It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 942
- [Upload Request Type](#) on page 943

Parent topic: [Upload Request](#) on page 1403

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the Edit  icon, the Upload Request Type screen appears where you can edit the details of the upload request type.

Column Name	Column Description
Duplicate	On clicking the Duplicate (📄) icon, the Upload Request Type screen appears where you can define an upload request type using an existing upload request type.
Delete	On clicking the Delete (🗑️) icon, you can delete the upload request type.
	Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Mapping	On clicking the Mapping (🔗) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type.

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.

Field Name	Field Description
Status	<p>Indicates the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive
File Size (KB)	<p>Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.</p> <p>Note: This field appears only when you create upload request type using Adjustment Upload Request Type business object.</p>
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note: This field appears only when you create upload request type using Adjustment Upload Request Type business object. It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm. In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p>
Approval Required	<p>Indicates whether approval is required for a file which is uploaded using the upload request type.</p>
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p>

Field Name	Field Description
Approval To Do Role	Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.
	<p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>On selecting the To Do Type, the To Do Roles configured on the To Do Type is populated.</p> <p>It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p>
FK Reference	Indicates the foreign key reference which specifies the created upload request type.
	<p>Note:</p> <p>This field appears only when you create upload request type using Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Foreign Key Reference screen appears with the details of the respective foreign key.</p>

In addition, this section has the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type
	<p>Note: The Match Type column is displayed for Adjustment Upload Request Business Object.</p>
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	<p>Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm. The Algorithm column is displayed for Adjustment Upload Request Business Object.</p>

- **Characteristics** – This section lists the characteristics defined for the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type.
	Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval

- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval
- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when Adjustment Upload Request Type business object is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when Adjustment Upload Request Type business object is selected.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)																						
Entity Business Object	<p>Used to indicate for creating Business Object of the entity using the upload request type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when Upload Request Type business object is selected.</p>	No																						
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No																						
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The following table lists the To Do type using which the To Do must be generated for the different upload requests:</p> <table border="1"> <thead> <tr> <th>Upload Request</th> <th>To Do Type</th> </tr> </thead> <tbody> <tr> <td>Adjustment</td> <td>C1-ADJUP</td> </tr> <tr> <td>Bill Cycle Update</td> <td>C1-BCUUR</td> </tr> <tr> <td>Billable Charge</td> <td>C1-BCUR</td> </tr> <tr> <td>Contract Rider Update</td> <td>C1-CRUUR</td> </tr> <tr> <td>Hold Request</td> <td>C1-HLDUR</td> </tr> <tr> <td>Refund Request</td> <td>C1-REFUR</td> </tr> <tr> <td>Write Off Request</td> <td>C1-WOUR</td> </tr> <tr> <td>Policy Reinstatement</td> <td>C1-RPUR</td> </tr> <tr> <td>Bill Group Sorting</td> <td>C1-BGSRT</td> </tr> <tr> <td>Bill Group Derivation and Pricing Parameters</td> <td>C1-BGDVP</td> </tr> </tbody> </table>	Upload Request	To Do Type	Adjustment	C1-ADJUP	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters	C1-BGDVP	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when Upload Request Type business object is selected.	No

In addition, this section contains the following fields in the grid:

Note: This field appears when **Adjustment Upload Request Type** business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you select the match type from the respective field.

6. Enter the required details.

<p>Note:</p> <p>You can search for an algorithm by clicking the Search (🔍) icon corresponding to the respective field.</p> <p>If you want to associate more than one match type with the upload request type, click the Add (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the Delete (🗑️) icon corresponding to the match type.</p>
--

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 952

Defining a Characteristic for an Upload Request Type**Prerequisites**

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	Note: This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to copy an upload request type	Copying an Upload Request Type on page 956

Editing an Upload Request Type**Prerequisites**

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when the business object is Adjustment Upload Request Type .	
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.	Yes
	<p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate for creating Business Object of the entity using the upload request type.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.	
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type .	

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> • Contract • Contract Type 	Yes (Conditional)
		Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics from the upload request type, if required.

6. Click **Save**.

The changes made to the upload request type are saved.

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 952

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type

- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when the business object is Adjustment Upload Request Type .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	Yes
Entity Business Object	<p>Used to indicate to create the copy of Business Object of the entity using the upload request type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when the business object is Upload Request Type.</p>	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when the Approval Required check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
		Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type .	

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional)
		Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics from the upload request type, if required.
6. Click **Save**.

The new upload request type is defined.

Mapping an Upload Request Type**Prerequisites**

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping** (🔗) icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional) Note: This column is required when you search the Data Records zone in the Upload Request screen.
Use for Searching	Used to indicate whether the defined CSV Column Header is searchable or not. Note: Upto 10 rows can be selected as searchable rows.	Yes (Conditional) Note: This column is required to be selected to be shown in the Data Records zone in the Upload Request screen
Sequence Number	Used to specify the sequence of the searchable fields. Note: Searchable rows should have sequence less than or equal to 10.	Yes (Conditional) Note: This column is required to be selected to be shown sequentially in the Data Records zone in the Upload Request screen

- Enter the required details.

Note: If you want to add more than one column names mapped to the upload request type, click the **Add (+)** icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete (🗑)** icon corresponding to the column header.

- Click **Save**.

The columns are mapped to the CSV files for upload request type.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **U** and then click **Upload Request Type**.

A sub-menu appears.

- In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.

Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

- Click **OK**.

The upload request type is deleted.

Viewing the Upload Request Type Details

Procedure

To view the details of an upload request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **U** and then click **Upload Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Upload Request Type** sub-menu.

The **Upload Request Type** screen appears.

- In the **Upload Request Type List** zone, click the

Broadcast (📡) icon corresponding to the upload request type whose details you want to view.

The **Upload Request Type** zone appears.

- View the details of the upload request type in the **Upload Request Type** zone.

Adjustment Upload Request (Used for Searching)

The **Adjustment Upload Request** screen allows you to search for an adjustment upload request using various search criteria. Through this screen, you can:

- Upload an adjustment data file
- Cancel an adjustment data file
- View the details of an adjustment upload request
- View all adjustment records which are uploaded through an adjustment data file
- Create adjustments for an adjustment data file
- Submit an adjustment data file for approval
- Approve or reject an adjustment data file
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

This screen consists of the following zones:

- [Search Adjustment Upload Request](#) on page 963
- [Adjustment Upload Request](#) on page 971
- [Adjustment Data Records](#) on page 974

Search Adjustment Upload Request

The **Search Adjustment Upload Request** zone allows you to search for an adjustment upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. At present, there is only one query option named **Upload Request**. On selecting the **Upload Request** query option, the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to search adjustment upload requests which are created using a particular upload request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search adjustment upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending For Approval 	No
Upload From Date	Used to search adjustment upload requests which are created from a particular date onwards. Note: By default, the current date appears in this field.	No
To	Used to search adjustment upload requests which are created till a particular date. Note: By default, the current date appears in this field.	No
File Name	Used to search an adjustment upload request which is created while uploading an adjustment data file.	No

Note: You must specify at least one search criterion while searching for an adjustment upload request.

- **Search Results** — On clicking the **Refresh** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the adjustment data file is uploaded in the system.
Upload Request Information	Displays information about the adjustment upload request. Note: It has a link. On clicking the link, the Adjustment Upload Request screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the adjustment upload request.
Upload Request Type	Indicates the upload request type using which the adjustment data file is uploaded in the system.
File Name	Displays the name of the adjustment data file.

You can upload an adjustment data file by clicking the **Upload** link in the upper right corner of this zone.

Searching for an Adjustment Upload Request

Prerequisites

To search for an adjustment upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an adjustment upload request:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Enter the search criteria in the **Search Adjustment Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of adjustment upload requests that meet the search criteria appears in the **Search Results** section.

Uploading an Adjustment Data File

Prerequisites

To upload an adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To upload an adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.
The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.
The **Upload Adjustment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	Note: The list includes only those upload request types which are in the Active status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	Note: You can replace an existing file only when the adjustment upload request is in the Pending or Cancelled status.	
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
7. Browse to the location where the adjustment data file that you want to upload is available.
8. Click **Open**.
The adjustment data file name and path appears in the **File Name** field.
9. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.
	Note: This column appears only when you click the Save button.
Account Identifier Type	Indicates the account identifier type.

Column Name	Column Description
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

10. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.

- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Replacing an Adjustment Data File

Prerequisites

To replace an existing adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To replace an existing adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.
The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Adjustment Upload Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	Note: The list includes only those upload request types which are in the Active status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	Note: You can replace an existing file only when the adjustment upload request is in the Pending or Cancelled status.	

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Select the **Replace Existing File** check box to indicate that you want to replace an existing adjustment data file.
7. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

8. Browse to the location where the adjustment data file that you want to upload is available.
9. Click **Open**.

The adjustment data file name and path appears in the **File Name** field.

10. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.
	Note: This column appears only when you click the Save button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.

Column Name	Column Description
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

11. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Cancelling an Adjustment Data File

There might be situations when incorrect adjustment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel an adjustment data file only when the adjustment upload request is in the **Pending** status.

Prerequisites

To cancel an adjustment data file, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an adjustment data file, you need to specify the reason why you want to cancel the adjustment data file. You can select the appropriate cancellation reason only when you have defined the reasons for the **Cancelled** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

Procedure

To cancel an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to cancel) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to cancel.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Cancel File** in the **Adjustment Upload Request** zone.

The **Cancellation Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancellation Reason	Used to indicate the reason why you want to cancel the adjustment data file.	Yes

Note: The **Cancel File** button appears only when the adjustment upload request is in the **Pending** status.

4. Select the cancellation reason from the list.
5. Click **Save**.

The adjustment data file is cancelled. In addition, the status of the adjustment upload request is changed to **Cancelled**.

Creating Adjustments for an Adjustment Data File

Procedure

To create adjustments for an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file for which you want to create adjustments) in the **Adjustment Upload Request** screen.

- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file for which you want to create adjustments.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- Main** – This tab contains the following two zones:
 - Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

- Click **Create Adjustment** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Create Adjustment** button appears only when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.

Submitting an Adjustment Data File for Approval

Procedure

To submit an adjustment data file for approval:

- Search for the adjustment upload request (which is created while uploading the file that you want to submit for approval) in the **Adjustment Upload Request** screen.

2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to submit for approval.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Submit for Approval** in the **Adjustment Upload Request** zone.

The status of the adjustment upload request is changed to **Pending for Approval**. A To Do is created using the **C1-ADJUP** To Do type. Users having a To Do role to which the **C1-ADJUP** To Do type is associated can view the To Do from the **To Do List** screen. On clicking the **Submitted Message** link corresponding to the To Do, the **Adjustment Upload Request** screen appears where you can review the records of the adjustment data file.

Note:

The **Submit for Approval** button appears only when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.

Approving an Adjustment Data File

Procedure

To approve an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
 4. If the adjustment data file is appropriate, then click **Approve** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Approve** button appears only when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

Rejecting an Adjustment Data File

Prerequisites

To reject an adjustment data file, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an adjustment data file, you need to specify the reason why you want to reject the adjustment data file. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

The system does not allow the submitter to approve or reject the adjustment data file.

Procedure

To reject an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
 4. If the adjustment data file is not appropriate, then click **Reject** in the **Adjustment Upload Request** zone.

The **Rejection Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rejection Reason	Used to indicate the reason why you want to reject the adjustment data file.	Yes

Note:

The **Reject** button appears only when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

5. Select the rejection reason from the list.
6. Click **Save**.

The adjustment data file is rejected. In addition, the status of the adjustment upload request is changed to **Rejected**.

Viewing the Log of an Adjustment Upload Request

Procedure

To view the log of an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.

- **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the adjustment upload request.
Details	Displays the details about the action performed on the adjustment upload request.
User	Indicates the user who has performed the action on the adjustment upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the adjustment upload request.
Status Reason	Indicates the reason why the adjustment upload request was rejected or cancelled.

Note: You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Adding a Log Entry for an Adjustment Upload Request

Procedure

To add a log entry for an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to edit.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the adjustment upload request.	Not applicable
Log Details	Used to specify additional comments on the adjustment upload request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

Chapter 16

Payment Request

Topics:

- [Prerequisites](#)
- [Payment Request \(Without Approval\) Status Transition](#)
- [Payment Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-PaymentRequest](#)
- [Algorithms Used in C1-PaymentTransferRequest](#)
- [Payment Request Type](#)
- [Payment Request \(Used for Searching\)](#)
- [Payment Request \(Used for Viewing\)](#)
- [Payment Event Summary](#)

Oracle Revenue Management and Billing facilitates you to create and transfer payments through a payment request. While creating a payment creation or transfer request, you need to specify the payment request type using which you want to create the payment request. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing the payments

While creating a payment creation request, you need to specify the tender amount and match type details. However, while creating a payment transfer request, you need to specify the transfer amount and match type details. The **Payment Request** feature supports the following match types :

- By Bill Regular (Match Entity: Account)
- By Bill (Match Entity: Bill)
- By Bill Weighted (Match Entity: Account)
- By Bill Segments (Match Entity: Account)
- By Suspense Contract (Match Entity: Account)
- By Settlement ID (Match Entity: Account)

You can specify multiple match types along with the entity (such as account or bill) in the payment request. Depending on the match type and match entity selected, the entities (such as unpaid bills, bill segments, or contracts) of the account are considered against which you can match the tender or transfer (payment) amount. Once you update the payment amount against the required entities, you can distribute the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tender are created. The payments are created in the **Freezable** status. If any error occurs while creating a payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating a new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

The system allows you to view the pay segments of a payment and edit the pay segment amount, if required. You can edit the pay segment amount before submitting the payment request for approval or before freezing the payments. If the approval is not required for the payment request, you can directly freeze the payments created through the payment request. However, if the approval is required for the payment request, you need to submit the payment request for approval. Based on the observations, the approver might approve or reject the payment request. On approving a payment creation request or freezing the payments, the status of the payments is changed from **Freezable** to **Frozen**. However, on approving a payment transfer request or freezing the payments, the system does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

On rejecting a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, on rejecting a payment transfer request, the new payments which are created through the payment transfer request are deleted.

During the payment request process, a payment creation or transfer request goes through various statuses in its lifecycle. For more information about the payment request statuses, see [Payment Request \(Without Approval\) Status Transition](#) on page 986 and [Payment Request \(With Approval\) Status Transition](#) on page 987.

Note that the lifecycle of a payment creation and transfer requests is driven by the respective business object using which the payment creation and transfer requests are created. The **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects are shipped with the product. The payment request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects.

For more information on how to setup the payment request process, see [Prerequisites](#) on page 985.

Prerequisites

To setup the payment request process, you need to do the following:

- Define the following match types:

Match Type	Description	Payment Distribution Override Algorithm	Manual Distribution Algorithm	Entity Type	Match Type Search Zone	Entity Flag
BILLR	By Bill Regular	C1-PDOV-PYBL	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILLW	By Bill Weighted	C1-PDOV-WTBS	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILL-WO	By Bill Weighted Outstanding Amount	C1-PDOV-WTOA		Account	C1_ACCT_SRCH	Bill
BILLSEG	By Bill Segment	C1-PDOV-PYBS	C1-MD-BSEG	Account	C1_ACCTSRCH	Bill Segment
BYSATY	By Suspense Contract	C1-PDOV-SATY	C1-MD-ONSA	Account	C1_ACCTSRCH	Contract
SETT-ID	By Settlement ID	C1-PDOV-PYSL	C1-MD-SID	Account	C1_ACCTSRCH	Settlement
BYBILL	By Bill	C1-PDOV-PYBL or C1-PDOV-WTBS	C1-MDBYBILL	Bill	CI_BILL	Bill
BILL-BS	By Bill - Pay By Bill Segment Oldest	C1-PDOV-BSDT		Account	C1_ACCT_SRCH	Bill

Note: The **C1-PDOV-BSDT** algorithm for the bill match type BILL-BS is used to distribute the amount among the bill segments of the bill in the order of bill segment start date.

Note: The **C1-PDOV-WTOA** algorithm for the bill match type BILL-WOA performs the bill weighted calculation based on the unpaid amount on the bill segment.

- Create a defer algorithm using the **C1-PAY-COUNT** algorithm type
- Define the required payment request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Request Type**
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**
- Define rejected status reasons for the **C1-PaymentRequest** business object
- Define rejected status reasons for the **C1-PaymentTransferRequest** business object
- Define payment cancelation or transfer reasons through the **Payment Cancel Reason** screen

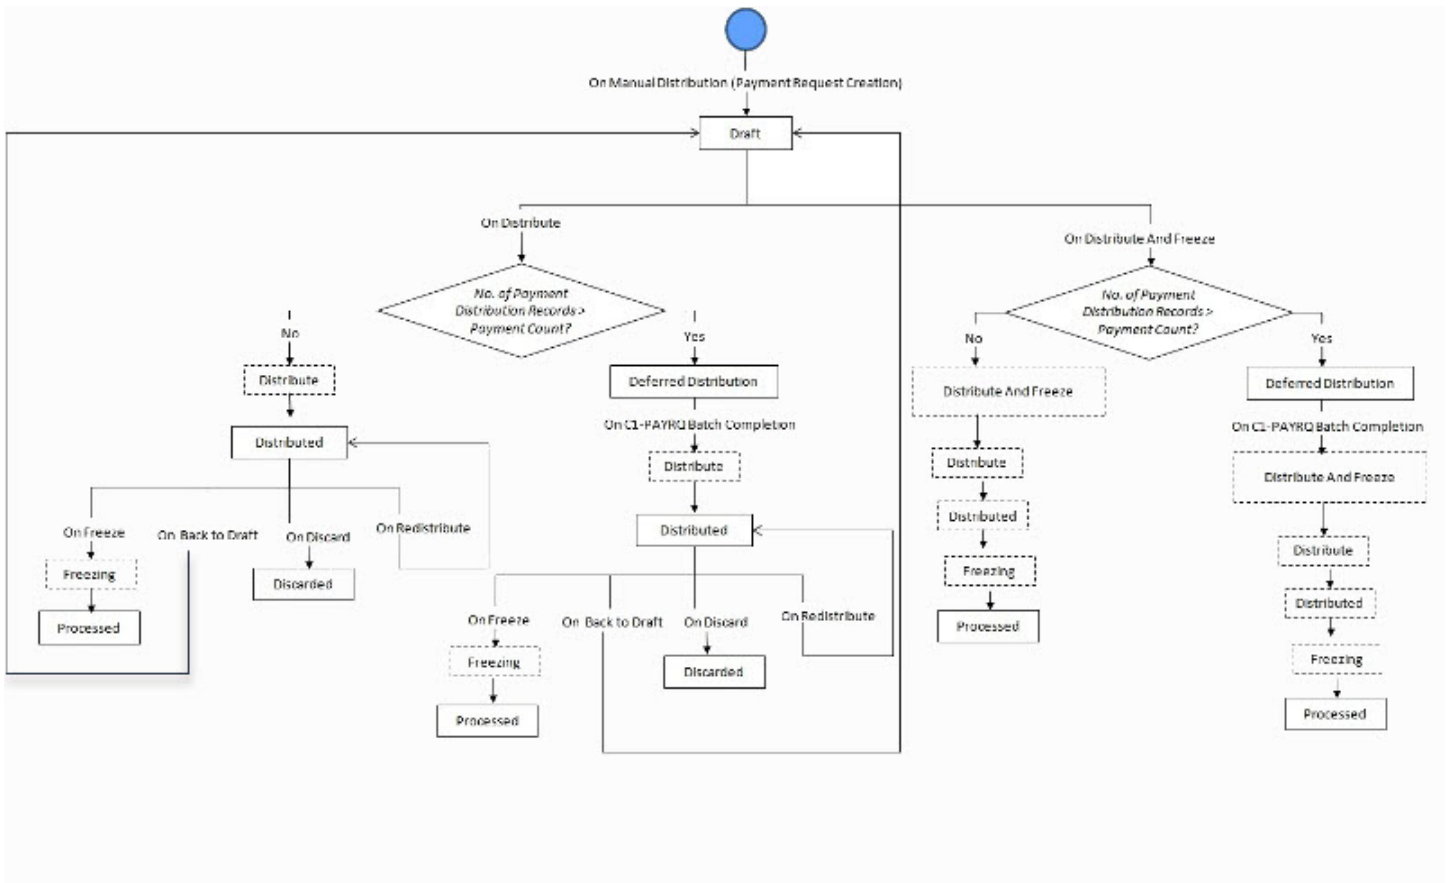

- Assign the **C1-PAYRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a payment request for approval
- Set the **Payment Portal Configuration (C1-PAYPORTAL)** feature configuration
- Set the **Payment Request-Sort Distribution data (C1-PYREQSRT)** feature configuration
- Set the batch control type of the **Payment Request Periodic Monitor (C1-PAYRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Payment Request (Without Approval) Status Transition

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when the approval workflow is off:

Payment Request (With Approval) Status Transition

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when approval workflow is on:

Algorithms Used in C1-PaymentRequest

The following table lists the algorithms which are attached to the **C1-PaymentRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> • Payment Request Type Description • Payment Request Status Description • Payment Request ID
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the C1_PAY_DISTRIBUTION table when you remove a match type while editing a payment request.

System Event	Algorithm	Algorithm Type	Description
Validation	C1-PAYREQVAL	C1-PAYREQVAL	<p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the Generate Auto Pay option is selected. This algorithm is triggered when you click the Manual Distribution button.</p> <p>Note: You do not specify the tender and auto pay details while creating a payment transfer request.</p>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.
Draft	Exit	C1-PAYDFTEXT	C1-PAYDFTEXT	This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the Distribute button.
Approval In Progress	Enter	C1-PAY-PFA	C1-PAY-PFA	This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.
Approval In Progress	Exit	C1-PAYPFAEXT	C1-PAYPFAEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Enter	C1-PAY-APP	C1-PAY-APP	This algorithm changes the status of the payment request to Freezing when the approver clicks the Approve button.
Distribute	Enter	C1-PAY-DIST	C1-PAY-DIST	This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to Distributed . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to Deferred Distribution .
Deferred Distribution	Monitor	C1-PAY-MONT	C1-PAY-MONT	This algorithm is invoked from the Payment Request Periodic Monitor (C1-PAYRQ) batch. It changes the status of the payment request from Deferred Distribution to Distributed .
Distributed	Enter	C1-PAYCREATE	C1-PAYCREATE	This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the C1_PAY_DISTRIBUTION table where the payment amount is greater than or less than zero. The status of the payments is set to Freezable . If any error occurs while creating a payment, the status of the payment is set to Error . The payment event ID is updated corresponding to the payment request in the C1_PAY_REQ table. Finally, the status of the payment request is changed to Distributed .
Distributed	Exit	C1-FRZ-VALID	C1-FRZ-VALID	This algorithm is triggered when you click the Submit for Approval or Freeze button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

Status	System Event	Algorithm	Algorithm Type	Description
Distributed	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Freezing	Enter	C1-PAY-V-FRZ	C1-PAY-V-FRZ	This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.
Freezing	Enter	C1-PAY-FRZ	C1-PAY-FRZ	<p>This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status <p>However, if you are freezing the payments of a payment transfer request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the old payments which are in the Frozen status to Cancelled • Deletes the old payments which are in the Error status • Changes the status of the new payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status
Processed	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Discarded	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Distribute And Freeze	Enter	C1-ISFREEZE	C1-ISFREEZE	This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

Algorithms Used in C1-PaymentTransferRequest

The following table lists the algorithms which are attached to the **C1-PaymentTransferRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> • Payment Request Type Description • Payment Request Status Description • Payment Request ID
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the C1_PAY_DISTRIBUTION table when you remove a match type while editing a payment request.

System Event	Algorithm	Algorithm Type	Description
Validation	C1-PAYREQVAL	C1-PAYREQVAL	<p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the Generate Auto Pay option is selected. This algorithm is triggered when you click the Manual Distribution button.</p> <p>Note: You do not specify the tender and auto pay details while creating a payment transfer request.</p>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentTransferRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.
Draft	Exit	C1-PAYDFTEXT	C1-PAYDFTEXT	This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the Distribute button.
Approval In Progress	Enter	C1-PAY-PFA	C1-PAY-PFA	This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.
Approval In Progress	Exit	C1-PAYPFAEXT	C1-PAYPFAEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Approved	Enter	C1-PAY-APP	C1-PAY-APP	This algorithm changes the status of the payment request to Freezing when the approver clicks the Approve button.
Distribute	Enter	C1-PAY-DIST	C1-PAY-DIST	This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to Distributed . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to Deferred Distribution .
Deferred Distribution	Monitor	C1-PAY-MONT	C1-PAY-MONT	This algorithm is invoked from the Payment Request Periodic Monitor (C1-PAYRQ) batch. It changes the status of the payment request from Deferred Distribution to Distributed .

Status	System Event	Algorithm	Algorithm Type	Description
Distributed	Enter	C1-PAYTRANS	C1-PAYTRANS	This algorithm is invoked when the status of the payment transfer request is changed to Distributed . A payment is created for each record in the C1_PAY_DISTRIBUTION table where the payment amount is greater than or less than zero. The status of the new payments is set to Freezable . If any error occurs while creating a payment, the status of the payment is set to Error . The payment event ID is updated corresponding to the payment request in the C1_PAY_REQ table. Finally, the status of the payment request is changed to Distributed .
Distributed	Exit	C1-FRZ-VALID	C1-FRZ-VALID	This algorithm is triggered when you click the Submit for Approval or Freeze button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.
Distributed	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Freezing	Enter	C1-PAY-V-FRZ	C1-PAY-V-FRZ	This algorithm validates the payment that already exists on the entity. It checks the unpaid amount of the entity.

Status	System Event	Algorithm	Algorithm Type	Description
Freezing	Enter	C1-PAY-FRZ	C1-PAY-FRZ	<p>This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status <p>However, if you are freezing the payments of a payment transfer request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the old payments which are in the Frozen status to Cancelled • Deletes the old payments which are in the Error status • Changes the status of the new payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status
Processed	-	-	-	-
Rejected	Enter	C1-PAY-RJT	C1-PAY-RJT	<p>This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Discarded	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Distribute And Freeze	Enter	C1-ISFREEZE	C1-ISFREEZE	This algorithm invokes the distribute algorithm and set Flag in payment request clob.
Cancel	-	-	-	-

Payment Request Type

Oracle Revenue Management and Billing allows you to define a payment request type using which you can create a payment request. A payment request of the specified payment request type is created when you manually distribute the tender or payment amount. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing payments

The **Payment Request Type** screen allows you to define, edit, copy, and delete a payment request type. This screen consists of the following zones:

- [Payment Request Type List](#) on page 997
- [Payment Request Type](#) on page 998

Payment Request Type List

The **Payment Request Type List** zone lists payment request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Request Type	Displays the payment request type.
Description	Displays the description of the payment request type.
Edit	On clicking the Edit  icon, the Payment Request Type screen appears where you can edit the details of the payment request type.
Duplicate	On clicking the Duplicate  icon, the Payment Request Type screen appears where you can define a payment request type using an existing payment request type.

Column Name	Column Description
Delete	On clicking the Delete (🗑️) icon, you can delete the payment request type.
	Note: You can delete a payment request type only when you have not created a payment request using the payment request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment request type, the **Payment Request Type** zone appears with the details of the respective payment request type.

Payment Request Type

The **Payment Request Type** zone displays the details of the payment request type. This zone contains the following sections:

- **Main** — This section provides basic information about the payment request type. It contains the following fields:

Field Name	Field Description
Payment Request Type	Displays the payment request type.
Payment Request Business Object	Indicates the business object that will be used to create the payment request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the payment request type.
Detailed Description	Displays additional information about the payment request type.
Status	Indicates the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Transfer	Indicates whether the payment request type will be used to create payment transfer or payment creation request.

Field Name	Field Description
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p>
Approval Required	Indicates whether approval is required while freezing payments of the payment requests which are created using the payment request type.
Approval To Do Type	<p>Indicates that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve the payment request submitted for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>

- **Characteristics** — This section lists the characteristics defined for the payment request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment request type.

Button Name	Button Description
Delete	Used to delete the payment request type.
	Note: You can delete a payment request type only when you have not created a payment request using the payment request type.
Duplicate	Used to create a new payment request type using an existing payment request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Payment Request Type** zone does not appear in the **Payment Request Type** screen. It appears only when you click the **Broadcast** () icon corresponding to a payment request type in the **Payment Request Type List** zone.

Defining a Payment Request Type

Prerequisites

To define a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To define a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type Business Object	Used to indicate the business object that you want to use to create the payment request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple payment request type business objects defined in the application. If there is only one payment request type business object defined in the application, the **Payment Request Type** screen appears.

4. Select the required payment request type business object from the respective field.
5. Click **OK**.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. When the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked, the system checks whether there are any payment requests in the Deferred Distribution status. If there is a payment request in the Deferred Distribution status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	<p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

- Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

- Define characteristics for the payment request type, if required.
- Click **Save**.

The payment request type is defined.

How to define a characteristic for a payment request type	Defining a Characteristic for a Payment Request Type on page 1003

Defining a Characteristic for a Payment Request Type

Prerequisites

To define a characteristic for a payment request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Request Type**)

Procedure

To define a characteristic for a payment request type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Request Type .	Note: This field is required when you are defining a characteristic for the payment request type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment request type.

- Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Payment Request Type

Prerequisites

To edit a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To edit a payment request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.
- In the **Payment Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the payment request type whose details you want to edit.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Displays the payment request type.	Not applicable
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. Copying a Payment Request Type

Instead of creating a payment request type from scratch, you can create a new payment request type using an existing payment request type. This is possible through copying a payment request type. On copying a payment request type, the details including the characteristics are copied to the new payment request type. You can then edit the details, if required.

Prerequisites

To copy a payment request type, you should have:

- Payment request type (whose copy you want to create) defined in the application
- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To copy a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request Type** sub-menu.

The **Payment Request Type** screen appears.

- In the **Payment Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the payment request type whose copy you want to create.

The **Payment Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the payment request type.
- Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Deleting a Payment Request Type

Procedure

To delete a payment request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.
- In the **Payment Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the payment request type that you want to delete.
A message appears confirming whether you want to delete the payment request type.

Note: You can delete a payment request type only when you have not created a payment request using the payment request type.

Tip: Alternatively, you can click the **Delete** button in the **Payment Request Type** zone to delete the payment request type.

5. Click **OK**.

The payment request type is deleted.

Payment Request (Used for Searching)

The **Payment Request** screen allows you to search for a payment creation or transfer request using various search criteria. It also allows you to create payment creation and transfer requests. Through this screen, you can navigate to the following screens:

- [Payment Request \(Used for Viewing\)](#) on page 1016

This screen consists of the following zones:

- [Search Payment Request](#) on page 1012

Search Payment Request

The **Search Payment Request** zone allows you to search for a payment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment request using request or payment details. The valid values are: <ul style="list-style-type: none"> • Request Details • Payment Details 	Yes
	Note: By default, the Request Details option is selected.	
On or Before Creation Date/Time	Used to search payment requests which are created till a particular date and time.	No
	Note: By default, the current date and time appears in this field. This field appears only when you select the Request Details option from the Search By list.	
Payment Request Status	Used to search payment requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Discarded • Distribute And Freeze • Distributed • Draft • Processed • Rejected 	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Payment Request Type	Used to search payment requests which are created using a particular payment request type.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
User ID	Used to search payment requests which are created by a particular user.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Payment Request ID	Used to search a particular payment request.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Payment Event ID	Used to search a payment request through which a payment event is created.	No
	Note: This field appears only when you select the Payment Details option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears.	
Payor Account ID	Used to search payment requests which are created for a particular payor account.	No
	Note: This field appears only when you select the Payment Details option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Payor Name	Used to search payment requests which are created for a particular payor.	No
	Note: This field appears only when you select the Payment Details option from the Search By list.	
Payment Date	Used to search payment requests through which payments are created on a particular date.	No
	Note: This field appears only when you select the Payment Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a payment request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the payment request was created in the system.
Payment Request Information	Displays information about the payment request.
	Note: It has a link. On clicking the link, the Payment Request screen appears where you can view the details of the respective payment request.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected
Payment Event Information	Displays information about the payment event which is created through the payment request.
	Note: It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event.
Created By	Indicates the user who has created the payment request.
Payor Account Information	Displays information about the payor's account for which the payment request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Searching for a Payment Request

Prerequisites

To search for a payment request, you should have:

- Payment request types defined in the application

Procedure

To search for a payment request:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Financial** and then click **Payment Request**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request** sub-menu.

The **Payment Request** screen appears.

- Enter the search criteria in the **Search Payment Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment requests that meet the search criteria appears in the **Search Results** section.

Viewing the Payment Request Details

Procedure

To view the details of a payment request:

- Search for the payment request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
 - **Log** – This tab lists the complete trail of actions performed on the payment request.
- View the details of the payment request in the **Payment Request** zone.
 - View the payment distribution records of the payment request in the **Payment Distribution** zone.

Payment Request (Used for Viewing)

Once you create a payment creation or transfer request, the **Payment Request** screen allows you to:

- Edit the details of a payment request
- Edit the payment amount against each entity
- Delete a payment request
- View the details of a payment request
- Distribute the tender or payment amount
- Edit the amount of a payment segment
- Freeze the payments created through a payment request
- Submit a payment request for approval before freezing payments
- Approve or reject a payment request
- View the log of a payment request
- Add a log entry for a payment request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
- **Log** – This tab lists the complete trail of actions performed on the payment request.

Payment Request

The **Payment Request** zone displays the details of the payment request. This zone contains the following sections:

- **Main** — This section provides basic information about the payment request. It contains the following fields:

Field Name	Field Description
Payment Request Information	Displays information about the payment request.
Payment Request Type	Indicates the payment request type using which the payment request is created. Note: It has a link. On clicking the link, the Payment Request Type screen appears where you can view the details of the payment request type.
Payment Request Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected

Field Name	Field Description
Status Reason	Indicates the reason why the payment request is rejected.
	<p>Note:</p> <p>This field appears only when the payment request is in the Rejected status.</p> <p>It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected reason.</p>
Payor Account Information	Displays information about the payor's account for which the payment request is created.
	<p>Note:</p> <p>This field appears only when you are viewing the details of a payment creation request.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Payment Date	Displays the date when the payment event and payments are created.
Payment Event Information	Displays information about the payment event. If you are viewing the details of a payment creation request, this field displays information about the payment event which is created through the payment creation request. However, if you are viewing the details of a payment transfer request, this field displays information about the payment event whose payments you want to transfer.
	<p>Note:</p> <p>This field does not appear when the payment request is in the Rejected status.</p> <p>If you are viewing the details of a payment creation request, this field does not appear when the payment creation request is in the Draft status.</p> <p>It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event.</p>
Transfer Amount	Displays the total payment amount which you want to transfer.
	<p>Note: This field appears only when you are viewing the details of a payment transfer request.</p>
Transfer Reason	Indicates the reason why you want to transfer the payment amount.
	<p>Note: This field appears only when you are viewing the details of a payment transfer request.</p>

- **Tender Details** — This section provides details about the tender used in the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following fields:

Field Name	Field Description
Tender Type	Indicates the type of tender through which the payment was made.
Tender Amount	Displays the tender amount.

Field Name	Field Description
Currency	Indicates the currency in which the payment was made.
Check Number	Displays the check number if the payment is made through check. Note: This field appears only when the tender type is set to Check .
Auto Pay Route Type Code	Indicates when and how automatic payment request of the account is routed to a financial institution. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Auto Pay Source Code	Indicates the financial institution that receives the automatic payment request. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and frozen in the system. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Account Number	Indicates the bank account number through which the automatic payment was made. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Expires On	Displays the date when the tender type will expire. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Name	Displays the name of the person as maintained in the financial institution's system. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.

Field Name	Field Description
Tender Control Information	<p>Displays information about the tender control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: This field appears only when the payment request is in the Distributed, Approval In Progress, Processed , or Rejected status. It has a link. On clicking the link, the Tender Control screen appears where you can view the details of the respective tender control.</p>
Deposit Control Information	<p>Displays information about the deposit control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: This field appears only when the payment request is in the Distributed, Approval In Progress, Processed, or Rejected status. It has a link. On clicking the link, the Deposit Control screen appears where you can view the details of the respective deposit control.</p>
Pay Tender ID	<p>Displays the payment tender ID.</p> <p>Note: This field appears only when the payment request is in the Processed status.</p>
Tender Status	<p>Indicates the current status of the tender. The valid values are:</p> <ul style="list-style-type: none"> Valid Cancelled <p>Note: This field appears only when the payment request is in the Processed status.</p>
MICR ID	Displays the MICR code on the payment.
Ext. Reference ID	Displays the external reference number of the payment on the payment upload interface record.
Person ID	Indicates the person's account ID mentioned in the payment upload interface record.
Name	Indicates the person mentioned in the payment upload interface record.

- **Characteristics** — This section lists the characteristics defined for the payment tender. It appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Match Types** — This section lists the match type details of the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which you want to match the payment.
Match By	Indicates the bill or account (whose entities, such as unpaid bills, unpaid bill segments, settlement IDs, or contracts) must be considered while matching the payment.

- **Payor Account Details** — This section appears only when you are viewing the details of a payment transfer request. It contains the following columns:

Column Name	Column Description
Payor Account Information	Displays information about the payor's account whose payments you want to transfer.

- **Payment Details** — This section appears only when you are viewing the details of a payment transfer request. It contains the **Show Payments** link. On clicking the link, the **Payment** screen appears where you can view the details of the payment that you want to transfer. In case, you want to transfer multiple payments, the **Payment Search** window appears with the list of payments selected for transfer. You can click the individual payment to view the details in the **Payment** screen. The **Show Payments** link does not appear when you are viewing the details of a payment transfer request which is in the **Processed** status. Instead, the following column appears in this section:

Column Name	Column Description
Payment(s)	Displays information about the payment which is cancelled.

- **Record Actions** — This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the payment request.
	Note: The Edit button appears only when the payment request is in the Draft status.
Delete	Used to delete the payment request.
	Note: The Delete button appears only when the payment request is in the Draft status.
Distribute	Used to distribute the tender or payment amount.
	Note: The Distribute button appears only when the payment request is in the Draft status.
Submit for Approval	Used to submit the payment request for approval.
	Note: The Submit for Approval button appears only when: <ul style="list-style-type: none"> • The payment request is in the Distributed status. • The Approval Required check box is selected in the payment request type using which the payment request is created.

Column Name	Column Description
Freeze	Used to freeze the payments which are created through the payment request.
	<p>Note: The Freeze button appears only when:</p> <ul style="list-style-type: none"> The payment request is in the Distributed status. The Approval Required check box is not selected in the payment request type using which the payment request is created.
Approve	Used to approve the payment request.
	<p>Note: The Approve button appears only when:</p> <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request.
Reject	Used to reject the payment request.
	<p>Note: The Reject button appears only when:</p> <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request.
Back to Draft	Used to change the status of the payment request to Draft .
	<p>Note: The Back to Draft button appears only when the payment request is in the Distributed status.</p>
Discard	Used to discard the payment creation or transfer request.
	<p>Note: The Discard button appears only when the payment request is in the Distributed status.</p>
Distribute And Freeze	Used to distribute and freeze the payments at the same time.
	<p>Note: the Distribute And Freeze button appears only when the payment request is in the Draft status.</p>

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Status Date/Time	Displays the date and time when the payment request status is updated
Create Date/Time	Displays the date and time when the payment request is created.

Payment Distribution

The **Payment Distribution** zone lists the payment distribution records of the payment request. This zone contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the payment was matched.
Payee Account ID	Indicates the account for which the payment was made. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Match Value	Indicates the entity (such as bill ID, bill segment ID, contract ID, or settlement ID) against which the payment was matched.
Match Entity	Indicates the type of entity against which the payment was matched. The valid values are: <ul style="list-style-type: none"> • Bill • Bill Segment • Contract • Settlement
Amount	Displays the entity amount. In case of contract, the entity amount would be zero.
Write Off Adjustment Amount	Indicates the amount which is either write up or down when the payment against the bill is within the tolerance limit. Note: The data appears in this column only when the match type is Bill Weighted and the payment amount is within the underpayment or overpayment tolerance limit. This column does not appear when the payment request is in the Draft or Rejected status.
Paid Amount	Displays the amount which is already paid against the entity. Note: This column appears only when the payment request is in the Draft or Rejected status.
Unpaid Amount	Displays the amount which is eligible for payment against the entity. Note: This column appears only when the payment request is in the Draft or Rejected status.
Payment Amount	Displays the payment amount. If the Show Default check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the Show Default check box is selected against a match type while creating the payment request, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where Show Default check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can edit the payment amount, if required.
Payment Currency	Indicates the currency in which the payment was made.

Column Name	Column Description
Payment ID	Displays the payment ID.
	<p>Note:</p> <p>It has a link. On clicking the link, the Payment screen appears with the details of the respective payment.</p> <p>This column does not appear when the payment request is in the Draft or Rejected status.</p>
Payment Status	<p>Indicates the status of the payment. The valid values are:</p> <ul style="list-style-type: none"> • Canceled • Error • Freezable • Frozen • Incomplete
	<p>Note: This column does not appear when the payment request is in the Draft or Rejected status.</p>
Error Message	Indicates the reason why the payment is in the Error status.
	<p>Note: This column does not appear when the payment request is in the Draft or Rejected status.</p>
Detail	On clicking the Detail button, the Edit Payment Segment Amount screen appears where you can edit the payment segment amount.
	<p>Note:</p> <p>This column does not appear when the payment request is in the Draft or Rejected status.</p> <p>The Detail button appears in the Detail column only when:</p> <ul style="list-style-type: none"> • The payment request is in the Distributed or Approval In Progress status • The payment is in the Freezable status. <p>However, a user with the approval To Do role will not be able to edit the payment segment amount.</p>
Redistribute	On clicking the Redistribute button, you can redistribute the payment amount among the payment segments.
	<p>Note:</p> <p>This column appears only when the payment request is in the Distributed or Distribute and Freeze status.</p> <p>The Redistribute button appears in the Redistribute column only when:</p> <ul style="list-style-type: none"> • The payment request is in the Distributed or Approval In Progress status

You can edit the payment amount by clicking the **Update Payment Amount** button in the upper right corner of this zone.

Creating a Payment Creation Request

Prerequisites

To create a payment creation request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is not selected)

Procedure

To create a payment creation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Request**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Request** sub-menu.

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment request. Note: The list includes only those payment request types where the Transfer check box is not selected.	Yes

Tip: Alternatively, you can access the **Select Payment Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request** screen.

4. Select the required payment request type from the respective field.
5. Click **OK**.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request. Note: On specify the account ID, additional information about the account appears corresponding to this field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Payment Date	Used to specify the date when the payment was made.	Yes
	Note: By default, the current date appears in this field.	

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment was made.	Yes
Tender Amount	Used to specify the tender amount.	Yes
Currency	Used to indicate the currency in which the payment was made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and frozen in the system.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Account Number	Used to indicate the bank account number through which the automatic payment was made.	Yes (Conditional) Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Expires On	Used to specify the date when the tender type will expire.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Name	Used to specify the name of the person as maintained in the financial institution's system.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to indicate the person's account ID mentioned in the payment upload interface record.	No
Name	Used to indicate the person mentioned in the payment upload interface record.	No
Tender Control ID	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Tender Control Search window appears.	

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender .	Note: This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	Note: By default, the Show Default check box is selected when you select the match type.	
Entity	<p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> • Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill — Enables you to select the unpaid bill against which you want to match the payment. <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p>	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

6. Enter the required details.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the payment tender, if required.

8. Click **Manual Distribution**.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

Defining a Characteristic for a Payment Tender**Prerequisites**

To define a characteristic for a payment tender, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Tender**)

Procedure

To define a characteristic for a payment tender:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a payment request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender .	Note: This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment tender.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment tender, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment tender, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing the Payment Amount

Procedure

To edit the payment amount against each entity:

- Search for the payment request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

- Click the **Update Payment Amount** button in the upper right corner of the **Payment Distribution** zone.

The **Edit Payment Amount** screen appears. It contains the following two sections:

- Search Criteria** — The **Search Criteria** section allows you to filter the payment distribution records using various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to search the entities which are considered using a particular match type.	Yes
	Note: By default, the All option is selected.	
Entity ID	Used to search entities which belong to a particular account.	Yes
	Note: By default, the All option is selected.	
Match Value	Used to search for a particular entity (such as bill, bill segment, contract, or settlement ID).	No
Sort By	Used to sort entity information as per the match type defined in the C1-PYREQSRT feature configuration.	No

- Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the entity is considered.
Payee Information	Displays information about the account for which the payment was made.
Entity Information	Displays information about the entity against which the payment was matched.
Amount	Displays the entity amount. In case of contract, the entity amount would be zero.
Paid Amount	Displays the amount which is already paid against the entity.
Unpaid Amount	Displays the amount which is eligible for payment against the entity.
Payment Amount	Used to specify the payment amount. Note: If the Allow Overpayment option type of the C1-PAYPORTAL feature configuration is set to true , you can specify the payment amount greater than the unpaid amount. In other words, you can make overpayment against an entity.
Payment Currency	Indicates the currency in which the payment was made.

In addition, the **Search Results** section contains the following fields:

Field Name	Field Description
Total Amount	Displays the tender or transfer amount.
Running Total	Displays the sum of payment amount specified against each entity.
Running Balance	Displays the difference between total amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

Note: Pagination is used to display limited number of records in the **Edit Payment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (), **Previous** (), **Next** (), and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- Modify the payment amount against an entity, if required.

Note: The sum of payment amount should be equal to the tender or transfer (payment) amount.

- Click **Save**.

The changes made to the payment request are saved.

- Click **Close**.

The payment amount is updated in the **Payment Distribution** zone.

Editing a Payment Request

Procedure

To edit a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment request.	Not applicable
Payment Request Type	Indicates the payment request type using which the payment request is created.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request. <div style="border: 1px solid black; padding: 5px;"> <p>Note: On specify the account ID, additional information about the account appears corresponding to this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search screen appears.</p> </div>	Yes
Payment Date	Used to specify the date when the payment was made.	Yes

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment was made.	Yes
Tender Amount	Used to specify the tender amount.	Yes
Currency	Used to indicate the currency in which the payment was made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freed in the system.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Account Number	Used to indicate the bank account number through which the automatic payment was made.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
Expires On	Used to specify the date when the tender type will expire.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Name	Used to specify the name of the person as maintained in the financial institution's system.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No

Field Name	Field Description	Mandatory (Yes or No)
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to indicate the person's account ID mentioned in the payment upload interface record.	No
Name	Used to indicate the person mentioned in the payment upload interface record.	No

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender .	Note: This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	Note: By default, the Show Default check box is selected when you select the match type.	

Field Name	Field Description	Mandatory (Yes or No)
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. Bill — Enables you to select the unpaid bill against which you want to match the payment. 	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

Note: The **Edit** button appears only when the payment request is in the **Draft** status.

- Modify the details of the payment request, if required.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

- Define, edit, or remove characteristics from the payment request, if required.
- Click **Manual Distribution**.

The changes made to the payment request are saved. Depending on the information specified in the **Match Types** section, the entities are listed in the **Payment Distribution** zone. You can edit the payment amount against each entity, if required.

Deleting a Payment Request

Procedure

To delete a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to delete.

The **Payment Request** screen appears.

3. Click the **Delete** button in the **Payment Request** zone.

A message appears confirming whether you want to delete the payment request.

Note: The **Delete** button appears only when the payment request is in the **Draft** status.

4. Click **OK**.

The payment request is deleted.

Distributing the Tender or Payment Amount

Procedure

To distribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute.

The **Payment Request** screen appears.

3. Click the **Distribute** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Freezable** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed, the status of the payment request is changed to **Distributed**.

Note:

The **Distribute** button appears only when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Distributing and Freezing the Tender or Payment Amount

Procedure

To distribute and freeze the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute and freeze.

The **Payment Request** screen appears.

3. Click the **Distribute And Freeze** button in the **Payment Request** zone.

The **Defer** algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the **Defer** algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes and freezes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes and freezes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing and freezing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Frozen** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Frozen** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Frozen** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed and frozen, the status of the payment request is changed to **Processed**.

Note:

The **Distribute And Freeze** button appears only when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Redistributing the Tender or Payment Amount**Procedure**

To redistribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to redistribute.

The **Payment Request** screen appears.

3. In the **Payment Distribution** zone, click the **Redistribute** button in the **Redistribute** column corresponding to the payment distribution whose tender or payment amount you want to redistribute.

The required payment gets redistributed among the account's contracts.

Note: The **Redistribute** button appears only when the payment status is in **Incomplete, Error, or Freezable** status.

Editing the Payment Segment Amount

Before you freeze the payments, the system allows you to edit the pay segment amount of the payments which are in the **Freezable** status. You can edit the amount only when there are multiple pay segments in a payment.

Procedure

To edit the payment segment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Detail** button in the **Payment Distribution** zone.

The **Edit Payment Segment Amount** screen appears. It contains the following fields:

Field Name	Field Description
Payment Event Information	Displays information about the payment event which is created through the payment request.
Payment Information	Displays information about the payment which is created through the payment event.
Payee Account Information	Displays information about the account for which the payment is made.
Match Value	Displays information about the entity against which the payment is matched.
Payment Amount	Displays the total payment amount.
Running Total	Displays the sum of payment amount specified against each pay segment.
Running Balance	Displays the difference between total payment amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

In addition, this section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sr No	Indicates the sequence number of the pay segment.	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Entity Information	Displays information about the entity (such as bill segment or contract) against which the pay segment is created.	Not applicable
Total Amount	Displays the entity amount. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total bill segment amount.	Not applicable
Unpaid Amount	Displays the amount which is eligible for payment. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total unpaid bill segment amount.	Not applicable
Payment Amount	Used to specify the payment amount that you want to distribute against the pay segment. <div style="border: 1px solid black; padding: 5px;"> <p>Note: This field is non-editable when:</p> <ul style="list-style-type: none"> • There is only one pay segment in a payment. • A user with the approval To Do role is reviewing the pay segment amount. </div>	Yes
Payment Currency	Indicates the currency in which the payment was made.	Not applicable
Pay Segment ID	Displays the pay segment ID.	Not applicable

Note:

The **Detail** button appears in the **Detail** column only when:

- The payment request is in the **Distributed** or **Approval In Progress** status
- The payment is in the **Freezable** status.

Pagination is used to display limited number of records in the **Edit Payment Segment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (), **Previous** (), **Next** (), and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

4. Modify the payment amount against a pay segment, if required.

Note: The sum of payment segment amount should be equal to the payment amount.

5. Click **Redistribute**.

The payment amount is redistributed among the pay segments.

Note: The **Redistribute** button is disabled when the **Payment Amount** field is non-editable.

6. Click **Close**.

Freezing Payments Created Through a Payment Request

Procedure

To freeze the payments created through a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose payments you want to freeze.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before freezing the payments.
4. Click the **Freeze** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Freezing the payments created through a payment creation request	The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment request is changed to Processed .
Freezing the payments created through a payment transfer request	The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment request is changed to Processed .

Note:

The **Freeze** button appears only when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is not selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to freeze the payments created through the payment request.

Submitting a Payment Request for Approval

Procedure

To submit a payment request for approval:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to submit for approval.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before submitting the payment request for approval.
4. Click the **Submit for Approval** button in the **Payment Request** zone.

The status of the payment request is changed to **Approval In Progress**. A To Do is created using the **C1-PAYRQ** To Do type. Users having a To Do role to which the **C1-PAYRQ** To Do type is associated can view the To Do from the **To Do List** screen.

Note:

The **Submit for Approval** button appears only when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to submit the payment request for approval.

Approving a Payment Request

You can view the number of payment requests which are pending for approval in the **Payment Request** screen. The approver can review, and accordingly approve or reject the payment request based on the observations.

Note: The system will not allow you to approve or reject a payment request submitted by you.

Procedure

To approve a payment request:

1. Do either of the following:

If you want to	Then
Approve a payment request through the Payment Request screen	<ol style="list-style-type: none"> 1. Search for the payment request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment request which you want to review.
Approve a payment request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-PAYRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the payment request that you want to review.

The **Payment Request** screen appears.

2. Review the payment request details.
3. Click the **Approve** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Approving a payment creation request	The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment request is changed to Processed .
Approving a payment transfer request	The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment request is changed to Processed .

Note: The **Approve** button appears only when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

Rejecting a Payment Request

Prerequisites

To reject a payment request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a payment request, you need to specify the reason why you want to reject the payment request. If you are rejecting a payment creation request, you can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-PaymentRequest** business object in the **Status Reason** screen. However, if you are rejecting a payment transfer request, you can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-PaymentTransferRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment request submitted by you.

Procedure

To reject a payment request:

1. Do either of the following:

If you want to...	Then...
Reject a payment request through the Payment Request screen	<ol style="list-style-type: none"> 1. Search for the payment request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment request which you want to review.
Reject a payment request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List.

If you want to...	Then...
	<p>The To Do Type for User Search window appears.</p> <ol style="list-style-type: none"> <li data-bbox="846 289 1354 321">3. Enter C1-PAYRQ in the To Do Type field. <li data-bbox="846 348 1398 411">4. Click the Search button corresponding to the To Do Type field. <p>The To Do List screen appears.</p> <ol style="list-style-type: none"> <li data-bbox="846 485 1398 548">5. Select the Open option from the Filter by list to view all unassigned To Dos. <li data-bbox="846 575 1398 674">6. Click the link in the Message column corresponding to the To Do of the payment request that you want to review.

The **Payment Request** screen appears.

2. Review the payment request details.
3. If required, you can review the payment segment amount of each payment by clicking the **Detail** button in the **Detail** column corresponding to the payment in the **Payment Distribution** zone.
4. Click the **Reject** button in the **Payment Request** zone.

The **Status Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment request.	Yes

Note: The **Reject** button appears only when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

5. Select the rejection reason from the **Status Reason** list.
6. Click **Save**.

If the approver rejects a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver rejects a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Rejected**.

Related Topics

For more information on...	See...
How to search for a payment request	Searching for a Payment Request on page 1014

Payment Request zone	Payment Request on page 1016

Discarding a Payment Request

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request which you want to discard.
3. Click the **Discard** button in the **Payment Request** zone.

Note:

The **Discard** button appears only when the payment request is in **Distributed** status.

If the approver discards a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver discards a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Discarded**.

Discarding a payment request is similar to rejecting a payment request. However, you can only reject a payment request, when approval workflow is on while creating a payment request but discarding a payment request can be done in both the cases, when the approval workflow is on or off.

Viewing the Log of a Payment Request

Procedure

To view the log of a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
 - **Log** – This tab lists the complete trail of actions performed on the payment request.
3. Click the **Log** tab.

The **Payment Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment request.
Details	Displays the details about the action performed on the payment request.
User	Indicates the user who has performed the action on the payment request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment request.
Status Reason	Indicates the reason why the payment request was rejected.

Note: You can manually add a log entry for the payment request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

Adding a Log Entry for a Payment Request

Procedure

To add a log entry for a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to edit.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
- **Log** – This tab lists the complete trail of actions performed on the payment request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

The **Add Payment Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Log Details	Used to specify additional comments on the payment request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Payment Request Log** zone.

Payment Event Summary

The **Payment Event Summary** screen allows you to search for a payment event using various search criteria. Through this screen, you can:

- View the payments created through a payment event
- View payment segments of a payment
- Transfer one or more payments of a payment event to another payee account
- Cancel a payment event
- Delete a payment event
- Cancel a payment of a payment event
- Delete a payment of a payment event
- Refund a payment which is matched against the suspense or excess credit contract

This screen consists of following zones:

- [Search Payment Event](#) on page 1048
- [Payments](#) on page 1051
- [Payment Segments](#) on page 1053

Search Payment Event

The **Search Payment Event** zone allows you to search for a payment event using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for a payment event using the payor, payment event, tender, or contract details. The valid values are:</p> <ul style="list-style-type: none"> • Payor Account/Payment Event • Tender Details • Suspense/Excess Credit Contract <p>Note: By default, the Payor Account/Payment Event option is selected.</p>	Yes
Payment Event ID	<p>Used to search a particular payment event.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears.</p>	No
Payor Account ID	<p>Used to search payment events which are created for a particular payor account.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p>	No
Payor Name	<p>Used to search payment events which are created for a particular payor.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list.</p>	No
Payment Date	<p>Used to search payment events which are created on a particular date.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list.</p>	No
Tender Type	<p>Used to search payment events where a particular tender type is used.</p> <p>Note: This field appears only when you select the Tender Details option from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Check Number	Used to search a payment event which includes payments made through a particular check.	No
	Note: This field appears only when you select the Tender Details option from the Search By list.	
MICR ID	Used to search payment events which include payments made with a particular MICR code.	No
	Note: This field appears only when you select the Tender Details option from the Search By list.	
Contract ID	Used to search payment events which include payments made against a particular suspense or excess credit contract.	No
	Note: This field appears only when you select the Suspense/ Excess Credit Contract option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Search window appears.	

Note: You must specify at least one search criterion while searching for a payment event.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event Information	Displays additional information about the payment event.
	Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event.
Transfer	On clicking the Transfer button, you can transfer all payments (which are in either Frozen and Error status) of the payment event to another payee account.
	Note: The Transfer button appears only when: <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen or Error status. • There is no payment transfer request which is currently in progress for the payment event.

Column Name	Column Description
Cancel	On clicking the Cancel button, you can cancel all payments (which are in the Frozen status) of the payment event.
	<p>Note: The Cancel button appears only when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen status. • One or more payments of the payment event are not in the Freezable or Error status. • There is no payment transfer request which is currently in progress for the payment event.
Delete	On clicking the Delete button, you can delete the payment event.
	<p>Note: The Delete button appears only when the payments of a payment event are in the Freezable, Error or Incomplete status.</p>
Additional Information	Displays information about the status of the payment event.
Payment Date	Displays the date when the payment was made.
Payor Name	Indicates the person who has made the payment.
	<p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p>
Payor Account ID	Indicates the account which made the payment.
	<p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Tender Amount	Displays the tender amount.
Payment Event ID	Displays the payment event ID.

Payments

The **Payments** zone lists all payments created through the payment event. This zone contains the following columns:

Column Name	Column Description
Payment ID	Displays the payment ID.
	<p>Note: It has a link. On clicking the link, the Payment screen appears with the details of the respective payment.</p>

Column Name	Column Description
Payee Account Information	Displays information about the account for which the payment was made. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Payment Amount	Displays the amount paid through the tender.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment. The valid values are: <ul style="list-style-type: none"> • Incomplete • Error • Freezable • Frozen • Canceled
Match Type	Indicates the match type using which the payment was matched.
Match Value	Indicates the entity (such as bill, bill segment, or contract) against which the payment was matched.
Error Message	Indicates the reason why the payment is in the Error status.
Payor Account ID	Indicates the account which made the payment.
Refund Amount	Displays the amount which is already refunded to the payor account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Transfer	Used to transfer the payment to another payee account.
	Note: You can transfer a payment only when it is in the Frozen or Error status.
Cancel	Used to cancel the payment.
	Note: You can cancel a payment only when it is in the Frozen status.
Delete	Used to delete the payment.
	Note: You can delete a payment only when it is in the Freezable or Error status.
Refund	Used to refund the payment amount to the payor account.
	Note: You can refund the payment amount to the payor account only when: <ul style="list-style-type: none"> • The payment is matched against the suspense or excess credit contract. • The payment is in the Frozen status.

Searching for a Payment Event

Prerequisites

To search for a payment event, you should have:

- Tender types defined in the application

Procedure

To search for a payment event:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.

- From the **Main Menu**, select **Financial** and then click **Payment Event Summary**.

The **Payment Event Summary** screen appears.

- Enter the search criteria in the **Search Payment Event** zone.

Note:

You can search for a payment event and payor account by clicking the **Search** (🔍) icon corresponding to the respective field.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment events that meet the search criteria appears in the **Search Results** section.

Creating a Payment Transfer Request

The system allows you to transfer payments through a payment request. You can transfer all payments or individual payment of a payment event. You can only transfer payments which are in the **Frozen** or **Error** status.

Prerequisites

To create a payment transfer request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is selected)
- Payment cancel reasons defined in the application (where the **Payment Transfer** check box is selected)

Procedure

To create a payment transfer request:

- Search for the payment event (whose payments you want to transfer) in the **Payment Event Summary** screen.
- Do either of the following:

If you want to...	Then...
Transfer all payments of a payment event	<ol style="list-style-type: none"> In the Search Results section, click the Transfer button in the Transfer column corresponding to the payment event whose payments you want to transfer.

If you want to...	Then...
	<p>Note: The Transfer button appears only when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen or Error status. • There is no payment transfer request which is currently in progress for the payment event.
Transfer one or more payments of a payment event	<ol style="list-style-type: none"> 1. In the Search Results section, click the Broadcast () icon corresponding to the payment event whose payments you want to view. The Payments zone appears. 2. Select the check box corresponding to the payments that you want to transfer. 3. Click the Transfer button in the Payments zone. <p>Note: You can transfer a payment only when it is in the Frozen or Error status.</p>

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment request. Note: The list includes only those payment request types where the Transfer check box is selected.	Yes

3. Select the required payment request type from the respective field.
4. Click **OK**.
 - **Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payment Event Information	Displays information about the payment event whose payments you want to transfer.	Not applicable
Transfer Amount	Displays the total payment amount which you want to transfer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Payment Date	Used to specify the date when the payment was transferred.	Yes
	Note: By default, the current date appears in this field.	
Transfer Reason	Used to indicate the reason why you want to transfer the payments.	Yes
	Note: The list includes only those payment cancel reasons where the Payment Transfer check box is selected.	

- **Payor Account Details** — This section contains the following columns:

Column Name	Column Description
Payor Account Information	Displays information about the payor's account whose payments you want to transfer.

- **Payment Details** — This section contains the following columns:

Column Name	Column Description
Payment(s)	Displays information about the payment that you want to transfer.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	Note: By default, the Show Default check box is selected when you select the match type.	
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> • Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill — Enables you to select the unpaid bill against which you want to match the payment. 	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

5. Enter the required details.

Note:

You can search for an entity (such as account or bill) by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑️) icon corresponding to the match type.

6. Click Manual Distribution.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs) do not exist for the payee account.

Canceling a Payment Event**Prerequisites**

To cancel a payment event, you should have:

- Payment cancel reasons defined in the application

Procedure

To cancel a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Cancel** button in the **Cancel** column corresponding to the payment event that you want to cancel.

The **Cancel** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the payment event.	Yes
Bank	Used to indicate the bank which should be charged for the cancellation.	Yes
Bank Account	Used to indicate the bank account which should be charged for the cancellation.	Yes

Note: The **Cancel** button appears only when:

- One or more payments of the payment event are in the **Frozen** status.
- One or more payments of the payment event are not in the **Freezable** or **Error** status.
- There is no payment transfer request which is currently in progress for the payment event.

3. Select the cancel reason, bank, and bank account from the respective fields.

4. Click **OK**.

The payment tender and all payments in the payment event are cancelled.

Deleting a Payment Event

You can delete a payment event only when the payment(s) of the payment event are in the **Freezable**, **Error**, or **Incomplete** status. On deleting a payment event, the payment event, payments, payment segments, and payment tender are deleted.

Procedure

To delete a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the payment event that you want to delete.

A message appears confirming whether you want to delete the payment event.

Note: The **Delete** button appears only when the payments of a payment event are in the **Freezable**, **Error**, or **Incomplete** status.

3. Click **OK**.

The payment event is deleted.

Chapter 17

Account Receivable Central

Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Hold](#)
- [Refund](#)
- [Write Off](#)
- [Dispute](#)
- [Account Receivable Central](#)

The Account Receivable Central is a portal which facilitates user to perform Single/Mass/Cross Currency offset operation for a bill's outstanding amount with another bill or multiple bills. You can also refund/write off amount to the account using refund requests and write off requests respectively.

Account Receivable Central also enables to put bill(s) on hold for the funding purpose. It allows you to have a complete overview of the bills. Based on the search criteria, the system returns a list of bills that meet the search criteria.

Account Receivable Central is used for:

- **Single Offset** - Enables single debit bill to be offset against multiple credit bills in the same currency and vice versa.
- **Mass Offset** - Enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.
- **Cross Currency Offset** - Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa.
- **Hold** - Enables bill(s) to be put on hold fully (the bill outstanding amount) or partially (the bill outstanding amount in partial) for a specific period for funding.
- **Refund** - Enables you to refund amount of credit bill or bill line item (credit bill segment or adjustment) to the account through a refund request.
- **Write Off** - Enables you to write off amount to the account through a write off request.
- **Dispute** - Enables you to dispute amount of credit/debit bill or bill item (credit/debit bill segment or adjustment) to the account through a dispute request.

The bill(s) for offsetting can belong to the same person or multiple persons depending upon the option **Allow Offsetting across Persons** set in the feature configuration **C1-OFFSETREQ** which allows offsetting in the system.

Single Offset

Single Offset enables you to search and add bill to an offset request from the **Account Receivable Central** screen. Single Offset enables single debit bill to be offset against multiple credit bills in the same currency and vice versa. The offset request is created and an offset request ID is generated for the request.

You can search and select credit/debit bills (with outstanding amount) for offsetting belonging to the same or different person. All the selected bills with their outstanding balance are displayed. The display of bills is controlled by **C1-OFFSETREQ** feature configuration. The feature configuration identifies whether offsetting is allowed for bills across persons. To offset bills belonging to different persons, set the **Allow Offsetting Across Persons** option type to **Y**. The bills are displayed having same currency with the default offset amount on the offset request after adding the bills. You can select one or multiple or all the bills displayed and add to the offset request. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request.

Upon adding a bill to the offset request, the default offset amount algorithm **C1-OFST-AMT** configured in the offset request type is invoked. The bills in the offset request are processed based on the logic of oldest bill first. The default offset amount is populated against the selected debit and credit bills. You can also edit the offset amount from the offset request, if required. The offset adjustments for offset requests are created and distributed based on the match type set in the offset distribution algorithm.

You can configure the offset request type to be submitted for offset distribution with or without approval. Upon submitting the offset request for approval, a To Do type is created and sent to the approver for offset request approval. The status of the offset request changes from **Submitted** to **Approval In Progress** in case of offset request with approval and in case of offset request without approval it changes to **Processed**. The approver can either approve or reject the offset request. Once the approver approves the offset request, selected bills are offset and adjustments are created for the bills. The status of the offset request changes from **Approval In Progress** to **Processed**. You can also view the details of the adjustment(s) created. However, if the approver rejects an offset request, a rejection reason should be provided.

A log maintained for offset requests logs complete trail of actions performed on offset request except the actions performed while editing the offset request. On submitting, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type and the **Unapply** button is enabled which cancels the adjustments. Upon cancelling the adjustments, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Note: The **Unapply** button appears only when the offset request is in the **Processed** status

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$1200	—\$800	\$400	Bill 1 amount \$1200 is offset against Bill 2.
Bill 2	—\$1000	\$500	—\$500	From Bill 2, \$500 is offset against from Bill 1.
Bill 3	—\$300	\$300	0	From Bill 3, \$300 is offset against from Bill 1.

Mass Offset

Mass offset functions is similar to single offset, the only difference is that mass offset enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.

Upon selection of a debit/credit bill from **Account Receivable Central**, you can add more credit/debit bill(s) from the search bills result in offset request. You can filter the bills using the **Bill Type** filter on the bill search zone to select debit/credit bills to be added to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

A log maintained for offset requests logs complete trail of actions performed on offset request. Once you submit the offset request, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type. When the offset request status changes to **Processed** adjustments are created and the **Unapply** button is enabled which cancels the adjustments. Upon unapplying the offset request, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$2000	—\$700	\$1300	The Offset amount \$400 is offset against Bill 2.
Bill 2	—\$400	\$400	0	Bill 2 is offset against \$400 from Bill Outstanding amount of Bill 1 i.e. \$2000.
Bill 3	—\$300	\$300	0	Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1600.

Cross Currency Offset

Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa. Cross-currency offset enables you to offset credit/debit bills with different currencies. You can add credit/debit bills to the debit/credit bill added from **Account Receivable Central**. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

The **C1-OFFSUBENT** algorithm validates whether the sum of debit offset amount is equal to sum of credit offset amount for all bills selected in the offset request. After validation, status of the offset request changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type.

Bill Information	Outstanding Amount	Outstanding Amount (in Offset currency)	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$300	\$300	—\$130.1	\$169.9	Outstanding amount \$300 is offset against \$130.1 (£100). (Exchange rate: 1£=1.3\$)
Bill 2	—£100	—\$130.1	\$130.1	0	Outstanding amount £100 (\$130.1) of Bill 2 is offset against \$300 from Bill 1.

Note: In case of multiple exchange rates with same date and different timestamps, the latest timestamp is considered.

Note: The adjustments are created in the currency of the bill.

Hold

Account Receivable Central enables bill(s) to be put on hold which belongs to a person's account or all accounts of a particular person. When a bill is put on hold, specific reason must be specified; no funding related activities can be performed for the specified period.

Funding related activities are put on hold from the start date of the hold request. The hold exists till the hold request release date; however you can also release individual bills.

You can only put bills on hold which has **Completed** status. When a person/account is on hold, all the subsequent bills under them are also on hold irrespective of bill status. You can select the bill amount in a bill to be put on hold i.e. you can put the particular bill on hold with partial or full bill amount.

Hold request type is used to define the hold request. In the hold request type, the **Hold Process** is set to **Funding**, which puts hold on only the funding activities of the selected bill belonging to a person or account.

Refund

Enables you to refund amount of credit bill to account through a refund request. For creating a refund request you need to specify the refund request type using which you want to create the refund request. The refund request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the refund request type, the adjustment type should be defined for creating refund adjustments.

Write Off

Enables you to write off the amount to the account through a write off request. For creating a write off request you need to specify the write off request type. The write off request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the write off request type, the adjustment type should be defined for creating write off adjustments.

Dispute

Enables you to dispute amount of credit/debit bill to an account through a dispute request. For creating a dispute request you need to specify the dispute request type using which you want to create the dispute request. The dispute request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the dispute request type, the adjustment type should be defined for creating dispute adjustments.

Account Receivable Central

The **Account Receivable Central** screen allows you to search for bills using various search criteria. This screen consists of the following zones:

- [Search Bill](#) on page 1066

Through the **Account Receivable Central** screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1117
- [Hold Request \(Used for Viewing\)](#) on page 1358
- [Refund Request](#) on page 1264
- [Write Off Request](#) on page 1297
- [Dispute Request \(Used for Viewing\)](#)

Search Bill

The **Search Bill** zone allows you to search for bills in the **Accounts Receivable Central** screen using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search bills using bill details, using account details or using person details whose account is linked to a particular bill. The valid values are: <ul style="list-style-type: none"> • Person Details • Account Details • Bill Details 	Yes
	Note: By default, the Person Details option is selected.	
Person ID	Used to select the person ID based on which you want to search for bills of a person.	No
	Note: This field appears only when you select the Person Details option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	Note: This field appears only when you select the Person Details option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search for bills of a person.	Yes (Conditional)
	Note: This field appears only when you select the Person Details option from the Search By list.	
Person Identifier	Used to specify the value of the person identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Person Details option from the Search By list.	
Bills on Hold	Used to indicate whether the bill is on hold. The valid values are: <ul style="list-style-type: none"> • No • Yes 	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Balance	Used to search bills with a particular balance amount. The valid values are: <ul style="list-style-type: none"> • Equal to Zero • Greater Than Zero • Less Than Zero • Not Equal to Zero 	No
Pending Bills	Used to indicate whether the bill is pending.	No
Account ID	Used to search for bills of a particular account. Note: This field appears only when you select the Account Details option from the Search By list.	No
Account Identifier Type	Used to specify the account identifier type of the account whose bill you want to search. Note: This field appears only when you select the Account Details option from the Search By list.	No
Account Identifier	Used to select the account identifier based on which you want to search for bills of a particular account. Note: This field appears only when you select the Account Details option from the Search By list.	No
Bill ID	Used to search a particular bill. Note: This field appears only when you select the Bill Details option from the Search By list.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID. Note: This field appears only when you select the Bill Details option from the Search By list.	No
Invoice Currency	Used to search for bills which are billed in a particular currency. Note: This field appears only when you select the Bill Details option from the Search By list.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Bill Outstanding Amount From	Used to search bills with a particular minimum outstanding amount.	

Field Name	Field Description	Mandatory (Yes or No)
To	Used to search bills with a particular maximum outstanding amount.	

Note: You must specify at least one search criterion while searching for a bill when you select the **Person Details** or **Account Details** option from the **Search By** list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Outstanding Amount	Displays the current bill balance amount.
Bill Date	Used to specify the date on which the bill was generated.
Hold Amount	Displays the amount from the bill that is on hold.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. A tool tip appears when you hover over this column corresponding to the bill. It indicates the Current Balance, Excess Payment and Unapplied Payments and their values. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective bill.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears with the details of the respective bill.

This zone contains following buttons:

Button Name	Button Description
Single Offset	Used to add the selected bill with same currency to an offset request.
Mass Offset	Used to add the selected bills with same currency to an offset request.
Cross Currency Offset	Used to add the selected bills with different currency to an offset request.
Hold	Used to add the selected bill to hold request to be put on hold.
Write Off	Used to add the selected bill to a write off request.
Refund	Used to add the selected bill to a refund request.
Dispute	Used to add the selected bill to a dispute request.

Bill Information

The **Bill Information** screen allows you to view detail information of a particular bill.

This screen consists of the following zones:

- [Hold Details](#) on page 1070
- [Offset Details](#) on page 1070
- [Garnishment Details](#) on page 1071
- [Bill Line Items](#) on page 1071

Offset Details

The **Offset Details** zone displays details of the offset request. This zone contains following columns:

Column Name	Column Description
Offset Request Information	Displays additional information about the offset request.
	Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total offset amount.
Creation Mode	Displays the mode of creation for offset request . The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Hold Details

The **Hold Details** zone displays details of the hold request on a bill. This zone contains following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request.
Entity	Displays the type of entity.
Hold Entity	Displays additional information about the bill which is put on hold.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Start Date	Displays the start date of the hold request.
End Date	Displays the end date of the hold request.

Garnishment Details

The **Garnishment Details** zone displays details garnishment details of the offset request. This zone contains following columns:

Column Name	Column Description
Garnishment Contract	Displays additional information about the contract created against the garnishment adjustments. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Garnishment Amount	Displays the total garnishment amount.

Bill Line Items

The **Bill Line Items** zone displays information about the selected bill's bill line item. This zone contains the following fields:

Field Name	Field Description
Bill Line Item	Displays the bill line item (bill segment/adjustment) of the selected bills.
Bill Line Item Information	Displays the information about the bill line item. Note: It has a link. On clicking the link, the Bill Segment screen or Adjustments screen appears with the details of the respective bill line item or adjustments.
Amount	Displays the amount of the bill line item.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Account Receivable Central**.
The **Account Receivable Central** screen appears.

- Enter the search criteria in the **Search Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Note: The wild card search for searching bill in the **Search Bill** zone is applicable only when you select the **Bill Details** option from the **Search By** list.

- Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

Offset Request

Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Prerequisites](#)
- [Offset Request \(Without Approval\) Status Transition](#)
- [Offset Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-OffsetRequest](#)
- [Additional Algorithms Used in Offset Request](#)
- [Offset Request Type](#)
- [Offset Request \(Used for Searching\)](#)
- [Offset Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to offset the credit and debit bills across accounts of the person and/or its hierarchy. However, you can offset bills across person's hierarchy only when the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **Y**.

You can offset a credit bill with a debit bill and vice-versa. You can offset one or more credit bills with one or more debit bills and vice-versa. You can offset the credit and debit bills in the same currency or in the different currencies. The system enables you to offset bills through an offset request. You can create an offset request from the following screens:

- [Account Receivable Central](#) on page 1066
- [Offset Request \(Used for Searching\)](#) on page 1110

You can create the following types of offset request from both the above screens:

- [Single Offset](#) on page 1075
- [Mass Offset](#) on page 1076
- [Cross Currency Offset](#) on page 1079

While creating an offset request, you need to specify an offset request type using which you want to create the offset request. It is the offset request type which helps the system to determine:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustment should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether the transfer or offset adjustments should be created while offsetting bills through an offset request.

In addition, while creating an offset request, you need to specify a primary bill for which you want to create the offset request. A primary bill can be a debit

or credit bill. Once the primary bill is added to an offset request, you can never remove it from the offset request.

Once you specify an offset request type and primary bill, the offset request is created in the **Draft** status. You can then add one or more debit or credit bills in the same or different currencies to the offset request depending on whether you want to create single, mass, or cross currency offset request. These bills are called as secondary bills. You can remove a secondary bill from the offset request when it is in the **Draft** status.

Once both the debit and credit bills are added to an offset request, the default offset amount is calculated for each bill. You can then update the offset amount of a bill, if required. Once the offset amount is specified for each bill, you can submit the offset request. On submitting an offset request, the system checks whether the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type). If the number of financial transactions does not exceed the defer processing count, the system creates the transfer or offset adjustments in the **Frozen** status. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. The batch then creates the transfer or offset adjustments for these offset requests in the **Frozen** status.

You can optionally configure the approval process for the offset request. The approver can either approve or reject an offset request based on the observations. The system also enables you to unapply (i.e. cancel) an offset request. On canceling an offset request, the transfer or offset adjustments created for bills through the offset request are canceled.

An offset request goes through various statuses in its lifecycle. For more information about the offset request statuses, see [Offset Request \(Without Approval\) Status Transition](#) on page 1082 and [Offset Request \(With Approval\) Status Transition](#) on page 1083. Note that the lifecycle of an offset request is driven by business object using which the offset request is created. An offset request business object named **C1-OffsetRequest** is shipped with the product. The offset request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-OffsetRequest** business object.

For more information on how to setup the offset request feature, see [Prerequisites](#) on page 1081.

Single Offset

Single offset means you can offset one credit bill against multiple debit bills and vice-versa in the same currency. For example, the following bills are created for Garry Smith:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
A1	Bill 1	06-18-2018	BS1	10	-\$100	-\$100	-\$20
	Bill 2	06-12-2018	BS2	10	\$30	\$30 (This is because \$20 is already paid.)	\$10
			BS3	20	\$20		
	Bill 3	06-22-2018	BS4	10	\$30	\$30	\$10
	Bill 4	06-28-2018	BS5	20	\$30	\$40	-
			BS6	30	\$10		

The system enables you to offset these bills through a single offset request. While creating a single offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills – Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 - (-\$20)) = (-\$100 + \$20) = -\$80$$

Sum of debit bills' amount which is available for offsetting:

$$((\$30 - \$10) + (\$30 - \$10) + (\$40)) = \$80$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a single offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status. Considering the above example, the system will create the following transfer adjustments for the offset request:

Transfer	Transfer Adjustments
1	<ul style="list-style-type: none"> \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$20 transfer adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2
2	<ul style="list-style-type: none"> \$20 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$20 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
3	<ul style="list-style-type: none"> \$30 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5
4	<ul style="list-style-type: none"> \$10 transfer adjustment is created for Bill 1 and matched to -\$100 bill segment cancellation (BS1) FT 1 -\$10 transfer adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$80 offset adjustment is created for Bill 1 and matched to -\$100 Bill Segment Cancellation (BS1) FT 1
- \$20 offset adjustment is created for Bill 2 and matched to \$30 bill segment (BS2) FT 2
- \$20 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- \$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS5) FT 5
- \$10 offset adjustment is created for Bill 4 and matched to \$10 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [CI-OFST-DIST](#) on page 1087.

You can create a single offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a single offset request, see [Creating an Offset Request](#) on page 1114.

Mass Offset

Mass offset means you can offset one or more credit bills against one or more debit bills and vice-versa in the same currency. For example, the following bills are created for Juliet Hurd:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
A11	Bill 1	01-15-2019	BS1	10	-\$50	-\$100	-
			BS2	20	-\$50		

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
	Bill 2	01-20-2019	BS3	10	-\$50	-\$50	-
	Bill 3	01-18-2019	BS4	10	\$30	\$50	-
			BS5	10	\$20		
A12	Bill 4	01-21-2019	BS6	10	\$30	\$30	-
	Bill 5	01-25-2019	BS7	20	\$30	\$40	-
			BS8	30	\$10		
A13	Bill 6	01-29-2019	BS9	10	\$20	\$20	-

The system enables you to offset these bills through a mass offset request. While creating a mass offset request, you can add the Bill 1 as the primary bill. Once the offset request is created, you can add another credit bill (i.e. Bill 2) and the debit bills – Bill 3, Bill 4, Bill 5, and Bill 6. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

$$(-\$100 + (-\$50)) = (-\$100 - \$50) = -\$150$$

Sum of debit bills' amount which is available for offsetting:

$$(\$50 + \$30 + \$40 + \$20) = \$140$$

The system considers the credit or debit bills' total whichever is less as the default offset amount. In this case, the default offset amount is set to \$140. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a mass offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status. Considering the above example, the system will create the following transfer adjustments for the offset request:

Transfer	Transfer Adjustments
1	<ul style="list-style-type: none"> • \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1 • -\$30 transfer adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4

Transfer	Transfer Adjustments
2	<ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS1) FT 1 • -\$20 transfer adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5
3	<ul style="list-style-type: none"> • \$30 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2 • -\$30 transfer adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6
4	<ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 1 and matched to -\$50 bill segment cancellation (BS2) FT 2 • -\$20 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7
5	<ul style="list-style-type: none"> • \$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$10 transfer adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7
6	<ul style="list-style-type: none"> • \$10 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$10 transfer adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8
7	<ul style="list-style-type: none"> • \$20 transfer adjustment is created for Bill 2 and matched to -\$50 bill segment cancellation (BS3) FT 3 • -\$20 transfer adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS1) FT 1
- \$50 offset adjustment is created for Bill 1 and matched to -\$50 Bill Segment Cancellation (BS2) FT 2
- \$40 offset adjustment is created for Bill 2 and matched to -\$50 Bill Segment Cancellation (BS3) FT 3
- -\$30 offset adjustment is created for Bill 3 and matched to \$30 bill segment (BS4) FT 4
- -\$20 offset adjustment is created for Bill 3 and matched to \$20 bill segment (BS5) FT 5
- -\$30 offset adjustment is created for Bill 4 and matched to \$30 bill segment (BS6) FT 6
- -\$30 offset adjustment is created for Bill 5 and matched to \$30 bill segment (BS7) FT 7
- -\$10 offset adjustment is created for Bill 5 and matched to \$10 bill segment (BS8) FT 8
- -\$20 offset adjustment is created for Bill 6 and matched to \$20 bill segment (BS9) FT 9

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [CI-OFST-DIST](#) on page 1087.

You can create a mass offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a mass offset request, see [Creating an Offset Request](#) on page 1114.

Cross Currency Offset

Cross currency offset means you can offset one credit bill against multiple debit bills and vice-versa in the different currencies. For example, the following bills are created for Mark Forbes:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outstanding Bill Amount	Hold Amount
A1	Bill 1	09-18-2018	BS1	10	-\$250	-\$250	-
	Bill 2	09-12-2018	BS2	10	€10	€30	-
			BS3	20	€20		
	Bill 3	09-22-2018	BS4	10	€50	€50	-
	Bill 4	09-28-2018	BS5	20	€30	€70	-
			BS6	30	€40		

The system enables you to offset these bills through a cross currency offset request. While creating a cross currency offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills – Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. In a cross currency offset request, you can offset the bills which are in the currency different from the primary bill. For example, if you have added a primary bill with credit balance in USD, you can only add the debit bills in the currency other than USD. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

-\$250

Sum of credit bills' amount which is available for offsetting (in offset currency):

-€227

Sum of debit bills' amount which is available for offsetting:

(30€+50€+70€)=€150

Sum of debit bills' amount which is available for offsetting (in offset currency):

\$33+\$55+\$77=\$165

The system considers the credit or debit bills' total (in the primary bill's currency) whichever is less as the default offset amount. In this case, the default offset amount is set to \$165. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a cross currency offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status. Considering the above example, the system will create the following transfer adjustments for the offset request:

Transfer	Transfer Adjustments
1	<ul style="list-style-type: none"> \$11 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€10 transfer adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2
2	<ul style="list-style-type: none"> \$22 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€20 transfer adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3
3	<ul style="list-style-type: none"> \$55 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€50 transfer adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4
4	<ul style="list-style-type: none"> \$33 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€30 transfer adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5
5	<ul style="list-style-type: none"> \$44 transfer adjustment is created for Bill 1 and matched to -\$250 bill segment cancellation (BS1) FT 1 -€40 transfer adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- \$165 offset adjustment is created for Bill 1 and matched to -\$250 Bill Segment Cancellation (BS1) FT 1
- €10 offset adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2
- €20 offset adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3
- €50 offset adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4
- €30 offset adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5
- €40 offset adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see [C1-OFST-DIST](#) on page 1087.

To use the cross currency offset request feature, you need to do the following:

- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.

You can create a cross currency offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a cross currency offset request, see [Creating an Offset Request](#) on page 1114.

Prerequisites

To setup the offset request feature, you need to do the following:

- Define the required offset adjustment types where the **A/P Request Type Code** field is not set to **REFUND**.
- Define a default offset amount algorithm using the **C1-OFST-AMT** algorithm type.
- Assign the **C1-OFSRQ** To Do type to a To Do role whose users must receive a To Do while submitting an offset request for approval.
- Assign the **C1-OFSSB** To Do type to a To Do role whose users must not approve an offset request.
- Define the required offset request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Offset Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Offset Request**.
- Define the values for the **CAN_RSN_CD_FLG** lookup field.
- Set the parameters of the **C1-UPD-FUND**, **C1-DFRUNAPLY**, **C1-WTBS-CRBL**, and **C1-OFST-DIST** algorithms.
- Define the status reasons for the **Rejected** and **Unapplied Offset** statuses of the **C1-OffsetRequest** business object in the **Status Reason** screen.
- Set the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration.
- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.
- Set the batch control type of the **Offset Request Periodic Monitor (C1-OFSRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

C1-OFFST-INF

This algorithm generates the offset request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Offset Request Type Description
2. Offset Request Status Description
3. Offset Request ID

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-OFFSUBENT

This algorithm is invoked when you click the **Submit** button. It validates the following:

- Whether the outstanding amount of the selected bills is not zero
- Whether the selected bills are in the **Complete** status
- Whether the overridden offset amount of a bill is not zero
- Whether the sum of the debit bills' offset amount is equal to the sum of the credit bills' offset amount
- Whether at least one debit and credit bills are selected in the offset request

If the validation is successful, it checks whether the **Approval Required** option is selected in the respective offset request type. If the **Approval Required** option is selected in the respective offset request type, it changes the status of the offset request to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective offset request type, it checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

C1-OFFAPPENT

This algorithm is invoked when the status of the offset request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type which is specified in the respective offset request type. Once a To Do is created, it is assigned to all users with the approval To Do role which is specified in the respective offset request type. In addition, it creates a log entry for the offset request when the To Do is created.

C1-OFFAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role which is specified in the respective offset request type. If so, it allows the approver to approve or reject the offset request. It also ensures that the submitter does not approve or reject the offset request.

C1-OFSAPRENT

This algorithm is invoked when you click the **Approve** button. It checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-OFST-DIST

This algorithm is invoked when the status of the offset request is changed to **Creating Adjustment**. It creates offset adjustments using the adjustment type specified in the offset request and sets the status of the offset adjustments to **Frozen**. If the **Transfer Adjustment** option is selected in the respective offset request type, it creates transfer adjustments in the **Frozen** status.

This algorithm distributes the offset amount of a bill in the following manner:

1. **Internal Offsetting Within Each Bill** - This happens when a bill contains both debit and credit line items. The internal offsetting happens either at the bill segment or contract level depending on the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. If the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BILL** or **SA**, the internal offsetting happens at the contract level. However, if the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BSEG**, the internal offsetting happens at the bill segment level. In the bill, the internal offsetting is done starting from a credit contract with highest payment priority against a debit contract with highest payment priority by creating transfer adjustments. This continues until the sum of credit or debit amount within a bill is exhausted.
2. **Offsetting Across Debit and Credit Bills** - This offsetting is always done from the credit bills to the debit bills with the objective to reduce the debit bill balance. This algorithm checks whether any match event is created for the bill. If so, it creates the offset adjustments against the bill using the existing match event. If there are no match events created for the bill, this algorithm creates match events using the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. It distributes the amount from the credit bill starting with the oldest due date. This continues until the credit bill balance is exhausted.

It contains the following parameters:

- **Match Type** - Used to specify the match type using which you want to distribute the offset amount. You must specify a match type where the payment distribution override algorithm is attached.

Note: If a bill which is offset is partially paid using a match type, this algorithm uses the same match type for offset distribution. However, if no payment is received for a bill which is offset, this algorithm uses the match type which is specified in the **Match Type** parameter for offset distribution.

- **Match Type Entity (Valid Values: BILL, BSEG, SA)** - Used to indicate the entity, such as bill, bill segment, or contract, against which you want to create match event. It is used to create match events for bills which are unpaid. The valid values are:
 - **BILL** - Used when you want to stamp same match event on all financial transactions of the bill.
 - **BSEG** - Used when you want to stamp unique match event on each bill segment or adjustment financial transaction.
 - **SA** - Used when you want to stamp same match event on all financial transactions which are created for the same contract.
- **Credit Bill Distribution Algorithm** - Used to specify an algorithm which helps to create offset adjustments for a credit bill at the bill segment level. This parameter is required when the **Transfer Adjustment** option is not selected in the respective offset request type.

Note: The **C1-WTBS-CRBL** algorithm type is shipped with the product. You can attach an algorithm created using the **C1-WTBS-CRBL** algorithm type to the **Credit Bill Distribution Algorithm** parameter. For more information, see [C1-WTBS-CRBL](#) on page 1089.

C1-UPD-HOLD

This algorithm updates the hold request whenever a bill on hold is offset through an offset request. If the remaining outstanding amount of a bill after offsetting is not zero and is less than the current hold amount, this algorithm updates the hold amount to the current hold amount plus remaining outstanding bill balance. For example, if the original outstanding amount is 80\$, hold amount is 40\$, offset amount is 20\$, then the remaining outstanding amount (i.e. $80\$ - 40\$ - 20\$ = 20\$$) is less than the current hold amount (i.e. 40\$). Therefore, this algorithm updates the hold amount of the bill in the hold request to 60\$ (i.e. $40\$ + 20\$$).

However, if the remaining outstanding amount of a bill after offsetting is zero and the bill is included in any active hold request, the hold end date of the bill in the hold request is changed to the system date.

In both the above scenarios, this algorithm creates a log entry for the offset and hold requests. The bill whose hold details (i.e. either hold amount or hold end date) are updated through the offset request is maintained in its log. Similarly, the old and updated hold amount and hold end date of the bill are maintained in the respective hold request log.

C1-UPD-FUND

If a bill which is offset through an offset request is present in a funding request which is in the **Draft** status, this algorithm updates the funding amount of the bill in the funding request. If entire sum of the funding and garnishment amount of a bill is offset through the offset request, the bill is excluded from the funding request.

It contains the following parameter:

- **Funding Exclusion Reason Code** - Used to indicate the reason why you want to exclude the bill from the funding request. This parameter is mandatory while excluding a bill from a funding request. You must specify a value which is already defined in the **CAN_RSN_CD_FLG** lookup field.

C1-DFRUNAPLY

This algorithm is invoked when you click the **Unapply** button. It checks whether the number of transfer or offset adjustments created through the offset request exceeds the online record process limit defined in this algorithm. If the number of transfer or offset adjustments does not exceed the online record process limit, the system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to **Unapplied Offset**. However, if the number of transfer or offset adjustments exceeds the online record process limit, the system changes the status of the offset request to **Defer Unapplied**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of transfer or offset adjustments you can process in the real time (i.e. immediately).

C1-UNAPOFST

This algorithm is invoked when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is executed. It cancels all transfer or offset adjustments created through the offset request and then changes the status of the offset request to **Unapplied Offset**.

C1-UPDT-FUND

Once the transfer or offset adjustments of a bill are canceled, it checks whether the bill is included in any funding request which is in the **Draft** status. If so, it updates the funding amount of the bill in the respective funding request.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** – Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
 - **F** – Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
 - **C** – Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option only when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Additional Algorithms Used in Offset Request

Besides using the algorithms attached to the lifecycle, the system uses the following algorithms for the **Offset Request** feature:

- [C1-OFST-AMT](#) on page 1089
- [C1-WTBS-CRBL](#) on page 1089

C1-OFST-AMT

This algorithm calculates the default offset amount whenever a bill is added to the offset request. The default offset amount is equal to the sum of outstanding amount of the debit or credit bills whichever is less. For example, if the following bills are added to the offset request:

- Bill 1 (-100\$) where due date is set to 01-01-2018
- Bill 2 (-100\$) where due date is set to 01-01-2019
- Bill 3 (25\$) where due date is set to 01-01-2018
- Bill 4 (25\$) where due date is set to 06-01-2018

In such case, the system sets the default offset amount of Bill 1 to 50\$.

Note: This algorithm does not calculate the default offset amount until both the debit and credit bills are added to the offset request.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** – Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
 - **F** – Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
 - **C** – Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option only when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Offset Request Type

Oracle Revenue Management and Billing allows you to define an offset request type using which you can create an offset request. It is the offset request type which helps the system to determine the following:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustments should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether transfer or offset adjustments should be created while offsetting bills through an offset request.

The **Offset Request Type** screen allows you to define, edit, delete, and copy an offset request type. It contains the following zones:

- [Offset Request Type List](#) on page 1090
- [Offset Request Type](#) on page 1091

Offset Request Type List

The **Offset Request Type List** zone lists the offset request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Edit	On clicking the Edit (✎) icon, the Offset Request Type screen appears where you can edit the details of the offset request type.
Duplicate	On clicking the Duplicate (📄) icon, the Offset Request Type screen appears where you can define a new offset request type using an existing offset request type.

Column Name	Column Description
Delete	On clicking the Delete (🗑️) icon, you can delete the offset request type.
	Note: You can delete an offset request type only when an offset request is not created using the offset request type.

On clicking the **Broadcast** (📡) icon corresponding to an offset request type, the **Offset Request Type** zone appears with the details of the respective offset request type.

How to view the details of an offset request type	Viewing the Offset Request Type Details on page 1109

Offset Request Type

The **Offset Request Type** zone displays the details of the offset request type. It contains the following sections:

- **Main** - Displays basic information about the offset request type. It contains the following fields:

Field Name	Field Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Offset Request Business Object	Indicates the business object using which an offset request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the offset request type.
Status	Indicates the status of the offset request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Adjustment Type	Indicates the adjustment type using which the transfer or offset adjustments should be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Default Offset Amount Algorithm	Indicates the algorithm using which the default offset amount should be calculated while adding a bill in an offset request. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.

Field Name	Field Description
Defer Processing Count	Displays the count which helps to determine whether an offset request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while offsetting bills through an offset request.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type. This field appears only when the Approval Required option is selected.
Approval To Do Role	Indicates that users with the specified To Do role can only approve an offset request which is submitted for approval. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role. This field appears only when the Approval Required option is selected.
Submitter To Do Type	Indicates the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type while defining or editing the offset request type. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates that users with the specified To Do role cannot approve an offset request which is submitted for approval. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.
Bill Search Period	Displays the maximum search period (in days) which is allowed while searching bills in an offset request.
Transfer Adjustment	Indicates whether transfer adjustments should be created while offsetting bills through an offset request.

- **Characteristics** - Lists the characteristics defined for the offset request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request type.
Delete	Used to delete the offset request type. Note: You can delete an offset request type only when an offset request is not created using the offset request type.
Duplicate	Used to create a new offset request type using an existing offset request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Offset Request Type** zone does not appear in the **Offset Request Type** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to an offset request type in the **Offset Request Type List** zone.

Defining an Offset Request Type

Prerequisites

To define an offset request type, you should have:

- Offset request type business objects defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To define an offset request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **O** and then click **Offset Request Type**.

A sub-menu appears.

- Click the **Add** option from the **Offset Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type Business Object	Used to indicate the business object using which you want to create the offset request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple offset request type business objects defined in the application. If there is only one offset request type business object defined in the application, the **Offset Request Type** screen appears.

- Select the required offset request type business object from the respective field.
- Click **OK**.

The **Offset Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the offset request type.
- Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Business Object	Indicates the business object using which you are defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed , Rejected , or Unapplied Offset .	

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	<p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p>	Yes
Default Offset Amount Algorithm	<p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing FT Count	<p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p>	No
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval.</p> <p>Note: The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval.	Yes (Conditional)
	<p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request.	No
	<p>Note: If you do not specify any value, by default, it is set to 30.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. Note: By default, the Transfer Adjustment option is selected. This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type.	No

6. Enter the required details in the **Main** section.
7. Define characteristics for the offset request type, if required.
8. Click **Save**.

The offset request type is defined.

Defining a Characteristic for an Offset Request Type

Prerequisites

To define a characteristic for an offset request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request Type**).

Procedure

To define a characteristic for an offset request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an offset request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request Type .	Note: This field is required when you are defining a characteristic for the offset request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the offset request type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the offset request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the offset request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to copy an offset request type	Copying an Offset Request Type on page 1105

Editing an Offset Request Type

Prerequisites

To edit an offset request type, you should have:

- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To edit an offset request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **O** and then click **Offset Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Offset Request Type** sub-menu.

The **Offset Request Type** screen appears.

4. In the **Offset Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the offset request type whose details you want to edit.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Displays the offset request type.	Not applicable
Business Object	Indicates the business object which is used while defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed, Rejected, or Unapplied Offset .	

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	<p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p>	Yes
Default Offset Amount Algorithm	<p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing FT Count	<p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p>	No
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval.</p> <p>Note: The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval.	Yes (Conditional)
	<p>Note: The list includes only those To Do roles which are associated with the submitter To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request.	No
	<p>Note: If you do not specify any value, by default, it is set to 30.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request.	No
	Note: This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type.	

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Offset Request Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove characteristics from the offset request type, if required.
- Click **Save**.

The changes made to the offset request type are saved.

Deleting an Offset Request Type

Procedure

To delete an offset request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
- In the **Offset Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the offset request type that you want to delete.
A message appears confirming whether you want to delete the offset request type.

Note: You can delete an offset request type only when an offset request is not created using the offset request type.

Tip: Alternatively, you can delete an offset request type by clicking the **Delete** button in the **Offset Request Type** zone.

5. Click **OK**.

The offset request type is deleted.

Copying an Offset Request Type

Instead of creating an offset request type from scratch, you can create a new offset request type using an existing offset request type. This is possible through copying an offset request type. On copying an offset request type, the details including the characteristics are copied to the new offset request type. You can then edit the details, if required.

Prerequisites

To copy an offset request type, you should have:

- Offset request type (whose copy you want to create) defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To copy an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the offset request type whose copy you want to create.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Business Object	Indicates the business object which is used while defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	<p>Used to indicate the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of an offset request type to Inactive when the corresponding offset request is in a status other than Processed, Rejected, or Unapplied Offset.</p>	Yes
Adjustment Type	<p>Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p> <p>You can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Offset Amount Algorithm	<p>Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Offset Amount Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Default Offset Amount Algorithm field.</p> <p>You must specify an algorithm which is created using the C1-OFST-AMT algorithm type in the Default Offset Amount Algorithm field.</p>	Yes
Defer Processing FT Count	<p>Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).</p> <p>Note:</p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Offset Request Periodic Monitor (C1-OFSRQ) batch is invoked. You can configure the Offset Request Periodic Monitor (C1-OFSRQ) batch such that it is executed at regular intervals. For more information about the Offset Request Periodic Monitor (C1-OFSRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If you set the defer processing count to zero (0), the system resets the default value to 50.</p>	No
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit an offset request for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The C1-OFSRQ To Do type is shipped with the product. You can use the C1-OFSRQ To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-OFSSB To Do type is shipped with the product. You can use the C1-OFSSB To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an offset request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request.	No
	Note: If you do not specify any value, by default, it is set to 30 .	
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request.	No
	Note: This impacts the system performance when the match type entity is set to BSEG and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the Transfer Adjustment option is not selected in the respective offset request type.	

Tip: Alternatively, you can copy an offset request type by clicking the **Duplicate** button in the **Offset Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics from the offset request type, if required.
7. Click **Save**.

The new offset request type is defined.

Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to define an offset request. It contains the following zone:

- [Search Offset Request](#) on page 1110

Through this screen, you can navigate to the following screen:

- [Offset Request \(Used for Viewing\)](#) on page 1117

Search Offset Request

The **Search Offset Request** zone allows you to search for an offset request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using the offset request or bill details. The valid values are: <ul style="list-style-type: none"> • Request Details • Bill Details 	Yes
	Note: By default, the Request Details option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Offset Request ID	Used to search a particular offset request.	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Created From	Used to search offset requests which are created from a particular date onwards.	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
User ID	Used to search offset requests which are created by a particular user.	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Created To	Used to search offset requests which are created till a particular date.	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Status	Used to search offset requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset 	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Person ID	Used to search offset requests which include bills of a particular person.	No
	Note: This field appears when the Request Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to search offset requests which are created using a particular offset request type.	No
	Note: This field appears when the Request Details option is selected from the Search By list.	
Account ID	Used to search offset requests which include bills of a particular account.	No
	Note: This field appears when the Request Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.	
Bill ID	Used to search offset requests which include a particular bill.	No
	Note: This field appears when the Bill Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.	
Bill Date From	Used to search offset requests which include bills created from a particular date onwards.	No
	Note: This field appears when the Bill Details option is selected from the Search By list.	
Alternate Bill ID	Used to search offset requests which include a particular bill.	No
	Note: This field appears when the Bill Details option is selected from the Search By list.	
Bill Date To	Used to search offset requests which include bills created till a particular date.	No
	Note: This field appears when the Bill Details option is selected from the Search By list.	

Note: You must specify at least one search criterion while searching for an offset request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the offset request is created.
Offset Request Information	Displays information about the offset request.
	Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total amount which is offset through the offset request.
Status	Indicates the status of the offset request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset
Created By	Indicates the user who has created the offset request.
Creation Mode	Indicates whether the offset request is created manually or automatically. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual
Primary Bill	Indicates the bill for which the offset request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Offset Request

Prerequisites

To search for an offset request, you should have:

- Offset request types defined in the application

Procedure

To search for an offset request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Offset Request**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request** sub-menu.
The **Offset Request** screen appears.
4. Enter the search criteria in the **Search Offset Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of offset requests that meet the search criteria appears in the **Search Results** section.

Creating an Offset Request

Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application
- Bills created in the application

Procedure

To create an offset request:

1. Do either of the following:

If you want to...	Then...
Create a single offset request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone.

If you want to...	Then...
	<ol style="list-style-type: none"> 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a single offset request. 5. Click Single Offset.
Create a mass offset request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a mass offset request. 5. Click Mass Offset.
Create a cross currency offset request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the required bill in the Search Bill zone. 4. In the Search Results section, select the check box corresponding to the bill which you want to offset through a cross currency offset request. 5. Click Cross Currency Offset.
Create a single, mass, or cross currency offset request from the Offset Request screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Offset Request. A sub-menu appears. 3. Click the Add option from the Offset Request sub-menu.

The **Add Offset Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to indicate the offset request type using which you want to create the offset request.	Yes
Bill	Used to indicate the bill which you want to offset through the offset request.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Bill field. On clicking the Search icon, the Bill Search window appears.</p> <p>On specifying the bill, the information about the bill appears corresponding to the Bill field.</p>	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

- Enter the required details in the **Add Offset Request** screen.
- Click **Save**.

The offset request is created in the **Draft** status. The **Offset Request** screen appears where you can view the details of the offset request. By default, the adjustment type specified in the respective offset request type is used while creating the offset request. You can then change the adjustment type, if required.

- Add debit and/or credit bills in the offset request.
- Define characteristics for the offset request, if required.

Offset Request screen	Offset Request (Used for Viewing) on page 1117
Offset Request zone	Offset Request on page 1117

Offset Request (Used for Viewing)

The **Offset Request** screen allows you to:

- View the details of the offset request
- View the debit and credit bills which are added to the offset request
- View the offset or transfer adjustments which are created through the offset request
- Add a debit or credit bill to the offset request
- Edit the details of the offset request
- Define, edit, or remove the characteristics from the offset request
- Edit the offset amount for each debit and credit bill
- Remove a debit or credit bill from the offset request
- Delete the offset request
- Submit the offset request for approval
- Approve or reject the offset request
- Unapply (i.e. cancel) the offset request
- View the log of the offset request
- Add a log entry for the offset request

It consists of the following tabs:

- [Offset Request - Main](#) on page 1117
- [Offset Request - Log](#) on page 1126

Offset Request - Main

The **Main** tab displays information about the offset request. It contains the following zones:

- [Offset Request](#) on page 1117
- [Selected Bills](#) on page 1120
- [Search Bill](#) on page 1121
- [Offset Request Adjustments](#) on page 1126

Offset Request

The **Offset Request** zone displays the details of the offset request. It contains the following sections:

- **Main** - Displays basic information about the offset request. It contains the following fields:

Field Name	Field Description
Offset Request Information	Displays information about the offset request.
Offset Request Type	Indicates the offset request type using which the offset request is created. Note: It has a link. On clicking the link, the Offset Request Type screen appears where you can view the details of the respective offset request type.
Status	Indicates the status of the offset request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Rejected • Processed • Unapplied Offset
Status Reason	Indicates the reason why the offset request is rejected or unapplied (i.e. canceled). Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status reason. This field appears only when the offset request is in the Rejected, Defer Unapplied, or Unapplied Offset status.
Adjustment Type	Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Offset Amount	Displays the total amount which is offset through the offset request.
Comments	Displays additional details specified while rejecting or unapplying (i.e. canceling) the offset request. Note: This field appears only when the offset request is in the Rejected, Defer Unapplied, or Unapplied Offset status.

- **Characteristics** - Lists the characteristics defined for the offset request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the offset request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request.
	Note: The Edit button appears only when the offset request is in the Draft status.
Delete	Used to delete the offset request.
	Note: The Delete button appears only when the offset request is in the Draft status.
Submit	Used to submit the offset request.
	Note: The Submit button appears only when the offset request is in the Draft status.
Approve	Used to approve the offset request.
	Note: The Approve button appears only when: <ul style="list-style-type: none"> • The offset request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the offset request.
Reject	Used to reject the offset request.
	Note: The Reject button appears only when: <ul style="list-style-type: none"> • The offset request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the offset request.
Unapply	Used to unapply (i.e. cancel) the offset request.
	Note: The Unapply button appears only when the offset request is in the Processed status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the offset request status is updated
Create Date/Time	Displays the date and time when the offset request is created.

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the offset request. It contains the following columns:

Column Name	Column Description
Bill Information	Indicates the debit or credit bill which is added to the offset request. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.
Offset Amount	Displays the amount which you want to offset from the debit or credit bill.
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount).
	Note: This column does not appear when the offset request is in the Processed or Unapplied Offset status.
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount.
	Note: This column does not appear when the offset request is in the Processed or Unapplied Offset status.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Bill ID	Displays the bill ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a bill, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

Note: The **Broadcast** () icon appears corresponding to a bill only when the offset request is in the **Processed** or **Unapplied Offset** status.

You can filter the list using various search criteria (such as, **Bill Balance**, **Bill ID**, and **Account ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Search Bill

The bills listed in the **Search Bill** zone varies depending on the following scenarios:

If...	Then...
The single offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y	The Search Bill zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed bills of all accounts of its effective child persons. If the primary bill is a debit bill, it lists credit bills of the main customer and its child persons. However, if the primary bill is a credit bill, it lists debit bills of the main customer and its child persons. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer and its child persons which are in USD.
The single offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N	The Search Bill zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). If the primary bill is a debit bill, it lists credit bills of the main customer. However, if the primary bill is a credit bill, it lists debit bills of the main customer. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer which are in USD.
The mass offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y	The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in USD.
The mass offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N	The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in USD.

If...	Then...
The cross currency offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y	The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the currency different from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in the currency other than USD.
The cross currency offset request is created through the Account Receivable Central screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N	The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). Note that it lists only those debit and credit bills which are in the currency different from the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in the currency other than USD.
The offset request is created through the Offset Request screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to Y	<p>The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer and its child persons which are in USD.</p> <p>Note: This zone lists the debit and credit bills in the currency different from the primary bill only when the Show Cross Currency Bills option is selected.</p>
The offset request is created through the Offset Request screen and the Allow Offsetting Across Persons option type of the C1-OFFSETREQ feature configuration is set to N	<p>The Search Bill zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). It also allows you to filter the bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a completed bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"> • Person Details • Account Details • Bill Details 	Yes
	Note: By default, the Person Details option is selected.	
Person ID	Used to search completed bills of a particular person.	No
	Note: This field appears when the Person Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.	
Bill Date From	Used to search completed bills which are created from a particular date onwards.	Yes
	Note: By default, it is set to a date which is calculated as follows: Bill Date To - Bill Search Period (Specified in Offset Request Type)	
Bills on Hold	Used to indicate whether you want to search completed bills which are partially kept on hold. The valid values are: <ul style="list-style-type: none"> • No • Yes 	No
Bill Date To	Used to search completed bills which are created till a particular date.	Yes
	Note: By default, it is set to the current date.	

Field Name	Field Description	Mandatory (Yes or No)						
Bill Balance	<p>Used to indicate whether you want to search completed bills with a particular balance amount. The valid values are:</p> <ul style="list-style-type: none"> • Equal to Zero • Greater Than Zero • Less Than Zero • Not Equal to Zero <p>Note:</p> <p>If a single or cross currency offset request is created through the Account Receivable Central screen, this field is disabled, and by default, it is set to the following:</p> <table border="1"> <thead> <tr> <th>If the primary bill is a...</th> <th>Then, it is set to...</th> </tr> </thead> <tbody> <tr> <td>Credit Bill</td> <td>Greater Than Zero</td> </tr> <tr> <td>Debit Bill</td> <td>Less Than Zero</td> </tr> </tbody> </table>	If the primary bill is a...	Then, it is set to...	Credit Bill	Greater Than Zero	Debit Bill	Less Than Zero	No
If the primary bill is a...	Then, it is set to...							
Credit Bill	Greater Than Zero							
Debit Bill	Less Than Zero							
Show Cross Currency Bills	<p>Used to indicate whether you want to search completed bills in the currencies different from the primary bill.</p> <p>Note:</p> <p>This option is disabled when a single or cross currency offset request is created through the Account Receivable Central screen.</p> <p>By default, this option is selected when a cross currency offset request is created through the Account Receivable Central screen.</p>	No						
Account ID	<p>Used to search completed bills which created for a particular account.</p> <p>Note:</p> <p>This field appears when the Account Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.</p>	Yes						

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search a particular completed bill. Note: This field appears when the Bill Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Display information about the completed debit or credit bill. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Due Date	Displays the date when the debit or credit bill is due for payment.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. Note: This column appears only when the offset request is a cross-currency offset request.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the offset request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the offset request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the offset request.

Adding a Debit or Credit Bill to an Offset Request

Prerequisites

To add a debit or credit bill to an offset request, you should have:

- Completed bills for accounts of the main customer (whose bill is added as the primary bill in the offset request)
- Completed bills for effective child persons of the main customer (whose bill is added as the primary bill in the offset request)
- The **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration set to **Y** or **N** based on the business requirements

Procedure

To add a debit or credit bill to an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

- Ensure that the **Main** tab is selected.
- Enter the search criteria in the **Search Bill** zone.

Note:

The **Search Bill** zone appears only when the offset request is in the **Draft** status.

The date range specified in the **Bill Date From** and **Bill Date To** fields should not exceed the number of days specified in the **Bill Search Period** field of the respective offset request type.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of completed bills that meet the search criteria appears in the **Search Results** section.

6. Select the check box corresponding to a completed bill that you want to add to the offset request.
7. Click the **Add** button in the **Search Bill** zone.

A message appears indicating that the bill is added to the offset request.

Note: You can only add a completed bill to an offset request when its outstanding amount is not equal to zero.

8. Click **OK**.

The completed bill is added to the offset request. You can view the completed bills which are added to the offset request in the **Selected Bills** zone.

Note: The default offset amount is calculated for each bill using the algorithm which is attached in the respective offset request type. For more information on how the default offset amount is calculated, see [CI-OFST-AMT](#) on page 1089.

Editing an Offset Request

Prerequisites

To edit an offset request, you should have:

- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the offset request.
- **Characteristics** - Used to define characteristics for the offset request.
- **Offset Details** - Used to edit the offset amount of the bills which are added to the offset request. It also allows you to remove a bill from the offset request.

Note: You can only remove secondary debit or credit bills from the offset request. And, you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Information	Displays information about the offset request.	Not applicable
Offset Request Type	Indicates the offset request type using which the offset request is created.	Not applicable
Adjustment Type	Used to indicate the adjustment type using which transfer or offset adjustments must be created through the offset request. Note: The Search (🔍) icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.	Yes
Comments	Used to specify additional information about the offset request.	No

Note: The **Edit** button appears only when the offset request is in the **Draft** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the offset request, if required.
7. Edit the offset amount of a debit or credit bill, if required.
8. Remove a debit or credit bill from the offset request, if required.
9. Click **Save**.

The changes made to the offset request are saved.

Defining a Characteristic for an Offset Request

Prerequisites

To define a characteristic for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

Procedure

To define a characteristic for an offset request:

1. Ensure that the **Characteristics** section is expanded when you are editing an offset request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the offset request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the offset request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the offset request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the offset request, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the offset request.

Editing the Offset Amount of a Debit or Credit Bill**Prerequisites**

To edit the offset amount of a debit or credit bill, you should have:

- Required debit or credit bill added in the offset request

Procedure

To edit the offset amount of a debit or credit bill:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.

The **Offset Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Total Debit Offset Amount	Displays the total offset amount of all debit bills which are included in the offset request.	Not applicable
Total Credit Offset Amount	Displays the total offset amount of all credit bills which are included in the offset request.	Not applicable
Total Offset Amount	Displays the sum of the total debit and credit offset amount.	Not applicable

In addition, this section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Indicates the debit or credit bill which is added to the offset request.	Not applicable
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.	Not applicable
Due Date	Displays the date when the debit or credit bill is due for payment.	Not applicable
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.	Not applicable
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. Note: This field appears only when the offset request is a cross-currency offset request.	Not applicable
Offset Amount	Used to specify the amount which you want to offset from the debit or credit bill.	Yes
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount).	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount.	Not applicable

The **Delete** () icon appears corresponding to the secondary debit or credit bills in the **Offset Details** section. It allows you to remove the respective bill from the offset request.

2. Modify the offset amount of the required debit or credit bill in the **Offset Details** section.
3. Click **Save**.

The changes made to the offset request are saved.

Removing a Debit or Credit Bill from an Offset Request

Procedure

To remove a debit or credit bill from an offset request:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.
2. Click the **Delete** () icon corresponding to the debit or credit bill that you want to remove from the offset request.

A message appears confirming whether you want to delete the bill.

Note: The **Delete** () icon appears corresponding to the secondary debit or credit bills. It does not appear corresponding to the primary debit or credit bill. This is because you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

3. Click **OK**.

The debit or credit bill is removed from the offset request.

Deleting an Offset Request

Procedure

To delete an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to delete.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Offset Request** zone.

A message appears confirming whether you want to delete the offset request.

Note: The **Delete** button appears only when the offset request is in the **Draft** status.

5. Click **OK**.

The offset request is deleted.

Submitting an Offset Request

Prerequisites

To submit an offset request, you should have:

- At least one debit and credit bills added to the offset request
- Offset amount of each bill not equal to zero
- Total debit offset amount equal to total credit offset amount in the offset request
- Negative offset amount for each debit bill and positive offset amount for each credit bill
- Offset amount less than or equal to the current outstanding amount of the bill

Procedure

To submit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to submit.

The **Offset Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Offset Request** zone.

The system behaves in the following manner:

If...	Then
The Approval Required option is selected in the respective offset request type	A To Do of the C1-OFSRQ To Do type is created and sent to the approver. The status of the offset request is then changed to Approval In Progress .

Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

Note: The system will not allow you to approve or reject an offset request submitted by you.

Prerequisites

To approve an offset request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an offset request:

1. Do either of the following:

If you want to...	Then...
Approve an offset request through the Offset Request screen	<ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review.
Approve an offset request through the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFSRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review.

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is accurate, click the **Approve** button in the **Offset Request** zone.

The system behaves in the following manner:

If...	Then
<p>The number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type)</p>	<p>The status of the offset request is changed to Deferred Processing. Rejecting an Offset Request

Prerequisites

To reject an offset request, you should have:

- Reasons defined for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve or reject an offset request submitted by you.

Procedure

To reject an offset request:

1. Do either of the following:

If you want to...	Then...
Reject an offset request through the Offset Request screen	<ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review.
Reject an offset request through the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFSRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review.

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is incorrect, click the **Reject** button in the **Offset Request** zone.

The **Reject Offset Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the offset request.	Yes
Comments	Used to specify additional information while rejecting the offset request.	No

Note: The **Reject** button appears only when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

4. Select the reason for rejecting the offset request from the **Status Reason** list.
5. Click **Save**.

The status of the offset request is changed to **Rejected**.

Related Topics

For more information on...	See...
How to search for an offset request	Searching for an Offset Request on page 1113

Unapplying an Offset Request

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply (i.e. cancel) the offset request. However, note that you can cancel an offset request only when the offset request is in the **Processed** status.

Prerequisites

To cancel an offset request, you should have:

- Reasons defined for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Procedure

To cancel an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to cancel.

The **Offset Request** screen appears.

- Click the **Unapply** button in the **Offset Request** zone.

The **Unapply Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Unapply Reason	Used to indicate the reason why you want to cancel the offset request.	Yes
Comments	Used to specify additional information while canceling the offset request.	No

Note: The **Unapply** button appears only when the offset request is in the **Processed** status.

- Select the reason for canceling the offset request from the **Unapply Reason** list.
- Click **Save**.

The system behaves in the following manner:

If...	Then...
The number of transfer or offset adjustments does not exceed the online record process limit (which is defined in the C1-DFRUNAPLY algorithm)	The system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to Unapplied Offset .

If...	Then...
The number of transfer or offset adjustments exceeds the online record process limit (which is defined in the C1-DFRUNAPLY algorithm)	The system changes the status of the offset request to Defer Unapplied . On executing the Offset Request Periodic Monitor (C1-OFSRQ) batch, the system considers the offset requests which are in the Defer Unapplied status. The system then cancels the frozen transfer or offset adjustments of the offset request and changes the status of the offset request to Unapplied Offset .

Adding a Log Entry for an Offset Request

Procedure

To add a log entry for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request for which you want to add a log entry.

The **Offset Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the offset request.	Not applicable
Log Details	Used to specify additional comments on the offset request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Offset Request Log** zone.

Chapter 19

Funding Request

Topics:

- [Prerequisites](#)
- [Funding Request \(Without Approval\) Status Transition](#)
- [Funding Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-FundingReq](#)
- [Funding Request Type](#)
- [Funding Request \(Used for Searching\)](#)
- [Funding Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI_BILL_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.

- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.
- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

Note: The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

Bill Type	Funding Amount for the Bill
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in the funding request)

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic**

Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see [Prerequisites](#) on page 1146.

Prerequisites

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN_RSN_CD_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

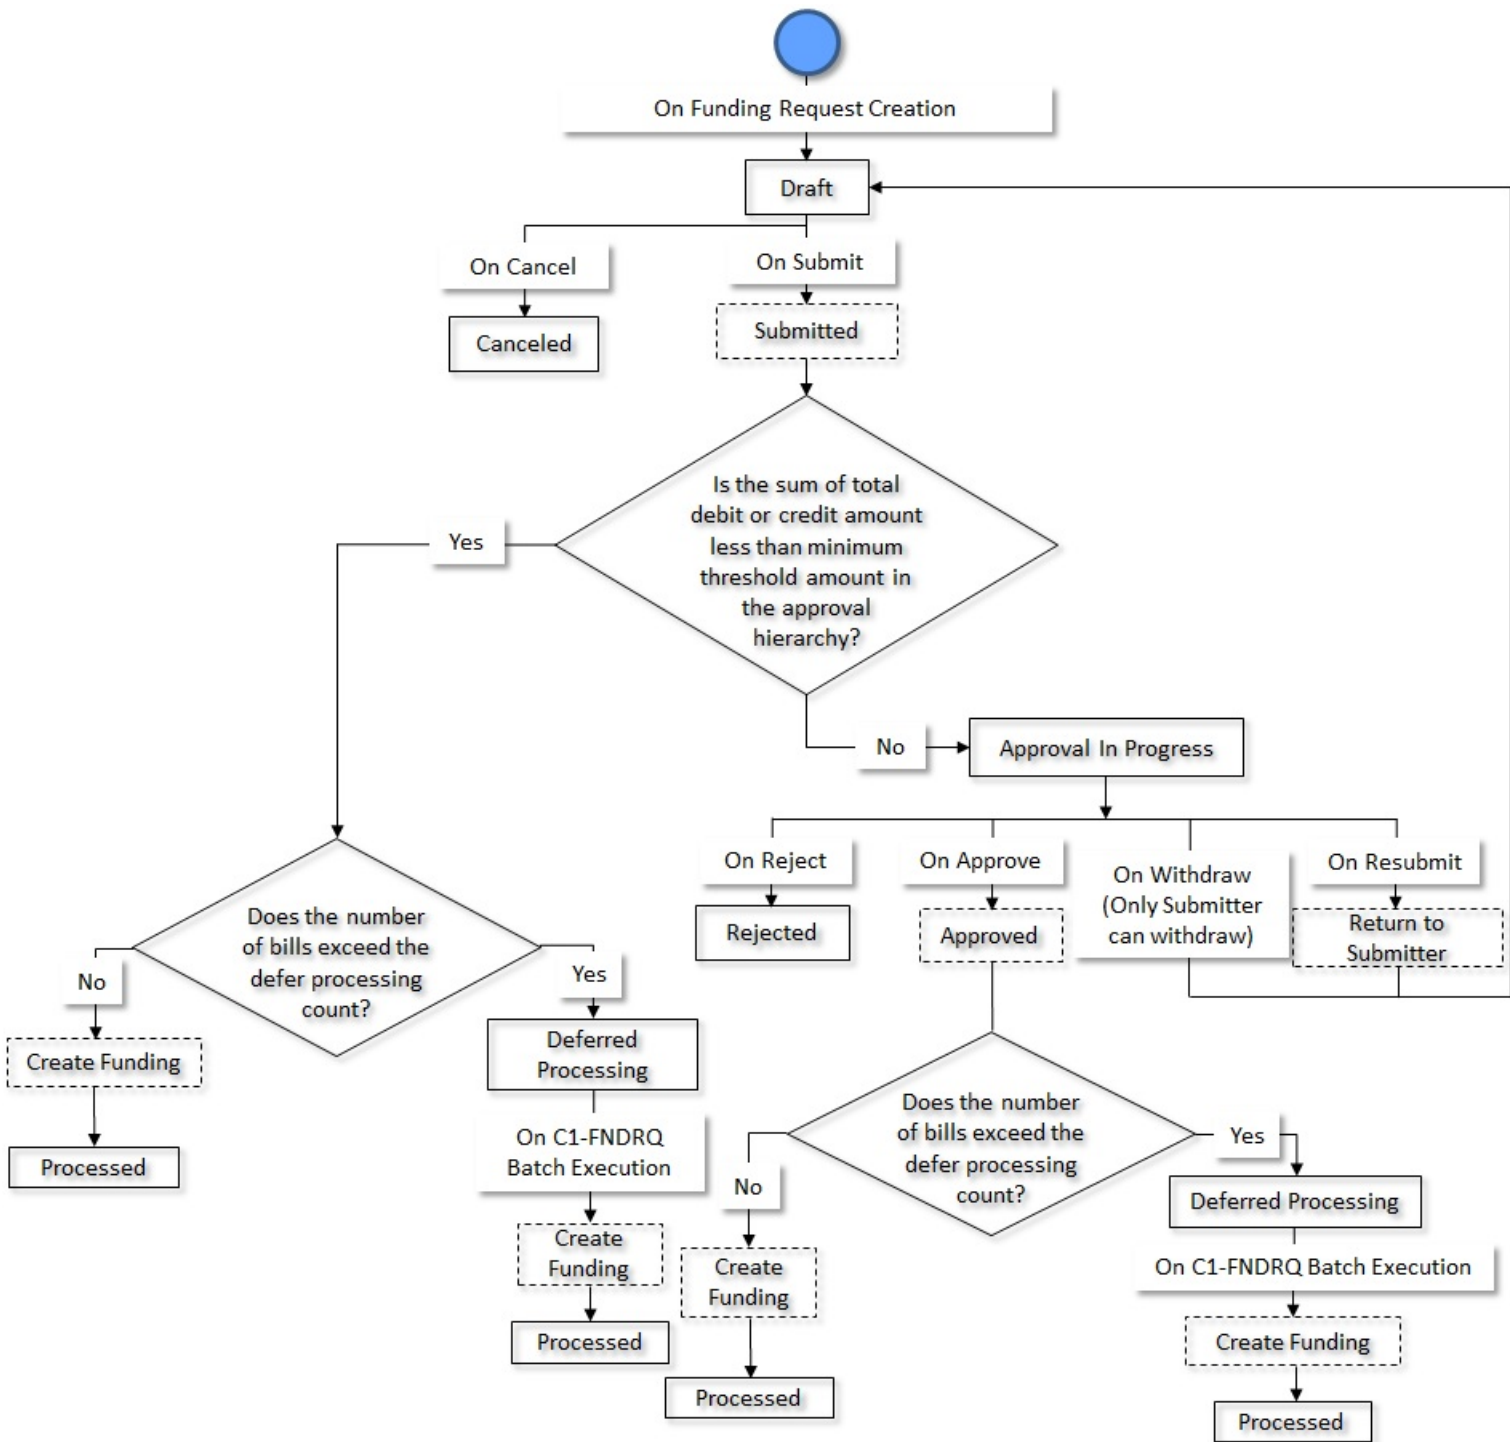

Funding Request (Without Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is not configured in the funding request type:

Funding Request (With Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is configured in the funding request type:

Algorithms Used in C1-FundingReq

The following table lists the algorithm which is attached to the **C1-FundingReq** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-FUNDINFO	C1-FUNDINFO	Refer to C1-FUNDINFO on page 1149

The following table lists the algorithms which are used in the lifecycle of the **C1-FundingReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description

C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding

request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

C1-FUNDAPP

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

Note: If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

C1-FUNDAPRVD

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-FNDRESUBM

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

C1-FUNDVAL

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount}$). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount} - \text{Garnishment Amount}$). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

C1-FUNDAPAY

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI_BILL_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI_BILL_ACH** table, the status of the record in the funding request is changed to **Error**.

C1-FUNDADJCR

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

Points to Note:

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
 - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
 - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).

- **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- The business object using which the funding request should be created in the system.
- The currency in which the funding amount should be calculated.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- [Funding Request Type List](#) on page 1152
- [Funding Request Type](#) on page 1153

Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Edit	On clicking the Edit (✎) icon, the Funding Request Type screen appears where you can edit the details of the funding request type.

Column Name	Column Description
Duplicate	On clicking the Duplicate (📄) icon, the Funding Request Type screen appears where you can define a new funding request type using an existing funding request type.
Delete	On clicking the Delete (🗑️) icon, you can delete the funding request type.
	Note: You can delete a funding request type only when you have not created a funding request using the funding request type.

On clicking the **Broadcast** (📡) icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains of the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

Field Name	Field Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Funding Request Business Object	Indicates the business object that will be used to create the funding request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the funding request type.
Status	Indicates the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Funding Amount Currency	Indicates the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.
Account Funding Currency Characteristic Type	Indicates the characteristic type which should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.

Field Name	Field Description
Default Funding Adjustment Type	Indicates the adjustment type using which the funding adjustments must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Default Garnishment Adjustment Type	Indicates the garnishment adjustment type using which the garnishment adjustments must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears with the details of the respective adjustment type.
Threshold Range Algorithm	Indicates the threshold range for a bill based on the payments done for the bill.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Defer Processing Count	Displays the number of bills to determine if the funding request will be processed in deferred mode.
	Note: If the number of bills is less than the Defer Processing Count , the funding request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating the funding adjustments using the funding request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the funding request type.
	<p>Note:</p> <p>The Approval Profile field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile.</p>
Submitter To Do Type	Indicates the To Do type for the submitter when the funding request type is resubmitted by the approver.
	<p>Note:</p> <p>The Submitter To Do Type field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>

Field Name	Field Description
Submitter To Do Role	<p>Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver.</p> <p>Note:</p> <p>The Submitter To Do Role field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Currency Conversion Adjustment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.
Currency Conversion Payment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.

- **Characteristics** - The **Characteristics** section lists the characteristics defined for the funding request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request type.
Delete	<p>Used to delete the funding request type.</p> <p>Note: You can delete a funding request type only when you have not created a funding request using the funding request type.</p>
Duplicate	Used to create a new funding request type using an existing funding request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	<p>Indicates the business object using which the funding request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

By default, the **Funding Request Type** zone does not appear in the **Funding Request Type** screen. It appears only when you click the **Broadcast** (📢) icon corresponding to the funding request type in the **Funding Request Type List** zone.

Defining a Funding Request Type**Prerequisites**

To define a funding request type, you should have:

- Funding request type business objects defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To define a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Funding Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type Business Object	Used to indicate the business object using which you want to create the funding request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Funding Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple funding request type business objects defined in the application. If there is only one funding request type business object defined in the application, the **Funding Request Type** screen appears.

4. Select the required funding request type business object from the respective field.
5. Click **OK**.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected .	

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	<p>Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.</p> <p>Note:</p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Funding Currency Characteristic Type	<p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Account Funding Currency Characteristic Type field. On clicking the Search icon, the Characteristic Type Search window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to Account.</p> <p>The converted amount appears in the Funding Currency Amount column of the Selected Bills zone in the Funding Request screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Default Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Garnishment Adjustment Type	<p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p>	Yes
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p>Note:</p> <p>You must specify an algorithm which is created using the C1-FDRTTR algorithm type in the Threshold Range Algorithm field.</p> <p>The Search  icon appears corresponding to the Threshold Range Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	<p>Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.</p> <p>Note: You cannot specify a negative value in the Defer Processing Count field.</p> <p>Deferred mode means in the background when the Funding Request Periodic Monitor (C1-FNDRQ) batch is invoked. You can configure the Funding Request Periodic Monitor (C1-FNDRQ) batch such that it is executed at regular intervals. For more information about the Funding Request Periodic Monitor (C1-FNDRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	No
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	<p>Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.</p> <p>Note: This field appears only when the Approval Required option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>You must specify the C1-FNDSB To Do type in the Submitter To Do Type field.</p> <p>The Search  icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Adjustment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p>

Field Name	Field Description	Mandatory (Yes or No)
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> <p>Note: This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Payment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	

6. Enter the required details in the **Main** section.
7. Define characteristics for the funding request type, if required.
8. Click **Save**.

The funding request type is defined.

How to define a characteristic for a funding request type	Defining a Characteristic for a Funding Request Type on page 1163

Defining a Characteristic for a Funding Request Type

Prerequisites

To define a characteristic for a funding request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request Type**)

Procedure

To define a characteristic for a funding request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a funding request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Funding Request Type .	Note: This field is required when you are defining a characteristic for the funding request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the funding request type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the funding request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to edit a funding request type	Editing a Funding Request Type on page 1164
How to copy a funding request type	Copying a Funding Request Type on page 1172

Editing a Funding Request Type

Prerequisites

To edit a funding request type, you should have:

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)

- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To edit a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the funding request type whose details you want to edit.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Displays the funding request type.	Not applicable
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the funding request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected.</p>	Yes
Funding Amount Currency	<p>Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.</p> <p>Note:</p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Funding Currency Characteristic Type	<p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Account Funding Currency Characteristic Type field. On clicking the Search icon, the Characteristic Type Search window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to Account.</p> <p>The converted amount appears in the Funding Currency Amount column of the Selected Bills zone in the Funding Request screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Garnishment Adjustment Type	<p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p>	Yes
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p>Note:</p> <p>You must specify an algorithm which is created using the C1-FDRTTR algorithm type in the Threshold Range Algorithm field.</p> <p>The Search  icon appears corresponding to the Threshold Range Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No
	<p>Note:</p> <p>You cannot specify a negative value in the Defer Processing Count field.</p> <p>Deferred mode means in the background when the Funding Request Periodic Monitor (C1-FNDRQ) batch is invoked. You can configure the Funding Request Periodic Monitor (C1-FNDRQ) batch such that it is executed at regular intervals. For more information about the Funding Request Periodic Monitor (C1-FNDRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>You must specify the C1-FNDSB To Do type in the Submitter To Do Type field.</p> <p>The Search  icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Adjustment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p>

Field Name	Field Description	Mandatory (Yes or No)
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Payment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p>

Tip: Alternatively, you can edit the details of a funding request type by clicking the **Edit** button in the **Funding Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove characteristics from the funding request type, if required.
7. Click **Save**.

The changes made to the funding request type are saved.

Deleting a Funding Request Type

Procedure

To delete a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
The **Funding Request Type** screen appears.

- In the **Funding Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the funding request type that you want to delete.

A message appears confirming whether you want to delete the funding request type.

Note: You can delete a funding request type only when you have not created a funding request using the funding request type.

Tip: Alternatively, you can delete a funding request type by clicking the **Delete** button in the **Funding Request Type** zone.

- Click **OK**.

The funding request type is deleted.

Copying a Funding Request Type

Instead of creating a funding request type from scratch, you can create a new funding request type using an existing funding request type. This is possible through copying a funding request type. On copying a funding request type, the details including the characteristics are copied to the new funding request type. You can then edit the details, if required.

Prerequisites

To copy a funding request type, you should have:

- Funding request type (whose copy you want to create) defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To copy a funding request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.

3. Click the **Search** option from the **Funding Request Type** sub-menu.

The **Funding Request Type** screen appears.

4. In the **Funding Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the funding request type whose copy you want to create.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected .	

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	<p>Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.</p> <p>Note:</p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. Funding Request (Used for Searching)

The **Funding Request** screen allows you to search for a funding request using various search criteria. It also allows you to create a funding request. It contains the following zone:

- [Search Funding Request](#) on page 1180

Through this screen, you can navigate to the following screen:

- [Funding Request \(Used for Viewing\)](#) on page 1185

Search Funding Request

The **Search Funding Request** zone allows you to search for a funding request using various search criteria. It contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a funding request using the funding request or bill details. The valid values are: <ul style="list-style-type: none"> Request Details Bill Details 	Yes
	Note: By default, the Request Details option is selected.	
Created From	Used to search funding requests which are created from a particular date onwards.	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search funding requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Processing • Draft • Processed • Rejected 	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	
Created To	Used to search funding requests which are created till a particular date.	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	
User ID	Used to search funding requests which are created by a particular user.	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	
Funding Request Type	Used to search funding requests which are created using a particular funding request type.	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	
Person Name	Used to search funding requests which includes bills of a particular person.	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	
Funding Request ID	Used to search a particular funding request.	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	
Creation Mode	Used to search funding requests which are created in a particular mode. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual 	No
	Note: This field appears only when the Request Details option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search funding requests which include a particular bill.	No
	<p>Note:</p> <p>This field appears only when the Bill Details option is selected from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.</p>	
Bill Date From	Used to search funding requests which include bills that are created from a particular date onwards.	No
	<p>Note: This field appears only when the Bill Details option is selected from the Search By list.</p>	
Alternate Bill ID	Used to search funding requests which include a particular bill.	No
	<p>Note: This field appears only when the Bill Details option is selected from the Search By list.</p>	
Bill Date To	Used to search funding requests which include bills that are created till a particular date.	No
	<p>Note: This field appears only when the Bill Details option is selected from the Search By list.</p>	
Division	Used to search funding requests which includes bills of accounts which belong to a particular division.	No
	<p>Note:</p> <p>This field appears only when the Bill Details option is selected from the Search By list.</p> <p>You can only view those divisions to which you have access in the Division list.</p>	

Note: You must specify at least one search criterion while searching for a funding request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date Time	Displays the date and time when the funding request is created.
Funding Request Information	Displays information about the funding request.
	<p>Note: It has a link. On clicking the link, the Funding Request screen appears where you can view the details of the respective funding request.</p>

Column Name	Column Description
Status	Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Processing • Draft • Processed • Rejected
Total Debit Amount	Displays the total amount of the debit bills which are added in the funding request.
Total Credit Amount	Displays the total amount of the credit bills which are added in the funding request.
Created By	Indicates the user who has created the funding request.
Creation Mode	Indicates how the funding request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

How to search for a funding request	Searching for a Funding Request on page 1183

Searching for a Funding Request

Prerequisites

To search for a funding request, you should have:

- Funding request types defined in the application

Procedure

To search for a funding request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Funding Request**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request** sub-menu.
The **Funding Request** screen appears.
4. Enter the search criteria in the **Search Funding Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of funding requests that meet the search criteria appears in the **Search Results** section.

Creating a Funding Request

Prerequisites

To create a funding request, you should have:

- Funding request types defined in the application

Procedure

To create a funding request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Funding Request**.
A sub-menu appears.
3. Click the **Add** option from the **Funding Request** sub-menu.

The **Add Funding Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to indicate the funding request type using which you want to create the funding request.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Funding Request** screen.

4. Select the required funding request type from the respective field.
5. Click **OK**.

The funding request is created in the **Draft** status.

Funding Request (Used for Viewing)

The **Funding Request** screen allows you to:

- Edit the details of a funding request
- Delete or cancel a funding request
- View the details of a funding request
- Submit a funding request for processing
- Approve or reject a funding request
- Request the submitter to resubmit a funding request for approval
- Withdraw a funding request
- View the log of a funding request
- Add a log entry for a funding request

It consists of the following tabs:

- [Funding Request - Main](#) on page 1185
- [Funding Request - Bills](#) on page 1193
- [Funding Request - Log](#) on page 1197

Funding Request - Main

The **Main** tab displays information about the funding request. It contains the following zones:

- [Funding Request](#) on page 1186
- [Search Bill](#) on page 1189

Funding Request

The **Funding Request** zone displays the details of the funding request. It contains the following sections:

- **Main** - Displays basic information about the funding request. It contains the following fields:

Field Name	Field Description
Funding Request Information	Displays information about the funding request.
Funding Request Type	Indicates the funding request type using which the funding request is created. Note: It has a link. On clicking the link, the Funding Request Type screen appears where you can view the details of the respective funding request type.
Status	Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Processing • Draft • Processed • Rejected
Status Reason	Indicates the reason why the funding request is rejected. Note: This field appears only when the funding request is in the Rejected status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status reason.
Funding Adjustment Type	Indicates the adjustment type using which the A/P adjustment is created against a credit bill. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Garnishment Adjustment Type	Indicates the adjustment type using which the garnishment adjustment is created when the amount from the credit bill is transferred to the garnishment contract of the account. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Comments	Displays additional information entered while rejecting the funding request. Note: This field appears only when the funding request is in the Rejected status.
Creation Mode	Indicates whether the funding request is created automatically or manually. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

- **Statistics** - Displays analytical information about the funding request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of debit or credit bills which are added in the funding request.
Total Records Processed	Displays the total number of debit or credit bills for which payments or adjustments are successfully created in the system.
Total Records Excluded	Displays the total number of debit or credit bills which are excluded from the automatic funding request.
Total Records In Error	Displays the total number of debit or credit bills for which payments or adjustments was not successfully created in the system.
Total Payment Incoming Events Created	Displays the total number of payment events created against the debit bills in the funding request.
Total Adjustments Created	Displays the total number of adjustments created against the credit bills in the funding request.
Total Credit Funding Amount	<p>Displays the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. The sum total is calculated in the funding amount currency which is specified in the funding request type.</p> <p>Note: If the credit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>
Total Debit Funding Amount	<p>Displays the sum of funding amount of all bills whose funding amount is in debit. The sum total is calculated in the funding amount currency which is specified in the funding request type.</p> <p>Note: If the debit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division.</p>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the funding request.</p> <p>Note: The Edit button appears only when the funding request is in the Draft status.</p>
Delete	<p>Used to delete the funding request.</p> <p>Note: The Delete button appears only when the funding request is in the Draft status.</p>

Button Name	Button Description
Submit	Used to submit the funding request.
	Note: The Submit button appears only when the funding request is in the Draft status.
Cancel	Used to cancel the funding request.
	Note: The Cancel button appears only when the funding request is in the Draft status.
Approve	Used to approve the funding request.
	Note: The Approve button appears only when: <ul style="list-style-type: none"> • The funding request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the funding request.
Reject	Used to reject the funding request.
	Note: The Reject button appears only when: <ul style="list-style-type: none"> • The funding request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the funding request.
Re Submit	Used to request for resubmitting the funding request.
	Note: The Re Submit button appears only when: <ul style="list-style-type: none"> • The funding request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the funding request.
Withdraw	Used to withdraw the funding request.
	Note: The Withdraw button appears only when: <ul style="list-style-type: none"> • The funding request is in the Approval In Progress status. • A user with the submitter To Do role is viewing the funding request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the funding request status is updated
Create Date/Time	Displays the date and time when the funding request is created.

- **Characteristics** - Lists the characteristics defined for the funding request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the funding request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Search Bill

The **Search Bill** zone allows you to search for a bill using various search criteria. It appears only when the funding request is in the **Draft** status and the creation mode is set to **Manual**. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Account Details • Person Details 	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search a particular bill.	No
	Note: This field appears only when the Bill Details option is selected from the Search By list. The Search (🔍) icon appears corresponding to the Bill ID field. On clicking the Search icon, the Bill Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Date From	Used to search bills which are created from a particular date onwards.	Yes
	<p>Note:</p> <p>This field appears only when the Bill Details option is selected from the Search By list.</p> <p>By default, the current date appears in this field.</p>	
Alternate Bill ID	Used to search a particular bill.	No
	<p>Note: This field appears only when the Bill Details option is selected from the Search By list.</p>	
Bill Date To	Used to search bills which are created till a particular date.	Yes
	<p>Note:</p> <p>This field appears only when the Bill Details option is selected from the Search By list.</p> <p>By default, the current date appears in this field.</p>	
Bill Balance	Used to indicate whether you want to search bills with debit or credit balance. The valid values are:	No
	<ul style="list-style-type: none"> • Credit • Debit <p>Note: This field appears only when the Bill Details option is selected from the Search By list.</p>	
Bill Due Date From	Used to search bills which are due from a particular date onwards.	No
	<p>Note: This field appears only when the Bill Details option is selected from the Search By list.</p>	
Division	Used to search bills of accounts which belong to a particular division.	No
	<p>Note:</p> <p>You can only view those divisions to which you have access in the Division list.</p> <p>This field appears only when the Bill Details option is selected from the Search By list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Bill Due Date To	Used to search bills which are due till a particular date.	No
	Note: This field appears only when the Bill Details option is selected from the Search By list.	
Account ID	Used to search bills of a particular account.	Yes (Conditional)
	Note: This field appears only when the Account Details option is selected from the Search By list.	Note: This field is required when the Account Details option is selected from the Search By list.
Person ID	Used to search bills which belong to a particular person.	Yes (Conditional)
	Note: This field appears only when the Person Details option is selected from the Search By list.	Note: This field is required when: <ul style="list-style-type: none"> • The Person Details option is selected from the Search By list. • The person name is not specified in the search criteria.
Person Name	Used to search bills which are created for accounts of a particular person.	Yes (Conditional)
	Note: This field appears only when the Person Details option is selected from the Search By list.	Note: This field is required when: <ul style="list-style-type: none"> • The Person Details option is selected from the Search By list. • The person ID is not specified in the search criteria.
Country	Used to search bills of persons who reside in a particular country.	No
	Note: This field appears only when the Person Details option is selected from the Search By list.	

Note: You must specify at least one search criterion while searching for a bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description						
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.						
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.						
Due Date	Displays the date when the bill is due for payment.						
Outstanding Amount	Displays the unpaid amount of the bill.						
Hold Amount	Displays the amount of the bill which is kept on hold through a hold request.						
Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:						
	<table border="1"> <thead> <tr> <th>Bill Type</th> <th>Funding Amount for the Bill</th> </tr> </thead> <tbody> <tr> <td>Debit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td> </tr> <tr> <td>Credit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td> </tr> </tbody> </table>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)
	Bill Type	Funding Amount for the Bill					
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)						
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)						
Person Name	Indicates the person to whom the bill belongs. In addition, this column has a context menu which helps in navigating to other screens in the application.						
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.						
Bill ID	Displays the bill ID.						
Defer Auto Pay	Indicates whether the Defer Auto Pay option is selected on the customer class of the account for which the bill is created. The valid values are: <ul style="list-style-type: none"> • N • Y 						

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the funding request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the funding request.

Adding a Debit or Credit Bill to a Funding Request

In a funding request, you can only add the debit or credit bills of the accounts for which the **Defer Auto Pay** option is selected on the respective customer class.

Procedure

To add a debit or credit bill to a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Note:

The **Search Bill** zone appears only when the funding request is in the **Draft** status.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

6. Select the check box corresponding to a bill that you want to add to the funding request.
7. Click the **Add** button in the **Search Bill** zone.

A message appears indicating that the bill is added to the funding request.

Note: You can only add a debit or credit bill of an account for which the **Defer Auto Pay** option is selected on the respective customer class.

8. Click **OK**.

The bill is added to the funding request. The status of the bill record in the funding request is set to **Pending**.

Deleting a Debit or Credit Bill from a Funding Request

Procedure

To delete a debit or credit bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to delete from the funding request.

5. Click the **Delete** button in the **Selected Bills** zone.

A message appears confirming whether you want to delete the bill from the funding request.

Note: The **Delete** button appears only when the funding request is in the **Draft** status.

6. Click **OK**.

The debit or credit bill is deleted from the funding request.

Excluding a Bill from a Funding Request

If the funding request is manually created through the user interface, you add or delete bills from the funding request when it is in the **Draft** status. However, if the funding request is automatically created through a custom logic, the system allows you to exclude the required bills from the funding request when it is in the **Draft** status. In such case, the status of the record in the funding request is changed to **Excluded**. The excluded bills can then be included in some other funding request.

Prerequisites

To exclude a bill from a funding request, you should have:

- Values defined for the **CAN_RSN_CD_FLG** lookup field

Procedure

To exclude a bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to exclude from the funding request.

5. Click the **Edit** button in the **Selected Bills** zone.

The **Edit Funding Request Details** screen appears. It contains the following field:

Field Name	Field Description
Funding Request Information	Displays the information about the funding request.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Bill Information	Displays the information about the bill.	Not applicable						
Garnishment Amount	Displays the funding amount which is transferred to the garnishment contracts of the account.	Not applicable						
Funding Amount	<p>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:</p> <table border="1"> <thead> <tr> <th>Bill Type</th> <th>Funding Amount for the Bill</th> </tr> </thead> <tbody> <tr> <td>Debit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td> </tr> <tr> <td>Credit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td> </tr> </tbody> </table>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)	Not applicable
Bill Type	Funding Amount for the Bill							
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)							
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)							

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the record in the funding request. The valid values are: <ul style="list-style-type: none"> Excluded Invalid Masked Pending Processed Valid 	Yes
Cancel Reason	Used to indicate the reason why you want to exclude the bill from the funding request.	Yes (Conditional)
	Note: The list includes only those values which are defined in the CAN_RSN_CD_FLG lookup field.	Note: This field is required when you want to exclude the bill from the funding request.

Note: The **Edit** button appears only when the creation mode of the funding request is set to **Automatic** and the funding request is in the **Draft** status.

- Select the **Excluded** option from the **Status** field.
- Select the required cancel reason from the respective field.
- Click **Save**.

The bill is excluded from the funding request. The status of the bill record in the funding request is set to **Excluded**.

Editing a Funding Request

Prerequisites

To edit a funding request, you should have:

- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Edit** button in the **Funding Request** zone.

The **Edit Funding Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request.
- **Characteristics** - Used to define characteristics for the funding request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Information	Displays information about the funding request.	Not applicable
Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill. Note: The Search (🔍) icon appears corresponding to the Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. In the Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND .	Yes (Conditional) Note: This field is required while creating an A/P adjustment against a credit bill.
Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account. Note: The Search (🔍) icon appears corresponding to the Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. In the Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND .	Yes (Conditional) Note: This field is required while creating garnishment adjustments for a credit bill.
Comments	Used to specify additional information about the funding request.	No

Note: The **Edit** button appears only when the funding request is in the **Draft** status.

4. Modify the details of the funding request, if required.
5. Define, edit, or remove characteristics from the funding request, if required.

6. Click **Save**.

The changes made to the funding request are saved.

How to define a characteristic for a funding request	Defining a Characteristic for a Funding Request on page 1203

Defining a Characteristic for a Funding Request

Prerequisites

To define a characteristic for a funding request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request**)

Procedure

To define a characteristic for a funding request:

1. Ensure that the **Characteristics** section is expanded when you are editing a funding request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the funding request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the funding request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Funding Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the funding request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the funding request.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the funding request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Deleting a Funding Request

Procedure

To delete a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to delete.

The **Funding Request** screen appears.

- Click the **Delete** button in the **Funding Request** zone.

A message appears confirming whether you want to delete the funding request.

Note: The **Delete** button appears only when the funding request is in the **Draft** status.

- Click **OK**.

The funding request is deleted.

Canceling a Funding Request

Prerequisites

To cancel a funding request, you should have:

- Reasons defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Procedure

To cancel a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to cancel.

The **Funding Request** screen appears.

- Click the **Cancel** button in the **Funding Request** zone.

The **Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the funding request.	Yes
	Note: The list includes only those reasons which are defined for the Canceled status of the C1-FundingRequest business object in the Status Reason screen.	

Note: The **Cancel** button appears only when the funding request is in the **Draft** status.

- Select the cancellation reason from the **Status Reason** list.
- Click **Save**.

The status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. The excluded bills can then be included in some other funding request.

Submitting a Funding Request

Prerequisites

To submit a funding request, you should have:

- At least one debit or credit bill in the funding request
- Funding and garnishment adjustment types defined in the funding request
- Funding adjustment type defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment type defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To submit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to submit.

The **Funding Request** screen appears.

3. Click the **Submit** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...				
<p>The Approval Required option is selected in the funding request type using which the funding request is created</p>	<p>It calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. Depending on the sum total amount, the system behaves in the following manner:</p>				
	<table border="1"> <thead> <tr> <th data-bbox="889 466 1174 506">If...</th> <th data-bbox="1182 466 1466 506">Then...</th> </tr> </thead> <tbody> <tr> <td data-bbox="889 510 1174 894"> <p>The sum total is less than the minimum threshold amount in the approval hierarchy</p> </td> <td data-bbox="1182 510 1466 894"> <p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> </td> </tr> </tbody> </table>	If...	Then...	<p>The sum total is less than the minimum threshold amount in the approval hierarchy</p>	<p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p>
	If...	Then...			
<p>The sum total is less than the minimum threshold amount in the approval hierarchy</p>	<p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p>				
<p>The sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy</p>	<p>The system changes the status of the funding request to Approval In Progress. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.</p>				

If...	Then...
<p>The Approval Required option is not selected in the funding request type using which the funding request is created</p>	<p>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.</p> <p>Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.</p> <p>Note: The funding and garnishment adjustments are created in the Frozen status.</p>

Note: The **Submit** button appears only when the funding request is in the **Draft** status.

Approving a Funding Request

You can view the number of funding requests which are pending for approval in the **Funding Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the funding request based on the observations.

Note: The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To approve a funding request:

1. Do either of the following:

If you want to...	Then...
Approve a funding request through the Funding Request screen	<ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review.
Approve a funding request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review.

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is accurate, then click the **Approve** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...
The sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to Approval In Progress . It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the next level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.

If...	Then...
<p>The sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy</p>	<p>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.</p> <p>Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.</p> <p>Note: The funding and garnishment adjustments are created in the Frozen status.</p>

Note: The **Approve** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

Rejecting a Funding Request

Prerequisites

To reject a funding request, you should have:

- Reasons defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To reject a funding request:

1. Do either of the following:

If you want to...	Then...
Reject a funding request through the Funding Request screen	<ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review.
Reject a funding request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review.

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incorrect, then click the **Reject** button in the **Funding Request** zone.

The **Reject Funding Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	<p>Used to indicate the reason why you want to reject the funding request.</p> <p>Note: The list includes only those reasons which are defined for the Rejected status of the C1-FundingRequest business object in the Status Reason screen.</p>	Yes
Comments	Used to specify additional information while rejecting the funding request.	No

Note: The **Reject** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the funding request is changed to **Rejected**.

Requesting to Resubmit a Funding Request

Procedure

To request for resubmitting a funding request:

1. Do either of the following:

If you want to...	Then...
Request for resubmitting a funding request through the Funding Request screen	<ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review.
Request for resubmitting a funding request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review.

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incomplete and you want the submitter to make the required changes and resubmit it, click the **Re Submit** button in the **Funding Request** zone.

The **Resubmit Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the funding request before resubmitting it for approval.	Yes

Note: The **Re Submit** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the funding request type. In addition, the status of the funding request is changed to **Draft**.

Withdrawing a Funding Request

Prerequisites

To withdraw a funding request, you should have:

- Submitter To Do role (which is specified in the funding request type) associated with the **C1-FNDAP** To Do type

Procedure

To withdraw a funding request:

1. Search for the funding request in the **Funding Request** screen.

- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to withdraw.

The **Funding Request** screen appears.

- If you want to make some changes in the funding request which is already sent for approval, click the **Withdraw** button in the **Funding Request** zone.

The status of the funding request is changed to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. The To Do for approver is automatically closed when the submitter withdraws the funding request. Note that the To Do for approver is automatically closed only when the submitter To Do role is associated with the To Do type specified in the approval profile.

Note: The **Withdraw** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the submitter To Do role is viewing the funding request.

Transferring the Funding Amount of a Credit Bill to a Garnishment Contract

Prerequisites

To transfer the funding amount of a credit bill to a garnishment contract, you should have:

- At least one garnishment contract on the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

Procedure

To transfer the funding amount of a credit bill to a garnishment contract:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

- Click the **Bills** tab.

The **Bills** tab appears.

- In the **Selected Bills** zone, click the link on the value **Y** in the **Garnishment Contract** column corresponding to a credit bill whose funding amount you want to transfer to a garnishment contract of the account.

The **Edit Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Information	Indicates the credit bill whose funding amount you want to transfer to a garnishment contract of the account.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Garnishment Contract	Used to indicate the garnishment contract of the account.	Yes
Garnishment Amount	Used to specify the amount that you want to transfer to the garnishment contract.	Yes

- Enter the required details in the **Edit Garnishment Details** screen.
- If you want to transfer the funding amount of the credit bill to more than one garnishment contract of the account, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a garnishment record from the funding request, click the **Delete** (🗑️) icon corresponding to the garnishment record.

- Click **Save**.

The changes made to the funding request are saved.

Procedure

To view the log of a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to view.

The **Funding Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the funding request in the **Funding Request Log** zone.

Adding a Log Entry for a Funding Request**Procedure**

To add a log entry for a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to edit.

The **Funding Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the funding request.	Not applicable
Log Details	Used to specify additional comments on the funding request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Funding Request Log** zone.

Oracle Revenue Management and Billing allows you to refund and write off amount to the account. If the amount received from the payor account is matched against the suspense or excess credit contract, the system facilitates you to refund the amount to the payor. In addition, you can refund the amount of a credit bill line item, such as credit bill segment or adjustment, if required. To refund the amount to the account holder, you need to create refund adjustments through a refund request. While creating a refund request, you need to specify the refund request type using which you want to create the refund request. It is the refund request type which helps the system to determine:

- Whether the refund request must be approved before creating refund adjustments in the system
- Approval profile using which the refund request must be approved
- Whether multi-level or single-level approval is required while creating refund adjustments in the system
- Tolerance limit for refund (i.e. minimum refund amount)
- Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
- Default adjustment type using which refund adjustments must be created

The system allows you to create refund adjustments only using those adjustment types where A/P request type is defined. Once the refund adjustments are created, the A/P Extract process will extract the information and accordingly refund the amount to the payor. During the refund request process, a refund request goes through various statuses in its lifecycle. For more information about the refund request statuses, see [Refund Request \(Without Approval\) Status Transition](#) on page 1221 and [Refund Request \(With Approval\) Status Transition](#) on page 1221.

Note that the lifecycle of a refund request is driven by the business object using which the refund request is created. A refund request business object named **C1-RefundReq** is shipped with the product. The refund request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-RefundReq** business object.

Similarly, the system facilitates you to write off the amount to the account through a write off request. While creating a write off request, you need to specify the write off request type using which you want to create the write off request. It is the write off request type which helps the system to determine:

- Whether the write off request must be approved before creating write off adjustments in the system
- Approval profile using which the write off request must be approved

- Whether multi-level or single-level approval is required while creating write off adjustments in the system
- Default adjustment type using which write off adjustments must be created

The system allows you to create write off adjustments only using those adjustment types where A/P request type is not defined. During the write off request process, a write off request goes through various statuses in its lifecycle. For more information about the write off request statuses, see [Write Off Request \(Without Approval\) Status Transition](#) on page 1222 and [Write Off Request \(With Approval\) Status Transition](#) on page 1223.

Note that the lifecycle of a write off request is driven by the business object using which the write off request is created. A write off request business object named **C1-WORequest** is shipped with the product. The write off request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-WORequest** business object.

For more information on how to setup the refund and write off request processes, see [Prerequisites](#) on page 1233.

Refund Request (Without Approval) Status Transition

Algorithms Used in C1-RefundReq

The following table lists the algorithms which are attached to the **C1-RefundReq** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	<p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID
Post-Processing	C1-REFWOPOSP	C1-REFWOPOSP	<p>This algorithm recalculates and updates the total refund amount in the Refund Request zone when you change the refund amount against an entity while editing a refund request.</p>
Validation	C1-REFUNDVAL	C1-REFUNDVAL	<p>This algorithm validates the following for each entity that you have selected in the refund request:</p> <ul style="list-style-type: none"> • The mandatory data, such as refund amount and adjustment type, is specified. • The refund amount is not less than zero. • The refund amount is not greater than the entity amount. • The refund amount is not greater than the eligible refund amount. • The partial refund is not done at the payment event or bill level.

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-REF-DFT	C1-REF-DFT	<p>This algorithm fetches the account's main customer's name and address and displays in the Refund Request zone. In addition, when you refund the payments from the Payment Event Summary screen, this algorithm does the following:</p> <ul style="list-style-type: none"> • The total eligible refund amount is calculated and accordingly displayed in the Refund Request screen. • The default refund adjustment type specified in the refund request type is fetched and displayed against the selected payment event or payments. • On selecting a payment event for refund, if all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the Refund Details zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the Refund Details zone.
Submitted	Enter	C1-REFUNDSUB	C1-REFUNDSUB	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> • Whether the approval is required for the refund request. If the approval is required for a refund request, the status of the refund request is changed to Approval In Progress. However, if the approval is not required for a refund request, the status of the refund request is changed to Creating Adjustment. • At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the refund request. • Whether the approval profile attached to the refund request type has the credit hierarchy and C1-REFRQ To Do type defined.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Enter	C1-REFUNDAPP	C1-REFUNDAPP	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> • A To Do using the To Do type specified in the approval profile which is attached to the refund request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type.
Approved	Enter	C1-REFAPPRVD	C1-REFAPPRVD	<p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the refund request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the refund request is changed to Creating Adjustment.</p>
Rejected	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-REFADJCRI	C1-REFADJCRI	<p>This algorithm does the following:</p> <ul style="list-style-type: none"> Creates the refund adjustments for the refund request. These refund adjustments are created in the Frozen status. The adjustment ID is displayed corresponding to the entity in the Refund Details zone. Stamps the bill ID of credit line item on the adjustment and the corresponding financial transaction. If a match event is present for the credit bill line item and for payments which are matched against the excess credit contract, the existing match event is stamped on the refund or write up adjustment and the corresponding financial transaction. However, when a match event is not present for payments which are matched against the suspense contract or if the match event does not exist, a new match event is created and stamped on the refund or write up adjustment and the corresponding financial transaction. If you are doing a partial refund for any entity, the corresponding match event status is set to Open. However, if you are refunding the entire eligible amount, the corresponding match event status is set to Balanced. The details of the refund adjustments are added in the A/P Check Request (CL_ADJ_APREQ) table. If a write up adjustment is created, the write up adjustment type specified in the refund request type is displayed corresponding to the entity in the Refund Details zone.
Processed	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Voided	Enter	C1-REFVOID	C1-REFVOID	<p>This algorithm is invoked on click of the Void button for a refund request which is in processed state.</p> <p>The algorithm cancels all the frozen adjustments created for the refund request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (F1_BUS_OBJ_STATUS_RSN_CHAR table). If the reason is not found, it will use the status reason selected by the user</p>

Algorithms Used in C1-WORequest

The following table lists the algorithms which are attached to the **C1-WORequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	<p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID
Post-Processing	C1-WOPOSP	C1-WOPOSP	<p>This algorithm recalculates and updates the total write off amount in the Write Off Request zone when you change the write off amount against an entity while editing a write off request.</p>

System Event	Algorithm	Algorithm Type	Description
Validation	C1-WOBOVAL	C1-WOBOVAL	<p>This algorithm validates the following for each entity that you have selected in the write off request:</p> <ul style="list-style-type: none"> • The mandatory data, such as write off amount and adjustment type, is specified. • The write off amount is not less than zero. • The write off amount is not greater than the entity amount. • The write off amount is not greater than the eligible write off amount. • The partial write off is not done at the bill level. • The A/P Request Type is not defined in the selected adjustment type.

The following table lists the algorithms which are used in the lifecycle of the **C1-WORequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Submitted	Enter	C1-WOSUBMIT	C1-WOSUBMIT	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> • Whether the approval is required for the write off request. If the approval is required for a write off request, the status of the write off request is changed to Approval In Progress. However, if the approval is not required for a write off request, the status of the write off request is changed to Creating Adjustment. • At least one debit bill line item (such as debit bill segment or adjustment) is selected in the write off request. • Whether the approval profile attached to the write off request type has the debit hierarchy and C1-WOREQ To Do type defined.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Enter	C1-WOAPPROVL	C1-WOAPPROVL	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> • A To Do using the To Do type specified in the approval profile which is attached to the write off request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type.
Approved	Enter	C1-WOAPPROVD	C1-WOAPPROVD	<p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the write off request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the write off request is changed to Creating Adjustment.</p>
Rejected	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-WOAJCRT	C1-WOAJCRT	<p>This algorithm does the following:</p> <ul style="list-style-type: none"> Creates the write off adjustments for the write off request. These write off adjustments are created in the Frozen status. The adjustment ID is displayed corresponding to the entity in the Write Off Details zone. Stamps the bill ID of debit line item on the adjustment and the corresponding financial transaction. If a match event is present for the debit bill line item, the existing match event is stamped on the write off adjustment and the corresponding financial transaction. However, if the match event does not exist, a new match event is created and stamped on the write off adjustment and the corresponding financial transaction. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced.
Processed	-	-	-	-
Cancelled	Enter	C1-WOCANCEL	C1-WOCANCEL	<p>This algorithm is invoked on click of the Cancel button for a write off request which is in the Processed state.</p> <p>This algorithm cancels all the frozen adjustments created for the write off request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (F1_BUS_OBJ_STATUS_RSN_CHAR table). If the reason is not found, it will use the status reason selected by the user.</p>

Prerequisites

To setup the refund request process, you need to do the following:

- Define the required adjustment types (for creating refund adjustments) where A/P request type is defined
- Define the required adjustment types (for creating write up adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define voided and rejected status reasons for the **C1-RefundReq** business object
- Assign the **C1-REFRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a refund request for approval
- Define the required approval profiles with the credit hierarchy and **C1-REFRQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required refund request types in the system

To setup the write off request process, you need to do the following:

- Define the required adjustment types (for creating write off adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define cancelled and rejected status reasons for the **C1-WOREquest** business object
- Assign the **C1-WOREQ** To Do type to a To Do role whose users must receive To Do generated while submitting a write off request for approval
- Define the required approval profiles with the debit hierarchy and **C1-WOREQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required write off request types in the system

Refund/Write Off Request Type

Oracle Revenue Management and Billing allows you to define:

- **Refund Request Type** — It is used to create a refund request. You can define multiple refund request types in the system. A refund request type helps the system to determine:
 - Whether the refund request must be approved before creating refund adjustments in the system
 - Approval profile using which the refund request must be approved
 - Whether multi-level or single-level approval is required while creating refund adjustments in the system
 - Tolerance limit for refund (i.e. minimum refund amount)
 - Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
 - Default adjustment type using which refund adjustments must be created

- **Write Off Request Type** — It is used to create a write off request. You can define multiple write off request types in the system. A write off request type helps the system to determine:
 - Whether the write off request must be approved before creating write off adjustments in the system
 - Approval profile using which the write off request must be approved
 - Whether multi-level or single-level approval is required while creating write off adjustments in the system
 - Default adjustment type using which write off adjustments must be created

While defining a refund or write off request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the refund or write off request (which is created using the refund or write off request type) is sent for approval before creating the refund or write off adjustments. However, if the **Approval Required** check box is not selected, the refund or write off adjustments are created immediately on submitting a refund or write off request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy is used for approving write off request and credit approval hierarchy is used for approving refund request. Therefore, while defining an approval profile for refund, you need to define credit hierarchy and set the To Do Type to **C1-REFRQ**. However, while defining an approval profile for write off, you need to define debit hierarchy and set the To Do Type to **C1-WOREQ**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the refund or write off request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the *Manager* To Do role will approve or reject the refund or write off request, and at the second level, a user with the *Senior Manager* To Do role will approve or reject the refund or write off request. On submitting a refund or write off request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the refund or write off request, the refund or write off adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the refund or write off adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval — First Level (Threshold Amount: 300, To Do Role: *Manager*) and Second Level (Threshold Amount: 500, To Do Role: *Senior Manager*). Now, if the total refund or write off amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total refund or write off amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total refund or write off amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the refund or write off request and create the refund or write off adjustments.

The system supports both single-level and multi-level approval process while approving refund or write off request. If the **Hierarchical Approval** check box is selected while defining a refund or write off request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a refund or write off request type, the approval is required only from the approval level where the total refund or write off amount falls within the threshold limit. Let us understand this with the help of some examples.

Example 1

Refund Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval								
R1	Refund Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	Yes
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										
R2	Refund Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	No
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										

The following table indicates how the system will behave in different refund scenarios:

Refund Request	Refund Request Type	Total Refund Amount (\$)	Comments
RR1	R1	200	This refund request is automatically approved by the system because the total refund amount is less than \$500.
RR2	R1	750	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role <p>This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is required.</p>
RR3	R1	2000	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total refund amount is greater than \$1500 and hierarchical approval is required.</p>
RR4	R2	200	This refund request is automatically approved by the system because the total refund amount is less than \$500.

Refund Request	Refund Request Type	Total Refund Amount (\$)	Comments
RR5	R2	750	The To Do is sent for approval to users with the Manager To Do role. This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is not required.
RR6	R2	2000	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total refund amount is greater than \$1500 and hierarchical approval is not required.

Example 2

Write Off Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval								
W1	Write Off Analyst	Debit Hierarchy	Yes								
		<table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$100</td> <td>Senior Analyst</td> </tr> <tr> <td>\$200</td> <td>Manager</td> </tr> <tr> <td>\$300</td> <td>Senior Manager</td> </tr> </tbody> </table>		Threshold Amount	To Do Role	\$100	Senior Analyst	\$200	Manager	\$300	Senior Manager
		Threshold Amount		To Do Role							
		\$100		Senior Analyst							
		\$200		Manager							
\$300	Senior Manager										
W2	Write Off Analyst	Debit Hierarchy	No								
		<table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$100</td> <td>Senior Analyst</td> </tr> <tr> <td>\$200</td> <td>Manager</td> </tr> <tr> <td>\$300</td> <td>Senior Manager</td> </tr> </tbody> </table>		Threshold Amount	To Do Role	\$100	Senior Analyst	\$200	Manager	\$300	Senior Manager
		Threshold Amount		To Do Role							
		\$100		Senior Analyst							
		\$200		Manager							
\$300	Senior Manager										

The following table indicates how the system will behave in different write off scenarios:

Write Off Request	Write Off Request Type	Total Write Off Amount (\$)	Comments
WO1	W1	90	This write off request is automatically approved by the system because the total write off amount is less than \$100.
WO2	W1	250	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> Users with the Senior Analyst To Do role Users with the Manager To Do role <p>This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is required.</p>

Write Off Request	Write Off Request Type	Total Write Off Amount (\$)	Comments
WO3	W1	500	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total write off amount is greater than \$300 and hierarchical approval is required.</p>
WO4	W2	90	This write off request is automatically approved by the system because the total write off amount is less than \$100.
WO5	W2	250	The To Do is sent for approval to users with the Manager To Do role. This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is not required.
WO6	W2	500	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total write off amount is greater than \$300 and hierarchical approval is not required.

The **Refund/Write Off Request Type** screen allows you to define, edit, delete, and copy a refund and write off request type. This screen consists of the following zones:

- [Refund/Write Off Request Type List](#) on page 1237
- [Refund/Write Off Request Type](#) on page 1238

Refund/Write Off Request Type List

The **Refund/Write Off Request Type List** zone lists refund and write off request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Description	Displays the description of the refund or write off request type.
Edit	On clicking the Edit (✎) icon, the Refund/Write Off Request Type screen appears where you can edit the details of the refund and write off request type.
Duplicate	On clicking the Duplicate (📄) icon, the Refund/Write Off Request Type screen appears where you can define a refund and write off request type using an existing refund and write off request type.
Delete	On clicking the Delete (🗑) icon, you can delete the refund or write off request type.
	Note: You can delete a refund or write off request type only when you have not created a refund or write off request using the refund or write off request type.

On clicking the **Broadcast** (📡) icon corresponding to refund or write off request type, the **Refund/Write Off Request Type** zone appears with the details of the respective refund or write off request type.

Refund/Write Off Request Type

The **Refund/Write Off Request Type** zone displays the details of the refund or write off request type. This zone consists of the following sections:

- **Main** — This section provides basic information about the refund or write off request type. It contains the following fields:

Field Name	Field Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Refund/Write Off Request Business Object	Indicates the business object that will be used to create the refund or write off request. Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.
Description	Displays the description of the refund or write off request type.
Detailed Description	Displays additional information about the refund or write off request type.
Status	Indicates the status of the refund or write off request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Action	Indicates whether the request type is created for refund or write off. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off
Minimum Refund Amount	Displays the minimum refund amount. Note: This field appears only when the Action field is set to Refund .

Field Name	Field Description
Write Up Adjustment Type	Indicates the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. Note: This field appears only when the Action field is set to Refund .
Approval Required	Indicates whether approval is required while creating the refund or write off adjustments using the refund or write off request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the refund or write off request type. Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the Approval Profile screen appears with the details of the respective approval profile.
Hierarchical Approval	Indicates whether multi-level or single approval is required while creating the refund or write off adjustments using the refund or write off request type. Note: This field appears only when the Approval Required check box is selected.
Adjustment Type	Indicates the adjustment type using which the refund or write off adjustments must be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears with the details of the respective adjustment type.

- **Characteristics** — This section lists the characteristics defined for the refund or write off request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund or write off request type.
Delete	Used to delete the refund or write off request type. Note: You can delete a refund or write off request type only when you have not created a refund or write off request using the refund or write off request type.
Duplicate	Used to create a new refund or write off request type using an existing refund or write off request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund or write off request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Refund/Write Off Request Type** zone does not appear in the **Refund/Write Off Request Type** screen. It appears only when you click the **Broadcast** () icon corresponding to the refund or write off request type in the **Refund/Write Off Request Type List** zone.

Defining a Refund or Write Off Request Type

Prerequisites

To define a refund or write off request type, you should have:

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To define a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Refund/Write Off Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type Business Object	Used to indicate the business object that you want to use to create the refund or write off request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple refund and write off request type business objects defined in the application. If there is only one refund and write off request type business object defined in the application, the **Refund/Write Off Request Type** screen appears.

4. Select the required refund and write off request type business object from the respective field.
5. Click **OK**.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define characteristics for the refund or write off request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	<p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a refund or write off request type to Inactive if there are refund or write off requests which are created using the refund or write off request type and are currently in the Draft or Approval In Progress status.</p>	Yes
Action	<p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> • Refund • Write Off 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment. Note: This field appears only when the Action field is set to Refund .	Yes
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. Note: This field appears only when the Action field is set to Refund . You can create write up adjustments only using those adjustment types where A/P request type is not defined.	Yes
Approval Required	Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type. Note: This field appears only when the Approval Required check box is selected.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type. Note: This field appears only when the Approval Required check box is selected.	No

Field Name	Field Description	Mandatory (Yes or No)
Refund Adjustment Type	Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request.	Yes
	<p>Note:</p> <p>This field appears only when the Action field is set to Refund.</p> <p>The list includes only those adjustment types where A/P request type is defined.</p>	
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request.	Yes
	<p>Note:</p> <p>This field appears only when the Action field is set to Write Off.</p> <p>You can create write off adjustments only using those adjustment types where A/P request type is not defined.</p>	

6. Enter the required details depending on whether you want to define refund or write off request type.

Note: You can search for an adjustment type by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define characteristics for the refund or write off request type, if required.
8. Click **Save**.

The refund or write off request type is defined.

Defining a Characteristic for a Refund or Write Off Request Type

Prerequisites

To define a characteristic for a refund or write off request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request Type**)

Procedure

To define a characteristic for a refund or write off request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a refund or write off request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request Type .	Note: This field is required when you are defining a characteristic for the refund or write off request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the refund or write off request type.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the refund or write off request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the refund or write off request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to define a characteristic for a refund or write off request type	Defining a Characteristic for a Refund or Write Off Request Type on page 1243

Copying a Refund or Write Off Request Type

Instead of creating a refund or write off request type from scratch, you can create a new refund or write off request type using an existing refund or write off request type. This is possible through copying a refund or write off request type. On copying a refund or write off request type, the details including the characteristics are copied to the new refund or write off request type. You can then edit the details, if required.

Prerequisites

To copy a refund or write off request type, you should have:

- Refund or Write Off request type (whose copy you want to create) defined in the application
- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To copy a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the refund or write off request type whose copy you want to create.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define characteristics for the refund or write off request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	<p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a refund or write off request type to Inactive if there are refund or write off requests which are created using the refund or write off request type and are currently in the Draft or Approval In Progress status.</p>	Yes
Action	<p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> • Refund • Write Off 	Yes
Minimum Refund Amount	<p>Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment.</p> <p>Note: This field appears only when the Action field is set to Refund.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Write Up Adjustment Type	<p>Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount.</p> <p>Note: This field appears only when the Action field is set to Refund. You can create write up adjustments only using those adjustment types where A/P request type is not defined.</p>	Yes
Approval Required	Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
Approval Profile	<p>Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>
Hierarchical Approval	<p>Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p>	No
Refund Adjustment Type	<p>Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request.</p> <p>Note: This field appears only when the Action field is set to Refund. The list includes only those adjustment types where A/P request type is defined.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request.	Yes
	<p>Note:</p> <p>This field appears only when the Action field is set to Write Off.</p> <p>You can create write off adjustments only using those adjustment types where A/P request type is not defined.</p>	

Tip: Alternatively, you can click the **Duplicate** button in the **Refund/Write Off Request Type** zone to create a copy of the refund or write off request type.

- Enter the required details in the **Main** section.

Note: You can search for an adjustment type by clicking the **Search** (🔍) icon corresponding to the respective field.

- Define, edit, or remove characteristics from the refund or write off request type, if required.
- Click **Save**.

The new refund or write off request type is defined.

Searching for a Refund or Write Off Request

Prerequisites

To search for a refund or write off request, you should have:

- Refund or Write Off request types defined in the application

Procedure

To search for a refund or write off request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Refund/Write Off Request**.
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request** sub-menu.
The **Refund/Write Off Request** screen appears.
4. Enter the search criteria in the **Search Refund/Write Off Request** zone depending on whether you want to search for a refund or write off request.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of refund or write off requests that meet the search criteria appears in the **Search Results** section.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Refund. <p>Note: Only one bill at a time is allowed to select for Refund Request from the Account Receivable Central screen.</p>
Define a refund request from the Refund Request screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Refund/Write Off Request. A sub-menu appears. 3. Click the Add option from the Refund/Write Off Request sub-menu.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	<p>Displays the type of request (refund or write off) to be created.</p> <p>Note:</p> <p>This field is pre-populated if the refund request is created from the Account Receivable Central screen.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p>	Not applicable
Refund/Write Off Request Type	<p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p>	Yes
Account	<p>Used to indicate the account for which you want to create the refund or write off request.</p> <p>Note:</p> <p>This field is pre-populated if the refund request is created from the Account Receivable Central screen.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p> <p>You can search for an account by clicking the Search (🔍) icon corresponding to the respective field.</p>	Yes

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

Note: The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the refund request.
4. Add payment events, payments, or credit bill line items that you want to refund.
 5. Edit the refund amount of each entity, if required.
 6. Define characteristics for the refund request, if required.
 7. Override the address if you want to sent the refund to an address other than the account’s main customer address.

Refund Request

Once you create a refund request, the **Refund Request** screen allows you to:

- Edit and delete a refund request
- View the details of a refund request
- Submit a refund request for approval
- Approve or reject a refund request
- View the log of a refund request
- Add a log entry for a refund request
- Void a refund request

This screen consists of the following tabs:

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Bill Line Items** — Displays the details of the bill which must be refunded.

Note: This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Refund Details** zone.

- **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:
 - **Search Bills** — Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.

- **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears only when the refund request is in the **Draft** status.

- **Payments** — Used to search payment events or individual payments that you want to refund. It contains the following zones:
 - **Search Payment Event** — Lists the payment events which are created for the account. You can filter the payment events using various search criteria.
 - **Payments** — Lists all payments created through the payment event.

This tab appears only when the refund request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the refund request.

Refund Request - Main

The **Main** tab displays information about the refund request. It contains the following zones:

- [Refund Request](#) on page 1265
- [Refund Details](#) on page 1267
- [Bill Line Items](#) on page 1268

Refund Request

The **Refund Request** zone displays the details of the refund request. This zone contains the following sections:

- **Main** — This section provides basic information about the refund request. It contains the following fields:

Field Name	Field Description
Refund Request Information	Displays information about the refund request.
Refund Request Type	Indicates the refund request type using which the refund request is created. Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the refund request type.
Status	Indicates the status of the refund request. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Rejected • Processed • Voided
Status Reason	Indicates the reason why the refund request is rejected or voided. Note: This field appears only when the refund request is in the Rejected or Voided status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or voided reason.

Field Name	Field Description
Account Information	Indicates the account for which the refund request is created.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Name	Indicates the person for whom the refund request is created.
Override Address	Indicates whether the account's mailing address is overridden.
Address 1	Displays the house number and apartment name.
Address 2	Displays the street name.
Address 3	Indicates the landmark, if available.
Address 4	Displays the village, town, or city name.
City	Displays the city name.
State	Displays the state name.
Country	Displays the country name.
Postal	Displays the postal or zip code.
Comments	Displays additional information about the refund request.
Total Refund Amount	Displays the total refund amount.

- **Characteristics** — Lists the characteristics defined for the refund request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the refund request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund request.
	Note: The Edit button appears only when the refund request is in the Draft status.
Delete	Used to delete the refund request.
	Note: The Delete button appears only when the refund request is in the Draft status.
Submit	Used to submit the refund request for approval.
	Note: The Submit button appears only when the refund request is in the Draft status.

Button Name	Button Description
Approve	Used to approve the refund request.
	<p>Note: The Approve button appears only when:</p> <ul style="list-style-type: none"> The refund request is in the Approval In Progress status. A user with the approval To Do role is reviewing the refund request.
Reject	Used to reject the refund request.
	<p>Note: The Reject button appears only when:</p> <ul style="list-style-type: none"> The refund request is in the Approval In Progress status. A user with the approval To Do role is reviewing the refund request.
Void	Used to void the refund request.
	<p>Note: The Void button appears only when the refund request is in the Processed status.</p>

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Status Date/Time	Displays the date and time when the refund request status is updated
Create Date/Time	Displays the date and time when the refund request is created.

Refund Details

The **Refund Details** zone lists the payment events, payments, and credit bill line items (such as bill segments and adjustments) that you have added to the refund request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a payment event, payment, bill, bill segment, or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Refund Amount	Displays the amount that must be refunded.
	<p>Note: By default, the amount which is eligible for refund appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.</p>

Column Name	Column Description
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created or against which the payment is matched. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: By default, the adjustment type specified in the refund request type appears in this column. You can change the adjustment type, if required, by editing the refund request.
Adjustment Information	Displays information about the refund adjustment.
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. The data appears in this column only when the status of the refund request is Processed .
	The information string appears only when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen.

Note: On clicking the Broadcast () icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.

Column Name	Column Description
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast** (📢) icon corresponding to the bill in the **Refund Details** zone.

Refund Request - Bills

The **Bills** tab allows you to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:

- [Search Bills](#) on page 1269
- [Bill Line Items](#) on page 1271

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details 	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Price Item	Used to search bills which are created for a particular price item.	No
	Note: This field appears only when you select Bill and Price Item Details option from the Search By list. You can search for a price item by clicking the search (🔍) icon corresponding to the field.	

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to refund a bill with credit balance and all credit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit bill segments and adjustments of the bill are added in the **Refund Details** zone on the **Main** tab. However, if you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Refund.

If you want to...	Then...
	<p>Note: Only one bill at a time is allowed to select for Refund Request from the Account Receivable Central screen.</p>
Define a refund request from the Refund Request screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Refund/Write Off Request. A sub-menu appears. 3. Click the Add option from the Refund/Write Off Request sub-menu.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	<p>Displays the type of request (refund or write off) to be created.</p> <p>Note: This field is pre-populated if the refund request is created from the Account Receivable Central screen. This field is editable if the refund request is created from the Refund/Write Off Request screen.</p>	Not applicable
Refund/Write Off Request Type	<p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account	Used to indicate the account for which you want to create the refund or write off request. Note: This field is pre-populated if the refund request is created from the Account Receivable Central screen. This field is editable if the refund request is created from the Refund/Write Off Request screen. You can search for an account by clicking the Search (🔍) icon corresponding to the respective field.	Yes

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

Note: The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the refund request.
4. Add payment events, payments, or credit bill line items that you want to refund.
 5. Edit the refund amount of each entity, if required.
 6. Define characteristics for the refund request, if required.
 7. Override the address if you want to sent the refund to an address other than the account's main customer address.

Defining a Characteristic for a Refund Request

Prerequisites

To define a characteristic for a refund request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.

The **Refund Request** screen appears.

3. Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears.

Note: The **Edit** button appears only when the refund request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the refund request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the refund request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the refund request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the refund request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the refund request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Adding a Payment Event to the Refund Request

Prerequisites

To add a payment event to the refund request, you should have:

- Payments made by the account for which you need to create the refund request

Procedure

To add a payment event to the refund request:

1. Click the **Payments** tab in the **Refund Request** screen.

The **Payments** tab appears.

2. Filter the payment events, if required, in the **Search Payment Event** zone.

Note: You can only refund payments, which are matched against suspense or excess credit contracts, to the payor account. Therefore, you can only view payment events which includes payments matched against suspense or excess credit contracts. If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

3. Select the check box corresponding to the payment event, whose payments you want to refund, in the **Search Results** section.

Note: You can add more than one payment event to the refund request at the same time.

4. Click **Add**.

A message appears indicating that the selected payment events are added to the refund request.

5. Click **OK**.

Note that the entity is added in the **Refund Details** zone on the **Main** tab.

Note:

You can only refund payments which are in the **Frozen** status.

If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Adding a Credit Bill to the Refund Request

You can refund the credit bills to the account.

Prerequisites

To add a credit bill to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add the credit bill to the refund request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to refund. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>
A bill has credit balance and one or more debit line items and you want to add the credit bill to the refund request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to refund. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>

4. Click **Add**.

A message appears indicating that the selected bills are added to the refund request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

Note that all the credit bill segments or adjustments of the bills are added in the **Refund Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Adding a Credit Bill Line Item to the Refund Request

You can refund the credit bill line items, such as bill segments and adjustments, to the account. While adding a credit bill line item to the refund request, you can either:

- Directly add all credit line items of a bill to the refund request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit line items) to the refund request

Prerequisites

To add a credit bill line item to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill line item to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.
The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add a particular credit bill line item to the refund request	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears.

If...	Then...
	<ol style="list-style-type: none"> 2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast () icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. 2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> 1. Editing a Refund Request

Prerequisites

To edit a refund request, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.

The **Refund Request** screen appears.

3. Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears. It contains the following section:

Field Name	Field Description	Mandatory (Yes or No)
Refund Request Information	Displays information about the refund request.	Not applicable
Account Information	Indicates the account for which the refund request is created.	Not applicable
Person Name	Used to indicate the person for whom the refund request is created.	No
Override Address	Used to indicate whether the account's mailing address must be overridden. Note: By default, the account's main customer's address appears in the following fields — Address 1, Address 2, Address 3, Address 4, City, Country, State, and Postal. You can override the address in these fields, if required.	No
Address 1	Used to specify the house number and apartment name.	No
Address 2	Used to specify the street name.	No
Address 3	Used to specify any landmark, if available.	No
Address 4	Used to specify the village, town, or city name.	No
City	Used to specify the city name.	No
Country	Used to specify the country name.	No
State	Used to specify the state name.	No
Postal	Used to specify the postal or zip code.	No
Comments	Used to specify additional information about the refund request.	No

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define characteristics for the refund request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the refund request.

4. Modify the details of the refund request, if required.
5. Define, edit, or remove characteristics from the refund request, if required.
6. Click **Save**.

The changes made to the refund request are saved.

Approving a Refund Request

You can view the number of refund requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the refund request based on the observations.

Note: The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To approve a refund request:

1. Do either of the following:

If you want to...	Then...
Approve a refund request through the Refund/Write Off Request screen	<ol style="list-style-type: none"> 1. Search for the refund request in the Refund/Write Off Request screen.

If you want to...	Then...
	<ol style="list-style-type: none"> In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the refund request which you want to review.
Approve a refund request from the To Do List screen	<ol style="list-style-type: none"> Click the Menu link in the Application toolbar. A list appears. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. Enter C1-REFRQ in the To Do Type field. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. Select the Open option from the Filter by list to view all unassigned To Dos. Click the link in the Message column corresponding to the To Do of the refund request that you want to review.

The **Refund Request** screen appears.

- Review the refund request details.
- Click the **Approve** button in the **Refund Request** zone.

The system behaves in the following manner:

If...	Then
The Hierarchical Approval check box is selected in the refund request type using which the refund request is created and the total refund amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the C1-REFRQ To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the refund request remains as Approval In Progress .

If...	Then
<p>The Hierarchical Approval check box is selected in the refund request type using which the refund request is created and the total refund amount is less than the threshold amount specified at the next level in the approval hierarchy</p>	<p>The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to Processed.</p> <p>Note: The refund adjustments are created in the Frozen status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to Open. However, if you are refunding the entire eligible amount, the corresponding match event status is set to Balanced.</p>
<p>The Hierarchical Approval check box is not selected in the refund request type using which the refund request is created</p>	<p>The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to Processed.</p> <p>Note: The refund adjustments are created in the Frozen status. Rejecting a Refund Request

Prerequisites

To reject a refund request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a refund request, you need to specify the reason why you want to reject the refund request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-RefundReq** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To reject a refund request:

1. Do either of the following:

If you want to...	Then...
Reject a refund request through the Refund/Write Off Request screen	<ol style="list-style-type: none"> 1. Search for the refund request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the refund request which you want to review.
Reject a refund request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-REFRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos.

If you want to...	Then...
	6. Click the link in the Message column corresponding to the To Do of the refund request that you want to review.

The **Refund Request** screen appears.

- Review the refund request details.
- Click the **Reject** button in the **Refund Request** zone.

The **Reject Refund Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the refund request.	Yes
Comments	Used to specify additional information while rejecting the refund request.	No

Note: The **Reject** button appears only when:

- The refund request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the refund request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the refund request is changed to **Rejected**.

Voiding a Refund Request

There might be situations when incorrect refund request is processed in the system. In such case, the system provides you with an ability to void or cancel the refund request. However, note that you can void a refund request only when the refund request is in the **Processed** status.

Prerequisites

To void a refund request, you should have:

- Void reasons defined in the application

Note: While voiding a refund request, you need to specify the reason why you want to void the refund request. You can select the appropriate void reason only when you have defined the reasons for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen.

Procedure

To void a refund request:

- Search for the refund request in the **Refund/Write Off Request** screen.
- In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request that you want to void.

The **Refund Request** screen appears.

- Click the **Void** button in the **Refund Request** zone.

The **Void Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to void the refund request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify additional information while voiding the refund request.	No

Note: The **Void** button appears only when the refund request is in the **Processed** status.

4. Select the void reason from the **Status Reason** list.
5. Click **Save**.

The status of the refund request is changed to **Voided**.

Note: The **C1-REFVOID** algorithm cancels all the frozen adjustments created for the refund request which is in the **Processed** state.

Write Off Request

Once you create a write off request, the **Write Off Request** screen allows you to:

- Edit and delete a write off request
- View the details of a write off request
- Submit a write off request for approval
- Approve or reject a write off request
- View the log of a write off request
- Add a log entry for a write off request
- Cancel a write off request

This screen consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
 - **Write Off Request** – Displays the details of the write off request.
 - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bill Line Items** — Displays the details of the bill which must be written off.

Note:

This zone appears when you click the Broadcast () icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:
 - **Search Bills** — Lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
 - **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears only when the write off request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the write off request.

Write Off Request - Main

The **Main** tab displays information about the write off request. It contains the following zones:

- [Write Off Request](#) on page 1298
- [Write Off Details](#) on page 1300
- [Bill Line Items](#) on page 1301

Write Off Request

The **Write Off Request** zone displays the details of the write off request. This zone contains the following sections:

- **Main** — This section provides basic information about the write off request. It contains the following fields:

Field Name	Field Description
Write Off Request Information	Displays information about the write off request.
Write Off Request Type	Indicates the write off request type using which the write off request is created. Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the write off request type.
Status	Indicates the status of the write off request. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Rejected • Processed • Cancelled
Status Reason	Indicates the reason why the write off request is rejected or cancelled. Note: This field appears only when the write off request is in the Rejected or Cancelled status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or cancelled reason.

Field Name	Field Description
Account Information	Indicates the account for which the write off request is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Comments	Displays additional information about the write off request.
Total Write Off Amount	Displays the total write off amount.

- **Characteristics** — Lists the characteristics defined for the write off request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the write off request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the write off request. Note: The Edit button appears only when the write off request is in the Draft status.
Delete	Used to delete the write off request. Note: The Delete button appears only when the write off request is in the Draft status.
Submit	Used to submit the write off request for approval. Note: The Submit button appears only when the write off request is in the Draft status.
Approve	Used to approve the write off request. Note: The Approve button appears only when: <ul style="list-style-type: none"> • The write off request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the write off request.
Reject	Used to reject the write off request. Note: The Reject button appears only when: <ul style="list-style-type: none"> • The write off request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the write off request.

Button Name	Button Description
Cancel	Used to cancel the write off request. Note: The Cancel button appears only when the write off request is in the Processed status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the write off request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the write off request status is updated
Create Date/Time	Displays the date and time when the write off request is created.

Write Off Details

The **Write Off Details** zone lists the debit bill line items (such as bill segments and adjustments) that you have added to the write off request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Write Off Amount	Displays the amount that must be written off. Note: By default, the amount which is eligible for write off appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created. Note: By default, the adjustment type specified in the write off request type appears in this column. You can change the adjustment type, if required, by editing the write off request.

Column Name	Column Description
Adjustment Information	<p>Displays information about the write off adjustment.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.</p> <p>The data appears in this column only when the status of the write off request is Processed.</p> <p>The information string appears only when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen.</p>

Note:

On clicking the **Broadcast** () icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	<p>Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.</p> <p>Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.</p>
Contract Information	<p>Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.</p>

Column Name	Column Description
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast** () icon corresponding to the bill in the **Write Off Details** zone.

Write Off Request - Bills

The **Bills** tab allows you to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:

- [Search Bill](#)
- [Bill Line Items](#) on page 1303

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details 	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search bills which are created for a particular price item.	No
	<p>Note:</p> <p>This field appears only when you select Bill and Price Item Details option from the Search By list.</p> <p>You can search for a price item by clicking the search (🔍) icon corresponding to the field.</p>	

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to write off a bill with debit balance and all debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All debit bill segments and adjustments of the bill are added in the **Write Off Details** zone on the **Main** tab. However, if you select a bill (with debit balance) which contains one or more credit line items or if you select a bill (with credit balance) which contains one or more debit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Creating a Write Off Request

Prerequisites

To create a write off request, you should have:

- Write off request types defined in the application

Procedure

To create a write off request:

1. Do either of the following:

If you want to...	Then...
Define a write off request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Write Off. <p>Note: Only one bill at a time is allowed to select for Write Off Request from the Account Receivable Central screen.</p>
Define a write off request from the Write Off Request screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Refund/Write Off Request. A sub-menu appears.

If you want to...	Then...
	3. Click the Add option from the Refund/Write Off Request sub-menu.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	<p>Displays the type of request (refund or write off) to be created.</p> <p>Note:</p> <p>This field is pre-populated if the write off request is created from the Account Receivable Central screen.</p> <p>This field is editable if the write off request is created from the Refund/Write Off Request screen.</p>	Yes
Refund/Write Off Request Type	<p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p>	Yes
Account	<p>Used to indicate the account for which you want to create the refund or write off request.</p> <p>Note:</p> <p>This field is pre-populated if the write off request is created from the Account Receivable Central screen.</p> <p>This field is editable if the write off request is created from the Refund/Write Off Request screen.</p> <p>You can search for an account by clicking the Search (🔍) icon corresponding to the respective field.</p>	Yes

Tip: Alternatively, you can access the **Select Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request** screen.

2. Select the required write off request type and account from the respective fields.
3. Click **Save**.

The write off request is defined and the status of the write off request is set to **Draft**. The **Write Off Request** screen appears with the details of the write off request. It contains the following tabs:

Note: The write off request can be created only for bill with outstanding amount greater than zero.

- **Main** – Displays information about the write off request. It contains the following zones:
 - **Write Off Request** – Displays the details of the write off request.
 - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears only when the write off request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the write off request.
4. Add debit bill line items that you want to write off.
 5. Edit the write off amount of each entity, if required.
 6. Define characteristics for the write off request, if required.

Defining a Characteristic for a Write Off Request

Prerequisites

To define a characteristic for a write off request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.

The **Write Off Request** screen appears.

3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears.

Note: The **Edit** button appears only when the write off request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the write off request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the write off request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the write off request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Adding a Debit Bill to the Write Off Request

Prerequisites

To add a debit bill to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all debit line items and you want to add the debit bill to the write off request	<ol style="list-style-type: none"> In the Search Bills zone, select the bills that you want to write off. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>
A bill has debit balance and one or more credit line items and you want to add the debit bill to the write off request	<ol style="list-style-type: none"> In the Search Bills zone, select the bills that you want to write off. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>

4. Click **Add**.

A message appears indicating that the selected bills are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone. The system will not allow you to add a credit line item to the **Write Off Details** zone.

Adding a Debit Bill Line Item to the Write Off Request

You can write off the debit bill line items, such as bill segments and adjustments, of the account. While adding a debit bill line item to the write off request, you can either:

- Directly add all debit line items of a bill to the write off request by adding the bill which has all bill segments and adjustments in debit
- Individually add a debit bill segment or adjustment of a bill (with one or more debit line items) to the write off request

Prerequisites

To add a debit bill line item to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill line item to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do any of the following:

If...	Then...
A bill has all debit line items and you want to add a particular debit bill line item to the write off request	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. 2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. 2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears.

If...	Then...
	2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.

4. Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.

The system will not allow you to add a credit line item to the **Write Off Details** zone.

Editing a Write Off Request

Prerequisites

To edit a write off request, you should have:

- Adjustment types without A/P request type defined in the application

Procedure

To edit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.

The **Write Off Request** screen appears.

3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Write Off Request Information	Displays information about the write off request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account for which the write off request is created.	Not applicable
Comments	Used to specify additional information about the write off request.	No

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define characteristics for the write off request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the write off request.

4. Modify the details of the write off request, if required.
5. Define, edit, or remove characteristics from the write off request, if required.
6. Click **Save**.

The changes made to the write off request are saved.

Editing the Write Off Details

Prerequisites

To edit the write off details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the write off details:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose bill line item details you want to edit.

The **Write Off Request** screen appears. You can edit the bill line items of the write off request by using either of the following ways:

If...	Then...
Select the bill whose details you want to edit in the Write Off Details zone and click the Edit button available in the upper left corner of this zone.	The Edit Request Details screen appears.
In the Write Off Details zone, click the Broadcast () icon corresponding to the bill whose line items details you want to edit.	<p>The Bill Line Items zone appears.</p> <p>Note: This zone appears only when the Entity Type is Bill.</p> <p>1. Select the bill line item whose details you want to edit in the Bill Line Items zone and click the Edit button available in the upper left corner of this zone.</p> <p>The Edit Request Details screen appears.</p>

Note: A bill line item from the write off request can be edited only when the write off request is in the **Draft** status.

The **Edit Request Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the write off request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	<p>Indicates the adjustment type of the write off request type.</p> <p>You can search for an adjustment type by clicking the Search () icon corresponding to the field.</p>	No

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are <ul style="list-style-type: none"> • Adjustments • Bill • Bill Segment • Payment Event • Payment
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the amount that must be write off.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>You can search for an account by clicking the Search (🔍) icon corresponding to the field.</p> </div>
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the write off request.

<p>Note:</p> <p>Pagination is used to display limited number of records in the Search Results section. By default, 10 records are displayed in the Search Results section. You can change the number of records displayed per page, if required.</p> <p>You can use the navigation buttons, such as First (◀), Previous (◀), Next (▶), and Last (▶) to navigate between pages. You can also select the page to which you want to navigate from the Go To list.</p> <p>The values appear in the Page Limit list only when you define values for the PAGE_NUMBER lookup field.</p>
--

3. Modify the details of the bill line items.
4. Click **Save**.

The changes made to the write off bill line items are saved.

Rejecting a Write Off Request

Prerequisites

To reject a write off request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a write off request, you need to specify the reason why you want to reject the write off request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-WORequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To reject a write off request:

1. Do either of the following:

If you want to...	Then...
Reject a write off request through the Refund/Write Off Request screen	<ol style="list-style-type: none"> 1. Search for the write off request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the write off request which you want to review.
Reject a write off request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 3. Enter C1-WOREQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the write off request that you want to review.

The **Write Off Request** screen appears.

2. Review the write off request details.
3. Click the **Reject** button in the **Write Off Request** zone.

The **Reject Write Off Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the write off request.	Yes
Comments	Used to specify additional information while rejecting the write off request.	No

Note: The **Reject** button appears only when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the write off request is changed to **Rejected**.

Canceling a Write Off Request

There might be situations when incorrect write off request is processed in the system. In such case, the system provides you with an ability to cancel the write off request. However, note that you can cancel a write off request only when the write off request is in the **Processed** status.

Prerequisites

To cancel a write off request, you should have:

- Cancel reasons defined in the application

Note: While cancelling a write off request, you need to specify the reason why you want to cancel the write off request. You can select the appropriate cancel reason only when you have defined the reasons for the **Cancelled** status of the **C1-WORequest** business object in the **Status Reason** screen.

Procedure

To cancel a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to cancel.

The **Write Off Request** screen appears.

3. Click the **Cancel** button in the **Write Off Request** zone.

The **Cancel Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the write off request.	Yes
Comments	Used to specify additional information while cancelling the write off request.	No

Note: The **Cancel** button appears only when the write off request is in the **Processed** status.

4. Select the cancel reason from the **Status Reason** list.
5. Click **Save**.

The status of the write off request is changed to **Cancelled**.

Note: The **C1-WOCANCEL** algorithm cancels all the frozen adjustments created for the write off request which is in the **Processed** state.

- [Hold Request Type](#)
- [Hold Request \(Used for Searching\)](#)
- [Hold Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to hold the amount for Person, Account or Bills. Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. The activities that need to be on Hold vary according to the reason for hold, such as due to a climate disaster the collection activity remains on Hold until disaster period is over.

Hold Request is a object which contains list of processes to be kept on hold for certain entities such as account, person, and bill for certain period of time. The hold period is defined as the duration between Hold Request Start Date and End Date. Each Hold Request contains an entity and processes on hold. There could exists multiple hold requests for an entity for different hold reasons and processes.

Following are the hold request entities:

- **Person:** If the person is on hold then all entities linked to that person where the person is financially responsible, such as accounts and its bills will be on hold.
- **Account:** If the account is on hold then all the bills of that account will be on hold.
- **Bill:** A bill will be on complete or partial hold.

In Hold Request, following mentioned processes can be on hold:

- **Auto Pay** — If the auto payment process is on hold then, then auto pay for the bills of the account added in hold request will be on hold till the request is released. However, you can do the manual payments. On activation of the hold request, **Defer Auto Pay Date** field (in Account screen) is populated with some future date. If billing process is on hold then auto payment process would also go on hold.
- **Bill Generation** — If the bill generation process is on hold then, then new bills will not be created for the account added in hold request till request is released. On activation of the hold request, **Bill After** date field (in Account screen) is populated with either hold request end date or some future date until that date billing is kept on hold. Whenever hold request is released for billing process then **Bill After** date field will be populated as system date.

Note: During the tenure of a hold request if customer does not require pending bills to be used for bill generation, bill in pending for accounts under hold are identified during activation of hold request which can be deleted by execution of the **C1-DELBI** batch . For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

- **Overdue** — If the overdue process is on hold then bills associated with accounts in the hold request will be on hold for overdue process. It means existing overdue will be cancelled. New overdue process will get created once hold request is released. On activation of the hold request, **Postpone Credit Review** field (in Account screen) is populated with either hold request end date or some future date. When hold request is released, **Postpone Credit Review** field would be set as system date. If the overdue process is on hold then request for policy termination due to non payment will be on hold.
- **Funding** — A list of bills identified for a full bill amount or a partial bill amount will be kept on hold for a funding process.

Note:

For Funding process, Person, Bill, and Account entities can be put on hold. However, for processes like Auto pay, Bill Generation, and Overdue, only Account entity can be put on hold.

Processes and Entities start dates and end dates are expected to be within the limit of Hold Request Start Date and End Date.

You need to specify the hold request type while creating a hold request. Hold request type helps the system to determine:

- Whether to allow the partial hold for bill or not
- Whether hold request must be approved by the approver before keeping entities and processes on hold

It is possible for a given entity, such as a person or account, to be affected by hold request with differing periods or at differing levels. For example, if there is a hold request added for a person manually and another hold request is there due to some other reason for an account belongs to the person who is already on hold. The system assumes that both hold requests are in effect for the account and that the period of accounts starts from the start of the earlier hold request record (for the account) until the later of the two release dates.

During the hold request process, a hold request goes through various statuses in its lifecycle. For more information about the hold request statuses, see [Hold Request \(Without Approval\) Status Transition](#) on page 1327 and [Hold Request \(With Approval\) Status Transition](#) on page 1327

Note that the lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object. In addition, you can configure the search feature by setting **Fkref** feature configuration for each entity, such as person, account and bill.

For more information on how to setup the hold request processes, see [Prerequisites](#) on page 1334.

Hold Request (Without Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is off:

Hold Request (With Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is on:

Algorithms Used in C1-HoldRequest

The following table lists the algorithms which are attached to the **C1-HoldRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-HOLD-INF	C1-HOLD-INF	<p>This algorithm generates hold request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> • Hold Request Type • Status • Entity • Hold Request ID

System Event	Algorithm	Algorithm Type	Description
Validation	C1-HLDVALDN	C1-HLDVALDN	<p>This algorithm validates following during different statuses:</p> <p>For Draft status, it checks the following:</p> <ul style="list-style-type: none"> • At least one Process is present in the request. Entity selection is optional • No duplicate entity and process is allowed in a single request. • Same entity cannot be placed on hold with the same Hold Reason in multiple Hold Requests. • Request start date is earlier than or equal to process and entity start date. • Request End Date is later than or equal to process and entity end date. • At least one process start date is earlier than or equal to any entity start date. • At least one process end date is later than or equal to any entity end date. • For Bill and Person entity, Bill Generation, Overdue, and Auto Pay processes cannot be selected as the hold processes in a hold request. • For Bill entity, it checks if hold amount is less than or equal to bill outstanding amount • For Bill entity, to add a new bill to the request, the selected bill should be with a non-zero outstanding amount. • Each Entities start date should lie within at least one process start date and end date in a request. <p>For Active state following are some additional validations:</p> <ul style="list-style-type: none"> • Hold Process or Entities cannot be deleted. • Hold Request or Entity or Process Start Date cannot be modified. • Hold Reason cannot be modified • Hold Request or Process or Entity End Date can be updated as either equal or greater than system date. • Process can be added with start date as system date. • Entity cannot be added in hold request. • If entity or process end date is in past then it cannot be updated.

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLDARCTRN	C1-HLDARCTRN	This algorithm transitions the request to active status when the request is created from Account Receivable Central and Delinquency Control .
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for primary key of the current business object, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submit	Enter	C1-HOLDSUBMT	C1-HOLDSUBMT	This algorithm checks the following: <ul style="list-style-type: none"> Whether the approval is required for the hold request. If the approval is required for a hold request, the status of the hold request is changed to Approval In Progress. However, if the approval is not required for a hold request, the status of the hold request is changed to Active or Deferred Processing depending on the Defer Processing Count specified in the hold request type.

Status	System Event	Algorithm	Algorithm Type	Description
Active	Enter	C1-HOLDACTV	C1-HOLDACTV	<p>This algorithm is invoked on Active button and validates following:</p> <ul style="list-style-type: none"> • Entities Start Date is on or after Hold Request Start Date • Entities End Date is on or before Hold Request End Date • For an Entity Bill, Hold Amount is not more than bill outstanding amount or Bill outstanding amount is not equal to zero. • Updates and processes entities start date to system date. • It updates following mentioned date to minimum of Entity End Date or Process End Date: <ul style="list-style-type: none"> • Bill After Date - For Bill Generation Process. • Postpone Credit review Date Until- For Overdue Process. • Defer Auto Pay Date - For Auto pay process. • Parameter-Alert Type-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to Alerts tab on account. • Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account. <p>Note: If entity end date is empty, process end date will be considered. If process end date and entity is empty, Hold Request End Date will be considered.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Processing	Monitor	F1-AT-RQJ	F1-AT-RQJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Only one of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Approval In Progress	Enter	C1-HOLDAPP	C1-HOLDAPP	This algorithm creates To Do based on 'Approval To Do Type configured in Hold Request Type.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Approved	Enter	C1-HOLDAPRVD	C1-HOLDAPRVD	This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval profile hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the hold request is changed to Approval In Progress . If further approval is not required, the status of the hold request is changed to Active or Deferred Processing depending on the Defer Processing Count specified in the hold request type.

Status	System Event	Algorithm	Algorithm Type	Description
Return to Submitter	Enter	C1-HLDRESUBM	C1-HLDRESUBM	This algorithm is triggered when the approver clicks the Re Submit button. A To Do is created and sent to the submitter. It transitions the status of the hold request from Approval In Progress to Draft . The submitter can make required changes to the request details and submit it again. The To Do Type and To Do Role for submitter is specified in hold request type.
Rejected	-	-	-	-
Released	Enter	C1-RELENTITY	C1-RELENTITY	This algorithm is invoked on Release button and updates following date to system date for all entities in the Hold Request: <ul style="list-style-type: none"> • Bill After Date - For Bill Generation Process • Postpone Credit review Date Until- For Overdue Process • Defer Auto Pay Date - For Auto pay process • Parameter-Alert Type-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to Alerts tab on account • Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account.
Released	Enter	C1-RLSHOLD	C1-RLSHOLD	This algorithm is invoked on click of Release button in hold request and updates the following: <ul style="list-style-type: none"> • Hold Request End Date is updated to System Date • Processes End Date is updated to System Date • Entities End Date is updated to System Date • Hold request status is changed to Released after Hold Release Reason is accepted.

Prerequisites

To setup the hold request process, you need to do the following:

- Define the release status reasons for the **C1-HoldRequest** business object
- Define the required hold reasons in the system
- Define rejected status reasons for the **C1-HoldRequest** business object
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive To Do generated while submitting a hold request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive To Do generated while resubmitting a hold request
- Define the required hold request types in the system
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)** and **Hold Request Monitor (C1-HLMON)** batches to Timed and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Note: For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

Hold Request Type

Oracle Revenue Management and Billing allows you to define a hold request type using which you can create a hold request.

The **Hold Request Type** screen allows you to define, edit, copy, and delete a hold request type. This screen consists of the following zones:

- [Hold Request Type List](#) on page 1334
- [Hold Request Type](#) on page 1335

Hold Request Type List

The **Hold Request Type List** zone lists hold request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.

Column Name	Column Description
Edit	On clicking the Edit (✎) icon, the Hold Request Type screen appears where you can edit the details of the hold request type.
Duplicate	On clicking the Duplicate (📄) icon, the Hold Request Type screen appears where you can define a hold request type using an existing hold request type.
Delete	On clicking the Delete (🗑) icon, you can delete the hold request type. Note: You can delete a hold request type only when you have not created a hold request using the hold request type.

On clicking the **Broadcast** (📡) icon corresponding to the hold request type, the **Hold Request Type** zone appears with the details of the respective hold request type.

Hold Request Type

The **Hold Request Type** zone displays the details of the hold request type. This zone consists of the following sections:

- **Main** — This section provides basic information about the hold request type. It contains the following fields:

Field Name	Field Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Hold Request Business Object	Indicates the business object that will be used to create the hold request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the hold request type.
Status	Indicates the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Allow Partial Hold for Bill	Indicates whether the partial hold amount is allowed for a bill.

Field Name	Field Description
Defer Processing Count	Displays the number of entities to determine if the hold request will be processed in deferred mode.
	Note: If the number of entities is less than the Defer Processing Count , the hold request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating the hold request using hold request type.
Approval To Do Type	Indicates that To Do of the specified To Do type must be created when you submit the hold request for approval.
	Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve the hold request submitted for approval.
	Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do type of the submitter.
	Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the To Do role of the submitter.
	Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.

- **Hold Processes** —This section displays the list of processes to be kept on hold for the hold request type.
- **Characteristics** — This section lists the characteristics defined for the hold request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request type.
Delete	Used to delete the hold request type.
	Note: You can delete a hold request type only when you have not created a hold request using the hold request type.
Duplicate	Used to create a new hold request type using an existing hold request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Hold Request Type** zone does not appear in the **Hold Request Type** screen. It appears only when you click the **Broadcast** () icon corresponding to the hold request type in the **Hold Request Type List** zone.

How to view the details of a hold request type	Viewing the Hold Request Type Details on page 1347

Defining a Hold Request Type

Prerequisites

To define a hold request type, you should have:

- Hold request business objects defined in the application

Procedure

To define a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Hold Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type Business Object	Used to indicate the business object that you want to use to create the hold request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple hold request type business objects defined in the application. If there is only one hold request type business object defined in the application, the **Hold Request Type** screen appears.

4. Select the required hold request type business object from the respective field.
5. Click **OK**.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status.	
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate the number of entities to determine if the hold request will be processed in deferred mode.	No
	<p>Note:</p> <p>If the number of entities is less than the Defer Processing Count, the hold request will be processed in real time (i.e. immediately).</p> <p>Defer processing count should be a numerical value without decimal points.</p>	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p>	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p>	
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

Note:

Deferred mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. When the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked, the system checks whether there are any hold requests in the **Deferred** status. If there is an hold request in the **Deferred** status, then its status is changed to **Active**.

6. Enter the required details.

Note: You can search for **To Do Type** by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define processes to hold for the hold request type.

Note:

At least one hold process needs to be selected for defining a hold request type.

8. Define characteristics for the hold request type, if required.
9. Click **Save**.

The hold request type is defined.

Hold Request Type screen	Hold Request Type on page 1334
Hold Request Type List zone	Hold Request Type List on page 1334
How to define a characteristic for a hold request type	Defining a Characteristic for a Hold Request Type on page 1340

**Defining a Characteristic for a Hold Request Type****Prerequisites**

To define a characteristic for a hold request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request Type**)

Procedure

To define a characteristic for a hold request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hold request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request Type .	Note: This field is required when you are defining a characteristic for the hold request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the hold request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the hold request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the hold request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to edit a hold request type	Editing a Hold Request Type on page 1341
How to copy a hold request type	Copying a Hold Request Type on page 1344

Editing a Hold Request Type

Prerequisites

To edit a hold request type, you should have:

- Hold request business objects defined in the application

Procedure

To edit a hold request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Hold Request Type** sub-menu.
The **Hold Request Type** screen appears.
- In the **Hold Request Type List** zone, click the **Edit** (📎) icon in the **Edit** column corresponding to the hold request type whose details you want to edit.

The **Hold Request Type** screen appears. It contains the following sections:

- Main** — Used to specify basic details about the hold request type.
- Hold Processes** — Used to define the processes to hold for the hold request type.
- Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Displays the hold request type.	Not applicable
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status.	
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes
Defer Processing Count	Used to indicate the number of entities to determine if the hold request will be processed in deferred mode.	No
	Note: If the number of entities is less than the Defer Processing Count , the hold request will be processed in real time (i.e. immediately). Defer processing count should be a numerical value without decimal points.	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	
	Note: This field is required when the Approval Required check box is selected	

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

Note:

Deferred mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. When the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked, the system checks whether there are any hold requests in the **Deferred** status. If there is an hold request in the **Deferred** status, then its status is changed to **Active**.

Tip: Alternatively, you can click the **Edit** button in the **Hold Request Type** zone to edit the details of the hold request type.

5. Modify the details, if required.
6. Define, edit, or remove characteristics from the hold request type, if required.
7. Click **Save**.

The changes made to the hold request type are saved.

Deleting a Hold Request Type**Procedure**

To delete a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Hold Request Type** sub-menu.

The **Hold Request Type** screen appears.

- In the **Hold Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the hold request type that you want to delete.

A message appears confirming whether you want to delete the hold request type.

Note: You can delete a hold request type only when you have not defined a hold request using the hold request type.

Tip: Alternatively, you can click the **Delete** button in the **Hold Request Type** zone to delete the hold request type.

- Click **OK**.

The hold request type is deleted.

Copying a Hold Request Type

Instead of creating a hold request type from scratch, you can create a new hold request type using an existing hold request type. This is possible through copying a hold request type. On copying a hold request type, the details including the characteristics are copied to the new hold request type. You can then edit the details, if required.

Prerequisites

To copy a hold request type, you should have:

- Hold request type (whose copy you want to create) defined in the application
- Hold request business objects defined in the application

Procedure

To copy a hold request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **H** and then click **Hold Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Hold Request Type** sub-menu.

The **Hold Request Type** screen appears.

- In the **Hold Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the hold request type whose copy you want to create.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status.</p>	Yes
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	used to indicate the number of bills to determine if the hold request will be processed in deferred mode.	No
	<p>Note:</p> <p>Deferred mode means in the background when the Hold Request Periodic Monitor (C1-HLDRQ) batch is invoked. You can configure the Hold Request Periodic Monitor (C1-HLDRQ) batch such that it is executed at regular intervals. When the Hold Request Periodic Monitor (C1-HLDRQ) batch is invoked, the system checks whether there are any hold requests in the Deferred status. If there is an hold request in the Deferred status, then its status is changed to Active.</p> <p>If the number of bills is less than the Defer Processing Count, the hold request will be processed in real time (i.e. immediately).</p> <p>Defer processing count should be a numerical value without decimal points.</p>	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p>	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p>	
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Hold Request Type** zone to create a copy of the hold request type.

5. Enter the required details.
6. Define, edit or remove processes from the hold request type, if required.
7. Define, edit, or remove characteristics from the hold request type, if required.
8. Click **Save**.

The new hold request type is defined.

Hold Request (Used for Searching)

The **Hold Request** screen allows you to search for a hold request using various search criteria. It also allows you to create a hold request. Through this screen, you can navigate to the following screen:

- [Hold Request \(Used for Viewing\)](#) on page 1358

This screen consists of the following zone:

- [Search Hold Request](#) on page 1348

Search Hold Request

The **Search Hold Request** zone allows you to search for hold requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a hold request using request or bill details. The valid values are: <ul style="list-style-type: none"> • Request Details • Bill Details 	Yes
	Note: By default, the Request Details option is selected.	
Hold Request Type	Used to search hold requests which are created using a particular hold request type.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Hold Process	Used to search hold requests which are created using a particular hold process.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Status	Used to search hold requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Released • Approval In Progress • Deferred Processing • Rejected 	No
	Note: This field appears only when you select the Request Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search hold requests which are created for a particular account.	No
	Note: This field appears only when you select the Request Details option from the Search By list. You can search for an account by clicking the Search (🔍) icon corresponding to the field.	
Entity	Used to search hold request with a particular entity. The valid values are: <ul style="list-style-type: none"> • Account • Person • Bill 	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
User ID	Used to search hold requests which are created by a particular user.	
	Note: This field appears only when you select the Request Details option from the Search By list.	
Start Date	Used to search hold requests which are created from a particular date onwards.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
End Date	Used to search hold requests which are created till a particular date.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Hold Request ID	Used to search a particular hold request.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search hold requests which are created for a particular person.	No
	Note: This field appears only when you select the Request Details option from the Search By list. You can search for a person by clicking the Search (🔍) icon corresponding to the field.	
Bill ID	Used to search hold requests which includes bill segments or adjustments of a particular bill.	No
	Note: This field appears only when you select the Bill Details option from the Search By list. You can search for a bill by clicking the Search (🔍) icon corresponding to the field.	
Bill Date From	Used to search hold requests which includes bill segments or adjustments of bills which are created from a particular date onwards.	No
	Note: This field appears only when you select the Bill Details option from the Search By list.	
To	Used to search hold requests which includes bill segments or adjustments of bills which are created till a particular date.	No
	Note: This field appears only when you select the Bill Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a hold request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the hold request is created.
Hold Request Information	Displays information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request.

Column Name	Column Description
Status	Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none"> Active Draft Released
Start Date	Displays the date when the hold request is created.
End Date	Displays the date when the hold request is released.
Hold Processes	Displays the hold processes using which hold request is created.
Hold Reason	Displays the hold reason for the hold request.
Created By	Indicates the user who has created the hold request.

Searching for a Hold Request

Prerequisites

To search for a hold request, you should have:

- Hold request types defined in the application

Procedure

To search for a hold request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Hold Request**.
A sub-menu appears.
3. Click the **Search** option from the **Hold Request** sub-menu.
The **Hold Request** screen appears.
4. Enter the search criteria in the **Search Hold Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of hold requests that meet the search criteria appears in the **Search Results** section.

Only one bill at a time is allowed to select for Hold Request from Account Receivable Central</p>
Define a hold request from the Delinquency Central screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Credit & Collection and then click Delinquency Central. The Delinquency Central screen appears. 3. Search for the overdue process in the Delinquency Central screen.

If you want to...	Then...
	<p>4. In the Search Results section, select the required overdue process and then click Create Hold Request.</p> <p>Note: Accounts are selected to be on hold from Delinquency Central screen Only one account at a time is allowed to select for Hold Request from Delinquency Central screen.</p>
Define a hold request from the Hold Request screen	<p>1. Click the Menu link in the Application toolbar. A list appears.</p> <p>2. From the Main menu, select Financial and then click Hold Request. A sub-menu appears.</p> <p>3. Click the Add option from the Hold Request sub-menu.</p>

The **Add Hold Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to indicate the request type using which you want to create the hold request.	Yes

Tip: Alternatively, you can access the **Add Hold Request** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request** screen.

2. Select the required hold request type from the respective fields.
3. Click **OK**.

The hold request is defined and the status of the hold request is set to **Draft**. The **Hold Request** screen appears where you can view the details of the hold request. It contains the following sections:

- **Main** – Used to specify basic details about the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Indicates the hold request type using which you want to create the hold request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the hold request is effective.	Yes
	Note: The hold request start date cannot be later than the hold request end date. By default, system date appears in this field.	
End Date	Used to specify the date till when the hold request is effective.	Yes
	Note: The hold request end date cannot be earlier than the hold request start date.	
Hold Reason	Used to indicate the reason why you want to hold the entity.	Yes
	Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active .	
Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • Account • Bill • Person 	Yes
	Note: If bill is kept on hold using Account Receivable Central screen, then this field will display Bill as an entity and Hold Entities section will display information about this bill.	
Comments	Used to specify the additional information about hold request.	No

- **Hold Entities** — Used to specify details of the selected hold entity. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Entity ID	Used to specify the hold entity ID.	Yes
	<p>Note:</p> <p>You can search for an entity ID by clicking the search (🔍) icon corresponding to the field</p> <p>If the hold entity is account, you must specify the account ID in this field. If the hold entity is person, you must specify the person ID in this field. And, if the hold entity is bill, you must specify the bill ID in this field.</p> <p>.</p>	
Start Date	Used to specify the date from when you want to hold the entity.	Yes
	<p>Note:</p> <p>By default, system date appears in this field</p> <p>The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity start date cannot be later than the hold entity end date.</p>	
End Date	Used to specify the date till when you want to hold the entity.	No
	<p>Note:</p> <p>The hold entity end date must be between hold request start and end dates and between the process's start and end dates.</p> <p>The hold entity end date cannot be earlier than the hold entity start date.</p>	
Hold Amount	Displays the amount which is kept on hold.	Not applicable
	<p>Note: This column appears only when the hold entity is Bill.</p>	

- **Hold Processes** — Used to indicate the processes to be on hold for the hold request. By default, processes are defined on the hold request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that needs to be kept on hold.	Yes
Start Date	Used to specify the date from when process is to be on hold for the hold request.	Yes
	Note: By default, system date appears in this field The hold process start date must be between the hold request start and end dates.	
End Date	Used to specify the date till when the process is to be on hold.	No

- **Characteristics** — Used to define the characteristics for the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the hold request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request .	Note: This field is required when you are defining a characteristic for the hold request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the hold request.

4. Enter the required details

Note:

Processes and Entities start dates and end dates are expected to be within the limit of Hold Request Start Date and End date.

You can search for a hold entity by clicking the **search**  icon corresponding to the respective field.

5. Add entities and processes for the hold request.
6. Define characteristics for the hold request, if required.
7. Click **Save**.

The hold request is created and the status of the hold request is set to **Draft**. The **Hold Request** screen appears with the details of hold request.

Note: It is recommended that user should set the **C1-HLMON** batch every time the hold request is generated. Otherwise, alert would be shown in the dashboard which may not give the proper representation of active hold requests.

Note: This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** — Searches the persons to be put on hold.

Note: This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** — Lists complete trail of actions performed on the hold request. This tab contains the following zone:
 - **Hold Request Log** — Displays the actions performed on the hold request.

Hold Request - Main

The **Main** tab on the **Hold Request** contains the following zones:

- [Hold Request](#) on page 1359
- [Hold Entities](#) on page 1361
- [Search Account](#) on page 1362

Note: This zone appears only when hold request is for **Account** and its status is **Draft** .

- [Search Bill](#) on page 1365

Note: This zone appears only when hold request is for **Bill** and its status is **Draft** .

- [Search Person](#) on page 1366

Note: This zone appears only when hold request is for **Person** and its status is **Draft** .

Hold Request

The **Hold Request** zone displays the details of the hold request. This zone contains the following sections:

- **Main** — This section provides basic information about the hold request. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Hold Request Type	Indicates the hold request type using which the hold request is created. Note: It has a link. On clicking the link, the Hold Request Type screen appears where you can view the details of the hold request type.
Status	Indicates the status of the hold request.
Status Reason	Indicates the reason why the hold request is released. Note: This field appears only when the hold request is in the Released status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the released reason.
Start Date	Displays the date when the hold request is created.
End Date	Displays the date when the hold request is released.
Hold Reason	Displays the reason of hold request.
Entity	Displays the hold request entity.
Comments	Displays the additional information for a hold request.

- **Hold Processes** — Lists the processes that are on hold in the hold request. It contains the following columns:

Column Name	Column Description
Hold Process	Lists the processes that are on hold.
Start Date	Displays the date from when the process is to be on hold for hold request.
End Date	Displays the date till when the process is to be on hold for hold request.

- **Characteristics** — Lists the characteristics defined for the hold request. It contains the following fields:

Field Name	Field Description
Effective Date	Displays the date from when hold request is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request.
	Note: The Edit button appears only when the hold request is in the Draft or Active status.
Delete	Used to delete the hold request.
	Note: The Delete button appears only when the hold request is in the Draft status.
Submit	Used to activate the hold request.
	Note: The Submit button appears only when the hold request is in the Draft status.
Re Submit	Used to re-submit the hold request.
	Note: the Re Submit button appears only when the hold request is in the Approval In Progress status.
Approve	Used to approve the hold request.
	Note: the Approve button appears only when the hold request is in the Approval In Progress status.
Reject	Used to reject the hold request.
	Note: the Reject button appears only when the hold request is in the Approval In Progress status.
Release	Used to release the hold request.
	Note: The Release button appears only when the hold request is in the Active status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Field Name	Field Description
Status Date/Time	Displays the date and time when the hold request status is updated.
Create Date/Time	Displays the date and time when the hold request is created.

Hold Entities

The **Hold Entities** zone on the **Hold Request** screen lists the entities that are on hold request. This zone contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears with details of the respective person.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with details of the respective account.
Bill Information	Displays information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with details of the respective bill.
Start Date	Displays the date from when the entity is on hold.
End Date	Displays the date till when the entity is on hold.
	Note: When hold request for entity is released, then its end date gets updated to the release date only when its end date lies between the hold request start date and end date .
Hold Amount	Displays the amount on hold.
	Note: This column appears only when the entity bill is on hold.
Bill After Date	Displays the date after which bills can be generated.
	Note: This column appears only when the entity account is on hold.
Postpone Credit Review Until	Displays the date till when overdue process is to be on hold.
	Note: This column appears only when the entity account is on hold.
Defer Auto Pay Date	Displays the date from when auto pay process is to be put on deferred mode.
	Note: This column appears only when the entity account is on hold.

Note:

You can directly edit the start and end date of the hold entities by selecting the corresponding column and then click the **Edit** button available on the upper left corner of the **Hold Entities** zone.

You can directly delete the hold entities by selecting the corresponding column and then click the **Delete** button available on the upper left corner of the **Hold Entities** zone.

Postal	Used to indicate the postal or zip code.	No

Note:

You must specify at least one search criterion while searching for accounts.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays the account information.
Country	Displays the country name.
State	Displays the state name.
County	Displays the county name.
Postal	Displays the postal or zip code.
Customer Class	Displays the customer class of the account.
Division	Displays the division to which the account belongs.
Entity ID	Displays the entity ID.

Submitting a Hold Request

Prerequisites

To submit a hold request, you should have:

- Hold Request Types, Hold Processes and Hold Entities defined in the request.

Procedure

To submit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to submit.

The **Hold Request** screen appears.

3. Click the **Submit** button in the **Hold Request** zone.

The system behaves in the following manner:

If...	Then
The Approval Required check box is selected in the hold request type using which the hold request is created.	A To Do of the C1-HLDAP To Do type is created and sent to the approver and the status of the hold request is changed to Approval In Progress .
The Approval Required check box is not selected in the hold request type using which the hold request is created.	The hold request is created using the specified hold request types and the status of the hold request is changed to Active or Deferred Processing as specified in the hold request type.

Note:

The **Submit** button appears only when the hold request is in the **Draft** status.

Once the request is activated, the **Release** button appears in the **Record Actions** section.

If hold request start date is in past and its status is draft then, on activation of the hold request, the start date is changed to the system date.

For Active hold request, **C1-DELBI** batch will delete all pending bill segments and bills under account for bill generation process.

For more information about the **Delete Pending Bill segments and Bills (C1-DELBI) batch**, refer to Oracle Revenue Management and Billing Batch Guide.

Prerequisites

To resubmit a hold request, you should have:

- Entities added in the hold request which is submitted for approval.

While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the hold request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

Procedure

To resubmit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to resubmit.

The **Hold Request** screen appears.

3. Click the **Re Submit** button in the **Hold Request** zone.

The **Resubmit Hold Request** screen appears.

Note: The **Re Submit** button appears only when the hold request is in the **Approval In Progress** status.

A To Do of the **C1-HOLSB** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the hold request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

Viewing the Log of a Hold Request

Procedure

To view the log of a hold request:

1. Search for the hold request in the **Hold Request** screen.

- In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold* request whose log you want to view.

The **Hold Request** screen appears. It consists of the following tabs:

- Main** – Displays information about the hold request. It contains the following zones:

- Hold Request** – Displays the details of the hold request.
- Hold Entities** – Lists the hold entities records of the hold request.
- Search Account** – Searches the accounts to be put on hold.

Note: This zone appears only when hold request is for **Account** and its status is **Draft**.

- Search Bill** – Searches the bills to be put on hold.

Note: This zone appears only when hold request is for **Bill** and its status is **Draft**.

- Search Person** – Searches the persons to be put on hold.

Note: This zone appears only when hold request is for **Person** and its status is **Draft**.

- Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:

- Hold Request Log** – Displays the trail of actions performed on the particular hold request.

- Click the **Log** tab.

The **Hold Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the hold request.
Details	Displays the details about the action performed on the hold request.
User	Indicates the user who has performed the action on the hold request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the hold request.
Status Reason	Indicates the reason why the hold request was rejected or voided.

Note: You can manually add a log entry for the hold request by clicking the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

Adding a Log Entry for a Hold Request

Procedure

To add a log entry for a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose log you want to edit.

The **Hold Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:

- **Hold Request** – Displays the details of the hold request.
- **Hold Entities** – Lists the hold entities records of the hold request.
- **Search Account** – Searches the accounts to be put on hold.

Note: This zone appears only when hold request is for **Account** and its status is **Draft**.

- **Search Bill** – Searches the bills to be put on hold.

Note: This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** – Searches the persons to be put on hold.

Note: This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:
 - **Hold Request Log** – Displays the trail of actions performed on the particular hold request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

The **Add Hold Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Log Details	Used to specify additional comments on the hold request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Hold Request Log** zone.

Chapter 22

Delinquency Central

Topics:

- [Prerequisites](#)
- [Delinquency Central \(Used for Viewing\)](#)
- [Overdue Process Information for Account: {Account ID}](#)

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see [Prerequisites](#) on page 1388.

Related Topics

Delinquency Central screen	Delinquency Central (Used for Viewing) on page 1388
Overdue Process Information for Account: {Account ID}	Overdue Process Information for Account: {Account ID} on page 1395

Prerequisites

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

Delinquency Central (Used for Viewing)

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person's account
- Create a payment agreement request for an account

This screen consists of the following zones:

- [Search Overdue Process](#)
- [Overdue Events](#)

Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: <ul style="list-style-type: none"> • Person • Account • Bill • Overdue Process 	No
	Note: By default, the Person option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for overdue processes which belong to a particular person.	No
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier Type	Used to search for overdue processes with a particular person identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier	Used to search for overdue processes with a specific value of the person identifier type.	Yes
	Note: This field appears only when you select the Person option from the Search By list.	
Account ID	Used to search for overdue processes created for a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to search for overdue processes with a particular account identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier	Used to search for overdue processes with a particular account identifier.	Yes
	Note: This field appears only when you select the Account option from the Search By list.	
Bill ID	Used to search for overdue processes with a particular bill.	No
	Note: This field appears only when you select the Bill option from the Search By list.	
Alternate Bill ID	Used to search for overdue processes using an alternate bill ID.	No
	Note: This field appears only when you select the Bill option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and its value.	No
	Note: This field appears only when you select the Bill option from the Search By list.	
Overdue Process Template	Used to search for overdue processes with a particular overdue process template.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
Start Date	Used to search for overdue processes with a particular start date.	Yes
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
End Date	Used to search overdue process with a particular end date.	Yes
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
Status	Used to search for overdue processes with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
On Hold	Used to search for overdue processes that are on hold.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
Overdue Amount From	Used to search for overdue processes with a particular lower limit of the overdue amount.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
To	Used to search for overdue processes with a particular higher limit of the overdue amount.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and value.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

Column Name	Column Description
Main Customer	Displays the name of the main customer to whom the account belongs.
	Note: This field appears only when you select the Account option from the Search By list.
Person Name	Displays the name of the person to whom the account belongs.
	Note: This field appears only when you select the Person option from the Search By list.
Person Identifier Type	Displays the person identifier type.
	Note: This field appears only when you select the Person or Account option from the Search By list.
Person Identifier	Displays the value of the person identifier type.
	Note: This field appears only when you select the Person or Account option from the Search By list.
Account Identifier Type	Displays the account identifier type.
	Note: This field appears only when you select the Account option from the Search By list.
Account Identifier	Displays the value of the account identifier type.
	Note: This field appears only when you select the Account option from the Search By list.
Overdue	Displays whether the person account(s)/bill(s) are overdue. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field appears only when you select the Person or Account option from the Search By list.
Number of Active Overdue processes	Displays the number of overdue processes linked to the person's account that are in active status.
	Note: This field appears only when you select the Person or Account option from the Search By list.

Column Name	Column Description
Number of Hold(s) on Account(s)	Displays the number of hold requests on the particular account.
Number of Overdue Bills	Displays the total number of bills that are overdue. Note: This field appears only when you select the Person or Account option from the Search By list.
Total Overdue Amount	Displays the total overdue amount for an account.
Last Payment Date	Displays date of the last payment made by the person. Note: This field appears only when you select the Person or Account option from the Search By list.
Last Payment Amount	Displays the amount last paid by the person. Note: This field appears only when you select the Person or Account option from the Search By list.
Number Of Payment Arrangements	Displays the number of payment arrangements for the person's account. Note: This field appears only when you select the Person or Account option from the Search By list.
Total Number of Overdue Process on Hold	Displays the total number of overdue process that are on hold. Note: This field appears only when you select the Person or Account option from the Search By list.
Number of Promise To Pay	Displays the number of promise to pay belonging to the person. Note: This field appears only when you select the Person or Account option from the Search By list.
Number of Broken Promise To Pay	Displays the total number of promise to pay that are broken. Note: This field appears only when you select the Person or Account option from the Search By list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Overdue Process	Display additional information about the overdue process. Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the overdue process.
Overdue Process Template	Displays the template that was used to create overdue process's events.

Column Name	Column Description
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the account.
Person Information	Display additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears with the details of the person.
Overdue Amount	Displays the overdue amount under that overdue process.
On Hold	Displays whether the overdue process is on hold.
Overdue Process Details	On clicking the View () icon, the Overdue Process Details screen appears where you can view details of the overdue process.

On clicking the **Broadcast** () icon corresponding to the overdue process, the **Overdue Events** zone appears with the details of the respective overdue process.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

1. Click the **Menu** link in the **Application** toolbar
2. From the **Main** menu, select **Credits & Collection** and then click **Delinquency Central**.

The **Delinquency Central** screen appears.

3. Enter the search criteria in the **Search Overdue Process** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of overdue processes that meet the search criteria appear in the **Search Results** section.

Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Person Name	Displays the name of the person whose account is linked to the overdue process.
Phone Number	Displays the phone number of the person.
Address	Displays the address of the person.

Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Last Payment Date	Displays the date of the last payment made from the account that is linked with the overdue process.
Last Payment Amount	Displays the amount last paid from the account.

Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Contact Date/Time	Displays the date and time when the customer was contacted.
Customer Contact Information	Displays additional information about the customer contact.
	Note: It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer contact.
Preferred Contact Method	Displays the preferred method of contacting the customer.
Comments	Displays the comments that are placed against each customer.

Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Promise To Pay Information	Displays additional information of promise to pay.
	Note: It has a link. On clicking the link, the Promise To Pay screen appears where you can view the details of promise to pay.
Scheduled Amount	Displays the amount to be paid on the Scheduled Date .
Scheduled Date	Displays the date when the payment is expected as per promise to pay.
Status	Displays the status of promise to pay.
Created By	Displays the user ID who has created the promise to pay.

Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request.
Status	Displays the status of the hold request.
Entity	Displays the hold request entity.
Entity Information	Displays the information about the entity on hold.
	Note: It has a link. On clicking the link, the Account, Bill or Person screen appears, where you can view details of the respective account, bill or person.
Start Date	Displays the date when the hold request is created.
End Date	Displays the end date of the hold request.

Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Overdue Amount	Displays the amount that is overdue in the bill.
Days Past Due	Displays the number of days past after the bill date.

Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Contract Information	Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Payoff Balance	Displays the total amount that is paid against the payment arrangement contract.
Arrange Amount	Displays the amount that is paid in installments as per the payment arrangement contract.
Number of Installments	Displays the number of installments used to calculate the Arrange Amount .

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the name of the person for whom the bill is generated.	No
Person ID	Used to specify the person ID.	No
Bills of Persons in Hierarchy	Used to indicate whether you want to search for a bills generated against a person's hierarchy.	No
Bill Cycle	Used to indicate bills where a particular bill cycle is defined.	No
Bill Currency	Used to indicate the bill currency.	No
Billing Method	Used to indicate the billing method. The valid values are: <ul style="list-style-type: none"> • Ad-Hoc Billing • Regular Billing 	No
Bill ID	Used to specify the bill ID.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Account ID	Used to indicate the account against which the bill is generated.	No
On or After Bill Date	Used to specify the date when the bill was completed.	No
Account Identifier Type	Used to search for bills where the account against which it is generated, a particular account identifier type is defined.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to search for a bill generated against an account with a particular account identifier.	No

Note: You must specify at least one search criterion while searching for the bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Name	Displays the name of the person against whom the bill is generated.
Bill ID	Displays the bill ID.
Bill Status	Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete

- [CSV File Format for Account Bill Cycle Upload Request](#)
- [CSV File Format for Contract Rider Upload Request](#)
- [CSV File Format for Billable Charge Upload](#)
- [CSV File Format for Hold Upload Request](#)
- [CSV File Format for Refund Request Upload](#)

Oracle Revenue Management and Billing provides a generic upload feature which enables you to upload various types of data. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

While uploading data for the above supported entities, you need to specify the upload request type using which you want to upload the file. It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can upload a data file in the CSV format. You cannot upload data for more than one entity type through the same CSV file. For example, you cannot upload data for billable charges and hold requests using a single CSV file. An upload request of the specified upload request type is created when the file is successfully uploaded in the system. You can track a file through an upload request.

Once an upload request is created, the status of the upload request is set to **Draft**. The status of each record uploaded through an upload request is set to **Pending**. However, if the mandatory data is not available or data required for deriving

- [CSV File Format for Write Off Request Upload](#)
- [CSV File Format for Reinstatement Upload Request](#)
- [CSV File Format for Bill Group Sorting Upload Request](#)
- [CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request](#)
- [Upload Request Type](#)
- [Upload Request \(Used for Searching\)](#)
- [Upload Request \(Used for Viewing\)](#)

mandatory data is incorrect in the record, the status of record is set to **Invalid**. You can then edit, delete, or validate the upload request. During the validation process, the system and custom validations (if any) are executed. The status of each record is changed to **Valid** or **Invalid** depending on whether the record was validated successfully or not.

Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUplReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUplReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request(C1-BillLevelUploadRequest)

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see [Upload Request \(Without Approval\) Status Transition](#) on page 1406 and [Upload Request \(With Approval\) Status Transition](#) on page 1407.

Note: The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see [Prerequisites](#) on page 1408.

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is off:

Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is on:

Prerequisites

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
 - Policy Status after Processing Reinstatement Upload Request
 - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
 - **Navigation Option** - c1upldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
- Create a To Do type named **C1-BGDVP** using the following information:
 - **Navigation Option** - c1upldrqTabMenu

- **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BCU-DERIV	C1-BCU-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-BCU-VALID	C1-BCU-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p>
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: <ul style="list-style-type: none"> • Next Status • Next Transition Condition At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Processing	Enter	C1-BCU-PROC	C1-BCU-PROC	<p>This algorithm fetches a list of records which are in the Valid status. For each valid record, the system reads the account ID and bill cycle, and updates the bill cycle information of the account using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to Processed. However, if the record could not be processed successfully due to any reason, the status of the record is changed to Error. Finally, the status of the upload request is changed to Processed.</p>
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-CR-VALID	C1-CR-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the Contract Rider Applicability flag on the bill factor is set to Y, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the Contract Rider Applicability flag on the bill factor is set to N, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>

Status	System Event	Algorithm	Algorithm Type	Description

Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLD-DERIV	C1-HLD-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>If the hold entity is ACCT and the entity ID is not specified in the record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is PERS and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-HLD-VALID	C1-HLD-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the hold entity is ACCT and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is PERS and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Processing	Enter	C1-HLD-PROC	C1-HLD-PROC	<p>This algorithm fetches a list of records which are in the Valid status. For each valid record with a unique combination of the hold request type, start date, end date, hold reason, hold entity, hold entity start date, hold entity end date, comments, hold process details, and hold characteristic details, it creates one hold request using the entity business object defined in the upload request type. However, if there are multiple entity IDs with the same combination, all are added in the same hold request. The hold request is created in the Draft status and then transitioned to Submit.</p> <p>From the Submit status, the status of the hold request is either changed to Approval In Progress or Active depending on whether the Approval Required flag is set to Yes. If the number of bills of the entities which are kept on hold through the hold request does not exceed the defer processing count (defined in the hold request type), the status of the hold request is changed to Active. However, if the number of bills of the entities which are kept on hold through the hold request exceeds the defer processing count, the status of the hold request is changed to Deferred Processing. If the record is successfully processed, the status of the record is changed to Processed. However, if the record could not be processed successfully due to any reason, the status of the record is changed to Error. Finally, the status of the upload request is changed to Processed.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-RF-VALID	C1-RF-VALID	This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing.
Draft	Enter	C1-RF-DERIV	C1-RF-DERIV	This algorithm reads the BO_DATA_AREA in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in C1_UPLOAD_REQ_DTLS table.
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. Algorithms Used in C1-ReinstatementUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-ReinstatementUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending .
Draft	Enter	C1-REN-DERIV	C1-REN-DERIV	This algorithm reads the data in the BO_DATA_AREA column of the C1_UPLOAD_REQ_DTLS table and then derives the policy ID using the source system and policy number combination whenever the policy ID is not specified in the record. Once the policy ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the policy ID using the source system and policy number combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid .

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-REN-VALID	C1-REN-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the policy ID and reinstatement reason specified in the record is valid. If the policy ID and reinstatement reason are valid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the policy ID is invalid, it derives the policy ID using the source system and policy number combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the policy ID using the source system and policy number combination, or if the reinstatement reason is invalid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more policies with the same policy ID. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid. It contains the following parameters:</p> <ul style="list-style-type: none"> • Policy Status after Processing Reinstatement Upload Request – Used to specify the status to which you want to transition the policy when the reinstatement upload request is processed. • Policy Reinstatement Status for Reason Verification – Used to validate the reinstatement reason. The reason should be a valid reason for the specified status.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. C1-BLSRTUPLD

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLSRTDERV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group sort record.
- The end date is not earlier than the start date and the start date is not later than the end date.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group sort record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_BILL_LVL** table.

- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-BLSRTPROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, it creates one bill group sort record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Algorithms Used in C1-BillLevelUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillLevelUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description

C1-BLVUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLVLDERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group derivation and pricing parameters record.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group derivation and pricing parameters record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- The number of characters specified in each field does not exceed the maximum field length.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.
- The source system exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the effective bill group sort record.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It contains the following parameter:

- **Source System Extendable Lookup** – Used to specify the source system extendable lookup business object. The bill group derivation and pricing parameters records should contain the source system which is already defined in this extendable lookup.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-BLVLVLPRO

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, it creates one bill group derivation and pricing parameters record using the entity business object defined in the upload request type. If the record

is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

CSV File Format for Account Bill Cycle Upload Request

Before uploading the account bill cycle file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the account ID is not specified.
Account Identifier	Used to specify the identifier of the account whose bill cycle you want to update.	Yes (Conditional)
		Note: This data is required when the account ID is not specified.
Account ID	Used to indicate the account whose bill cycle you want to update.	No
	Note: If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination.	
Bill Cycle	Used to specify the bill cycle.	Yes
	Note: You must specify a valid bill cycle which is associated with the division to which the account belongs.	

CSV File Format for Contract Rider Upload Request

Before uploading a contract rider file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the account ID and contract ID are not specified.
Account Identifier	Used to specify the identifier of the account whose contract you want to update.	Yes (Conditional)
		Note: This data is required when the account ID and contract ID are not specified.

Column Name	Description	Mandatory (Yes or No)
Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional)
		Note: This data is required when the account identifier type, account identifier, and contract ID are not specified.
Contract Type	Used to indicate the type of the contract whose details you want to update.	Yes (Conditional)
	Note: You must specify a contract type which already exists in the system.	Note: This data is required when the contract ID is not specified.
Contract ID	Used to indicate the contract whose contract rider information you want to update.	No
	Note: If you do not specify the contract ID, the system derives the active contract using the account ID and contract type combination.	
Start Date	Used to specify the date from when the bill factor is effective for the contract.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the bill factor is effective for the contract.	No
	Note: The end date cannot be earlier than the start date.	
Bill Factor	Used to specify the bill factor.	Yes
	Note: You must specify a valid bill factor where the Contract Rider Applicability flag is set to Y .	

CSV File Format for Billable Charge Upload

Before uploading a billable charge file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.

Column Name	Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional) Note: This data is required when you want to create the billable charge against a specific contract on the account. If this data is not specified then billable charge is created against a contract with highest priority.
Start Date	Used to specify the start date of billable charge.	Yes
End Date	Used to specify the end date of billable charge.	Yes
Charge Type	Used to specify the charge type for which you want to create a billable charge.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Recurring Flag	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set policy invoice frequency. The valid values are: <ul style="list-style-type: none"> • BP • FR 	Yes (Conditional) Note: This data is required if Frequency or Bill Period is specified.
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required if Recurring Flag is FR.
Bill Period	Used to specify the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required if Recurring Flag is BP.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No

Column Name	Description	Mandatory (Yes or No)
Description on Bill1, Description on Bill2,, Description on Bill5	Used to specify description for the billable charge lines.	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
Currency1, Currency2,, Currency5	Used to specify the currency in which the amount is charged. Note: If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
Amount1, Amount2,, Amount5	Used to specify the charge amount.	Yes (Conditional)
		Note: This data is required when the description on bill or currency is specified.
Show On Bill1, Show on Bill2,, Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> • true • false Note: By default, the value will be set to true if the column does not contain any value.	No
Summary1, Summary2,, Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are: <ul style="list-style-type: none"> • true • false Note: By default, the value will be set to true if the column does not contain any value.	No
Memo Only1, Memo Only2,, Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> • true • false Note: By default, the value will be set to false if the column does not contain any value.	No

Column Name	Description	Mandatory (Yes or No)
GL Distribution Code1, GL Distribution Code2,, GL distribution Code5	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional) Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description.
Price Item	Used to specify the price item code.	Yes (Conditional) Note: This data is required when Variance Parameter or, Price Item Parameter and Price Item Parameter Value is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) Note: This data is required when Price Item is specified and Price Item Parameter and Price Item Parameter Value are not specified.
Price Item Parameter1, Price Item Parameter2,, Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
Price Item Parameter Value1, Price Item Parameter Value2,, Price Item Parameter Value15	Used to specify the parameter value. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
SQI1, SQI2,, SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) Note: This data is required when the service quantity is specified.
SQI Value1, SQI Value2,, SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) Note: This data is required when the SQI is specified.

Column Name	Description	Mandatory (Yes or No)
Effective Date1, Effective Date2,, Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Value1, Char Value2,, Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Hold Upload Request

Before uploading a hold request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type. Note: You must specify a valid hold request type which is in the Active status.	Yes
Start Date	Used to specify the date from when the hold request is effective. Note: The hold request start date cannot be later than the hold request end date.	Yes
End Date	Used to specify the date till when the hold request is effective. Note: The hold request end date cannot be earlier than the hold request start date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active .	Yes

Column Name	Description	Mandatory (Yes or No)
Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS 	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the hold entity is ACCT and the entity ID is not specified.
Account Identifier	Used to specify the identifier of the account for which you want to create the hold request.	Yes (Conditional) Note: This data is required when the hold entity is ACCT and the entity ID is not specified.
Person Identifier Type	Used to specify the person identifier type.	Yes (Conditional) Note: This data is required when the hold entity is PERS and the entity ID is not specified.
Person Identifier	Used to specify the identifier of the person for which you want to create the hold request.	Yes (Conditional) Note: This data is required when the hold entity is PERS and the entity ID is not specified.
Hold Entity ID	Used to specify the entity ID. Note: If the hold entity is ACCT , you must specify the account ID in this field. If the hold entity is PERS , you must specify the person ID in this field. And, if the hold entity is BILL , you must specify the bill ID in this field. If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	Yes (Conditional) Note: This data is required when the hold entity is BILL .
Comments	Used to specify additional information about the hold request.	No

Column Name	Description	Mandatory (Yes or No)
Hold Entity Start Date	Used to specify the date from when you want to hold the entity.	Yes
	<p>Note:</p> <p>The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity start date cannot be later than the hold entity end date.</p>	
Hold Entity End Date	Used to specify the date till when you want to hold the entity.	No
	<p>Note:</p> <p>The hold entity end date must be between hold request start and end dates and between the process's start and end dates.</p> <p>The hold entity end date cannot be earlier than the hold entity start date.</p>	
Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are:	No
	<ul style="list-style-type: none"> • Y • N <p>Note: You can hold the funding process only when the hold entity is PERS or BILL.</p>	
Hold Funding Start Date	Used to specify the date from when you want to hold the funding process.	Yes (Conditional)
	<p>Note:</p> <p>The hold funding start date must be between the hold request start and end dates.</p> <p>The hold funding start date cannot be later than the hold funding end date.</p>	
Hold Funding End Date	Used to specify the date till when you want to hold the funding process.	No
	<p>Note:</p> <p>The hold funding end date must be between the hold request start and end dates.</p> <p>The hold funding end date cannot be earlier than the hold funding start date.</p>	

Column Name	Description	Mandatory (Yes or No)
Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process. Note: The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	Yes (Conditional) Note: This data is required when the overdue process must be kept on hold.
Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process. Note: The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	No
Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process. Note: The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	Yes (Conditional) Note: This data is required when the bill generation process must be kept on hold.
Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process. Note: The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	No

Column Name	Description	Mandatory (Yes or No)
Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Autopay Start Date	Used to specify the date from when you want to hold the automatic payment process. <p>Note: The hold autopay start date must be between the hold request start and end dates. The hold autopay start date cannot be later than the hold autopay end date.</p>	Yes (Conditional) Note: This data is required when the automatic payment process must be kept on hold.
Hold Autopay End Date	Used to specify the date till when you want to hold the automatic payment process. <p>Note: The hold autopay end date must be between the hold request start and end dates. The hold autopay end date cannot be earlier than the hold autopay start date.</p>	No
Effective Date1, Effective Date2,, Effective Date5	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional) Note: This data is required when the characteristic type or characteristic value is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the hold request. <p>Note: You must specify a characteristic type where the characteristic entity is set to Hold Request.</p>	Yes (Conditional) Note: This data is required when the effective date or characteristic value is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required when the effective date or characteristic type is specified.

CSV File Format for Refund Request Upload

Before uploading a refund request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Refund Request Type	Used to specify the refund request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the refund request.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the refund request.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the refund adjustments are created.	No
Refund Amount	Used to specify the amount that you want to refund.	Yes
Comments	Used to specify the comments which are added on the refund request.	No
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the refund request.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Write Off Request Upload

Before uploading a write off request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Write Off Request Type	Used to specify the write off request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the write off request.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the write off request.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the write off adjustments are created.	No
Write Off Amount	Used to specify the amount that you want to write off.	Yes
Comments	Used to specify the comments which are added on the write off request.	No
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the write off request.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Reinstatement Upload Request

Before uploading a policy reinstatement file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Policy ID	Used to indicate the policy which you want to reinstate.	No
	Note: If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.
Policy Number	Used to indicate the policy number.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.
Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy.	Yes
	Note: You must specify a reason which is defined for the status specified in the Policy Reinstatement Status for Reason Verification parameter of the C1-REN-VALID algorithm.	

CSV File Format for Bill Group Sorting Upload Request

Before uploading a bill group sorting file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group sorting upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration.	Note: This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
2	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
			Note: This data is required when the bill group (i.e. person) ID is not specified.

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional) Note: This data is required when the bill group (i.e. person) ID is not specified.
4	Sort ID	Used to specify the sort ID.	Yes
5	Description	Used to specify the description for the sort ID.	Yes
6	Start Date	Used to specify the date from when the sort ID is effective for the bill group. Note: The start date cannot be later than the end date.	Yes
7	End Date	Used to specify the date till when the sort ID is effective for the bill group. Note: The end date cannot be earlier than the start date.	No

CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request

Before uploading a bill group derivation and pricing parameters file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the claim and enrollment transactions are received. Note: You must specify a source system which already exists in the extendable lookup which is specified in the Source System Extendable Lookup parameter of the C1-BLVLVALID algorithm.	Yes
2	Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in the parameter 1.	Yes

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 2.	
4	Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 3.	
5	Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 4.	
6	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
		Note: The effective date must be within the date range of the sort ID defined for the bill group.	
7	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group derivation and pricing parameters upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration.	
8	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
		Note: This data is required when the bill group (i.e. person) ID is not specified.	
9	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
		Note: This data is required when the bill group (i.e. person) ID is not specified.	

Sr. No.	Value	Description	Mandatory (Yes or No)
10	Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to Contract (CONT) .
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to Contract Type (CNTY) . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement

- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 942
- [Upload Request Type](#) on page 943

Parent topic: [Upload Request](#) on page 1403

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the Edit (✎) icon, the Upload Request Type screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the Duplicate (📄) icon, the Upload Request Type screen appears where you can define an upload request type using an existing upload request type.
Delete	On clicking the Delete (🗑) icon, you can delete the upload request type. Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Mapping	On clicking the Mapping (🔗) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type.

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
File Size (KB)	Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. Note: This field appears only when you create upload request type using Adjustment Upload Request Type business object.

Field Name	Field Description
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>This field appears only when you create upload request type using Adjustment Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p>
Approval Required	Indicates whether approval is required for a file which is uploaded using the upload request type.
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>On selecting the To Do Type, the To Do Roles configured on the To Do Type is populated.</p> <p>It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p>

Field Name	Field Description
FK Reference	Indicates the foreign key reference which specifies the created upload request type.
	<p>Note:</p> <p>This field appears only when you create upload request type using Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Foreign Key Reference screen appears with the details of the respective foreign key.</p>

In addition, this section has the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type
	Note: The Match Type column is displayed for Adjustment Upload Request Business Object .
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm. The Algorithm column is displayed for Adjustment Upload Request Business Object .

- **Characteristics** – This section lists the characteristics defined for the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type.
	Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears only when you click the **Broadcast** () icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval

- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when Adjustment Upload Request Type business object is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when Adjustment Upload Request Type business object is selected.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)																						
Entity Business Object	<p>Used to indicate for creating Business Object of the entity using the upload request type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when Upload Request Type business object is selected.</p>	No																						
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No																						
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The following table lists the To Do type using which the To Do must be generated for the different upload requests:</p> <table border="1"> <thead> <tr> <th>Upload Request</th> <th>To Do Type</th> </tr> </thead> <tbody> <tr> <td>Adjustment</td> <td>C1-ADJUP</td> </tr> <tr> <td>Bill Cycle Update</td> <td>C1-BCUUR</td> </tr> <tr> <td>Billable Charge</td> <td>C1-BCUR</td> </tr> <tr> <td>Contract Rider Update</td> <td>C1-CRUUR</td> </tr> <tr> <td>Hold Request</td> <td>C1-HLDUR</td> </tr> <tr> <td>Refund Request</td> <td>C1-REFUR</td> </tr> <tr> <td>Write Off Request</td> <td>C1-WOUR</td> </tr> <tr> <td>Policy Reinstatement</td> <td>C1-RPUR</td> </tr> <tr> <td>Bill Group Sorting</td> <td>C1-BGSRT</td> </tr> <tr> <td>Bill Group Derivation and Pricing Parameters</td> <td>C1-BGDVP</td> </tr> </tbody> </table>	Upload Request	To Do Type	Adjustment	C1-ADJUP	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters	C1-BGDVP	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>
Upload Request	To Do Type																							
Adjustment	C1-ADJUP																							
Bill Cycle Update	C1-BCUUR																							
Billable Charge	C1-BCUR																							
Contract Rider Update	C1-CRUUR																							
Hold Request	C1-HLDUR																							
Refund Request	C1-REFUR																							
Write Off Request	C1-WOUR

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when Upload Request Type business object is selected.	No

In addition, this section contains the following fields in the grid:

Note: This field appears when **Adjustment Upload Request Type** business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you select the match type from the respective field.

6. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

Upload Request Type List zone	Upload Request Type List on page 942
How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 952

Defining a Characteristic for an Upload Request Type**Prerequisites**

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	Note: This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to edit an upload request type	Editing an Upload Request Type on page 953
How to copy an upload request type	Copying an Upload Request Type on page 956

Editing an Upload Request Type**Prerequisites**

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when the business object is Adjustment Upload Request Type .	
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.	Yes
	<p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate for creating Business Object of the entity using the upload request type.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.	
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type .	

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional)
		Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics from the upload request type, if required.

6. Click **Save**.

The changes made to the upload request type are saved.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.

Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

4. Click **OK**.

The upload request type is deleted.

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEV** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when the business object is Adjustment Upload Request Type .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	Yes
Entity Business Object	<p>Used to indicate to create the copy of Business Object of the entity using the upload request type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when the business object is Upload Request Type.</p>	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when the Approval Required check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
		Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type .	

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> • Contract • Contract Type 	Yes (Conditional)
		Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics from the upload request type, if required.
6. Click **Save**.

The new upload request type is defined.

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 952

Mapping an Upload Request Type**Prerequisites**

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping** (🔗) icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional) Note: This column is required when you search the Data Records zone in the Upload Request screen.
Use for Searching	Used to indicate whether the defined CSV Column Header is searchable or not. Note: Upto 10 rows can be selected as searchable rows.	Yes (Conditional) Note: This column is required to be selected to be shown in the Data Records zone in the Upload Request screen
Sequence Number	Used to specify the sequence of the searchable fields. Note: Searchable rows should have sequence less than or equal to 10.	Yes (Conditional) Note: This column is required to be selected to be shown sequentially in the Data Records zone in the Upload Request screen

- Enter the required details.

Note: If you want to add more than one column names mapped to the upload request type, click the **Add (+)** icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete (🗑)** icon corresponding to the column header.

- Click **Save**.

The columns are mapped to the CSV files for upload request type.

Viewing the Upload Request Type Details

Procedure

To view the details of an upload request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **U** and then click **Upload Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Upload Request Type** sub-menu.

The **Upload Request Type** screen appears.

- In the **Upload Request Type List** zone, click the

Broadcast () icon corresponding to the upload request type whose details you want to view.

The **Upload Request Type** zone appears.

- View the details of the upload request type in the **Upload Request Type** zone.

Upload Request (Used for Searching)

The **Upload Request** screen allows you to upload, validate and process the transaction data. Through this screen, you can navigate to the following screen:

- [Upload Request \(Used for Viewing\)](#) on page 1494

This screen consists of the following zone:

- [Search Upload Request](#) on page 1487

Search Upload Request

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. This zone contains the following two sections:

- Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using Request Details .	Yes
Upload Date From	Used to search upload requests which are created from a particular date.	No
To	Used to search upload requests which are created till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> Approval In Progress Canceled Deferred Processing Draft Processed Rejected Validated 	No
Upload Request Type	Used to search upload requests which are created using a particular upload request type.	No
User ID	Used to search upload requests which are created by a particular user.	No
Upload Request ID	Used to search a particular upload request.	No
File Name	Used to search a particular file name.	No

Note: You must specify at least one search criterion while searching for an upload request.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Payment Request Information	Displays information about the upload request. Note: It has a link. On clicking the link, the Upload Request screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the upload request. The valid values are: <ul style="list-style-type: none"> Approval In Progress Canceled Deferred Processing Draft Processed Rejected Validated
Upload Request Type	Displays the upload request type using which the upload request is created.
Entity Business Object	Displays the business object code of the entity.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.

Column Name	Column Description
Created By	Indicates the user who has created the upload request.

Searching for an Upload Request

Prerequisites

To search for an upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.
The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of upload requests that meet the search criteria appears in the **Search Results** section.

Viewing the Upload Request Details

Procedure

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the details of data records uploaded in the csv file.
 - **Log** – This tab lists the complete trail of actions performed on the upload request.
3. View the details of the upload request in the **Upload Request** zone.
 4. View the data records in the csv file of the upload request in the **Data Records** zone.

Creating an Upload Request

Prerequisites

To create an upload request, you should have:

- Upload request types defined in the application

Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. Note: The following upload request types are shipped with the product: <ul style="list-style-type: none"> • ADJ_UPL_REQ_TYPE_APVL • ADJ_UPL_REQ_TYPE_WO_APVL • BC_UPL_REQ_TYPE • BILL_CYCLE_UPD_UPL_REQ_TYPE • BILL_LVL_UPL_REQ_TYPE • BILL_SRT_UPL_REQ_TYPE • HOLD_UPL_REQ_TYPE • REFUND_UPL_REQ_TYPE • REIN_UPL_REQ_TYPE • SA_RIDER_UPD_UPL_REQ_TYPE • WO_UPL_REQ_TYPE 	Yes

Tip: Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

Note: The **Select Upload Request Type** screen appears only when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the **{XXX} Upload Request** screen appears.

4. Select the required upload request type from the respective field.
5. Click **OK**.

The **{XXX} Upload Request** screen appears. Here, {XXX} changes depending on the upload request type that you have selected. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request.	Yes
	<p>Note:</p> <p>This field appears only when you are creating an upload request using an upload request type where the upload request business object is set to C1-BillGrpSortUploadRequest or C1-BillLevelUploadRequest.</p> <p>The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to Parent Customer.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	<p>Note: You can also click the Browse button corresponding to this field to browse to the location where the file is available in the system.</p>	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.

- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.

- Define characteristics for the upload request, if required.

- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID)

is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

How to define a characteristic for an upload request	Defining a Characteristic for an Upload Request on page 1493

Defining a Characteristic for an Upload Request

Prerequisites

To define a characteristic for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

Procedure

To define a characteristic for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the upload request, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request, click the **Delete (🗑)** icon corresponding to the characteristic.

Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request
- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request
- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- Main** – This tab contains the following two zones:
 - Upload Request** – Displays the details of the upload request.
 - Data Records** – Lists the data records of the upload request.
- Log** – This tab lists the complete trail of actions performed on the upload request.

Upload Request - Main

The **Main** tab contains the following zones:

- [Upload Request](#) on page 1494
- [Data Records](#) on page 1496

Upload Request

The **Upload Request** zone displays the details of the upload request. This zone contains the following sections:

- Main** – This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.

Field Name	Field Description
Upload Request Type	Indicates the upload request type using which the upload request is created.
	Note: It has a link. On clicking the link, the Upload Request Type screen appears where you can view the details of the upload request type.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Approved • Cancelled • Deferred Processing • Draft • Processed • Rejected • Submitted • Validated
File Name	Displays name of the uploaded file.

- **Statistics** – This section lists the statistics of records in the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Valid Records	Displays the count of valid data records.
Error Records	Displays the count of data records in error status.
Pending Records	Displays the count of data records pending after successful derivation.
Invalid Records	Displays the count of data records after unsuccessful derivation.
Processed Records	Displays the count of data records after processing.

- **Characteristics** – This section lists the characteristics defined for the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the upload request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request.
	Note: The Edit button appears when the upload request is in the Draft or Validated status.

Column Name	Column Description
Delete	Used to delete the upload request.
	Note: The Delete button appears only when the upload request is in the Draft status.
Validate	Used to validate the upload request.
	Note: The Validate button appears only when the upload request is in the Draft status.
Cancel	Used to cancel the upload request.
	Note: The Cancel button appears only when the upload request is in the Validated status.
Submit	Used to submit the upload request for approval.
	Note: The Submit button appears only when: <ul style="list-style-type: none"> The upload request is in the Validated status. The Approval Required check box is selected in the upload request type using which the upload request is created.
Approve	Used to approve the upload request.
	Note: The Approve button appears only when: <ul style="list-style-type: none"> The upload request is in the Approval In Progress status. A user with the approval To Do role is reviewing the upload request.
Reject	Used to reject the upload request.
	Note: The Reject button appears only when: <ul style="list-style-type: none"> The upload request is in the Approval In Progress status. A user with the approval To Do role is reviewing the upload request.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the upload request status is updated
Create Date/Time	Displays the date and time when the upload request is created.

Data Records

The **Data Records** zone lists the data records of the upload request. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2,,Search Criteria 10 Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	Used to search for data from the CSV file with respect to the field.	No
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: <ul style="list-style-type: none"> • Error • Invalid • Pending • Processed • Valid 	No

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the View () icon, the Data Record Details window appears where you can view the details of the data records.
Search Result 1, Search Result 2,, Search Result 10 Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	Displays data from the CSV file.
Record Status	Indicates the status of the data record. The valid values are: <ul style="list-style-type: none"> • Error • Invalid • Pending • Processed • Valid
Message(s)	Displays message for the data record respective to it's status.

Column Name	Column Description
Entity ID	Displays entity ID of the upload request. Note: The entity ID is displayed only for data records with Processed status.
Entity Information	Displays entity information for the FK Reference selected in Upload Request Type screen. Note: The entity information is displayed only for data records with Processed status.

Note: By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

Upload Request - Log

The **Log** tab contains the following zone:

- [Upload Request Log](#) on page 1498

Upload Request Log

The **Upload Request Log** zone on the **Upload Request** screen lists the complete trail of actions performed on the upload request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Displays the status reason of action performed on the upload request.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. Enter **Log Details** and click **Save**. The upload request log is added.

Editing an Upload Request

Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to edit.

The **Upload Request** screen appears.

3. Click the **Edit** button in the **Upload Request** zone.

Note: The **Edit** button appears only when the upload request is in the **Draft** or **Validated** status.

The entity **Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to indicate the comments for upload request.	No

- **Characteristics** – Used to define characteristics for the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request .	Note: This field is required when you are defining a characteristic for the Upload request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the Upload request.

4. Modify the details of the upload request, if required.

5. Define, edit, or remove characteristics from the upload request, if required.
6. Click **Save**.

The changes made to the upload request are saved.

Deleting an Upload Request

Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to delete.

The **Upload Request** screen appears.

3. Click the **Delete** button in the **Upload Request** zone.

A message appears confirming whether you want to delete the upload request.

Note: The **Delete** button appears only when the upload request is in the **Draft** status.

4. Click **OK**.

The upload request is deleted.

Validating an Upload Request

Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to validate.

The **Upload Request** screen appears.

3. Click the **Validate** button in the **Upload Request** zone.

Note: The **Validate** button appears only when the upload request is in the **Draft** status.

For more information about the **Upload Request Periodic Monitor (C1-UPLRQ)** batch, refer to Oracle Revenue Management and Billing Batch Guide.

The status of the upload request is changed to **Validated**.

Canceling an Upload Request

Prerequisites

To cancel an upload request, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.

The **Upload Request** screen appears.

3. Click the **Cancel** button in the **Upload Request** zone.

The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request.	Yes
Comments	Used to specify additional information while cancelling the upload request.	No

Note: The **Cancel** button appears only when the upload request is in the **Validated** status.

4. Select the cancellation reason from the **Cancel Reason** list.
5. Click **Save**.

The status of the upload request is changed to **Canceled**.

Approving an Upload Request

You can view the number of upload requests which are pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

Note: The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve a upload request through the Upload Request screen	<ol style="list-style-type: none"> 1. Search for the upload request in the Upload Request screen. 2. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.
Approve a upload request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter the required To Do type in the respective field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

2. Review the upload request details.
3. Click the **Approve** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...																				
<p>The number of valid records in the upload request does not exceed the online record process limit defined in the C1-DEFERUPLD algorithm</p>	<p>The following table lists the behavior for the different upload requests:</p> <table border="1" data-bbox="889 348 1464 1455"> <thead> <tr> <th data-bbox="894 354 1133 394">Upload Request</th> <th data-bbox="1138 354 1461 394">Behavior</th> </tr> </thead> <tbody> <tr> <td data-bbox="894 401 1133 478">Bill Cycle Update</td> <td data-bbox="1138 401 1461 478">The bill cycle information is updated for the accounts.</td> </tr> <tr> <td data-bbox="894 485 1133 562">Billable Charge</td> <td data-bbox="1138 485 1461 562">The billable charges are created.</td> </tr> <tr> <td data-bbox="894 569 1133 674">Contract Rider Update</td> <td data-bbox="1138 569 1461 674">The contract rider information is updated for the contracts.</td> </tr> <tr> <td data-bbox="894 680 1133 758">Hold Request</td> <td data-bbox="1138 680 1461 758">The hold requests are created.</td> </tr> <tr> <td data-bbox="894 764 1133 842">Refund Request</td> <td data-bbox="1138 764 1461 842">The refund requests are created.</td> </tr> <tr> <td data-bbox="894 848 1133 926">Write Off Request</td> <td data-bbox="1138 848 1461 926">The write off requests are created.</td> </tr> <tr> <td data-bbox="894 932 1133 1220">Policy Reinstatement</td> <td data-bbox="1138 932 1461 1220">The policies are reinstated and the status of the policies is changed to the one defined in the Policy Status after Processing Reinstatement Upload Request parameter of the C1-REN-VALID algorithm.</td> </tr> <tr> <td data-bbox="894 1226 1133 1304">Bill Group Sorting</td> <td data-bbox="1138 1226 1461 1304">The sort ID is defined for the respective bill group.</td> </tr> <tr> <td data-bbox="894 1310 1133 1449">Bill Group Derivation and Pricing Parameters</td> <td data-bbox="1138 1310 1461 1449">The derivation and pricing parameters are defined for the respective bill group and sort ID combination.</td> </tr> </tbody> </table> <p>In addition, the status of the upload request is changed to Processed.</p>	Upload Request	Behavior	Bill Cycle Update	The bill cycle information is updated for the accounts. Rejecting an Upload Request

Prerequisites

To reject an upload request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an upload request, you need to specify the reason why you want to reject the upload request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To reject an upload request:

1. Do either of the following:

If you want to	Then
Reject an upload request through the Upload Request screen	<ol style="list-style-type: none"> 1. Search for the upload request in the Upload Request screen. 2. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.
Reject an upload request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter the required To Do type in the respective field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos.

If you want to	Then
	6. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

- Review the upload request details.
- Click the **Reject** button in the **Upload Request** zone.

The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes
Comments	Used to specify additional information while rejecting the upload request.	No

Note: The **Reject** button appears only when:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the upload request is changed to **Rejected**.

Viewing the Data Record Details

Procedure

To view the details of a data record:

- Search for the data record in the **Data Records** zone in the **Upload Request** screen.
- In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the data record whose details you want to view.

The **Data Record Details** window appears. It contains the following fields:

Field Name	Field Description
Sr. No.	Displays the sequential number of data.
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

- View the details of the data record in the **Data Record Details** window.

Data Record zone	Data Records on page 1496

Viewing the Log of an Upload Request

Procedure

To view the log of an upload request:

- Search for the upload request in the **Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- Main** – Displays information about the upload request. It contains the following zones:
 - Upload Request** – Displays the details of the upload request.
 - Data Records** – Lists the data records of the upload request.
 - Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
 - Upload Request Log** – Displays the trail of actions performed on the particular upload request.

- Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Indicates the reason why the upload request was rejected.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Adding a Log Entry for an Upload Request**Procedure**

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to edit.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the upload request. It contains the following zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the data records of the upload request.
- **Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
 - **Upload Request Log** – Displays the trail of actions performed on the particular upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments on the upload request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

Chapter 24

General Ledger (GL) Accounting Template

Topics:

- [GL Accounting Template \(Without Approval\) Status Transition](#)
- [GL Accounting Template \(With Approval\) Status Transition](#)
- [Algorithms Used in C1- GLAT](#)
- [Prerequisites](#)
- [GL Accounting Template \(Used for Searching\)](#)
- [GL Accounting Template \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, ..., and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, ..., Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do

for the approver to review the GL Accounting template. Once the approver approves a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	BS	AD	PS
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	Process	Sub Process 1	Sub Process 2	Sub Process 3
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	Use GL Accounting Template (Y or N)	Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)	Algorithm Behaviour
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for the bill segment calculation line using the distribution code on the respective rate component • FT GL for the pass through line using the distribution code on the respective pass through line • Balancing FT GL using the distribution code on contract type
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.

If the bill segment is...	Then, the system...
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for bill segment calculation line using the lines in the GL Accounting template. • FT GL for the pass through line using the distribution code on the respective pass through line. • Balancing FT GL using the line in the GL Accounting template.
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

GL Accounting Template (Without Approval) Status Transition

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is off:

GL Accounting Template (With Approval) Status Transition

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is on:

Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> GLAT Description GLAT Status Description GLAT ID

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- [GL Accounting Template \(Used for Viewing\)](#) on page 1527

This screen consists of the following zones:

- [Search GL Accounting Template](#) on page 1522
- [GL Accounting Template Lines](#) on page 1523

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Deactivation Approval In Progress • Active • Inactive • Rejected 	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template. <p>Note: It has a link. On clicking the link, the GL Accounting Template screen appears where you can view the details of the respective template.</p>
Description	Displays the description of process.

Column Name	Column Description
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

Note: By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the template in the **Search Results** section.

Searching for a GL Accounting Template

Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of templates that meet the search criteria appears in the **Search Results** section.

Creating a GL Accounting Template

Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** —Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

4. Enter the required details

Note:

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.

Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.

6. Click **Save**.

The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

Viewing the GL Accounting Template Details**Procedure**

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
 - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. View the details of the template in the **GL Accounting Template** zone.

GL Accounting Template (Used for Viewing)

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
 - **GL Accounting Template** – Displays the details of the template.
- **Log** — Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

GL Accounting Template - Main

The **Main** tab on the **GL Accounting Template** contains the following zone:

[GL Accounting Template](#) on page 1527

GL Accounting Template

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- **Main** — This section provides basic information about the GL Accounting template. It contains the following fields:

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** — Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	Note: The Edit button appears only when the template is in the Draft or Rejected status.
Delete	Used to delete the template.
	Note: The Delete button appears only when the template is in the Draft or Rejected status.
Submit	Used to activate the template.
	Note: The Submit button appears only when the template is in the Draft or Rejected status.

Button Name	Button Description
Approve	Used to approve the template. Note: the Approve button appears only when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Reject	Used to reject the template. Note: the Reject button appears only when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Deactivate	Used to deactivate the active template. Note: The Deactivate button appears only when the template is in the Active status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

[GL Accounting Template Log](#) on page 1529

GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

Editing a GL Accounting Template**Procedure**

To edit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to edit.

The **GL Accounting Template** screen for editing appears.

3. Click the **Edit** button in the **GL Accounting Template** zone.

Note: The **Edit** button appears only when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional)
		Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** — Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

Note:

If you want to specify more than one template lines, click the **Add (+)** icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete (🗑)** icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search (🔍)** icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.

The changes made to the GL Accounting template are saved.

Deleting a GL Accounting Template

Procedure

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to delete.

The **GL Accounting Template** screen appears.

3. Click the **Delete** button in the **GL Accounting Template** zone.

A message appears confirming whether you want to delete the template.

Note: The **Delete** button appears only when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.

The GL Accounting template is deleted.

Note:

You can delete a template only when its status is **Draft**.

Submitting a GL Accounting Template

Prerequisites

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

Procedure

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to submit.

The **GL Accounting Template** screen appears.

3. Click the **Submit** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the C1-GLATSUB algorithm.	A To Do of the C1-GLAT To Do type is created and sent to the approver and the status of the template is changed to Approval In Progress .
Approval Required Flag is set to No in the C1-GLATSUB algorithm.	The template is created using the specified process and the status of the template is changed to Active .

Note:

The **Submit** button appears only when the template is in the **Draft** or **Rejected** status.

Approving a GL Accounting Template

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

Note: The system will not allow you to approve or reject a template submitted by you.

Procedure

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the GL Accounting template screen	<ol style="list-style-type: none"> 1. Search for the template in the GL Accounting template screen. 2. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.
Approve a GL Accounting Template from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-GLAT in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the GL Accounting template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to Active as specified in the GL Accounting template.

Note: The **Approve** button appears only when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

Rejecting a GL Accounting Template

Prerequisites

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

Procedure

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the GL Accounting Template screen	<ol style="list-style-type: none"> 1. Search for the template in the GL Accounting Template screen. 2. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.
Reject a GL Accounting template from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-GLAT in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes
Comments	Used to specify additional information while rejecting the template.	No

Note: The **Reject** button appears only when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the template is changed to **Rejected**.

Deactivating a GL Accounting Template

Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

Note:

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason only when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

Procedure

To deactivate a GL Accounting template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to deactivate.

The **GL Accounting Template** screen appears.

3. Click the **Deactivate** button in the **GL Accounting Template** zone.

Note: The **Deactivate** button appears only when the template is in the **Active** status.

The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments on the deactivation of template.	No

4. Click **OK**.

The GL Accounting template status is changed to **Deactivation Approval In Progress**.

Chapter 25

Payment Agreement Request

Topics:

- [Payment Agreement Request \(Without Approval\) Status Transition](#)
- [Payment Agreement Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-PaymentAgreementRequest](#)
- [Payment Agreement Request Type](#)
- [Payment Agreement Request \(Used for Searching\)](#)
- [Payment Agreement Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount – 100\$, Unpaid Amount - 75\$)
- B2 (Bill Amount – 250\$, Unpaid Amount – 125\$)
- B3 (Bill Amount – 150\$, Unpaid Amount – 150\$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exist in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exist in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see [Payment Agreement Request \(Without Approval\) Status Transition](#) on page 1542 and [Payment Agreement Request \(With Approval\) Status Transition](#) on page 1542. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

Note: The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see [Prerequisites](#) on page 1543.

Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**

- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**
- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to C1-PA-INFO
Pre-Processing	C1-PA-PRE	C1-PA-PRE	C1-PA-PRE
Validation	C1-PA-VAL	C1-PA-VAL	C1-PA-VAL

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	C1-PA-SUBMIT
Approval In Progress	Enter	C1-PA-APPENT	C1-PA-APPENT	C1-PA-APPENT
Approval In Progress	Exit	C1-PA-APPEXT	C1-PA-APPEXT	C1-PA-APPEXT
Return to Submitter	Enter	C1-PA-RESUB	C1-PA-RESUB	C1-PA-RESUB
Active	Monitor	C1-PA-MONTR	C1-PA-MONTR	C1-MONTR
Active	Enter	C1-PA-ACTENT	C1-PA-ACTENT	C1-ACTENT

Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- [Payment Agreement Request Type List](#) on page 1545
- [Payment Agreement Request Type](#) on page 1545

Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the Edit (✎) icon, the Payment Agreement Request Type screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the Duplicate (📄) icon, the Payment Agreement Request Type screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the Delete (🗑) icon, you can delete the payment agreement request type. Note: You can delete a payment agreement request type only when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

Defining a Payment Agreement Request Type

Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both 	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required for creating payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required only when the Approval Required option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required only when the Approval Required option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the Approval To Do Type field.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required only when the Approval Required option is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required only when the Approval Required option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the Submitter To Do Type field.

6. Enter the required details.
7. Define characteristics for the payment agreement request type, if required.
8. Click **Save**.

The payment agreement request type is defined.

Defining a Characteristic for a Payment Agreement Request Type

Prerequisites

To define a characteristic for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

Procedure

To define a characteristic for a payment agreement request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	Note: This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment agreement request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment agreement request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both 	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval. <p>Note: This field appears only when the Approval Required check box is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	Yes (Conditional)
		Note: This field is required when the Approval Required check box is selected.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
	The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Agreement Request Type** zone to create a copy of the payment agreement request type.

- Enter the required details.
- Define, edit, or remove characteristics from the payment agreement request type, if required.
- Click **Save**.

The new payment agreement request type is defined.

Searching for a Payment Agreement Request

Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Credit & Collection** and then click **Payment Agreement Request**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.
The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

Reject a payment agreement request through the Payment Agreement Request screen	<ol style="list-style-type: none"> 1. Search for the payment agreement request in the Payment Agreement Request screen. 2. In the Search Results section, click the link in the Payment Agreement Request Information column corresponding to the payment request which you want to review.
Reject a payment agreement request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter the to do type C1-PAREQ in the To Do Type field for the entity payment agreement request. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos.

If you want to	Then
	6. Click the link in the Message column corresponding to the To Do of the payment agreement request that you want to review.

The **Payment Agreement Request** screen appears.

- Review the payment agreement request details.
- Click the **Reject** button in the **Payment Agreement Request** zone.

The **Reject Payment Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment agreement request.	Yes
Comments	Used to specify additional information while rejecting the payment agreement request.	No

Note: The **Reject** button appears only when:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the payment agreement request is changed to **Rejected**.

Resubmitting a Payment Agreement Request

Prerequisites

To resubmit a payment agreement request, you should have:

- Entities added in the payment agreement request which is submitted for approval.

Procedure

To resubmit a payment agreement request:

- Search for the payment agreement request in the **Payment Agreement Request** screen.
- In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to resubmit.

The **Payment Agreement Request** screen appears.

- Click the **Resubmit** button in the **Payment Agreement Request** zone.

The **Resubmit Payment Agreement Request** screen appears.

Note: The **Resubmit** button appears only when the payment agreement request is in the **Approval In Progress** status.

A To Do of the **C1-PAREQ** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the payment agreement request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

Note: While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the payment agreement request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

Filtering Overdue Bills of an Account

The **Search Bills** zone lists bills that are overdue for an account. You will not find any records in this zone if the payment agreement request does not have overdue bills in the account. This zone contains the following fields as search criteria:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using bill details.	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search for a particular bill.	No
	Note: The Search (🔍) icon appears corresponding to the field. On clicking the Search icon, the Bill Search window appears.	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

By default, the **Search Bills** zone appears in the **Bills** tab of **Payment Agreement Request** screen. By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🔼) icon in the upper right corner of this zone.

By default, the search results section displays the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Unpaid Amount	Displays the amount which is eligible for payment agreement request against the bill.
Overdue Process Information	Displays the overdue process information for the bill.

How to add an overdue bill in a payment agreement request	Adding an Overdue Bill in a Payment Agreement Request on page 1582

Adding an Overdue Bill in a Payment Agreement Request

Prerequisites

To add an overdue bill in a payment agreement request, you should have:

- Overdue bills should be available for accounts to add in payment agreement request

Procedure

To add an overdue bill in a payment agreement request:

Note: A bill with outstanding amount greater than zero which is not part of an overdue process will be allowed to be added in a payment agreement request. While a bill with negative outstanding amount will not be allowed to be added in a payment agreement request.

1. Search for the payment agreement request in the **Payment Agreement Request** screen which is in **Draft** or **Active** status.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.
The **Payment Agreement Request** screen appears.
3. Click the **Bills** tab.
The **Bills** tab appears.
4. Enter the search criteria in the **Search Bills** zone.
In the **Search Results** section, list of bills meeting the search criteria are displayed.
5. Select the check box corresponding to the bill which you want to add to the payment agreement request from the **Search Results** section.
You can add more than one bill to the payment agreement request at the same time.
6. Click **Add**.
A message appears indicating that selected bills have been successfully added to the payment agreement request.
7. Click **OK**.

Note that the bill is added in the **Bill Details** zone in the **Main** tab.

Viewing the Log of a Payment Agreement Request

Procedure

To view the log of a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to view.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
 - **Payment Agreement Request** – Displays the details of the payment agreement request.
 - **Bill Details** – Lists the bill details of the payment agreement request.
 - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed only when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Payment Agreement Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Indicates the reason why the payment agreement request was rejected.
Old Payment Schedule	Displays the details of old payment schedule.

Note: You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

Adding a Log Entry for a Payment Agreement Request

Procedure

To add a log entry for a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to edit.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
 - **Payment Agreement Request** – Displays the details of the payment agreement request.
 - **Bill Details** – Lists the bill details of the payment agreement request.
 - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed only when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

The **Add Payment Agreement Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Log Details	Used to specify additional comments on the payment agreement request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Payment Agreement Request Log** zone.

Chapter 26

Inbound Message

Topics:

- [Customer Inbound Message](#)
- [Membership Inbound Message](#)
- [ASO Customer Inbound Message](#)
- [Health Care Inbound Message](#)
- [Inbound Message Type](#)
- [Inbound Message \(Used for Searching\)](#)
- [Inbound Message \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to create the following inbound messages through the respective inbound web services:

Inbound Message	Inbound Web Service
Customer Inbound Message on page 1588	CI-CustomerStructureInboundMessage on page 1845
Membership Inbound Message on page 1626	CI-MembershipInboundMessage on page 1846
ASO Customer Inbound Message on page 1656	CI-ASOCustomerInboundMessage on page 1846
Health Care Inbound Message on page 1694	CI-HCInboundMessage on page 1847

Once an inbound message is created, you can submit the inbound message for validation and processing from the user interface or through a batch process. The following table lists the batches which validate and process the respective inbound message at regular intervals:

Inbound Message	Batch Control Name
Customer Inbound Message	Customer Inbound Message Periodic Monitor (C1-CUSIN)
Membership Inbound Message	Membership Inbound Message Periodic Monitor (C1-MEMIN)
ASO Customer Inbound Message	Customer Inbound Message Periodic Monitor (C1-CUSIN)
Health Care Inbound Message	Health Care Inbound Message Periodic Monitor (C1-HCINB)

For more information about the batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

Customer Inbound Message

On calling the **C1-CustomerStructureInboundMessage** web service, a customer inbound message is created in the **Pending** status. When the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is invoked, the system checks whether there are any customer inbound messages in the **Pending** status. If there is a customer inbound message in the **Pending** status, the system validates the customer inbound message. If a customer inbound message is successfully validated, it is processed further and the following entities are created or updated in the system based on the available information:

- Person
- Account
- Contract
- Policy
- Policy Plan
- Packaged Savings
- Billable Charges (for packaged savings and/or non-eligibility based fees)

In addition, the system enables you to submit the customer inbound messages for validation and processing from the user interface. On submitting a customer inbound message, the system validates the customer inbound message. If a customer inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the customer inbound message is changed to **Processed**. If any error occurs while validating or processing a customer inbound message, the status of the customer inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected customer inbound message. The system can reprocess a customer inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the customer inbound message from **Rejected** to **Pending**. The **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch will then reconsider the customer inbound message for validation and processing.

You can also configure the system such that the batch can automatically retry to process the rejected customer inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a customer inbound message depends on the value defined in the **Maximum Retry** parameter.

Prerequisites

To use the customer inbound message feature, you need to do the following:

- Define the required customer inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define values for the required parameters in the **C1-CINMSGVAL**, **C1-CINMSGPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the **Policy Plan BO (C1PPLNBO)** characteristics for the policy type which is specified in the **C1-CINMSGPRC** algorithm.
- Define predefined values for the **C1PRBASE**, **C1PRSRSN**, **C1INVHLD**, **C1STISSE**, **C1PRTNRL**, **C1PRDCAT**, **C1RATCOV**, and **C1PSNINT** characteristic types.
- Define values for the **C1-SourceSystemLookup** extendable lookup.

- Define values for the **PER_OR_BUS_FLG**, **ADDRESS_TYPE_FLG**, **EXT_TYPE_FLG**, **BILL_ADDR_SRCE_FLG**, and **RATE_COVRG_CNTRACT_TYPE** lookup fields.
- Define the required person identifier types, account identifier types, characteristic types, person relationship types, phone types, customer classes, bill cycles, divisions, bill route types, hold request types, service quantity identifiers, contract types, and policy person roles in the application.
- Define values for the **C1BC_OPT_TYP_FLG** lookup field.

Note: You can then set the value for the option type (defined in the **C1BC_OPT_TYP_FLG** lookup field) in the **C1-BILLCYCLE** feature configuration.

- Define values for the option types in the **C1-BILLCYCLE** feature configuration.
- Define values for the **C1_INVOICE_DAY_BILL_PERIOD_FLG** lookup field.

Note: Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

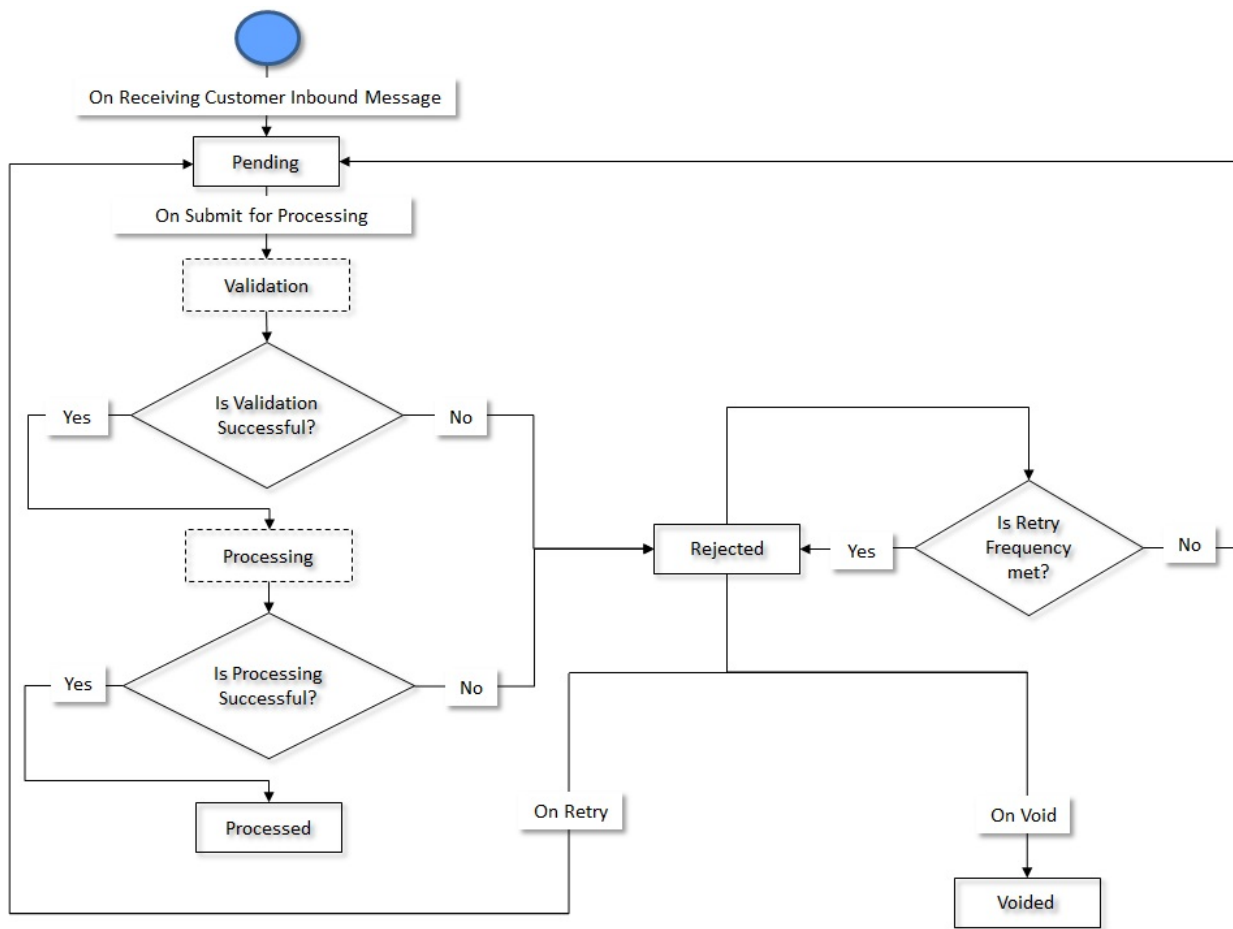

- Define predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination and map each status reason to a prime source reason (which is a predefined value in the **C1PRSRSN** characteristic type).
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement and map each status reason to a prime source reason (which is a predefined value in the **C1PRSRSN** characteristic type).
- Define bill cancel reasons which you want to use on packaged savings and premium bill segment cancelation during the policy or membership termination.

Customer Inbound Message Status Transition through User Interface

The following figure graphically indicates how a customer inbound message moves from one status to another when it is validated and processed through the user interface:

Customer Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how a customer inbound message moves from one status to another when it is validated and processed through the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch:

Algorithms Used in C1-CustomerInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-CustomerInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 1592.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1087.
	Enter	C1-CINMSGVAL	C1-CINMSGVAL	Refer to C1-CINMSGVAL on page 1592.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1087.
	Enter	C1-CINMSGPRC	C1-CINMSGPRC	Refer to C1-CINMSGPRC on page 1593.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 1602.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 1602.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-CINMSGVAL

This algorithm is invoked when the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is executed and when you click the **Submit for Processing** button. It validates the customer inbound message which is in the **Pending** status. It checks the following:

- Whether the primary identifier is specified for the person.
- Whether the bill group information exist when the policy information is specified in the customer inbound message.
- Whether the bill cycle is specified in the bill group information.
- Whether the **Invoice Day** characteristic type (as mentioned in the **Invoice Day Characteristic Type** parameter) exists in the bill group information and a valid value is specified for this characteristic type.

If any of the above validation fails, the status of the customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Invoice Day Characteristic Type	Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system then fetches the bill period mapped to the invoice day in the C1_INVOICE_DAY_BILL_PERIOD_FLG lookup field. Note: By default, the parameter value is set to C1OFFRST . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Account .	Yes

C1-CINMSGPRC

This algorithm is invoked once a customer inbound message is successfully validated. It processes the customer inbound message and accordingly creates or updates a person, account, contract, policy, policy plan, packaged savings, and billable charges for packaged savings. If requested, it also terminates, reinstates, or renews a fully-insured group policy.

If the processing fails due to any reason, the status of the customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle. Note: By default, the parameter value is set to F1OK .	No
Hold Reason Characteristic Type	Used to specify the characteristic type which you want to use to store the reason why the account must be kept on hold. This type of characteristic is defined on the account. Note: By default, the parameter value is set to C1INVHLD . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Account .	Yes

Parameter	Description	Mandatory (Yes or No)
Franchise Person Relationship Type	Used to specify the person relationship type. If the parent person's relationship type in the customer inbound message matches to this parameter value, the system will add the person's account and contract details in the parent person's statement construct.	No
	Note: By default, the parameter value is set to BILLING . You can change the parameter value, if required. However, you must specify a person relationship type which is already defined in the system.	
Packaged Savings Contract Type	Used to specify the contract type using which you want to create the packaged savings contract for accounts. This contract is then used to create packaged savings billable charges.	No
	Note: By default, the parameter value is set to PACKSAV . You can change the parameter value, if required. However, you must specify a contract type which is already defined in the system.	
Policy Characteristic Type	Used to specify the characteristic type which you want to use to store the policy ID. This type of characteristic is defined on the billable charge. The system then uses this characteristic to derive the packaged savings billable charge which you want to update.	Yes
	Note: By default, the parameter value is set to C1POLICY . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Billable Charge .	
Policy Plan Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan ID. This type of characteristic is defined on the contract. The system then uses this characteristic to derive the contract which you want to update.	Yes
	Note: By default, the parameter value is set to C1POLPLN . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Contract .	

Parameter	Description	Mandatory (Yes or No)
Plan Code Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system then uses this characteristic to derive the price item which you want to update.</p> <p>Note: By default, the parameter value is set to C1HPLNID. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item.</p>	Yes
Coverage Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the coverage type. This type of characteristic is defined on the price item.</p> <p>Note: By default, the parameter value is set to C1PRDCAT. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item.</p>	Yes
Rate Coverage Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system then uses this characteristic to derive the price item which you want to update.</p> <p>Note: By default, the parameter value is set to C1RATCOV. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item.</p>	Yes
Policy Person Role	<p>Used to specify the policy person role which you want to use while adding main customer in a policy.</p> <p>Note: By default, the parameter value is set to DEP. You can change the parameter value, if required. However, you must specify a policy person role which is already defined in the system.</p>	No
Description on Bill	<p>Used to specify the description that you want to display on the packaged savings billable charge.</p> <p>Note: By default, the parameter value is set to Package Savings BC.</p>	No

Parameter	Description	Mandatory (Yes or No)
Policy Start Date Characteristic Type	Used to specify the characteristic type which you want to use to store the date from when the policy is effective. This type of characteristic is defined on the policy.	Yes
	Note: By default, the parameter value is set to C1PPSTDT . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy .	
Policy End Date Characteristic Type	Used to specify the characteristic type which you want to use to store the date till when the policy is effective. This type of characteristic is defined on the policy. The system uses this characteristic while reinstating the policy.	Yes
	Note: By default, the parameter value is set to C1PPENDT . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy .	
Base Policy Indicator Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the policy is a base policy. This type of characteristic is defined on the policy.	Yes
	Note: By default, the parameter value is set to C1PRBASE . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy .	
Invoice Day Characteristic Type	Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system fetches the bill period mapped to the invoice day in the C1_INVOICE_DAY_BILL_PERIOD_FLG lookup field while creating packaged savings billable charges for accounts.	Yes
	Note: By default, the parameter value is set to C1OFFRST . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Account .	

Parameter	Description	Mandatory (Yes or No)
State of Issue Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the members are eligible for the state assessment fee. This type of characteristic is defined on the policy.	Yes
	Note: By default, the parameter value is set to C1STISSE . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy .	
Days to Calculate Hold Request End Date	Used to specify the number of days. It is used to calculate the hold request end date (which is hold request start date + specified number of days).	No
	Note: By default, the parameter value is set to 5 .	
Proration Rule Characteristic Type	Used to specify the characteristic type which you want to use to indicate how premium must be prorated. This type of characteristic is defined on the policy.	Yes
	Note: By default, the parameter value is set to C1PRTNRL . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy .	
Policy Plan Business Object Characteristic Type	Used to specify the characteristic type which you want to use to store the business object using which the policy plan must be created. This type of characteristic is defined on the policy type.	Yes
	Note: By default, the parameter value is set to C1PPLNBO . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy Type .	
External Source System Status Reason Characteristic Type	Used to specify the characteristic type which you want to use to store the external source system status reason. Each status reason configured for a policy status is mapped to an external source system status reason. The system uses this characteristic to derive the status reason configured in ORMB while reinstating or terminating the policy.	Yes
	Note: By default, the parameter value is set to C1PRSRSN . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Status Reason .	

Parameter	Description	Mandatory (Yes or No)
Plan Effective Date Characteristic Type	Used to specify the characteristic type which you want to use to store the date from when the policy plan is effective. This type of characteristic is defined on the policy plan. Note: By default, the parameter value is set to C1PLEFDT . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy Plan .	Yes
Policy Type	Used to indicate the policy type. The system derives the policy business object (using which the policy must be created) from the policy type. Note: By default, the parameter value is set to INDIVIDUAL . You can change the parameter value, if required. However, you must specify a policy type which is already defined in the system.	No
Account Identifier Type	Used to indicate the account identifier type against which you want to store the account number. Note: By default, the parameter value is set to C1_F_ANO . You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.	No
Membership Characteristic Type	Used to specify the characteristic type which you want to use to store the membership ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive the packaged savings billable charges whose corresponding bill segments must be canceled on the policy termination. Note: By default, the parameter value is set to C1MMBRSH . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Billable Charge .	Yes
Add Days to Billable Charge End Date	Used to specify the number of days. It is used to calculate the billable charge end date (which is billable charge existing end date + specified number of days).	No

Parameter	Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the cancel reason which you want to use during packaged savings bill segment cancelation on the policy termination.	No
	Note: By default, the parameter value is set to MASS . You can change the parameter value, if required. However, you must specify a bill cancel reason which is already defined in the system.	
Member Count Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) against which you want to store the number of members in the policy plan. The system uses this SQI while creating the premium billable charges.	No
	Note: By default, the parameter value is set to MEMCOUNT . You can change the parameter value, if required. However, you must specify a service quantity identifier which is already defined in the system.	
Non-Eligibility Based Contract Type	Used to specify the contract type using which you want to create the non-eligibility based contract. The system then uses this contract to create non-eligibility based billable charges.	No
	Note: By default, the parameter value is set to NEBFEEES . You can change the parameter value, if required. However, you must specify a contract type which is already defined in the system.	
Franchise Indicator Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the parent person is a franchise. This type of characteristic is defined on the person.	Yes
	Note: By default, the parameter value is set to C1FRANCD . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Person .	

Parameter	Description	Mandatory (Yes or No)
Product Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the product to which the price item is mapped. This type of characteristic is defined on the price item.</p> <p>Note: By default, the parameter value is set to C1PRODUC. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item.</p>	Yes
Plan Activity Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the plan activity date. This type of characteristic is defined on the policy plan.</p> <p>Note: By default, the parameter value is set to C1PLACDT. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy Plan.</p>	Yes
Non Integrated Packaged Savings Indicator Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the packaged savings is non-integrated. This type of characteristic is defined on the billable charge.</p> <p>Note: By default, the parameter value is set to C1PSNINT. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Billable Charge.</p>	Yes
Override Collection Class Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the collection class. This type of characteristic is defined on the person. The system then uses this characteristic to override the collection class of all accounts where the person is the main customer.</p> <p>Note: By default, the parameter value is set to C1OVCOLL. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Person.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Override Postpone Credit Review Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the postpone credit review date. This type of characteristic is defined on the person. The system then uses this characteristic to override the postpone credit review date of all accounts where the person is the main customer.</p> <p>Note: By default, the parameter value is set to CIOVRWDT. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Person.</p>	Yes
Lock Box Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the person ID. This type of characteristic is defined on the account.</p> <p>Note: By default, the parameter value is set to CILCKBX. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Account.</p>	Yes
Auto Pay Route Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the auto pay route type. This type of characteristic is defined on the person. The system then uses this characteristic of a person to update auto pay route type for all accounts where the person is linked to the accounts through the CILCKBX characteristic.</p> <p>Note: By default, the parameter value is set to CIAPAYRT. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Person.</p>	Yes
Hold Request Type	<p>Used to specify the hold request type using which you want to create the hold request for an account.</p> <p>Note: By default, the parameter value is set to DIASTER. You can change the parameter value, if required. However, you must specify a hold request type which is already defined in the system.</p>	No

Parameter	Description	Mandatory (Yes or No)
Price Item Business Object	Used to specify the business object using which you want to create a price item.	Yes
	Note: By default, the parameter value is set to C1_PRICEITEM_BO . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	
Address Business Object	Used to specify the business object using which you want to create an address.	Yes
	Note: By default, the parameter value is set to C1-Address . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Customer Inbound Message XML Format

Note: We recommend you to refer the Customer Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-CustomerStructureInboundMessage** inbound web service, you need to ensure that the customer inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)												
schema	Used to specify the tags of a customer inbound message.	Yes												
characteristics	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the characteristics tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Used to specify a list of characteristics for the customer inbound message.</td> </tr> <tr> <td>customerData</td> <td>Used to specify a list of characteristics for the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify a list of characteristics for the bill group (i.e. account).</td> </tr> <tr> <td>policyData</td> <td>Used to specify a list of characteristics for the policy.</td> </tr> <tr> <td>plan</td> <td>Used to specify a list of characteristics for the policy plan.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the characteristics tag is...	schema	Used to specify a list of characteristics for the customer inbound message.	customerData	Used to specify a list of characteristics for the person.	billGroup	Used to specify a list of characteristics for the bill group (i.e. account).	policyData	Used to specify a list of characteristics for the policy.	plan	Used to specify a list of characteristics for the policy plan.	No
If this tag is used within...	Then the purpose of the characteristics tag is...													
schema	Used to specify a list of characteristics for the customer inbound message.													
customerData	Used to specify a list of characteristics for the person.													
billGroup	Used to specify a list of characteristics for the bill group (i.e. account).													
policyData	Used to specify a list of characteristics for the policy.													
plan	Used to specify a list of characteristics for the policy plan.													
inboundMessageCharacteristic	Used to specify a characteristic for the customer inbound message.	No												
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional) <table border="1"> <tr> <td>Note: This data is required while defining or editing an adhoc characteristic of the customer inbound message.</td> </tr> </table>	Note: This data is required while defining or editing an adhoc characteristic of the customer inbound message.											
Note: This data is required while defining or editing an adhoc characteristic of the customer inbound message.

Tag Name	Tag Description	Mandatory (Yes or No)
transactionType	Used to indicate the type of the transaction. The valid values are: <ul style="list-style-type: none"> • CHNG - Used when you want to update the details of a person, account, contract, fully-insured group policy, policy plan, packaged savings, and billable charge. • NEW - Used when you want to create a person, account, contract, fully-insured group policy, policy plan, packaged savings, and billable charge. • REIN - Used when you want to reinstate a fully-insured group policy. • TERM - Used when you want to terminate a fully-insured group policy. 	Yes
externalTransactionType	Used to specify the corresponding transaction type used in the external source system.	No
customerStructureData	Used to specify the customer information, such as details of the person, bill group (i.e. account), fully-insured group policy, and policy plan.	Yes
customerData	Used to specify the details of the person.	Yes (Conditional) Note: This data is required while defining or editing a person.
customerName	Used to specify the name of the person.	Yes (Conditional) Note: This data is required while defining a person.
customerType	Used to indicate the type of the person. Note: You must specify a value which is already defined in the PER_OR_BUS_FLG lookup field. It must be in the Active status.	Yes (Conditional) Note: This data is required while defining a person.

Tag Name	Tag Description	Mandatory (Yes or No)						
Id	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the Id tag is...</th> </tr> </thead> <tbody> <tr> <td>customerData</td> <td>Used to specify the identification details of the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify the identification details of the bill group (i.e. account).</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the Id tag is...	customerData	Used to specify the identification details of the person.	billGroup	Used to specify the identification details of the bill group (i.e. account).	Note: This data is required while defining or editing the respective information.
	If this tag is used within...	Then the purpose of the Id tag is...						
	customerData	Used to specify the identification details of the person.						
billGroup	Used to specify the identification details of the bill group (i.e. account).							
Note: You must specify one primary identifier for a person and account.								
IDType	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the IDType tag is...</th> </tr> </thead> <tbody> <tr> <td>Id</td> <td>Used to specify the person or account identifier type.</td> </tr> <tr> <td>parentSection</td> <td>Used to specify the person identifier type.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the IDType tag is...	Id	Used to specify the person or account identifier type.	parentSection	Used to specify the person identifier type.	Note: This data is required in the following scenarios: <ul style="list-style-type: none"> • While defining or editing the identification details of a person and account. • While defining or editing a person to person relationship.
	If this tag is used within...	Then the purpose of the IDType tag is...						
	Id	Used to specify the person or account identifier type.						
parentSection	Used to specify the person identifier type.							
Note: You must specify a person or account identifier type which is already defined in the system.								
IDValue	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the IDValue tag is...</th> </tr> </thead> <tbody> <tr> <td>Id</td> <td>Used to specify the person or account identifier.</td> </tr> <tr> <td>parentSection</td> <td>Used to indicate the person with whom you want to establish the person to person relationship.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the IDValue tag is...	Id	Used to specify the person or account identifier.	parentSection	Used to indicate the person with whom you want to establish the person to person relationship.	Note: This data is required in the following scenarios: <ul style="list-style-type: none"> • While defining or editing the identification details of a person and account. • While defining or editing a person to person relationship.
	If this tag is used within...	Then the purpose of the IDValue tag is...						
	Id	Used to specify the person or account identifier.						
parentSection	Used to indicate the person with whom you want to establish the person to person relationship.							
isPrimary	Used to indicate whether the person or account identifier is a primary identifier. The valid values are: <ul style="list-style-type: none"> • Y • N 	No						
	Note: If you do not specify the value, by default, it is set to N.							

Tag Name	Tag Description	Mandatory (Yes or No)
parentSection	Used to specify the details of the parent person with whom you want to establish the person's relationship.	No
relationshipType	Used to indicate how the parent person is related to the person.	Yes (Conditional)Yes (Conditional)
	Note: You must specify a person relationship type which is already defined in the system.	Note: This data is required while defining or editing a person to person relationship.
isFranchiseBillingIndicator	Used to indicate whether the parent person is the franchise. The valid values are: <ul style="list-style-type: none"> Y - If you specify the value as Y, the system will create the parent-child relationship and add the person's account or contract details in the parent person's existing statement construct. N - If you specify the value as N, the system will end the parent-child relationship and the person's account or contract details in the parent person's existing statement construct. 	No
characteristicsList	Used to specify a characteristic for the respective entity (such as person, bill group (i.e. account), policy, or policy plan).	Yes (Conditional)
		Note: This data is required while defining or editing a characteristic of the respective entity.
address	You can use this tag within the following tags:	
	If this tag is used within...	Then the purpose of the address tag is...
	customerData	Used to specify the address of the person.
	billGroup	Used to specify the address of the account.
		Note: This data is required while defining or editing the address of the respective entity.
addressEffDate	Used to specify the date from when the address is effective.	Yes (Conditional)
	Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the customer inbound message.	Note: This data is required while editing the address of the respective entity.

Tag Name	Tag Description	Mandatory (Yes or No)
addressType	Used to indicate the type of address. The valid values are: <ul style="list-style-type: none"> • MAIN - Indicates that the address is the person's mailing address. You can use this address type while specifying the address for the person and account. • SEAS - Indicates that the address is the person's seasonal address. You can use this address type while specifying the address for the person. • OVRD - Indicates that the address is the account's override address. You can use this address type while specifying the address for the account. 	Yes (Conditional)
	<p>Note:</p> <p>If you do not specify the address type, by default, it is set to MAIN.</p> <p>You must specify an address type which is already defined in the ADDRESS_TYPE_FLG lookup field. It must be in the Active status.</p>	<p>Note: This data is required while editing the address of the respective entity.</p>
MailingName	Used to specify the name using which the person should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional)
		<p>Note: This data is required while defining or editing the address of the respective entity.</p>
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
country	Used to indicate the country where the person or account is located.	Yes (Conditional)
		<p>Note: This data is required while defining or editing the address of the respective entity.</p>

Tag Name	Tag Description	Mandatory (Yes or No)						
attentionName	Used to specify the fourth line of the address. It may contain the landmark details.	No						
email	You can use this tag within the following tags: <table border="1" data-bbox="573 352 1157 632"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the email tag is...</th> </tr> </thead> <tbody> <tr> <td>customerData</td> <td>Used to specify the email ID of the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify the email ID of the account's main customer.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the email tag is...	customerData	Used to specify the email ID of the person.	billGroup	Used to specify the email ID of the account's main customer.	No
If this tag is used within...	Then the purpose of the email tag is...							
customerData	Used to specify the email ID of the person.							
billGroup	Used to specify the email ID of the account's main customer.							
phones	You can use this tag within the following tags: <table border="1" data-bbox="573 724 1157 1003"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the phones tag is...</th> </tr> </thead> <tbody> <tr> <td>customerData</td> <td>Used to specify the phone details of the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify the phone details of the account's main customer.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the phones tag is...	customerData	Used to specify the phone details of the person.	billGroup	Used to specify the phone details of the account's main customer.	Yes (Conditional) Note: This data is required while defining or editing the phone details of the respective entity.
If this tag is used within...	Then the purpose of the phones tag is...							
customerData	Used to specify the phone details of the person.							
billGroup	Used to specify the phone details of the account's main customer.							
phoneType	Used to indicate the type of phone. Note: You must specify a phone type which is already defined in the system.	Yes (Conditional) Note: This data is required while defining or editing the phone details of the respective entity.						
phoneValue	Used to specify the phone number of the person or account's main customer.	Yes (Conditional) Note: This data is required while defining or editing the phone details of the respective entity.						
billGroup	Used to specify the account details of a person.	Yes (Conditional) Note: This data is required while defining or editing a bill group (i.e. account).						
customerClass	Used to indicate the customer class to which the account belongs. Note: You must specify a customer class which is already defined in the system.	Yes (Conditional) Note: This data is required while defining a bill group (i.e. account).						

Tag Name	Tag Description	Mandatory (Yes or No)
billCycle	Used to indicate the bill cycle for the account.	Yes (Conditional)
	Note: You must specify a bill cycle which is already defined in the system and added in the C1-BILLCYCLE feature configuration.	Note: This data is required while defining a bill group (i.e. account).
division	Used to indicate the division to which the account belongs.	Yes (Conditional)
	Note: You must specify a division which is already defined in the system.	Note: This data is required while defining a bill group (i.e. account).
billRouteType	Used to indicate how the account's bill must be sent to the main customer.	Yes (Conditional)
	Note: You must specify a bill route type which is already defined in the system.	Note: This data is required while defining a bill group (i.e. account).
billGroupID	Used to specify the account number. It is stored as the primary account identifier in the system.	Yes (Conditional)
	Note: The system stores the value against the account identifier type which is specified in the Account Identifier Type parameter of the C1-CINMSGPRC algorithm.	Note: This data is required while defining or editing a bill group (i.e. account).
bankNumber	Used to indicate the bank account number through which the automatic payment must be done.	No
depositoryFinancialInstitution	Used to indicate the depository financial institution.	No
accountType	Used to indicate the type of the account.	No
	Note: You must specify an account type which is already defined in the EXT_TYPE_FLG lookup field. It must be in the Active status.	
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 	Yes (Conditional)
	Note: This data is required while defining a bill group (i.e. account).	
	Note: You must specify a value which is already defined in the BILL_ADDR_SRCE_FLG lookup field. It must be in the Active status.	
billToName	Used to specify the name using which you want to override the main customer's mailing name.	No

Tag Name	Tag Description	Mandatory (Yes or No)
policyData	Used to specify the details of the fully-insured group policy.	Yes (Conditional)
		Note: This data is required while defining or editing a fully-insured group policy.
policyNumber	Used to specify the policy number.	Yes (Conditional)
		Note: This data is required while defining or editing a fully-insured group policy.
endDate	You can use this tag within the following tags:	
	If this tag is used within...	Then the purpose of the endDate tag is...
	policyData	Used to specify the date till when the policy is effective.
	packageSavings	Used to specify the date till when the packaged savings is effective on the policy. This date is then used as the end date of the billable charge.
Note: The end date cannot be earlier than the start date. You must specify the date in the YYYY-MM-DD format.		Note: This data is required while defining a fully-insured group policy.
renewalDate	Used to specify the date when you want to renew the fully-insured group policy.	Yes (Conditional)
		Note: On renewing a fully-insured group policy, the status of the policy is changed to the status which is specified in the Status on Policy Renewal field of the respective inbound message type.
policyName	Used to specify the description for the fully-insured group policy.	Yes (Conditional)
		Note: This data is required while defining a fully-insured group policy.

Tag Name	Tag Description	Mandatory (Yes or No)
terminateDate	Used to specify the date when you want to terminate the fully-insured group policy.	Yes (Conditional)
	<p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The termination date cannot be earlier than the policy start date.</p> <p>On terminating a fully-insured group policy, the status of the policy is changed to the status which is specified in the Status on Policy Termination field of the respective inbound message type.</p>	<p>Note: This data is required while terminating a fully-insured group policy.</p>
statusReason	Used to indicate the reason why you want to terminate or reinstate the fully-insured group policy.	Yes (Conditional)
	<p>Note: You must specify a reason which is defined for the respective status specified in the inbound message type.</p>	<p>Note: This data is required while terminating or reinstating a fully-insured group policy.</p>
policyEffectiveDate	Used to specify the date from when the policy is effective.	Yes (Conditional)
	<p>Note: The policy start date cannot be later than the policy end date.</p>	<p>Note: This data is required while defining a fully-insured group policy.</p>
packageSavings	Used to specify a list of packaged savings offered on the policy.	No
packageSavings	Used to specify the packaged savings offered on the policy.	Yes (Conditional)
	<p>Note:</p> <p>The packaged savings is configured as a price item in the system. You must specify a price item which is already defined in the system.</p> <p>On processing the customer inbound message, one billable charge is created for each packaged savings offered on the policy. The policy ID is stored as a characteristic on such billable charge.</p>	<p>Note: This data is required while defining or editing the packaged savings offered on the fully-insured group policy.</p>
startDate	Used to specify the date from when the packaged savings is offered on the policy. This date is then used as the start date of the billable charge.	Yes (Conditional)
	<p>Note:</p> <p>The start date cannot be later than the end date.</p> <p>You must specify the date in the YYYY-MM-DD format.</p>	<p>Note: This data is required while defining or editing the packaged savings offered on the fully-insured group policy.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
nonintegratedInd	Used to indicate whether the packaged savings is non-integrated. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes (Conditional)
	<p>Note:</p> <p>The value is stored as a characteristic on the billable charge. The system stores the value against the characteristic type which is specified in the Non Integrated Packaged Savings Indicator Characteristic Type parameter of the C1-CINMSGPRC algorithm.</p> <p>If you do not specify the value, by default, it is set to N.</p>	<p>Note: This data is required while editing the packaged savings offered on the fully-insured group policy.</p>
plan	Used to specify the details of the policy plan.	Yes (Conditional)
planCode	Used to specify the plan number.	Yes (Conditional)
	<p>Note: The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the Plan Code Characteristic Type parameter of the C1-CINMSGPRC algorithm.</p>	<p>Note: This data is required while defining or editing a policy plan.</p>
coverageType	Used to specify the coverage type.	No
productCode	Used to indicate the product to which the price item is mapped.	No
	<p>Note: The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the Product Characteristic Type parameter of the C1-CINMSGPRC algorithm.</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
rateCoverageType	<p>Used to specify the contract type using which the contract should be created for the policy plan. The system checks whether a price item already exists where the specified rate coverage type, coverage type, and plan code are defined on the price item as characteristics. If a price item exists with these characteristics, the system maps the price item to the policy plan. However, if a price item does not exist with these characteristics, the system create a new price item, concatenates the rate coverage type and plan code to generate the price item code, and then maps the price item to the policy plan.</p> <p>Note:</p> <p>You must specify a value which is already defined in the RATE_COVRG_CNTRACT_TYPE lookup field. It must be in the Active status.</p> <p>The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the Rate Coverage Type Characteristic Type parameter of the C1-CINMSGPRC algorithm.</p> <p>A new price item is created using the business object which is specified in the Price Item Business Object parameter of the C1-CINMSGPRC algorithm.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a policy plan.</p>
planEffectiveDate	<p>Used to specify the date from when the policy plan is effective.</p> <p>Note:</p> <p>The value is also stored as a characteristic on the policy plan. The system stores the value against the characteristic type which is specified in the Plan Effective Date Characteristic Type parameter of the C1-CINMSGPRC algorithm.</p> <p>The policy plan start date cannot be later than the policy plan end date.</p> <p>The policy plan start date cannot be earlier than the policy start date or later than the policy end date.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a policy plan.</p>
planEndDate	<p>Used to specify the date till when the policy plan is effective.</p> <p>Note:</p> <p>The policy plan end date cannot be earlier than the policy plan start date.</p> <p>The policy plan end date cannot be earlier than the policy start date or later than the policy end date.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
planActivityDate	Used to specify the date when the activity is scheduled for the policy plan.	No
	Note: The value is stored as a characteristic on the policy plan. The system stores the value against the characteristic type which is specified in the Plan Activity Date Characteristic Type parameter of the C1-CINMSGPRC algorithm.	

The following table lists and describes the tags which are available in the customer inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
c1InboundMessage	Displays the inbound message ID.						
boStatus	Displays the status of the customer inbound message.						
statusReason	Indicates the reason why the status of the customer inbound message is changed.						
c1ExternalTransactionId	Indicates the transaction in the external source system which resulted in the customer inbound message.						
c1ExternalBatchId	Indicates the external batch job or batch run number through which the customer inbound message is created.						
c1ExternalSourceId	Displays the external source system ID.						
person	At present, this tag is not supported in a customer inbound message.						
statusDateTime	Displays the date and time when the status of the customer inbound message is changed in the system.						
creationDateTime	Displays the date and time when the customer inbound message is created in the system.						
version	This tag appears within the following parent tags: <table border="1" data-bbox="646 1325 1463 1604"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the customer inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the customer inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the customer inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the customer inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the customer inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the customer inbound message.						
searchCharacteristicValue	At present, this tag is not supported in a customer inbound message.						
messageID	Displays the inbound message ID.						
status	Displays the status of the customer inbound message.						
createDateTime	Displays the date and time when the customer inbound message is created in the system.						
ORMBcreateDateTime	Displays the date and time when the customer inbound message is created in the system.						

Tag Name	Tag Description
policyStatus	<p>Indicates the status of the policy. The valid values are:</p> <ul style="list-style-type: none"> • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated
toDoRetry	<p>Displays the information about the retry option used for the customer inbound message.</p> <p>Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the customer inbound message is validated and processed either through the user interface or batch process.</p>
retryDateTime	Displays the date and time when the retry option is used to change the status of the customer inbound message from Rejected to Pending .
numberOfRetries	Indicates the number of times the retry option is used for the customer inbound message.
currentErrorState	<p>Indicates the status to which the customer inbound message is transitioned when its validation or processing fails. The valid value is:</p> <ul style="list-style-type: none"> • REJECTED
isRetried	<p>Indicates whether the retry option is used to change the status of the customer inbound message. The valid values are:</p> <ul style="list-style-type: none"> • true • false

Sample Customer Inbound Message

Using the below example, you can do the following:

- Create the customer and bill groups (i.e. accounts) for a fully-insured group health insurance business
- Create a fully-insured group policy along with package savings and policy plan

Customer	Bill Group (i.e. Account)	Policy	Policy Plan
Williams, Tom	126535	WT1256678	HCBILLING1

```

<schema>

Membership Inbound Message

On calling the **C1-MembershipInboundMessage** web service, a membership inbound message is created in the **Pending** status. When the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch is invoked, the system checks whether there are any membership inbound messages in the **Pending** status. If there is a membership inbound message in the **Pending** status, the system validates the membership inbound message. If a membership inbound message is successfully validated, it is processed further and the following entities are created or updated in the system based on the available information in the membership inbound message:

- Membership
- Main Subscriber
- Dependent Person
- Billable Charge (for membership premium)

In addition, the system enables you to submit the membership inbound messages for validation and processing from the user interface. On submitting a membership inbound message, the system validates the membership inbound message. If a membership inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the membership inbound message is changed to **Processed**. If any error occurs while validating or processing a membership inbound message, the status of the membership inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected membership inbound message. The system can reprocess a membership inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the membership inbound message from **Rejected** to **Pending**. The **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch will then reconsider the membership inbound message for validation and processing.

You can also configure the system such that the batch can automatically retry to process the rejected membership inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a membership inbound message depends on the value defined in the **Maximum Retry** parameter.

Prerequisites

To use the membership inbound message feature, you need to do the following:

- Define the required membership inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define values for the required parameters in the **C1-INMEMEVAL**, **C1-INMEMEPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the **Membership BO (C1MEMBRO)** characteristic for the policy type which is specified in the **C1-CINMSGPRC** algorithm.
- Define predefined values for the **C1RATCOV**, **C1TRNCAT**, **C1INAPPC**, **C1CVTIER**, and **C1PRODTY** characteristic types.
- Define values for the **C1-SourceSystemLookup** extendable lookup.

- Define values for the **PER_OR_BUS_FLG**, **ADDRESS_TYPE_FLG**, and **RATE_COVRG_CNTRACT_TYPE** lookup fields.
- Define the required person identifier types, account identifier types, characteristic types, phone types, service quantity identifiers, and contract relationship types in the application.
- Define values for the **C1_INVOICE_DAY_BILL_PERIOD_FLG** lookup field.

Note: Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

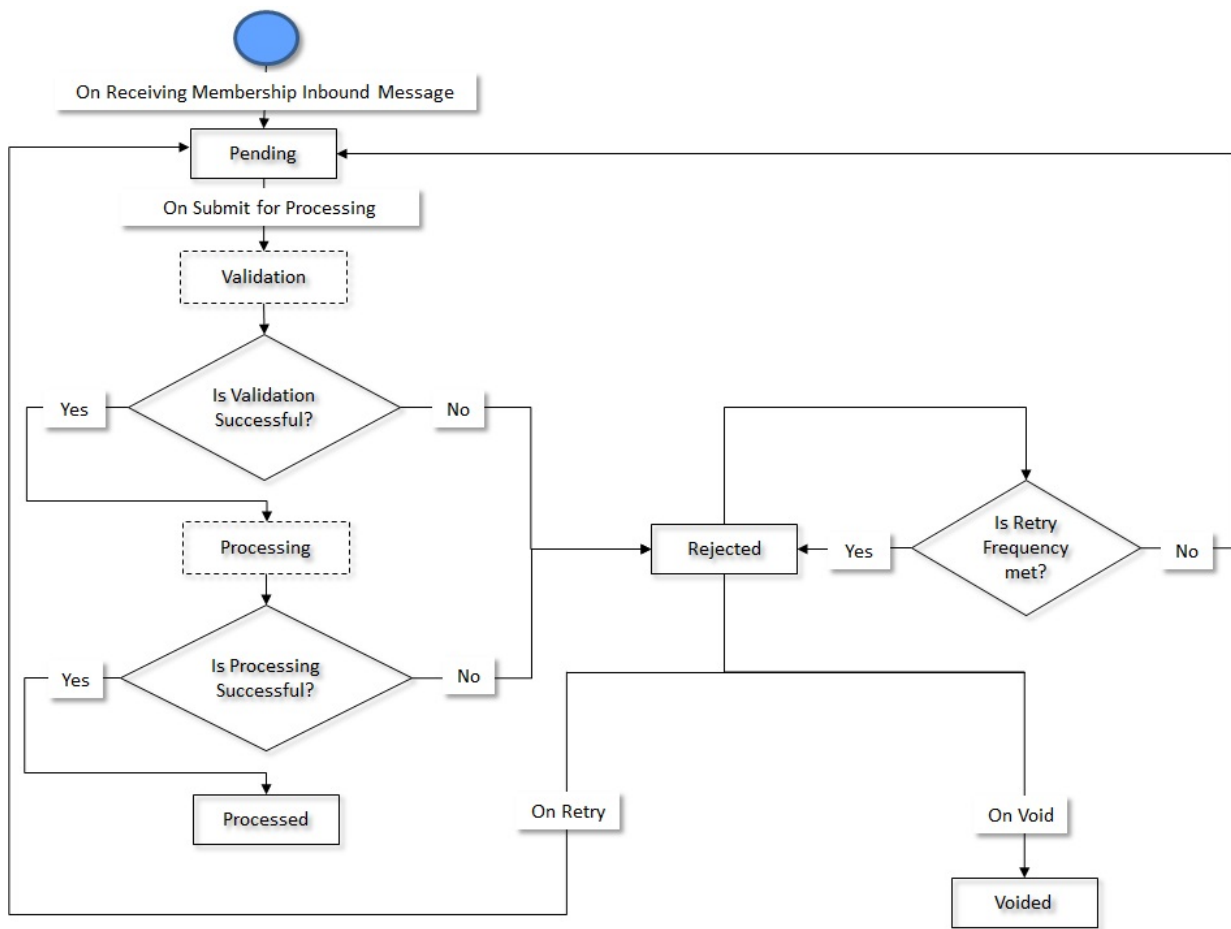

- Define predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address
- Define bill cancel reasons which you want to use on premium bill segment cancelation during the membership termination.

	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1086.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-INMEMEVAL

This algorithm is invoked when the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch is executed and when you click the **Submit for Processing** button. It validates the membership inbound message which is in the **Pending** status. It checks the following:

- Whether the primary identifier is specified for the person.
- Whether the policy with the specified policy number and source system combination exists in the system.
- Whether the policy plan exists in the policy.
- Whether the bill group ID (i.e. account identifier) is specified in the member plan coverage information.
- Whether the **Plan Code** characteristic type (as mentioned in the **Plan Code Characteristic Type** parameter) exists in the member plan coverage information.
- Whether the **Rate Coverage Type** characteristic type (as mentioned in the **Rate Coverage Type Characteristic Type** parameter) exists in the member plan coverage information and a valid value is specified for this characteristic type.

If any of the above validation fails, the status of the membership inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Plan Code Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item. Note: By default, the parameter value is set to C1HPLNID . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item .	Yes
Rate Coverage Type Characteristic Type	Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item. Note: By default, the parameter value is set to C1RATCOV . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item .	Yes
Account Identifier Type	Used to indicate the account identifier type. The system derives the account using the account identifier type and account identifier combination. Note: By default, the parameter value is set to C1_F_ANO . You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.	No

C1-INMEMEPRC

This algorithm is invoked once a membership inbound message is successfully validated. It processes the membership inbound message and accordingly does the following:

- Adds or updates a membership in a policy plan
- Adds a dependent in a membership
- Updates the details of the main subscriber or dependent person
- Creates main subscriber or dependent person

- Associates a contract with a membership
- Creates a membership premium billable charge for a coverage period

If the processing fails due to any reason, the status of the membership inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Subscriber Member Business Object	Used to specify the business object using which you want to create the main subscriber or dependent person in the system. Note: By default, the parameter value is set to C1-HCCustomer . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	No
Description on Bill	Used to specify the description that you want to display on the premium billable charge. Note: By default, the parameter value is set to Premium .	No
Premium Amount Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) against which you want to store the premium amount. The system uses this SQI while creating the premium billable charges. Note: By default, the parameter value is set to PREMAMT . You can change the parameter value, if required. However, you must specify a service quantity identifier which is already defined in the system.	No
Recurring Flag	Used to indicate that you want to create recurring bill segments at the intervals defined in the bill period. Note: By default, the parameter value is set to BP .	No

Parameter	Description	Mandatory (Yes or No)
Plan Code Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.</p> <p>Note: By default, the parameter value is set to C1HPLNID. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item.</p>	Yes
Rate Coverage Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.</p> <p>Note: By default, the parameter value is set to C1RATCOV. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item.</p>	Yes
Policy Plan Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy plan ID. This type of characteristic is defined on the contract. The system uses this characteristic to derive the active contract associated with the memberships of the policy plan.</p> <p>Note: By default, the parameter value is set to C1POLPLN. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Contract.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Main Subscriber Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the person is the main subscriber in a membership. This type of characteristic is defined on the person. The system checks whether the value for this characteristic (specified in the membership inbound message) matches the value specified in the Main Subscriber Characteristic Value parameter. If so, it considers the person as the main subscriber. Otherwise, the person is considered as a dependent person.</p> <p>Note: By default, the parameter value is set to C1DEPCD. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Person.</p>	Yes
Main Subscriber Characteristic Value	<p>Used to specify the value for the characteristic type which is specified in the Main Subscriber Characteristic Type parameter.</p> <p>Note: By default, the parameter value is set to MEM.</p>	No
Account Identifier Type	<p>Used to indicate the account identifier type. The system derives the account using the account identifier type and account identifier combination.</p> <p>Note: By default, the parameter value is set to C1_F_ANO. You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.</p>	No
Bill Segment Cancel Reason	<p>Used to indicate the cancel reason which you want to use during premium bill segment cancelation on the membership termination.</p> <p>Note: By default, the parameter value is set to MASS. You can change the parameter value, if required. However, you must specify a bill cancel reason which is already defined in the system.</p>	No

Parameter	Description	Mandatory (Yes or No)
Invoice Day Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system fetches the bill period mapped to the invoice day in the C1_INVOICE_DAY_BILL_PERIOD_FLG lookup field while creating premium billable charges for accounts.</p> <p>Note: By default, the parameter value is set to C1OFFRST. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Account.</p>	Yes
Membership Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the membership ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive premium billable charges whose corresponding bill segments must be canceled due to change in membership coverage period.</p> <p>Note: By default, the parameter value is set to CIMMBRSH. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Billable Charge.</p>	Yes
Membership Business Object Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the business object using which the membership must be created. This type of characteristic is defined on the policy type.</p> <p>Note: By default, the parameter value is set to CIMEMBRO. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Policy Type.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Transaction Type Category Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the type of the transaction (i.e. whether the transaction is related to premium, fee, and so on). This type of characteristic is defined on the billable charge. The system uses this characteristic to derive premium billable charges.</p> <p>Note: By default, the parameter value is set to C1TRNCAT. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Billable Charge.</p>	Yes
Transaction Type Category Characteristic Value	<p>Used to specify the value for the characteristic type which is specified in the Transaction Type Category Characteristic Type parameter.</p> <p>Note: By default, the parameter value is set to CMPREM.</p>	No
Inactive Policy Plan Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the policy plan is inactive. This type of characteristic is defined on the contract. The system uses this characteristic to derive contracts associated with the memberships of policy plan .</p> <p>Note: By default, the parameter value is set to C1INAPPC. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Contract.</p>	Yes
Coverage Tier Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the coverage tier to which the membership belongs. This type of characteristic is defined on the membership.</p> <p>Note: By default, the parameter value is set to C1CVTIER. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Membership.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Membership Termination Status	<p>Used to indicate the status to which you want to transition the membership when the membership is terminated.</p> <p>Note: By default, the parameter value is set to TERMINATE. You can change the parameter value, if required. However, you must specify a status which is already defined in the lifecycle of the C1-Membership business object.</p>	No
Medical Rate Coverage Type	<p>Used to specify a medical contract type. The system evaluates whether the rate coverage type specified in the membership inbound message is a medical contract type using this parameter value.</p> <p>Note: By default, the parameter value is set to M. You can change the parameter value, if required. However, you must specify a value which is already defined in the RATE_COVRG_CNTRACT_TYPE lookup field.</p>	No
Policy Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive the packaged savings billable charge when the membership coverage period is changed.</p> <p>Note: By default, the parameter value is set to C1POLICY. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Billable Charge.</p>	Yes
Product Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the type of the product. This type of characteristic is defined on the price item. The system uses this characteristic to derive packaged savings billable charges whose corresponding bill segments must be canceled due to change in membership coverage period.</p> <p>Note: By default, the parameter value is set to C1PRODTY. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to Price Item.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Product Type Characteristic Value	Used to specify the value for the characteristic type which is specified in the Product Type Characteristic Type parameter.	No
	Note: By default, the parameter value is set to PACKSAV .	
Policy Status	Used to specify the status of the policy. If the parameter value is specified and if the parameter value matches the policy status, the system validates whether the membership start and end dates fall within the policy plan start and end dates.	No
	Note: You must specify a status which is already defined in the lifecycle of the C1-Policy business object.	
Address Business Object	Used to specify the business object using which you want to create an address.	Yes
	Note: By default, the parameter value is set to C1-Address . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

Membership Inbound Message XML Format

Note:

We recommend you to refer the Membership Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

If a characteristic is defined for a person using the characteristic type specified in the **Main Subscriber Characteristic Type** parameter of the **C1-INMEMEPRC** algorithm and its value is set to the one specified in the **Main Subscriber Characteristic Value** parameter of the **C1-INMEMEPRC** algorithm, then the person is added as the main subscriber in the membership. Otherwise, the person is added as a dependent person in the membership.

Before calling the **C1-MembershipInboundMessage** inbound web service, you need to ensure that the membership inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)								
schema	Used to specify the tags of a membership inbound message.	Yes								
characteristics	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the characteristics tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Used to specify a list of characteristics for the membership inbound message.</td> </tr> <tr> <td>memberData</td> <td>Used to specify a list of characteristics for the person.</td> </tr> <tr> <td>memberPlanCoverages</td> <td>Used to specify a list of characteristics for the membership.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the characteristics tag is...	schema	Used to specify a list of characteristics for the membership inbound message.	memberData	Used to specify a list of characteristics for the person.	memberPlanCoverages	Used to specify a list of characteristics for the membership.	No
If this tag is used within...	Then the purpose of the characteristics tag is...									
schema	Used to specify a list of characteristics for the membership inbound message.									
memberData	Used to specify a list of characteristics for the person.									
memberPlanCoverages	Used to specify a list of characteristics for the membership.									
inboundMessageCharacteristic	Used to specify a characteristic for the membership inbound message.	No								

Tag Name	Tag Description	Mandatory (Yes or No)						
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional) Note: This data is required while defining or editing an adhoc characteristic of the membership inbound message.						
characteristicType	You can use this tag within the following tags: <table border="1" data-bbox="594 590 1203 1703"> <thead> <tr> <th data-bbox="594 590 938 737">If this tag is used within...</th> <th data-bbox="938 590 1203 737">Then the purpose of the characteristicType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="594 737 938 1041">inboundMessageCharacteristic</td> <td data-bbox="938 737 1203 1041">Used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to Inbound Message.</td> </tr> <tr> <td data-bbox="594 1041 938 1703">characteristicsList</td> <td data-bbox="938 1041 1203 1703"> Used to specify the characteristic type. If you are defining a characteristic for a: <ul style="list-style-type: none"> • Person - You must specify a characteristic type where the characteristic entity is set to Person. • Membership - You must specify a characteristic type where the characteristic entity is set to Membership. </td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the characteristicType tag is...	inboundMessageCharacteristic	Used to specify the characteristic type. isPrimary	<p>Used to indicate whether the person identifier is a primary identifier. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value, by default, it is set to N.</p>	<p>No</p>								
newPrimaryID	<p>Used when you want to change the primary identifier of the main subscriber or dependent person.</p>	<p>No</p>								
mainSubscriber	<p>Used to specify the primary identifier of the main subscriber.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are adding dependent person in a membership.</p>								

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicsList	Used to specify a characteristic for the respective entity (i.e. person or membership)	Yes (Conditional) Note: This data is required while defining or editing a characteristic of the respective entity.
address	Used to specify the address details of the main subscriber or dependent person.	Yes (Conditional) Note: This data is required while defining or editing the address of a main subscriber or dependent person.
addressEffDate	Used to specify the date from when the address is effective for the main subscriber or dependent person. Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the membership inbound message.	Yes (Conditional) Note: This data is required while editing the address of a main subscriber or dependent person.
addressType	Used to indicate whether the address is the person's mailing or seasonal address. The valid values are: <ul style="list-style-type: none"> MAIN - Indicates that the address is the person's mailing address. SEAS - Indicates that the address is the person's seasonal address. Note: If you do not specify the address type, by default, it is set to MAIN . You must specify an address type which is already defined in the ADDRESS_TYPE_FLG lookup field. It must be in the Active status.	Yes (Conditional) Note: This data is required while editing the address of a main subscriber or dependent person.
MailingName	Used to specify the override mailing name for the main subscriber or dependent person.	No

Tag Name	Tag Description	Mandatory (Yes or No)
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional) Note: This data is required while defining or editing the address of a main subscriber or dependent person.
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
country	Used to indicate the country where the main subscriber or dependent person is located.	Yes (Conditional) Note: This data is required while defining or editing the address of a main subscriber or dependent person.
attentionName	Used to specify the fourth line of the address. It may contain the landmark details.	No
phones	Used to specify the phone details of the main subscriber or dependent person.	Yes (Conditional) Note: This data is required while defining or editing the phone details of a main subscriber or dependent person.
phoneType	Used to indicate the type of the phone. Note: You must specify a phone type which is already defined in the system.	Yes (Conditional) Note: This data is required while defining or editing the phone details of a main subscriber or dependent person.

Tag Name	Tag Description	Mandatory (Yes or No)
phoneValue	Used to specify the phone number of the main subscriber or dependent person.	Yes (Conditional) Note: This data is required while defining or editing the phone details of a main subscriber or dependent person.
policyData	Used to specify information about the policy and its plan for which you want to define or edit the membership.	Yes (Conditional) Note: This data is required while defining or editing a membership.
policyNumber	Used to specify the policy number.	Yes (Conditional) Note: This data is required while defining or editing a membership.
memberPlanCoverages	Used to specify the details of the membership.	Yes (Conditional) Note: This data is required while defining or editing a membership.
billGroup	Used to indicate the account on which you want to create the membership premium billable charges.	No
planCode	Used to specify the plan number. Note: The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the Plan Code Characteristic Type parameter of the C1-INMEMEPRC algorithm.	Yes (Conditional) Note: This data is required while defining or editing a membership.
coverageType	Used to specify the coverage type.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
rateCoverageType	<p>Used to specify the contract type. The system finds the contract of the specified contract type on the account and associates it with the membership.</p> <p>Note: You must specify a contract type which is already defined in the RATE_COVRG_CNTRACT_TYPE lookup field. It must be in the Active status.</p> <p>The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the Rate Coverage Type Characteristic Type parameter of the C1-INMEMEPRC algorithm.</p> <p>The system derives the price item where the specified rate coverage type and plan code are defined as characteristics. The system then derives the policy plan using the derived policy ID and price item. It also checks whether the start date of the policy plan is earlier than or equal to the membership start date and the policy plan end date is later than or equal to the membership end date.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing a membership.</p>						
startDate	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="594 1035 1198 1864"> <thead> <tr> <th data-bbox="594 1035 857 1119">If this tag is used within...</th> <th data-bbox="857 1035 1198 1119">Then the purpose of the startDate tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="594 1119 857 1577">memberPlanCoverages</td> <td data-bbox="857 1119 1198 1577"> <p>Used to specify the date from when the membership is effective.</p> <p>Note: The membership start date cannot be later than the membership end date. premiumRateList	<p>Used to specify the end date of the coverage period.</p> <p>Note: The coverage period end date cannot be later than the membership end date and earlier than the coverage period start date.</p>							
productCode	Used to indicate the product to which the price item is mapped.	No						
premiumRates	Used to specify the premium details of the membership.	<p>Yes (Conditional)</p> <p>Note: This data is required while creating or editing a membership premium billable charge.</p>						
premiumRateList	Used to specify the premium for a coverage period.	<p>Yes (Conditional)</p> <p>Note: This data is required while creating or editing a membership premium billable charge.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
premiumAmount	Used to specify the premium amount for the coverage period.	Yes (Conditional)
		Note: This data is required while creating or editing a membership premium billable charge.

The following table lists and describes the tags which are available in the membership inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
c1InboundMessage	Displays the inbound message ID.						
c1InboundMessageType	Indicates the inbound message type using which the membership inbound message is created in the system.						
boStatus	Displays the status of the membership inbound message.						
statusReason	Indicates the reason why the status of the membership inbound message is changed.						
c1SourceSystem	Indicates the external system from where the membership inbound message is received.						
c1ExternalTransactionId	Indicates the transaction in the external source system which resulted in the membership inbound message.						
c1ExternalBatchId	Indicates the external batch job or batch run number through which the membership inbound message is created.						
c1ExternalSourceId	Displays the external source system ID.						
person	At present, this tag is not supported in a membership inbound message.						
statusDateTime	Displays the date and time when the status of the membership inbound message is changed in the system.						
creationDateTime	Displays the date and time when the membership inbound message is created in the system.						
version	This tag appears within the following parent tags: <table border="1" data-bbox="683 1488 1463 1833"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the membership inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the membership inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the membership inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the membership inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the membership inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the membership inbound message.						
searchCharacteristicValue	At present, this tag is not supported in the membership inbound message.						

Tag Name	Tag Description
messageID	Displays the inbound message ID.
status	Displays the status of the membership inbound message.
createDateTime	Displays the date and time when the membership inbound message is created in the system.
ORMBcreateDateTime	Displays the date and time when the membership inbound message is created in the system.
toDoRetry	Displays the information about the retry option used for the membership inbound message. Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the membership inbound message is validated and processed either through the user interface or batch process.
retryDateTime	Displays the date and time when the retry option is used to change the status of the membership inbound message from Rejected to Pending .
numberOfRetries	Indicates the number of times the retry option is used for the membership inbound message.
currentErrorState	Indicates the status to which the membership inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> REJECTED
isRetried	Indicates whether the retry option is used to change the status of the membership inbound message. The valid values are: <ul style="list-style-type: none"> true false

ASO Customer Inbound Message

On calling the **C1-ASOCustomerInboundMessage** web service, you can create an ASO customer inbound message using an ASO customer inbound message type. You can create an ASO customer inbound message type using the **ASO Customer Inbound Message Type (C1-ASOCustomerInboundMsgType)** business object. The ASO customer inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the ASO customer inbound message should be created in the system. You must specify the **ASO Customer Inbound Message (C1-ASOCustomerInboundMessage)** business object in the ASO customer inbound message type.
- **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Health Care Customer (C1-HCCustomer)** business object in the ASO customer inbound message type.
- **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Health Care Account (C1-HCAccount)** business object in the ASO customer inbound message type.
- **Policy Type** - The policy type indicates the policy business object using which the policy should be created in the system. You must specify the **ASO Policy (C1-ASOPolicy)** business object in the policy type.
- **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the ASO customer inbound message type.

The **C1-ASOCustomerInboundMessage** web service enables you to do the following:

- Create or edit a parent customer
- Create or edit the bill groups of the parent customer
- Create or edit the accounts of a bill group
- Create or edit auto pay instructions of an account
- Create or edit the self-funded policies of a bill group
- Create or edit the plans of a self-funded policy

The following table describes how the system behaves when the respective entity information is given in an ASO customer inbound message:

Entity	System Behavior
Parent Customer	The system creates the person whose person type is set to PG .
Bill Group	The system creates the person whose person type is set to BG . The bill group is related to the parent customer using the person relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration.
Account	While creating an account, the system defines the Invoice Type characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLLNG feature configuration.
Policy	If the policy information is given for a bill group, the system creates the self-funded policy using the policy type which is specified in the ASO customer inbound message type. In addition, it does the following: <ul style="list-style-type: none"> • Associates the bill group with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLLNG feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLLNG feature configuration
Policy Plan	The system creates the plan for the self-funded policy.

On calling the **C1-ASOCustomerInboundMessage** web service, an ASO customer inbound message is created in the **Pending** status. When the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is executed, the system checks whether there are any ASO customer inbound messages in the **Pending** status. If there is an ASO customer inbound message in the **Pending** status, the system validates the ASO customer inbound message. If an ASO customer inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the ASO customer inbound messages for validation and processing from the user interface. On submitting an ASO customer inbound message, the system validates the ASO customer inbound message. If an ASO customer inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the ASO customer inbound message is changed to **Processed**. If any error occurs while validating or processing an ASO customer inbound message, the status of the ASO customer inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected ASO customer inbound message. The system can reprocess an ASO customer inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the ASO customer inbound message from **Rejected** to **Pending**. The **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch will then reconsider and reprocess the ASO customer inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected ASO customer inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess an ASO customer inbound message depends on the value defined in the **Maximum Retry** parameter.

For more information on...	See...
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 2949

Prerequisites

To use the ASO customer inbound message feature, you need to do the following:

- Define the required ASO customer inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-ASOCINVAL**, **C1-ASOCINPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the values for the **ADDRESS_TYPE_FLG** and **RUNOUT_ADM_OPT_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
 - Person Relationship Type
 - Bill Group Policy Person Role
 - Parent Customer Policy Person Role
 - Invoice Type Characteristic Type
- Define the required divisions, person identifier types, account identifier types, phone types, person relationship types, customer classes, bill cycles, bill route types, auto pay route types, auto pay sources, policy person roles, price items, and characteristic types in the application.
- Set the batch control type of the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

ASO Customer Inbound Message Status Transition through User Interface

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the user interface:

ASO Customer Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch:

Algorithms Used in C1-ASOCustomerInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-ASOCustomerInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 1592.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1087.
	Enter	C1-ASOCINVAL	C1-ASOCINVAL	Refer to C1-ASOCINVAL on page 1661.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1087.
	Enter	C1-ASOCINPRC	C1-ASOCINPRC	Refer to C1-ASOCINPRC on page 1662.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 1602.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 1602.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-ASOCINVAL

This algorithm is invoked when you execute the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the ASO customer inbound message which is in the **Pending** status. It checks the following:

- Whether the parent customer information exists in the ASO customer inbound message.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.

- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-ASOCINPRC

This algorithm is invoked once an ASO customer inbound message is successfully validated. It processes the ASO customer inbound message and accordingly creates or updates a person (parent customer and bill group), account (including automatic payment options), policy and policy plan.

If the processing fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

ASO Customer Inbound Message XML Format

Note: We recommend you to refer the ASO Customer Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the ASO customer inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)						
schema	Used to specify the tags of an ASO customer inbound message.	Yes						
bo	Used to indicate the business object using which the ASO customer inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> C1-ASOCustomerInboundMessage 	Yes						
messageType	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system. Note: The system refers the value from within the headerData tag.</td> </tr> <tr> <td>headerData</td> <td>Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.</td> </tr> </tbody> </table> <p>Note: You must specify a valid ASO customer inbound message type which is in the Active status.</p>	If this tag is used within...	Then the purpose of the messageType tag is...	schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system. Note: The system refers the value from within the headerData tag.	headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.	Yes
If this tag is used within...	Then the purpose of the messageType tag is...							
schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system. Note: The system refers the value from within the headerData tag.							
headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.

relatedPersons	Used to indicate whether the related person is financially responsible for the parent customer. The valid values are: <ul style="list-style-type: none"> • true • false 							
billGroupData	Used to indicate whether the bill group is financially responsible for the parent customer. The valid values are: <ul style="list-style-type: none"> • true • false 							
characteristicsList	Used to specify a characteristic for the respective entity (i.e. parent customer, bill group, account, policy, or policy plan).	Yes (Conditional) Note: This data is required while defining or editing a characteristic of the respective entity.						
billGroupData	Used to specify the details of the bill group.	Yes (Conditional) Note: This data is required while defining or editing a bill group.						
seqNo	Used to indicate the order in which the bill group should be created in the system.	Yes (Conditional) Note: This data is required while defining or editing a bill group.						

Tag Name	Tag Description	Mandatory (Yes or No)														
billGroupName	Used to specify the name of the bill group.	Yes (Conditional) Note: This data is required while defining a bill group.														
accountData	Used to specify the account details of the bill group. Note: The system, by default, adds the bill group (for whom the account information is given in the ASO customer inbound message) as the main customer of the account. While linking the bill group as main customer of the account, the system sets the following attributes: <table border="1"> <thead> <tr> <th>Attribute Name</th> <th>Attribute Value</th> </tr> </thead> <tbody> <tr> <td>Financially Responsible</td> <td>Y</td> </tr> <tr> <td>Account Relationship Type</td> <td>Main Customer</td> </tr> <tr> <td>Receive Copy of Bill</td> <td>Y</td> </tr> <tr> <td>Bill Format</td> <td>Detailed</td> </tr> <tr> <td>Receives Notification</td> <td>Y</td> </tr> <tr> <td>Number of Bill Copies</td> <td>1</td> </tr> </tbody> </table>	Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y	Number of Bill Copies	1	Yes (Conditional) Note: This data is required while defining or editing an account.
Attribute Name	Attribute Value															
Financially Responsible	Y															
Account Relationship Type	Main Customer															
Receive Copy of Bill	Y															
Bill Format	Detailed															
Receives Notification	Y															
Number of Bill Copies	1															
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account. Note: The value is stored in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASO BLLNG feature configuration. You must specify a value which is already defined in the predefined characteristic type.	Yes (Conditional) Note: This data is required while defining or editing an account.														
customerClass	Used to indicate the customer class to which the account belongs. Note: You must specify a customer class which is already defined in the system.	Yes (Conditional) Note: This data is required while defining an account.														
billCycle	Used to indicate the bill cycle for the account. Note: You must specify a bill cycle which is already defined in the system.	No														

Tag Name	Tag Description	Mandatory (Yes or No)
billRouteType	Used to indicate how the account's bill must be sent to the main customer.	Yes (Conditional)
	Note: You must specify a bill route type which is already defined in the system.	Note: This data is required while defining the bill routing information for the main customer.
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 	Yes (Conditional) Note: This data is required while defining the bill routing information for the main customer.
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional) Note: This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date.	Yes (Conditional)
	Note: The priority cannot be less than or equal to zero.	Note: This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional) Note: This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> • CIDD - Indicates that you want to directly debit the main customer's bank account. • CIPA - Indicates that you want to send a payment advice to the main customer. 	No

Tag Name	Tag Description	Mandatory (Yes or No)
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	Note: You must specify an auto pay route type which is already defined in the system.	Note: This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	Note: You must specify an auto pay source which is already defined in the system.	Note: This data is required while defining or editing an auto pay instruction of an account.
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional) Note: This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire.	Yes (Conditional)
	Note: You must specify the month in the MM format.	Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.
expiryYear	Used to specify the year when the tender type of the auto pay source will expire.	Yes (Conditional)
	Note: You must specify the year in the YYYY format.	Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.
name	Used to specify the name of the person as it appears in the financial institution's system.	No

Tag Name	Tag Description	Mandatory (Yes or No)
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.	No
	Note: The maximum withdrawal amount cannot be less than zero.	
comments	Used to specify additional information about the auto pay instruction.	No
policyData	Used to specify the details of the self-funded policy.	Yes (Conditional)
		Note: This data is required while defining or editing a self-funded policy.
policyNumber	Used to specify the policy number.	Yes (Conditional)
		Note: This data is required while defining or editing a self-funded policy.
policyDescription	Used to specify the description for the self-funded policy	Yes (Conditional)
		Note: This data is required while defining a self-funded policy.
runOutEndDate	Used to specify the date when the runout period of the self-funded policy ends.	No
	Note: The runout end date cannot be earlier than the policy end date. You must specify the date in the YYYY-MM-DD format.	

Tag Name	Tag Description	Mandatory (Yes or No)
runOutAdminOption	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • NROA • PERC <p>Note: At present, this data is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. You must specify a value which is already defined in the RUNOUT_ADM_OPT_FLG lookup field. It must be in the Active status.</p>	No
policyPersons	Used to associate a person with the policy.	Yes (Conditional) Note: This data is required while associating a person with the policy.
policyPerRole	Used to indicate the role of the person in the policy. Note: You must specify a policy person role which is already defined in the system.	Yes (Conditional) Note: This data is required while associating a person with the policy.
planData	Used to specify the details of the policy plan.	Yes (Conditional) Note: This data is required while defining or editing a policy plan.
planNumber	Used to specify the plan number.	Yes (Conditional) Note: This data is required while defining or editing a policy plan.
planCode	Used to specify the price item which you want to associate with the policy plan. Note: You must specify a price item which is already defined in the system.	Yes (Conditional) Note: This data is required while defining or editing a policy plan.

The following table lists and describes the tags which are available in the ASO customer inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
InboundMessage	Displays the inbound message ID.						
boStatus	Displays the status of the ASO customer inbound message.						
statusReason	Indicates the reason why the status of the ASO customer inbound message is changed.						
person	At present, this tag is not supported in an ASO customer inbound message.						
statusDateTime	Displays the date and time when the status of the ASO customer inbound message is changed in the system.						
creationDateTime	Displays the date and time when the ASO customer inbound message is created in the system.						
searchCharacteristicValue	At present, this tag is not supported in an ASO customer inbound message.						
version	<p>This tag appears within the following parent tags:</p> <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the ASO customer inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the ASO customer inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the ASO customer inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the ASO customer inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.						
toDoRetry	<p>Displays the information about the retry option used for the ASO customer inbound message.</p> <p>Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the ASO customer inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the ASO customer inbound message from Rejected to Pending .						
numberOfRetries	Indicates the number of times the retry option is used for the ASO customer inbound message.						
currentErrorState	<p>Indicates the status to which the ASO customer inbound message is transitioned when its validation or processing fails. The valid value is:</p> <ul style="list-style-type: none"> REJECTED 						
isRetried	<p>Indicates whether the retry option is used to change the status of the ASO customer inbound message. The valid values are:</p> <ul style="list-style-type: none"> true false

Sample ASO Customer Inbound Message

Using the below example, you can do the following:

- Create the parent customer and bill groups for the self-funded health insurance business
- Create the accounts for the bill groups
- Create the self-funded policies for the bill groups

Parent Customer	Bill Group	Account	Policy
UK OIL AND GAS CORP	UK OIL AND GAS ACRE	Standard	Active Employee Health Insurance Policy
		Retention	Retiree Employee Health Insurance Policy
	UK OIL AND GAS COBRA	Standard	Active COBRA Employee Health Insurance Policy
		Retention	Retiree COBRA Employee Health Insurance Policy

```

Health Care Inbound Message

On calling the **C1-HCInboundMessage** web service, you can create a health care inbound message using a health care inbound message type. You can create a health care inbound message type using the **Health Care Inbound Message Type (C1-HCInboundMsgType)** business object. The health care inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. You must specify the **Health Care Inbound Message (C1-HCInboundMessage)** business object in the health care inbound message type.
- **Customer Registration Type** - The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. The customer registration type helps the system to determine:
 - **Customer Registration Business Object** - The business object using which the customer registration object should be created in the system. You must specify the **Customer Registration - Health Care (C1-CustomerRegistrationHC)** business object in the customer registration type.
 - **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Person BO (C1_PERSON_BO)** business object in the customer registration type.
 - **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Account BO (C1-AccountBO)** business object in the customer registration type.

- **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the customer registration type.
- **Membership Business Object** - The business object using which the membership should be created in the system. You must specify the **Membership (C1-Membership)** business object in the customer registration type.
- **Address Business Object** - The business object using which the effective dated address should be created in the system. You must specify the **Address (C1-Address)** business object in the customer registration type.

While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

The **C1-HCInboundMessage** web service enables you to do the following depending on the person type and the category to which the policy type belongs:

Person Type	Policy Category	Enables you to:
Parent Customer	Self-Funded	<ul style="list-style-type: none"> • Create or edit a parent customer • Create or edit a bill group of the parent customer • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of a bill group • Create or edit the policies of a bill group
	Fully-Insured Group	<ul style="list-style-type: none"> • Create or edit a parent customer • Create or edit a bill group of the parent customer • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the parent customer and bill group • Create or edit the policies of the parent customer and bill group • Create or edit the plans of the policies • Associate one or more pricing rule types with a policy plan • Create or edit the pricing rules of the policy plans • Terminate, reinstate, or renew policies of the parent customer and bill group

Person Type	Policy Category	Enables you to:
Bill Group	Self-Funded	<ul style="list-style-type: none"> • Create or edit a bill group • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the bill group • Create or edit the policies of the bill group
	Fully-Insured Group	<ul style="list-style-type: none"> • Create or edit a bill group • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the bill group • Create or edit the policies of the bill group • Create or edit the plans of the policies • Associate one or more pricing rule types with a policy plan • Create or edit the pricing rules of the policy plans • Terminate, reinstate, or renew policies of the bill group
Any Other Person Type	-	<ul style="list-style-type: none"> • Create or edit a person • Credit or edit the accounts of the person • Create or edit the memberships of the policy plans • Add or remove members from a membership • Create or edit the one-time or recurring pass-through billable charges for a membership

The following table describes how the system behaves when the respective entity information is given in a health care inbound message:

Entity	System Behavior
Person	<p>The system uses the C1-PERSTYPE feature configuration to decide whether the person type specified in the health care inbound message represents Parent Customer or Bill Group. If the person type specified in the health care inbound message matches the person type specified in the Bill Group Person Type or Parent Person Type option type of the C1-PERSTYPE feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the Bill Group Person Type or Parent Person Type option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the related person information is given for a bill group and the person type of the related person is Parent Customer, then the bill group is related to the parent customer using the person relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p> <p>Note: The system supports the Add and Update operations for all entities except the derivation and pricing parameters for the bill group. Through the health care inbound message, each time, the system creates a new derivation and pricing parameters record for the bill group and does not update the existing derivation and pricing parameters record of the bill group.</p>
Account	<p>While creating an account, the system defines the Invoice Type characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLNG feature configuration.</p>

Entity	System Behavior
Policy	<p>If the fully-insured group policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> • Associates the bill group with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLNG feature configuration <p>However, if the fully-insured group policy information is given for a parent customer, the system does the following:</p> <ul style="list-style-type: none"> • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLNG feature configuration <p>If the self-funded policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> • Associates the bill group with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLNG feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the Parent Customer Policy Person Role option type of the C1-ASOBLNG feature configuration <p>On renewing a fully-insured group policy, the system removes the end date from the policy and stamps the renewal date against the policy.</p>
	<p>Note: You can renew a policy where the policy category is set to Self-Funded from the user interface and not through a health care inbound message. However, you can renew a policy where the policy category is set to Fully-Insured Group through a health care inbound message and not from the user interface.</p>
	<p>On terminating a fully-insured group policy, the system updates the end date of the following entities with the termination date:</p> <ul style="list-style-type: none"> • Policy • Policy Person • Policy Plan • Membership • Membership Person • Pricing Rule <p>However, before updating the end dates, the system stores the original end date in the ORG_END_DT column of the respective table for all the above entities. The status of the policy is changed to the status which is specified in the Policy Termination Status option type of the C1-ASOBLNG feature configuration.</p> <p>On reinstating a fully-insured group policy, the system updates the end date of the above entities with the original end date. In addition, the status of the policy is changed to the status which is specified in the Policy Reinstatement Status option type of the C1-ASOBLNG feature configuration.</p>

Entity	System Behavior
Policy Plan	While creating a policy plan, the system requires either the price item or at least one pricing rule type. The system allows you to associate only those pricing rule types where the category is set to Age Based , Tier Based , or Pass-Through Billable Charge .
Pricing Rule Type	The system does not allow you to create or update a pricing rule type through a health care inbound message.
Pricing Rule	<p>The system allows you to define and edit the age-based and tier-based pricing rules of the policy plan. Note that the system supports the Replace operation and not the Update operation when you are editing these pricing rules through a health care inbound message.</p> <p>Note:</p> <p>You can define and edit the age-based and tier-based pricing rules through a health care inbound message and not from the user interface.</p> <p>You can create the following pricing rules from the user interface and not through a health care inbound message:</p> <ul style="list-style-type: none"> • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • One-Time Flat Fees • Recurring Flat Fees • Ancillary • Discount Arrangement • Level Funded
Pass-Through Billable Charge	If the price item, account identifier type, and account identifier are given in the billable charge information, the system directly creates an SQI based billable charge when you process the health care inbound message. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to Pass-Through Billable Charge . If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). If so, the system creates an SQI based billable charge using the respective pass-through billable charge pricing rule type.

Note:

We recommend you to create or update the following through separate health care inbound messages:

- Entities, such as parent customer, bill group, accounts, policies, and policy plans
- Pricing rules
- Membership, member persons, and pass-through billable charges

On calling the **C1-HCInboundMessage** web service, a health care inbound message is created in the **Pending** status. When the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch is executed, the system checks whether there are any health care inbound messages in the **Pending** status. If there is a health care inbound message in the **Pending** status, the system validates the inbound message. If the health care inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the health care inbound messages for validation and processing from the user interface. On submitting a health care inbound message, the system validates the health care inbound message. If a health care inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

If the person type is **Parent Customer**, the customer registration object is created in the **Complete** status. However, if the person type is **Bill Group**, the customer registration object is created in the **Bill Group Approved** status. The policies are created in the **In Force/Active** status and the pricing rules are created in the **Active** status. Finally, the status of the health care inbound message is changed to **Processed**.

Note: The above status transition is mentioned for a customer registration object based on the assumption that the data sent through the health care inbound message will be pre-approved and does not require any approval in the system.

If any error occurs while validating or processing a health care inbound message, the status of the health care inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected health care inbound message. The system can reprocess a health care inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the health care inbound message from **Rejected** to **Pending**. The **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch will then reconsider and reprocess the health care inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected health care inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a health care inbound message depends on the value defined in the **Maximum Retry** parameter.

At present, if a customer registration object is created through a health care inbound message, you cannot edit the customer registration object from the user interface. You can only edit such customer registration objects through a health care inbound message.

How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 2949
How to setup the C1-PERSTYPE feature configuration	Setting the C1_PERSTYPE Feature Configuration on page 2987

Prerequisites

To use the health care inbound message feature, you need to do the following:

- Define the required customer registration types in the system.

Note: The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

- Define the required health care inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-HCINVAL**, **C1-HCINPROC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** and **C1-ExtLookRetTypeRateOpt** extendable lookups.
- Define the values for the **HOUSE_TYPE**, **PER_OR_BUS_FLG**, **NAME_TYPE_FLG**, **ADDRESS_TYPE_FLG**, **BILL_ADDR_SRCE_FLG**, **BILL_FORMAT_FLG**, and **RUNOUT_ADM_OPT_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
 - Person Relationship Type
 - Bill Group Policy Person Role
 - Parent Customer Policy Person Role
 - Invoice Type Characteristic Type
 - Policy Termination Status
 - Policy Reinstatement Status
 - Default Rate Option – Flat
 - Default Rate Option – Percentage
 - Age Based Parameter
 - Membership Inactive Status
 - Member Person Inactive Status
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
 - Bill Group Person Type
 - Parent Person Type
- Define the required person identifier types, account identifier types, person relationship types, characteristic types, phone types, customer classes, bill cycles, collection classes, divisions, bill route types, charge types, currencies, bill periods, invoice frequencies, distribution codes, auto pay route types, auto pay sources, account relationship types, policy types, policy person roles and contract relationship types in the application.
- Define the values for the **C1_INVOICE_DAY_BILL_PERIOD_FLG** lookup field.

Note: Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

- Define the required predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language

- Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination.
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement.
- Define the bill cancel reasons which you want to use when the premium bill segment is canceled during the policy or membership termination.
- Define the required exchange rates in the system.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

Health Care Inbound Message Status Transition through User Interface

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the user interface:

Health Care Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch:

Algorithms Used in C1-HCInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-HCInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 1592.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1087.
	Enter	C1-HCINVAL	C1-HCINVAL	Refer to C1-HCINVAL on page 1705.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1087.
	Enter	C1-HCINPROC	C1-HCINPROC	Refer to C1-HCINPROC on page 1706.

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 1602.
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 1602.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HCINVAL

Health Care Inbound Message - Validation

This algorithm is invoked when you execute the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the health care inbound message which is in the **Pending** status. It checks the following:

- Whether the details of the parent customer are given in the bill group information.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HCINPROC

This algorithm is invoked once a health care inbound message is successfully validated. It processes the health care inbound message and creates or updates the parent customers, bill groups (including derivation and pricing parameters for the bill group), accounts, self-funded or fully-insured group policies, policy plans, memberships, member persons, pass-through billable charges, and pricing rules. In addition, it allows you to terminate, reinstate, and renew a fully-insured group policy.

If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. The memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.

If the processing fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Care Inbound Message XML Format

Note: We recommend you to refer the Health Care Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the health care inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health care inbound message.	Yes
bo	Used to indicate the business object using which the health care inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> • C1-HCInboundMessage 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)						
messageType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 302 1203 785"> <thead> <tr> <th data-bbox="602 302 789 386">If this tag is used within...</th> <th data-bbox="789 302 1203 386">Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 386 789 638">schema</td> <td data-bbox="789 386 1203 638"> <p>Indicates the health care inbound message type using which the health care inbound message is created in the system.</p> <p>Note: The system refers the value from within the headerData tag.</p> </td> </tr> <tr> <td data-bbox="602 638 789 785">headerData</td> <td data-bbox="789 638 1203 785"> <p>Used to specify the health care inbound message type using which the health care inbound message should be created in the system.</p> </td> </tr> </tbody> </table> <p>Note: You must specify a valid health care inbound message type which is in the Active status.</p>	If this tag is used within... billLevelInfo4	Used to specify the employee attribute based on which you want to derive the bill group.	No						
	Note: You must not specify the ampersand (&) character in the value.							

Tag Name	Tag Description	Mandatory (Yes or No)
memberData	Used to specify the details of the membership to which the person belongs.	Yes (Conditional) Note: This data is required while defining or editing the membership details of a person.
memberId	Used to specify the external membership ID.	No
memberRelationship	Used to indicate how the person is related to the main subscriber. Note: You must specify a contract relationship type which is already defined in the system. If the person is the main subscriber in a membership, you must set the value to SELF .	Yes (Conditional) Note: This data is required while defining or editing the membership details of a person.
membershipPersonStatus	Used to indicate the status of the member person. The valid values are: <ul style="list-style-type: none">• ACTV• INAC Note: While adding a member person to a membership, by default, the status of the member person is set to Active . You cannot change the status of a member person from Inactive to Active when the status of the membership is Inactive . If you change the status of the main subscriber to Inactive , the system automatically changes the status of the membership and all its member persons to Inactive . For more information, see XXX. Note: If you do not specify the value, by default, it is set to N .	No
mainSubscriber	Used to indicate the person who is the main subscriber in the membership.	Yes (Conditional) Note: This data is required while defining the membership details for a person.

Tag Name	Tag Description	Mandatory (Yes or No)
policyNumber	You can use this tag within the following tags:	Yes (Conditional)
	If this tag is used within...	Then the purpose of the policyNumber tag is...
	memberData	Used to indicate the policy where the policy plan is defined.
	policyData	Used to specify the policy number.
planNumber	You can use this tag within the following tags:	Yes (Conditional)
	If this tag is used within...	Then the purpose of the planNumber tag is...
	memberData	Used to indicate the policy plan where you want to add or edit the membership.
	planData	Used to specify the plan number.
membershipPersonCharacteristic	Used to specify a list of characteristics for the member person.	No
billableChargeData	Used to specify the details for a billable charge. Ideally, this piece of information should be specified in the main subscriber details and not in the member person details.	Yes (Conditional)
accountIdType	Used to specify the account identifier type.	Yes (Conditional)
	Note: You must specify an account identifier type which is already defined in the system.	Note: This data is required when the accountIdValue tag contains the account identifier.
accountIdValue	Used to indicate the account for which you want to create the billable charge.	Yes (Conditional)
		Note: This data is required when the accountIdType tag contains the account identifier type.

Tag Name	Tag Description	Mandatory (Yes or No)						
chargeType	Used to indicate the type of billable charge that you want to create.	No						
	Note: You must specify a charge type which is already defined in the system.							
priceItemCode	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the priceItemCode tag is...</th> </tr> </thead> <tbody> <tr> <td>billableChargeData</td> <td>Used to indicate the price item for which you want to create the billable charge.</td> </tr> <tr> <td>planData</td> <td>Used to indicate the price item which you want to associate with the policy plan.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the priceItemCode tag is...	billableChargeData	Used to indicate the price item for which you want to create the billable charge.	planData	Used to indicate the price item which you want to associate with the policy plan.	Note: This data is required while defining or editing a billable charge of a membership.
	If this tag is used within...	Then the purpose of the priceItemCode tag is...						
	billableChargeData	Used to indicate the price item for which you want to create the billable charge.						
planData	Used to indicate the price item which you want to associate with the policy plan.							
description	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the description tag is...</th> </tr> </thead> <tbody> <tr> <td>billableChargeData</td> <td>Used to specify the description for the billable charge.</td> </tr> <tr> <td>policyData</td> <td>Used to specify the description for the policy.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the description tag is...	billableChargeData	Used to specify the description for the billable charge.	policyData	Used to specify the description for the policy.	Note: This data is required while defining the respective information.
	If this tag is used within...	Then the purpose of the description tag is...						
	billableChargeData	Used to specify the description for the billable charge.						
policyData	Used to specify the description for the policy.							
recurringMethod	<p>Used to indicate whether recurring bill segments must be created for the billable charge at the specified intervals. The valid values are:</p> <ul style="list-style-type: none"> • BP - Used when you want to create recurring bill segments at the intervals defined in the bill period. • FR - Used when you want to create recurring bill segments at the set invoice frequency. 	No						
billPeriod	Used to indicate the bill period using which you want to determine the intervals at which the recurring bill segments must be created.	Yes (Conditional)						
	Note: You must specify a bill period which is already defined in the system.	Note: This data is required when the recurringMethod tag contains BP .						

Tag Name	Tag Description	Mandatory (Yes or No)
frequency	Used to indicate the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required when the recurringMethod tag contains FR .
	Note: You must specify an invoice frequency which is already defined in the system.	
billAfterDt	Used to specify the date after which the bill must be generated for the billable charge.	No
	Note: You must specify the date in the YYYY-MM-DD format.	
billableChargeLines	Used to specify the details for a pass through line in the billable charge.	Yes
descriptionOnBill	Used to specify the information about the pass through line that should appear on the bill.	Yes
currencyCode	Used to indicate the currency in which you want to charge the amount.	Yes
	Note: You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	
chargeAmount	Used to specify the charge amount.	Yes
showOnBillSw	Used to indicate whether the charge should appear on the person's printed bill. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: If you do not specify the value, by default, it is set to true .	
appearInSummarySw	Used to indicate whether the charge should be included in the summary line. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: If you do not specify the value, by default, it is set to false .	

Tag Name	Tag Description	Mandatory (Yes or No)
distributionCode	Used to specify the distribution code which indicates the GL account associated with the charge.	No
	Note: You must specify a distribution code which is already defined in the system.	
accountData	Used to specify the account details of a person.	Yes (Conditional)
		Note: This data is required while defining or editing an account.
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account.	Yes (Conditional)
	<p>Note:</p> <p>The value is stored in the characteristic type which is specified in the Invoice Type Characteristic Type option type of the C1-ASOBLNG feature configuration.</p> <p>You must specify a value which is already defined in the predefined characteristic type.</p>	
customerClass	Used to indicate the customer class to which the account belongs.	Yes (Conditional)
	Note: You must specify a customer class which is already defined in the system.	
billCycle	Used to indicate the bill cycle for the account.	No
	Note: You must specify a bill cycle which is already defined in the system.	
billLeadDays	Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0).	No
	Note: If you do not specify the value, by default, it is set to zero(0).	
currency	Used to indicate the currency in which you want to bill the account.	Yes (Conditional)
	Note: You must specify a currency which is already defined in the system.	

Tag Name	Tag Description	Mandatory (Yes or No)						
setUpDate	<p>Used to specify the date when the account was first created. This is purely informational.</p> <p>Note: You must specify the date in the YYYY-MM-DD format. If you do not specify the value, by default, it is set to the current date.</p>	No						
acctUsageFlg	<p>Used to indicate the category to which the account belongs. The valid values are:</p> <ul style="list-style-type: none"> • INVC - Indicates that the account will be used to bill charges of the usage accounts. • SETL - Indicates that the account will be used only for settlement purposes. • USAG - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually. <p>Note: If you do not specify the value, by default, it is set to USAG.</p>	No						
comments	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the comments tag is...</th> </tr> </thead> <tbody> <tr> <td>accountData</td> <td>Used to specify additional information about the account.</td> </tr> <tr> <td>autoPayDetails</td> <td>Used to specify additional information about the auto pay instruction.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the comments tag is...	accountData	Used to specify additional information about the account.	autoPayDetails	Used to specify additional information about the auto pay instruction.	No
If this tag is used within...	Then the purpose of the comments tag is...							
accountData	Used to specify additional information about the account.							
autoPayDetails	Used to specify additional information about the auto pay instruction.							
deferAutoPayDt	Used to specify the date till when you want to hold the automatic payment process for the account.	No						
collectionClass	<p>Used to specify the collection class using which you want to control the account's debt.</p> <p>Note: If you do not specify the value, by default, it is set to the collection class which is specified in the customer class of the account. You must specify a collection class which is already defined in the system.</p>	No						

Tag Name	Tag Description	Mandatory (Yes or No)						
billRouteType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 302 1198 615"> <thead> <tr> <th data-bbox="602 302 883 386">If this tag is used within...</th> <th data-bbox="883 302 1198 386">Then the purpose of the billRouteType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 386 883 499">accountData</td> <td data-bbox="883 386 1198 499">Used to indicate how the account's bill must be sent to the main customer.</td> </tr> <tr> <td data-bbox="602 499 883 615">accountPersonRouting</td> <td data-bbox="883 499 1198 615">Used to indicate how the account's bill must be sent to the linked person.</td> </tr> </tbody> </table> <p>Note: You must specify a bill route type which is already defined in the system.</p>	If this tag is used within...	Then the purpose of the billRouteType tag is...	accountData	Used to indicate how the account's bill must be sent to the main customer.	accountPersonRouting	Used to indicate how the account's bill must be sent to the linked person.	<p>Yes (Conditional)</p> <p>Note: This data is required while defining or editing the respective information.</p>
If this tag is used within...	Then the purpose of the billRouteType tag is...							
accountData	Used to indicate how the account's bill must be sent to the main customer.							
accountPersonRouting	Used to indicate how the account's bill must be sent to the linked person.							
billAddressSource	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 806 1198 1610"> <thead> <tr> <th data-bbox="602 806 883 919">If this tag is used within...</th> <th data-bbox="883 806 1198 919">Then the purpose of the billAddressSource tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 919 883 1266">accountData</td> <td data-bbox="883 919 1198 1266"> Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV </td> </tr> </tbody> </table> <p>Note: You must specify a value which is already defined in the BILL_ADDR_SRCE_FLG lookup field. It must be in the Active status.</p>	If this tag is used within...	Then the purpose of the billAddressSource tag is...	accountData	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 	accountPersonRouting	Used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 	<p>Yes (Conditional)</p> <p>Note: This data is required while defining the respective information.</p>
If this tag is used within...	Then the purpose of the billAddressSource tag is...							
accountData	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 							
accountPersonRouting	Used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. The valid values are: <ul style="list-style-type: none"> • PER • ACOV 							

Tag Name	Tag Description	Mandatory (Yes or No)
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional) Note: This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date. Note: The priority cannot be less than or equal to zero.	Yes (Conditional) Note: This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional) Note: This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> • C1DD - Indicates that you want to directly debit the main customer's bank account. • C1PA - Indicates that you want to send a payment advice to the main customer. 	No
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution. Note: You must specify an auto pay route type which is already defined in the system.	Yes (Conditional) Note: This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request. Note: You must specify an auto pay source which is already defined in the system.	Yes (Conditional) Note: This data is required while defining or editing an auto pay instruction of an account.

Tag Name	Tag Description	Mandatory (Yes or No)
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional) Note: This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire. Note: You must specify the month in the MM format.	Yes (Conditional) Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.
expiryYear	Used to specify the year when the tender type of the auto pay source will expire. Note: You must specify the year in the YYYY format.	Yes (Conditional) Note: This data is required when the Expiration Date Required option is selected for the tender type which is specified in the auto pay source.
name	Used to specify the name of the person as it appears in the financial institution's system.	No
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount. Note: The maximum withdrawal amount cannot be less than zero.	No

Tag Name	Tag Description	Mandatory (Yes or No)													
accountPerson	Used to specify information about the person (other than main customer) to whom you want to link the account.	Yes (Conditional)													
	<p>Note:</p> <p>The system, by default, adds the person (for whom the account information is given in the health care inbound message) as the main customer of the account. While linking the person as main customer of the account, the system sets the following attributes:</p> <table border="1"> <thead> <tr> <th>Attribute Name</th> <th>Attribute Value</th> </tr> </thead> <tbody> <tr> <td>Financially Responsible</td> <td>Y</td> </tr> <tr> <td>Account Relationship Type</td> <td>Main Customer</td> </tr> <tr> <td>Receive Copy of Bill</td> <td>Y</td> </tr> <tr> <td>Bill Format</td> <td>Detailed</td> </tr> <tr> <td>Receives Notification</td> <td>Y</td> </tr> <tr> <td>Number of Bill Copies</td> <td>1</td> </tr> </tbody> </table>	Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y	Number of Bill Copies	1
Attribute Name	Attribute Value														
Financially Responsible	Y														
Account Relationship Type	Main Customer														
Receive Copy of Bill	Y														
Bill Format	Detailed														
Receives Notification	Y														
Number of Bill Copies	1														
accountRelationshipType	Used to indicate how the person is related to the account.	Yes (Conditional)													
	<p>Note: You must specify an account relationship type which is already defined in the system.</p>	<p>Note: This data is required while linking a person to an account.</p>													
isFinanciallyResponsible	Used to indicate whether the person is financially responsible for the account. The valid values are:	No													
	<ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value, by default, it is set to false.</p>														
personAddressOverride	Used to specify the account override address for the linked person.	No													
postal	Used to specify the postal code of the address.	No													
accountPersonRouting	Used to specify the bill routing information for the linked person.	Yes (Conditional)													
		<p>Note: This data is required while defining or editing the bill routing information of a linked person.</p>													

Tag Name	Tag Description	Mandatory (Yes or No)
shouldReceiveCopyOfBill	Used to indicate whether the linked person should receive a copy of the account's bill. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value, by default, it is set to N.	
billFormat	Used to indicate whether the linked person should receive the detailed or summary bill. The valid values are: <ul style="list-style-type: none"> • D • S 	No
	Note: You must specify a value which is already defined in the BILL_FORMAT_FLG lookup field. It must be in the Active status. If you do not specify the value, by default, it is set to D when the linked person should receive a copy of the account's bill. This information is ignored when the shouldReceiveCopyOfBill tag contains N.	
numberOfBillCopies	Used to indicate the number of copies of the bill which the linked person must receive.	No
	Note: If you do not specify the value, by default, it is set to 1 when the linked person should receive a copy of the account's bill. This information is ignored when the shouldReceiveCopyOfBill tag contains N.	
receivesNotification	Used to indicate whether the linked person should receive letters (i.e. notifications) initiated by collection, write-off, and overdue events. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value, by default, it is set to N. This information is ignored when the shouldReceiveCopyOfBill tag contains N.	

Tag Name	Tag Description	Mandatory (Yes or No)
policyData	Used to specify the details of the policy.	Yes (Conditional) Note: This data is required while defining or editing a policy.
policyType	Used to indicate the type of policy. Note: You must specify a policy type which is already defined in the system. If you want to create a fully-insured group policy, you must specify a policy type where the policy category is set to Fully-Insured Group . However, if you want to create a self-funded policy, you must specify a policy type where the policy category is set to Self-Funded .	Yes (Conditional) Note: This data is required while defining a policy.
runOutEndDate	Used to specify the date when the runout period of the self-funded policy ends. Note: The runout end date cannot be earlier than the policy end date. You must specify the date in the YYYY-MM-DD format.	No
runOutAdminOption	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none">• NROA• PERC Note: At present, this data is used only for the informational purpose and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. You must specify a value which is already defined in the RUNOUT_ADM_OPT_FLG lookup field. It must be in the Active status.	No

Tag Name	Tag Description	Mandatory (Yes or No)
renewalDate	Used to specify the date when you want to renew the fully-insured group policy.	Yes (Conditional)
	<p>Note:</p> <p>You can renew a self-funded policy only from the user interface.</p> <p>You must specify the date in the YYYY-MM-DD format.</p>	<p>Note: This data is required while renewing a fully-insured group policy.</p>
policyPersons	Used to associate a person with the policy.	Yes (Conditional)
		<p>Note: This data is required while associating a person with the policy.</p>
policyPerRole	Used to indicate the role of the person in the policy.	Yes (Conditional)
	<p>Note: You must specify a policy person role which is already defined in the system.</p>	<p>Note: This data is required while associating a person with the policy.</p>
terminationInformation	Used to specify the termination details of the fully-insured group policy.	No
	<p>Note: At present, you cannot terminate a self-funded policy either from the user interface or through a health care inbound message.</p>	
terminateDate	Used to specify the date when you want to terminate the fully-insured group policy.	Yes (Conditional)
	<p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The termination date cannot be earlier than the policy start date.</p> <p>On terminating a policy, the status of the policy is changed to the status which is specified in the Policy Termination Status option type of the C1-ASOBLLNG feature configuration.</p>	<p>Note: This data is required while terminating a fully-insured group policy.</p>
terminationReason	Used to indicate the reason why you want to terminate the fully-insured group policy.	Yes (Conditional)
	<p>Note: You must specify the status reason which is already defined for the status specified in the Policy Termination Status option type of the C1-ASOBLLNG feature configuration.</p>	<p>Note: This data is required while terminating a fully-insured group policy.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
reinstateInformation	Used to specify the reinstatement details of the fully-insured group policy.	No
	Note: At present, you cannot reinstate a self-funded policy either from the user interface or through a health care inbound message.	
reinstatementDate	Used to specify the date when you want to reinstate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the date in the YYYY-MM-DD format. The reinstatement date cannot be earlier than the policy start date. On reinstating a policy, the status of the policy is changed to the status which is specified in the Policy Reinstatement Status option type of the C1-ASOBLLNG feature configuration.	
reinstateReason	Used to indicate the reason why you want to reinstate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the status reason which is already defined for the status specified in the Policy Reinstatement Status option type of the C1-ASOBLLNG feature configuration.	
planData	Used to specify the details of the policy plan.	Yes (Conditional)
	Note: At present, you can only define a policy plan in a fully-insured group policy. Therefore, the system will ignore this information when given for a self-funded policy.	
planName	Used to specify the description for the policy plan.	No
pricingRuleTypeList	Used to associate a pricing rule type with the policy plan.	Yes (Conditional)
		Note: This data is required while associating a pricing rule type with the policy plan.

Tag Name	Tag Description	Mandatory (Yes or No)
pricingRuleType	Used to specify the pricing rule type.	Yes (Conditional)
	Note: At present, you can only associate those pricing rule types where the category is set to Age Based, Tier Based, or Pass-Through Billable Charge . Therefore, the system will ignore the pricing rule types where the category is set to Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Flat Fees, Ancillary, Discount Arrangement, or Level Funded .	Note: This data is required when a price item is not associated with the policy plan.
primaryPlanSw	Used to indicate whether the plan is a primary plan in the policy. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value, by default, it is set to N.	
pricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional)
		Note: This data is required while defining or editing a pricing rule.
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	Used to specify the entity type. The valid values are: <ul style="list-style-type: none"> • PLAN - Used when you want to specify the plan number. • PLCY - Used when you want to specify the policy number. • SSYS - Used when you want to specify the source system 	Yes (Conditional)
		Note: This data is required while defining or editing a pricing rule.
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional)
		Note: This data is required while defining or editing a pricing rule.

Tag Name	Tag Description	Mandatory (Yes or No)
status	Used to indicate the status of the pricing rule. The valid values are: <ul style="list-style-type: none"> • ACTV • INAC 	No
	Note: If you do not specify the value, by default, it is set to Active .	
pricingRuleType	Used to indicate the pricing rule type using which you want to define the pricing rule.	Yes (Conditional)
	Note: You must specify a pricing rule type where the category is set to Age Based or Tier Based .	
priceItemCd	Used to indicate the price item for which you want to define the pricing rule.	Yes (Conditional)
	Note: You must specify a price item which is already associated with the respective pricing rule type.	
rateOption	Used to indicate the rate option using which you want to create price assignment for the pricing rule.	No
	<p>Note:</p> <p>You must specify a rate option which is already defined in the C1-ExtLookRetTypeRateOpt extendable lookup. It must be in the Active status.</p> <p>If the rate option is not given for an age-based pricing rule, by default, it is set to:</p> <ul style="list-style-type: none"> • The value specified in the Default Rate Option – Flat option type of the C1-ASOBLNG feature configuration when the modifier method is set to FLAT • The value specified in the Default Rate Option – Percentage option type of the C1-ASOBLNG feature configuration when the modifier method is set to EXPT or INPT <p>However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the Default Rate Option – Flat option type of the C1-ASOBLNG feature configuration when the modifier method is set to FLAT or NULL.</p>	

Tag Name	Tag Description	Mandatory (Yes or No)
modifierApplicability	<p>Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value, by default, it is set to N.</p>	No
modifierMethod	<p>Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are:</p> <ul style="list-style-type: none"> • FLAT - Indicates that the system should consider the modifier rate as a flat amount. • INPT - Indicates that the system should consider the modifier rate as inclusive percentage. • EXPT - Indicates that the system should consider the modifier rate as exclusive percentage. 	<p>Yes (Conditional)</p> <p>Note: This data is required when the modifierApplicability tag contains Y.</p>
baseRate	<p>Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes.</p> <p>Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a pricing rule.</p>
baseFee	<p>Used to specify the base fees for the eligible members.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a pricing rule.</p>
lowerAgeLimit	<p>Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component.</p> <p>Note:</p> <p>The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration.</p> <p>This data is ignored when given in a tier-based pricing rule information.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining an age-based pricing rule.</p>

Tag Name	Tag Description	Mandatory (Yes or No)						
upperAgeLimit	<p>Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component.</p> <p>Note:</p> <p>The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the Age Based Parameter option type of the C1-ASOBLNG feature configuration.</p> <p>This data is ignored when given in a tier-based pricing rule information.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining an age-based pricing rule.</p>						
pricingParameter	<p>Used to specify a set of employee attributes based on which the base fees may vary.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required while defining a tier-based pricing rule.</p>						
parameterCode	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="602 953 1198 1457"> <thead> <tr> <th data-bbox="602 953 846 1031">If this tag is used within...</th> <th data-bbox="846 953 1198 1031">Then the purpose of the parameterCode tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="602 1031 846 1247">pricingParameter</td> <td data-bbox="846 1031 1198 1247">Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> <tr> <td data-bbox="602 1247 846 1457">modifierInformation</td> <td data-bbox="846 1247 1198 1457">Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> </tbody> </table> <p>Note:</p> <p>You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to Pricing Eligibility Criteria. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information.</p> <p>You cannot specify any special character except underscore (_) in the parameter name.</p>	If this tag is used within...	Then the purpose of the parameterCode tag is...	pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.	modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.	<p>Yes (Conditional)</p> <p>Note: This data is required while specifying the respective information.</p>
If this tag is used within...	Then the purpose of the parameterCode tag is...							
pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.							
modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.							

Tag Name	Tag Description	Mandatory (Yes or No)						
parameterValue	You can use this tag within the following tags:	Yes (Conditional) Note: This data is required while specifying the respective information.						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the parameterValue tag is...</th> </tr> </thead> <tbody> <tr> <td>pricingParameter</td> <td>Used to specify the value for the parameter (i.e. employee attribute).</td> </tr> <tr> <td>modifierInformation</td> <td>Used to specify the value for the parameter (i.e. modifier).</td> </tr> </tbody> </table>		If this tag is used within...	Then the purpose of the parameterValue tag is...	pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).	modifierInformation	Used to specify the value for the parameter (i.e. modifier).
	If this tag is used within...		Then the purpose of the parameterValue tag is...					
	pricingParameter		Used to specify the value for the parameter (i.e. employee attribute).					
modifierInformation	Used to specify the value for the parameter (i.e. modifier).							
Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.								
modifierInformation	Used to specify the modifier based on which you want to increase or decrease the base fees.	Yes (Conditional) Note: This data is required while specifying the modifier information.						
	Note: While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.							
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional) Note: This data is required while specifying the modifier information.						

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
cInboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the health care inbound message.
statusReason	Indicates the reason why the status of the health care inbound message is changed.
person	At present, this tag is not supported in a health care inbound message.
statusDateTime	Displays the date and time when the status of the health care inbound message is changed in the system.
creationDateTime	Displays the date and time when the health care inbound message is created in the system.
searchCharacteristicValue	At present, this tag is not supported in a health care inbound message.

Tag Name	Tag Description						
version	<p>This tag appears within the following parent tags:</p> <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the health care inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the health care inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the health care inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the health care inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.						
paidThroughDate	Indicates the term end date of the last fully or partially paid term. For more information about the paid through date, refer to Policy on page 1953.						
toDoRetry	<p>Displays the information about the retry option used for the health care inbound message.</p> <p>Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the health care inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the health care inbound message from Rejected to Pending .						
numberOfRetries	Indicates the number of times the retry option is used for the health care inbound message.						
currentErrorState	<p>Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is:</p> <ul style="list-style-type: none"> REJECTED 						
isRetried	<p>Indicates whether the retry option is used to change the status of the health care inbound message. The valid values are:</p> <ul style="list-style-type: none"> true false

Sample Health Care Inbound Message for Fully-Insured Group Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group health insurance business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
		APE Medicare Gold RE MALE		AGE_BASED	
		APE Medicare Bronze RE FEMALE		AGE_BASED	
		APE Medicare Silver RE FEMALE		AGE_BASED	
		APE Medicare Gold RE FEMALE		AGE_BASED	
		APE Medicare Gold RE FEMALE		AGE_BASED	

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	HMO

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	PPO
Antartica Petroleum COBRA	SMALLPRIME	COBRA	SEATTLE	MEDICAL	HMO
	SMALLPRIME	COBRA	SEATTLE	MEDICAL	PPO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	HMO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	PPO

Sample Health Care Inbound Message for Self-Funded Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a self-funded health insurance business
- Create the accounts for the bill groups
- Create the policies for the bill groups where the policy category is set to **Self-Funded**

Person Name	Person Type	Policy	Account
US Energy Corp	Parent Customer	-	-
US Energy ACTIVE	Bill Group	Active Employee Health Insurance Policy	Standard
			Retention
US Energy COBRA	Bill Group	Active COBRA Employee Health Insurance Policy	Standard
			Retention
US Energy RETIREE	Bill Group	Retiree Employee Health Insurance Policy	Standard
			Retention

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
US Energy ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	-	-
	SMALLPRIME	ACTIVE	LOS ANGELES	-	-
	SMALLPRIME	ACTIVE	DALLAS	-	-
	SMALLPRIME	ACTIVE	SAN JOSE	-	-
	SMALLPRIME	ACTIVE	SAN FRANCISCO	-	-
	SMALLPRIME	ACTIVE	CHARLOTTE	-	-
	SMALLPRIME	ACTIVE	DETROIT	-	-
	SMALLPRIME	ACTIVE	CLEVELAND	-	-
	SMALLPRIME	ACTIVE	ORLANDO	-	-
	SMALLPRIME	ACTIVE	JERSEY CITY	-	-

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	ACTIVE	FONTANA	-	-
	SMALLPRIME	ACTIVE	OXNARD	-	-
US Energy COBRA	SMALLPRIME	COBRA	SEATTLE	-	-
	SMALLPRIME	COBRA	LOS ANGELES	-	-
	SMALLPRIME	COBRA	DALLAS	-	-
	SMALLPRIME	COBRA	SAN JOSE	-	-
	SMALLPRIME	COBRA	SAN FRANCISCO	-	-
	SMALLPRIME	COBRA	CHARLOTTE	-	-
	SMALLPRIME	COBRA	DETROIT	-	-
	SMALLPRIME	COBRA	CLEVELAND	-	-
	SMALLPRIME	COBRA	ORLANDO	-	-
	SMALLPRIME	COBRA	JERSEY CITY	-	-
	SMALLPRIME	COBRA	FONTANA	-	-
	SMALLPRIME	COBRA	OXNARD	-	-
US Energy RETIREE	SMALLPRIME	RETIRED	SEATTLE	-	-
	SMALLPRIME	RETIRED	LOS ANGELES	-	-
	SMALLPRIME	RETIRED	DALLAS	-	-
	SMALLPRIME	RETIRED	SAN JOSE	-	-
	SMALLPRIME	RETIRED	SAN FRANCISCO	-	-
	SMALLPRIME	RETIRED	CHARLOTTE	-	-
	SMALLPRIME	RETIRED	DETROIT	-	-
	SMALLPRIME	RETIRED	CLEVELAND	-	-
	SMALLPRIME	RETIRED	ORLANDO	-	-
	SMALLPRIME	RETIRED	JERSEY CITY	-	-

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	RETIRED	FONTANA	-	-
	SMALLPRIME	RETIRED	OXNARD	-	-

```

Sample Health Care Inbound Message for Pricing Rules

Using the below example, you can create the following:

- Tier-based pricing rule for the **DD_BASIC** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Parameter	Parameter Value
DD_BASIC	TIER_BASED	30	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	MALE
		40	EMPBAND	IC1
			SUBSCRIPTIONTIER	ES
			GENDER	MALE
		60	EMPBAND	IC1
			SUBSCRIPTIONTIER	F
			GENDER	MALE
		25	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	FEMALE
		35	EMPBAND	IC1
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
50	EMPBAND	IC1		
	SUBSCRIPTIONTIER	F		
	GENDER	FEMALE		

- Age-based pricing rule for the **PPO_MED_BRONZE_RETIRED** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
PPO_MED_BRONZE_RETIRED	AGE_BASED	150	0	15	GENDER	FEMALE	TOBUSAGE	Y	10
		150	0	15	GENDER	MALE	TOBUSAGE	Y	20
		170	16	18	GENDER	FEMALE	TOBUSAGE	Y	20
		170	16	18	GENDER	MALE	TOBUSAGE	Y	30

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
		200	19	20	GENDER	FEMALE	TOBUSAGE	Y	30
		200	19	20	GENDER	MALE	TOBUSAGE	Y	40
		240	21	40	GENDER	FEMALE	TOBUSAGE	Y	40
		240	21	40	GENDER	MALE	TOBUSAGE	Y	50
		270	41	60	GENDER	FEMALE	TOBUSAGE	Y	50
		270	41	60	GENDER	MALE	TOBUSAGE	Y	60
		300	61	65	GENDER	FEMALE	TOBUSAGE	Y	60
		300	61	65	GENDER	MALE	TOBUSAGE	Y	70
		350	66	199	GENDER	FEMALE	TOBUSAGE	Y	70
		350	66	199	GENDER	MALE	TOBUSAGE	Y	80

Sample Health Care Inbound Message for Membership

Using the below example, you can do the following:

- Create the persons who are neither parent customer nor bill group
- Create a membership where the person is the main subscriber
- Add persons in a membership

Person Name	Person Type	Policy	Policy Plan	Main Subscriber	Member Relationship Type
G, ALLEN	Person	AP234389	HMO_MED_SILVER_RETIRE	Yes	SELF
G, JOHNSON	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SPOUSE
G, CLARK	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, NELSON	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, PARKER	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, RUSSEL	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, LINDA	Person	AP234389	HMO_MED_SILVER_RETIRE	No	DAUGHTER

```

Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Customer Inbound Message Type	<ul style="list-style-type: none"> • Inbound Message Business Object - The business object using which the inbound message should be created in the system. • Person Business Object - The business object using which a person should be created when the customer inbound message is processed. • Account Business Object - The business object using which an account should be created when the customer inbound message is processed. • Hold Request Business Object - The business object using which the hold request should be created when the Invoice Hold Reason characteristic is defined for an account in the customer inbound message. • Status on Policy Termination - The status to which the policy should be transitioned when the policy termination request is processed through the customer inbound message. • Status on Policy Reinstatement - The status to which the policy should be transitioned when the policy reinstatement request is processed through the customer inbound message. • Status on Policy Renewal - The status to which the policy should be transitioned when the policy renewal request is processed through the customer inbound message.
Membership Inbound Message Type	<ul style="list-style-type: none"> • Inbound Message Business Object - The business object using which the inbound message should be created in the system.
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> • Inbound Message Business Object - The business object using which the inbound message should be created in the system. • Person Business Object - The business object using which a person should be created when the ASO customer inbound message is processed. • Account Business Object - The business object using which an account should be created when the ASO customer inbound message is processed. • Policy Type - The policy type using which a policy should be created when the ASO customer inbound message is processed. • Policy Plan Business Object - The business object using which a policy plan should be created when the ASO customer inbound message is processed.
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Inbound Message Business Object - The business object using which the inbound message should be created in the system. • Customer Registration Type - The customer registration type using which the customer registration object should be created through a health care inbound message.

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- [Inbound Message Type List](#) on page 1821
- [Inbound Message Type](#) on page 1821

Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.
Edit	On clicking the Edit (✎) icon, the Inbound Message Type screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the Duplicate (📄) icon, the Inbound Message Type screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the Delete (🗑) icon, you can delete the inbound message type. Note: You can delete an inbound message type only when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** (📡) icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** – Displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.

Field Name	Field Description
Customer Registration Type	<p>Indicates the customer registration type using which the customer registration object is created through a health care inbound message.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Customer Registration Type screen appears where you can view the details of the respective customer registration type.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the C1-HCInboundMsgType business object.</p>
Person Business Object	<p>Indicates the business object using which a person is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>
Account Business Object	<p>Indicates the business object using which an account is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>
Policy Type	<p>Indicates the policy type using which a policy is created when the ASO customer inbound message is processed.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Policy Type screen appears where you can view the details of the respective policy type.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the C1-ASOCustomerInboundMsgType business object.</p>

Field Name	Field Description
Policy Plan Business Object	<p>Indicates the business object using which a policy plan is created when the ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the C1-ASOCustomerInboundMsgType business object.</p>
Hold Request Business Object	<p>Indicates the business object using which a hold request is created for an account when the customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the C1-CustomerInboundMessageType business object.</p>
Status on Policy Termination	<p>Indicates the status to which the policy is transitioned when the policy termination request is processed through the customer inbound message.</p> <p>Note: This field appears only when you are viewing the details of an inbound message type which is created using the C1-CustomerInboundMessageType business object.</p>
Status on Policy Reinstatement	<p>Indicates the status to which the policy is transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p>Note: This field appears only when you are viewing the details of an inbound message type which is created using the C1-CustomerInboundMessageType business object.</p>
Status on Policy Renewal	<p>Indicates the status to which the policy is transitioned when the policy renewal request is processed through the customer inbound message.</p> <p>Note: This field appears only when you are viewing the details of an inbound message type which is created using the C1-CustomerInboundMessageType business object.</p>

Inbound Message Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the inbound message type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Detailed Description	Displays additional information about the inbound message type.

- **Characteristics** – Lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type. Note: You can delete an inbound message type only when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears only when you click the **Broadcast** () icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

Defining an Inbound Message Type

Prerequisites

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> • Customer inbound message type business objects defined in the application • Customer inbound message business objects defined in the application • Person, account, and hold request business objects defined in the application • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy termination • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy renewal • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy reinstatement
Membership Inbound Message Type	<ul style="list-style-type: none"> • Membership inbound message type business objects defined in the application • Membership inbound message business objects defined in the application
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> • ASO customer inbound message type business objects defined in the application • ASO customer inbound message business objects defined in the application • Person, account, and policy plan business objects defined in the application • Policy types defined in the application
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message type business objects defined in the application • Health care inbound message business objects defined in the application • Customer registration types defined in the application

Procedure

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)										
Inbound Message Type Business Object	Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type: <table border="1" data-bbox="565 390 1252 768"> <thead> <tr> <th>Inbound Message Type</th> <th>Business Object</th> </tr> </thead> <tbody> <tr> <td>Customer Inbound Message Type</td> <td>C1-CustomerInboundMessageType</td> </tr> <tr> <td>Membership Inbound Message Type</td> <td>C1-MemberInboundMessageType</td> </tr> <tr> <td>ASO Customer Inbound Message Type</td> <td>C1-ASOCustomerInboundMsgType</td> </tr> <tr> <td>Health Care Inbound Message Type</td> <td>C1-HCInboundMsgType</td> </tr> </tbody> </table>	Inbound Message Type	Business Object	Customer Inbound Message Type	C1-CustomerInboundMessageType	Membership Inbound Message Type	C1-MemberInboundMessageType	ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType	Health Care Inbound Message Type	C1-HCInboundMsgType	Yes
Inbound Message Type	Business Object											
Customer Inbound Message Type	C1-CustomerInboundMessageType											
Membership Inbound Message Type	C1-MemberInboundMessageType											
ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType											
Health Care Inbound Message Type	C1-HCInboundMsgType											

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Inbound Message Type** screen.

- Select the **ASO Customer Inbound Message Type**, **Customer Inbound Message Type**, **Health Care Inbound Message Type**, or **Membership Inbound Message Type** business object to create the respective inbound message type.
- Click **OK**.

The **Inbound Message Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the inbound message type.
- Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <p>Note:</p> <p>This field appears only when you are defining an inbound message type using the C1-HCInboundMsgType business object.</p> <p>While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required, Final Approval Required, and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.</p>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>	Yes
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-ASOCustomerInboundMsgType business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-ASOCustomerInboundMsgType business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object.</p>	Yes
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.</p>	Yes
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.	Yes
	<p>Note:</p> <p>This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object.</p> <p>You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.</p>	
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- Enter the required details in the **Main** section.
- Define characteristics for the inbound message type, if required.
- Click **Save**.

The inbound message type is defined.

How to define a characteristic for an inbound message type	Defining a Characteristic for an Inbound Message Type on page 1830

Defining a Characteristic for an Inbound Message Type

Prerequisites

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

Procedure

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound message type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Inbound Message Type .	Note: This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	Note: This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the inbound message type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Inbound Message Type

Prerequisites

The following table lists the prerequisites for editing various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> • Customer inbound message business objects defined in the application • Person, account, and hold request business objects defined in the application • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy termination • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy renewal • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy reinstatement
Membership Inbound Message Type	<ul style="list-style-type: none"> • Membership inbound message business objects defined in the application
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> • ASO customer inbound message business objects defined in the application • Person, account, and policy plan business objects defined in the application • Policy types defined in the application
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message business objects defined in the application • Customer registration types defined in the application

Procedure

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the *Inbound message type* whose details you want to edit.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-HCInboundMsgType business object.</p> <p>While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required, Final Approval Required, and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.</p>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed. Note: This field appears only when you are defining an inbound message type using the C1-ASOCustomerInboundMsgType business object.	Yes
Policy Plan Business Object	Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed. Note: This field appears only when you are defining an inbound message type using the C1-ASOCustomerInboundMsgType business object.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed. Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object.	Yes
Status on Policy Termination	Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message. Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Reinstatement	Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message. Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.	Yes
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message. Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

Tip: Alternatively, you can edit the details of an inbound message type by clicking the **Edit** button in the **Inbound Message Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the inbound message type, if required.
7. Click **Save**.

The changes made to the inbound message type are saved.

Copying an Inbound Message Type

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

Prerequisites

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> • Customer inbound message type (whose copy you want to create) defined in the application • Customer inbound message business objects defined in the application • Person, account, and hold request business objects defined in the application • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy termination • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy renewal • Status defined for the C1-POLICY business object to which a policy must be transitioned on policy reinstatement
Membership Inbound Message Type	<ul style="list-style-type: none"> • Membership inbound message type (whose copy you want to create) defined in the application • Membership inbound message business objects defined in the application
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> • ASO customer inbound message type (whose copy you want to create) defined in the application • ASO customer inbound message business objects defined in the application • Person, account, and policy plan business objects defined in the application • Policy types defined in the application

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none"> • Health care inbound message type (whose copy you want to create) defined in the application • Health care inbound message business objects defined in the application • Customer registration types defined in the application

Procedure

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the inbound message type whose copy you want to create.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <p>Note:</p> <p>This field appears only when you are defining an inbound message type using the C1-HCInboundMsgType business object.</p> <p>While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the Approval Required, Final Approval Required, and Manual Billing Hierarchy and Pricing options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the Final Approval Required and Manual Billing Hierarchy and Pricing options are selected, but the Approval Required option is not selected.</p>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType or C1-ASOCustomerInboundMsgType business object.</p>	Yes
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-ASOCustomerInboundMsgType business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-ASOCustomerInboundMsgType business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object.</p>	Yes
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.</p>	Yes
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p>Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message. Note: This field appears only when you are defining an inbound message type using the C1-CustomerInboundMessageType business object. You must specify a status which is already defined in the lifecycle of the C1-POLICY business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

Tip: Alternatively, you can copy an inbound message type by clicking the **Duplicate** button in the **Inbound Message Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics from the inbound message type, if required.
- Click **Save**.

The new inbound message type is defined.

Deleting an Inbound Message Type

Procedure

To delete an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the Inbound message type that you want to delete.
A message appears confirming whether you want to delete the inbound message type.

Note: You can delete an inbound message type only when an inbound message is not created using the inbound message type.

Tip: Alternatively, you can delete an inbound message type by clicking the **Delete** button in the **Inbound Message Type** zone.

5. Click **OK**.
The inbound message type is deleted.

Inbound Message (Used for Searching)

The **Inbound Message** screen allows you to search for an inbound message using various search criteria. It contains the following zone:

- [Search Inbound Message](#) on page 1841

Through this screen, you can navigate to the following screen:

- [Inbound Message \(Used for Viewing\)](#) on page 1847

Search Inbound Message

The **Search Inbound Message** zone allows you to search for an inbound message using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an inbound message using the inbound message or person details. The valid values are: <ul style="list-style-type: none"> • Message Details • Person Details 	Yes
	Note: By default, the Message Details option is selected.	
Inbound Message ID	Used to search a particular inbound message.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
Person ID	Used to search inbound messages through which a particular person and its related entities are created or updated in the system.	Yes
	Note: The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears. This field appears only when the Person Details option is selected from the Search By list.	
Status	Used to search inbound messages with a particular status. The valid values are: <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided 	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
Source System	Used to search inbound messages which are received from a particular external system.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
Created From	Used to search inbound messages which are created from a particular date onwards.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
External Source ID	Used to search inbound messages which are received from a particular external source system.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
Created To	Used to search inbound messages which are created till a particular date.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
External Transaction ID	Used to search the inbound message which was a result of a particular transaction in the external source system.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
User ID	Used to search inbound messages which are created by a particular user.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
External Batch ID	Used to search inbound messages which are created through a particular batch job.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type.	No
	Note: This field appears only when the Message Details option is selected from the Search By list.	

Note: You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Inbound Message Information	Displays information about the inbound message.
	Note: It has a link. On clicking the link, the Inbound Message screen appears where you can view the details of the respective inbound message.

Column Name	Column Description
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>This column appears only when the Person Details option is selected from the Search By list.</p> </div>
Created By	Indicates the user who has created the inbound message. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This column appears only when the Message Details option is selected from the Search By list.</p> </div>
Creation Date	Displays the date when the inbound message is created in the system.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Inbound Message

Prerequisites

To search for an inbound message, you should have:

- Inbound message types defined in the application

- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

Procedure

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.
The **Inbound Message** screen appears.
3. Enter the search criteria in the **Search Inbound Message** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of inbound messages that meet the search criteria appears in the **Search Results** section.

Creating an Inbound Message

Oracle Revenue Management and Billing allows you to create the following inbound messages by calling the respective inbound web service:

Inbound Message	Inbound Web Service
Customer Inbound Message on page 1588	CI-CustomerStructureInboundMessage on page 1845
Membership Inbound Message on page 1626	CI-MembershipInboundMessage on page 1846
ASO Customer Inbound Message on page 1656	CI-ASOCustomerInboundMessage on page 1846
Health Care Inbound Message on page 1694	CI-HCInboundMessage on page 1847

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

C1-CustomerStructureInboundMessage

The **C1-CustomerStructureInboundMessage** inbound web service enables you to create or update a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. It also allows you to terminate, reinstate, or renew a policy. In addition, it allows you to hold an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message.

On calling the **C1-CustomerStructureInboundMessage** inbound web service, a customer inbound message is created in the **Pending** status. A customer inbound message goes through various statuses in its lifecycle. You can search for a customer inbound message through the **Inbound Message** screen.

Before calling the **C1-CustomerStructureInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1588.

C1-MembershipInboundMessage

The **C1-MembershipInboundMessage** inbound web service enables you to create or update a membership in a policy plan, add or remove dependents from a membership, create or update the main subscriber or dependent person, associate a contract with a membership, add membership premium for a coverage period, or create billable charges for membership premium.

On calling the **C1-MembershipInboundMessage** inbound web service, a membership inbound message is created in the **Pending** status. A membership inbound message goes through various statuses in its lifecycle. You can search for a membership inbound message through the **Inbound Message** screen.

Before calling the **C1-MembershipInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1626.

C1-ASOCustomerInboundMessage

The **C1-ASOCustomerInboundMessage** inbound web service enables you to create or update a parent customer and its bill groups. In addition, it allows you to create or update an account and self-funded policy for a bill group.

On calling the **C1-ASOCustomerInboundMessage** inbound web service, an ASO customer inbound message is created in the **Pending** status. An ASO customer inbound message goes through various statuses in its lifecycle. You can search for an ASO customer inbound message through the **Inbound Message** screen.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1658

C1-HCInboundMessage

The **C1-HCInboundMessage** inbound web service enables you to create or update a person, account and self-funded or fully-insured group policy. It also allows you to create or update a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, it allows you to terminate, reinstate, or renew a fully-insured group policy.

On calling the **C1-HCInboundMessage** inbound web service, a health care inbound message is created in the **Pending** status. A health care inbound message goes through various statuses in its lifecycle. You can search for a health care inbound message through the **Inbound Message** screen.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1700.

Viewing the Inbound Message Details

Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the inbound message in the **Inbound Message** zone.

Related Topics

Inbound Message screen	Inbound Message (Used for Viewing) on page 1847
Inbound Message zone	Inbound Message on page 1848

Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing

- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- [Inbound Message - Main](#) on page 1848
- [Inbound Message - Message](#) on page 1850
- [Inbound Message - Log](#) on page 1850

Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- [Inbound Message](#) on page 1848

Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** – Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created. <p>Note: It has a link. On clicking the link, the Inbound Message Type screen appears where you can view the details of the respective inbound message type.</p>
Source System	Indicates the external source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** – Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics from the inbound message.
	Note: The Edit button appears only when the inbound message is in the Pending or Rejected status.
Delete	Used to delete the inbound message.
	Note: The Delete button appears only when the inbound message is in the Pending status.
Submit for Processing	Used to submit the inbound message for validation and processing.
	Note: The Submit for Processing button appears only when the inbound message is in the Pending status.
Retry	Used when you want to change the status of the inbound message from Rejected to Pending so that the inbound message can be considered once again for validation and processing.
	Note: The Retry button appears only when the inbound message is in the Rejected status.
Void	Used to cancel the inbound message.
	Note: The Void button appears only when the inbound message is in the Rejected status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

Inbound Message - Message

The **Message** tab displays the content of the inbound message in the XML format. It contains the following zone:

- [Inbound Message Content](#) on page 1850

Inbound Message Content

The **Inbound Message Content** zone displays the content of the inbound message in the XML format. By default, each tag in the inbound message is expanded. You can collapse the tag whenever required.

For more information about the tags, refer to the respective XML format section:

Inbound Message	XML Format
Customer Inbound Message	Customer Inbound Message XML Format on page 1603
Membership Inbound Message	Membership Inbound Message XML Format on page 1639
ASO Customer Inbound Message	ASO Customer Inbound Message XML Format on page 1663
Health Care Inbound Message	Health Care Inbound Message XML Format on page 1707

Once the inbound message is validated and processed either from the user interface or through a batch process, the following tags appear at the bottom of the inbound message in the **Inbound Message Content** zone:

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the inbound message.
retryDateTime	Displays the date and time when the retry option is used to change the status of the inbound message from Rejected to Pending .
numberOfRetries	Indicates the number of times the retry option is used for the inbound message.
currentErrorState	Indicates the status to which the inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> • REJECTED
isRetried	Indicates whether the retry option is used to change the status of the inbound message. The valid values are: <ul style="list-style-type: none"> • true • false

Inbound Message - Log

The **Log** tab contains the following zone:

- [Inbound Message Log](#) on page 1850

Inbound Message Log

The **Inbound Message Log** zone lists the complete trail of actions performed on the inbound message. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the inbound message.
Details	Displays the details about the action performed on the inbound message.
User	Indicates the user who has performed the action on the inbound message.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is created when the action is performed on the inbound message.
Status Reason	Indicates the reason why the status of the inbound message is changed. Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the inbound message by clicking the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

Editing an Inbound Message

Procedure

To edit an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to edit.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Inbound Message** zone.

The **Inbound Message** screen appears. It contains the following sections:

- **Main** - Displays the basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.

Field Name	Field Description
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** - Used to define, edit, or remove characteristics from the inbound message.

Note: The **Edit** button appears only when the inbound message is in the **Pending** or **Rejected** status.

5. Define, edit, or remove characteristics from the inbound message, if required.
6. Click **Save**.

The changes made to the inbound message are saved.

How to define a characteristic for an inbound message	Defining a Characteristic for an Inbound Message on page 1852

Defining a Characteristic for an Inbound Message

Prerequisites

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

Procedure

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the inbound message.
	Note: The list includes only those characteristic types where the characteristic entity is set to Inbound Message .	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the inbound message.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the inbound message, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the inbound message, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the inbound message.

Deleting an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message only when the inbound message is in the **Pending** status.

Procedure

To delete an inbound message:

- Search for the inbound message in the **Inbound Message** screen.
- In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to delete.

The **Inbound Message** screen appears.

- Ensure that the **Main** tab is selected.
- Click the **Delete** button in the **Inbound Message** zone.

A message appears confirming whether you want to delete the inbound message.

Note: The **Delete** button appears only when the inbound message is in the **Pending** status.

- Click **OK**.

The inbound message is deleted.

Processing an Inbound Message**Prerequisites**

The following table lists the prerequisites which you should setup before processing the respective inbound message:

Inbound Message	Refer to...
Customer Inbound Message	Prerequisites on page 1588
Membership Inbound Message	Prerequisites on page 1626
ASO Customer Inbound Message	Prerequisites on page 1658
Health Care Inbound Message	Prerequisites on page 1700

Procedure

To process an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to submit for validation and processing.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Processing** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Customer inbound message	<p>Creates or updates a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. If requested, it terminates, reinstates, or renews a policy. In addition, if requested, it holds an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message. Finally, status of the inbound message is changed to Processed.</p> <p>It creates a person and account using the person and account business objects, respectively, as specified in the inbound message type. It creates a policy using the policy type specified in the C1-CINMSGPRC algorithm. It creates a policy plan using the Policy Plan BO (C1PPLNBO) characteristic defined on the policy type.</p>

If the inbound message is a...	Then...
Membership inbound message	<p>Creates or updates a membership in a policy plan, adds or removes dependents from a membership, creates or updates the main subscriber or dependent person, associates a contract with a membership, adds membership premium for a coverage period, or creates billable charges for membership premium. Finally, the status of the inbound message is changed to Processed.</p> <p>It creates a membership using the Membership BO (C1MEMBRO) characteristic defined on the policy type. If the person who is the main subscriber or dependent in a membership does not exist, the system creates main subscriber or dependent person using the person business object specified in the inbound message type.</p>
ASO Customer Inbound Message	<p>Creates or updates a parent customer and its bill groups. In addition, it creates or updates an account and self-funded policy of a bill group. Finally, the status of the inbound message is changed to Processed.</p> <p>It creates a parent customer and bill group using the person business object specified in the inbound message type. It creates an account using the account business object specified in the inbound message type. It creates a self-funded policy using the policy type specified in the inbound message type.</p>
Health Care Inbound Message	<p>Creates or updates a person, account and self-funded or fully-insured group policy. It creates or updates a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, if requested, it terminates, reinstates, or renews a fully-insured group policy. Finally, the status of the inbound message is changed to Processed.</p> <p>The system uses the C1-PERSTYPE feature configuration to decide whether the person type specified in the health care inbound message represents Parent Customer or Bill Group. If the person type specified in the health care inbound message matches the person type specified in the Bill Group Person Type or Parent Person Type option type of the C1-PERSTYPE feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the Bill Group Person Type or Parent Person Type option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p>

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is

created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

Note: The **Submit for Processing** button appears only when the inbound message is in the **Pending** status.

Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

Procedure

To use the retry option for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to use the retry option.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
5. Click the **Retry** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Pending**.

Note: The **Retry** button appears only when the inbound message is in the **Rejected** status.

Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message only when the inbound message is in the **Rejected** status.

Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.

2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to void.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Voided**.

Note: The **Void** button appears only when the inbound message is in the **Rejected** status.

Health insurance is a type of insurance coverage that pays for medical and surgical expenses incurred by the insured. Health insurance can reimburse the insured for expenses incurred from illness or injury, or pay the care provider directly. Health insurance policy is a contract between the insurer and the insured, known as the policy holder.

A small, middle, or large organization can opt for a fully-insured group or self-funded health insurance plan for its employees. A fully-insured group health plan is the traditional way to structure an employer-sponsored health plan. In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year, based on the number of employees enrolled in the plan each month. The monthly premium changes during the year when the number of enrolled employees in the plan changes. The insurance carrier collects the premiums and pays the health insurance claims based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

In self-funded health plan, employers (usually larger) operate their own health plan. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk in the event that more claims than expected must be paid.

Oracle Revenue Management and Billing enables you to create policies for the fully-insured and self-funded health insurance plans. You can also import the policy data from the policy processing system through a health care inbound message and then view such policy data in the system.

You can create a fully-insured group policy using the **C1-POLICY** business object and a self-funded policy using the **C1-ASOPolicy** business object. The fully-insured and self-funded policies go through various statuses in their lifecycle. For more information, see [Fully-Insured Group Policy Status Transition](#) on page 1901 and [Self-Funded Policy Status Transition](#) on page 1902 processes.

Pre-requisites (for Fully-Insured Group Policy)

To use the fully-insured group policy feature, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the status reasons for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the status reasons for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the required price items in the system.
- Define the required pricing rule types where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.
- Define the required characteristic types where the characteristic entity is set to **Policy Plan**.
- Define the required contract relationship types in the system.
- Define the required characteristic types where the characteristic entity is set to **Membership**.
- Define the required characteristic types where the characteristic entity is set to **Membership Person**.
- Define the required contracts (which you want to associate with a membership) in the system.
- Define the values for the **BILL_TO_TYPE_FLG** lookup field
- Define the required parameter values in the following algorithm which is attached to the **C1-POLICY** business object:
 - C1-POLBOVAL
- Define the required parameter values in the following algorithms which are used in the lifecycle of the **C1-POLICY** business object:
 - C1-EVCSTSTAT
 - C1-PLCYTRMRQ
 - C1-POLCYTERM
 - C1-DELTRMLTR
 - C1-PLCYREIRQ
 - C1-POLCYREIN
 - C1-CCPOLRE1
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
 - Membership ID Characteristic for Billable Charge
 - Parent Customer Policy Person Role
 - Bill Group Policy Person Role
 - Membership Inactive Status

- Membership Person Inactive Status

How to setup the C1-ASOBLLNG feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 2949

Pre-requisites (for Self-Funded Policy)

To use the self-funded policy feature, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **RUNOUT_ADM_OPT_FLG** lookup field.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the required parameter values in the following algorithm which is attached to the **C1-ASOPolicy** business object:
 - C1-ASOBOPOSP
- Define the required parameter values in the following algorithm which is used in the lifecycle of the **C1-ASOPolicy** business object:
 - C1-ASOPOLMOA
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
 - Parent Customer Policy Person Role
 - Bill Group Policy Person Role
- Set the batch control type of the **Policy Periodic Monitor (C1-POLPR)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Types of Policies

The system enables you to create policies for different lines of business in the health insurance domain, such as policies for:

- Fully-Insured Group Health Insurance Business
- Self-Funded Health Insurance Business

Fully-Insured Group Policy

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. The policy type indicates the business object using which the fully-insured group policy should be created in the system.

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

As per the fully-insured group health insurance business, the system enables you to create a fully-insured group policy for the following:

- A parent customer (where a bill group is not associated)
- A bill group (where the parent customer is the policy holder)

You can create or edit a fully-insured group policy from the **Policy** screen. In addition, you can create or edit a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A fully-insured group policy encapsulates the following information:

- **Policy Persons** – While creating a fully-insured group policy, you need to associate the person who is the main customer of the policy. While associating a person with a fully-insured group policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a fully-insured group policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Plans** – You can define one or more plans in a fully-insured group policy. For example, Medical, Dental, Medicare, and Disability plans. While defining a policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received in a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can only associate a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**. If you associate an age based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the membership premium is calculated for eligible members. If you associate a tier based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the premium is calculated for membership. However, if you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

- **Membership** – You can define one or more memberships in a policy plan. While defining a membership, you need to specify the plan for which you want to create the membership, the person who is the main subscriber of

the membership, and how the main subscriber is related to the membership. Once the membership is created, you can add more members (i.e. persons) to the membership, if required. You can inactivate a membership whenever required. On terminating a policy, the system automatically terminates the membership.

- **Member Persons** – While adding a person to a membership, you need to specify whether the person is the main subscriber of the membership, whether the person is financially responsible for the membership, and how the person is related to the main subscriber. At a time, only one person can be the main subscriber of the membership. You cannot remove a member person, who is the main subscriber, from the membership. You can inactivate a member person whenever required. If you inactivate a member person who is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership.
- **Membership Contracts** – You can associate one or more contracts with a membership. At present, the system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. The system does not use the membership contracts for billing the membership premium.
- **Policy Plan Contracts** – The system creates or updates contracts of a policy plan when you do either of the following:
 - Create or Edit a Policy Plan from the User Interface or through an Inbound Message
 - Create or Edit an Account from the User Interface or through an Inbound Message

The system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. For more information, refer to [Single Contract Creation Across Fully-Insured Group Policies and Plans](#) on page 1865.

On defining a fully-insured group policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Activation

You can activate a fully-insured group policy by clicking the **Activate** button in the **Policy** screen. On activating a fully-insured group policy, the status of the policy is set to **In Force/Active**.

Note: If a fully-insured group policy is created through a customer registration object or a health care inbound message, the status of the policy is directly set to **In Force/Active**

Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Termination

The system enables you to terminate a fully-insured group policy whenever required. There are two ways in which you can terminate a fully-insured group policy:

- **Initiate Policy Termination Process** – In this method, you can initiate the policy termination process from the user interface. To initiate the termination process, you need to specify the termination date and termination reason. On initiating the termination process, the status of the policy is changed to **Pending Termination**. In addition, the system creates an outbound message which request for confirmation whether the policy should be terminated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Terminated**.
- **Terminate Policy** – In this method, you can directly terminate a fully-insured group policy. To terminate a fully-insured group policy, you need to specify the termination reason. You can directly terminate the policy from the user interface or through a health care inbound message. On clicking the **Terminate** button, the system will terminate the fully-insured group policy on the system date. However, when you terminate a fully-insured group policy through a health care inbound message, the policy is terminated when the health care inbound message is processed in the system. On terminating a fully-insured group policy, the status of the policy is changed to **Terminated**.

Once the status of the policy is changed to **Terminated**, the system sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)

Note: The system does not consider those persons associated with policy whose start date is later than the termination date or whose end date is earlier than the termination date.

- Policy Plan (when the termination date falls within the date range of the policy plan)

Note: The system does not consider those policy plans whose start date is later than the termination date or whose end date is earlier than the termination date.

- Membership (when the termination date falls within the date range of the membership)

Note: The system does not consider those memberships whose start date is later than the termination date or whose end date is earlier than the termination date.

- Member Person (when the termination date falls within the date range in which the person is associated with the membership)

Note: The system does not consider those member persons whose start date is later than the termination date or whose end date is earlier than the termination date.

- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

Note: The system does not consider those contracts whose start date is later than the termination date or whose end date is earlier than the termination date.

The system also changes the status of all memberships to **Terminated** irrespective of whether it is effective on the termination date or not. On terminating a membership, the system creates an audit event for the membership. For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. An entry for each membership, pricing rule type, and effective date combination is created in the **Pending (P)** status in the **CI_REPRC_ENTITY_DTL** table. For more information, see [Audit Framework for Fully-Insured Group Health Insurance Billing](#) on page 2740.

Fully-Insured Group Policy Reinstatement

The system enables you to reinstate the terminated policy whenever required. There are two ways in which you can reinstate a fully-insured group policy:

- **Initiate Policy Reinstatement Process** – In this method, you can initiate the policy reinstatement process from the user interface. To initiate the reinstatement process, you need to specify the reinstatement reason. On initiating the reinstatement process, the status of the policy is changed to **Pending Reinstatement**. In addition, the system creates an outbound message which request for confirmation whether the policy should be reinstated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Reinstated**.
- **Reinstate Policy** – In this method, you can directly reinstate a fully-insured group policy. To reinstate a fully-insured group policy, you need to specify the reinstatement reason. You can directly reinstate the policy from the user interface or through a health care inbound message. On clicking the **Reinstate** button, the system will reinstate the fully-insured group policy on the system date. However, when you reinstate a fully-insured group policy through a health care inbound message, the policy is reinstated when the health care inbound message is processed in the system. On reinstating a fully-insured group policy, the status of the policy is changed to **Reinstated**.

Once the status of the policy is changed to **Reinstated**, the system updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Note:

The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

Finally, the system automatically transitions the fully-insured group policy from **Reinstated** to **In Force/Active**.

Fully-Insured Group Policy Renewal

You can renew a fully-insured group policy only through a health care inbound message and not from the user interface. If you want to renew a fully-insured group policy, you must send the renewal date along with the new policy end date through a health care inbound message. On processing the health care inbound message, the fully-insured group policy is renewed. The renewal date is stamped on the fully-insured group policy. The policy end date is extended as mentioned in the health care inbound message. The policy plan and membership information for the renewed period must be sent in the subsequent health care inbound messages.

Note: You can renew a fully-insured group policy only when it is in the **In Force/Active** status.

Single Contract Creation Across Fully-Insured Group Policies and Plans

The system automatically creates a contract for a fully-insured group policy plan on the parent customer and/or bill group accounts. The system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** – The system creates a contract in either of the following ways:
 - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
 - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five

contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 1 — Contract Creation for a Parent Customer

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one contract using each contract type on each account of the parent customer and bill groups. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with two plans – PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

Now, in such case, the system will create the following contracts on the A1, A2, A3, and A4 accounts:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

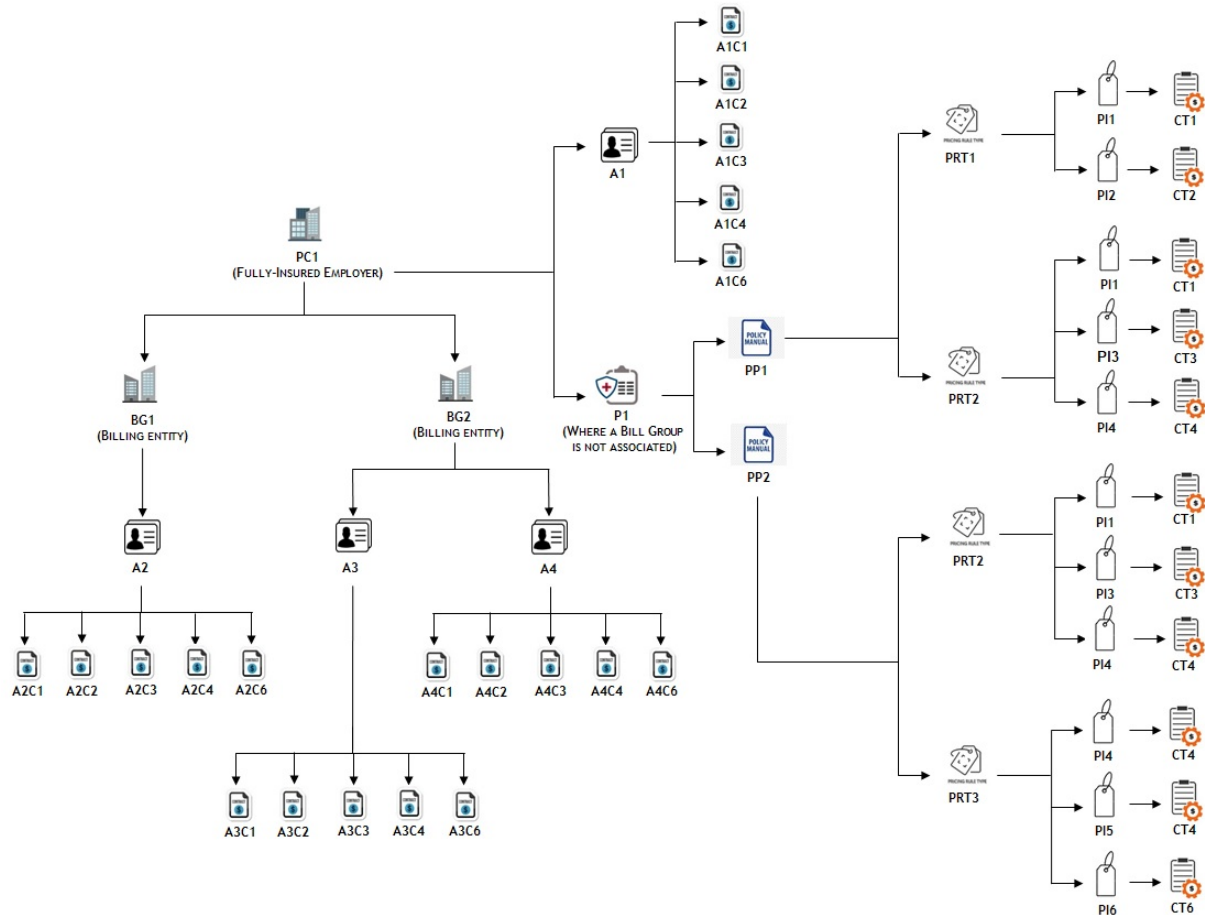

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

		PRT2	PI1	CT1	A2C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)	
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
	PP2	PRT2	PI1	CT1	A2C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
		PRT3	PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI5	CT4	A2C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))	
			PI6	CT6	A2C6	PP2 (03-01-2019)	03-01-2019	
	A3	PP1	PRTI	PI1	CT1	A3C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
				PI2	CT2	A3C2	PP1 (01-01-2019)	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)	
		PRT2	PI1	CT1	A3C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI3	CT3	A3C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI4	CT4	A3C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
	PP2	PRT2	PI1	CT1	A3C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI3	CT3	A3C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI4	CT4	A3C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
		PRT3	PI4	CT4	A3C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019	
			PI5	CT4	A3C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))	
				PI6	CT6	A3C6	PP2 (03-01-2019)	03-01-2019
	A4	PP1	PRTI	PI1	CT1	A4C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
			PI2	CT2	A4C2	PP1 (01-01-2019)	01-01-2019
		PRT2	PI1	CT1	A4C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A4C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A4C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A4C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A4C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A4C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PRT3	PI4	CT4	A4C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A4C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))
			PI6	CT6	A4C6	PP2 (03-01-2019)	03-01-2019

The following figure graphically illustrates the example 1:

Example 2 — Contract Creation for a Bill Group

If a policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one contract using each contract type on each account of the parent customer and the bill group. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans – PP1, PP2, and PP3 – is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

Now, in such case, the system will create the following contracts on the A1 and A2 accounts:

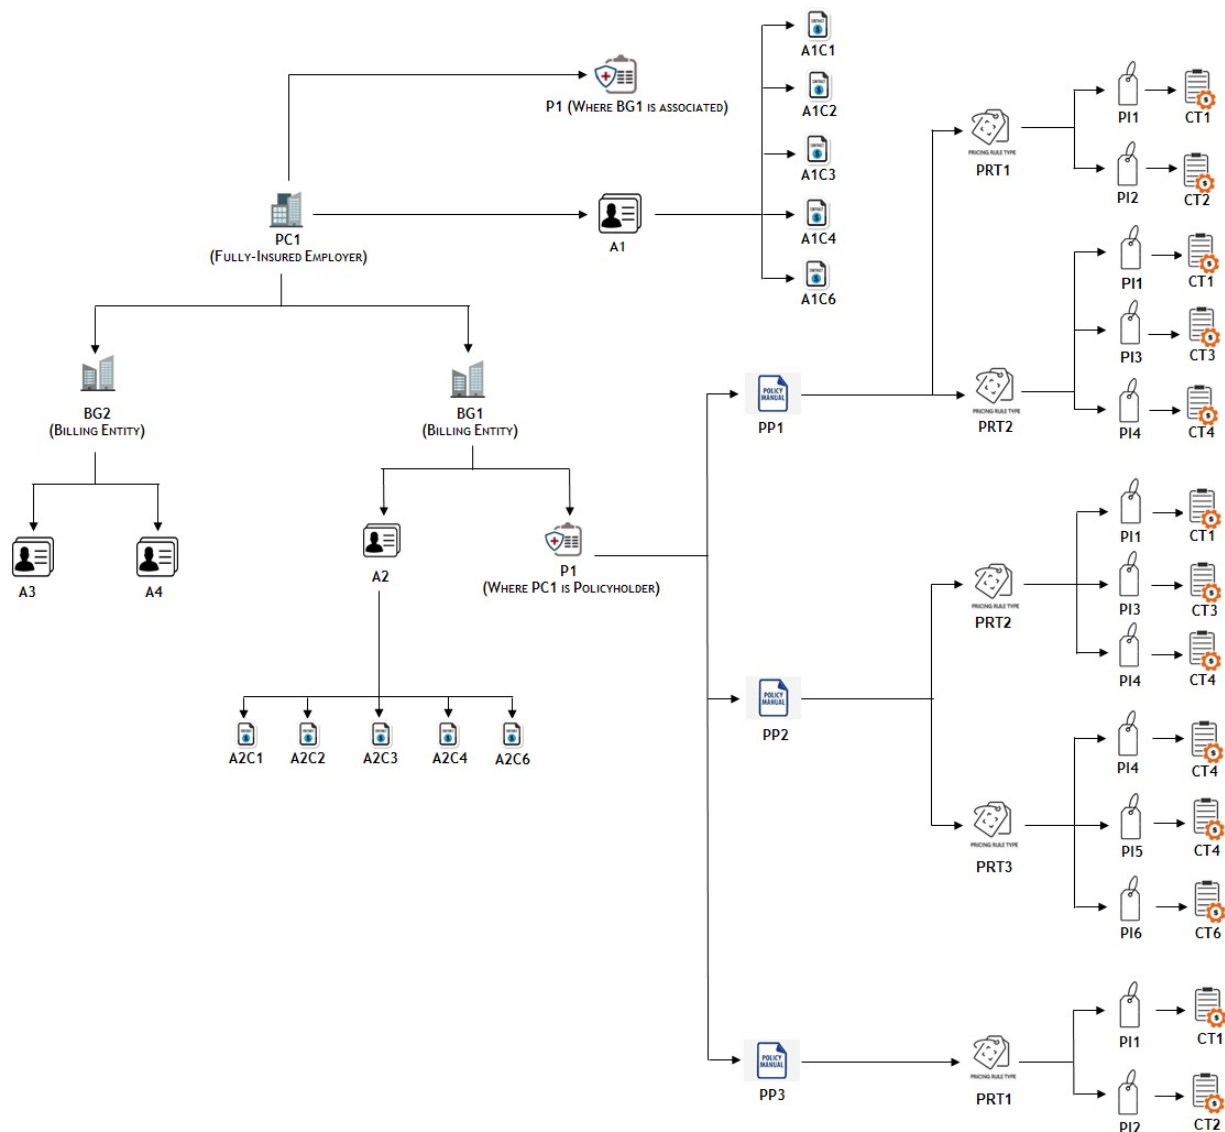

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PP2	PRT2	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)
	PI3			CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PI4			CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
		PRT3	PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A1C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))
			PI6	CT6	A1C6	PP2 (03-01-2019)	03-01-2019
	PP3	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
	A2	PP1	PRT1	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)
PI2				CT2	A2C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
PRT2			PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PRT3	PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A2C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))
			PI6	CT6	A2C6	PP2 (03-01-2019)	03-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
	PP3	PRT1	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A2C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019

The following figure graphically illustrates the example 2:

**Note:**

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

- **Create or Edit an Account from the User Interface or through an Inbound Message** – The system creates a contract when either of the following condition is met:
 - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

The system creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 3 — Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds policies (where a bill group may or may not be associated), the system will create one contract using each contract type for all parent customer's policies on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1
- P1 has two plans – PP1 and PP2
- P2 has two plans – PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI4
- PRT3 contains two price items – PI1 and PI5
- PRT4 contains two price items – PI6 and PI7

- PRT111 contains two price items – PI11 and PI12
- PRT112 contains two price items – PI1 and PI5
- PRT113 contains two price items – PI13 and PI14
- PRT114 contains two price items – PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

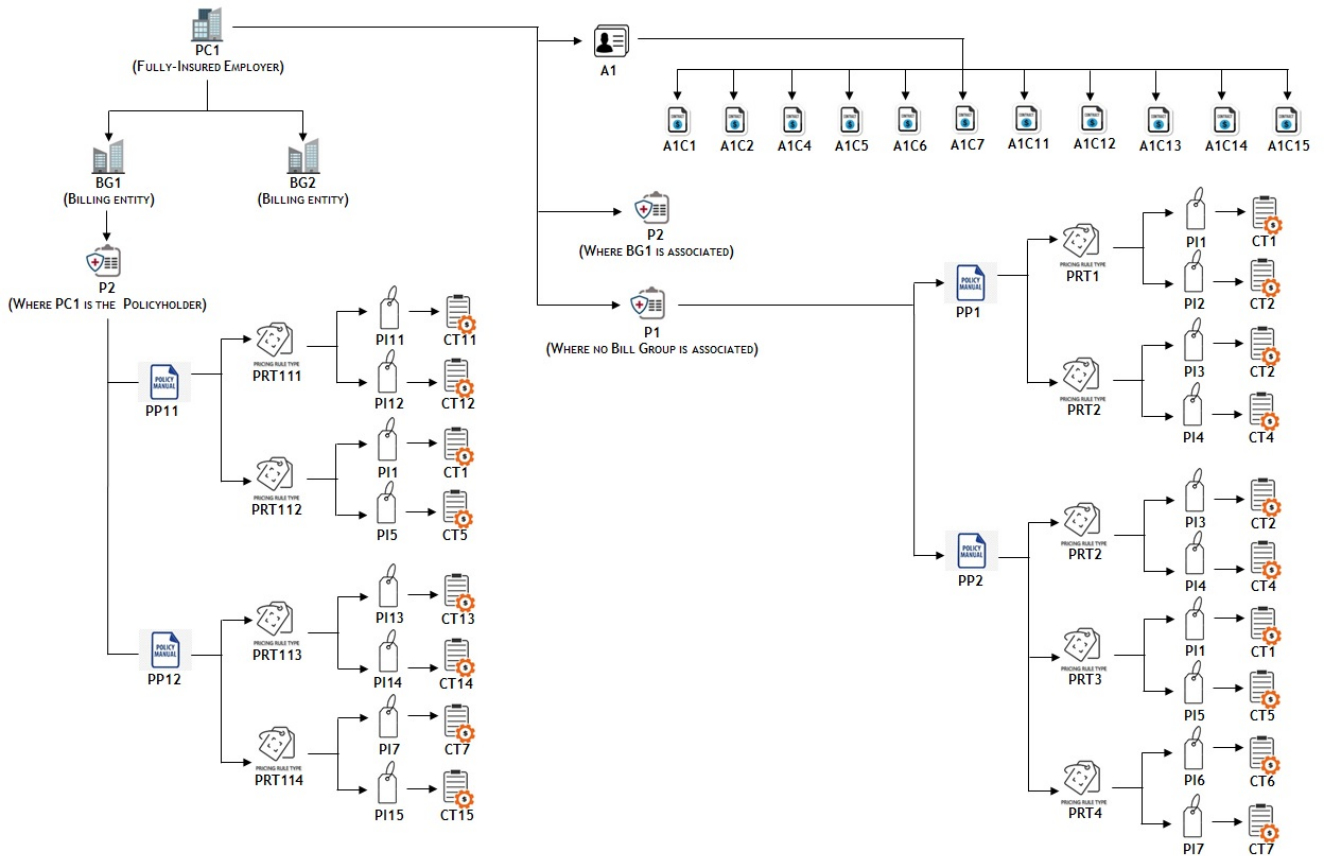

Now, in such case, the system will create the following contracts on the A1 account:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	P1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (06-01-2019), and PP11 (05-01-2019)	01-01-2019
				PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
			PRT2	PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019
				PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019
		PP2	PRT2	PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019
				PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (06-01-2019)	01-01-2019

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)	
			PRT3	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (06-01-2019), and PP11 (05-01-2019)	01-01-2019	
				PI5	CT5	A1C5	PP2 (06-01-2019) and PP11 (05-01-2019)	05-01-2019	
			PRT4	PI6	CT6	A1C6	PP2 (06-01-2019)	06-01-2019	
				PI7	CT7	A1C7	PP2 (06-01-2019) and PP12 (09-01-2019)	06-01-2019	
	P2	PP11	PRT111	PI11	CT11	A1C11	PP11 (05-01-2019)	05-01-2019	
						PI12	CT12	A1C12	PP11 (05-01-2019)
				PRT112	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (06-01-2019), and PP11 (05-01-2019)	01-01-2019
					PI5	CT5	A1C5	PP2 (06-01-2019) and PP11 (05-01-2019)	05-01-2019
			PP12	PRT113	PI13	CT13	A1C13	PP12 (09-01-2019)	09-01-2019
					PI14	CT14	A1C14	PP12 (09-01-2019)	09-01-2019
				PRT114	PI7	CT7	A1C7	PP2 (06-01-2019) and PP12 (09-01-2019)	06-01-2019

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
				PI15	CT15	A1C15	PP12 (09-01-2019)	09-01-2019

The following figure graphically illustrates the example 3:

Example 4 — Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one contract using each contract type for the bill group’s polices and parent customer’s polices (where a bill group is not associated) on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans – PP11 and PP12

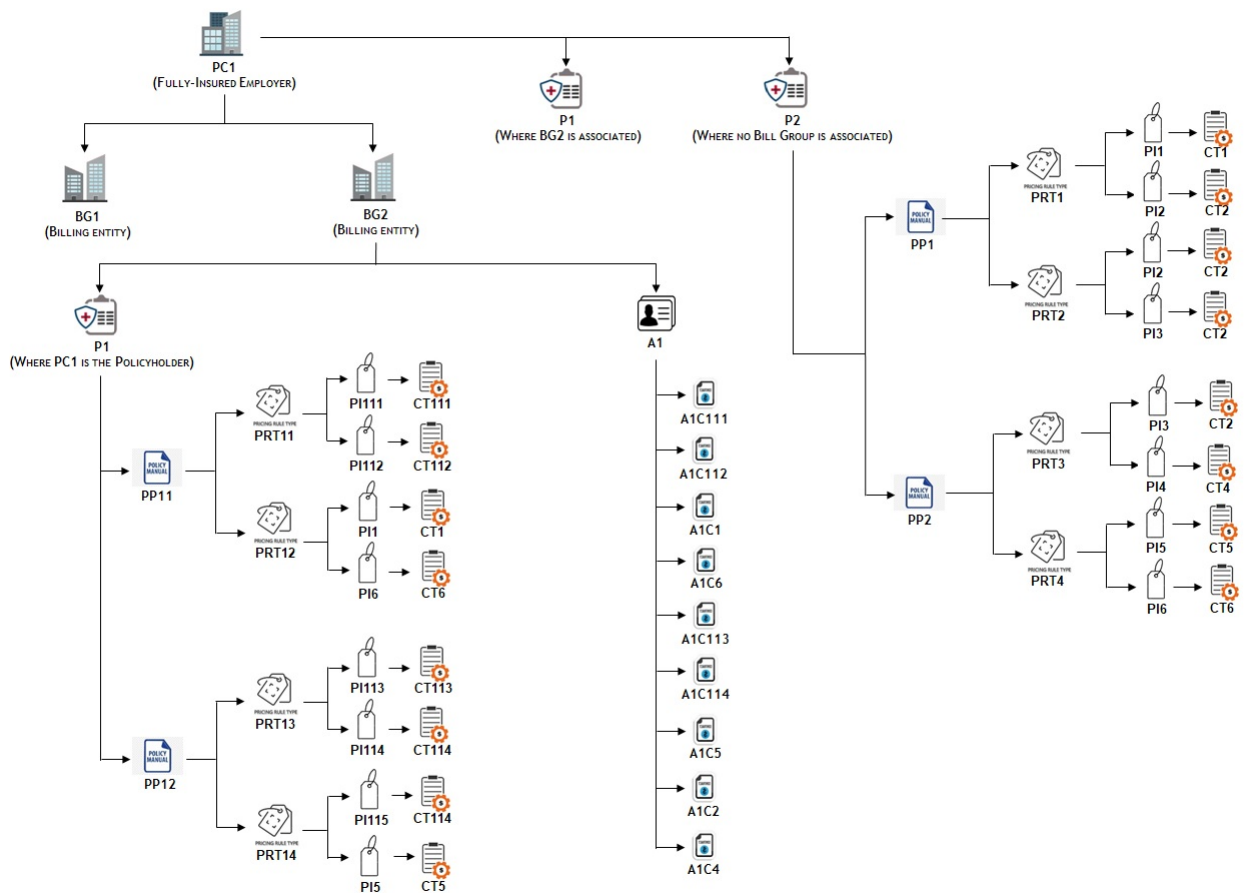

- P2 has two plans – PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI2
- PRT3 contains two price items – PI3 and PI4
- PRT4 contains two price items – PI5 and PI6
- PRT11 contains two price items – PI111 and PI112
- PRT12 contains two price items – PI1 and PI6
- PRT13 contains two price items – PI113 and PI114
- PRT14 contains two price items – PI115 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

Now, in such case, the system will create the following contracts on the A1 account:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	P1	PP11	PRT11	PI111	CT111	A1C111	PP11 (07-01-2019)	07-01-2019
				PI112	CT112	A1C112	PP11 (07-01-2019)	07-01-2019
			PRT12	PI1	CT1	A1C1	PP1 (01-01-2019) and PP11 (07-01-2019)	01-01-2019
				PI6	CT6	A1C6	PP2 (04-01-2019) and PP11 (07-01-2019)	04-01-2019
		PP12	PRT13	PI113	CT113	A1C113	PP12 (11-01-2019)	11-01-2019
				PI114	CT114	A1C114	PP12 (11-01-2019)	11-01-2019

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
			PRT14	PI115	CT114	A1C114	PP12 (11-01-2019)	11-01-2019
				PI5	CT5	A1C5	PP2 (04-01-2019) and PP12 (11-01-2019)	04-01-2019
	P2	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019) and PP11 (07-01-2019)	01-01-2019
				PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
			PRT2	PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
				PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (04-01-2019)	01-01-2019
		PP2	PRT3	PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (04-01-2019)	01-01-2019
				PI4	CT4	A1C4	PP2 (04-01-2019)	04-01-2019
			PRT4	PI5	CT5	A1C5	PP2 (04-01-2019) and PP12 (11-01-2019)	04-01-2019
				PI6	CT6	A1C6	PP2 (04-01-2019) and PP11 (07-01-2019)	04-01-2019

The following figure graphically illustrates the example 4:

**Note:**

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Policy Plan Specific Contract Creation

In the [Single Contract Creation Across Fully-Insured Group Policies and Plans](#) on page 1865 section, we have seen how the system creates one contract across fully-insured group policies and plans on the parent customer and/or bill group accounts. Alternatively, the system enables you to create a plan-specific contract (i.e. a contract using a contract type for each plan) on the parent customer and/or bill group accounts. You can opt for the plan-specific contract creation feature when you want to implement plan-specific business rules. For example, different payment priorities for your medical and dental plans. Under such conditions, you can create different contract types for different plans, say Medical and Dental and enable creation of different contracts using these contract types for billing different plans.

You can configure the plan-specific contract creation feature for the fully-insured group health insurance business by setting the following option types in the **C1-ASOBLNG** feature configuration:

- **Plan ID Characteristic Type** – Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.
- **Plan Based Contract Creation Eligibility** – Used to indicate whether the system should create plan-specific contract on the account. The valid value is **Yes**.

Alternatively, you can also configure the plan-specific contract creation feature for specific persons (i.e. main customers of the policy) based on the business requirement. This is possible by setting the following option types in the **C1-ASOBLLNG** feature configuration:

- **Plan Based Contract Characteristic Type** – Used to specify the characteristic type which helps the system to determine whether plan-specific contracts should be created on the account. This characteristic must be defined on the person for whom you want to create plan-specific contracts on the accounts. Here, you must specify a characteristic type where the characteristic entity is set to **Person**.
- **Plan Based Contract Characteristic Value** – Used to specify the characteristic value which indicates that the system should create plan-specific contracts on the accounts.
- **Plan ID Characteristic Type** – Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.

Here, the system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** – The system creates a contract in either of the following ways:
 - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
 - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

Example 1 — Plan-Specific Contract Creation for a Parent Customer

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one plan-specific contract using each contract type on each account of the parent customer and bill groups. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts

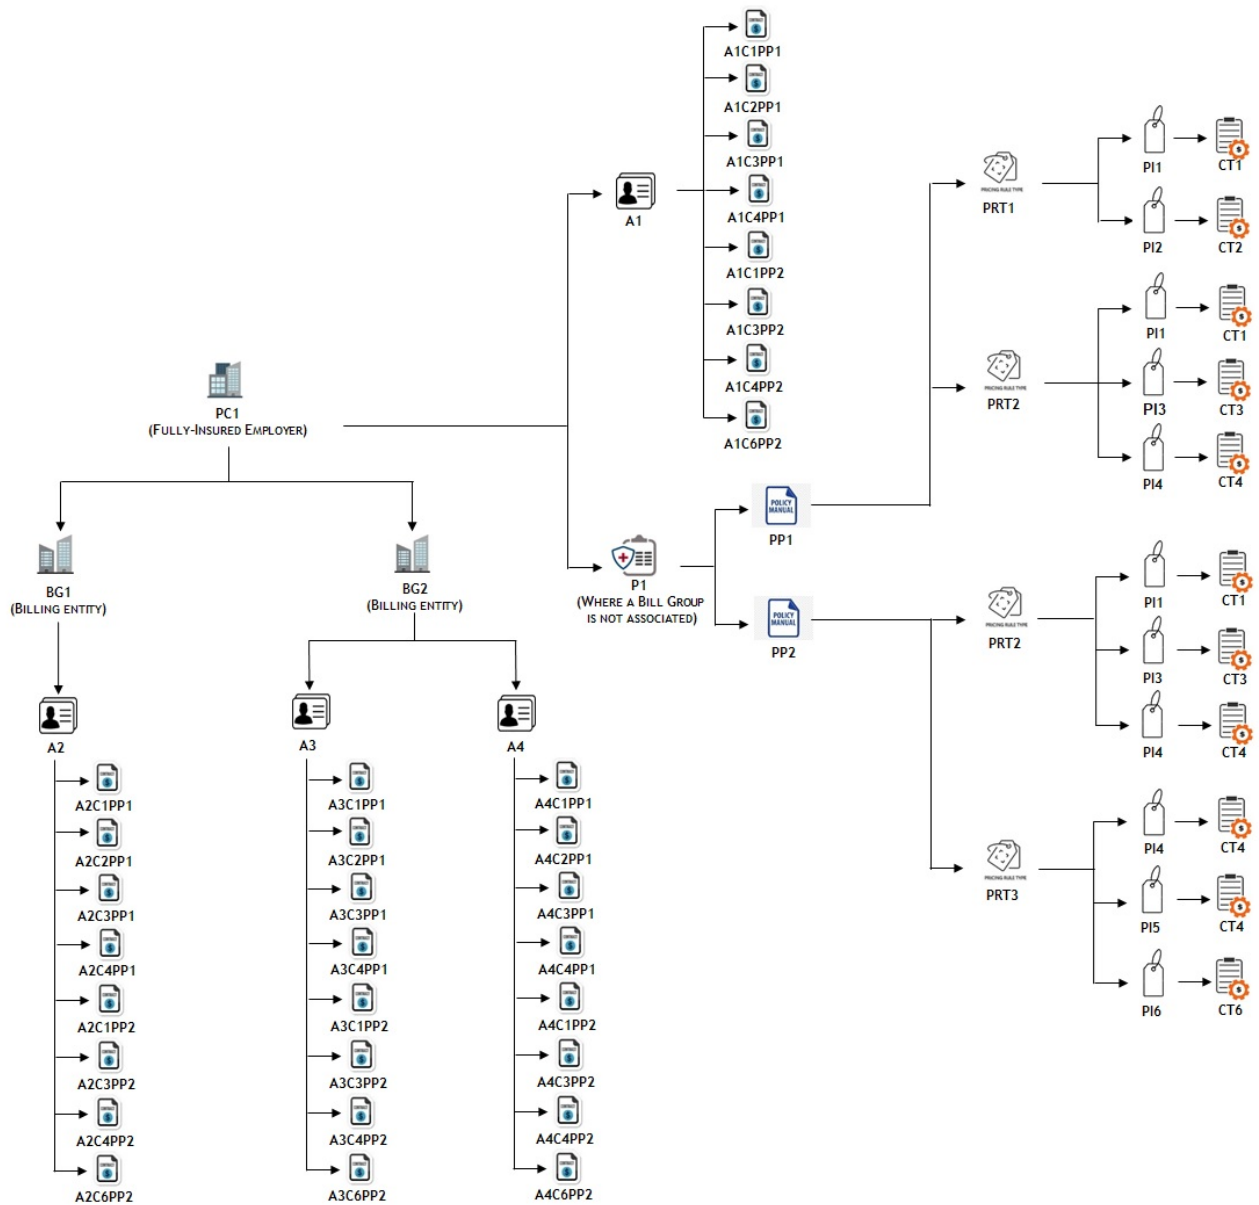

- A policy named P1 with two plans – PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

Now, in such case, the system will create the following contracts on the A1, A2, A3, and A4 accounts:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
			PI2	CT2	A1C2PP1	01-01-2019
		PRT2	PI1	CT1	A1C1PP1	01-01-2019
			PI3	CT3	A1C3PP1	01-01-2019
			PI4	CT4	A1C4PP1	01-01-2019

The following figure graphically illustrates the example 1:

Example 2 — Plan-Specific Contract Creation for a Bill Group

If the policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one plan-specific contract using each contract type on each account of the parent customer and the bill group. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans – PP1, PP2, and PP3 – is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items – PI1 and PI2

- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

Now, in such case, the system will create the following contracts on the A1 and A2 accounts:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
			PI2	CT2	A1C2PP1	01-01-2019
		PRT2	PI1	CT1	A1C1PP1	01-01-2019
			PI3	CT3	A1C3PP1	01-01-2019
			PI4	CT4	A1C4PP1	01-01-2019
		PP2	PRT2	PI1	CT1	A1C1PP2
	PI3			CT3	A1C3PP2	03-01-2019
	PI4			CT4	A1C4PP2	03-01-2019
	PRT3		PI4	CT4	A1C4PP2	03-01-2019
			PI5	CT4	A1C4PP2	03-01-2019
			PI6	CT6	A1C6PP2	03-01-2019
	PP3	PRT1	PI1	CT1	A1C1PP3	06-01-2019
PI2			CT2	A1C2PP3	06-01-2019	
A2	PP1	PRT1	PI1	CT1	A2C1PP1	01-01-2019
			PI2	CT2	A2C2PP1	01-01-2019
		PRT2	PI1	CT1	A2C1PP1	01-01-2019
			PI3	CT3	A2C3PP1	01-01-2019
			PI4	CT4	A2C4PP1	01-01-2019
		PP2	PRT2	PI1	CT1	A2C1PP2
	PI3			CT3	A2C3PP2	03-01-2019
	PI4			CT4	A2C4PP2	03-01-2019
	PRT3		PI4	CT4	A2C4PP2	03-01-2019
				PI5	CT4	A2C4PP2

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
			PI6	CT6	A2C6PP2	03-01-2019
	PP3	PRT1	PI1	CT1	A2C1PP3	06-01-2019
			PI2	CT2	A2C2PP3	06-01-2019

The following figure graphically illustrates the example 2:

Note: The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

- **Create or Edit an Account from the User Interface or through an Inbound Message** – The system creates a contract when either of the following condition is met:
 - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

The system creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

Example 3 — Plan-Specific Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds policies (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for all parent customer's policies on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1

- P1 has two plans – PP1 and PP2
- P2 has two plans – PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI4
- PRT3 contains two price items – PI1 and PI5
- PRT4 contains two price items – PI6 and PI7
- PRT111 contains two price items – PI11 and PI12
- PRT112 contains two price items – PI1 and PI5
- PRT113 contains two price items – PI13 and PI14
- PRT114 contains two price items – PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

Now, in such case, the system will create the following contracts on the A1 account:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	P1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
				PI2	CT2	A1C2PP1	01-01-2019
			PRT2	PI3	CT2	A1C2PP1	01-01-2019
				PI4	CT4	A1C4PP1	01-01-2019
		PP2	PRT2	PI3	CT2	A1C2PP2	06-01-2019
				PI4	CT4	A1C4PP2	06-01-2019
			PRT3	PI1	CT1	A1C1PP2	06-01-2019
				PI5	CT5	A1C5PP2	06-01-2019
			PRT4	PI6	CT6	A1C6PP2	06-01-2019
				PI7	CT7	A1C7PP2	06-01-2019
	P2	PP11	PRT111	PI11	CT11	A1C11PP11	05-01-2019
				PI12	CT12	A1C12PP11	05-01-2019

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
			PRT112	PI1	CT1	A1C1PP11	05-01-2019
				PI5	CT5	A1C5PP11	05-01-2019
		PP12	PRT113	PI13	CT13	A1C13PP12	09-01-2019
				PI14	CT14	A1C14PP12	09-01-2019
			PRT114	PI7	CT7	A1C7PP12	09-01-2019
				PI15	CT15	A1C15PP12	09-01-2019

The following figure graphically illustrates the example 3:

Example 4 — Plan-Specific Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for the bill group's polices and parent customer's polices (where a bill group is not associated) on the account. Let us assume...

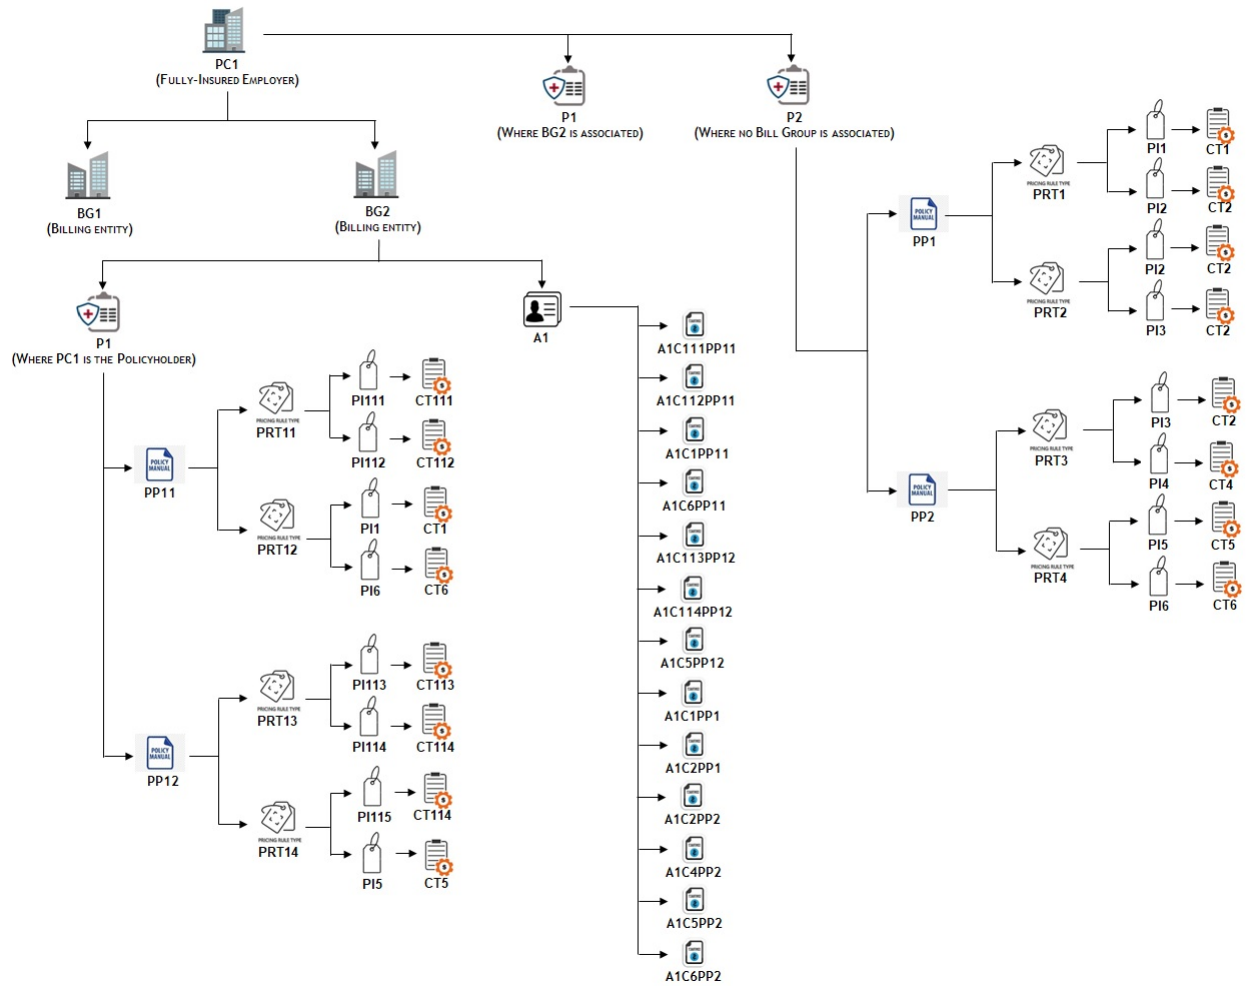

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans – PP11 and PP12
- P2 has two plans – PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI2
- PRT3 contains two price items – PI3 and PI4
- PRT4 contains two price items – PI5 and PI6
- PRT11 contains two price items – PI111 and PI112
- PRT12 contains two price items – PI1 and PI6
- PRT13 contains two price items – PI113 and PI114
- PRT14 contains two price items – PI115 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

Now, in such case, the system will create the following contracts on the A1 account:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	P1	PP11	PRT11	PI111	CT111	A1C111PP11	07-01-2019
				PI112	CT112	A1C112PP11	07-01-2019
			PRT12	PI1	CT1	A1C1PP11	07-01-2019
				PI6	CT6	A1C6PP11	07-01-2019
		PP12	PRT13	PI113	CT113	A1C113PP12	11-01-2019

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
				PI114	CT114	A1C114PP12	11-01-2019
			PRT14	PI115	CT114	A1C114PP12	11-01-2019
				PI5	CT5	A1C5PP12	11-01-2019
	P2	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
				PI2	CT2	A1C2PP1	01-01-2019
			PRT2	PI2	CT2	A1C2PP1	01-01-2019
				PI3	CT2	A1C2PP1	01-01-2019
		PP2	PRT3	PI3	CT2	A1C2PP2	04-01-2019
				PI4	CT4	A1C4PP2	04-01-2019
			PRT4	PI5	CT5	A1C5PP2	04-01-2019
				PI6	CT6	A1C6PP2	04-01-2019

The following figure graphically illustrates the example 4:

Note: The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

Self-Funded Policy

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. The policy type indicates the business object using which the self-funded policy should be created in the system.

As per the self-funded health insurance business, the system enables you to create a self-funded policy for a bill group where the parent customer is the policy holder. You can create or edit a self-funded policy from the **Policy** screen. In addition, you can create or edit a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

A self-funded policy encapsulates the following information:

- **Policy Persons** – While creating a self-funded policy, you need to associate the person who is the main customer of the policy. While associating a person with a self-funded policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is

the policy holder, broker, or underwriter. You can associate multiple persons with a self-funded policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.

- **Policy Contracts** – The system creates a contract for a self-funded policy when the policy is created either from the user interface or through an inbound message. For more information, refer to [Self-Funded Policy Contract Creation](#) on page 1899.

On defining a self-funded policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a self-funded policy is activated, you can renew the policy whenever required.

Note: If a self-funded policy is created through a customer registration object or a health care inbound message, the status of the policy is set to **Pending**.

In a self-funded policy, you can specify the policy period as well as the runout period. Here, the policy period means the period between the policy start and end dates when the policy is active. And, the runout period means the period between the runout start and end dates when the policy is no more active. Note that the system sets the runout start date to the policy end date + 1 Day when you specify the runout end date.

The system enables you to create a self-funded policy for the following contract types which are used in the self-funded health insurance business:

Contract Type	Policy (Example)	Policy Period (i.e. Period when Policy will be in the Active Status)	Runout Period (i.e. Period when Policy will be in the Runout Status)	Comments
12/12 (Claims Incurred and Paid During the Policy Period)	P1	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P1).
12/15 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P2	01-01-2019 to 12-31-2019	01-01-2020 to 03-31-2020	Here, the runout period is derived only when you set the runout end date of the self-funded policy (i.e. P2) to 03-31-2020.
12/18 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P3	01-01-2019 to 12-31-2019	01-01-2020 to 06-30-2020	Here, the runout period is derived only when you set the runout end date of the self-funded policy (i.e. P3) to 06-30-2020.
15/12 (Claims Incurred Three Months Prior to the Policy Start Date and During the Policy Period and Paid During the Policy Period)	P4	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P4).

The system enables you to offer different pricing for different policy periods, such as active, runout, and post runout.

Self-Funded Policy Activation

A self-funded policy can be activated manually from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can activate a self-funded policy by clicking the **Activate** button in the **Policy** screen. On clicking the **Activate** button, the system checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Note: The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Active** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Runout Status

A self-funded policy can be transitioned to the **Runout** status from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can transition a self-funded policy to the **Runout** status by clicking the **Runout** button in the **Policy** screen. On clicking the **Runout** button, the system checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

Note: The status of the policy is not changed from **In Force/Active** to **Runout** when either of the following condition is met:

- The runout end date is not specified.
- The system date is earlier than or equal to the policy end date.
- The policy is renewed.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).

- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Post Runout Status

A self-funded policy can be transitioned to the **Post Runout** status only through the **Policy Periodic Monitor (C1-POLPR)** batch. On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Post Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary

Self-Funded Policy Renewal

You can renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy only when it is in the **In Force/Active** status and which is not yet renewed. You can renew a self-funded policy only from the user interface and not through a health care inbound message.

On renewing a self-funded policy, a new policy is created in the **Pending** status. The renewal date is stamped in the base policy. The information from the base policy is copied to the renewed policy. The start date of the renewed policy is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.

While renewing a self-funded policy, you cannot disassociate persons (from the renewed policy) who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration.

While renewing a self-funded policy, the system enables you to copy the following pricing rules of the base policy and thereby create new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based

- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

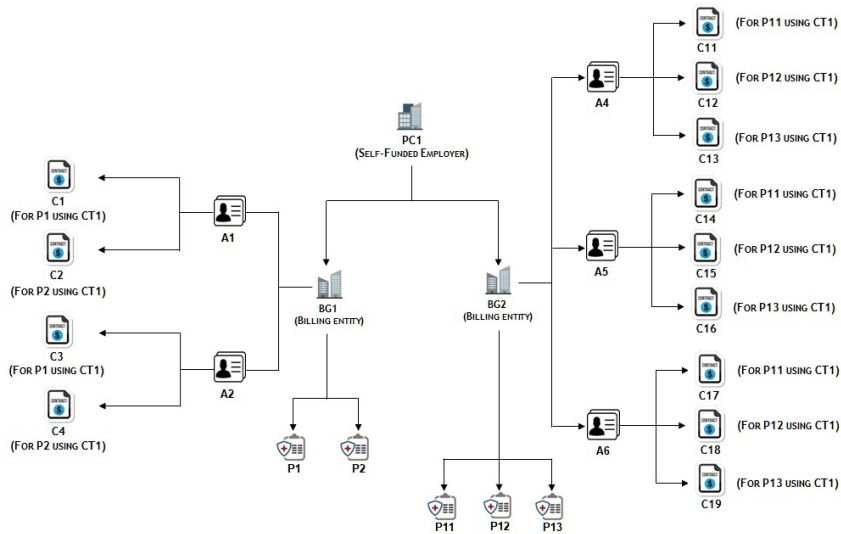

Once a policy is renewed, you cannot edit the base policy's end date or manually change the status of the base policy to **Runout**. The system automatically changes the status of the base policy to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Self-Funded Policy Contract Creation

The system automatically creates contracts when a self-funded policy is created either from the user interface or through a health care inbound message. It creates a contract for a self-funded policy on each account of the bill group. It creates a contract using the contract type which is specified in the **Contract Type** parameter of an algorithm which is created using the **C1-ASOBOPOSP** algorithm type. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to CT1. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11, P12, and P13 for BG2 through a health care inbound message, the system will create the following contracts on the respective accounts:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P2 using the CT1 contract type)
	A2	C3 (for P1 using the CT1 contract type)
		C4 (for P2 using the CT1 contract type)
BG2	A4	C11 (for P11 using the CT1 contract type)
		C12 (for P12 using the CT1 contract type)
		C13 (for P13 using the CT1 contract type)
	A5	C14 (for P11 using the CT1 contract type)
		C15 (for P12 using the CT1 contract type)
		C16 (for P13 using the CT1 contract type)
	A6	C17 (for P11 using the CT1 contract type)
		C18 (for P12 using the CT1 contract type)
		C19 (for P13 using the CT1 contract type)

The following figure graphically represents the above example:

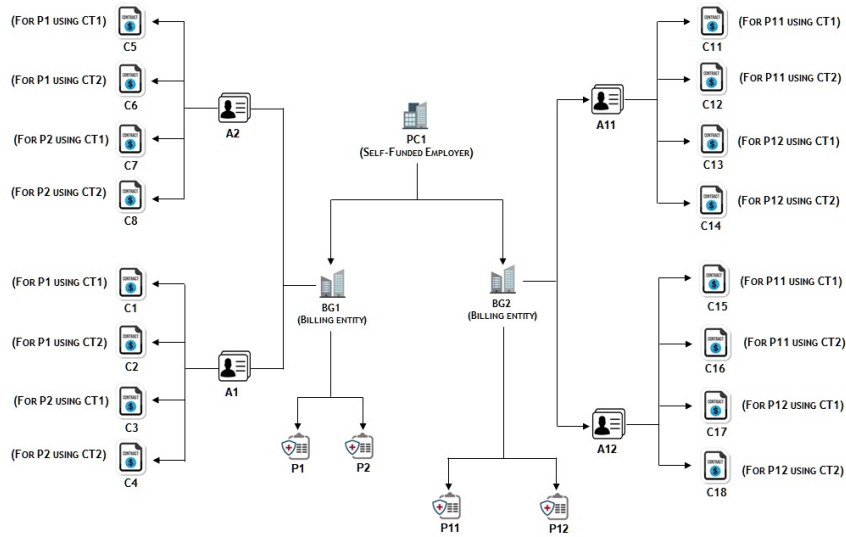

You can also specify comma-separated values for the **Contract Type** parameter. The system will then create a contract using each contract type for each self-funded policy on each account of the bill group. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to CT1 , CT2. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11 and P12 for BG2 through a health care inbound message, the system will create the following contracts on the respective accounts:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P1 using the CT2 contract type)
		C3 (for P2 using the CT1 contract type)
		C4 (for P2 using the CT2 contract type)
	A2	C5 (for P1 using the CT1 contract type)
		C6 (for P1 using the CT2 contract type)
		C7 (for P2 using the CT1 contract type)
		C8 (for P2 using the CT2 contract type)
BG2	A11	C11 (for P11 using the CT1 contract type)
		C12 (for P11 using the CT2 contract type)
		C13 (for P12 using the CT1 contract type)
		C14 (for P12 using the CT2 contract type)
	A12	C15 (for P11 using the CT1 contract type)
		C16 (for P11 using the CT2 contract type)
		C18 (for P12 using the CT1 contract type)

Bill Group	Account	Contract
		C19 (for P12 using the CT2 contract type)

The following figure graphically represents the above example:

Fully-Insured Group Policy Status Transition

The following figure graphically indicates how a fully-insured group policy moves from one status to another in its lifecycle:

Self-Funded Policy Status Transition

The following figure graphically indicates how a self-funded policy moves from one status to another in its lifecycle:

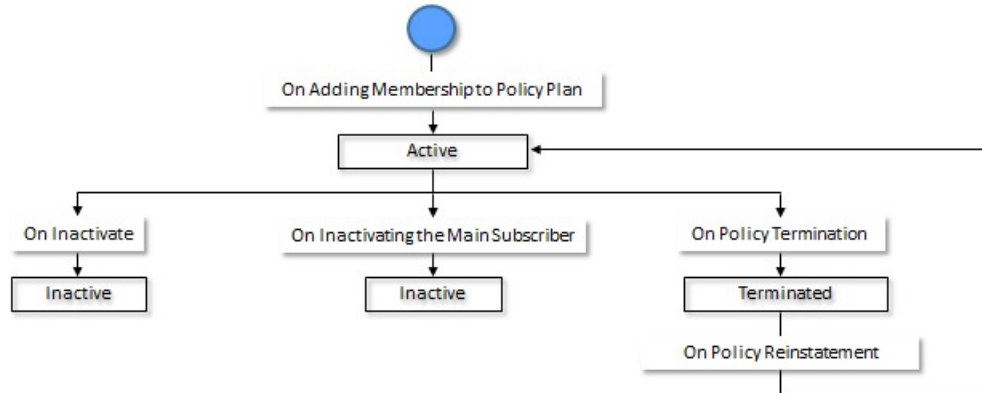

Membership Status Transition

The following figure graphically indicates how a membership moves from one status to another in its lifecycle:

Algorithms Used in C1-POLICY

The following table lists the algorithms which are attached to the **C1-POLICY** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1- REAUDEVNT	C1-REAUDEVNT	Refer to C1-REAUDEVNT on page 1907.
Validation	C1- POLBOVAL	C1-POLBOVAL	Refer to C1-POLBOVAL on page 1908.

The following table lists the algorithms which are used in the lifecycle of the **C1-POLICY** business object:

Status	System Event	Algorithm	Algorithm Type	Description

Pending Cancellation	-	-	-	-
Canceled	-	-	-	-

C1-READEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type.
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section.
- Deleting an entity when the **Delete Action** option is selected in the audit event type.

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event

At present, this algorithm is designed to work with the business objects of the following maintenance objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

In case, you want to create audit event for any other maintenance objects, you need to create a custom algorithm type.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-POLBOVAL

This algorithm validates a fully-insured group policy throughout its lifecycle. It checks the following:

- Whether the policy end date is not earlier than the policy start date.
- Whether the policy person end date is not earlier than the policy person start date.
- Whether the policy person start date is not earlier than the policy start date or later than policy end date.
- Whether the policy person end date is not earlier than the policy start date or later than policy end date.

Note: The above validation is done only when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter to **TERMINATED**, the system will not perform the above validation when the status of the policy is changed to **Terminated**.

- Whether the person who is the main customer is associated with the policy.
- Whether the policy person role is specified while associating a person with the policy.

It contains the following parameter:

- **Skip Status for Policy Person End Date Validation** – Used to specify the policy status in which you do not want to validate the policy person end date. You can specify comma-separated values for this parameter.

C1-TRNDFLSYS

This algorithm checks whether the fully-insured group policy is created from the user interface or through an inbound message. If a fully-insured group policy is created through an inbound message, the system will automatically transition the fully-insured group policy to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-EVCSTSTAT

This algorithm updates the **Customer Status** characteristic of the main customer of the policy. This characteristic indicates whether the customer is active or inactive. If the customer owns at least one active policy, the customer status is set to **Active**. However, if the customer does not own any active policy, the customer status is set to **Inactive**.

It is invoked while activating or terminating a fully-insured group policy. It contains the following parameters:

- **Customer Status Characteristic Type** – Used to specify the characteristic type whose value should be updated whenever the policy is activated or terminated. You must specify a characteristic type where the characteristic entity is set to **Person**.
- **Active Customer Status Characteristic Value** – Used to specify the characteristic value which should be used when the main customer owns at least one active policy.
- **Inactive Customer Status Characteristic Value** – Used to specify the characteristic value which should be used when the main customer does not own any active policy (in other words, when all policies of the main customer are terminated).
- **Policy Active Status** – Used to specify the status in which at least one policy should exist to indicate that the main customer is active.

All the above parameters are mandatory.

C1-PLCYTRMRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy termination process from the user interface. While creating the outbound message, the system identifies the account using the characteristic type specified in the **Main Customer Characteristic Type** parameter. The system checks whether this characteristic type is set to the main customer's ID on any account. If so, the system considers the account and then fetches the value of the account identifier type specified in the **Account Identifier Type** parameter.

In addition, it stores the details of the outbound message (which is created) in the log of the policy. It contains the following parameters:

- **Outbound Message Type** – Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** – Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.
- **Account Identifier Type** – Used to specify the account identifier type whose value you want to use in the outbound message. You must specify an account identifier type which is already defined in the system.
- **Main Customer Characteristic Type** – Used to specify the characteristic type using which you want to identify the account of the main customer. You must specify a characteristic type where the characteristic entity is set to **Person**.

All the above parameters are mandatory.

C1-POLCYTERM

This algorithm sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)
- Policy Plan (when the termination date falls within the date range of the policy plan)
- Membership (when the termination date falls within the date range of the membership)

- Member Person (when the termination date falls within the date range in which the person is added to the membership)
- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

It contains the following parameters:

- **Membership Old Status** – Used to specify the status from which you want to transition the membership when the policy is terminated.
- **Membership New Status** – Used to specify the status to which you want to transition the membership when the policy is terminated.

C1-DELTRMLTR

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **TERMINATED** status, it creates a customer contact whenever the policy is terminated. You can create a customer contact while terminating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while terminating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** – Used when you want to create a customer contact when the policy is terminated for a particular reason. The valid values are:
 - **Y** – Used to indicate that the system should create a customer contact when a particular status reason is specified while terminating a policy.
 - **N** – Used to indicate that the system should create a customer contact while terminating a policy irrespective of the status reason.
- **Policy Status Reason Codes** – Used to specify the status reason defined for the **TERMINATED** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** – Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** – Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** – Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
 - **Y** – If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
 - **N** – If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

Note: If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** – Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** – Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.

- **Status To Skip Process** – Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

C1-PLCYREIRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy reinstatement process from the user interface. In addition, it stores the details of the outbound message (which is created) in the log of the policy.

It contains the following parameters:

- **Outbound Message Type** – Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** – Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.

All the above parameters are mandatory.

C1-POLCYREIN

This algorithm updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Note: The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

It contains the following parameters:

- **Membership Old Status** – Used to specify the status from which you want to transition the membership when the policy is reinstated.
- **Membership New Status** - Used to specify the status to which you want to transition the membership when the policy is reinstated. This field is mandatory.

C1-CCPOLRE1

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **REINSTATE** status, it creates a customer contact whenever the policy is reinstated. You can create a customer contact while reinstating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while reinstating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** – Used when you want to create a customer contact when the policy is reinstated for a particular reason. The valid values are:

- **Y** – Used to indicate that the system should create a customer contact when a particular status reason is specified while reinstating a policy.
- **N** – Used to indicate that the system should create a customer contact while reinstating a policy irrespective of the status reason.
- **Policy Status Reason Codes** – Used to specify the status reason defined for the **REINSTATE** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** – Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** – Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** – Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
 - **Y** – If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
 - **N** – If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

Note: If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** – Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** – Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** – Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

Algorithms Used in C1-PolicyPlan

The following table lists the algorithms which are attached to the **C1-PolicyPlan** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-PPCONCRE	C1-PPCONCRE	Refer to C1-PPCONCRE on page 1912.
Validation	C1-VALPPBO	C1-VALPPBO	Refer to C1-VALPPBO on page 1913.

C1-PPCONCRE

This algorithm is invoked when you create or edit a policy plan from the user interface or through an inbound message. It creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

Let us assume that PRT1 is associated with the policy plan and it contains three price items – P1, P2, and P3. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, and P3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the P1 and P3 are associated with the CT1 contract type and P2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

If the policy plan belongs to an individual policy of the parent customer (i.e. a policy where a bill group is not associated), the system will create contracts of distinct contract types for each account of the parent customer and bill groups. However, if the policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create contracts of distinct contract types for each account of the parent customer and the bill group.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans on different policies, the contract start date is set to the start date of the earliest plan across policies.

C1-VALPPBO

This algorithm validates a policy plan. It checks the following:

- Whether the policy plan end date is not earlier than the policy plan start date.
- Whether the policy plan start date is not earlier than the policy start date or later than policy end date.
- Whether the policy plan end date is not earlier than the policy start date or later than policy end date.
- Whether the price item or at least one pricing rule type is associated with the policy plan.

Algorithms Used in C1-Membership

The following table lists the algorithms which are attached to the **C1-Membership** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to C1-FIAUDEV on page 1914.
Pre-Processing	C1-MEMSTPRE	C1-MEMSTPRE	Refer to C1-MEMSTPRE on page 1915.
Validation	C1-VALMEMBO	C1-VALMEMBO	Refer to C1-VALMEMBO on page 1915.

The following table lists the algorithms which are used in the lifecycle of the **C1-Membership** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Active	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Inactive	Enter	C1-MEMINACT	C1-MEMINACT	Refer to C1-MEMINACT on page 1915.
Terminated	-	-	-	-

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **C1-Membership** and **C1_PERSON_BO** business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a membership is added to a policy plan and member person is added to a membership. It also creates the audit event whenever the membership and member person details are updated. However, note that the audit events are created in the update scenario only when the element listed for auditing in the age based or tier based pricing rule types is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. membership or member person whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age based or tier based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the memberships on the policy plans which are impacted and the pricing rule types whose pricing rules are defined on the respective policy plans. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **P**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-MEMSTPRE

Once the status of the main subscriber is changed to **Inactive**, this algorithm changes the status of the membership to the value specified in the **Membership Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. In addition, it does not allow you to add a member person in the **Inactive** status to a membership.

C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Algorithms Used in C1-ASOPolicy

The following table lists the algorithms which are attached to the **C1-ASOPolicy** business object:

System Event	Algorithm	Algorithm Type	Description
Validation	C1-ASOPOLVAL	C1-ASOPOLVAL	Refer to C1-ASOPOLVAL on page 1916.
Post-Processing	C1-ASOBOPOSP	C1-ASOPOLPOS	Refer to C1-ASOBOPOSP on page 1917.
	C1-ASOPRUCPY	C1-ASOPRUCPY	Refer to C1-ASOPRUCPY on page 1917.

The following table lists the algorithms which are used in the lifecycle of the **C1-ASOPolicy** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to C1-ASOPOLMOA on page 1917.
	Enter	C1-ASOPOLREN	C1-ASOPOLREN	Refer to C1-ASOPOLREN on page 1918.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to C1-ASOPCKTD on page 1918.
In Force/ Active	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to C1-ASOPOLMOA on page 1917.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to C1-ASOPCKTD on page 1918.
Runout	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to C1-ASOPOLMOA on page 1917.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to C1-ASOPCKTD on page 1918.
Post Runout	-	-	-	-

C1-ASOPOLVAL

This algorithm validates a self-funded policy throughout its lifecycle. It checks the following:

- The policy end date is not earlier than the policy start date.
- The runout end date is later than the policy end date.
- The runout end date is later than the system date while editing the policy which is in the **Runout** status.
- The runout end date is not removed when the policy is in the **Runout** or **Post Runout** status.
- The policy end date is not modified when the policy is in the **Runout** status.
- The policy end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status.
- The runout end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status.
- The runout end date is not set to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.
- The policy is not edited when it is in the **Post Runout** status.
- The policy start date is not modified when the policy is in the **In Force/Active**, **Runout**, or **Post Runout** status.
- The policy person end date is not earlier than the policy person start date.
- The policy person role is specified while associating a person with the policy.
- One of the policy persons is set as the main customer of the policy.
- The policy end date is not changed when the policy is renewed.

C1-ASOBOPOSP

This algorithm is invoked when you create a self-funded policy either from the user interface or through an inbound message. It creates a contract of the specified contract type for the self-funded policy on each account of the bill group. For example, if you create a self-funded policy named P1 for a bill group who has two accounts - A1 and A2, the system will create two contracts for P1 - one on the A1 account and another on the A2 account.

It contains the following parameter:

- **Contract Type** - Used to indicate the contract type whose contract you want to create for the self-funded policy on each account of the bill group. You can also specify comma-separated values for this parameter. It will then create a contract of each contract type for the self-funded policy on each account of the bill group.

C1-ASOPRUCPY

This algorithm is invoked when the **Copy Pricing Rules** option is selected while renewing a self-funded policy. It copies the following pricing rules of the base policy and creates new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

C1-ASOPOLMOA

This algorithm is invoked when the **Policy Periodic Monitor (C1-POLPR)** batch is executed. It does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter.
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.
- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter.
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.
- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter.
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

It contains the following parameters:

- **To Do Type for Pending Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy start date.
- **To Do Type for Active Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy end date.
- **To Do Type for Runout Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the runout end date.
- **X Days** - Used to specify the number of days prior to which you want to create a To Do for the self-funded policy.

All these parameters are mandatory.

C1-ASOPOLREN

This algorithm is invoked when you renew a self-funded policy. Once the new policy is created in the **Pending** status, it stamps the renewal date on the base policy.

C1-ASOPCKTD

This algorithm is invoked when you click the **Activate** and **Runout** buttons in the **Policy** screen. On clicking the **Activate** button, it checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Similarly, on clicking the **Runout** button, it checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

It also validates the following:

- The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.
- The status of the policy is not changed from **In Force/Active** to **Runout** when the runout end date is not specified.
- The status of the policy is not changed from **In Force/Active** to **Runout** until the system date is later than the policy end date.
- The status of the policy is not changed to **Runout** if it is renewed.

In addition, it also changes the status of the base policies to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Policy Type

Oracle Revenue Management and Billing enables you to define a policy type using which you can create a policy. The policy type helps the system to determine:

- **Policy Category** - The category implies the line of business in the health insurance domain for which the policy should be created using the policy type. The valid values are:
 - Fully-Insured Group
 - Fully-Insured Individual
 - Self-Funded

Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.

- **Policy Business Object** - The business object using which the policy should be created in the system. You can specify the **C1-POLICY** or **C1-ASOPolicy** business object depending on whether you want to create the policy type for the fully-insured or self-funded health insurance business.

The **Policy Type** screen allows you to define, edit, copy, and delete a policy type. It contains the following zones:

- [Policy Type List](#) on page 1919
- [Policy Type](#) on page 1919

Policy Type List

The **Policy Type List** zone lists the policy types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Policy Type	Displays the policy type.
Description	Displays the description of the policy type.
Policy Category	Indicates the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> • Self-Funded • Fully-Insured Group • Fully-Insured Individual
Edit	On clicking the Edit () icon, the Policy Type screen appears where you can edit the details of the policy type.
Duplicate	On clicking the Duplicate () icon, the Policy Type screen appears where you can define a new policy type using an existing policy type.
Delete	On clicking the Delete () icon, you can delete the policy type. <p>Note: You can delete a policy type only when a policy is not created using the policy type.</p>

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a policy type, the **Policy Type** zone appears with the details of the respective policy type.

You can filter the list using the **Policy Category** field available in the **Filter** area. By default, the **Filter** area is hidden.

You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Policy Type

The **Policy Type** zone displays the details of the policy type. It contains the following sections:

- **Main** - Displays basic information about the policy type. It contains the following fields:

Field Name	Field Description
Policy Type	Displays the policy type.
Policy Business Object	Indicates the business object using which the policy should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the policy type.
Status	Indicates the status of the policy type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Policy Category	Indicates the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> Self-Funded Fully-Insured Group Fully-Insured Individual
Detailed Description	Displays additional information about the policy type.

- **Characteristics** - Lists the characteristics defined for the policy type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy type.
Delete	Used to delete the policy type. Note: You can delete a policy type only when a policy is not created using the policy type.
Duplicate	Used to create a new policy type using an existing policy type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Policy Type** zone does not appear in the **Policy Type** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the policy type in the **Policy Type List** zone.

Defining a Policy Type

Prerequisites

To define a policy type, you should have:

- Required policy business object defined in the application

Note: The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To define a policy type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
A sub-menu appears.
3. Click the **Add** option from the **Policy Type** sub-menu.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.
- **Characteristics** - Used to define characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> Fully-Insured Group Fully-Insured Individual Self-Funded 	Yes
	Note: At present, the Fully-Insured Individual policy category is not supported in the system.	
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy Type** screen.

- Enter the required details in the **Main** section.
