Table of Contents

1. Preface

1.1 Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.2 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

1.3 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit

http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

1.4 Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual.

Introduction provides brief information on the overall functionality covered in the User Manual.

The subsequent chapters provide information on transactions covered in the User Manual.

Each transaction is explained in the following manner:

- Introduction to the transaction
- Screenshots of the transaction
- The images of screens used in this user manual are for illustrative purpose only, to provide improved understanding of the functionality; actual screens that appear in the application may vary based on selected browser, theme, and mobile devices.
- Procedure containing steps to complete the transaction- The mandatory and conditional fields of the transaction are explained in the procedure.

If a transaction contains multiple procedures, each procedure is explained. If some functionality is present in many transactions, this functionality is explained separately.

1.5 Related Information Sources

For more information on Oracle Banking Digital Experience Release 19.2.0.0.0, refer to the following documents:

- Oracle Banking Digital Experience Installation Manuals

2.   Social Payments – Facebook

A Social Payment involves the transfer of money to an individual via social media. Social payments simplify digital payments by affording the initiator of the payment, the convenience of not having to know or remember the recipient's account information.

This document defines the means by which Facebook can be enabled as a mode under OBDX Peer to Peer Payments, by selecting which, retail users can initiate transfers towards Facebook contacts.

Home

3.   Facebook Console Configurations

This section documents the steps involved in enabling Facebook as a made for Peer to Peer payments in OBDX.

1. Navigate to the following Facebook Developers page and login with your account – https://developers.facebook.com

2. Select the option **Add New App** from the **My Apps** dropdown.
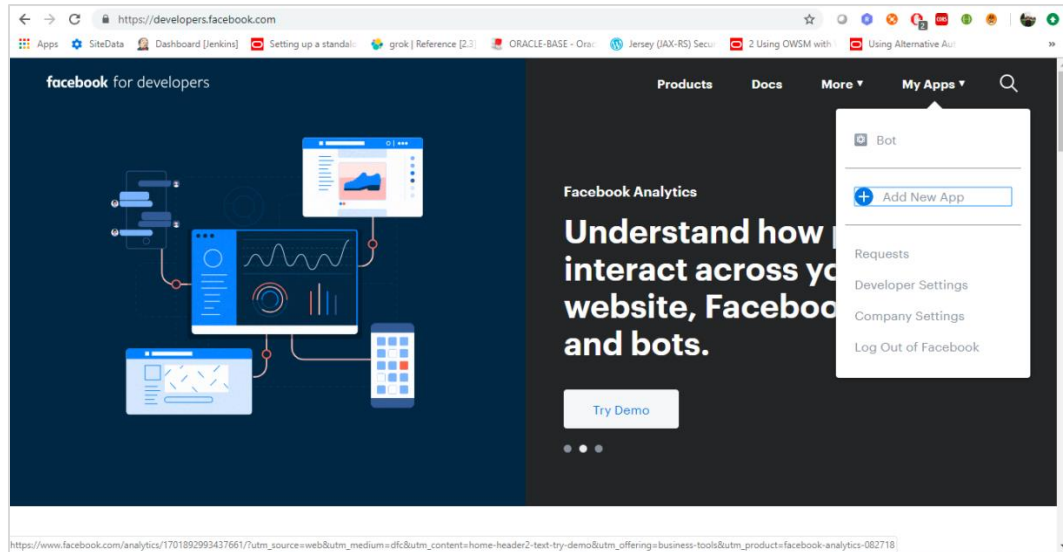

3. Enter the name you want to be assigned to the app in the **Display Name** field and enter the email ID at which you want to receive updates regarding the app in the **Contact Email** field.
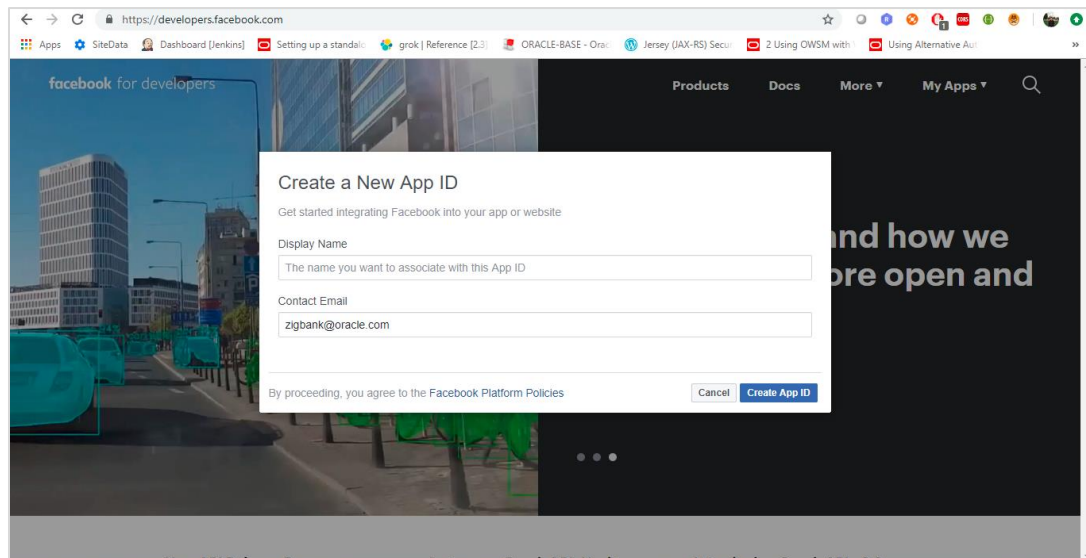

4. Click on **Basic** under **Settings** to access the basic settings of client's Facebook app page. Make a note of the app ID displayed under the **App ID** field and click the option **Show** against the **App Secret** to reveal the App Secret.

Add the domain name of the bank server which is exposed on the internet under the **App Domains** input field. Only one domain is sufficient. (Multiple domains can be added in case of production, UAT etc.)
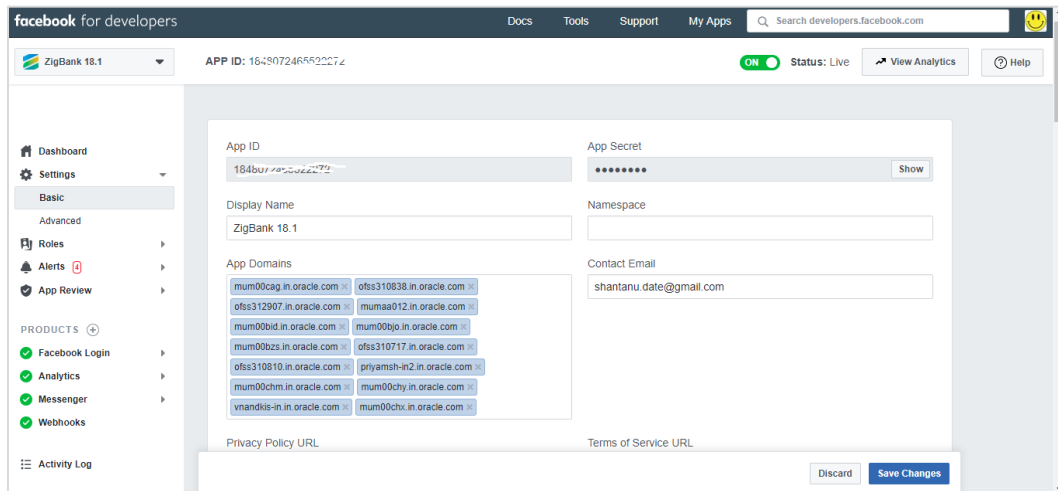

5. Click on **Settings** under **Facebook Login** access the Facebook Login settings page.

Add the client provided callback URL under the field **Valid OAuth Redirect URIs** as displayed below. Only one callback URL is sufficient. (Multiple urls can be added in case of production, UAT etc.). The URL must be of http server and "/?module=dashboard" must be added to the URL.
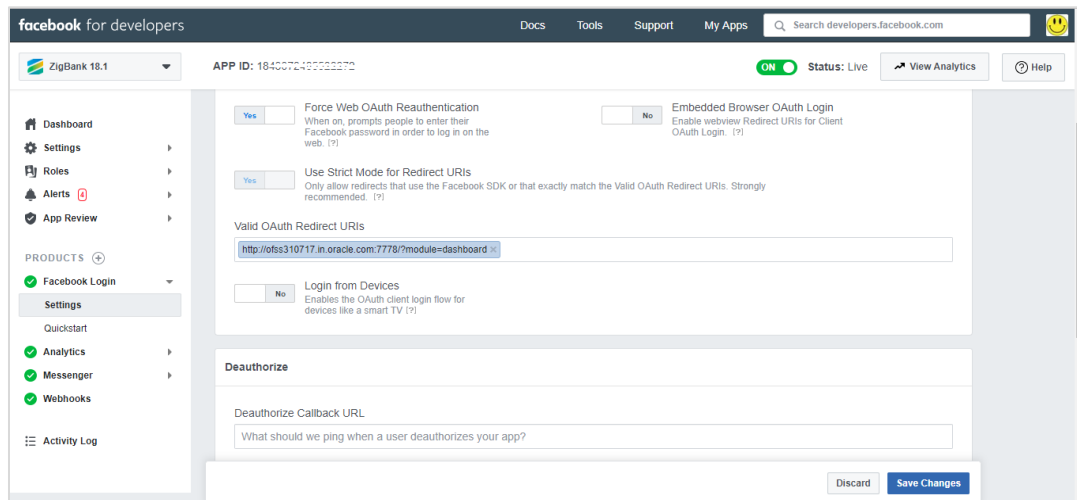

6. Click **Save Changes** to complete Facebook console configurations

Home

4. OBDX Configurations

4.1 Internet banking

Go to **"properties. json"** file in **'_build'** folder in your channel path and update the Facebook app id as shown below. This is to be done before UI build.

"fb_api_key": "<FB app id>"

4.2 Mobile banking (Application)

Refer mobile application builder of respective platforms.
