1 Preface

This section provides information about the Oracle Financial Services Balance Sheet Planning Application Pack's (OFS BSP Pack) Planning Administrator and Planning Analyst User Guide.

Topics:

- [Audience](#)
- [Access to Oracle Support](#)
- [Related Documents](#)
- [Conventions](#)
- [Abbreviations](#)

1.1 Audience

Oracle Financial Services Balance Sheet Planning Application Pack's (OFS BSP Pack) Planning Administrator and Planning Analyst User Guide describes all the features and functions of BSP's Planning user interfaces and primarily is intended for the use of Planning Administrators and Planning Users.

1.2 Access to Oracle Support

Oracle customers have access to electronic support through [My Oracle Support](#). For more information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

1.3 Related Information Sources

This section identifies additional documents related to the OFS BSP Application Pack. You can access the below documents online from the Oracle Help Center (OHC) [Documentation Library](#) for OFS BSP Application Pack Release 8.1.0.0.0:

- [Oracle Financial Services Balance Sheet Planning Application Pack Release Notes Release 8.1.1.0.0](#)
- [Oracle Financial Services Balance Sheet Planning System Administrator User Guide Release 8.1.1.0.0](#)
- [Oracle Financial Services Balance Sheet Planning Application Pack Security Guide Release 8.1.0.0.0](#)
- [Oracle Financial Services Balance Sheet Planning Application Pack Cloning Guide Release 8.1.0.0.0](#)

You can access the OFS AAI documentation from the OHC Documentation Library for OFS AAI 8.1.0.0.0:

- [OFS Advanced Analytical Applications Infrastructure Installation Guide Release 8.1.1.0.0](#)
- [OFS Advanced Analytical Applications Infrastructure User Guide Release 8.1.1.0.0](#)
- [OFS Advanced Analytical Applications Infrastructure Environment Check Utility Guide Release 8.1.x](#)
- [OFS Advanced Analytical Applications Infrastructure Application Pack Administration and Configuration Guide Release 8.1.x](#)
- [OFS AAI Application Security Guide Release 8.1.x](#)

- [Oracle Financial Services Analytical Applications Infrastructure Cloning Guide Release 8.1.x](#)
- [OFSAA Licensing User Manual, Release 8.1.1.0.0](#)

You can access the common document from the OHC Documentation Library:

- [OFS Analytical Applications 8.1.1.0.0 Technology Matrix](#)
- [OFS Data Model Utilities Guide](#)
- [OFS Cash Flow Engine Reference Guide](#)

1.4 Conventions

The following text conventions are used in this document:

Table 1: Document Conventions

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, file names, text that appears on the screen, or text that you enter.
Hyperlink	Hyperlink type indicates the links to external websites, internal document links to sections.

1.5 Abbreviations

The following table lists the abbreviations used in this document:

Table 2: Abbreviations

Abbreviation	Meaning
AIX	Advanced Interactive eXecutive
BDP	Big Data Processing
DBA	Database Administrator
DDL	Data Definition Language
DEFQ	Data Entry Forms and Queries
DML	Data Manipulation Language
EAR	Enterprise Archive
EJB	Enterprise JavaBean
ERM	Enterprise Resource Management

Abbreviation	Meaning
FTP	File Transfer Protocol
HDFS	Hadoop Distributed File System
HTTPS	Hypertext Transfer Protocol Secure
J2C	J2EE Connector
J2EE	Java 2 Enterprise Edition
JCE	Java Cryptography Extension
JDBC	Java Database Connectivity
JDK	Java Development Kit
JNDI	Java Naming and Directory Interface
JRE	Java Runtime Environment
JVM	Java Virtual Machine
LDAP	Lightweight Directory Access Protocol
LHS	Left Hand Side
MFA	Multi-Factor Authentication
MOS	My Oracle Support
OFSA	Oracle Financial Services Analytical Applications
OFSAI	Oracle Financial Services Analytical Application Infrastructure
OFSAAI	Oracle Financial Services Advanced Analytical Applications Infrastructure Application Pack
OHC	Oracle Help Center
OLAP	On-Line Analytical Processing
OLH	Oracle Loader for Hadoop
ORAAH	Oracle R Advanced Analytics for Hadoop
OS	Operating System
RAM	Random Access Memory
RDBMS	Relational Database Management System
RHEL	Red Hat Enterprise Linux
SFTP	Secure File Transfer Protocol
SID	System Identifier
SSL	Secure Sockets Layer
TNS	Transparent Network Substrate
URL	Uniform Resource Locator
VM	Virtual Machine
WAR	Web Archive

Abbreviation	Meaning
XML	Extensible Markup Language

2 Introduction to OFS Balance Sheet Planning Application

Oracle Financial Services Balance Sheet Planning is designed to help financial services institutions budget for a full balance sheet and the associated net interest margin. Banks have a number of very unique needs when looking ahead. They must be sensitive to economic conditions, and create plans that not only forecast future performance, but also the forward risks they are assuming. Most importantly, they require tools that accurately forecast the net interest margin. By accurately modeling the detailed and complex events on a bank's balance sheet, for both the current book of business and forecasted new volumes, Oracle Financial Services Balance Sheet Planning enables the delivery of accurate margin forecast and comprehensive, meaningful budgets.

OFS Balance Sheet Planning (OFS BSP) supports three distinct user roles:

- System Administrator
- Planning Administrator
- Planning User

This guide describes all the features and functions of BSP's Planning user interfaces and primarily is intended for the use of Planning Administrators and Planning Users.

2.1 Planning Overview

Your BSP System Administrator is responsible for generating runoff projections of your current book of business that are the starting points for all planning within BSP. For details on the System Administrator's role, see the PFS Balance Sheet Planning System Administrator Guide.

Once your System Administrator has generated a runoff projection of your current book of business, either he or a Planning Administrator can build Forecast Sets based on that projection. For example, if your System Administrator has generated a runoff forecast for your current book of business as of March 31, 2021, then either he or a Planning Administrator can build a Forecast Set that begins its forecast with the month of April 2021.

2.1.1 Planning User Overview

[Introduction to OFS Balance Sheet Planning section of](#) this guide covers all of the planning user interfaces available to Planning Users. Chapter 3 is also applicable to Administrators since administrative users have full access to the planning user interfaces. Planning Users may also want to review [OFS Balance Sheet Planning](#), [Planning Center - User Maps](#), and [Forecast Sets](#) sections in this guide to get a better understanding of how Forecast Sets and access to Forecast Sets are managed in BSP.

2.1.2 Planning Administrator Overview

The sections [Planning Center - User Maps](#), [Forecast Sets](#), and [Forecast Set Lifecycle](#) cover all of the user interfaces available to Administrators that are not available to Planning Users. Again, Planning Users may also want to review these chapters to get a better understanding of Forecast Sets and Planning Center – User Maps.

3 Logging into OFS Balance Sheet Planning

To log into OFS Balance Sheet Planning, follow these steps:

1. Access the URL and open the Balance Sheet Planning login page.

Figure 1: OFSAA Login Page

2. Enter the Balance Sheet Planning - System Administrator or Planning Administrator Username and password and then click **Login** to display the Applications page.

Figure 2: OFSAA Applications Page

4 OFS Balance Sheet Planning

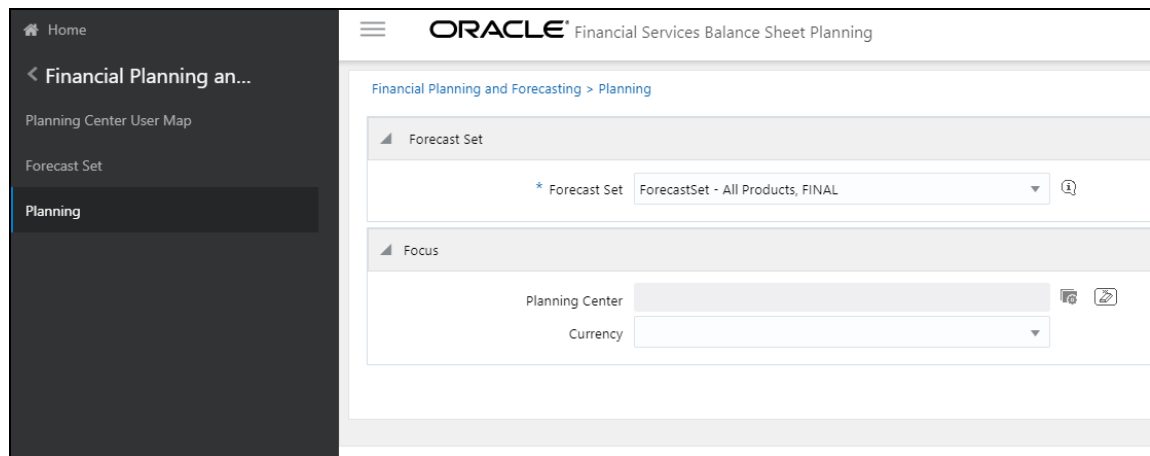

Both Administrators and Planning Users can utilize BSP's planning functionality. Administrators can access all planning data for any Initialized or Published Forecast Set, but Planning Users can only access Planning Centers to which they have been assigned by an Administrator (for more information, see [Planning Center - User Maps](#)). Additionally, Planning Users can only access Forecast Sets that an Administrator has Published (for more information, see [Forecast Sets](#), and [Forecast Set Lifecycle](#)).

4.1 Navigation to Planning Interfaces

Your navigation path to the BSP's planning interfaces depends on your user type. System Administrators and Planning Administrators navigate to **Balance Sheet Planning**, select **Financial Planning and Forecasting**, and then select **Planning**. The "left-hand side" (LHS) view looks as follows:

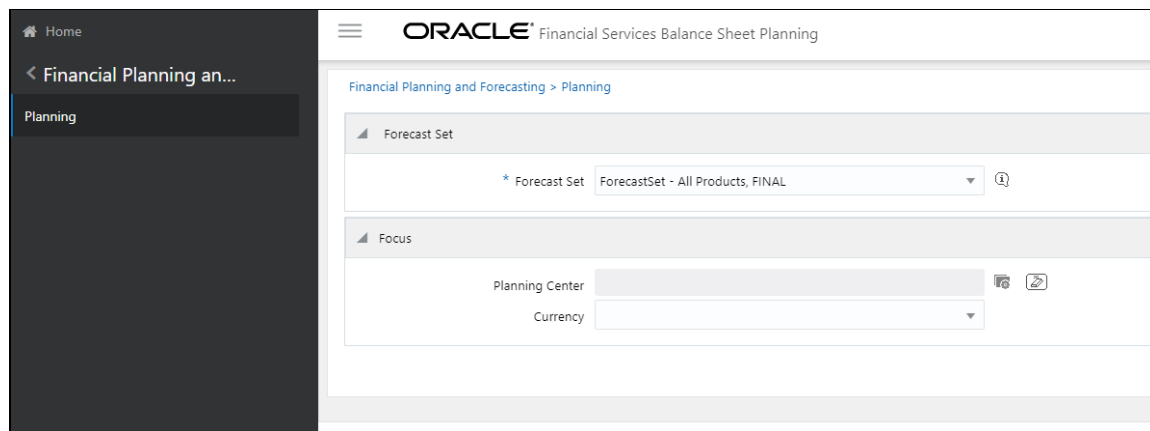

Note that Administrators have access to Planning Center User Maps and Forecast Sets on their LHS while Planning Users do not.

Figure 3: Financial Planning and Forecasting - Planning Administrator's View

Planning Users also navigate to Balance Sheet Planning > Financial Planning and Forecasting > Planning but their "left-hand side" (LHS) appears as follows:

Figure 4: Financial Planning and Forecasting - Planning User's View

4.2 Planning Interfaces

BSP supports a hierarchy of planning interfaces featuring:

- Planning Center Statistics form
- Planning Points or Detailed Planning & Analysis form

When you initially navigate to Balance Sheet Planning > Financial Planning and Forecasting > Planning, you are presented with the Planning Center Statistics form. From here, you can select one or more Planning Centers that you want to work with and you can drill into details within the Planning Points form. This form presents Product/Currency combinations for each of the Planning Centers that you selected within the Planning Center Statistics form. Both the Planning Center-level and the Planning Points-level provide "focus" elements that allow you to narrow the data that is presented to you. Your focus elements generally are preserved as you navigate between the two levels.

4.2.1 Planning Center Statistics

To begin planning, follow these steps:

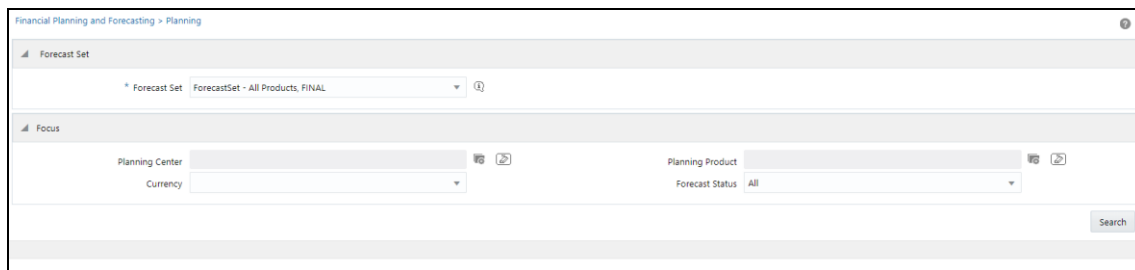

1. Navigate to **Balance Sheet Planning**, select **Financial Planning and Forecasting**, and then select **Planning** to display the Planning window.
2. Select the Forecast Set that you want to work with. Note that there may be several Forecast Sets available to you. Click the  icon to view the details of the Forecast Set.

Figure 5: Forecast Set Details

NOTE

System Admin and Planning Admin users can see all Initialized and Published Forecast Sets in the drop-down list. A Planning User can see only the Forecast Sets that are mapped to him/her. If a Forecast Set is not mapped to the Planning User, then this field does not display any Forecast Sets. For information on mapping Forecast Sets to Planning Users, see [OFS Balance Sheet Planning](#) and [Planning Center - User Maps](#) sections.

3. If you click the **Search** button, the system will display statistics for all of the Planning Centers to which you are allowed access within your selected Forecast Set. You can optionally refine the Planning Centers that are displayed by using filtering criteria. These optional filtering criteria are as follows:

- **Planning Center:** Click the <ICON> icon to open the Hierarchy window that displays Planning Centers. You can filter on individual Planning Centers from a list of Planning Centers or you can use the Hierarchy search to select Planning Centers. The Hierarchy type of search also allows you to select Planning Center nodes. When you select a Planning Center node, the system will filter on all of the Planning Centers to roll up to the node value you selected. Click **Ok** after making your selection.
 - **Currency:** This allows you to filter by Currency.
 - **Planning Product:** This hierarchy search functions identically to the Planning Center hierarchy search described above.
 - **Forecast Status:** Forecast Statuses include All, New Business Product, Planning Required, Processed, Processing Required, Review Required, and Reviewed.
4. Click **Search** to generate Planning Center Statistics for your chosen Forecast Set.

The system will now display Planning Center statistics for your Forecast Set (optionally filtered down to a smaller list). From here, you can select a single Planning Center, multiple Planning Centers, or all Planning Centers. Click on the checkbox on the left side of each row to select one or more Planning Centers. Click on the top row (next to "Planning Center") to select all Planning Centers.

Figure 6: Planning Center Statistics

Planning Center	Historical Balances	Current Balances	Forecast Balances	Processed	Reviewed
BR 1101 - North Avenue	1	10	12	12	0
BR 1102 - East Avenue	0	3	3	3	0

Before selecting any Planning Centers, you can add one or more "New Business Products" to your Forecast Set. New Business Products are products that do not have any current balances but for which you want to start forecasting new business originations at a future point in time. You can also forecast New Business Products on the detailed planning screen described in the next section. See the next section for additional details on adding New Business products.

After selecting one or more Planning Centers, you can either:

- **Process Cash Flows:** Click **Process Cash Flow** to generate total (current and new) business results for the Planning Centers you have selected.
- **Download:** Click **Download** to download the forecast results for the Planning Centers you have selected. This downloads the forecast results in a CSV format.
- **Proceed to Planning:** Click **Proceed to Planning** to navigate to the detailed planning interface -- see next section below for details.

4.2.2 Detailed Planning and Analysis

Click **Proceed to Planning** to display the Planning Points for the Planning Centers you have selected. This user interface -- the "detailed planning" or "planning points" form -- provides access to all of BSP's detailed planning functionality.

Figure 7: Planning Points for the selected Planning Centers

The screenshot displays the 'Financial Planning and Forecasting - Planning' interface. At the top, there is a 'Forecast Set' dropdown menu set to 'ForecastSet - All Products, FINAL'. Below this is a 'Focus' section with 'Planning Center' set to 'BR 1101 - North Avenue, BR 1102 - East Avenue', 'Planning Product' set to an empty dropdown, and 'Currency' set to an empty dropdown. A 'Forecast Status' dropdown is set to 'All'. A 'Search' button is located to the right of the 'Forecast Status' dropdown. Below the 'Focus' section is a 'Planning Points' section with a table and several action buttons: 'Add', 'Delete', 'Bulk Forecast Balance', 'Bulk Pricing Margin', 'Detailed Planning', 'Process Cash Flow', 'Review', and 'Analysis'. The table has 15 rows and 10 columns. The columns are: 'Planning Center', 'Planning Product', 'Currency', 'Historical Balances', 'Current Balances', 'Forecast Balances', 'Processed', 'Reviewed', 'Forecast Balance Method', and 'Pricing Margin Method'. The rows list various products such as 'Bond Investment', 'Consumer Loan', 'Home Loan (Adjustable)', 'Home Loan (Fixed)', 'Liquid Investment', 'Other Asset', 'Other Investment', 'Other Liability', 'Retail CASA', 'Retail Term Deposit', 'Wholesale CASA', 'Wholesale Term Deposit', 'Consumer Loan', 'Home Loan (Adjustable)', and 'Retail Term Deposit'. The 'Historical Balances', 'Current Balances', 'Forecast Balances', 'Processed', and 'Reviewed' columns contain checkboxes, many of which are checked. The 'Forecast Balance Method' and 'Pricing Margin Method' columns contain text values like 'New Add', 'Target Average', 'Target Growth', 'Target End', 'New Add Spread', and 'New Add Net Rate'. A 'Back To Dashboard' button is located at the bottom of the table.

	Planning Center	Planning Product	Currency	Historical Balances	Current Balances	Forecast Balances	Processed	Reviewed	Forecast Balance Method	Pricing Margin Method
1	BR 1101 - North Avenue	Bond Investment	USD	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	New Add	New Add Spread
2	BR 1101 - North Avenue	Consumer Loan	USD	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Target Average	New Add Net Rate

14	BR 1102 - East Avenue	Home Loan (Adjustable)	USD	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Target Growth	New Add Spread
15	BR 1102 - East Avenue	Retail Term Deposit	USD	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Target Growth	New Add Spread

4.2.3 New Business Products

Before selecting any planning points, you can add one or more "New Business Products" to your Forecast Set. New Business Products are products that do not have any current book of business but for which you want to start forecasting balances at a future point in time.

- **Add New Business Product:** Click the **Add** button to display the Add New Business Product window. Select the following details:
 - Planning Center
 - Planning Product
 - Currency

Note that the **Add** button is only enabled when you have not selected any planning points. Also note that when adding a New Business Product within the Add New Business Product window, you can select only a single Planning Center at a time even if you are a super-user or Administrator. Similarly, you can only select a single Planning Product at a time. The purpose here is to prevent users from accidentally adding large numbers of New Business Products.

Figure 8: Add New Business Product

* Planning Center	* Planning Product	* Currency
BR 1102 - East Avenue	Home Loan (Fixed)	US Dollar

The above example shows the addition of Home Loan (Fixed) in USD to Planning Center BR 1102 - East Avenue. Note that the system will not allow you to add a New Business Product for any planning point that has current balances. To add multiple New Business Products, click on the + sign to add a new row.

4.2.4 Planning and Analysis Overview

Upon selecting one or more planning points (distinct combinations of Planning Center + Planning Product + Currency), the following functions are available:

- **Delete:** This feature allows you to remove New Business Product planning points that you have previously added. This function only applies to New Business Products so the button is only active when (1) you have selected one or more New Business Products and (2) you have NOT selected any planning points that are not New Business Products.
- **Bulk Forecast Balance:** This form allows you simultaneously to establish new business forecasts for multiple planning points.
- **Bulk Pricing Margin:** This form allows you simultaneously to establish new business pricing margins for multiple planning points.
- **Detailed Planning:** This form allows you to plan both new business volumes and new business pricing margins for a single planning point.
- **Process Cash Flows:** This control allows you to process cash flows for each planning point you have selected.
- **Review:** This feature allows you to mark as "Reviewed" any planning point that has already been planned and processed.

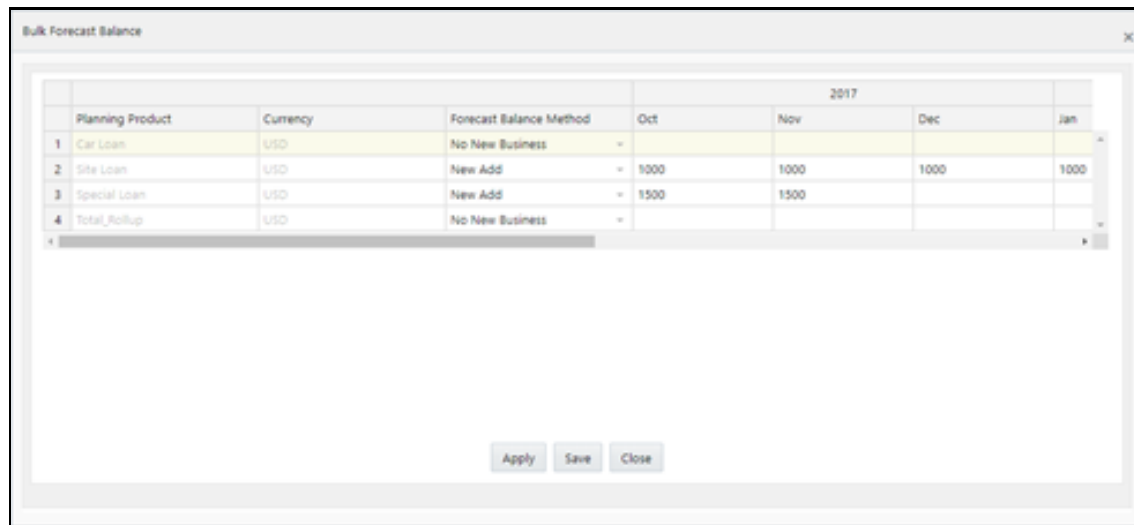

- **Analysis:** For the planning points you have selected, this dropdown list allows you to download forecast results and also offers a series of forecasted reporting elements across your chosen products.

4.2.5 Planning and Analysis Functions

The following are the Planning and Analysis functions:

- **Bulk Forecast Balance:** Click this to display the Bulk Forecast Balance window.

Figure 9: Bulk Forecast Balance window

			2017			
Planning Product	Currency	Forecast Balance Method	Oct	Nov	Dec	Jan
1 Car Loan	USD	No New Business				
2 Site Loan	USD	New Add	1000	1000	1000	1000
3 Special Loan	USD	New Add	1500	1500		
4 Total Rollup	USD	No New Business				

- Select a Forecast Balance Method for the Planning Product and enter the relevant values each month. The values indicate the amount for all except Target Growth to which the value will be %.

The acceptable ranges for the Forecast Balance Methods are as follows:

- **No New Business:** All bucketing column fields values should be removed and disabled
- **New Add:** -100,000,000,000 to +100,000,000,000
- **Target Average:** -100,000,000,000 to +100,000,000,000
- **Target End:** -100,000,000,000 to +100,000,000,000
- **Target Growth:** -99.99 to +99.99
- Click **Save** or **Apply** to save the details. Clicking Save will save the details and exit the screen. Clicking Apply will save the details and remains on the same screen and allows you to update any further details.
- **Bulk Pricing Margin:** Click this to display the **Bulk Pricing Margin** window where you can select the Pricing Margin Method and define values (in %) for the New Add Spread and New Add Net Rate fields. The acceptable ranges are:
 - **New Add Spread:** -100,000,000,000 to +100,000,000,000
 - **New Add Net Rate:** -99.99 to +99.99
- **Detailed Planning:** Click this to display the Detailed Planning Window. More details about Detailed Planning are explained below:

- **Forecast Drivers:** This allows you to update the details of the forecast drivers if you want to rerun the Cash Flow. The Forecast Drivers section of the window displays Prior Forecast Methods (if available).

Figure 10: Forecast Drivers

		2017					
Forecast Methods		Nov	Dec	Jan	Feb	Mar	Apr
1	Target Average	5	6	7	8	7.5	9
2	New Add Net Rate	11	12.5	15	17	9	20

		2017					
Prior Forecast Methods		Nov	Dec	Jan	Feb	Mar	Apr
1	New Add	0	0	0	0	0	0
2	New Add Spread	1	2	3	3	3	3

- **Forecast Results:** This section of the window displays different Forecast Results. You can select Total Business or Current Book or New Business to see the Forecast Results. If you select Total Business, the Forecast Results are displayed for both current and new business. You can click the down arrow next to the Forecast Result and view the Current Book and New Business forecast results. You can use the switch to scroll the results together for Current Forecast and Prior Forecast results at the same time. If this switch is on, then both Current and Prior Forecast Results are displayed on horizontal scrolling. If it off, then you can scroll only through the Current Forecast Results.

Figure 11: Forecast Results

		2017					
Current Forecast Results		Nov	Dec	Jan	Feb	Mar	Apr
>	Ending Balance	387314.33	385313.18	383322.37	381341.86	379371.58	3774
>	Net Interest Margin	462.76	441.46	457.96	446.21	414.08	471
>	Ending Net Interest Spread	1.4	1.4	1.4	1.4	1.4	1.4
>	Average Net Interest Spread	1.4	1.4	1.4	1.4	1.4	1.4

		2017					
Prior Forecast Results		Nov	Dec	Jan	Feb	Mar	Apr
No Records Found							

- **Management Ledger Data:** This section of the window displays the Management Ledger data for the Actual and Budget (planned) with details for Ending Balance, Average Balance, and Net Interest Margin. Here too you can use the switch to scroll the results together for Actual and Budget results at the same time.

Figure 12: Management Ledger Data

Management Ledger Data							
2017							
	Actual	Aug	Sep	Oct	Nov	Dec	Jan
1	Ending Balance			92716.594	21256.584	22057.562	3736
2	Average Balance			9273.094	2120.334	22058.35	4523
3	Net Interest Margin			-22529.138	-7685.961	-42163.861	-141
2017							
	Budget	Aug	Sep	Oct	Nov	Dec	Jan
1	Ending Balance			139074.89	31884.876	33086.344	5604
2	Average Balance			13909.64	3180.501	33087.525	6785
3	Net Interest Margin			-33793.704	-11528.942	-63245.794	-211

- **Process Cash Flow:** You can select one or multiple Planning Products and run the Cash Flows.
- **Download:** You can select one or multiple Planning Products and download the forecast results in CSV format.

5 Planning Center - User Maps

Administrators can access any planning point in any Initialized or Published Forecast Set, but Planning Users are assigned planning responsibilities for specific Planning Centers. Planning Center - User Maps are used within Forecast Sets to govern which Planning Users can access which Planning Centers.

Planning Center - User Maps support one-to-one or many-to-many forms of mapping. For example, the same planning user can be assigned to multiple Planning Centers, and any Planning Center can be assigned to multiple Planning Users.

You will generally only need one Planning Center - User Map, but you can build and maintain as many maps as you need.

When you define a Forecast Set, one of its required attributes is a Planning Center - User Map. However, if you update a Planning Center - User Map by adding or removing Planning Users or Planning Centers, your changes will immediately affect access to any Forecast Set that uses that map. For information on setting up new user IDs and assigning OFS BSP Planning User privileges, see the [OFS Advanced Analytical Applications Infrastructure User Guide](#).

The remainder of the chapter covers the following topics:

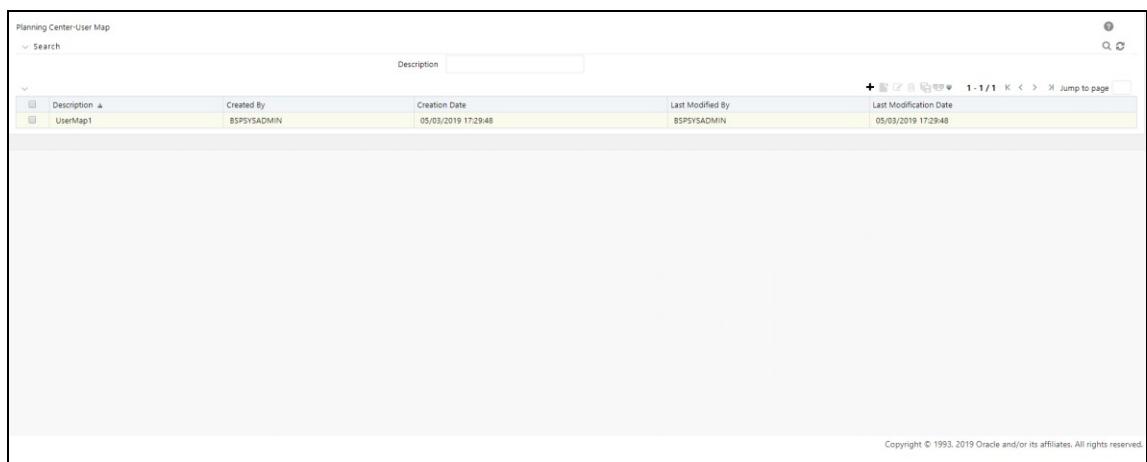

- [Adding a Planning Center User and Mapping](#)
- [Modifying a Planning Center User and Mapping](#)
- [Deleting a Planning Center User and Mapping](#)
- [Copying a Planning Center User and Mapping](#)

5.1 Adding a Planning Center - User Map

To add and map a planning center user:

1. Navigate to **Financial Planning and Forecasting** and select **Planning Center User Map** to display the **Planning Center User Map** window.

Figure 13: Planning Center - User Map window

Description	Created By	Creation Date	Last Modified By	Last Modification Date
UserMap1	BSPYSADMIN	05/03/2019 17:29:48	BSPYSADMIN	05/03/2019 17:29:48

This window displays the user maps that have already been created with the following details:

- Description

- Create By
 - Created Date
 - Last Modified By
 - Last Modification Date
2. To add a new user map, click the **+** icon on the window to display the Planning Center-User Map window.

Figure 14: Planning Center - User Map New Addition window

3. Enter the following details:
- Under the **Map Description** section of the window:
- **Name:** The name of the user map.
 - **Description:** The description for the user map.
- Under the **Map Definition** section of the window:
- **Planning Center:** Click the **+** icon to display the Hierarchy page. Select the planning enter and click the **>** icon to move it to the Selected Members section and then click Ok.
 - **Users:** Click on the  icon to display the Hierarchy page. Select the available user(s) and click the **>** icon to move it to Selected Members section and then click Ok.
4. Click **Save**. This will add the newly created user map to the **Planning Center User Map** page.

5.2 Modifying a Planning Center - User Map

To modify a Panning Center - User Map, follow these steps:

1. Select a User map from the **Planning Center User and Mapping** page and click the  icon the display the **Planning Center-User Map** page.
2. Edit the relevant details and click **Save**.

5.3 Deleting a Planning Center - User Map

To delete a Planning Center - User Map, follow these steps:

3. Select the User map that you want to delete from the **Planning Center User and Mapping** page and then click the  icon to display the **Planning Center-User Map** page.

If the selected User map is having any Child Objects, then you cannot delete the User map. If there are no Child Objects, then proceed to the next step.

4. Click the  icon to delete the selected User map.

5.4 Copying a Planning Center - User Map

To copy a Planning Center - User Map, follow these steps:

5. Select the User map that you want to copy from the **Planning Center User and Mapping** page and then click the  icon to display the Save As page.
6. Enter a Name, Description fields, and then click **Save** to create a copy of the existing definition.

6 Forecast Sets

A Forecast Set constitutes a discrete set of planning data. Each Forecast Set represents a specific Scenario and Version of forecast data for a specified starting date and a specified duration. Examples of Forecast Sets might include:

- 2021 Budget, Working Version 1
- 18 Rolling Forecast as of Oct 2020, Preliminary
- 18 Rolling Forecast as of Oct 2020, Final

You can maintain as many Forecast Sets as you need, but only BSP System Administrators or Published Locked Purged. The process of moving a Forecast Set from one status to the next is described below, but the topic is covered in more detail in Chapter 4: Forecast Set Lifecycle.

6.1 Defined

Forecast Set is defined in outline form including:

- Name, Scenario, and Version
- Starting and ending month
- Source of the current position data that will be used in the Initialization stage
- Other outline details

Once you have saved your outline, the status of the Forecast Set is “Defined”. Since “Defined” Forecast Sets contain no business data, their definitions can be deleted with a simple Delete from the user interface.

6.2 Initialized or Published

In this stage, a Forecast Set has been initialized with current position data and is ready for use. Once a Forecast Set has been Initialized, System Administrators and Planning Administrators can generate and process forecasts but Planning Users can not. To allow access to planning users, administrators must Publish the Forecast Set. Administrators can Publish any Initialized Forecast Set.

Administrators can call re-set any Published Forecast Set back to Initialized. Re-setting a Forecast Set to Initialized revokes planning user access to the Forecast Set.

Note that Initialized or Published Forecast Sets are working sets of forecast data so they may not be deleted.

6.3 Locked

In this status, a Forecast Set is locked and can no longer be updated.

- System Administrators and Planning Administrators can change the status of an Initialized or Published Forecast Set to Locked
- Locking a Forecast Set is a one time, irreversible process
- Locking a Forecast Set prevents any subsequent updating of the forecast

- Locked Forecast Sets can be retained as required
- Locked Forecast Sets can be exported to other planning applications
- Locked Forecast Sets can continue to serve as “Prior Forecast Set” or as “Initialization Forecast Set” for other Forecast Sets
- Only Locked Forecast Sets can be purged from the system

6.4 Purged

When a Forecast Set is purged, its definition and all its related business data have been purged from the system. System Administrators and Planning Administrators can delete Forecast Sets that are in the Locked status

Deleting a Locked Forecast Set:

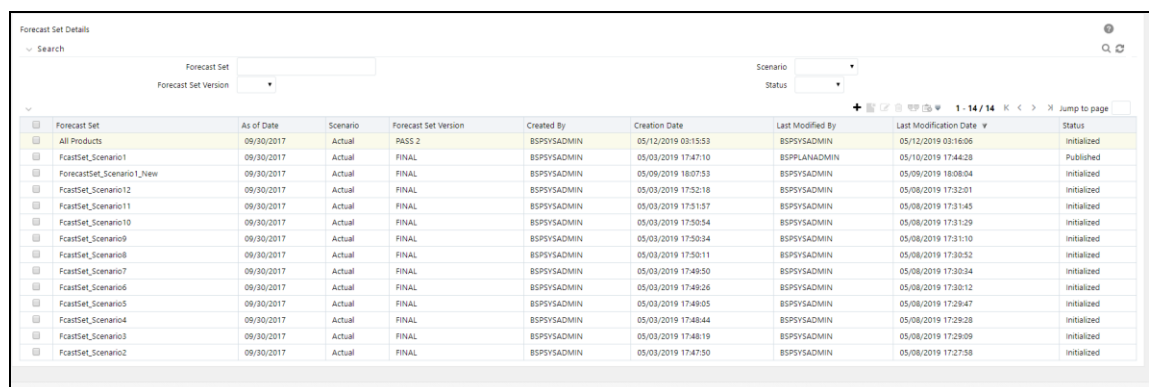

- Deletes the Forecast Set definition
- Deletes all forecast driver data and forecast results for the Forecast Set
- Deletes all the forecasting metadata associated with new business cash flow processing
- Deletes all of the OFSAA Batch jobs associated with the Forecast Set

6.5 Adding a Forecast Set

To add and forecast set, follow these steps:

1. Navigate to **Financial Planning and Forecasting** and select **Forecast Set** to display the **Forecast Set Details** window.

Figure 15: Forecast Set Details window

Forecast Set	As of Date	Scenario	Forecast Set Version	Created By	Creation Date	Last Modified By	Last Modification Date	Status
All Products	09/30/2017	Actual	PASS 2	BSPYSADMIN	05/12/2019 03:15:53	BSPYSADMIN	05/12/2019 03:16:06	Initialized

2. Click the **+** icon to display the Forecast window.

Figure 15: Forecast window

3. Populate the following details:

Under the **Forecast Set Parameters** section of the window:

- a. **Name:** The name of the forecast set.
- b. **Description:** The description for the forecast set.
- c. **Scenario:** Select a relevant scenario from the drop-down list.
- d. **Forecast Set Version:** Select a relevant version for the forecast set from the drop-down list. The versions are user-defined members defined under the bsp_version dimension.
- e. **As of Date:** Auto-populated based on the application preferences. This will be defaulted to the last day of the month. However, you can change the date as required.
- f. **Legal Entity:** Select a relevant legal entity from the hierarchy browser.

Under the **Current Position Data and Modelling Assumptions** section of the window, select relevant values for the following:

NOTE These values will be defined by the BSP system administrator.

- Statis Deterministic Process
- Default Pricing Margin
- Default Maturity Mix

Under the Forecast Set Details section of the window:

- g. **Initialization Forecast Set:** Select a forecast set as a reference. The drop-down list displays the forecast sets that are defined earlier that are with Initialized or Published status. This is used to

select/copy Balance Driver or/and Pricing Margin Driver methods to the current forecast set. You can select any of the forecast sets as a reference here.

- h. **Prior Forecast Set:** Select the previous forecast as a reference. This is for viewing the results of the previous forecast. If you select a forecast set here, then you need to enter the Months of Prior Forecast in the following field. The number of months you enter here determines the number of months you want to see the history data in the detailed planning window.
- i. **Management Ledger:** Select the management ledger from which you want to include the historical data to the forecast set.
- j. **Planning Center-User Map:** Select a relevant planning center-user map from the drop-down list.
- k. **Months of Forecast:** Enter the number of months you want to include in the forecast set.
- l. **Months of Prior Forecast:** Enter the number of months from the prior forecast.
- m. **Months of Management Ledger History:** Enter the number of months from the management ledger history that you want to include in the forecast set.

NOTE

The BSP system/planning administrator should use public folders or shared folders (i.e. provided this folder is shared to all the BSP users) for the selection of hierarchy folders and assumption folders.

4. Click **Save**. This action creates the Forecast Set on the Forecast Set Details screen. The Workflow Status of the newly created Forecast will be set as **Defined**.

6.6 Editing a Forecast Set

To modify a forecast set, follow these steps:

1. Select the forecast set that you want to modify from the **Forecast Set Details** screen and click the  icon.
2. Modify the relevant details and then click **Save**.

NOTE

If the forecast set is already Initialized or Published, then you are allowed to modify some of the fields, not all the details of the forecast set.

6.7 Deleting a Forecast Set

To delete a forecast set, follow these steps:

1. Select the forecast set that you want to delete from the **Forecast Set Details** screen and click the  icon.
2. Click **Yes** after prompted for confirmation. This will delete the selected forecast set from the list.

NOTE

You cannot delete a forecast set that is in Initialized or Published workflow status. To delete an initialized or published forecast set, change the status to Locked.

7 Forecast Set Lifecycle

This chapter describes the lifecycle of the forecast set.

7.1 Initialization Process

The initialization process copies current position runoff results into a Forecast Set from a Static Deterministic Process that the BSP System Administrator has previously built and executed. The Static Deterministic Process that is used as the source is named in the Forecast Set's Definition stage.

7.2 Optional Features

When you Initialize a Forecast Set, you may optionally recover data from a previous Forecast Set. This is the Forecast Set that you have designated as the "Initialization Forecast" set in your Definition step. For example, you might have started with a Forecast Set called "2021 Budget, Version 1" and now want to build a new version called "2021 Budget, Version 2".

When you initialize Version 2 of your 2021 Budget, you might want to recover data from Version 1 of your 2021 Budget. To do this, you would designate "2021 Budget, Version 1" as the "Initialization Forecast Set" when you first define "2021 Budget, Version 2".

NOTE

Only data from months that overlap both Forecast Set can be recovered. Also, note that the first month of the Initialization Forecast Set must be the same or earlier than the first month of the Forecast Set being initialized.

There are also options in terms of what kind of data you might want to recover from the Initialization Forecast Set. The first option is to recover the Balance Driver Methods and/or Pricing Margin Driver Methods. For example, you might want to retain each planning user's preferred form of forecasting new business balances (i.e., New Add, Target End, Target Average, or Growth); or you might want to retain each planning user's preferred form of forecasting new business margins (New Add Rate vs. New Add Spread).

The second option is to recover the actual forecast driver values for New Business Balances and New Business Pricing Margins.

NOTE

- To recover Balance Driver values from an Initialization Forecast, you must also recover the Balance Driver Methods.
- To recover Pricing Margin Driver values from an Initialization Forecast, you must also recover the Pricing Margin Driver Methods.
- Only months that overlap between a new Forecast Set and an older Initialization Forecast Set can be recovered.
- When the new Forecast Set extends in time beyond the older Initialization Forecast Set, values for the last month in the older Forecast Set are copied out to the last month of the new Forecast Set.

In the Forecast Set Lifecycle, each of the Forecast Set goes through four status changes namely Defined, Initialized, Published, and Locked.

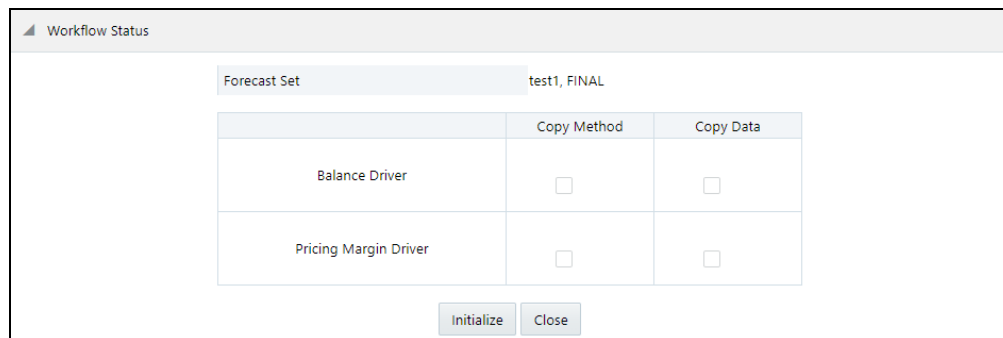

- **Defined:** Once a Forecast set is created and saved, the workflow status of the forecast set will be set to Defined.
- **Initialized:** To change the status to Initialized, select a created Forecast Set from the list and click  icon (Workflow Status) to display the Workflow Status screen.

Figure 16: Workflow Status

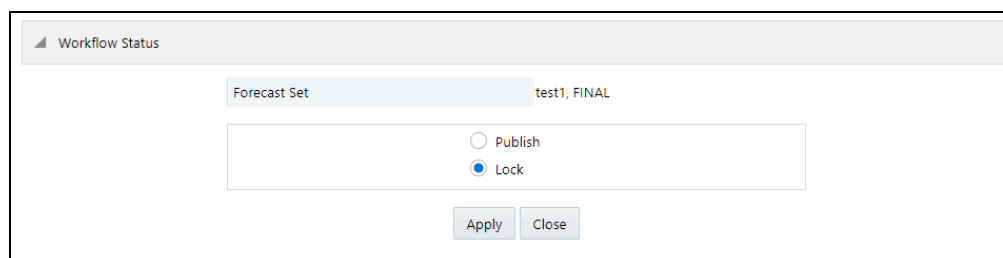

Forecast Set	Copy Method	Copy Data
test1, FINAL	<input type="checkbox"/>	<input type="checkbox"/>
	Balance Driver	<input type="checkbox"/>
	Pricing Margin Driver	<input type="checkbox"/>

Initialize Close

Select the relevant check boxes for Balance Driver and Pricing Margin Driver and click Initialize. This changes the status of the selected Forecast Set to Initialized.

- **Published:** To change the status to Published, select a Forecast set which is in Initialized status and click the icon to display the Workflow Status screen.

Figure 17: Workflow Status

Forecast Set test1, FINAL

Publish

Lock

Apply Close

You can either change the status to Published or Locked.

- **Publish:** If you select Publish, the Forecast set will be ready for the consumption of the planning analyst. The forecast set you selected will be with the status Published on the Forecast Set Details screen. A published forecast set can be un-published by again clicking the Workflow Status icon and selecting the Depublish check box.

This sets the workflow status again to Initialized.

- **Locked:** If the status of a forecast set is Locked, then it cannot be unlocked or edited.

8 Export the Dimension and Forecast Set Cash Flow Results

This feature will enable the user to export the dimensions and forecast set cash flow results. Export is supported for the following dimensions:

- Forecast set
- Forecast set scenario
- Forecast set version
- Legal entity
- Leg type
- Result type
- Financial elements
- Currency
- Planning center
- Planning product

8.1 Configuration File

The configuration file `bsp_forecastset_export.properties` is available under `<FIC_DB>/conf` folder. This file is used for configuring the export properties:

Table 1: Properties of bsp_forecastset_export.properties File

Property Name	Details
ExportFormat	Export files format. The value should be either S or H. S for standard database format and H for Hyperion import format.
ExportFileType	Export files type. The value should be either CSV or TSV.
FilePath	All the exported files will be placed under this path.
MasterResDetailFileName	The file name of the forecast set cash flow results.
MLS_CD	Locale value. Example: US.
ForecastSet	If the value is 'Y' then forecast set definitions will be exported.
Scenario	If the value is 'Y' then scenarios will be exported.
Version	If the value is 'Y' then versions will be exported.
LegalEntity	If the value is 'Y' then legal entities will be exported.
LegType	If the value is 'Y' then leg types will be exported.
ResultType	If the value is 'Y' then result types will be exported.
FinancialElement	If the value is 'Y' then financial elements will be exported.
Currency	If the value is 'Y' then currencies will be exported.

Property Name	Details
PlanningCenter	If the value is 'Y' then planning center hierarchies will be exported.
PlanningProduct	If the value is 'Y' then planning product hierarchies will be exported.
AppendPrefix	If the value is 'Y' then the prefix will be appended to the code or id fields. This property is used only if ExportFormat is H.
ForecastSetPrefix	Prefix value to be appended for forecast set.
ScenarioPrefix	Prefix value to be appended for the scenario.
VersionPrefix	Prefix value to be appended for version.
LegalEntityPrefix	Prefix value to be appended for the legal entity.
LegTypePrefix	Prefix value to be appended for leg type.
ResultTypePrefix	Prefix value to be appended for result type.
FinancialElementPrefix	Prefix value to be appended for the financial element.
PlanningCenterPrefix	Prefix value to be appended for the planning center.
PlanningProductPrefix	Prefix value to be appended for planning Product.

8.2 Export

The shell script file “bsp_forecastset_export.sh” is available under the <FIC_DB>/bin folder. This file can be executed for exporting the dimensions and forecast set cash flow results. This shell script file can be executed directly from the putty session or creating an ICC batch in the application.

8.2.1 Execution from Putty Session

To execute from the Putty session, navigate to <fic_db>/bin folder and execute the following statements

```
./bsp_forecastset_export.sh <infodom name> <forecast_set_id>
```

Example: ./bsp_forecastset_export.sh OFSBSPINFO 200275

Figure 18: Putty screen 1

```

8.2.2 Execution using ICC Batch

To create a batch, follow these steps:

3. Navigate to **Common Object Maintenance**, select **Operations**, and then select **Batch Maintenance** to display the **Batch Maintenance** screen.
4. Click the **Add** icon for adding the new batch definition.

Figure 20: Batch Maintenance window

Send Us Your Comments

Oracle welcomes your comments and suggestions on the quality and usefulness of this publication. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most about this manual?

If you find any errors or have any other suggestions for improvement, indicate the title and part number of the documentation along with the chapter/section/page number (if available) and contact the My Oracle Support.

Before sending us your comments, you might like to ensure that you have the latest version of the document wherein any of your concerns have already been addressed. You can access My Oracle Support site that has all the revised or recently released documents.
