## Brief Description

**Business Process:** 5.5.5 C2M.MDM.Monitor and Manage Service Faults

**Process Type:** Process

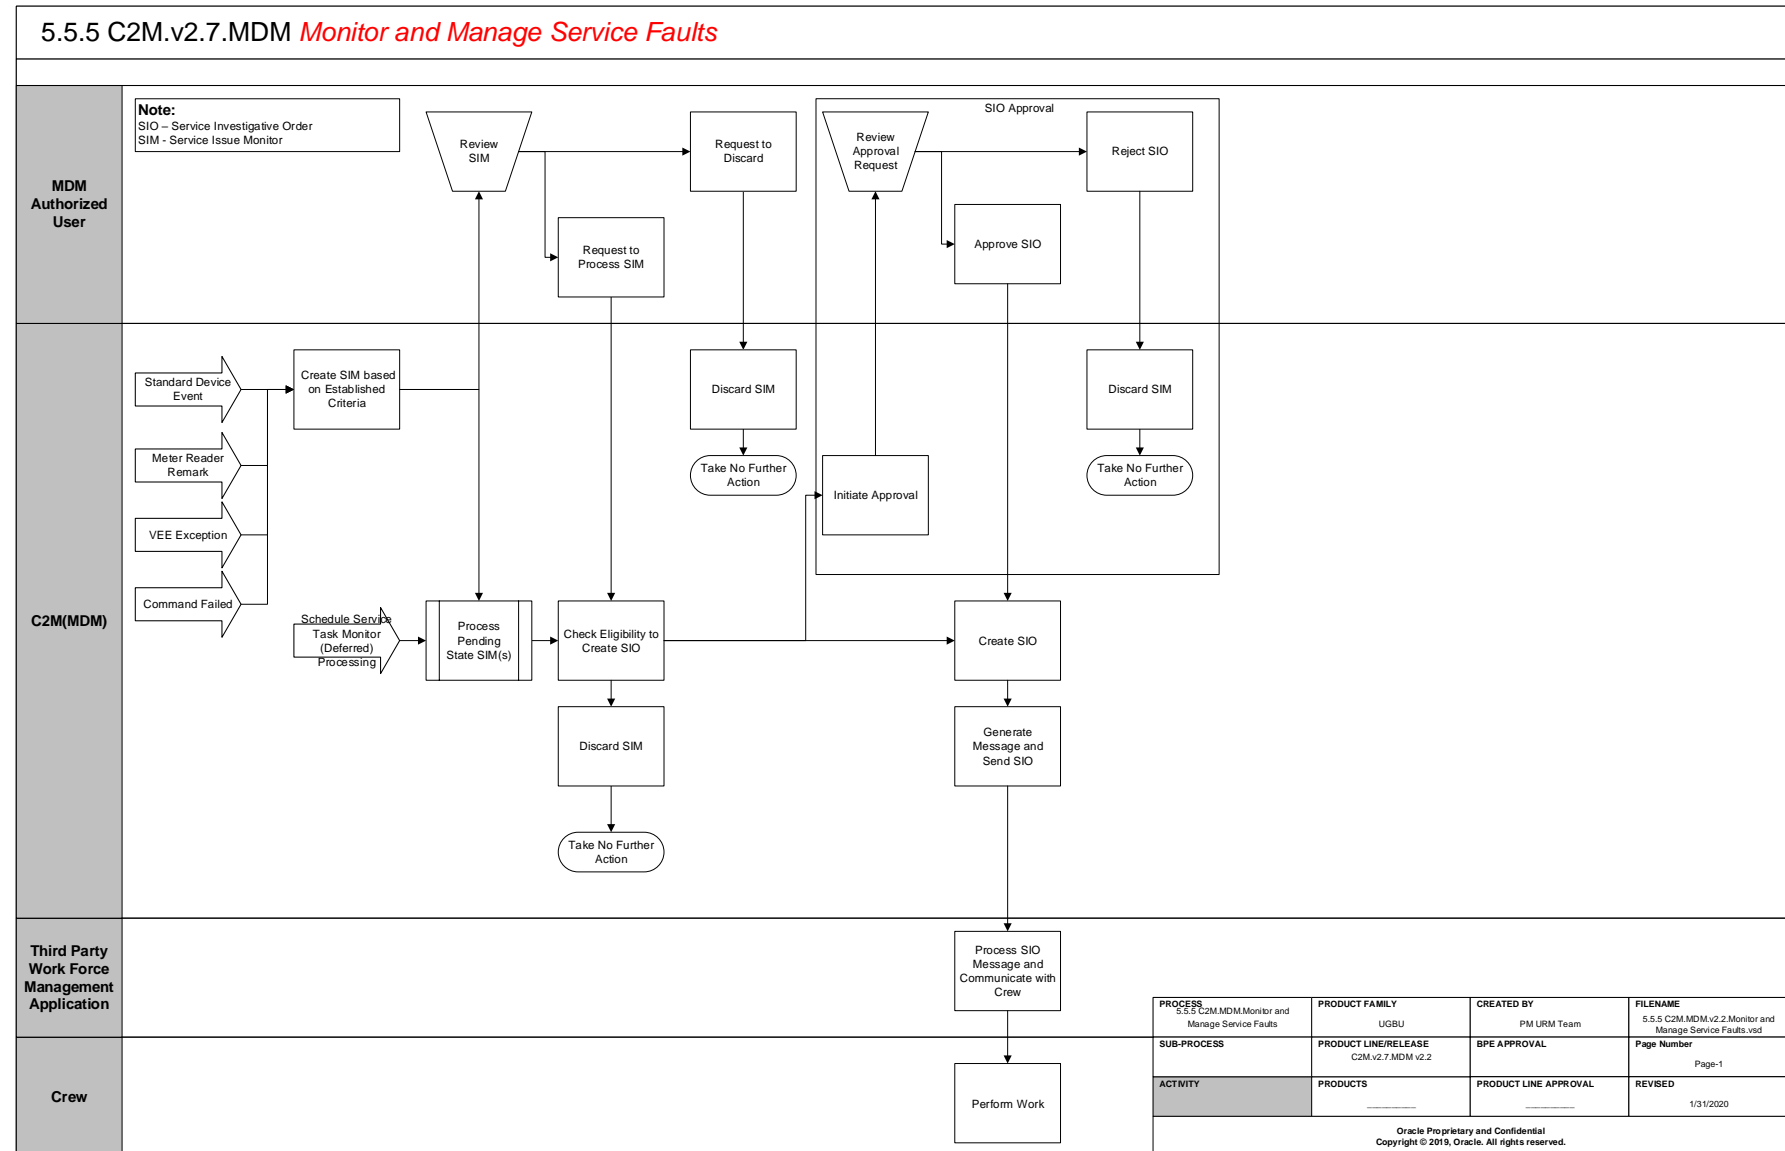

**Parent Process:**

**Sibling Processes:**

This process gets initiated by a Device Event or a Meter Reader Remark or a VEE Exception or a Failed Command that refers to a Service Issue Monitor (SIM) to analyze the service point. The Service Issue Monitor initiates a Service Investigative Order (SIO) process based on eligibility criteria to initiate a field action by crew. At times a user approval is required to create this SIO depending on field action.

A Service Investigative Order is sent to a Third Party Workforce Management Application which in turns communicates to the field crew. Field crew performs the action and status is reflected back in Third Party Workforce Management Application and C2M(MDM) accordingly.
