job ntdMgr: started", is displayed, press the Enter Key to get the Login prompt.</p>
<input type="checkbox"/> 23.	MPS X: Log in to the server as the user "root"	Login: root Password: <root_password>
<input type="checkbox"/> 24.	MPS X: Verify that the platform revision is same as the ISO used.	<pre># getPlatRev 7.5.x.0.0-y.z.0<LSMS></pre>
<input type="checkbox"/> 25.	Procedure complete.	This procedure is complete.

Procedure 30 Copying License Files using SCP

Procedure 30: Copying License Files using SCP

S T E P #	This procedure will help copying the license files from a desktop to LSMS server Estimated time: 5 minutes	
<input type="checkbox"/> 1.	Server X: Login to server where license files are present	Login to server using ID and password where license files are copied
<input type="checkbox"/> 2.	Server X: SCP the TMN Toolkit license file from server to LSMS server	<pre>scp <TMN Toolkit license file> root@<LSMS IP>:/usr/local/netech/etc/license</pre>
<input type="checkbox"/> 3.	LSMS MPS: Check if the license file has been copied correctly	Run command to check for license file : <pre># cat /usr/local/netech/etc/license</pre> Expected Output : Contents of license file should be displayed

Procedure 30: Copying License Files using SCP

4. <input type="checkbox"/>	Server X: SCP the Marben OSI license file from server to LSMS server	<code>scp <Marben OSI license file> root@<LSMS IP>:/usr/TKLC/osi/conf/license</code>
5. <input type="checkbox"/>	LSMS MPS: Check if the license file has been copied correctly	Run command to check for license file : # cat /usr/TKLC/osi/conf/license Expected Output : Contents of license file should be displayed
6. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

Procedure 31 Copying License Files from USB

Procedure 31: Copying License Files from USB

S T E P #	This procedure will help copying the license files from a desktop to LSMS server. Estimated time: 5 minutes	
	1. <input type="checkbox"/>	Server X: Copy license files to USB Connect USB to desktop and copy the 2 license files from desktop to USB.
	2. <input type="checkbox"/>	LSMS MPS: Confirm how the USB is enumerated on LSMS server Connect the USB which contains the license files to LSMS MPS and check how it is enumerated using command: # dmesg grep -i "removable disk" Expected output sd 6:0:0:0: Attached scsi removable disk sdc This shows USB is enumerated as /dev/sdc
	3. <input type="checkbox"/>	LSMS MPS: Determine the partition name Run command fdisk -l on enumerated name device to determine partition name: # fdisk -l /dev/sdc Expected Output : Disk /dev/sdc: 2013 MB, 2013265920 bytes 256 heads, 63 sectors/track, 243 cylinders Units = cylinders of 16128 * 512 = 8257536 bytes Device Boot Start End Blocks Id System /dev/sdc1 * 1 110 887008+ b W95 FAT32 This shows that partition name is /dev/sdc1
	4. <input type="checkbox"/>	LSMS MPS: Mount the USB Run below commands to mount the USB to /tmp/usb # mkdir -p /tmp/usb # mount /dev/sdc1 /tmp/usb
5. <input type="checkbox"/>	LSMS MPS: Copy TMN Toolkit license file from /tmp/usb directory # cp /tmp/usb/<TMN Toolkit license-file> /usr/local/netech/etc/license	

Procedure 31: Copying License Files from USB

6. <input type="checkbox"/>	LSMS MPS: Check if the license file has been copied correctly	Run command to check for license file : # cat /usr/local/netech/etc/license Expected Output : Contents of license file should be displayed
7. <input type="checkbox"/>	LSMS MPS: Copy Marben OSI license file from /tmp/usb directory	# cp /tmp/usb/<Marben OSI license-file> /usr/TKLC/osi/conf/license
8. <input type="checkbox"/>	LSMS MPS: Check if the license file has been copied correctly	Run command to check for license file : # cat /usr/TKLC/osi/conf/license Expected Output : Contents of license file should be displayed
9. <input type="checkbox"/>	LSMS MPS: Unmount the USB	Unmount the USB using command: # umount /tmp/usb
10. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

Procedure 32 Password change for LSMS System Users

Procedure 32: Password change for LSMS System Users

S T E P #	This procedure will change the password for the LSMS System User(s).	
1. <input type="checkbox"/>	MPS A: Log on Server A with the LSMS System User for which the password is to be changed.	[hostname]: <LSMS System User> password: <lsmsadm_password>
2. <input type="checkbox"/>	MPS A: Change Password for an LSMS system user	Execute the command to change to password of an existing LSMS user. \$ passwd Changing password for user <LSMS System User>. Changing password for <LSMS System User>.. (current) UNIX password: < Enter the current password here > New password: < Enter the new password here > Retype new password: < Retype the new password here > passwd: all authentication tokens updated successfully. Note: The Linux “passwd” command used to change the password of Linux users, follows the Linux PAM rules. Refer to the Linux manual for the PAM rules. # man pam_cracklib

Procedure 32: Password change for LSMS System Users

3. <input type="checkbox"/>	MPS B: Change Password	Repeat steps 1 and 2 on MPS B also. Note: The new password on MPS A and B should be same.
4. <input type="checkbox"/>	Procedure Complete	This procedure is complete.

Procedure 33 Run switch_NANC528 script to switch to older npacagent on LSMS

Procedure 33 : Run switch_NANC528 script to switch to older npacagent on LSMS

S T E P #	<p>This procedure will switch the npacagent binary on LSMS to older version which will not have NANC 528 changes.</p> <p>NOTE: NANC528 changes will take effect from 25-Oct-2020. If you are upgrading the LSMS before NANC528 is enabled by iConnectiv, run the procedure to switch to older npacagent. On the other hand, if you are running the LSMS upgrade after NANC528 is enabled by iConnectiv (i.e. after 25-Oct-2020), do not run this procedure as you will need the newer npacagent compatible with NANC528 changes which is already in effect.</p> <p>Note: Skip this step if you do not want to switch to older npacagent version.</p>	
1. <input type="checkbox"/>	MPS A: Log on to LSMS Server A with lsmsadm user.	# su - lsmsadm
2. <input type="checkbox"/>	<p>MPS A: Check if the hidden file /usr/TKLC/lsms/bin/.NANC_528 is present on the server. Remove the file /usr/TKLC/lsms/bin/.NANC_528, if present.</p> <p>Note: If this is a fresh installation of LSMS 13.4 or 13.4.1 this hidden file will not be present on the server. Also, if this is an upgrade from 13.3 release, the hidden file will not be present. The file will mostly be present when it is an upgrade from 13.4 to 13.4.1 release.</p>	<p>Check if the hidden file is present on the server. If the file is present output will be something like:</p> <pre>[lsmsadm@lsmspri ~]\$ ls -altr /usr/TKLC/lsms/bin/.NANC_528 -rw-r----- 1 lsmsadm lsms 2 Jul 31 02:53 /usr/TKLC/lsms/bin/.NANC_528</pre> <p>If the file is not present output will be:</p> <pre>[lsmsadm@lsmspri ~]\$ ls -altr /usr/TKLC/lsms/bin/.NANC_528 ls: cannot access /usr/TKLC/lsms/bin/.NANC_528: No such file or directory</pre> <p>If the hidden file is present then remove the hidden by below command:</p> <pre>[lsmsadm@lsmspri ~]\$ rm -rf /usr/TKLC/lsms/bin/.NANC_528</pre> <p>Now check again, the file should not be present now.</p> <pre>[lsmsadm@lsmspri ~]\$ ls -altr /usr/TKLC/lsms/bin/.NANC_528 ls: cannot access /usr/TKLC/lsms/bin/.NANC_528: No such file or directory</pre>

Procedure 33 : Run switch_NANC528 script to switch to older npacagent on LSMS

<p>3. <input type="checkbox"/></p>	<p>MPS B: Run the /usr/TKLC/lsms/bin/switch_NANC528 script to switch to older npacagent version.</p>	<pre>[lsmsadm@lsmspri ~]\$ /usr/TKLC/lsms/bin/switch_NANC528 INFO: This script is used for switching between older and newer npacagent. LSMS should be stopped for this process to continue. Checking whether LSMS is stopped... INFO: No active node found, We can proceed... INFO: You are going to switch to older version of npacagent that will not have NANC 528 updates. Are you sure you want to continue? (y/n) y INFO: Binary replaced successfully on local server, Replacing it on mate now. FIPS integrity verification test failed. INFO: Binary replaced on mate successfully</pre>
<p>4. <input type="checkbox"/></p>	<p>Procedure Complete</p>	<p>This procedure is complete.</p>

Procedure 34 E5-APP-B Halt/Shutown

Procedure 34: E5-APP-B Halt/Shutdown

<p>S T E P #</p>	<p>This procedure will halt the E5-APP-B hardware.</p>	
<p>1. <input type="checkbox"/></p>	<p>E5APPB Card: Slide the ejector switch</p>	<p>On the APP-B card, slide the Ejector switch (4) up to the UNLOCKED position. Refer to Figure 6.</p> <p>Caution: If the Ejector switch goes from locked to unlocked and the E5-APP-B card is in service, the card will halt.</p>
<p>2. <input type="checkbox"/></p>	<p>E5APPB Card: Monitor the Eject Status LED</p>	<p>WAIT for the E5-APP-B Eject Status LED to go from blinking red to a steady red.</p>
<p>3. <input type="checkbox"/></p>	<p>E5APPB Card: Lever Release</p>	<p>Grasp the upper and lower card Inject/Eject (I/E) lever release (3) just underneath the I/E lever, and press it to meet the I/E lever. This is the mechanical interlock for the card. Refer to Figure 7.</p>
<p>4. <input type="checkbox"/></p>	<p>E5APPB Card: Pull out the levers</p>	<p>While holding the I/E interlock and lever, pull the levers (2) away from the shelf until they are parallel to the floor. Refer to Figure 7.</p>
<p>5. <input type="checkbox"/></p>	<p>E5APPB Card: Slide the ejector switch</p>	<p>Remove the E5-APP-B card from the EAGLE shelf.</p>
<p>6. <input type="checkbox"/></p>	<p>Procedure Complete</p>	<p>This procedure is complete.</p>

APPENDIX D. MY ORACLE SUPPORT

CAUTION: Use only the guide downloaded from the Oracle Technology Network (OTN) (<http://www.oracle.com/technetwork/indexes/documentation/oracle-comms-tekelec-2136003.html>).

Before upgrading your system, access the **My Oracle Support** web portal (<https://support.oracle.com>) and review any Knowledge Alerts that may be related to the System Health Check or the Upgrade.

Before beginning this procedure, contact My Oracle Support and inform them of your upgrade plans. **If installing for an Oracle customer on a customer site, obtain the customer's Support Identifier (SI) before requesting assistance.**

Web portal (preferred option): My Oracle Support (MOS) (<https://support.oracle.com/>)

Phone: Contact your local Oracle Global Customer Support Center (<http://www.oracle.com/support/contact.html>)

Make the following selections on the Support telephone menu:

1. Select '2' for New Service Request
2. Select '3' for Hardware, Networking and Solaris Operating System Support
3. Select '1' for Technical Issues and when talking to the agent, please indicate that you are an existing Oracle customer
