Diameter Signaling Router**

Rack Mount Server Disaster Recovery Guide

Release 8.5

F34928-01

October 2020

**ORACLE®**

**Oracle Communications DSR Rack Mount Server Disaster Recovery User's Guide, Release 8.5**

Copyright © 2020 Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

**U.S. GOVERNMENT END USERS:** Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates is not responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

**CAUTION:** Use only the Upgrade procedure included in the Upgrade Kit.

Before upgrading any system, please access My Oracle Support (MOS) (<https://support.oracle.com>) and review any Technical Service Bulletins (TSBs) that relate to this upgrade.

My Oracle Support (MOS) (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>.

See more information My Oracle Support (MOS).

| Procedure 21. Restore PMAC from Backup Server .....   | 200 |
| Procedure 22. Restore Provisioning Database .....   | 206 |
| Procedure 23. Recover PDB Relay .....   | 210 |
| Procedure 24. Configure SNMP .....  | 211 |
| Procedure 25. Backup Directory .....  | 214 |
| Procedure 26. Turn off cipher list before<br>backupConfiguration/restoreConfiguration/upgradeFirmware command ..... | 216 |
| Procedure 27. Resume cipher list after backupConfiguration/restoreConfiguration/upgradeFirmware<br>command.....     | 217 |

## 1. Introduction

This document is a guide to describe procedures used to execute disaster recovery for DSR Rack Mount Server deployment. This includes recovery of partial or complete loss RMS servers. The audience for this document includes GPS groups such as Software Engineering, Product Verification, Documentation, and Customer Service including Software Operations and First Office Application. This document can also be executed by Oracle customers, as long as Oracle Customer Service personnel are involved and/or consulted. This document provides step-by-step instructions to execute disaster recovery for DSR. Executing this procedure also involves referring to and executing procedures in existing support documents.

Note that components dependent on DSR might need to be recovered as well, for example IDIH, PMAC, and SDS (Oracle X5-2/Netra X5-2/X6-2/ X7-2/HP DL380 Gen9 Only).

Note that this document only covers the disaster recovery scenarios of DSR Rack Mount Server deployments.

### 1.2 Acronyms

An alphabetized list of acronyms used in the document.

**Table 1. Acronyms**

| Acronym | Definition                           |
|---------|--------------------------------------|
| BIOS    | Basic Input Output System            |
| CD      | Compact Disk                         |
| DSR     | Diameter Signaling Router            |
| DVD     | Digital Versatile Disc               |
| EBIPA   | Enclosure Bay IP Addressing          |
| FRU     | Field Replaceable Unit               |
| IDIH    | Integrated Diameter Intelligence Hub |

| Acronym | Definition   |
|---------|--|
| iLO     | Integrated Lights Out manager  |
| IPFE    | IP Front End   |
| IPM     | Initial Product Manufacture – the process of installing TPD on a hardware platform |
| MSA     | Modular Smart Array  |
| NB      | NetBackup  |
| OA      | HP Onboard Administrator   |
| OS      | Operating System (e.g. TPD)  |
| PCA     | Policy and Charging Application  |
| PMAC    | Platform Management & Configuration  |
| RMS     | Rack Mounted Server  |
| SAN     | Storage Area Network   |
| SDS     | Subscriber Database Server   |
| SFTP    | Secure File Transfer Protocol  |
| SNMP    | Simple Network Management Protocol   |
| TPD     | Tekelec Platform Distribution  |
| TVOE    | Tekelec Virtual Operating Environment  |
| VM      | Virtual Machine  |

### 1.3 Terminology

An alphabetized list of terms used in the document.

**Table 2. Terminology**

| Term             | Definition  |
|------------------|---|
| Base hardware    | Base hardware includes all hardware components (bare metal) and electrical wiring to allow a server to power on.  |
| Base software    | Base software includes installing the server's operating system: Oracle Platform Distribution (TPD).  |
| Enablement       | The business practice of providing support services (hardware, software, documentation, etc.) that enable a 3rd party entity to install, configuration, and maintain Oracle products for Oracle customers.  |
| Failed server    | A failed server in disaster recovery context refers to a server that has suffered partial or complete software and/or hardware failure to the extent that it cannot restart or be returned to normal operation and requires intrusive activities to re-install the software and/or hardware.  |
| Software centric | The business practice of delivering an Oracle software product, while relying upon the customer to procure the requisite hardware components. Oracle provides the hardware specifications, but does not provide the hardware or hardware firmware, and is not responsible for hardware installation, configuration, or maintenance. |

## 1.4 How to Use this Document

When executing the procedures in this document, there are a few key points to ensure you understand procedure convention. These points are:

1. Before beginning a procedure, completely read the instructional text (it displays immediately after the Section heading for each procedure) and all associated procedural WARNINGS or NOTES.
2. Before execution of a STEP within a procedure, completely read the left and right columns including any STEP specific WARNINGS or NOTES.
3. If a procedural STEP fails to execute successfully or fails to receive the desired output, STOP the procedure. It is recommended to contact My Oracle Support (MOS) for assistance, as described in Appendix N before attempting to continue.

Figure 1 shows an example of a procedural step used in this document.

- Each step has a checkbox that the user should check-off to keep track of the progress of the procedure.
- Any sub-steps within a step are referred to as step X.Y. The example in Figure 1 shows steps 1 and step 2 and substep 2.1.
- The title box describes the operations to be performed during that step.
- GUI menu items, action links, and buttons to be clicked on are in bold Arial font.
- GUI fields and values to take note of during a step are in bold Arial font.
- Each command that the user enters, as well as any response output, is formatted in 10-point Courier font.

| Title/Instructions             |                             | Directive/Result Steps   |
|--------------------------------|-----------------------------|--|
| 1.<br><input type="checkbox"/> | Change directory            | Change to the backout directory.<br>\$ cd /var/TKLC/backout  |
| 2.<br><input type="checkbox"/> | Verify Network Element data | View the Network Elements configuration data; verify the data; save and print report.<br>1. Select <b>Configuration &gt; Network Elements</b> to view Network Elements Configuration screen. |

Figure 1. Example Procedure Steps Used in This Document

## 1.5 Optional Features

Further configuration and/or installation steps are needed for optional features that may be present in this deployment. Please refer to these documents for disaster recovery steps needed for their components.

Table 3. Optional Features

| Feature                              | Document  |
|--------------------------------------|---|
| Diameter Custom Applications (DCA)   | DCA Framework and Application Activation and Deactivation Guide |
| Diameter Mediation                   | DSR Meta Administration Feature Activation Procedure            |
| Full Address Based Resolution (FABR) | DSR FABR Feature Activation Procedure                           |
| Gateway Location Application (GLA)   | DSR GLA Feature Activation Procedure                            |

| Feature                                | Document  |
|--|---|
| Host Intrusion Detection System (HIDS) | DSR Security Guide (Section 3.2)                  |
| Map-Diameter Interworking (MAP-IWF)    | DSR MAP-Diameter IWF Feature Activation Procedure |
| Policy and Charging Application (PCA)  | DSR PCA Activation Guide                          |
| Range Based Address Resolution (RBAR)  | DSR RBAR Feature Activation Procedure             |

## 2. General Description

The DSR disaster recovery procedure has five basic categories. It is primarily dependent on the state of the NOAM servers and SOAM servers:

**Table 4. Recovery Scenarios**

| Procedure   | State of NOAM and/or SOAM server(s)   |
|---|---|
| Recovery of the entire network from a total outage<br>Recovery Scenario 1 (Complete Server Outage)  | <ul style="list-style-type: none"> <li>• All NOAM servers failed.</li> <li>• All SOAM servers failed.</li> <li>• MP servers may or may not have failed.</li> </ul>  |
| Recovery of one or more servers with at least one NOAM server intact<br>Recovery Scenario 2 (Partial Server Outage with One NOAM Server Intact and ALL SOAMs Failed)            | <ul style="list-style-type: none"> <li>• At least 1 NOAM server is intact and available.</li> <li>• All SOAM servers failed.</li> <li>• MP servers may or may not have failed.</li> </ul>   |
| Recovery of the NOAM pair with one or more SOAM servers intact<br>Recovery Scenario 3 (Partial Server Outage with All NOAM Servers Failed and One SOAM Server Intact)           | <ul style="list-style-type: none"> <li>• All NOAM servers failed.</li> <li>• At least 1 SOAM server out of active, standby, spare is intact and available.</li> <li>• MP servers may or may not have failed.</li> </ul>   |
| Recovery of one or more server with at least one NOAM and one SOAM server intact<br>Recovery Scenario 4 (Partial Server Outage with One NOAM Server and One SOAM Server Intact) | <ul style="list-style-type: none"> <li>• At least 1 NOAM server is intact and available.</li> <li>• At least 1 SOAM server out of active, standby, spare is intact and available.</li> <li>• 1 or more MP servers have failed.</li> </ul>   |
| Recovery Scenario 5 (Both NOAM Servers Failed with DR-NOAM Available)   | <ul style="list-style-type: none"> <li>• Both NOAM servers failed.</li> <li>• DR NOAM is available</li> <li>• SOAM servers may or may not be failed.</li> <li>• MP servers may or may not be failed.</li> </ul>   |
| Section Recovery Scenario 6 (Database Recovery)<br>Recovery of one or more server with corrupt databases that cannot be restored using replication from the active parent node. | <ul style="list-style-type: none"> <li>• Server is intact</li> <li>• Database gets corrupted on the server</li> <li>• Latest database backup of the corrupt server is present</li> <li>• Replication is inhibited (either manually or because of Comcol upgrade barrier)</li> </ul> |

| Procedure                           | State of NOAM and/or SOAM server(s)   |
|-------------------------------------|---|
| Section Recovery Scenario 6: Case 1 | <ul style="list-style-type: none"> <li>• Server is intact</li> <li>• Database gets corrupted on the server</li> <li>• Replication is occurring to the server with corrupted database</li> </ul>   |
| Section Recovery Scenario 6: Case 2 | <ul style="list-style-type: none"> <li>• Server is intact</li> <li>• Database gets corrupted on the server</li> <li>• Latest Database backup of the corrupt server is NOT present</li> <li>• Replication is inhibited (either manually or because of Comcol upgrade barrier)</li> </ul> |

**Note:** For failed aggregation switches (HP DL380 Gen 8 Only), refer to Recover/Replace Failed Cisco 4948 Aggregation Switches (HP DL380 Gen 9 Only).

Disaster recovery procedure execution depends on the failure conditions in the network. The severity of the failure determines the recovery scenario for the network. Use Table 4. Recovery Scenarios to evaluate the correct recovery scenario and follow the procedure(s) listed to restore operations.

**Note:** A failed server in disaster recovery context refers to a server that has suffered partial or complete software and/or hardware failure to the extent that it cannot restart or be returned to normal operation and requires intrusive activities to re-install the software and/or hardware.

## 2.1 Complete Server Outage (All Servers)

This is the worst-case scenario where all the servers in the network have suffered complete software and/or hardware failure. The servers are recovered using base recovery of hardware and software and then restoring database backups to the active NOAM and SOAM servers.

Database backups are taken from customer offsite backup storage locations (assuming these were performed and stored offsite before the outage). If no backup files are available, the only option is to rebuild the entire network from scratch. The network data must be reconstructed from whatever sources are available, including entering all data manually.

## 2.2 Partial Server Outage with One NOAM Server Intact and Both SOAMs Failed

This case assumes that at least one NOAM servers intact. All SOAM servers have failed (including SOAM spares-If equipped) and are recovered using base recovery of hardware and software. Database is restored on the SOAM server and replication will recover the database of the remaining servers.

## 2.3 Partial Server Outage with Both NOAM Servers Failed and One SOAM Server Intact

If both NOAM servers have suffered complete software and/or hardware failure (where DR-NOAMs are not present), but at least one SOAM server is available. Database is restored on the NOAM and replication recovers the database of the remaining servers.

## 2.4 Partial Server Outage with NOAM and One SOAM Server Intact

The simplest case of disaster recovery is with at least one NOAM and at least one SOAM servers intact. All servers are recovered using base recovery of hardware and software. Database replication from the active NOAM and SOAM servers recovers the database to all servers.

**Note:** This includes failures of any disaster recovery network NOAM servers.

## 2.5 Partial Server Outage with Both NOAMs Failed and DR-NOAM Available

For a partial outage with both NOAM servers failed but a DR NOAM available, the DR NOAM is switched from secondary to primary then recovers the failed NOAM servers.

## 2.6 Partial Service Outage with Corrupt Database

**Case 1:** Database is corrupted, replication channel is inhibited (either manually or because of Comcol upgrade barrier) and database backup is available.

**Case 2:** Database is corrupted but replication channel is active.

## 3. Procedure Overview

This section lists the materials required to perform disaster recovery procedures and a general overview (disaster recovery strategy) of the procedure executed.

### 3.1 Required Materials

The following items are needed for disaster recovery:

1. A hardcopy of this document and hardcopies of all documents in the reference list.
2. Hardcopy of all NAPD performed at the initial installation and network configuration of this customer's site. If the NAPD cannot be found, escalate this issue within My Oracle Support (MOS) until the NAPD documents can be located.
3. DSR recent backup files: electronic backup file (preferred) or hardcopy of all DSR configuration and provisioning data.
4. Latest Network Element report: Electronic file or hardcopy of Network Element report.
5. The XML configuration files used to configure the Cisco 4948 aggregation switches, available on the PMAC Server (or PMAC backup).
6. The switch backup files taken after the switch is configured, available on the PMAC server (or PMAC backup).
7. The network element XML file used for the initial configuration.
8. Firmware files as provided by hardware vendor.
9. NetBackup files if they exist. This may require the assistance of the customer's NetBackup administrator.
10. PMAC and TVOE backups (if available).
11. One (1) target release DSR media or a target-release ISO.
12. One (1) target release SDS Media or a target-release ISO (Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen9 Only).
13. Three (3) target release iDIH Media or target-release ISOs.

14. Site specific VM Placement and Socket Pinning workbook used during deployment (Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen9 only).
15. Latest RADIUS shared secret encryption key file backup (DpiKf.bin.enqr).
16. List of activated and enabled features.

**Note:** For all disaster recovery scenarios, we assume the NOAM database backup and the SOAM database backup were performed around the same time, and that no synchronization issues exist among them.

### 3.2 Disaster Recovery Strategy

Disaster recovery procedure execution is performed as part of a disaster recovery strategy with these basic steps:

1. Evaluate failure conditions in the network and determine that normal operations cannot continue without disaster recovery procedures. This means the failure conditions in the network match one of the failure scenarios described in section 2.
2. Read and review the content in this document.
3. Gather required materials in section 3.1 Required Materials.
4. From the failure conditions, determine the Recovery Scenario and procedure to follow (using Figure 2 and Table 4. Recovery Scenarios).
5. Execute appropriate recovery procedures (listed in Table 4. Recovery Scenarios).

**Figure 2. Determining Recovery Scenario**

## 4. Disaster Recovery Procedure

Before disaster recovery, properly evaluate the outage scenario. Call My Oracle Support (MOS) before executing this procedure to ensure the proper recovery planning is performed.

### WARNING

**Note:** Disaster recovery is an exercise that requires collaboration of multiple groups and is expected to be coordinated by the ORACLE SUPPORT prime. Based on ORACLE support's assessment of disaster, it may be necessary to deviate from the documented process.

#### Recovering Base Hardware:

1. Hardware recovery is executed by the appropriate HW vendor.
2. Base hardware replacement must be controlled by an engineer familiar with the DSR application.

Disaster recovery requires configuring the system as it was before the disaster and restoration of operational information. There are eight distinct procedures to select from depending on the type of recovery needed. Only one of these scenarios should be followed, not all.

### WARNING

When there is a need to restore the database backup for NOAM and SOAM servers in any of recovery scenarios described in the following sections, the backup directory may not be available in the system since the system is DRed. In this case, refer to Appendix L: Backup Directory for steps to check and create the backup directory.

The file format for recovery is when backup was taken. Generally, the backup file is in the following format:

- Backup.dsr.DSRNO1.Configuration.NETWORK\_OAMP.20180328\_021502.AUTO.tar
- Backup.dsr.DSRSO1.Configuration.SYSTEM\_OAM.20180328\_021502.AUTO.tar
- X7201TVOE-plat-app-201803281022.iso
- backupPmac\_20180328\_050002.pef5.1.1

### 4.1 Recovery Scenario 1 (Complete Server Outage)

For a complete server outage, TVOE is recovered on all rack mount servers. The VMs are re-created and configured. The database restored on one of the NOAM and SOAM servers.

Database replication from the active NOAM server recovers the database on these servers. The major activities are summarized in the list below. Use this list to understand the recovery procedure summary. Do not use this list to execute the procedure. The actual detailed steps are in Procedure 1. The major activities are summarized as follows:

- Recover base hardware and software for all rack mount servers
  - Recover the base hardware
  - Recover the virtual machines
  - Recover the software
- Recover PMAC

- Recover active **NOAM** guest
  - Recover the NOAM database
  - Reconfigure the application
- Recover standby **NOAM** guest
  - Reconfigure the application
- Recover query server (SDS only) guest
  - Reconfigure the application
- Recover all **SOAM** and MP/DP guest
  - Recover the SOAM database
  - Reconfigure the application
- Recover **IDIH**, if necessary
- Restart processes and re-enable provisioning and replication.

#### Procedure 1. Recovery Scenario 1

Examine all active alarms and refer to the on-line help on how to address them.<br/>           If needed, contact My Oracle Support (MOS).         </li> </ol> |
| 93. | <input type="checkbox"/> Restore GUI usernames and passwords                             | If applicable, execute the section 5 <b>Resolve User Credential Issues after Database Restore</b> procedure to recover the user and group information restored.  |
| 94. | <input type="checkbox"/> Back up and archive all the databases from the recovered system | Execute the <b>DSR Database Backup</b> procedure to back up the configuration databases.   |
| 95. | <input type="checkbox"/> Recover IDIH, if configured                                     | If IDIH was affected, refer to section 6 IDIH Disaster Recovery to perform disaster recovery on IDIH.  |
| 96. | <input type="checkbox"/> SNMP workaround   | Refer to Appendix K SNMP Configuration to configure SNMP as a workaround in these cases: <ol style="list-style-type: none"> <li>1. If SNMP is not configured in DSR/SDS.</li> <li>2. If SNMP is already configured and SNMPv3 is selected as enabled version.</li> </ol>   |

**4.2 Recovery Scenario 2 (Partial Server Outage with One NOAM Server Intact and ALL SOAMs Failed)**

For a partial server outage with an NOAM server intact and available; SOAM servers are recovered using recovery procedures of base hardware and software and then executing a database restore to the active SOAM server using a database backup file obtained from the SOAM servers. All other servers are recovered using recovery procedures of base hardware and software. Database replication from the active NOAM server will recover the database on these servers. The major activities are summarized in the list below. Use this list to understand the recovery procedure summary. Do not use this list to execute the procedure; detailed steps are in Procedure 2. The major activities are summarized as follows:

- Recover **standby NOAM** server (if needed) by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
- Recover **Query Server** (if needed) by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
- Recover **active SOAM** server by recovering base hardware, software, and database
  - Recover the base hardware

- Recover the software
- Recover the database
- Recover any failed **SOAM and MP/DP** servers by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
- The database has already been restored at the active SOAM server and does not require restoration at the SO and MP/DP servers.
- Recover IDIH if necessary

#### Procedure 2. Recovery Scenario 2

| 73. | <input type="checkbox"/> Back up and archive all the databases from the recovered system | Execute Appendix A DSR Database Backup to back up the Configuration databases.  |
| 74. | <input type="checkbox"/> Recover IDIH  | If IDIH was affected, refer to section 6 IDIH Disaster Recovery to perform disaster recovery on IDIH.   |

**4.3 Recovery Scenario 3 (Partial Server Outage with All NOAM Servers Failed and One SOAM Server Intact)**

For a partial server outage with an SOAM server intact and available; NOAM servers are recovered using recovery procedures of base hardware and software and then executing a database restore to the active NOAM server using a NOAM database backup file obtained from external backup sources such as customer servers or NetBackup. All other servers are recovered using recovery procedures of base hardware and software. Database replication from the active NOAM/active SOAM server recovers the database on these servers. The major activities are summarized in the list below. Use this list to understand the recovery procedure summary. Do not use this list to execute the procedure. The actual procedure detailed steps are in Procedure 3. The major activities are summarized as follows:

- Recover **Active NOAM** server by recovering base hardware, software, and the database
  - Recover the base hardware
  - Recover the software
  - Recover the database
- Recover **NOAM servers** by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
- Recover **Query Server** (if needed) by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
- Recover any failed **SOAM and MP/DP servers** by recovering base hardware and software
  - Recover the base hardware
  - Recover the software

Database is already intact at one SOAM server and does not require restoration at the other SOAM and MP/DP servers.

- Recover IDIH if necessary

### Procedure 3. Recovery Scenario 3

**4.4 Recovery Scenario 4 (Partial Server Outage with One NOAM Server and One SOAM Server Intact)**

For a partial outage with an NOAM server and an SOAM server intact and available, only base recovery of hardware and software is needed. The intact NO and SOAM servers are capable of restoring the database using replication to all servers. The major activities are summarized in the list below. Use this list to understand the recovery procedure summary. Do not use this list to execute the procedure. The actual procedure detailed steps are in Procedure 4. The major activities are summarized as follows:

- Recover standby NOAM server by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
- Recover Query Server (if needed) by recovering base hardware and software.
  - Recover the base hardware.
  - Recover the software.
- Recover Standby SOAM server by recovering base hardware and software.
  - Recover the base hardware.
  - Recover the software.
- Recover MP/DP C-level servers by recovering base hardware and software.
  - Recover the base hardware.
  - Recover the software.

- Recover IDIH if necessary

## 4.5 Recovery Scenario 5 (Both NOAM Servers Failed with DR-NOAM Available)

For a partial outage with both NOAM servers failed but a DR NOAM available, the DR NOAM is switched from secondary to primary then recovers the failed NOAM servers. The major activities are summarized in the list below. Use this list to understand the recovery procedure summary. Do not use this list to execute the procedure. The actual procedure detailed steps are in Procedure 5. The major activities are summarized as follows:

- Switch DR NOAM from secondary to primary
- Recover the failed NOAM servers by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
  - The database is intact at the newly active NOAM server and does not require restoration
- If applicable, recover any failed SOAM and MP servers by recovering base hardware and software
  - Recover the base hardware
  - Recover the software
  - The database is intact at the active NOAM server and does not require restoration at the SOAM and MP servers
- Recover IDIH if necessary

### Procedure 5. Recovery Scenario 5

**Procedure 5. Recovery Scenario 5**

|     |  |   |
|-----|--|---|
| 12. | <b>Recovered Servers:</b><br>Verify alarms | <p>1. Navigate to <b>Alarms &amp; Events &gt; View Active</b>.</p>  <p>2. Verify the recovered servers are not contributing to any active alarms (Replication, Topology misconfiguration, database impairments, NTP, etc.)</p> |
| 13. | Recover IDIH                               | If IDIH was affected, refer to section 6 IDIH Disaster Recovery to perform disaster recovery on IDIH.   |

**4.6 Recovery Scenario 6 (Database Recovery)****4.6.1 Recovery Scenario 6: Case 1**

For a partial outage with

- Server having a corrupted database
- Replication channel from parent is inhibited because of upgrade activity; or
- Server is in a different release then that of its active parent because of upgrade activity
- Verify the server runtime backup files, performed at the start of the upgrade, are present in /var/TKLC/db/filemgmt area in the following format
  - Backup.DSR.HPC02-NO2.FullDBParts.NETWORK\_OAMP.20140524\_223507.UPG.tar.bz2
  - Backup.DSR.HPC02-NO2.FullRunEnv.NETWORK\_OAMP.20140524\_223507.UPG.tar.bz2

**Notes:**

- During recovery, the corrupted database is replaced by the server runtime backup. Any configuration done after taking the backup is not available post recovery.
- Corrupt databases on the SOAM will replicate to all SOAMs in its Network Element (Active, Standby, and Spare). It may be necessary to perform this recovery procedure on ALL SOAMs.

**Procedure 6. Recovery Scenario 6 (Case 1)**

|                                  |  |   |
|----------------------------------|--|---|
| <b>S<br/>T<br/>E<br/>P<br/>#</b> | <p>This procedure performs recovery if at least one NOAM server is available, but all SOAM servers in a site have failed. This includes any SOAM server that is in another location.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p> |   |
| 1.                               | Workarounds  | Refer to Appendix L Backup Directory to look for a backup directory and create a directory if one does not exist. |

**Procedure 6. Recovery Scenario 6 (Case 1)**

|  |  |
| --- | --- |

| <input type="checkbox"/> | 14. Backup and archive all the databases from the recovered system          | Execute DSR Database Backup to back up the Configuration databases.   |

## 5. Resolve User Credential Issues after Database Restore

User incompatibilities may introduce security holes or prevent access to the network by administrators. User incompatibilities are not dangerous to the database, however. Review each user difference carefully to ensure the restoration does not impact security or accessibility.

### 5.1 Restore a Deleted User

- User 'testuser' exists in the selected backup file but not in the current database.

These users were removed before creation of the backup and archive file. They are reintroduced by system restoration of that file.

### 5.2 Keep a Restored User

#### Procedure 8. Keep Restored User

| S  | Perform this procedure to keep users restored by system restoration.   |  |
|--|--|--|
| T  | Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.  |  |
| E  |  |  |
| P  |  |  |
| #  | If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.  |  |
| 1. <b>Before Restoration:</b><br><input type="checkbox"/> Notify affected users before restoration | Contact each user affected before the restoration and notify them that you will reset their password during this maintenance operation.  |  |
| 2. <b>After Restoration:</b><br><input type="checkbox"/> Log into the NOAM VIP                     | <ol style="list-style-type: none"> <li>Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of:<br/><code>http://&lt;Primary_NOAM_VIP_IP_Address&gt;</code></li> <li>Login as the <b>guiadmin</b> user:</li> </ol>  |  |

**Procedure 8. Keep Restored User**

|   |   |
|---|---|
| <p>3. <input type="checkbox"/> <b>After Restoration:</b><br/>Reset user passwords</p> | <p>1. Navigate to <b>Administration &gt; Access Control &gt; Users</b>.</p> <p>Main Menu<br/>Administration<br/>General Options<br/>Access Control<br/>Users (highlighted)<br/>Groups<br/>Sessions<br/>Certificate Management<br/>Authorized IPs<br/>SFTP Users</p> <p>2. Select the user.</p> <p>3. Click <b>Change Password</b>.</p> <p>Insert Edit Delete Report Change Password</p> <p>4. Type a new password.</p> <p>   Enter the old password once, new password twice for <b>guiadmin</b><br/>   Old Password: <input type="text"/><br/>   New Password: <input type="text"/><br/>   Retype New Password: <input type="text"/><br/> <input checked="" type="checkbox"/> Force password change on next login<br/>   Continue   </p> <p><b>NOTE:</b> The password must be between 8 and 16 characters.<br/>   The password must also contain 3 of these 4 types of characters:<br/>   numeric, lowercase alpha, uppercase alpha, special character (!@#\$%^&amp;*?~).</p> <p>5. Click <b>Continue</b>.</p> |
|---|---|

## 5.3 Remove a Restored User

### Procedure 9. Remove the Restored User

|   |   |
|---|---|
| <p><b>S</b> Perform this procedure to remove users restored by system restoration</p> <p><b>T</b> Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p><b>P</b> If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p> | <p>1. <b>After Restoration:</b><br/>Log into the NOAM VIP</p> <ol style="list-style-type: none"> <li>Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of:<br/> <div style="border: 1px solid black; padding: 2px; display: inline-block;"> <a href="http://&lt;Primary_NOAM_VIP_IP_Address&gt;">http://&lt;Primary_NOAM_VIP_IP_Address&gt;</a> </div> </li> <li>Login as the <b>guiadmin</b> user:</li> </ol> <div style="text-align: center;">  <br/> <b>Oracle System Login</b> <div style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <p style="text-align: center;"><b>Log In</b></p> <p>Enter your username and password to log in</p> <p style="text-align: center;">Username: <input type="text"/></p> <p style="text-align: center;">Password: <input type="password"/></p> <p style="text-align: center;"><input type="checkbox"/> Change password</p> <p style="text-align: center;"><b>Log In</b></p> </div> <p style="text-align: center;">Unauthorized access is prohibited. |---|---|

**Procedure 9. Remove the Restored User**

|  |  |
|--|--|
| <p><b>2. After Restoration:</b><br/>Reset user passwords</p> | <p>1. Navigate to <b>Administration &gt; Access Control &gt; Users</b>.</p>  <p>2. Select the user.</p> <p>3. Click <b>Delete</b>.</p>  <p>4. Click <b>OK</b> to confirm.</p> |
|--|--|

**5.4 Restore a Modified User**

These users have had a password change before creation of the backup and archive file. They are reverted by system restoration of that file.

- The password for user 'testuser' differs between the selected backup file and the current database.

**Before Restoration:**

Verify you have access to a user with administrator permissions that is not affected.

Contact each user affected and notify them that you will reset their password during this maintenance operation.

**After Restoration:**

Login and reset the passwords for all users in this category. See the steps in Procedure 8 for resetting passwords for a user.

**5.5 Restore an Archive that Does Not Contain a Current User**

These users have been created after the creation of the backup and archive file. They are deleted by system restoration of that file.

- User 'testuser' exists in current database but not in the selected backup file.

If the user is no longer desired, do not perform any additional steps. The user is permanently removed.

**Procedure 10. Restore an Archive That Does Not Contain a Current User**

|  |   |
|--|---|

| 7. | <b>After Restoration:</b><br>Reset the passwords         | See Procedure 8 for resetting passwords for a user. |

**6. IDIH Disaster Recovery**

The fdconfig xml file you use for disaster recovery is different from the one used for fresh installation. The one for disaster recovery has the **hostname-upgrade\_xx-xx-xx.xml** file format. It took out the Oracle server installation part since it is not needed for disaster recovery. If the disaster recovery procedure is being executed on the rack mount server containing the Oracle database, use the fdconfig installation xml file.

**Note:** The fdconfig xml file for disaster recovery is exactly the same as the one for upgrade and this file should have been created during the latest upgrade or fresh installation. In case the file is not found, make a copy of the fdconfig.xml file for fresh installation with **-upgrade** between the hostname and the version number. Edit the newly created **hostname-upgrade\_xx-xx-xx.xml** file and take out the following section within the dotted line:

```

</infrastructure>
</infrastructures>
<servers>
.....
.
<tvoeguest id="ORA">
    <infrastructure>localPMAC</infrastructure>
        </postdeploy>
    </scripts>
</tvoeguest
.....
.
<tvoeguest id="MED">
    <infrastructure>localPMAC</infrastructure>
        <!--Specify which Rack Mount Server TVOE Host the Mediation
server will be placed -->
    <tvoehost>mgmtsrvrtvoe2</tvoehost>
    <name>MED</name>

```

**Disaster Recovery Scenarios**

| Disaster Recovery Scenario               | fdconfig file to use          |
|--|-------------------------------|
| Server containing Oracle database server | Install fdconfig xml          |

## Appendix G. Restore TVOE Configuration from Backup Media

### Procedure 19. Restore TVOE Configuration from Backup Media

| S<br>T<br>E<br>P<br>#          | <p>This procedure provides steps to restore the TVOE application configuration from backup media. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p> |   |
|--------------------------------|--|---|
| 1.<br><input type="checkbox"/> | Install TVOE application   | <ul style="list-style-type: none"> <li>• If the PMAC is <b>NOT</b> hosted on the failed rack mount server, execute <b>IPM Servers Using PMAC Application</b> from reference [8].</li> <li>• If the PMAC is hosted on the failed rack mount server, execute <b>Installing TVOE on the Management Server</b> from reference [8].</li> </ul>   |
| 2.<br><input type="checkbox"/> | Establish network connectivity   | <ul style="list-style-type: none"> <li>• If the PMAC is <b>NOT</b> hosted on the failed rack mount server, <b>skip this step</b>.</li> <li>• If the PMAC is hosted on the failed rack mount server, execute <b>TVOE Network Configuration</b>, steps 1-11, from reference [8].</li> </ul> <p><b>Note:</b> The IP address configured on the TVOE must be one accessible through the network of the machine currently holding the TVOE Backup ISO image. This could be a NetBackup master server, a customer PC, etc.</p> |
| 3.<br><input type="checkbox"/> | Restore TVOE backup ISO image to the TVOE host (NetBackup)   | <p>If using NetBackup to restore the TVOE backup ISO image, then execute this step; otherwise, skip this step.</p> <ol style="list-style-type: none"> <li>1. Execute <b>Application NetBackup Client Installation Procedures</b> from reference [8].</li> <li>2. Interface with the NetBackup master server and initiate a restore of the TVOE backup ISO image.</li> </ol> <p><b>Note:</b> Once restored, the ISO image is in <b>/var/TKLC/bkp/</b> on the TVOE server.</p>  |

**Procedure 19. Restore TVOE Configuration from Backup Media**

|    |   |  |
|----|---|--|
| 4. | Transfer TVOE backup ISO image to the TVOE host | <p>Restore TVOE backup ISO using SCP.</p> <p>Using the IP of the TVOE host, transfer the backup ISO image to the TVOE.</p> <p><b>Linux:</b></p> <p>From the command line of a Linux machine use this command to copy the backup ISO image to the TVOE host:</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre># scp &lt;path_to_image&gt; tvoexfer@&lt;TVOE_IP&gt;:backup/</pre> </div> <p>where <code>&lt;path_to_image&gt;</code> is the path to the backup ISO image on the local system and <code>&lt;TVOE_IP&gt;</code> is the TVOE IP address.</p> <p><b>Notes:</b></p> <ul style="list-style-type: none"> <li>• If the IP is an IPv4 address, then <code>&lt;TVOE_IP&gt;</code> is a normal dot-decimal notation (for example, 10.240.6.170).</li> <li>• If the IP is an IPv6 link local address, then <code>&lt;TVOE_IP&gt;</code> needs to be scoped. For example, <code>[fe80::21e:bfः:fe76:5e1c%control]</code> where control is the name of the interface on the machine initiating the transfer and it must be on the same link as the interface on the TVOE host.</li> <li>• The control IP address of the TVOE can be used if the TVOE is NOT hosting the PMAC. This method requires first transferring the backup file to the PMAC, and then to the TVOE host.</li> </ul> <p><b>IPv4 Example:</b></p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre># scp /path/to/image.iso tvoexfer@10.240.6.170:backup/</pre> </div> <p><b>IPv6 Example:</b></p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre># scp /path/to/image.iso tvoexfer@[fe80::21e:bfः:fe76:5e1c%control]:backup/</pre> </div> <p><b>Windows:</b></p> <p>Use WinSCP to copy the Backup ISO image into the <code>/var/TKLC/bkp</code> directory. Refer to [8], the Using WinSCP procedure, to copy the backup image to the customer system.</p> |
| 5. | <b>TVOE Server:</b><br>Login                    | Establish an SSH session to the TVOE server and login as <b>admusr</b> .   |

## Procedure 19. Restore TVOE Configuration from Backup Media

6.  Restore TVOE backup ISO image

1. Restore the TVOE backup ISO by executing this command:  

```
$ sudo su - platcfg
```
2. Navigate to **Maintenance > Backup and Restore > Restore Platform .> Select Backup Media.**  

3. Select the desired archive.  

4. Click **OK**.
5. Click **Restore Backup Archive**.  

6. Confirm restore.  

**Procedure 19. Restore TVOE Configuration from Backup Media**

|    |  |   |
|----|--|---|
| 7. | <input type="checkbox"/> Monitor TVOE backup process                     | <p>1. Wait for the restore to complete.</p>  <p><b>Note:</b> This typically takes less than 5 minutes.</p>  <p>2. <b>Exit</b> platcfg.</p> |

**Procedure 22. Restore Provisioning Database**

|  |  |
|--|--|
|  | <p>3. Select the <b>Provisioning backup</b> file from the list (which was previously placed in the <b>/var/TKLC/db/filemgmt/backup</b> directory in step 5 of section 2.6.2) and click <b>OK</b>.</p> <p><b>Note:</b> You must use a <b>provisioning only</b> backup file. Combined backup files contain configuration and provisioning data and cause catastrophic issues, which could lead to a complete re-installation.</p> <p><b>Main Menu: Status &amp; Manage -&gt; Database [Restore]</b></p>  <p>4. Verify compatibility and click <b>OK</b> to restore.</p> <p><b>Main Menu: Status &amp; Manage -&gt; Database [Restoreconfirm]</b></p>  |
| 4. <input type="checkbox"/> <b>Primary SDS NOAM GUI:</b><br>Wait for the restore to begin and track progress until the restore is complete | <p>1. Wait 60 seconds for the restore to begin.</p> <p>2. Monitor the Info tab under the <b>Status &amp; Manage &gt; Database</b> screen and look for the following message:</p> <p>Restore on &lt;Active_NO_hostname&gt; status MAINT_IN_PROGRESS.</p> <p>3. Wait for the restore to complete by looking for the following message:</p> <p>Success: - Restore on rlghnc-sds-NO-b status MAINT_CMD_SUCCESS.<br/>Success</p> <p><b>Note:</b> Refresh the Info tab manually to see updated status by navigating to <b>Status &amp; Manage &gt; Database</b> again and selecting the Info tab.</p>  |

**Procedure 22. Restore Provisioning Database**

**Procedure 24. Configure SNMP**

|  |   |
|--|---|
| <p>2. <b>NOAM VIP GUI:</b><br/>Configure system-wide SNMP trap receiver(s)</p> | <ol style="list-style-type: none"> <li>1. Navigate to <b>Administration &gt; Remote Servers &gt; SNMP Trapping</b>.        </li> <li>2. Select the <b>Server Group</b> tab for SNMP trap configuration:        </li> <li>3. Type the <b>IP address or hostname</b> of the Network Management Station (NMS) where you want to forward traps. This IP should be reachable from the NOAMP's XML network. If already configured SNMP with <b>SNMPv3</b> as enabled version, another server needs to be configured here.        </li> <li>4. Continue to fill in additional secondary, tertiary, etc., <b>Manager IPs</b> in the corresponding slots if desired.        </li> <li>5. Set the <b>Enabled Versions</b> as <b>SNMPv2c and SNMPv3</b>.        </li> <li>6. Check <b>Traps Enabled</b> checkboxes for the Manager servers being configured.        </li> <li>7. Type the <b>SNMP Community Name</b>.        </li> <li>8. Leave all other fields at their default values.</li> <li>9. Click <b>OK</b>.</li> </ol> |
|--|---|

**Procedure 24. Configure SNMP**

|  |  |                                      |  |
|--|--|--------------------------------------|--|
| 3. <input type="checkbox"/> <b>NOAMP VIP:</b><br>Enable traps from individual servers (optional) | <p><b>Note:</b> By default SNMP traps from MPs are aggregated and displayed at the active NOAMP. If, instead, you want every server to send its own traps directly to the NMS, then execute this procedure.</p> <p>This procedure requires all servers, including MPs, to have an XML interface on which the customer SNMP target server (NMS) is reachable.</p> <ol style="list-style-type: none"> <li>1. Navigate to <b>Administration &gt; Remote Servers &gt; SNMP Trapping</b>.</li> </ol>  <ol style="list-style-type: none"> <li>2. Make sure the <b>Enabled</b> checkbox is marked.</li> </ol> <table border="1" data-bbox="465 960 1191 1024"> <tr> <td><b>Traps from Individual Servers</b></td><td><input checked="" type="checkbox"/> <b>Enabled</b></td></tr> </table> <ol style="list-style-type: none"> <li>3. | <b>Traps from Individual Servers</b>   | <input checked="" type="checkbox"/> <b>Enabled</b>   |                                      |  |
| 4. <input type="checkbox"/> <b>PMAC GUI:</b><br>Update the TVOE host SNMP community string       | <ol style="list-style-type: none"> <li>1. Establish an SSH session to the PMAC.</li> <li>2. Login as <b>admusr</b> user:</li> <li>3. Update the TVOE host community string with this command:</li> </ol> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <pre>\$ sudo pmaccli setCommStr --accessType=rw --<br/>commStr=&lt;site specific value&gt;</pre> </div> <p><b>Note:</b> When this operation is initiated, all supporting TVOE hosting servers and the PMAC guest on the PMAC control network are updated. All those servers that match the existing Site Specific Community String are not updated again until the string name is changed.</p>   |                                      |  |

## Appendix L. Backup Directory

### Procedure 25. Backup Directory

|  |   |  |
|--|---|--|
| <b>S</b>   | This procedure checks and creates the backup directory.   |  |
| <b>T</b>   | Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.   |  |
| <b>E</b>   |   |  |
| <b>P</b>   | If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.   |  |
| <b>#</b>   |   |  |
| 1. <input type="checkbox"/> <b>NOAM/SOAM VIP Console:</b> Determine if backup directory exists | <ol style="list-style-type: none"> <li>1. Execute this command an active NOAM/SOAM server console (accessed using the VIP) and compare the output.           <pre>\$ cd /var/TKLC/db/filemgmt/ \$ ls -ltr</pre> </li> <li>2. Look for the backup directory in the output.</li> <li>3. Make sure the directory is already created with correct permission. The directory looks like this:           <pre>drwxrwx--- 2 awadmin awadm 4096 Dec 19 02:15 backup</pre> </li> <li>4. If the directory is already there with correct permissions, then skip steps 2 and 3.</li> <li>5. If directory does not have the correct permissions, then go to step 3.</li> </ol> |  |
| 2. <input type="checkbox"/> <b>NOAM/SOAM VIP Console:</b> Create backup directory              | <ol style="list-style-type: none"> <li>1. Go to the backup directory location.           <pre>cd /var/TKLC/db/filemgmt/</pre> </li> <li>2. Create backup directory.           <pre>\$ mkdir backup</pre> </li> <li>3. Verify directory has been created.           <pre>\$ ls -ltr /var/TKLC/db/filemgmt/backup</pre> </li> </ol> <p><b>Note:</b> A <b>No such file or directory</b> error message should not display. The directory should show as empty with the total as 0 for content.</p>  |  |

**Procedure 25. Backup Directory**

|   |  |
|---|--|
| 3. <input type="checkbox"/> <b>NOAM/SOAM VIP Console:</b><br>Change permissions of backup directory       | <ol style="list-style-type: none"> <li>Verify directory has been created.<br/> <pre>\$ ls -ltr /var/TKLC/db/filemgmt/backup</pre> <p><b>Note:</b> A <b>No such file or directory</b> error message should not display. The directory should show as empty with the total as 0 for content.</p> </li> <li>Change permissions for the backup directory.<br/> <pre>\$ chmod 770 /var/TKLC/db/filemgmt/backup</pre> </li> <li>Change ownership of backup directory.<br/> <pre>\$ sudo chown -R awadmin:awadm /var/TKLC/db/filemgmt/backup</pre> </li> <li>Directory displays as follows:<br/> <pre>drwxrwx--- 2 awadmin awadm 4096 Dec 22 02:15 backup</pre> </li> </ol> |
| 4. <input type="checkbox"/> <b>NOAM/SOAM VIP Console:</b><br>Copy the backup file to the backup directory | <ol style="list-style-type: none"> <li>Copy the backup file to the backup directory.<br/> <pre>\$ cp BACKUPFILE /var/TKLC/db/filemgmt/backup</pre> </li> <li>Change permissions of files in the backup directory.<br/> <pre>\$ chmod 666 Backup.*</pre> </li> <li>Change ownership of files in the backup directory.<br/> <pre>\$ sudo chown -R awadmin:awadm Backup.*</pre> </li> </ol>   |

**Appendix M. netConfig****backupConfiguration/restoreConfiguration/upgradeFirmware with  
TPD cipher change**

Beginning with TPD 7.7.0.0.0-88.68.0, the cipher list is restricted to allow only a limited number of ciphers for ssh access to the servers. As a result, netConfig backup and restore operations are not functional with Cisco switches (3020, 4948s), as these switches use other ciphers. Executing these commands with the restricted ciphers would fail as shown below:

```
[admusr@p5-pmac ~]$ /usr/bin/sudo /usr/TKLC/plat/bin/netConfig --  
device=3020_ip backupConfiguration service=ssh_ip filename=backup  
Command failed: backupConfiguration  
Error saving to SSH service  
[admusr@p5-pmac ~]$
```

To avoid this issue, while maintaining a focus on improved security, the following procedure must be executed before and after netConfig backup and restore operations.

**Procedure 26. Turn off cipher list before  
backupConfiguration/restoreConfiguration/upgradeFirmware command**

| STEP #  | Procedure            | Description   |
|---|----------------------|---|
| <p>This procedure prepares the PM&amp;C to avoid the cipher mismatch issue with Cisco switches. This is performed before the netConfig backup, restore or upgrade operations.</p> <p><i>Check off (✓) each step as it is completed.</i> Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p> |                      |   |
| 1<br><input type="checkbox"/>   | Turn off cipher list | <p>From the PMAC shell enter the following:</p> <pre>/usr/bin/sudo /bin/vi /etc/ssh/sshd_config Add # in the beginning of the following three lines to comment them out, the result is:</pre> <pre>#Ciphers aes256-ctr,aes192-ctr,aes128-ctr #MaxAuthTries 4 #LoginGraceTime 1m</pre> |
| 2<br><input type="checkbox"/>   | Restart sshd         | <pre>/usr/bin/sudo service sshd restart</pre>   |

| STEP #                        | Procedure  | Description   |
|-------------------------------|--|---|
| 3<br><input type="checkbox"/> | Run the netConfig backupConfiguration/restoreConfiguration/upgradeFirmware command | <p>For a backup operation:</p> <pre>[admusr@pmac ~]\$ /usr/bin/sudo /usr/TKLC/plat/bin/netConfig backupConfiguration --device=&lt;switch_name&gt; service=&lt;ssh_service&gt; filename=&lt;switch_name&gt;-backup</pre> <p>For a restore operation:</p> <pre>[admusr@pmac ~]\$ /usr/bin/sudo /usr/TKLC/plat/bin/netConfig restoreConfiguration --device=&lt;switch_name&gt; service=&lt;ssh_service&gt; filename=&lt;switch_name&gt;-backup</pre> <p>For a upgrade operation:</p> <pre>[admusr@pmac ~]\$ /usr/bin/sudo /usr/TKLC/plat/bin/netConfig upgradeFirmware --device=&lt;switch_name&gt; service=&lt;ssh_service&gt; filename=&lt;Cisco IOS&gt;</pre> |

**Procedure 27. Resume cipher list after  
backupConfiguration/restoreConfiguration/upgradeFirmware command**

| STEP #  | Task         | Description                                     |
|---|--------------|---|
| <p>This procedure restores the PM&amp;C restricted cipher list after perform the netConfig backup, restore or upgrade operations.</p> <p><i>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</i></p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p> |              |   |
| <p>1<br/><input type="checkbox"/></p> <p>Resume the cipher list</p> <p>From the PMAC shell enter the following:<br/> <code>/usr/bin/sudo /bin/vi /etc/ssh/sshd_config</code><br/>   Uncomment the three lines:</p> <pre>Ciphers aes256-ctr,aes192-ctr,aes128-ctr MaxAuthTries 4 LoginGraceTime 1m</pre>   |              |   |
| 2<br><input type="checkbox"/>   | Restart sshd | <code>/usr/bin/sudo service sshd restart</code> |

## Appendix N. My Oracle Support (MOS)

### My Oracle Support

MOS (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at **1-800-223-1711** (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown on the Support telephone menu:

1. Select 2 for **New Service Request**.
2. Select 3 for **Hardware, Networking, and Solaris Operating System Support**.
3. Select one of the following options:
  - For technical issues such as creating a new Service Request (SR), select **1**.
  - For non-technical issues such as registration or assistance with MOS, select **2**.

You are connected to a live agent who can assist you with MOS registration and opening a support ticket. MOS is available 24 hours a day, 7 days a week, 365 days a year.

### Emergency Response

In the event of a critical service situation, emergency response is offered by the CAS main number at 1-800-223-1711 (toll-free in the US), or by calling the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities, and requires immediate corrective action. Critical situations affect service and/or system operation resulting in one or several of these situations:

- A total system failure that results in loss of all transaction processing capability
- Significant reduction in system capacity or traffic handling capability
- Loss of the system's ability to perform automatic system reconfiguration
- Inability to restart a processor or the system
- Corruption of system databases that requires service affecting corrective actions
- Loss of access for maintenance or recovery operations
- Loss of the system ability to provide any required critical or major trouble notification

Any other problem severely affecting service, capacity/traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.

### Locate Product Documentation on the Oracle Help Center

Oracle Communications customer documentation is available on the web at the Oracle Help Center (OHC) site, <http://docs.oracle.com>. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at <http://www.adobe.com>.

1. Access the Oracle Help Center site at <http://docs.oracle.com>.
2. Click **Industries**.
3. Under the **Oracle Communications** subheading, click the **Oracle Communications documentation** link. The Communications Documentation page appears. Most products covered by these documentation sets display under the headings **Network Session Delivery and Control Infrastructure** or **Platforms**.

4. Click on your Product and then the Release Number. A list of the entire documentation set for the selected product and release displays. To download a file to your location, right-click the PDF link, select **Save target as** (or similar command based on your browser), and save to a local folder.
