License Restrictions Warranty/Consequential Damages Disclaimer

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure, and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

Warranty Disclaimer

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

Restricted Rights Notice

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Oracle programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data delivered to U.S. Government end users are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data shall be subject to license terms and restrictions as mentioned in Oracle License Agreement, and to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). No other rights are granted to the U.S. Government.

Hazardous Applications Notice

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

Third Party Content, Products, and Services Disclaimer

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third party content, products, or services.

Viewing Price Items Assigned to a Price List.....	433
Removing a Price Item from a Price List.....	434
Viewing a Price Item Pricing.....	434

Editing a Price Item Pricing of a Price List.....	436
Assigning a Price Item to a Price List.....	440
Defining a Characteristic for a Price Item Pricing.....	444
Defining Parameters for a Price Item Pricing.....	445
Defining TFM Information in a Price Item Pricing.....	446
Price List Assignment.....	448
Price List Assignments.....	448
Price List Price Items.....	450
Search Price List for Assignment.....	451
Viewing Price Lists Assigned to an Account.....	454
Viewing Price Lists Assigned to a Person.....	455
Viewing Price Items Assigned to a Price List.....	456
Assigning a Price List to an Account.....	457
Assigning a Price List to a Person.....	460
Defining a Characteristic for a Price List Assignment.....	463
Editing the Price List Assignment Details of an Account.....	464
Editing the Price List Assignment Details of a Person.....	467
Price List Assignments.....	470
Accounts where Price List is Assigned.....	470
Persons to whom Price List is Assigned.....	471
Viewing Accounts and Persons where Price List is Assigned.....	472
Persons and Accounts Eligible for Price List Assignment.....	472
Eligible Accounts.....	473
Eligible Persons.....	473
Assigning a Price List to One or More Eligible Accounts.....	474
Assigning a Price List to One or More Eligible Persons.....	476
Defining a Characteristic for a Price List Assignment.....	477
Rate Definition.....	479
Rate Schedule Components.....	479
Create/Edit Rate Definition.....	480
Defining Tiering Setup of a Rate Component.....	481
Editing Tiering Setup of a Rate Component.....	482
Deleting Tiering Setup of a Rate Component.....	483
Tiering Criterion.....	484
Tiering Criterion List.....	484
Edit Tiering Criterion.....	484
Create Tiering Criterion.....	485
Creating a Tiering Criterion.....	485
Editing a Tiering Criterion.....	486

Chapter VI: Division.....489

Division.....	490
Division - Main.....	492
Division - Access Groups.....	493
Division - Price Items.....	494
Division - Price Lists.....	494
Division - Languages.....	495
Division - Invoice Currencies.....	495
Division - Person Identifier Types.....	495
Division - Algorithms.....	496
Division - Characteristics.....	496
Division - Bill Messages.....	497
Division - Party Char Types.....	497
Division - Bill Cycles.....	498
Division - Account Identifier Types.....	498

Division - Price Item Characteristics.....	498
Searching for a Division.....	499
Defining a Division.....	500
Associating an Access Group with a Division.....	503
Associating a Price Item or Price Item Bundle with a Division.....	504
Associating a Price List with a Division.....	506
Associating a Language with a Division.....	507
Associating an Invoice Currency with a Division.....	508
Associating a Person Identifier Type with a Division.....	510
Associating an Algorithm with a Division.....	511
Defining a Characteristic for a Division.....	517
Associating a Bill Message with a Division.....	518
Associating a Party Characteristic Type with a Division.....	520
Associating a Bill Cycle with a Division.....	521
Associating an Account Identifier Type with a Division.....	522
Defining a Division-Specific Characteristic for a Price Item.....	523
Associating a To Do Type and To Do Role with a Division.....	524
Chapter VII: Approval Workflow.....	527
Most Commonly Used Terms.....	529
Approval Workflow Process.....	529
Prerequisites.....	531
Approval Transaction.....	533
Search Approval Transaction.....	533
Approval Transaction Log.....	537
Searching for an Approval Transaction.....	538
Viewing the Log of an Approval Transaction.....	538
Comparison: New versus Existing.....	539
Approving an Approval Transaction.....	539
Rejecting an Approval Transaction.....	540
Canceling an Approval Transaction.....	541
Modifying an Approval Transaction.....	542

Transaction Aggregation Rules.....	847
Defining Transaction Aggregation Rule for an SQL.....	848
Editing Transaction Aggregation Rule of an SQL.....	849
Deleting Transaction Aggregation Rule of an SQL.....	850
Schedule.....	851
Search Schedule.....	851
Searching for a Schedule.....	852
Viewing the Schedule Details.....	852
Defining a Schedule.....	853
Editing a Schedule.....	854
Deleting a Schedule.....	855
Disaggregation Request.....	855
Search Disaggregation Request.....	856
Searching for a Disaggregation Request.....	859
Creating a Disaggregation Request.....	860
Deleting a Disaggregation Request.....	865

Chapter XI: Upload Validated Payment Data.....867

Payment Upload Process.....	868
Upload Payment Records in the Pre-Staging Area.....	868
Move Payment Records to the Staging Area.....	869
Create Payment Events and Payments.....	869
Prerequisites.....	870
CSV File Format.....	871
Payment Data File Status Transition.....	873
Payment Record Status Transition.....	873
Error Messages.....	875
Payment Upload.....	879
Search Payment Data File.....	880
Payment Data Records.....	882
Payment Data File Log.....	883
Searching for a Payment Data File.....	884
Uploading a Payment Data File.....	884
Replacing an Existing File.....	886
Cancelling a Payment Data File.....	887
Moving the Payment Records to the Staging Area.....	887
Editing a Payment Staging Record.....	888
Viewing the Records of a Payment Data File.....	889
Viewing the Log of a Payment Data File.....	889

Viewing the Error Messages.....	890
---------------------------------	-----

Chapter XII: Freeze Payments on Notification..... 891

Freeze Payments on Notification Process.....	893
Creating Automatic Payments and Refunds.....	893
Generating a Flat File.....	893
Uploading Response from Auto Clearing House (ACH).....	893
Freezing or Canceling Automatic Payments.....	894
Voiding Refund Requests and Canceling Refund Adjustments.....	895
Generating To Do Entries.....	895
Creating Tender Controls.....	895
Prerequisites.....	896
Automatic Payment or Refund Clearing Staging Record Status Transition.....	897
EDI 824 File Format.....	897
Sample EDI 824 File Format.....	898
Automatic Payment and Refund Upload Reason.....	899
Upload Reasons.....	899
Defining an Upload Reason.....	900
Editing an Upload Reason.....	902
Deleting an Upload Reason.....	904
Automatic Payment and Refund Clearing Staging.....	904
Search Clearing Record.....	905
Associated Clearing Staging Records.....	907
Clearing Staging Upload Reasons.....	908
Clearing Staging Characteristics.....	908
Searching for a Clearing Record.....	909
Viewing the Clearing Staging Records Associated to a Clearing Record.....	909
Viewing the Upload Reason Specified in the Clearing Staging Record.....	910
Viewing the Characteristics of the Clearing Staging Record.....	910
Editing a Clearing Staging Record.....	911
Defining a Characteristic for a Clearing Staging Record.....	912
Deleting a Clearing Staging Record.....	913

Chapter XIII: Trial Billing..... 915

Prerequisites.....	917
Trial Bill (Used for Searching).....	917
Search Trial Bill	917
Searching for a Trial Bill.....	919
Viewing the Trial Bill Details.....	919
Trial Bill (Used for Viewing).....	920
Trial Bill.....	920
Trial Bill Segments.....	922
Trial Bill Segment Calc Lines.....	923
Trial Bill Segment SQ Details.....	924
Trial Bill Segment Financial Details.....	925
Policy Details.....	925
Printing a Trial Bill in the PDF Format.....	926
Viewing the Segments of a Trial Bill.....	926
Filtering the Trial Bill Segments.....	927
Viewing the Calc Lines of a Trial Bill Segment.....	927
Viewing the SQ Details of a Trial Bill Segment.....	928
Viewing the Financial Details of a Trial Bill Segment.....	928
Viewing the Policy Details of a Trial Bill Segment.....	929

Chapter XIV: GL Account Validation..... 931

Static GL Account Validation.....	932
Dynamic GL Account Validation.....	932

Chapter XV: Upload Validated Adjustment Data..... 933

Prerequisites.....	935
CSV File Format.....	935
Adjustment Upload Request (Without Approval) Status Transition.....	936
Adjustment Upload Request (With Approval) Status Transition.....	937
Algorithms Used in C1-ADJUPLD.....	938
Upload Request Type.....	941
Upload Request Type List.....	942
Upload Request Type.....	943
Defining an Upload Request Type.....	946
Defining a Characteristic for an Upload Request Type.....	952
Editing an Upload Request Type.....	953
Copying an Upload Request Type.....	956
Mapping an Upload Request Type.....	960
Deleting an Upload Request Type.....	961
Viewing the Upload Request Type Details.....	962
Adjustment Upload Request (Used for Searching).....	963
Search Adjustment Upload Request.....	963
Searching for an Adjustment Upload Request.....	965
Uploading an Adjustment Data File.....	965
Replacing an Adjustment Data File.....	968
Viewing the Adjustment Upload Request Details.....	970
Adjustment Upload Request (Used for Viewing).....	971
Adjustment Upload Request - Main.....	971
Adjustment Upload Request.....	971
Adjustment Data Records.....	974
Adjustment Upload Request - Log.....	975
Adjustment Upload Request Log.....	975
Cancelling an Adjustment Data File.....	975
Creating Adjustments for an Adjustment Data File.....	976
Submitting an Adjustment Data File for Approval.....	977
Approving an Adjustment Data File.....	978
Rejecting an Adjustment Data File.....	979
Viewing the Log of an Adjustment Upload Request.....	980
Adding a Log Entry for an Adjustment Upload Request.....	981

Chapter XVI: Payment Request..... 983

Prerequisites.....	985
Payment Request (Without Approval) Status Transition.....	986
Payment Request (With Approval) Status Transition.....	987
Algorithms Used in C1-PaymentRequest.....	988
Algorithms Used in C1-PaymentTransferRequest.....	992
Payment Request Type.....	997
Payment Request Type List.....	997
Payment Request Type.....	998
Defining a Payment Request Type.....	1000
Defining a Characteristic for a Payment Request Type.....	1003
Editing a Payment Request Type.....	1004

Copying a Payment Request Type.....	1007
Deleting a Payment Request Type.....	1010
Viewing the Payment Request Type Details.....	1011
Payment Request (Used for Searching).....	1011
Search Payment Request.....	1012
Searching for a Payment Request.....	1014
Viewing the Payment Request Details.....	1015
Payment Request (Used for Viewing).....	1016
Payment Request.....	1016
Payment Distribution.....	1022
Creating a Payment Creation Request.....	1024
Defining a Characteristic for a Payment Tender.....	1029
Editing the Payment Amount.....	1030
Editing a Payment Request.....	1032
Deleting a Payment Request.....	1035
Distributing the Tender or Payment Amount.....	1036
Distributing and Freezing the Tender or Payment Amount.....	1037
Redistributing the Tender or Payment Amount.....	1038
Editing the Payment Segment Amount.....	1039
Freezing Payments Created Through a Payment Request.....	1041
Submitting a Payment Request for Approval.....	1042
Approving a Payment Request.....	1042
Rejecting a Payment Request.....	1044
Discarding a Payment Request.....	1046
Viewing the Log of a Payment Request.....	1046
Adding a Log Entry for a Payment Request.....	1047
Payment Event Summary.....	1048
Search Payment Event.....	1048
Payments.....	1051
Payment Segments.....	1053
Searching for a Payment Event.....	1053
Creating a Payment Transfer Request.....	1054
Cancelling a Payment Event.....	1058
Deleting a Payment Event.....	1059
Viewing Payments Created Through a Payment Event.....	1059
Cancelling a Payment.....	1060
Deleting a Payment.....	1061
Viewing Payment Segments of a Payment.....	1061

Chapter XVII: Account Receivable Central..... 1063

Single Offset.....	1064
Mass Offset.....	1064
Cross Currency Offset.....	1065
Hold.....	1065
Refund.....	1066
Write Off.....	1066
Dispute.....	1066
Account Receivable Central.....	1066
Search Bill	1066
Bill Information.....	1070
Offset Details.....	1070
Hold Details.....	1070
Garnishment Details.....	1071
Bill Line Items.....	1071
Searching for a Bill.....	1071

Viewing the Bill Details.....	1072
Chapter XVIII: Offset Request.....	1073
Single Offset.....	1075
Mass Offset.....	1076
Cross Currency Offset.....	1079
Prerequisites.....	1081
Offset Request (Without Approval) Status Transition.....	1082
Offset Request (With Approval) Status Transition.....	1083
Algorithms Used in C1-OffsetRequest.....	1085
C1-OFFST-INF.....	1086
F1-TODOCOMPL.....	1086
C1-OFFSUBENT.....	1086
C1-OFFAPPENT.....	1086
C1-OFFAPPEXT.....	1087

C1-DFRUNAPLY.....	1088
C1-UNAPOFST.....	1089
C1-UPDT-FUND.....	1089
C1-WTBS-CRBL.....	1089
Additional Algorithms Used in Offset Request.....	1089
C1-OFST-AMT.....	1089
C1-WTBS-CRBL.....	1090
Offset Request Type.....	1090
Offset Request Type List.....	1090
Offset Request Type.....	1091
Defining an Offset Request Type.....	1093
Defining a Characteristic for an Offset Request Type.....	1098
Editing an Offset Request Type.....	1099
Deleting an Offset Request Type.....	1104
Copying an Offset Request Type.....	1105
Viewing the Offset Request Type Details.....	1109
Offset Request (Used for Searching).....	1110
Search Offset Request.....	1110
Searching for an Offset Request.....	1113
Creating an Offset Request.....	1114
Viewing the Offset Request Details.....	1116
Offset Request (Used for Viewing).....	1117
Offset Request - Main.....	1117
Offset Request.....	1117
Selected Bills.....	1120
Search Bill.....	1121
Offset Request Adjustments.....	1126
Offset Request - Log.....	1126
Offset Request Log.....	1126
Viewing the Debit and Credit Bills Added to an Offset Request.....	1127
Viewing the Adjustments Created Through an Offset Request.....	1127
Adding a Debit or Credit Bill to an Offset Request.....	1128
Editing an Offset Request.....	1129
Defining a Characteristic for an Offset Request.....	1131
Editing the Offset Amount of a Debit or Credit Bill.....	1132

Removing a Debit or Credit Bill from an Offset Request.....	1133
Deleting an Offset Request.....	1133
Submitting an Offset Request.....	1134
Approving an Offset Request.....	1136
Rejecting an Offset Request.....	1138
Unapplying an Offset Request.....	1140
Viewing the Log of an Offset Request.....	1141
Adding a Log Entry for an Offset Request.....	1141

Chapter XIX: Funding Request..... 1143

Prerequisites.....	1146
Funding Request (Without Approval) Status Transition.....	1146
Funding Request (With Approval) Status Transition.....	1147
Algorithms Used in C1-FundingReq.....	1148
C1-FUNDINFO.....	1149
C1-FUNDSUBMT.....	1149
C1-FUNDAPP.....	1150
C1-FUNDAPRVD.....	1150
F1-TODOCOMPL.....	1150
F1-AT-RQJ.....	1150
C1-FNDRESUBM.....	1151
C1-FUNDVAL.....	1151
C1-FUNDAPAY.....	1151
C1-FUNDADJCR.....	1151
C1-FUNDCANCL.....	1152
Funding Request Type.....	1152
Funding Request Type List.....	1152
Funding Request Type.....	1153
Defining a Funding Request Type.....	1156
Defining a Characteristic for a Funding Request Type.....	1163
Editing a Funding Request Type.....	1164
Deleting a Funding Request Type.....	1171
Copying a Funding Request Type.....	1172
Viewing the Funding Request Type Details.....	1179
Funding Request (Used for Searching).....	1180
Search Funding Request.....	1180
Searching for a Funding Request.....	1183
Creating a Funding Request.....	1184
Viewing the Funding Request Details.....	1184
Funding Request (Used for Viewing).....	1185
Funding Request - Main.....	1185
Funding Request.....	1186
Search Bill.....	1189
Funding Request - Bills.....	1193
Currency Statistics.....	1193
Selected Bills.....	1193
Funding Payment Details.....	1196
Funding Adjustments.....	1197
Funding Request - Log.....	1197
Funding Request Log.....	1197
Adding a Debit or Credit Bill to a Funding Request.....	1198
Deleting a Debit or Credit Bill from a Funding Request.....	1199
Excluding a Bill from a Funding Request.....	1199
Editing a Funding Request.....	1201
Defining a Characteristic for a Funding Request.....	1203

Deleting a Funding Request.....	1204
Cancelling a Funding Request.....	1205
Submitting a Funding Request.....	1206
Approving a Funding Request.....	1208
Rejecting a Funding Request.....	1210
Requesting to Resubmit a Funding Request.....	1212
Withdrawing a Funding Request.....	1213
Transferring the Funding Amount of a Credit Bill to a Garnishment Contract.....	1214
Viewing the Garnishment Details of a Credit Bill.....	1215
Viewing the Payments Created Through a Funding Request.....	1216
Viewing the Adjustments Created Through a Funding Request.....	1217
Viewing the Log of a Funding Request.....	1217
Adding a Log Entry for a Funding Request.....	1218

Chapter XX: Refund/Write Off Request..... 1219

Refund Request (Without Approval) Status Transition.....	1221
Refund Request (With Approval) Status Transition.....	1221
Write Off Request (Without Approval) Status Transition.....	1222
Write Off Request (With Approval) Status Transition.....	1223
Algorithms Used in C1-RefundReq.....	1224
Algorithms Used in C1-WORequest.....	1229
Prerequisites.....	1233
Refund/Write Off Request Type.....	1233
Refund/Write Off Request Type List.....	1237
Refund/Write Off Request Type.....	1238
Defining a Refund or Write Off Request Type.....	1240
Defining a Characteristic for a Refund or Write Off Request Type.....	1243
Editing a Refund or Write Off Request Type.....	1244
Copying a Refund or Write Off Request Type.....	1248
Deleting a Refund or Write Off Request Type.....	1251
Viewing the Refund or Write Off Request Type Details.....	1252

Searching Bills.....	1369
Adding Persons in a Hold Request.....	1370
Adding Accounts in a Hold Request.....	1370
Adding Bills in a Hold Request.....	1371
Adding Processes in a Hold Request.....	1371
Defining a Characteristic for a Hold Request.....	1372
Editing a Hold Request.....	1373
Editing Hold Request Entities.....	1375
Deleting Hold Request Entities.....	1377
Deleting a Hold Request.....	1377
Submitting a Hold Request.....	1378
Approving a Hold Request.....	1379
Releasing a Hold Request.....	1380
Rejecting a Hold Request.....	1381
Resubmitting a Hold Request.....	1383
Viewing the Log of a Hold Request.....	1383
Adding a Log Entry for a Hold Request.....	1384

Chapter XXII: Delinquency Central..... 1387

Prerequisites.....	1388
Delinquency Central (Used for Viewing).....	1388
Search Overdue Process.....	1388
Overdue Events.....	1393
Searching for an Overdue Process.....	1394
Viewing Events of an Overdue Process.....	1394
Viewing the Overdue Process Details.....	1395
Overdue Process Information for Account: {Account ID}.....	1395
Person Information.....	1396
Account Information.....	1396
Customer Contact Details.....	1396
Promise To Pay.....	1396
Hold Details.....	1397
Overdue Bills.....	1397
Payment Arrangement.....	1398
Search Bill.....	1398
Searching for a Bill.....	1399
Adding the Customer Contact Details.....	1400
Creating a Hold Request for an Overdue Process.....	1400
Creating a Payment Arrangement for an Overdue Process.....	1401
Defining a Promise To Pay for an Overdue Process.....	1401

Chapter XXIII: Upload Request.....	1403
Upload Request (Without Approval) Status Transition.....	1406
Upload Request (With Approval) Status Transition.....	1407
Prerequisites.....	1408
Algorithms Used in C1-BillCycleUpdateUpdReq.....	1409
Algorithms Used in C1-ContractRiderUpdateUpdReq.....	1414
Algorithms Used in C1-HoldUploadRequest.....	1419
Algorithms Used in C1-RefundUploadRequest.....	1426
Algorithms Used in C1-WriteOffUploadRequest.....	1430
Algorithms Used in C1-BillableChargeUploadRequest.....	1434

Payment Agreement Request - Bills.....	1570
Search Bills.....	1570
Payment Agreement Request - Log.....	1572
Payment Agreement Request Log.....	1572
Editing a Payment Agreement Request.....	1572
Deleting a Payment Agreement Request.....	1575
Submitting a Payment Agreement Request.....	1576
Removing an Overdue Bill from a Payment Agreement Request.....	1577
Approving a Payment Agreement Request.....	1577
Rejecting a Payment Agreement Request.....	1579
Resubmitting a Payment Agreement Request.....	1580
Filtering Overdue Bills of an Account.....	1581
Adding an Overdue Bill in a Payment Agreement Request.....	1582
Viewing the Log of a Payment Agreement Request.....	1583
Adding a Log Entry for a Payment Agreement Request.....	1584

Chapter XXVI: Inbound Message..... 1587

Customer Inbound Message.....	1588
Prerequisites.....	1588
Customer Inbound Message Status Transition through User Interface.....	1589
Customer Inbound Message Status Transition through a Batch Process.....	1590
Algorithms Used in C1-CustomerInboundMessage.....	1591
C1-AT-RQJ.....	1592
F1-AT-RQJ.....	1592
C1-CINMSGVAL.....	1592
C1-CINMSGPRC.....	1593
C1-TODORETRY.....	1602
C1-TDCRINMSG.....	1602
Customer Inbound Message XML Format.....	1603
Customer Inbound Message Schema.....	1620
Sample Customer Inbound Message.....	1623
Membership Inbound Message.....	1626
Prerequisites.....	1626
Membership Inbound Message Status Transition through User Interface.....	1627

Membership Inbound Message Status Transition through a Batch Process.....	1628
Algorithms Used in C1-MemberInboundMessage.....	1629
C1-AT-RQJ.....	1630
F1-AT-RQJ.....	1630
C1-INMEMEVAL.....	1630
C1-INMEMEPRC.....	1631
C1-TODORETRY.....	1638

Viewing the Log of a Membership.....	2020
Adding a Log Entry for a Membership.....	2020

Chapter XXVIII: Upload Lockbox Payment and Remittance Advices

Overview..... 2023

Prerequisites.....	2025
EDI 820 Flat File Description.....	2025
Sample EDI 820 Flat File.....	2027
Upload EDI 820 Files in ORMB.....	2030

Chapter XXIX: Deferred Revenue Recognition..... 2033

Prerequisites.....	2035
Deferred Revenue Recognition Status Transition.....	2035
Algorithms Used in Deferred Revenue Recognition.....	2037
Deferred Revenue Recognition Template (Used for Searching).....	2042
Search Deferred Revenue Recognition Template.....	2042
Searching for a Deferred Revenue Recognition Template.....	2043
Defining a Deferred Revenue Recognition Template.....	2044
Associating Algorithms with a Deferred Revenue Recognition Template.....	2046
Associating Deferred Revenue Recognition Template With A Division.....	2047
Defining a Characteristic for a Deferred Revenue Recognition Template.....	2048
Viewing the Deferred Revenue Recognition Template Details.....	2049
Deferred Revenue Recognition Template (Used for Viewing).....	2050
Deferred Revenue Recognition Template.....	2050
Editing a Deferred Revenue Recognition Template.....	2052
Deleting a Deferred Revenue Recognition Template.....	2053
Viewing the Deferred Revenue Recognition Template Details.....	2053
Deferred Revenue Recognition (Used for Searching).....	2054
Search Deferred Revenue Recognition.....	2054
Searching for a Deferred Revenue Recognition.....	2058
Viewing the Deferred Revenue Recognition Details.....	2059
Deferred Revenue Recognition (Used for Viewing).....	2060
Deferred Revenue Recognition - Main.....	2060
Deferred Revenue Recognition.....	2060
Associated Deferred Revenue Recognitions.....	2062
Recognition Schedule.....	2063
Revenue Recognition Items.....	2063
Deferred Revenue Recognition - Log.....	2063
Deferred Revenue Recognition Log.....	2063
Editing a Deferred Revenue Recognition.....	2064
Creating the Deferred Revenue Recognition Schedule.....	2065
Defining a Characteristic for a Deferred Revenue Recognition.....	2065
Adding Related Deferred Revenue Recognitions.....	2066
Editing the Deferred Revenue Recognition Schedule Details.....	2067
Viewing the Log of a Deferred Revenue Recognition.....	2068
Adding a Log Entry for a Deferred Revenue Recognition.....	2069

Chapter XXX: Reconciliation..... 2071

Reconciliation Status Transition.....	2074
Pay Instruction Status Transition.....	2075
Discrepancy Report Status Transition.....	2077
EDI 820 File Format For Reconciliation.....	2077
Sample EDI 820 File Format.....	2078
Algorithms Used in C1-MemberReconType.....	2079
C1-REOCNPEP.....	2079
Algorithms Used in C1-MemberReconciliation.....	2080
C1-RECONINFO.....	2081
C1-MRECONVAL.....	2081

Discrepancy Report - Log.....	2137
Discrepancy Report Log.....	2137
Editing a Discrepancy Line Item.....	2137
Deleting a Discrepancy Report.....	2139
Finalizing a Discrepancy Report.....	2139
Adding a Log Entry for a Discrepancy Report.....	2140
Viewing the Log of a Discrepancy Report.....	2140

Chapter XXXI: Self-Funded Pricing..... 2143

Prerequisites.....	2145
Approval Workflow for the Self-Funded Pricing Rules.....	2145
Line Item Extendable Lookup.....	2146
Extendable Lookup Search.....	2147
Searching for the Line Item Extendable Lookup.....	2148
Viewing the Values of the Line Item Extendable Lookup.....	2149

Extendable Lookup (Line Item).....	2149
Extendable Lookup Value List.....	2149
Extendable Lookup Value.....	2150
Defining a Line Item.....	2153
Associating a Line Item with a Pricing Rule Type Category.....	2155
Defining the Markup or Markdown Billing Information for the Line Items.....	2157
Defining Line Item Billing Information for the Line Items.....	2158
Defining the Claim Handling Fees Billing Information for the Line Items.....	2159
Editing a Line Item.....	2161
Copying a Line Item.....	2163
Deleting a Line Item.....	2166
Viewing the Line Item Details.....	2166
Claim Template Extendable Lookup.....	2167
Extendable Lookup Search.....	2168
Searching for the Claim Template Extendable Lookup.....	2169
Viewing the Values of the Claim Template Extendable Lookup.....	2169
Extendable Lookup (Claim Template).....	2170
Extendable Lookup Value List.....	2170
Extendable Lookup Value.....	2171
Defining a Claim Template.....	2174
Defining the Claim Handling Fees for Line Items in the Claim Template.....	2176
Defining the Default Markup or Markdown Values for Line Items in a Claim Template..	2178
Adding a Line Item in a Claim Template.....	2179
Editing a Claim Template.....	2182
Copying a Claim Template.....	2183
Deleting a Claim Template.....	2185
Viewing the Claim Template Details.....	2185
Rate Option Extendable Lookup.....	2186
Extendable Lookup Search.....	2187
Searching for the Rate Option Extendable Lookup.....	2188
Viewing the Values of the Rate Option Extendable Lookup.....	2188
Extendable Lookup (Rate Option).....	2189
Extendable Lookup Value List.....	2189
Extendable Lookup Value.....	2190
Defining a Rate Option.....	2192
Editing a Rate Option.....	2194
Copying a Rate Option.....	2197
Deleting a Rate Option.....	2200
Viewing the Rate Option Details.....	2200
Rate Type Extendable Lookup.....	2201
Extendable Lookup Search.....	2201
Searching for the Rate Type Extendable Lookup.....	2202
Viewing the Values of the Rate Type Extendable Lookup.....	2203
Extendable Lookup (Rate Type).....	2203
Extendable Lookup Value List.....	2203
Extendable Lookup Value.....	2204
Defining a Rate Type.....	2205
Editing a Rate Type.....	2207
Copying a Rate Type.....	2209

Viewing the Rate Type Details.....	2211
Pricing Group.....	2212
Viewing the Pricing Groups of a Bill Group.....	2212
Defining a Pricing Group for a Bill Group.....	2213
Editing a Pricing Group of a Bill Group.....	2216
Deleting a Pricing Group of a Bill Group.....	2219

Copying a Pricing Group of a Bill Group.....	2219
Pricing Rule Type.....	2222
Pricing Rule Type List.....	2223
Pricing Rule Type.....	2226
Claim Pricing.....	2234
Defining a Claim Pricing Rule Type.....	2235
Adding Related Pricing Rule Types in a Primary Pricing Rule Type.....	2238
Defining Transaction Field Mapping in a Primary Pricing Rule Type.....	2240
Associating Algorithms with a Pricing Rule Type.....	2246
Defining Additional Data for a Pricing Rule Type.....	2248
Adding Price Items in a Pricing Rule Type.....	2250
Adding a Price Item Parameter in a Pricing Rule Type.....	2253
Defining a Characteristic for a Pricing Rule Type.....	2255
Adding Claim Templates in a Claim Pricing Rule Type.....	2257
Adding the Claim-Specific Data in a Pricing Rule Type.....	2258
Adding Claim Handling Fees Indicator in a Claim Pricing Rule Type.....	2259
Editing a Claim Pricing Rule Type.....	2261
Deleting a Claim Pricing Rule Type.....	2263
Viewing the Claim Pricing Rule Type Details.....	2264
Defining a Claim Pricing Rule for a Parent Customer.....	2264
Defining the Markup or Markdown Values For Line Items in a Claim Pricing Rule.....	2267
Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule.....	2268
Defining a Characteristic for a Claim Pricing Rule.....	2270
Editing a Claim Pricing Rule of a Parent Customer.....	2271
Viewing a Claim Pricing Rule of a Parent Customer.....	2273
Deleting a Claim Pricing Rule of a Parent Customer.....	2274
Defining a Claim Pricing Rule for a Bill Group.....	2275
Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group.....	2278
Editing a Claim Pricing Rule of a Bill Group.....	2281
Viewing a Claim Pricing Rule of a Bill Group.....	2283
Deleting a Claim Pricing Rule of a Bill Group.....	2284
Specific Stop-Loss (SSL) Pricing.....	2284
Defining a Specific Stop-Loss (SSL) Pricing Rule Type.....	2287
Adding the SSL-Specific Data in a Pricing Rule Type.....	2290
Editing a Specific Stop-Loss (SSL) Pricing Rule Type.....	2292
Deleting a Specific Stop-Loss (SSL) Pricing Rule Type.....	2295
Viewing the Specific Stop-Loss (SSL) Pricing Rule Type Details.....	2295
Defining a Specific Stop-Loss Pricing Rule for a Parent Customer.....	2296
Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule.....	2299
Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule.....	2301
Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule.....	2302
Defining a Characteristic for a Specific Stop-Loss Pricing Rule.....	2303
Editing a Specific Stop-Loss Pricing Rule of a Parent Customer.....	2304
Viewing a Specific Stop-Loss Pricing Rule of a Parent Customer.....	2307
Deleting a Specific Stop-Loss Pricing Rule of a Parent Customer.....	2308
Defining a Specific Stop-Loss Pricing Rule for a Bill Group.....	2308
Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule.....	2311
Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule.....	2313
Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group.....	2315
Editing a Specific Stop-Loss Pricing Rule of a Bill Group.....	2318
Viewing a Specific Stop-Loss Pricing Rule of a Bill Group.....	2319
Deleting a Specific Stop-Loss Pricing Rule of a Bill Group.....	2320
Aggregate Stop-Loss (ASL) Pricing.....	2321
Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type.....	2323
Adding the ASL-Specific Data in a Pricing Rule Type.....	2326

Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type.....	2328
Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type.....	2331
Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details.....	2331
Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer.....	2332
Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule.....	2335
Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule.....	2338
Defining a Characteristic for an Aggregate Stop-Loss Pricing Rule.....	2339
Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	2340
Viewing an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	2343
Deleting an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	2343
Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group.....	2344
Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule.....	2347
Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule.....	2349
Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group...	2351
Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2354
Viewing an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2355
Deleting an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2356
Retention Type Claim Based Pricing.....	2357
Defining a Retention Type Claim Based Pricing Rule Type.....	2358
Adding Claim Based Disposition Details in a Pricing Rule Type.....	2361
Editing a Retention Type Claim Based Pricing Rule Type.....	2362
Deleting a Retention Type Claim Based Pricing Rule Type.....	2364
Viewing the Retention Type Claim Based Pricing Rule Type Details.....	2365
Defining a Retention Type Claim Based Pricing Rule for a Parent Customer.....	2366
Defining a Characteristic for a Retention Type Claim Based Pricing Rule.....	2369
Editing a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2370
Deleting a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2373
Defining a Retention Type Claim Based Pricing Rule for a Bill Group.....	2374
Defining a Characteristic for a Retention Type Claim Based Pricing Rule.....	2376
Editing a Retention Type Claim Based Pricing Rule of a Bill Group.....	2377
Deleting a Retention Type Claim Based Pricing Rule of a Bill Group.....	2380
Defining a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.....	2380
Defining a Characteristic for a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.....	2383
Viewing a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2384
Viewing a Retention Type Claim Based Pricing Rule of a Bill Group.....	2385
Retention Type Enrollment Based Pricing.....	2386
Defining a Retention Type Enrollment Based Pricing Rule Type.....	2387
Adding the Enrollment Specific Data in a Pricing Rule Type.....	2390
Editing a Retention Type Enrollment Based Pricing Rule Type.....	2391
Deleting a Retention Type Enrollment Based Pricing Rule Type.....	2393
Viewing the Retention Type Enrollment Based Pricing Rule Type Details.....	2394
Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer.....	2394
Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule.....	2397
Editing a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2398
Deleting a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2401
Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group.....	2401
Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule.....	2404
Editing a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	2405
Deleting a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	2408
Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.....	2409
Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.....	2412
Viewing a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2413

Viewing a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	2414
Flat Fee Pricing.....	2414
Defining a One-Time Flat Fee Pricing Rule Type.....	2416
Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type.....	2419
Editing a One-Time Flat Fee Pricing Rule Type.....	2420
Deleting a One-Time Flat Fee Pricing Rule Type.....	2423
Viewing the One-Time Flat Fee Pricing Rule Type Details.....	2424
Defining a One-Time Flat Fee Pricing Rule for a Bill Group.....	2424
Defining a Characteristic for a One-Time Flat Fee Pricing Rule.....	2427
Editing a One-Time Flat Fee Pricing Rule of a Bill Group.....	2428
Viewing a One-Time Flat Fee Pricing Rule of a Bill Group.....	2429
Deleting a One-Time Flat Fee Pricing Rule of a Bill Group.....	2430
Defining a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	2431
Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type.....	2434
Editing a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	2435
Deleting a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	2438
Viewing the Bill Period Based Recurring Flat Fee Pricing Rule Type Details.....	2439
Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group.....	2439
Defining a Characteristic for a Bill Period Based Recurring Flat Fee Pricing Rule.....	2442
Editing a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2443
Viewing a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2444
Deleting a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2445
Defining a Frequency Based Recurring Flat Fee Pricing Rule Type.....	2446
Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type.....	2449
Editing a Frequency Based Recurring Flat Fee Pricing Rule Type.....	2450
Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type.....	2453
Viewing the Frequency Based Recurring Flat Fee Pricing Rule Type Details.....	2453
Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group.....	2454
Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule.....	2456
Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2457
Viewing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2459
Deleting a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2460
Ancillary Pricing.....	2460
Defining an Ancillary Pricing Rule Type.....	2463
Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type.....	2468
Mapping the Transaction Field in an Ancillary Pricing Rule Type.....	2470
Associating an Algorithm with an Ancillary Pricing Rule Type.....	2474
Defining Additional Data in an Ancillary Pricing Rule Type.....	2477
Adding a Price Item in an Ancillary Pricing Rule Type.....	2480
Adding a Price Item Parameter in an Ancillary Pricing Rule Type.....	2483
Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type.....	2484
Defining Pricing Arrangements in an Ancillary Pricing Rule Type.....	2486
Defining a Characteristic for a Ancillary Pricing Rule Type.....	2487
Editing an Ancillary Pricing Rule Type.....	2488
Deleting an Ancillary Pricing Rule Type.....	2492
Viewing the Ancillary Pricing Rule Type Details.....	2493
Defining an Ancillary Pricing Rule for a Parent Customer.....	2493
Defining a Characteristic for an Ancillary Pricing Rule.....	2496

Chapter XXXII: Self-Funded Billing.....2623

Pre-requisites.....	2625
Bill Group Derivation and Pricing Parameters.....	2626
Related Pricing Rule Type Eligibility.....	2628
Price Item Eligibility.....	2630
Self-Funded Billing Process.....	2631
Transaction Aggregation.....	2631
Stop Loss Calculation.....	2636
Bill Generation.....	2636
Bill Group Derivation.....	2637
Account and Price Item Derivation (for the Claim Pricing Rule Type Category).....	2640
Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories).....	2645
Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category).....	2658
Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category).....	2670
Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category).....	2680
Bill After Date Determination.....	2689

Chapter XXXIII: Fully-Insured Pricing..... 2691

Age Based Pricing.....	2692
Defining an Age Based Pricing Rule Type.....	2694
Associating an Algorithm with an Age Based Pricing Rule Type.....	2697
Adding a Price Item in an Age Based Pricing Rule Type.....	2699
Adding a Price Item Parameter in an Age Based Pricing Rule Type.....	2702
Defining a Characteristic for an Age Based Pricing Rule Type.....	2703
Adding Elements for Audit in an Age Based Pricing Rule Type.....	2704
Defining Additional Data in an Age Based Pricing Rule Type.....	2705
Editing an Age Based Pricing Rule Type.....	2706
Deleting an Age Based Pricing Rule Type.....	2708
Viewing the Age Based Pricing Rule Type Details.....	2709
Tier Based Pricing.....	2709
Defining a Tier Based Pricing Rule Type.....	2711
Associating an Algorithm with a Tier Based Pricing Rule Type.....	2713
Adding a Price Item in a Tier Based Pricing Rule Type.....	2715
Adding a Price Item Parameter in a Tier Based Pricing Rule Type.....	2718
Defining a Characteristic for a Tier Based Pricing Rule Type.....	2719
Adding Elements for Audit in a Tier Based Pricing Rule Type.....	2720
Editing a Tier Based Pricing Rule Type.....	2721
Deleting a Tier Based Pricing Rule Type.....	2723
Viewing the Tier Based Pricing Rule Type Details.....	2723
Pass-Through Billable Charge.....	2724
Defining a Pass-Through Billable Charge Pricing Rule Type.....	2725
Associating an Algorithm with a Pass-Through Billable Charge Pricing Rule Type.....	2727
Adding a Price Item in a Pass-Through Billable Charge Pricing Rule Type.....	2729
Adding a Price Item Parameter in a Pass-Through Billable Charge Pricing Rule Type.....	2732
Defining a Characteristic for a Pass-Through Billable Charge Pricing Rule Type.....	2732
Editing a Pass-Through Billable Charge Pricing Rule Type.....	2733
Deleting a Pass-Through Billable Charge Pricing Rule Type.....	2735
Viewing the Pass-Through Billable Charge Pricing Rule Type Details.....	2736

Chapter XXXIV: Fully-Insured Group Billing..... 2739

Audit Framework for Fully-Insured Group Health Insurance Billing.....	2740
Age Based and Tier Based Pricing Rules Audit Process.....	2741
Membership Audit Process.....	2742
Person Audit Process.....	2748
Bill Group Derivation and Pricing Parameters Audit Process.....	2750
Bill Group Derivation for Membership.....	2753
Account and Price Item Derivation for Membership.....	2755
State of Issue.....	2756
Membership Premium Calculation.....	2757
C1-MembRepricing Inbound Web Service.....	2762
C1-MembRepricing Inbound Web Service Schema.....	2763
Membership Repricing Service XML Format.....	2765
Sample Read Request through C1-MembRepricing.....	2772
Sample Read Request Response through C1-MembRepricing.....	2772
Sample Add Request through C1-MembRepricing.....	2773
Sample Add Request Response through C1-MembRepricing.....	2775
Sample Edit Request through C1-MembRepricing.....	2778
Sample Edit Request Response through C1-MembRepricing.....	2779
Sample Premium Simulation Request through C1-MembRepricing.....	2782
Sample Premium Simulation Request Response through C1-MembRepricing.....	2783
Repricing.....	2786
Fully-Insured Group Billable Charge Creation.....	2788
Repricing Request.....	2790
Search Repricing Entity Detail Record.....	2790
Repricing Requests.....	2792
Timeline and Billable Charge Details.....	2793
Pricing Calculation Details.....	2794
Searching for a Repricing Entity Detail Record.....	2795
Viewing the Repricing Requests Created for a Repricing Entity Detail Record.....	2795
Viewing the Billable Charge Timeline Details of a Repricing Request.....	2796
Viewing the Pricing Calculation Details of a Timeline.....	2796

Chapter XXXV: Entity Audit.....2799

Audit Event Status Transition.....	2800
Prerequisites.....	2800
Entity Audit Process.....	2801
Audit Event Creation.....	2801
Audit Event Processing.....	2802
Algorithms Used in the Entity Audit Process.....	2802
C1-REAUDEVNT.....	2802
C1-AUDEVMPR.....	2803
Audit Event Type.....	2803
Audit Event Type List.....	2805
Audit Event Type.....	2806
Defining an Audit Event Type.....	2808
Associating an Algorithm with an Audit Event Type.....	2811
Adding an Element for Auditing in an Audit Event Type.....	2812
Defining a Characteristic for an Audit Event Type.....	2815
Editing an Audit Event Type.....	2816
Copying an Audit Event Type.....	2818
Deleting an Audit Event Type.....	2820
Viewing the Audit Event Type Details.....	2821

Audit Event (Used for Searching).....	2822
Search Audit Event.....	2822
Searching for an Audit Event.....	2825
Viewing the Audit Event Details.....	2825
Audit Event (Used for Viewing).....	2826
Audit Event - Main.....	2826
Audit Event.....	2826
Audit Event - Log.....	2828
Audit Event Log.....	2828
Canceling an Audit Event.....	2828
Viewing the Log of an Audit Event.....	2829

Chapter XXXVI: Off-Process Request.....2831

Prerequisites.....	2834
Off-Process Request (Without Approval) Status Transition.....	2834
Off-Process Request (With Approval) Status Transition.....	2834
Algorithms Used in C1-OffProcessRequest.....	2835
Off-Process Request Type.....	2835
Off-Process Request Type List.....	2836
Off-Process Request Type.....	2836
Defining an Off-Process Request Type.....	2839
Adding the Accumulation Amendment Details in an Off-Process Request Type.....	2841
Defining a Characteristic for an Off-Process Request Type.....	2843
Editing an Off-Process Request Type.....	2844
Deleting an Off-Process Request Type.....	2846
Copying an Off-Process Request Type.....	2847
Viewing the Off-Process Request Type Details.....	2850
Off-Process Request (Used for Searching).....	2850
Search Off-Process Request.....	2850
Searching for an Off-Process Request.....	2853
Defining an Off-Process Request.....	2853
Viewing the Off-Process Request Details of an Off-Process Request.....	2855
Off-Process Request (Used for Viewing).....	2856
Off-Process Request - Main.....	2856
Off-Process Request.....	2856
Off-Process Request Details.....	2858
Off-Process Request Error Message.....	2860
Off-Process Request - Log.....	2860
Off-Process Request Log.....	2860
Viewing the Error Message of an Off-Process Request.....	2861
Adding the Off-Process Request Details in an Off-Process Request.....	2862
Defining a Characteristic for an Off-Process Request.....	2865
Editing an Off-Process Request.....	2865
Deleting an Off-Process Request.....	2866
Submitting an Off-Process Request.....	2867
Approving an Off-Process Request.....	2868
Rejecting an Off-Process Request.....	2869
Viewing the Log of an Off-Process Request.....	2871
Adding a Log Entry for an Off-Process Request.....	2871

Chapter XXXVII: Invoice Request.....2873

Prerequisites.....	2876
Types of Invoice Request.....	2876
Manual Regular Bill Generation Invoice Request.....	2876

Manual Trial Bill Generation Invoice Request.....	2878
Automatic Regular Bill Generation Invoice Request.....	2878
Invoice Request Manual Trial Bill Generation (Without Approval) Status Transition.....	2879
Invoice Request Manual Regular Bill Generation (Without Approval) Status Transition.....	2883
Invoice Request Manual Regular Bill Generation (With Approval) Status Transition.....	2889
Invoice Request Automatic Regular Bill Generation (Without Approval) Status Transition.....	2894
Invoice Request Type.....	2897
Invoice Request Type List.....	2897
Invoice Request Type.....	2898
Defining an Invoice Request Type.....	2901
Defining a Characteristic for an Invoice Request Type.....	2906
Editing an Invoice Request Type.....	2907
Deleting an Invoice Request Type.....	2911
Copying an Invoice Request Type.....	2911
Viewing the Invoice Request Type Details.....	2916
Invoice Request (Used for Searching).....	2916
Search Invoice Request.....	2916
Searching for an Invoice Request.....	2920
Manually Creating an Invoice Request.....	2921
Viewing the Invoice Request Details.....	2923
Invoice Request (Used for Viewing).....	2923
Invoice Request - Main.....	2924
Invoice Request.....	2924
Invoice Request Details/Account List.....	2927
Excluded Accounts.....	2928
Invoice Request - Log.....	2929
Invoice Request Log.....	2929
Editing an Invoice Request.....	2930
Defining a Characteristic for an Invoice Request.....	2931
Deleting an Invoice Request.....	2932
Canceling an Invoice Request.....	2933
Submitting an Invoice Request.....	2934
Approving an Invoice Request.....	2935
Rejecting an Invoice Request.....	2936
Requesting to Resubmit an Invoice Request.....	2938
Viewing the Log of an Invoice Request.....	2939
Adding a Log Entry for an Invoice Request.....	2939

Appendix A: Most Commonly Used Tasks..... 2941

Changing the Layout.....	2942
Adding a Column to the Zone.....	2942
Rearranging Columns in the Zone.....	2942
Removing a Column from the Zone.....	2942

Appendix B: Administration.....2945

UI Maps.....	2946
Creating Display UI Map for an Approval Workflow Group.....	2946
Creating Input UI Map for an Approval Workflow Group.....	2947
Feature Configurations.....	2948
Setting the C1_ACCTINFO Feature Configuration.....	2948
Setting the C1-ASOBLLNG Feature Configuration.....	2949
Setting the C1_AXENTITY Feature Configuration.....	2964
Setting the C1-BILLADJSQ Feature Configuration.....	2967
Setting the C1-BILLCYCLE Feature Configuration.....	2968

Setting the C1_CMO Feature Configuration.....	2969
Setting the C1_DIVFUNCT Feature Configuration.....	2971
Setting the C1-EHRCONFIG Feature Configuration.....	2971
Setting the C1_EXCHRATE Feature Configuration.....	2972
Setting the C1_EXP_OVRD Feature Configuration.....	2973
Setting the C1_FINTRANOP Feature Configuration.....	2974
Setting the C1_FM Feature Configuration.....	2977
Setting the C1-OFFSETREQ Feature Configuration.....	2983
Setting the C1-PAYPORTAL Feature Configuration.....	2984
Setting the C1_PER_REL Feature Configuration.....	2986
Setting the C1_PERSTYPE Feature Configuration.....	2987
Setting the C1_PPARAM_FLG Feature Configuration.....	2988
Setting the C1_PR_REC Feature Configuration.....	2988
Setting the C1_PRASNORDR Feature Configuration.....	2989
Setting the C1_PRICING Feature Configuration.....	2990
Setting the C1-PYREQSRT Feature Configuration.....	2992
Setting the C1_RLENG Feature Configuration.....	2993
Setting the C1-TXNDMYID Feature Configuration.....	2994

About this Document

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the Health Insurance domain. It describes all screens related to these features and explains how to perform various tasks through these screens.

Intended Audience

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

Organization of the Document

Each insurance feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Self-Funded Customer Management	Explains how to create customers and accounts for billing the self-funded plans.
Chapter 2	Fully-Insured Group Customer Management	Explains how to create customers and accounts for billing the fully-insured group health plans.
Chapter 3	Customer Registration	Describes how to create a person, account, policy, and policy plan through a customer registration object.
Chapter 4	Customer 360° View	Explains how to view in-depth information about the person, account, or policy in the Customer 360° View screen. It explains how to create sort records for bill groups and derivation and pricing parameters for bill groups. It explains how to view the pricing rules of a parent customer and the pricing rules defined for a policy of a bill group. It also explains how to define, edit, and delete the different types of pricing rules of a parent customer and bill group. In addition, it explains how to view the detailed information about the bill.
Chapter 5	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, tiering criterion, variance parameter, and person to person relationship type sequence. It also explains how to define pricing for a price item, how to assign a price item to a person, account, or price list, and how to assign a price list to a person or account.
Chapter 6	Division	Describes the different types of division. It also explains how to define a division.

Chapter Number	Chapter Name	Chapter Description
Chapter 7	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 8	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 9	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 10	Transaction Feed Management	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 11	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 12	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund adjustments when the review comments are received from the auto clearing house.
Chapter 13	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.
Chapter 14	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 15	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 16	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 17	Account Receivable Central	Explains how to use the Account Receivable Central screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 18	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 19	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 20	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 21	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 22	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the Delinquency Central screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.
Chapter 23	Upload Request	Explains how to do the following through an upload request: <ul style="list-style-type: none"> • Update bill cycle of accounts • Update contract riders in contracts • Create hold requests, refund requests, write off requests, or billable charges • Reinstate the policies • Create sort records for bill groups • Create derivation and pricing parameters for bill groups
Chapter 24	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the GL Accounting Template feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 25	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 26	Inbound Message	Explains how to create the customer and membership inbound messages through the web services. It explains the XML format in which the customer and membership data should be available while calling the respective web service. It also explains how to create the inbound message types and how to process the inbound messages in the system.
Chapter 27	Health Insurance Policy	Describes the fully-insured and self-funded policies and their lifecycle. Explains how to create the policy types, policy person roles, contract relationship types, and source systems in the system. It explains how to create the fully-insured group policies, plans, and memberships in the system. It also explains how to create the self-funded policies in the system.
Chapter 28	Upload Lockbox Payment and Remittance Advices	Explains how to upload lockbox payment and remittance advices received in the Electronic Data Exchange (EDI) 820 format. It also explains the format in which EDI 820 flat file should be uploaded in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 29	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 30	Reconciliation	Describes how to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. It explains the CSV and EDI 820 file formats in which you can upload the pay instructions. It also explains how to create reconciliation types, reconciliations, discrepancy report types, and discrepancy reports in the system.
Chapter 31	Self-Funded Pricing	Explains how to create the following in the system: <ul style="list-style-type: none"> • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, One-Time Flat Fees, Bill Period Based Recurring Flat Fees, Frequency Based Recurring Flat Fees, Ancillary, Discount, and Level-Funding pricing rule types • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Ancillary, and Level-Funding pricing rules for the parent customers and the policies of the bill groups • One-Time Flat Fees, Bill Period Based Recurring Flat Fees, and Frequency Based Recurring Flat Fees pricing rules for the policies of the bill groups • Discount pricing rules for the parent customers
Chapter 32	Self-Funded Billing	Explains the billing process for the self-funded plans.
Chapter 33	Fully-Insured Pricing	Explains how to create the following in the system: <ul style="list-style-type: none"> • Age Based, Tier Based, and Pass-Through Billable Charge pricing rule types • Age Based and Tier Based pricing rules for the fully-insured group policy plans
Chapter 34	Fully-Insured Group Billing	Explains how the system creates the fully-insured pass-through billable charges.
Chapter 35	Entity Audit	Explains how to use the entity audit framework to track various actions, such as add, update, and delete for an entity.
Chapter 36	Off-Process Request	Describes how to amend the agreed limits, funds, or calculated amounts of the accumulation products within the policy period through an off-process request. It explains how to create the off-process request types and off-process requests in the system.
Chapter 37	Invoice Request	Describes how to create adhoc regular and trial bills for an account through an invoice request. It explains how to create the invoice request types and invoice requests in the system.

Chapter Number	Chapter Name	Chapter Description
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

Conventions

The following conventions are used across this document:

Convention	Meaning
boldface	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
<i>italic</i>	Italic indicates a document or book title.
Monospace	Monospace indicates information that an end-user needs to enter in the application.

Related Documents

Document Name	Description
<i>Oracle Revenue Management and Billing Version 2.9.0.0.0 Release Notes</i>	Provides a brief description about the new features, enhancements, UI and database level changes, supported platforms, framework upgrade, supported upgrades, and technology upgrade made in this release. It also highlights the discontinued features, bug fixes, and known issues in this release.
<i>Oracle Utilities Application Framework Business Process Guide</i>	Explains how to get acquainted with the user interface. It explains the different types of pages or portals that you may come across in the application. It describes how to set the user preferences and how to create, manage, assign, and complete a To Do in the application. It also explains how to submit reports and view historic reports in the application.
<i>Oracle Utilities Application Framework Administrative Guide</i>	Lists and describes various features, options, and tools available in Oracle Utilities Application Framework (OUAF). It also explains how to implement the business requirements using these features, options, and tools in Oracle Revenue Management and Billing.
<i>Oracle Revenue Management and Billing Business Process Guide</i>	Lists and describes various features available in the system which can be used in both the financial services and insurance domains.
<i>Oracle Revenue Management and Billing Administrative Guide</i>	Lists and describes the various feature-specific options that the system administrator or the implementation team has to configure in order to use the system.
<i>ORMB - Transaction Feed Management - Batch Execution Guide</i>	Describes the sequence in which the batches must be executed while performing various tasks in the Transaction Feed Management module.

Document Name	Description
<i>Oracle Revenue Management and Billing Batch Guide</i>	Lists and describes various ORMB batches.

Chapter 1

Self-Funded Customer Management

Topics:

- [Self-Funded Entities](#)

Self-funded health insurance, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. In self-funded health plan, employers (usually larger) operate their own health plan. However, in the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk in the event that more claims than expected must be paid.

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

The system enables you to create customers and accounts for the self-funded health insurance business. This chapter explains how to create different entities involved in the self-funded health insurance business.

Pricing Rules	Pricing Rules on page 57
Price Assignments	Price Assignments on page 58

Parent Customer

The self-funded employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The claim, enrollment, and ancillary transactions of the employees are billed to a bill group. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the claim, enrollment, and ancillary charges should be billed in the system. The derived bill group is also used for billing the claim based fees, specific stop-loss credits, aggregate stop-loss credits, discount, and level-funding charges.

You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. self-funded employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

Related Topics

For more information on...	See...
Bill Group Derivation and Pricing Parameters	Bill Group Derivation and Pricing Parameters on page 2626
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 2949

Bill Group's Account

The claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level-funding charges are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level-funding charges can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, standard and retention) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2

Price Item	Priority	Invoice Type	Account
	20	Standard	A1

Now, when a claim transaction is mapped to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, when a claim transaction is mapped to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority only when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration is set to **C1INVTYP**.

Related Topics

For more information on...	See...
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 2949

Self-Funded Policy

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. You can create a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

Price Items

Each service offered in the self-funded plan should be defined as a price item in the system. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

You can define a price item and associate the required parameters with the price item from the user interface. You can use the price item parameters for defining multi parameter based pricing or for aggregating the transactions.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the self-funded plan from the user interface:

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Claim	Claim	CLAIM
Retention Type Claim Based	Retention Type Claim Based	RETCLMBSD
Discount Share	Discount Arrangement	DISSHARE
Discount Guarantee	Discount Arrangement	DISGUAR

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
One-Time Flat Fees	Flat Fees	ONETIMEFLATFEES
Bill Period Based Recurring Flat Fees	Flat Fees	RECFLATFEES_BP
Frequency Based Recurring Flat Fees	Flat Fees	RECFLATFEES_FREQ
Retention Type Enrollment Based	Retention Type Enrollment Based	RETENRLBSD
Ancillary	Ancillary	ANCILLARY
Specific Stop-Loss	Specific Stop-Loss	SSL
Aggregate Stop-Loss	Aggregate Stop-Loss	ASL
Enrollment Based Premium	Level Funded	LVLLENRLPRE
Flat Rate Based Premium	Level Funded	LVLFLATPRE

Pricing Rules

The self-funded plan may offer various services to the employer, such as claim administration, reinsurance or stop-loss, discount or level funding arrangement, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the self-funded plan. The below table lists the pricing rules which you can define for the following services offered in the self-funded plan:

Service	Pricing Rule	Created for....
Claim Administration	Claim	Parent Customer
Claim Administration	Claim	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Retention Type Claim Based	Parent Customer
Claim Administration	Retention Type Claim Based	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Discount Share	Parent Customer
Claim Administration	Discount Guarantee	Parent Customer
Claim Administration	One-Time Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Bill Period Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Frequency Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Enrollment	Retention Type Enrollment Based	Parent Customer
Enrollment	Retention Type Enrollment Based	Bill Group's Policy where the Parent Customer is the Policy Holder
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Parent Customer

Service	Pricing Rule	Created for....
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Specific Stop-Loss	Parent Customer
Stop-Loss	Specific Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Aggregate Stop-Loss	Parent Customer
Stop-Loss	Aggregate Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Enrollment Based Premium	Parent Customer
Level Funding Arrangement	Enrollment Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Flat Rate Based Premium	Parent Customer
Level Funding Arrangement	Flat Rate Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder

You can create the above mentioned self-funded pricing rules for a parent customer or for the policy of the bill group from the user interface and not through a health care inbound message.

The system creates a price assignment for each pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system first searches for the pricing rule of a price item (i.e. service) at the bill group level. If the effective pricing rule for a price item is available at the bill group level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group level, the system searches for the pricing rule of a price item at the parent customer level. If the effective pricing rule for a price item is available at the parent customer level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group or parent customer level, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each self-funded pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system automatically creates a price assignment whenever you create a self-funded pricing rule. The system creates the price assignment in a price list and assigns the price list to the parent customer or bill group. The system creates multiple price assignments when you define a pricing rule for a policy of a bill group using a pricing group.

Pricing Group	Pricing Group on page 2212

Chapter 2

Fully-Insured Group Customer Management

Topics:

- [Fully-Insured Entities](#)

A fully-insured group health plan is the traditional way to structure an employer-sponsored health plan. In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year, based on the number of employees enrolled in the plan each month. The monthly premium changes during the year when the number of enrolled employees in the plan changes. The insurance carrier collects the premiums and pays the health insurance claims based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

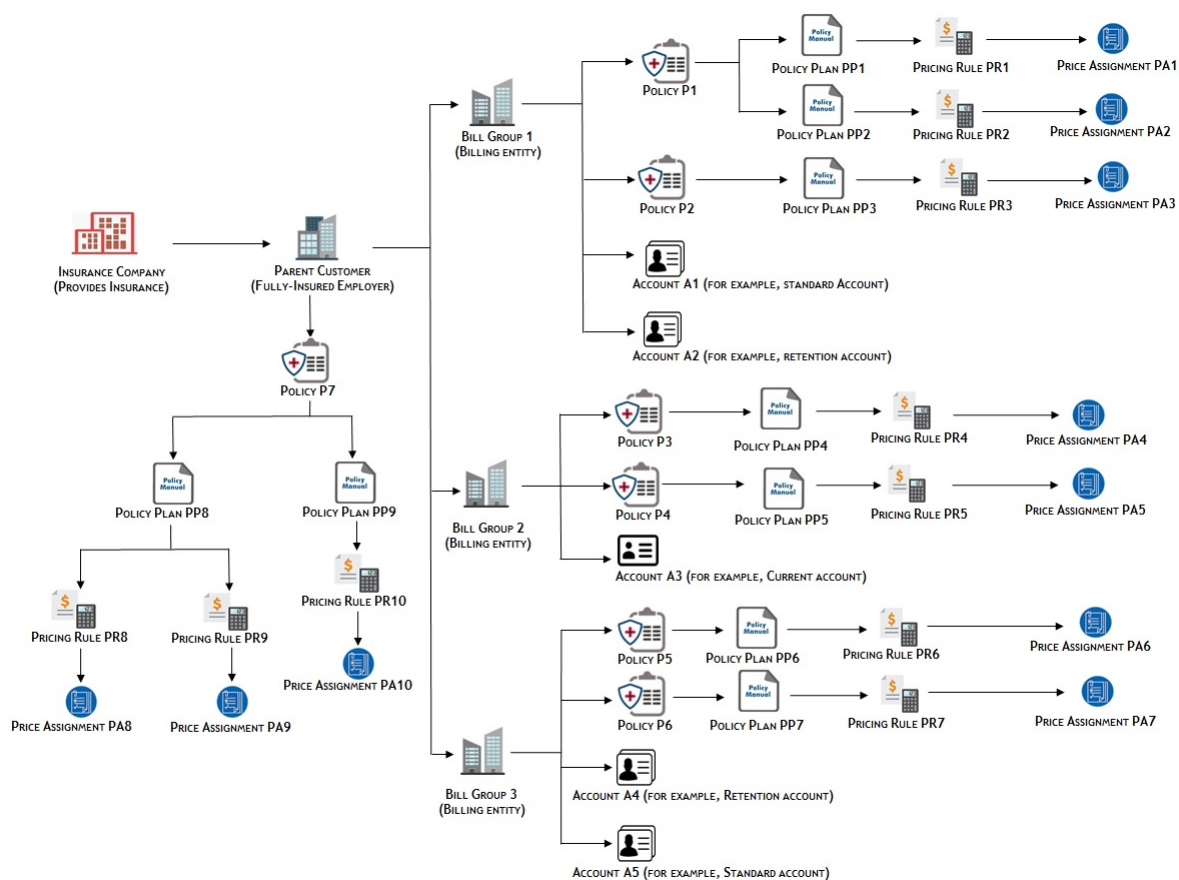

The system enables you to create customers and accounts for the fully-insured group health insurance business. This chapter explains how to create different entities involved in the fully-insured group health insurance business.

Pricing Rules	Pricing Rules on page 63
Price Assignments	Price Assignments on page 63

Parent Customer

The fully-insured employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The membership premium of the employees are billed to a bill group. Each bill group will handle the membership premium of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the membership premium should be billed in the system. You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. fully-insured employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

Related Topics

For more information on...	See...
Bill Group Derivation and Pricing Parameters	Bill Group Derivation and Pricing Parameters on page 2626
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 2949

Bill Group's Account

The membership premium of employees are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the charges for one or more membership and price item combinations can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, MEDCARE1 and MEDCARE2) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	MEDCARE1	A1
	20	MEDCARE2	A2
P2	10	MEDCARE2	A2
	20	MEDCARE1	A1

Now, when the effective pricing rule is derived for P1 on the policy plan, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** exists for the bill group. If so, it considers the account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** does not exist for the bill group, the system checks whether an account where the **Invoice**

Type (C1INVTYP) characteristic type is set to **MEDCARE2** exists for the bill group. If so, it considers the account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE2** does not exist for the bill group, the status of the record in the **CI_REPRC_ENTITY_DTL** table is set to **Error (E)**.

Similarly, when the effective pricing rule is derived for P2 on the policy plan, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority only when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration is set to **C1INVTYP**.

Related Topics

For more information on...	See...
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 2949

Fully-Insured Group Policy

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group**. You can create a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

Policy Plans

A fully-insured group policy may cover various plans for medical, dental, or disability benefits. You can subscribe a person for one or more policy plans within or across policies. The system creates one membership for each person who is subscribed to the policy plan. You can then add dependent members in each membership whenever required.

While creating a policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received in a membership inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can only associate a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**. If you associate an age based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the membership premium is calculated for eligible members. If you associate a tier based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the premium is calculated for membership. However, if you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer the pass-through billable charge pricing rule type which is associated with the policy plan.

Price Items

Each service offered in the fully-insured group health plan should be defined as a price item in the system. You can define a price item from the user interface. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the fully-insured group health plan through a health care inbound message:

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Age Based	Age Based	AGE_BASED
Tier Based	Tier Based	TIER_BASED
Pass-Through Billable Charge	Pass-Through Billable Charge	FI_PASSTBC

Note: You cannot define a pricing rule using a pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**.

Pricing Rules

The fully-insured group health plan may offer various services to the employer, such as medical insurance, dental insurance, vision care, life insurance, short-term and long-term disability benefits, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the fully-insured group health plan. The below table lists the pricing rules which you can define for the following services offered in the fully-insured group health plan:

Service	Pricing Rule	Created for....
Medical Insurance, Dental Insurance, Vision Care, Life Insurance, Short-Term and Long-Term Disability Benefits, etc.	Age Based	Fully-Insured Group Policy Plan
	Tier Based	Fully-Insured Group Policy Plan

You can create the above mentioned pricing rules for the fully-insured group policy plans through a health care inbound message and not from the user interface. The system creates a price assignment for each pricing rule. In the age based pricing rules, you can define different premium fee for employees who belong different age band. You can also offer different premium fee for the employees with the same age band, but with the different set of attributes. The system also enables you to charge additional fee for the eligible member based on certain modifiers. For example, you can charge additional fee when the eligible member is alcoholic and/or consumes tobacco. However, in the tier based pricing rules, you can define different premium fee for employees who belong to different membership tier, such as Employee (E), Employee + Spouse (ES), Employee + Spouse + Children (F), and so on.

The system searches for the pricing rule of a price item (i.e. service) on the policy plan to which the membership belongs. If the effective pricing rule for a price item is not available on the policy plan, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each fully-insured pricing rule. If different premium fee is defined for employees with different set of employee attributes, then the system creates a separate price component for each set of employee attributes. If the modifiers are used in the age based pricing rule, the system creates a price component for each modifier. In the price component, the age band or tier band parameter, the employee attributes, and modifiers are used to define the pricing eligibility criteria. Once the age based or tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list, and then assigns the price item pricing to the price list.

Chapter

3

Customer Registration

Topics:

- [Customer Registration \(Without Approval\) Status Transition](#)
- [Customer Registration \(With Approval\) Status Transition](#)
- [Customer Registration Template](#)
- [Customer Registration Type](#)
- [Customer Registration \(Used for Searching\)](#)
- [Customer Registration \(Used for Viewing\)](#)

Until now, you were able to create person, account, policy, and policy plan from the different screens. Now, ORMB provides the ability to create a person, multiple accounts for the person, multiple policies for the person, and multiple policy plans for the policy from the same user interface. A new object named **Customer Registration** is introduced in this release. Through a customer registration object, you can create person, accounts, policies, and policy plans at the same time from the same interface. Before creating a customer registration object, you need to create the following:

- Customer Registration Template
- Customer Registration Type

While creating a customer registration object, you need to specify the following:

- A customer registration type using which the customer registration object should be created
- A source system from the customer information is received
- A type of person that you want to create through the customer registration object

Once you specify the above details, the **Customer Registration** screen appears with a set of pages and sections which are added in the respective person template. The default values for the fields, characteristic types, identifier types, and phone types are shown as specified in the person template. In addition, the field values, characteristic types, characteristic values, identifier types, identifier values, phone types, and phone numbers are disabled as specified in the person template. On the Accounts page, you can view one row for each account template which is added in the customer registration type. You can then edit the row and thereby create an account for the person. You can create multiple accounts for the person using the same or different template.

Note:

You cannot create sort records and derivation and pricing parameters for the bill group from the **Customer Registrations** screen. You can only create these from the **Customer 360° Information** screen or using the health care inbound message.

The system creates effective dated address using the address business object which is specified in the customer registration type. By default, the account override address is effective from the date when the customer registration object is created in the system.

On the **Policies** page, you can view one row for each policy template which is added in the customer registration type. You can then edit the row and thereby

create a policy for the person. You can create multiple policies for the person using the same or different template. On clicking the **Add** icon corresponding to the policy row, you can view one row for each policy plan template which is added in the customer registration type. You can then edit the row and thereby create a policy plan for the policy.

On clicking the **View/Edit** icon or the **Add New Account** button in the **Accounts** page, the **Customer Registration - Add Account** screen appears with a set of pages and sections which are added in the respective account template. The default values for the fields, characteristic types, and identifier types are shown as specified in the account template. In addition, the field values, characteristic types, characteristic values, identifier types, and identifier values are disabled as specified in the account template.

On clicking the **View/Edit** icon or the **Add New Policy** button in the **Policies** page, you need to specify a policy type. The policy type indicates the category to which the policy belongs (i.e. whether it is Self Funded, Fully-Insured Group, or Fully-Insured Individual) and the policy business object using which the policy should be created. Once you specify a policy type, the **Policy** screen appears with a set of sections which are added in the respective policy template. The default values for the fields and characteristic types are shown as specified in the policy template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy template. You can create one or more policies for the person using the same or different policy type.

On clicking the **View/Edit** icon or the **Add New Plan** button corresponding to a policy plan row in the **Policies** page, the **Plan** screen appears with a set of sections which are added in the respective policy plan template. The default values for the fields and characteristic types are shown as specified in the policy plan template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy plan template.

You can save the person, account, policy, and policy plan details as and when you are entering the data by clicking the **Save as Draft** button. On clicking the **Save as Draft** button, the system creates a customer registration object in the Draft status. The status of the policies which are created through the customer registration object is set to Pending. Once the person, account, policy, and policy plan details are specified, you can click the **Validate and Save** button. The system then validates the information. You can edit, delete, or submit a customer registration object when it is in the **Draft** status. On submitting a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	Status
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

You can optionally configure the approval process for the customer registration. If the **Approval Required** option is selected in the customer registration type, the status of the customer registration object is changed to **Approval In Progress** on submitting it. A To Do using the approval To Do type is created and assigned to the users with the approval To Do role. The approver can

then review the customer registration object and accordingly approve, reject, or request the submitter to resubmit the customer registration object for approval. On approving a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	Status
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

If the approver rejects a customer registration object due to some reason, the status of the customer registration object is changed to **Rejected**. However, if the approver requests the submitter to resubmit a customer registration object for approval after making the required changes, the status of the customer registration object is changed to **Draft**. The submitter can then make the required changes and resubmit the customer registration object for approval.

The system provides the following two options while defining a customer registration type:

- Manual Billing Hierarchy and Pricing**- Used when you want to inform the user to create the billing hierarchy and pricing for the parent customer manually. In other words, you want the user to create the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters. If this option is selected, a To Do is created using the **Billing Hierarchy and Pricing To Do** type and assigned to the users with the **Billing Hierarchy and Pricing To Do** role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the billing hierarchy and pricing is created for the parent customer, the user must complete the corresponding To Do which is created using the **Billing Hierarchy and Pricing To Do** type. On executing the **Customer Registration Monitor (C1-CUSRG)** batch, the system considers all customer registration objects which are in the **Parent Customer Approved** or **Pending Pricing Correction** status. It checks whether the corresponding To Do (if any) created using the **Billing Hierarchy and Pricing To Do** type is completed. If so, it changes the status of the customer registration object to the following depending on whether the **Final Approval Required** option is selected:

Final Approval Required (Yes or No)	Status
Yes	Pending Final Approval
No	Complete

- Final Approval Required**- Used to indicate whether the final approval is required once the approver at the first level approves the customer registration object. Ideally, the final approval is required when the **Manual Billing Hierarchy and Pricing** option is selected. This ensures that the information related to the following entities is created and verified before the customer registration object moves to the **Complete** status:
 - Bill Group

- Bill Group's Accounts
- Bill Group's Sorting Records
- Bill Group's Derivation and Pricing Parameters
- Pricing Rules for the Policy Plans

If this option is selected, a To Do is created using the **Final Approval To Do** type and assigned to the users with the **Final Approval To Do** role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the user with the **Final Approval To Do** role approves the customer registration object, the status of the customer registration object is changed to **Complete**.

If the approver requests the submitter to resubmit a customer registration object for approval, the status of the customer registration object is changed to **Pending Pricing Correction**.

Note: The system enables you to create maximum 10 accounts and 5 policies for a person and maximum 10 policy plans for a policy through a customer registration object from the user interface.

Once the status of a customer registration object is changed to **Complete** or **Bill Group Approved**, the system changes the status of the policies created through the customer registration object to **In Force/Active**. In addition, the status of the pricing rules which are created for such policies' policy plans is set to **Active**.

You can also create a customer registration object using the **File Upload Interface** utility through an inbound message. On creating an inbound message using the **File Upload Interface** utility, the status of the inbound message is set to **Pending**. Once the inbound message is processed, a customer registration object is created in the following status depending on the person type:

Person Type	Status
Parent Customer	Complete
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

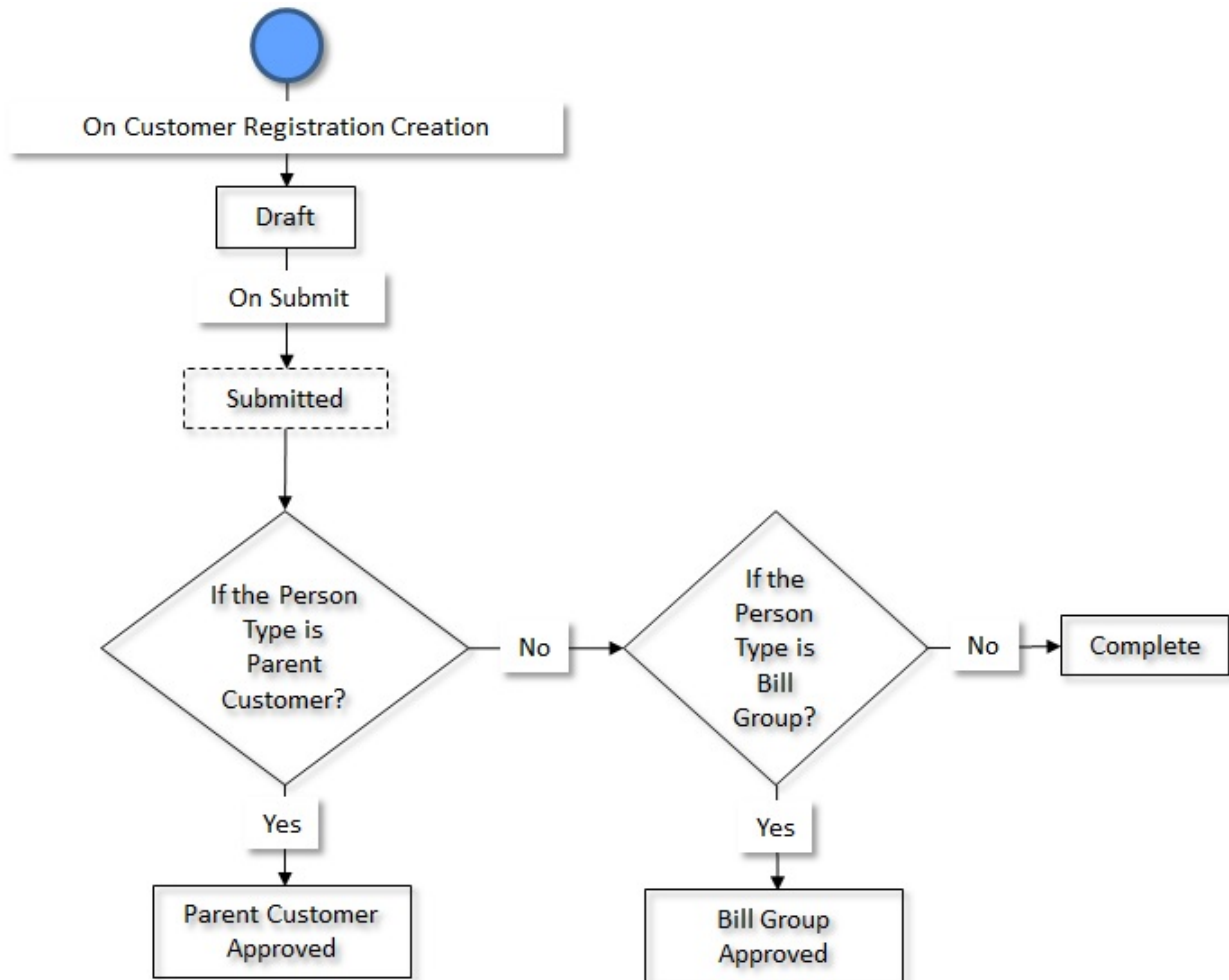

Note: The above status transition is mentioned based on the assumption that the data uploaded through the **File Upload Interface** utility will be pre-approved and does not require any approval in the system.

At present, only the XML format is supported for creating a customer registration object using the File Upload Interface utility through an inbound message. To implement the Customer Registration feature, the following new screens are introduced in this release:

- Customer Registration Template
- Customer Registration Type
- Customer Registration

Customer Registration (Without Approval) Status Transition

The following figure graphically indicates how a customer registration moves from one status to another when the approval process is not configured in the respective customer registration type:

Customer Registration (With Approval) Status Transition

The following figure graphically indicates how a customer registration moves from one status to another when the approval process is configured in the respective customer registration type:

Customer Registration Template

A customer registration template encapsulates the following information:

- List of pages that should appear when you create a person, account, policy, or policy plan using the respective customer registration template
- List of sections that should appear in each page
- Field or characteristic attributes, such as:
 - Default value for a field or characteristic type
 - Default value for a person or account identifier type or phone type
 - Primary identifier type for a person or account
 - Mandatory field in each section
 - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person, account, policy and policy plan. Depending on whether you are creating a customer registration template for person, account, policy or policy plan, you can include the following pages and define field or characteristic attributes for the following sections:

Template Category	Template Page	Template Section
Person	Main	Person Main
		Person Names
		Person Identifiers
		Person Phones
	Contact Information	Person Address
		Person Email
	Accounts	-
	Person Hierarchy	Person Hierarchy – Main
		Person Hierarchy – Characteristics
	Person Characteristics	Person Characteristics
	Policies	Policies
		Parent Policies
	Registration Characteristics	Customer Registration Characteristics
Account	Main	Account Information

Template Category	Template Page	Template Section
		Account Identifiers
	Auto Pay	Account Autopay
	Persons	Main
		Account Address Override Information
	Bill Routing	
Account Characteristics	Account Characteristics	
Policy	Policy – Main	Policy Main
		Policy Persons
		Policy Characteristics
Policy Plan	Plan	Plan - Main
		Plan - Characteristics

Search Customer Registration Template

The **Search Customer Registration Template** zone allows you to search for a customer registration template using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for customer registration templates using the banking template or the healthcare template details. The valid values are:</p> <ul style="list-style-type: none"> • Banking Template - Used to indicate whether you want to search for customer registration templates created using the C1-CustomerRegistrationTmplBK business object. • Healthcare Template - Used to indicate whether you want to search for customer registration templates created using the C1-CustomerRegistrationTmplHC business object. <p>Note: By default, the Banking Template option is selected.</p>	Yes
Template	Used to search for a particular template.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search for customer registration templates having a particular description.	No
Template Category	Used to search for customer registration templates which belong to a particular category. The valid values are: <ul style="list-style-type: none"> Account Person Policy Policy Plan 	No
	Note: The Policy and Policy Plan options appear only when you select the Healthcare Template option from the Search By list.	

Note: You must specify at least one search criterion while searching for a customer registration template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the customer registration template.
Description	Displays the description of the customer registration template.
Template Category	Displays the category to which the customer registration template belongs. The valid values are: <ul style="list-style-type: none"> Account Person Policy Policy Plan
Edit	On clicking the Edit (✎) icon, the Customer Registration Template screen appears where you can edit the details of the customer registration template.
Duplicate	On clicking the Duplicate (📄) icon, the Customer Registration Template screen appears where you can define a new customer registration template using an existing customer registration template.
Delete	On clicking the Delete (🗑) icon, you can delete the customer registration template. <p>Note: You can delete a customer registration template only when a customer registration is not yet defined using the customer registration template.</p>

On clicking the **Broadcast** (📡) icon corresponding to a customer registration template, the **Customer Registration Template** zone appears with the details of the respective customer registration template.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Template

The **Customer Registration Template** zone displays the details of the customer registration template. It also allows you to edit, copy, and delete the customer registration template. It contains the following sections

- **Main** - Displays the basic information about the customer registration template. It contains the following fields:

Field Name	Field Description
Template	Displays the customer registration template.
Template Category	Indicates the category for which the customer registration template is created in the system. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan <p>Note: The Policy and Policy Plan template categories appear only when the customer registration template is created using the C1-CustomerRegistrationTmplHC business object.</p>
Description	Displays the description of the customer registration template.
Detailed Description	Displays additional information about the customer registration template.

- **Template Pages** - The **Template Pages** section lists the template pages, template sections added for a particular template category in a customer registration template. It contains the following columns:

Column Name	Column Description
Template Page	Indicates the template page which is added for the template category.
Template Section	Indicates the template section which is defined for the template page.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration template.
Delete	Used to delete the customer registration template. <p>Note: You can delete a customer registration template only when a customer registration is not yet created using the customer registration template.</p>

Button Name	Button Description
Duplicate	Used to create a new customer registration template using an existing customer registration template.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration template is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Customer Registration Template** zone does not appear in the **Customer Registration Template** screen. It appears only when you click the **Broadcast** () icon corresponding to the customer registration template in the **Search Customer Registration Template** zone.

Searching for a Customer Registration Template

Prerequisites

To search for a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Customer registration templates defined in the application
- Customer registration templates associated with the template categories

Procedure

To search for a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Template** sub-menu.

The **Customer Registration Template** screen appears.

- Enter the search criteria in the **Search Customer Registration Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of customer registration templates that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Template

Prerequisites

To define a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **C** and then click **Customer Registration Template**.

A sub-menu appears.

- Click the **Add** option from the **Customer Registration Template** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Template Business Object	Used to indicate the business object using which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> Customer Registration Template - Banking - Used to indicate that you want to define a customer registration template using the C1-CustomerRegistrationTmplBK business object. Customer Registration Template - Health Care - Used to indicate that you want to define a customer registration template using the C1-CustomerRegistrationTmplHC business object. 	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Template** screen.

- Select the required customer registration template business object from the respective field.
- Click **OK**.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the selected business object. It contains the following sections:

- Main** - Used to specify basic details about the customer registration template.
- Template Pages** - Used to add template pages and its related sections for the customer registration template.
- Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear only when you are defining a customer registration template using the C1-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which you want to define the customer registration template.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

6. Enter the required details in the **Main** section.
7. Add the template pages and template sections for the customer registration template in the **Template Pages** section.
8. Set the field attributes for the template sections in the **Template Pages** section.
9. Click **Save**.

The customer registration template is defined.

Adding the Pages and Sections in a Customer Registration Template

Prerequisites

To add a page and its related sections in a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer registration template.

The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)						
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.						
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. Note: On clicking the Add (+) icon, the following columns appear: <table border="1" data-bbox="609 913 1104 1344"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Template Section</td> <td>Used to indicate the section for a particular page.</td> </tr> <tr> <td>Field Attributes</td> <td>Used to define the field attributes of a section. Note: On clicking the Add (+) icon, you can define the field attributes for the section.</td> </tr> </tbody> </table>	Column Name	Column Description	Template Section	Used to indicate the section for a particular page.	Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add (+) icon, you can define the field attributes for the section.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.
Column Name	Column Description							
Template Section	Used to indicate the section for a particular page.							
Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add (+) icon, you can define the field attributes for the section.							

The following table shows the pages and sections which you can add for a particular template category.

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
Account	Auto Pay	No	Account Autopay	No
	Account Characteristics	No	Account Characteristics	No

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
	Credit Ratings	No	Credit Rating	No
	<div style="border: 1px solid black; padding: 5px;"> <p>Note: This template page appears only when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplBK business object.</p> </div>			
	Main	Yes	Account Identifiers	Yes
			Account Information	Yes
			Account Address Override Information	No
	Persons	Yes	Bill Routing	Yes
			Main	Yes
Person	Accounts	No	-	-
	Contact Information	No	Person Address	No
			Person Email	No

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
	Deal Information Note: This template page appears only when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplBK business object.	No	Deal-Main	No
	Main	Yes	Person Identifiers	Yes
			Person Main	Yes
			Person Names	Yes
			Person Phones	No
	Person Characteristics	No	Person Characteristics	No
	Person Hierarchy	No	Person Hierarchy-Characteristics	No
			Person Hierarchy-Main	No

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
	Policies	No	Parent Policy	No
	<div style="border: 1px solid black; padding: 5px;"> <p>Note: This template page appears only when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplHC business object.</p> </div>		Policies	No
	Registration Characteristics	No	Customer Registration Characteristics	No
Policy	Policy-Main	Yes	Policy Characteristics	No
			Policy-Main	Yes
			Policy Persons	No
<div style="border: 1px solid black; padding: 5px;"> <p>Note: This template category appears only when you are defining, editing, or copying a customer registration template which is created using the C1-CustomerRegistration TmplHC business object.</p> </div>				

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
Policy Plan Note: This template category appears only when you are defining, editing, or copying a customer registration template which is created using the C1-CustomerRegistration TmplHC business object.	Plan	Yes	Plan-Characteristics	No
			Plan-Main	Yes

- Enter the required details in the **Template Pages** section.
- Set the field attributes for the template section, if required.
- If you want to add more than one page or section for the customer registration template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a page or section from the customer registration template, click the **Delete** (🗑️) icon corresponding to the page or section.

- Click **Save**.

The pages and sections are added in the customer registration template.

Note:

You can add all the template pages available for a particular template category by clicking the **Select All** check box in the upper left corner of the **Template Pages** section.

You cannot edit or delete a template page or section if a customer registration is already defined using the customer registration template.

Setting the Field Attributes for a Template Section

Prerequisites

To set the field attributes for a template section, you should have:

- Template pages and sections associated with the template category
- Fields for the sections defined in the application

Procedure

To set the field attributes for a template section:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer registration template.

The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)						
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.						
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. Note: On clicking the Add  icon, the following columns appear:	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.						
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Template Section</td> <td>Used to indicate the section for a particular page.</td> </tr> <tr> <td>Field Attributes</td> <td>Used to define the field attributes of a section. Note: On clicking the Add  icon, you can define the field attributes for the section.</td> </tr> </tbody> </table>	Column Name	Column Description	Template Section	Used to indicate the section for a particular page.	Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add  icon, you can define the field attributes for the section.	
Column Name	Column Description							
Template Section	Used to indicate the section for a particular page.							
Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add  icon, you can define the field attributes for the section.							

2. Select the template page and template section from the respective columns.
3. Click the **Add**  icon in the **Field Attributes** column corresponding to the template section whose field attributes you want to set.

It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence of the field attribute.	Yes (Conditional)
		Note: This field is required while setting the field attributes for a template section.
Field	Used to indicate the field for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Field Search window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the field.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Default Field Value	Used to indicate the default value for the field in the template section.	Yes (Conditional)
	<p>Note:</p> <p>On specifying a field, the Search (🔍) icon appears corresponding to the Default Field Value field. On clicking the Search icon, a window appears depending on the field that you have selected.</p> <p>On specifying the default field value, the description of the default field value appears corresponding to the default field value.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Required	Used to indicate whether the field is mandatory in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Required column is disabled. It is enabled only when you specify the field in the Field column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Field Value	Used to indicate whether the field is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Field Value column is disabled. It is enabled only when you specify the field in the Field column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>

Field Name	Field Description	Mandatory (Yes or No)
Identifier Type	Used to indicate the type of identifier for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying a field, the Search (🔍) icon appears corresponding to the Identifier Type field. On clicking the Search icon, the Search Zone for Person Identifier window appears.</p> <p>On specifying the identifier type, the description of the identifier type appears corresponding to the Identifier Type field.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Identifier Value	Used to specify the value for the identifier type for which you want to set attributes.	Yes (Conditional)
	<p>Note: By default, this field is disabled. It is enabled only when you specify the identifier type in the Identifier Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Primary ID	Used to indicate whether the identifier type and identifier value are primary or not.	Yes (Conditional)
	<p>Note: By default, the check box in the Primary ID field is disabled. It is enabled only when you specify the identifier type in the Identifier Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Identifier Type	Used to indicate whether the identifier type is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Identifier Type column is disabled. It is enabled only when you specify the identifier type in the Identifier Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Identifier Value	Used to indicate whether the identifier value is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Identifier Value column is disabled. It is enabled only when you specify the identifier value in the Identifier Value column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>

Field Name	Field Description	Mandatory (Yes or No)
Name Type	Used to indicate the type of name for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying a field, the Search (🔍) icon appears corresponding to the Name Type field. On clicking the Search icon, the Search Zone for Person Name Type window appears.</p> <p>On specifying the name type, the description of the name type appears corresponding to the Name Type field.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Name	Used to specify the name of the person.	Yes (Conditional)
	<p>Note: By default, this field is disabled. It is enabled only when you specify the name type in the Name Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Name Type	Used to indicate whether the name type is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Name Type column is disabled. It is enabled only when you specify the name type in the Name Type column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Disable Name	Used to indicate whether the specified name of the person is disabled in the template section.	Yes (Conditional)
	<p>Note: By default, the check box in the Disable Name column is disabled. It is enabled only when you specify the name in the Name column.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>
Phone Type	Used to specify the type of phone for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying a field, the Search (🔍) icon appears corresponding to the Phone Type field. On clicking the Search icon, the Search Zone for Phone Type window appears.</p> <p>On specifying the phone type, the description of the phone type appears corresponding to the Phone Type field.</p>	<p>Note: This field is required while setting the field attributes for a template section.</p>

Field Name	Field Description	Mandatory (Yes or No)
Phone Number	Used to specify the phone number.	Yes (Conditional)
	Note: By default, this field is disabled. It is enabled only when you specify the phone type in the Phone Type column.	Note: This field is required while setting the field attributes for a template section.
Disable Phone Type	Used to indicate whether the phone type is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Phone Type column is disabled. It is enabled only when you specify the phone type in the Phone Type column.	Note: This field is required while setting the field attributes for a template section.
Disable Phone Number	Used to indicate whether the specified phone number is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Phone Number column is disabled. It is enabled only when you specify the phone number in the Phone Number column.	Note: This field is required while setting the field attributes for a template section.
Characteristic Information	Used to indicate the characteristic type and characteristic value for which you want to set attributes.	Yes (Conditional)
	<p>Note:</p> <p>On specifying the characteristic type, the characteristic value field appears in the Characteristic Information column.</p> <p>On specifying a predefined characteristic type, the Search (🔍) icon appears corresponding to the characteristic value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the characteristic value field..</p>	Note: This field is required while setting the field attributes for a template section.
Disable Characteristic Type	Used to indicate whether the characteristic type is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Characteristic Type column is disabled. It is enabled only when you specify the characteristic type in the Characteristic Type column.	Note: This field is required while setting the field attributes for a template section.

Field Name	Field Description	Mandatory (Yes or No)
Disable Characteristic Value	Used to indicate whether the characteristic is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the Disable Characteristic Value column is disabled. It is enabled only when you specify the characteristic value in the Characteristic Value column.	Note: This field is required while setting the field attributes for a template section.

- Enter the required details in the **Template Pages** section.
- If you want to set more than one field attribute for the template section, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a field attribute from the template section, click the **Delete (🗑)** icon corresponding to the field.

- Click **Save**.

The field attributes are set for the template section.

Editing a Customer Registration Template

Prerequisites

To edit a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To edit a customer registration template:

- Search for the customer registration template in the **Customer Registration Template** screen.
- In the **Search Results** section, click the **Edit (📎)** icon in the **Edit** column corresponding to the customer registration template whose details you want to edit.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template is defined. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration template.
- **Template Pages** - Used to add template pages and its related sections for the customer registration template.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Displays the customer registration template.	Not applicable
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear only when you are defining a customer registration template using the C1-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can edit the details of a customer registration template by clicking the **Edit** button in the **Customer Registration Template** zone.

3. Modify the details in the **Main** section, if required.
4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.

The changes made to the customer registration template are saved.

Note: You can edit a customer registration template only when a customer registration it is not yet defined using the customer registration template.

Copying a Customer Registration Template

Instead of creating a customer registration template from scratch, you can create a new customer registration template using an existing customer registration template. This is possible through copying a customer registration template. On copying a customer registration template, the details including the template pages, template sections, and field attributes for the template sections are copied to the new customer registration template. You can then edit the details, if required.

Prerequisites

To copy a customer registration template, you should have:

- Customer registration template (whose copy you want to create) defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To copy a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the customer registration template whose copy you want to create.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template whose copy you want to create is defined. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration template.
- **Template Pages** - Used to add template pages and its related sections for the customer registration template.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear only when you are defining a customer registration template using the C1-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can copy a customer registration template by clicking the **Duplicate** button in the **Customer Registration Template** zone.

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.

The new customer registration template is defined.

Deleting a Customer Registration Template

Procedure

To delete a Customer Registration Template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the customer registration template that you want to delete.

A message appears confirming whether you want to delete the customer registration template.

3. Click **OK**.

The customer registration template is deleted.

Note: You can delete a customer registration template only when a customer registration is not yet created using the customer registration template.

Tip: Alternatively, you can delete a customer registration template by clicking the **Delete** button in the **Customer Registration Template** zone.

Customer Registration Type

A customer registration type encapsulates the following information:

- Users with a particular access group can only create a customer registration object using the customer registration type
- Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility
- Whether the approval is required when you create, edit, or delete a customer registration object
- Whether the final level approval is required once the approver at the first level approves the customer registration object
- Whether a To Do should be created indicating that the users have to manually create the billing hierarchy and pricing for the parent customer.
- The business objects using which the person, account, policy plan, membership, and address should be created when a customer registration object is created using the customer registration type
- A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account, policy, and policy plan.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, policies, policy plans, policy characteristics, or policy plan characteristics, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

Customer Registration Type List

The **Customer Registration Type List** zone lists the customer registration types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Edit	On clicking the Edit () icon, the Customer Registration Type screen appears where you can edit the details of the customer registration type.
Duplicate	On clicking the Duplicate () icon, the Customer Registration Type screen appears where you can define a new customer registration type using an existing customer registration type.
Delete	On clicking the Delete () icon, you can delete the customer registration type. Note: You can delete a customer registration type only when a customer registration is not yet defined using the customer registration type.

You can filter the list using various search criteria (such as, **Customer Registration Type** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to a customer registration type, the **Customer Registration Type** zone appears with the details of the respective customer registration type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Type

The **Customer Registration Type** zone displays the details of the customer registration type. It contains the following sections:

- **Main** - Displays the basic information about the customer registration type. It contains the following fields:

Field Name	Field Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Customer Registration Business Object	<p>Indicates the business object using which the customer registration is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> • Customer Registration - Banking - Indicates customer registration is created using the C1-CustomerRegistrationBanking business object. • Customer Registration - Health Care - Indicates customer registration is created using the C1-CustomerRegistrationHC business object. <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Detailed Description	Displays additional information about the customer registration type.
Status	<p>Indicates the status of the customer registration type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a customer registration type to Inactive when the corresponding customer registration is in a status other than Processed or Rejected.</p>
Access Group	<p>Displays the user group that can access the customer registration created using the customer registration type.</p> <p>Note: It has a link. On clicking the link, the Access Group screen appears where you can view the details of the respective access group.</p>
Registration Source	<p>Indicates the source through which the customer registration is created using the customer registration type. The valid values are:</p> <ul style="list-style-type: none"> • File Upload • Inbound Message • Manual

- **Additional Data** - Displays additional information about the customer registration type. It contains the following fields:

Field Name	Field Description
Approval Required	Indicates whether approval is required while creating the customer registration using the customer registration type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for approval. Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve, reject, or resubmit the customer registration for approval. Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do entry of the specified To Do type is created when the customer registration is resubmitted by the approver. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the users with the specified To Do role for whom the To Do task is created when the customer registration is resubmitted by the approver. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.
Final Approval Required	Indicates whether the final approval is required once the approver at the first level approves the customer registration. Note: This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object. The final approval is required only when the Manual Billing Hierarchy and Pricing option check box is selected.

Field Name	Field Description
Final Approval To Do Type	<p data-bbox="686 205 1468 275">Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for final approval.</p> <p data-bbox="686 296 1468 520">Note: It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type. This field appears only when the Final Approval Required check box is selected.</p>
Final Approval To Do Role	<p data-bbox="686 539 1468 609">Indicates that users with the specified To Do role can only approve or resubmit the customer registration for final approval.</p> <p data-bbox="686 630 1468 854">Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. This field appears only when the Final Approval Required check box is selected.</p>
Manual Billing Hierarchy and Pricing	<p data-bbox="686 873 1468 1014">Indicates whether the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters are created manually by the user while defining the customer registration.</p> <p data-bbox="686 1035 1468 1239">Note: This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object. This feature is used only for customer registration objects where the person type is set to Parent Customer.</p>
Billing Hierarchy and Pricing To Do Type	<p data-bbox="686 1272 1468 1371">Indicates the To Do entry of the specified To Do type is created for the user to define or edit the billing hierarchy and pricing for the parent customer manually.</p> <p data-bbox="686 1392 1468 1596">Note: It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type. This field appears only when the Manual Billing Hierarchy and Pricing check box is selected.</p>

Field Name	Field Description
Billing Hierarchy and Pricing To Do Role	<p>Indicates users with the specified To Do role can only define or edit the billing hierarchy and pricing for the parent customer manually.</p> <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role. This field appears only when the Manual Billing Hierarchy and Pricing check box is selected.</p>
Person Business Object	<p>Indicates the business object using which the person is created while defining the customer registration.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Account Business Object	<p>Indicates the business object using which the account is created while defining the customer registration.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Policy Plan Business Object	<p>Indicates the business object using which the policy plan is created while defining the customer registration.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.</p>
Membership Business Object	<p>Indicates the business object using which the membership is created while defining the customer registration.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object. This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.</p>
Address Business Object	<p>Indicates the business object using which the address is created while defining the customer registration.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

- **Characteristics** - Lists the characteristics defined for the customer registration type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Customer Registration Templates** - Lists the templates that are associated with the customer registration type for creating a customer registration. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence of the customer registration template.
Template Category	Indicates the category to which the customer registration template belongs. The valid values are: <ul style="list-style-type: none"> • Person • Account • Policy • Policy Plan <p>Note: The Policy and Policy Plan template categories appear only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.</p>
Template	Displays the customer registration template associated with the customer registration type. <p>Note: It has a link. On clicking the link, the Customer Registration Template screen appears where you can view the details of the respective customer registration template.</p>

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration type.
Delete	Used to delete the customer registration type. <p>Note: You can delete a customer registration type only when a customer registration is not yet defined using the customer registration type.</p>
Duplicate	Used to create a new customer registration type using an existing customer registration type.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

- **Copy Customer Registration Details** - Enables you to specify the type of information you want to copy while defining a customer registration using an existing customer registration. It contains the following fields:

Column Name	Column Description
Person Names	Indicates whether you want to copy the person details while copying a customer registration.
Accounts	Indicates whether you want to copy the account details while copying a customer registration.
Person Identifiers	Indicates whether you want to copy the person identifier details while copying a customer registration.
Account Identifiers	Indicates whether you want to copy the account identifier details while copying a customer registration.
Person Phones	Indicates whether you want to copy the phone details of the person while copying a customer registration.
Account Characteristics	Indicates whether you want to copy the characteristic details of the account while copying a customer registration.
Person Characteristics	Indicates whether you want to copy the characteristic details of the person while copying a customer registration.
Account Auto Pay Information	Indicates whether you want to copy the automatic payment details of the account while copying a customer registration.
Person Addresses	Indicates whether you want to copy the address details of the person while copying a customer registration.
Account Persons	Indicates whether you want to copy the details of the persons related to the account while copying a customer registration.
Person Hierarchy	Indicates whether you want to copy the person hierarchy details while copying a customer registration.
Account Override Address	Indicates whether you want to copy the account override address details while copying a customer registration.
Bill Routing Information	Indicates whether you want to copy the bill routing details of the account while copying a customer registration.
Credit Rating History	Indicates whether you want to copy the credit rating history details while copying a customer registration.
Policies	Indicates whether you want to copy the policy details while copying a customer registration. Note: This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.
Policy Plans	Indicates whether you want to copy the policy plan details while copying a customer registration. Note: This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.

Column Name	Column Description
Policy Characteristics	Indicates whether you want to copy the policy characteristic details while copying a customer registration. Note: This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.
Policy Plan Characteristics	Indicates whether you want to copy the policy plan characteristic details while copying a customer registration. Note: This field appears only when the Customer Registration Type is created using the C1-CustRegTypeHealthCare business object.

By default, the **Customer Registration Type** zone does not appear in the **Customer Registration Type** screen. It appears only when you click the **Broadcast** () icon corresponding to a customer registration type in the **Customer Registration Type List** zone.

Searching for a Customer Registration Type

Prerequisites

To search for a customer registration type, you should have:

- Customer registration types defined in the application

Procedure

To search for a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
A sub-menu appears.

3. Click the **Search** option from the **Customer Registration Type** sub-menu.

The **Customer Registration Type** screen appears with a list of customer registration types in the **Customer Registration Type List** zone.

4. Click the **Filters** () icon in the title bar of the **Customer Registration Type List** zone.

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to search for a particular customer registration type.	No
Description	Used to search for customer registration types having a particular description.	No

- Enter the search criteria in the **Customer Registration Type List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of customer registration types that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Type

Prerequisites

To define a customer registration type, you should have:

- Customer registration type business objects defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To define a customer registration type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **C** and then click **Customer Registration Type**.

A sub-menu appears.

- Click the **Add** option from the **Customer Registration Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type Business Object	Used to indicate the business object using which you want to create the customer registration type. The valid values are: <ul style="list-style-type: none"> Customer Registration Type - Banking Customer Registration Type - Healthcare 	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple customer registration type business objects defined in the application. If there is only one customer registration type business object defined in the application, the **Customer Registration Type** screen appears.

- Select the required customer registration business object from the respective field.
- Click **OK**.

The **Customer Registration Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the customer registration type.
- Additional Data** - Used to define additional information about the customer registration type.
- Characteristics** - Used to define a list characteristics for the customer registration type.
- Customer Registration Templates** - Used to associate templates with the customer registration type.
- Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> Active Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p> </div>	Yes
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> File Upload Inbound Message Manual 	Yes

6. Enter the required details in the **Main** section.
7. Define additional information about the customer registration type in the **Additional Data** section.
8. Define a list of characteristics for the customer registration type in the **Characteristics** section.
9. Associate customer registration templates with the customer registration type in the **Customer Registration Templates** section
10. Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section.
11. Click **Save**.

The customer registration type is defined.

Defining a Characteristic for a Customer Registration Type

Prerequisites

To define a characteristic for a customer registration type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration Type**)

Procedure

To define a characteristic for a customer registration type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a customer registration type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Customer Registration Type .	Note: This field is required when you are defining a characteristic for the customer registration type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the customer registration type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the customer registration type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the customer registration type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the customer registration type.

Associating a Customer Registration Template with a Customer Registration Type

Prerequisites

To associate a customer registration template with a customer registration type, you should have:

- Template categories defined in the application
- Customer registration templates associated to the template categories

Procedure

To associate a customer registration template with a customer registration type:

1. Ensure that the **Customer Registration Templates** section is expanded when you are defining, editing, or copying a customer registration type.

The **Customer Registration Templates** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence for the customer registration template.	Yes (Conditional) Note: This field is required when you are associating a customer registration template with a customer registration type.
Template Category	Used to indicate the category to which the customer registration template belongs. The valid values are: <ul style="list-style-type: none"> • Person • Account • Policy • Policy Plan Note: The Policy and Policy Plan template categories appear only when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object. You can associate only one person template category and multiple account, policy, and policy plan template categories with the customer registration type.	Yes (Conditional) Note: This field is required when you are associating a customer registration template with a customer registration type.
Template	Used to specify the customer registration template which you want to associate with the customer registration type. Note: The Search (🔍) icon appears corresponding to the Template field. On clicking the Search icon, the Customer Registration Template Search window appears. On specifying the template, the description of the template appears corresponding to the Template field.	Yes (Conditional) Note: This field is required when you are associating a customer registration template with a customer registration type.

2. Enter the required details in the **Customer Registration Templates** section.
3. If you want to define more than one template for the customer registration type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a template from the customer registration type, click the **Delete** (🗑️) icon corresponding to the customer registration template.

4. Click **Save**.

The customer registration template is associated with the customer registration type.

Setting Attributes to Define a Customer Registration Using the Existing Customer Registration

Prerequisites

To set an attribute for defining a customer registration using the existing customer registration, you should have:

- **Person** attributes defined in the application
- **Account** attributes defined in the application
- **Policy** attributes defined in the application

Note: The **Policy** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- **Policy Plan** attributes defined in the application

Note: The **Policy Plan** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

Procedure

To set an attribute for defining a customer registration using the existing customer registration:

1. Ensure that the **Copy Customer Registration Details** section is expanded when you are defining, editing, or copying a customer registration type.

The **Copy Customer Registration Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Names	Used to indicate whether you want to copy the person details while copying a customer registration.	No
Accounts	Used to indicate whether you want to copy the account details while copying a customer registration.	No
Person Identifiers	Used to indicate whether you want to copy the person identifier details while copying a customer registration.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifiers	Used to indicate whether you want to copy the account identifier details while copying a customer registration.	No
	Note: The check box of this field is enabled only when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Phones	Used to indicate whether you want to copy the phone details of the person while copying a customer registration.	No
Account Characteristics	Used to indicate whether you want to copy the characteristic details of the account while copying a customer registration.	No
	Note: The check box of this field is enabled only when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Characteristics	Used to indicate whether you want to copy the characteristic details of the person while copying a customer registration.	No
Account Auto pay Information	Used to indicate whether you want to copy the automatic payment details of the account while copying a customer registration.	No
	Note: The check box of this field is enabled only when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Addresses	Used to indicate whether you want to copy the address details of the person while copying a customer registration.	No
Account Persons	Used to indicate whether you want to copy the details of the persons related to the account while copying a customer registration.	No
	Note: The check box of this field is enabled only when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Hierarchy	Used to indicate whether you want to copy the person hierarchy details while copying a customer registration.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Override Address	Used to indicate whether you want to copy the account override address details while copying a customer registration.	No
	Note: The check box of this field is enabled only when the Accounts check box is selected in the Copy Customer Registration Details section.	
Bill Routing Information	Used to indicate whether you want to copy the bill routing details of the account while copying a customer registration.	No
	Note: The check box of this field is enabled only when the Accounts check box is selected in the Copy Customer Registration Details section.	
Credit Rating History	Used to indicate whether you want to copy the credit rating history details while copying a customer registration.	No
	Note: The check box of this field is enabled only when the Accounts check box is selected in the Copy Customer Registration Details section.	
Policies	Used to indicate whether you want to copy the policy details while copying a customer registration.	No
	Note: This field appears only when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.	
Policy Plans	Used to indicate whether you want to copy the policy plan details while copying a customer registration.	No
	<p>Note:</p> <p>This field appears only when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p> <p>The check box of this field is enabled only when the Policies check box is selected in the Copy Customer Registration Details section.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Policy Characteristics	Used to indicate whether you want to copy the policy characteristic details while copying a customer registration.	No
	<p>Note:</p> <p>This field appears only when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p> <p>The check box of this field is enabled only when the Policies check box is selected in the Copy Customer Registration Details section.</p>	
Policy Plan Characteristics	Used to indicate whether you want to copy the policy plan characteristic details while copying a customer registration.	No
	<p>Note:</p> <p>This field appears only when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p> <p>The check box of this field is enabled only when the Policy Plans check box is selected in the Copy Customer Registration Details section.</p>	

2. Select the required attributes in the **Copy Customer Registration Details** section.
3. Click **Save**.

The attributes are set for defining a customer registration using the existing customer registration.

Editing a Customer Registration Type

Prerequisites

To edit a customer registration type, you should have:

- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application

- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To edit a customer registration type:

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer registration type whose details you want to edit.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Displays the customer registration type.	Not applicable
Business Object	Indicates the business object using which the customer registration type is created in the system.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p>	
Registration Source	<p>Used to indicate the source through which you want to create the customer registration in the system. The valid values are:</p> <ul style="list-style-type: none"> • File Upload • Inbound Message • Manual 	Yes

Tip: Alternatively, you can edit the details of a customer registration type by clicking the **Edit** button in the **Customer Registration Type** zone.

3. Modify the required details in the **Main** section, if required.
4. Modify additional information about the customer registration type in the **Additional Data** section, if required.
5. Define, edit, or remove characteristics from the customer registration type in the **Characteristics** section, if required.
6. Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section, if required.
7. Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section, if required.
8. Click **Save**.

The changes made to the customer registration type are saved.

Copying a Customer Registration Type

Instead of creating a customer registration type from scratch, you can create a new customer registration type using an existing customer registration type. This is possible through copying a customer registration type. On copying a customer registration type, the details including the additional data, characteristics, customer registration templates, and attributes set to define a customer registration from the existing customer registration are copied to the new customer registration type. You can then edit the details, if required.

Prerequisites

To copy a customer registration type, you should have:

- Customer registration type (whose copy you want to create) defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To copy a customer registration type:

1. Search for a customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the customer registration type whose copy you want to create.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.

- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> • Active • Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p> </div>	Yes
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> • File Upload • Inbound Message • Manual 	Yes

Tip: Alternatively, you can copy a customer registration type by clicking the **Duplicate** button in the **Customer Registration Type** zone.

3. Enter the required details in the **Main** section.
4. Enter additional information about the customer registration type in the **Additional Data** section.

5. Define, edit, or remove characteristics from the customer registration type in the **Characteristics** section.
6. Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section.
7. Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section.
8. Click **Save**.

The new customer registration type is defined.

Deleting a Customer Registration Type

Procedure

To delete a Customer Registration Type:

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Customer Registration Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the customer registration type that you want to delete.

A message appears confirming whether you want to delete the customer registration type.

3. Click **OK**.

The customer registration type is deleted.

Note: You can delete a customer registration type only when a customer registration is not yet defined using the customer registration type.

Tip: Alternatively, you can delete a customer registration type by clicking the **Delete** button in the **Customer Registration Type** zone.

	Note: This field appears only when the Person Details option is selected from the Search By list.	Note: If you enter the person identifier as a search criteria, you have to select the person identifier type. This field is required for searching customer registrations using the person details.
Person Identifier	Used to specify the value of the person identifier type using which you want to search for customer registrations.	Yes (Conditional)
	Note: This field appears only when the Person Details option is selected from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier. This field is required for searching customer registrations using the person details.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search customer registrations of persons with a particular characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those characteristic types where the characteristic entity is set to Customer Registration.</p> <p>This field appears only when the Person Details option is selected from the Search By list and the Advanced Search link available in the upper right corner of the Search Customer Registration zone is clicked.</p>	<p>Note: This field is required for searching customer registrations using the person details.</p>
Characteristic Value	Used to specify the value of the characteristic type using which you want to search customer registrations of persons.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p> <p>This field appears only when the Person Details option is selected from the Search By list and the Advanced Search link available in the upper right corner of the Search Customer Registration zone is clicked.</p>	<p>Note: This field is required for searching customer registrations using the person details.</p>
Inbound Message ID	Used to search for a customer registration which was created through a particular inbound message.	Yes (Conditional)
	<p>Note: This field appears only when the Inbound Message Details option is selected from the Search By list.</p>	<p>Note: This field is required for searching customer registrations using the inbound message details.</p>
Source System	Used to search customer registrations whose information is received from a particular external system.	Yes (Conditional)
	<p>Note: This field appears only when the Inbound Message Details option is selected from the Search By list.</p>	<p>Note: This field is required for searching customer registrations using the inbound message details.</p>

Field Name	Field Description	Mandatory (Yes or No)
External Source ID	Used to search for a customer registrations whose information is received from a particular external source system.	Yes (Conditional)
	Note: This field appears only when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
External Transaction ID	Used to search for a customer registration which is created as a result of a particular transaction in the external source system.	Yes (Conditional)
	Note: This field appears only when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
External Batch ID	Used to search customer registrations which are created through an external batch job.	Yes (Conditional)
	Note: This field appears only when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
Inbound Message Type	Used to search customer registrations which are created using a particular inbound message type.	Yes (Conditional)
	Note: This field appears only when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
Request Id	Used to search customer registrations which are created from a particular file uploaded through the File Upload Interface utility.	Yes (Conditional)
	Note: This field appears only when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.
File Name	Used to search customer registrations created from uploading a file with a particular name.	Yes (Conditional)
	Note: This field appears only when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.

Field Name	Field Description	Mandatory (Yes or No)
File Status	Used to search customer registrations created from the uploaded files having a particular status. The valid values are: <ul style="list-style-type: none"> • Approval Pending • Completed • Error • Pending • Rejected 	Yes (Conditional)
	Note: This field appears only when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.
File Request Type	Used to search customer registrations which are created from the uploaded files with a particular file request type.	Yes (Conditional)
	Note: This field appears only when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.

Note: You must specify at least one search criterion while searching for a customer registration. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the customer registration is created in the system.
Customer Registration Information	Displays the concatenated string of information about the customer registration. <p>Note: It has a link. On clicking the link, the Customer Registration screen appears where you can view the details of the respective customer registration.</p>

Column Name	Column Description
Status	<p>Indicates the status of the customer registration. The valid values are:</p> <ul style="list-style-type: none"> • Approval In Progress • Bill Group Approved • Complete • Draft • Draft for Update • Parent Customer Approved • Pending Final Approval • Pending Pricing Correction • Rejected
	<p>Note: The values listed above appear only when the Registration Details option is selected from the Search By list.</p>
	<ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided
	<p>Note: These values listed above appear only when the Inbound Message Details option is selected from the Search By list.</p>
	<p>Note: This column appears only when the Registration Details, Person Details, or Inbound Message Details options are selected from the Search By list.</p>
Request Id	<p>Displays the request Id generated while uploading a file through the File Upload Interface utility for creating the customer registration object.</p>
	<p>Note: This column appears only when the File Upload Details option is selected from the Search By list.</p>
Created By	<p>Displays the user who has created the customer registration.</p>
	<p>Note: This column appears only when the Registration Details, Person Details, or Inbound Message Details options are selected from the Search By list.</p>
Inbound Message Information	<p>Displays the concatenated string of information about the inbound message.</p>
	<p>Note:</p> <p>It has a link. On clicking the link, the Inbound Message screen appears where you can view the details of the respective inbound message.</p> <p>This column appears only when the Inbound Message Details option is selected from the Search By list.</p>

Column Name	Column Description
File ID	Displays the file which is uploaded for creating the customer registration through the File Upload Interface utility.
	Note: This column appears only when the File Upload Details option is selected from the Search By list.
Copy	On clicking the Copy (📄) icon, the Customer Registration screen appears where you can define a new customer registration using an existing customer registration.
	Note: This column appears only when the Registration Details option is selected from the Search By list.
Person Name	Displays the name of the person for whom the customer registration is defined in the system.
	Note: This column appears only when the Person Details option is selected from the Search By list.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created in the system.
	Note: This column appears only when the Inbound Message Details option is selected from the Search By list.
File Name	Displays the name of the file which is uploaded for creating the customer registration through the File Upload Interface utility.
	Note: This column appears only when the File Upload Details option is selected from the Search By list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person.
	Note: This column appears only when the Person Details option is selected from the Search By list.
Source System	Indicates the source system from where the inbound message is received for creating the customer registration.
	Note: This column appears only when the Inbound Message Details option is selected from the Search By list.
Request Type	Indicates the request type using which the file is uploaded through the File Upload Interface utility for creating the customer registration.
	Note: This column appears only when the File Upload Details option is selected from the Search By list.
Primary Person Identifier	Displays the primary person identifier.
	Note: This column appears only when the Person Details option is selected from the Search By list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Customer Registration

Prerequisites

To search for a customer registration, you should have:

- Customer registration business objects defined in the application
- Customer registration statuses and customer registration types defined in the application
- Divisions associated with the access group to which the user belongs
- Person types and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Inbound message statuses, inbound message types, and source systems defined in the application.
- File statuses and file request types defined in the application.

Procedure

To search for a customer registration:

- 1.** Click the **Menu** link in the **Application** toolbar.
A list appears.
- 2.** From the **Main** menu, select **Person Information** and then click **Customer Registration**.
A sub-menu appears.
- 3.** Click the **Search** option from the **Customer Registration** sub-menu.
The **Customer Registration** screen appears.
- 4.** Enter the search criteria in the **Search Customer Registration** zone.

Note:

You must specify at least one search criterion while searching for a customer registration object. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify the division when you are searching for a customer registration of a person using the city.

You must specify division and/or any other criteria in the second group when you are searching for a customer registration using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the customer registration using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **Search Customer Registration** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of customer registrations that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration

Prerequisites

To define a customer registration, you should have:

- Customer registration types, source systems, and person types defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Customer class, invoice currencies, account categories, bill cycles, accrual cycles, account identifier types, auto pay source codes, auto pay methods, auto pay route types, account relationship types, bill formats, address sources, bill route types, and collection class defined in the application

Note: The collection class is required when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

- Deal review frequencies and currency codes defined in the application

Note: These prerequisites are required when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

- Policy types and policy person roles defined in the application.

Note: These prerequisites are required when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

Procedure

To define a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Customer Registration**.
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration** sub-menu.

The **Add Customer Registration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to define the customer registration.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the customer registration information is received.	No
Person Type	Used to indicate the type of person for whom you want to define the customer registration.	Yes

Tip: Alternatively, you can access the **Add Customer Registration** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration** screen.

4. Select the required **Customer Registration Type** from the respective field.
5. Select the required **Source System** from the respective field, if required.
6. Select the required **Person Type** from the respective field.
7. Click **OK**.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Deal** - Used to specify information about the deals created for the person.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

- **Policies** - Used to specify the policy details of the person.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which the person belongs.	Yes
	Note: You can view only those divisions to which you have access in the Division list.	
Person Since Date	Used to specify the date from when the person is the main customer.	Yes
Customer Segment	Used to indicate the customer segment to which the person belongs.	Yes
	Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs.	Yes
	Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	
Access Group	Used to indicate the user group that can access the customer registration.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	

8. Enter the required details in the **Main** section.
9. Add the names of the person in the **Person Names** section.
10. Add the phone details for the person in the **Person Phones** section.
11. Add the identifier details for the person in the **Person IDs** section.
12. Define the addresses of the person in the **Contact** page, if required.
13. Define a list of characteristics for the person in the **Person Characteristics** page, if required.
14. Define the person to person relationship for the person in the **Hierarchy** page, if required.
15. Add the account details of the person in the **Accounts** page, if required.
16. Add information about the deals created for the person in the **Deal** page, if required.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

17. Add the policy details of the person in the **Policies** page, if required.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

18. Define a list of characteristics for the customer registration in the **Registration Characteristics** page, if required.

19. Click **Validate and Save**.

The customer registration is defined.

Adding the Names of a Person

Prerequisites

To add the names of a person, you should have:

- Name types defined in the application.

Procedure

To add the names of a person:

1. Ensure that the **Person Names** section is expanded in the **Main** page when you are defining, editing, or copying a customer registration.

The **Person Names** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Name Type	Used to indicate the type of name which you want to add for the customer registration.	Yes (Conditional)
	Note: The list includes only those name types where the name type entity is set to Customer Registration .	Note: This field is required when you are adding a name for customer registration.
Name	Used to specify the name of the person.	Yes (Conditional)
		Note: This field is required when you are adding a name for customer registration.

- Enter the required details in the **Person Names** section.
- If you want to add more than one person name for the customer registration, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a person name from the customer registration, click the **Delete (🗑)** icon corresponding to the person name.

- Click **Validate and Save**.

The names are added for the person.

Adding the Contact Details of a Person

Prerequisites

To add the contact details of a person, you should have:

- Address type codes and countries defined in the application.

Procedure

To add the contact details of a person:

1. Ensure that the **Person Addresses** section in the **Contact** page is expanded when you are defining, editing, or copying a customer registration.

The **Person Addresses** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Address Type Code	Used to indicate the type of address that you want to add for the person.	Yes
	Note: The list includes only those address type codes where the address type code entity is set to Customer Registration .	
Effective Date	Used to specify the date from when the address is effective for the person.	Yes
Season	Used to specify the season for which the address is effective for the person.	Yes (Conditional)
	Note: This field appears only when you select the Person Seasonal option from the Address Type Code field.	
Country	Used to indicate the country where the person is located.	Yes
	Note: The list includes only those countries which are already defined in the system. On selecting a country, only those address fields which are set as Optional while defining the country appear in the Person Addresses section. Also, the labels of the address fields will change depending on the business label which is defined for the respective address field in the Country screen.	
Address 1	Used to specify the first line of the address. It may contain details, such as house number and apartment name.	No
Address 2	Used to specify the second line of the address. It may contain details, such as street name.	No
City	Used to specify the city name.	No
Address 3	Used to specify the third line of the address. It may contain the landmark details.	No

Field Name	Field Description	Mandatory (Yes or No)
County	Used to specify the county name.	No
State	Used to indicate the state where the city or county is located.	No
	Note: The states listed in this field change depending on the country that you have selected.	
Province	Used to specify the location within the country where the person is located.	No
Address 4	Used to specify the fourth line of the address.	No
Postal	Used to specify the postal or zip code of the address.	No
House Type	Used to indicate the type of the house.	No
	Note: The list includes only those values which are defined in the HOUSE_TYPE lookup field.	
In City Limit	Used to indicate whether the address is within the city limit. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Geographic Code	Used to specify the geographic code of the address.	No

Note: The above mentioned fields appear in the **Person Addresses** section only when the respective data is available for the person.

In addition, the **Person Addresses** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Override Mailing Name - Name1	Used to specify the name using which you want to override the person's mailing name.	Yes (Conditional)
		Note: This field is required while overriding the persons contact name.
Override Mailing Name - Name2	Used to specify the name using which you want to override the person's override mailing name 1.	Yes (Conditional)
		Note: This field is required while overriding the persons Override Mailing Name - Name1 .

Field Name	Field Description	Mandatory (Yes or No)
Override Mailing Name - Name3	Used to specify the name using which you want to override the person's override mailing name 2.	Yes (Conditional) Note: This field is required while overriding the persons Override Mailing Name - Name2 .
Email Address	Used to specify the email address of the person.	No

- Enter the required details in the **Person Addresses** section.
- If you want to add more than one contact details of the person, click the **Add (+)** icon in the upper right corner of this section and then repeat step 2.

Note: However, if you want to remove the contact details of the person, click the **Delete (🗑)** icon in the upper right corner of this section.

- Click **Validate and Save**.

The contact details are added for the person.

Defining a Characteristic for a Person

Prerequisites

To define a characteristic for a person, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)

Procedure

To define a characteristic for a person:

- Ensure that the **Characteristics** section is expanded in the **Person Characteristics** page when you are defining, editing, or copying a customer registration.

The **Characteristics** section contains the following columns:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the person.	Yes (Conditional) Note: This field is required while defining a characteristic for the person.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Customer Registration .	Note: This field is required while defining a characteristic for the person.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required while defining a characteristic for the person.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the person, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the person, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Validate and Save**.

The characteristic is defined for the person.

Defining a Characteristic for a Person to Person Relationship

Prerequisites

To define a characteristic for a person to person relationship, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Person Relationship**)

Procedure

To define a characteristic for a person to person relationship:

- Ensure that the **Related Person Information** section is expanded in the **Hierarchy** page when you are defining, editing, or copying a customer registration.
- Click the **Add (+)** icon in the **Characteristics** column corresponding to the related person.

The following columns appear in the **Related Person Information** section.

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the person to person relationship.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the person to person relationship.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Person Relationship .	Yes (Conditional)
		Note: This field is required while defining a characteristic for the person to person relationship.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a characteristic for the person to person relationship.</p>

- Enter the required details in the **Related Person Information** section.
- If you want to define more than one characteristic for the person to person relationship, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the person to person relationship, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Validate and Save**.

The characteristic is defined for the person to person relationship.

Adding an Account for a Person

Prerequisites

To add the account for a person, you should have:

- Customer class, divisions, currencies, account categories, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Collection class defined in the application

Note: The collection class is required when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

Procedure

To add an account for a person:

1. Ensure that the **Accounts** section is expanded in the **Accounts** page when you are adding, editing, or removing an account of a person.

The **Accounts** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the account.	Not applicable
Template	Displays the account template using which the account is added for the person.	Not applicable
Customer Class	Indicates the customer class to which the account belongs.	Not applicable
Division	Indicates the division to which the account belongs.	Not applicable
Primary Identifier Type	Indicates the primary identifier type using which the account is added for the person.	Not applicable
Identifier Value	Displays the value of the primary identifier type.	Not applicable
Account Information	Displays the concatenated string of information about the account that is added for the person.	Not applicable
View / Edit	On clicking the View / Edit (✎) icon, you can view or edit the details of the account.	Not applicable

Note: No information appears in the above columns if an account is not yet added for the person.

2. Click the **Add New Account** button in the **Accounts** section.

The **Customer Registration - Add Account** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the account.
- **Auto Pay** - Used to add the automatic payment details of the account.
- **Persons** - Used to associate a person to the account.
- **Account Characteristics** - Used to define a list of characteristics for the account.
- **Credit Ratings** - Used to add the credit rating details for the account.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the account.
- **Account Identifiers** - Used to add the identifier details for the account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs. Note: You can only view those divisions to which you have access in the Division list.	Yes
Set Up Date	Used to specify the date from when the account is configured for the person. Note: By default, the current date appears in this field.	Yes
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account. Note: The list includes only those currencies which are defined in the system.	Yes
Account Category	Used to indicate the category to which the account belongs. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account Note: The list includes only those values which are present in the ACCT_USAGE_FLG lookup field.	Yes
Access Group	Used to indicate the user group that can access the account for the person. Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Exclude Accrual	Used to indicate whether the account is eligible for accrual.	No
	<p>Note: By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the Exclude Accrual check box. On selecting the Exclude Accrual check box, the Accrual Cycle field is disabled.</p>	
Accrual Cycle	Used to indicate the accrual cycle of the account in the division.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search for Cust Reg window appears.</p> <p>On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the Accrual Cycle field.</p> <p>This field is disabled when you click the Exclude Accrual check box.</p>	
Product	Used to indicate the product for which the account is enrolled.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Search Product window appears.</p>	
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed.	No
	<p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>	
Bill Cycle	Used to indicate the bill cycle for the account.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing.	Yes
	Note: In case you don't want to bill the account in advance, you must specify 0 in this field.	
Comments	Used to specify additional information about the account.	No

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
5. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
6. Associate or disassociate persons from the account in the **Persons** page, if required.
7. Define, edit, or remove characteristics from the account in the **Account Characteristics** page, if required.
8. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
9. Click **Validate and Save**.

The account is added for the person.

Adding the Automatic Payment Details of an Account

Prerequisites

To add the automatic payment details of an account, you should have:

- Auto pay source codes, auto pay methods, and auto pay route types defined in the application

Procedure

To add the automatic payment details of an account:

1. Ensure that the **Auto Pay** page is expanded in the **Customer Registration - Add Account** screen when you are adding or editing the account of a person.

The **Auto Pay** page contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Defer Auto Pay Date	Used to indicate the date till when you want to hold the automatic payment process of the account.	Yes (Conditional)
		Note: This field is required while adding the automatic payment details of the account
Rule Based Auto Pay	Used to indicate whether the automatic payment is rule based.	Yes (Conditional)
		Note: This field is required while adding the automatic payment details of the account
Start Date	Used to indicate the date from when the automatic payment is effective for the account.	Yes (Conditional)
		Note: This field is required while adding the automatic payment details of the account
End Date	Used to indicate the date till when the automatic payment is effective for the account.	No
		Note: The end date cannot be earlier than the start date.
Percentage	Used to specify the contribution of payment amount in percentage within multiple Auto Pay IDs (i.e for Auto Pay Source Codes) having the same priority.	Yes (Conditional)
		Note: This field is required while adding the automatic payment details of the account
Priority	Used to specify the order in which the automatic payment option is considered for the effective date range.	Yes (Conditional)
		Note: This field is required while adding the automatic payment details of the account

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Auto Pay Source Code field. On clicking the Search icon, the Auto Pay Source Search window appears.</p> <p>On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the Auto Pay Source Code field.</p>	<p>Note: This field is required while adding the automatic payment details of the account</p>
Auto Pay Method	Used to indicate the method using which you want the system to process the automatic payment for the account. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • Direct Debit • Payment Advice 	<p>Note: This field is required while adding the automatic payment details of the account</p>
Auto Pay Route Type	Used to indicate when and how the automatic payment request of the account is routed to the financial institution.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Auto Pay Route Type field. On clicking the Search icon, the Auto Pay Route Type Search window appears.</p> <p>On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the Auto Pay Route Type field.</p>	<p>Note: This field is required while adding the automatic payment details of the account</p>
Account Number	Used to specify the account number for which you want to add the automatic payment details.	Yes (Conditional)
		<p>Note: This field is required while adding the automatic payment details of the account</p>
Expires On	Used to specify the month and year of expiry for the automatic payment of the account.	Yes (Conditional)
		<p>Note: This field is required while adding the automatic payment details of the account</p>

Field Name	Field Description	Mandatory (Yes or No)
Name	Used to specify the account name for which you want to add the automatic payment details.	Yes (Conditional) Note: This field is required while adding the automatic payment details of the account
Maximum Withdrawal Amount	Used to specify the maximum amount which can be withdrawn from the account through the automatic payment method.	Yes (Conditional) Note: This field is required while adding the automatic payment details of the account
Comments	Used to specify additional information about the automatic payment for the account.	No

- Enter the required details in the **Auto Pay** page.
- If you want to add more than one automatic payment details of the account, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove an automatic payment detail from the account, click the **Delete (🗑)** icon.

- Click **Validate and Save**.

The automatic payment details are added for the account.

Defining a Policy

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Source systems defined in the application.
- Policy person roles defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a policy:

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are defining, editing, or removing a policy from the person.

The **Policies & Plans** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy.	Not applicable
Template	Indicates the policy template using which the policy is defined for the person.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined for the person.	Not applicable
Policy Number	Displays the policy number.	Not applicable
View / Edit	On clicking the View / Edit (✎) icon, you can view or edit the details of the policy.	Not applicable
Policy Plans	On clicking the Add (+) icon, you can add policy plans for the policy.	Not applicable

Note: No information appears in the above columns if a policy is not yet defined for the person.

2. Click the **Add New Policy** button in the **Policies & Plans** section.

The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to define a policy.	Yes
	Note: If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual . However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to Self-Funded .	

3. Select the required policy type from the **Policy Type** field.
4. Click **OK**.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.

- **Characteristics** - Used to define characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated.	Yes
	Note: This field is enabled only when you are defining a policy using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual .	
Start Date	Used to specify the date from when the policy is effective.	Yes
	Note: The policy start date cannot be later than the policy end date.	
End Date	Used to specify the date till when the policy is effective.	Yes
	Note: The policy end date cannot be earlier than the policy start date.	
Policy Person Role	Used to indicate the role of the person for whom you are defining the policy.	Yes

Note: The **Policies** page appears only when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

5. Enter the required details in the **Main** section.
6. Define characteristics for the policy in the **Characteristics** section, if required.
7. Associate persons to the policy in the **Persons** section, if required.
8. Click **Validate and Save**.

The policy is defined for the person.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

1. Ensure that the **Characteristics** section is expanded in the **Policy** screen when you are defining or editing a policy.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy.	Yes (Conditional)
		Note: This field is required when defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Policy	Yes (Conditional)
		Note: This field is required when defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when defining a characteristic for the policy.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the policy, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Validate and Save**.

The characteristic is defined for the policy.

Adding a Plan in a Policy

Prerequisites

To add a plan in a policy, you should have:

- Policy plan templates defined in the application.
- Policy plan business objects defined in the application.
- Pricing rule types defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**)

Procedure

To add a plan in a policy:

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are adding, editing, or removing a policy plan from a policy.
2. Click the **Add**  icon in the **Policy Plans** column corresponding to the policy in which you want to add a policy plan.

The following columns appear in the **Policies & Plans** section:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy plan.	Not applicable
Template	Indicates the policy plan template using which the policy plan is added in the policy.	Not applicable
Plan Number	Displays the policy plan number.	Not applicable
Price Item	Displays the price item that is associated with the policy plan.	Not applicable
View / Edit	On clicking the View / Edit  icon, you can view or edit the details of the policy plan.	Not applicable

Note: No information appears in the above columns if a plan is not yet added in the policy.

3. Click the **Add New Plan** button in the **Policies & Plans** section.

The **Select Policy Plan Template** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template using which you want to define the policy plan for the policy.	Yes
	Note: By default, the Policy Plan - Healthcare option is selected.	
Business Object	Used to indicate the business object using which you want to define the policy plan for the policy.	Yes
	Note: By default, the Policy Plan option is selected.	

4. Select the required template and business object from the respective fields.
5. Click **OK**.

The **Plan** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy plan.
- **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
- **Characteristics** - Used to define characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to directly associate with the policy plan.	Yes
	Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On the specifying the price item, the concatenated string of information about the price item appears corresponding to the Price Item field separated by a comma (,).	
Plan Number	Used to specify the policy plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the policy plan is effective for the policy.	Yes
	Note: The policy plan start date cannot be earlier than the policy start date and later than the policy end date. The policy plan start date cannot be later than the policy plan end date.	
End Date	Used to specify the date till when the policy plan is effective for the policy.	No
	Note: The policy plan end date cannot be earlier than the policy start date and later than the policy end date. The policy plan end date cannot be earlier than the policy plan start date.	

6. Enter the required details in the **Main** section.
7. Associate the pricing rule types with the policy plan in the **Pricing Rule Types** section, if required.
8. Define the characteristics for the policy plan in the **Characteristics** section, if required.
9. Click **Validate and Save**.

The policy plan is added in the policy.

Associating a Pricing Rule Type with a Policy Plan

Prerequisites

To associate a pricing rule type with a policy plan, you should have:

- Pricing rule types defined in the application.

Procedure

To associate a pricing rule type with a policy plan:

1. Ensure that the **Pricing Rule Types** section is expanded in the **Plan** screen when you are adding or editing a policy plan of a policy.

The **Pricing Rule Types** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type that you want to associate with the policy plan.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Pricing Rule Type field. On clicking the Search icon, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.</p>	<p>Note: This field is required while associating a pricing rule type with the policy plan.</p>

2. Enter the required details in the **Pricing Rule Types** section.
3. If you want to associate more than one pricing rule type with the policy plan, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a pricing rule type from the policy plan, click the **Delete** (🗑️) icon corresponding to the pricing rule type.

4. Click **Validate and Save**.

The pricing rule type is associated with the policy plan.

Editing the Account Details of a Person

Prerequisites

To edit the account details of a person, you should have:

- Customer class, divisions, currencies, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Collection class defined in the application

Note: The collection class is required when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

Procedure

To edit the account details of a person:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose account details you want to edit.

The **Main** tab appears in the **Customer Registration** screen.

3. Click the **Edit** button in the **Customer Registration** zone.

The **Main** page appears in the **Customer Registration** screen.

4. Ensure that the **Accounts** section is expanded in the **Accounts** page.

5. Click the **Edit** (✎) icon in the **View / Edit** column corresponding to the account whose details you want to edit.

The **Customer Registration - Add Account** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the account.
- **Auto Pay** - Used to add the automatic payment details of the account.
- **Persons** - Used to associate a person to the account.
- **Account Characteristics** - Used to define a list of characteristics for the account.
- **Credit Ratings** - Used to add the credit rating details for the account.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the account.
- **Account Identifiers** - Used to add the identifier details for the account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	
Set Up Date	Displays the date from when the account is configured for the person.	Not applicable
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account.	Yes
	Note: The list includes only those currencies which are defined in the system.	

Field Name	Field Description	Mandatory (Yes or No)
Account Category	Displays the category to which the account belongs. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account 	Not applicable
	Note: The list includes only those values which are present in the ACCT_USAGE_FLG lookup field.	
Access Group	Used to indicate the user group that can access the account for the person.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	
Exclude Accrual	Used to indicate whether the account is eligible for accrual.	No
	Note: By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the Exclude Accrual check box. On selecting the Exclude Accrual check box, the Accrual Cycle field is disabled.	
Accrual Cycle	Used to indicate the accrual cycle of the account in the division.	No
	Note: The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search for Cust Reg window appears. On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the Accrual Cycle field. This field is disabled when you click the Exclude Accrual check box.	

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to indicate the product for which the account is enrolled.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Search Product window appears.	Note: This field is required while enrolling an account for a product.
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed.	No
	Note: Only accounts where the person and child person are the main customers are considered for repricing. The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.	
Bill Cycle	Used to indicate the bill cycle for the account.	No
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing.	Yes
	Note: In case you don't want to bill the account in advance, you must specify 0 in this field.	
Comments	Used to specify additional information about the account.	No

6. Modify the required details of the account in the **Main** page.
7. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
8. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
9. Associate or disassociate persons from the account in the **Persons** page, if required.
10. Define, edit, or remove characteristics from the account in the **Account Characteristics** page, if required.
11. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
12. Click **Validate and Save**.

The changes made to the account are saved.

Copying a Customer Registration

Instead of creating a customer registration from scratch, you can create a new customer registration using an existing customer registration. This is possible through copying a customer registration. On copying a customer registration, the details including the characteristics are copied to the new customer registration. You can then edit the details, if required.

Prerequisites

To copy a customer registration, you should have:

- Customer registration (whose copy you want to create) defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic Types defined in the application
- Relationship types defined in the application
- Customer class, invoice currencies, account categories, bill cycles, accrual cycles, account identifier types, auto pay source codes, auto pay methods, auto pay route types, account relationship types, bill formats, address sources, bill route types, and collection class defined in the application

Note: The collection class is required when you are copying a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- Deal review frequencies and currency codes defined in the application

Note: These prerequisites are required when you are copying a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- Policy types and policy person roles defined in the application.

Note: These prerequisites are required when you are copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To copy a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. Click the **Copy**  icon in the **Copy** column corresponding to the customer registration whose copy you want to create.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Deal** - Used to specify information about the deals created for the person.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

- **Policies** - Used to specify the policy details of the person.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	No
Division	Used to indicate the division to which the person belongs.	Not applicable
Person Since Date	Used to specify the date from when the person is the main customer.	No
Customer Segment	Used to indicate the customer segment to which the person belongs.	No
	Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	

Field Name	Field Description	Mandatory (Yes or No)
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs.	No
	Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	
Access Group	Used to indicate the user group that can access the customer registration.	No
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.	

3. Enter the required details in the **Main** section.
4. Add or remove the names of the person in the **Person Names** section.
5. Add or remove the phone details for the person in the **Person Phones** section.
6. Add, edit, or remove the identifier details for the person in the **Person IDs** section.
7. Define, edit, or remove the addresses of the person in the **Contact** page, if required.
8. Define, edit, or remove characteristics from the person in the **Person Characteristics** page, if required.
9. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
10. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
11. Add, edit, or remove information about the deals created for the person in the **Deal** page, if required.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.

12. Add, edit, or remove the policy details of the person in the **Policies** page, if required.

Note: This page appears only when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

13. Define, edit, or remove characteristics from the customer registration in the **Registration Characteristics** page, if required.
14. Click **Validate and Save**.

The new customer registration is defined.

Editing the Policy Details

Prerequisites

To edit the policy details, you should have:

- Source systems defined in the application.
- Policy person roles defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To edit the policy details:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose policy details you want to edit.
The **Main** tab appears in the **Customer Registration** screen.
3. Click the **Edit** button in the **Customer Registration** zone.
The **Main** page appears in the **Customer Registration** screen.
4. Ensure that the **Policies & Plans** section is expanded in the **Policies** page.
5. Click the **Edit**() icon in the **View / Edit** column corresponding to the policy whose details you want to edit.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which the policy is defined in the system.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes

Editing the Policy Plan Details

Prerequisites

To edit the policy plan details, you should have:

- Pricing rule types defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**)

Procedure

To edit the policy plan details:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose policy plan details you want to edit.
The **Main** page appears in the **Customer Registration** screen.

- Ensure that the **Policies & Plans** section is expanded in the **Policies** page.
- Click the **Add**  icon in the **Policy Plans** column corresponding to the policy whose plan details you want to edit.

The following columns appear in the **Policies & Plans** section:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy plan.	Not applicable
Template	Indicates the policy plan template using which the policy is added in the policy.	Not applicable
Plan Number	Displays the policy plan number.	Not applicable
Price Item	Displays the price item that is associated with the policy plan.	Not applicable
View / Edit	On clicking the View / Edit  icon, you can view or edit the details of the policy plan.	Not applicable

Note: No information appears in the above columns if a plan is not yet added in the policy.

- Click the **Edit**  icon in the **View / Edit** column corresponding to the policy plan whose details you want to edit.

The **Plan** screen appears. It contains the following sections:

- Main** - Used to specify the basic details about the policy plan.
- Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
- Characteristics** - Used to define characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)

Editing the Customer Registration Details

Prerequisites

To define a customer registration, you should have:

- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Customer class, invoice currencies, account categories, bill cycles, accrual cycles, account identifier types, auto pay source codes, auto pay methods, auto pay route types, account relationship types, bill formats, address sources, bill route types, and collection class defined in the application

Note: The collection class is required when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- Deal review frequencies and currency codes defined in the application

Note: These prerequisites are required when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- Policy types and policy person roles defined in the application.

Note: These prerequisites are required when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To edit a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose details you want to edit.

The **Main** tab appears in the **Customer Registration** screen.

3. Click the **Edit** button in the **Customer Registration** zone.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Deal** - Used to specify information about the deals created for the person.

Note: This page appears only when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

- **Policies** - Used to specify the policy details of the person.

Note: This page appears only when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs. Note: You can view only those divisions to which you have access in the Division list.	Yes
Person Since Date	Used to specify the date from when the person is the main customer.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Used to indicate the customer segment to which the person belongs.	Yes
	Note: This field appears when you are editing a customer registration which is created using the C1-CustomerRegistrationBanking business object.	
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs.	Yes
	Note: This field appears when you are editing a customer registration which is created using the C1-CustomerRegistrationBanking business object.	
Access Group	Used to indicate the user group that can access the customer registration.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	

4. Modify the required details in the **Main** section.
5. Add, edit, or remove the names of the person in the **Person Names** section.
6. Add, edit, or remove the phone details of the person in the **Person Phones** section.
7. Add or remove the identifier details of the person in the **Person IDs** section.
8. Define, edit, or remove the address of the person in the **Contact** page, if required.
9. Define, edit, or remove characteristics from the person in the **Person Characteristics** page, if required.
10. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
11. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
12. Add, edit, or remove information about the deals created for the person in the **Deal** page, if required.

Note: This page appears only when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

13. Add, edit, or remove the policy details of the person in the **Policies** page, if required.

Note: This page appears only when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

14. Define, edit, or remove characteristics from the customer registration in the **Registration Characteristics** page, if required.

15. Click **Validate and Save**.

The changes made to the customer registration are saved.

Chapter 4

Customer 360° View

Topics:

- [Prerequisites](#)
- [Customer 360° View](#)
- [Customer 360° Information](#)
- [Bill Information](#)

Oracle Revenue Management and Billing provides a new screen named **Customer 360° View** which enables you to quickly view in-depth information about the person. This screen can be used to view the 360° information of a person who is associated with the fully-insured group or self-funded policy. It provides the following information:

- Basic details, characteristics, child persons, person hierarchy, person billing hierarchy, and the customer contacts of the person.
- Customer registration objects through which the bill groups are created for a parent customer.
- List of accounts to which the parent customer and its bill groups are associated.
- Basic details, characteristics, administrative contracts, automatic payment options, billing and adjustment summary, financial and collections summary, and unpaid bills of the person's account.
- Consolidated view of the transactions (such as, billing, payment, payment cancellation, adjustment, adjustment cancellation, automatic payments sent to the auto clearing house for review, refund, write off, excess credit, and reconciliation) which are carried out for the person's account.
- List of policies to which the parent customer or bill group is associated. The system lists those policies where the policy category is set to **Self-Funded** and **Fully-Insured Group**.
- Basic details, related persons, and policy plans in the person's policy.
- Basic and in-depth details of the pricing rules which are defined for a parent customer who is associated with the self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a self-funded policy of a bill group.
- Basic and in-depth details of the pricing rules which are defined for a fully-insured group policy plan.
- Basic details of the pricing groups defined for a bill group who is associated with the self-funded policy.
- Basic details of the approval transactions which are created while defining, editing, and deleting the pricing rules of the parent customer and bill group.
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, write off, or transfer) through which the bill is settled, high-level summary and details of the bill segments which are included in the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset

against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill-down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

Prerequisites

To setup the Customer 360° View feature, you need do the following:

- Define the required divisions, customer classes, person types, person identifier types, account identifier types, policy types, and policy person roles in the system
- Define values for the **C1-SourceSystemLookup** extendable lookup
- Define the required characteristic types where the characteristic entity is set to **Person**
- Define the required characteristic types where the characteristic entity is set to **Account**
- Define the required characteristic types where the characteristic entity is set to **Policy**
- Define values for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration

Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

- Define values for **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

- Define value for the **Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration

	Note: This field appears when you are searching for a person, account, or policy using the characteristic type. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: If you specify the characteristic type as a search criteria, you have to enter the characteristics value.
Division	Used to search persons or accounts which belong to a particular division.	No
	Note: This field appears when the Person or Account option is selected from the Search By list.	
Customer Class	Used to search accounts or persons' whose accounts belong to a particular customer class.	No
	Note: This field appears when the Person or Account option is selected from the Search By list.	
Person ID	Used to search a particular person.	No
	Note: This field appears when the Person option is selected from the Search By list.	
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person.	Yes (Conditional)
	Note: This field appears when the Person option is selected from the Search By list.	Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier	Used to search a person with a particular identifier.	Yes (Conditional)
	Note: This field appears when the Person option is selected from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Person Type	Used to search persons of a particular type. The valid values are: <ul style="list-style-type: none"> • Business • Bill Group • Group • Broker • Person • Parent Customer 	No
	Note: This field appears when the Person option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address.	No
	Note: This field appears when the Person or Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	
City	Used to search persons who belong to a particular city or accounts' whose main customer belongs to a particular city.	No
	Note: This field appears when the Person or Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number.	No
	Note: This field appears when the Person or Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular account.	No
	Note: This field appears when the Account option is selected from the Search By list.	
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional)
	Note: This field appears when the Account option is selected from the Search By list.	Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional)
	Note: This field appears when the Account option is selected from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Note:

You must specify at least one search criterion while searching for a person, account, or policy. One more search criterion is required when you are searching for a person or account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the person ID, account ID, or policy ID, the system ignores the additional search criterion and searches using the person ID, account ID, or policy ID, respectively.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy. This column appears when the Policy option is selected from the Search By list.
Main Customer	Indicates the main customer of the policy or account.
	Note: This column appears when the Policy or Account option is selected from the Search By list.
Source System	Displays the name of the external system in which the policy was created.
	Note: This column appears when the Policy option is selected from the Search By list.

Column Name	Column Description
Policy Number	Displays the policy number.
	Note: This column appears when the Policy option is selected from the Search By list.
Start Date	Displays the date from when the policy is effective.
	Note: This column appears when the Policy option is selected from the Search By list.
End Date	Displays the date till when the policy is effective.
	Note: This column appears when the Policy option is selected from the Search By list.
Status	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated
	Note: This column appears when the Policy option is selected from the Search By list.
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>This column appears when the Person option is selected from the Search By list.</p>
Person Name	Displays the name of the person.
	Note: This column appears when the Person option is selected from the Search By list.

Column Name	Column Description
Person Type	Indicates the type of the person. The valid values are: <ul style="list-style-type: none"> • Business • Bill Group • Group • Broker • Person • Parent Customer
	Note: This column appears when the Person option is selected from the Search By list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person.
	Note: This column appears when the Person option is selected from the Search By list.
Primary Person Identifier	Displays the primary person identifier.
	Note: This column appears when the Person option is selected from the Search By list.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This column appears when the Account option is selected from the Search By list.
Division	Indicates the division to which the account belongs.
	Note: This column appears when the Account option is selected from the Search By list.
Customer Class	Indicates the customer class to which the account belongs.
	Note: This column appears when the Account option is selected from the Search By list.
Primary Account Identifier Type	Indicates the primary identifier type associated with the account.
	Note: This column appears when the Account option is selected from the Search By list.
Primary Account Identifier	Displays the primary account identifier.
	Note: This column appears when the Account option is selected from the Search By list.

Column Name	Column Description
Current Balance	Displays the total amount of funds in the account.
	Note: This column appears when the Account option is selected from the Search By list.
Also Known As	Displays the non-primary names of the person separated by semi-colon (;).
	Note: This column appears when the Person option is selected from the Search By list.

Note:

You can view the 360° information of the person, account, or policy by clicking the **View** () icon corresponding to the record in the **Search Results** section.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Person**Prerequisites**

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify division and/or customer class when you are searching for a person using the city.

You must specify division, customer class, or any other criteria in the second group when you are searching for a person using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

Searching for an Account

Prerequisites

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.

4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the fourth criteria group) and account identifier (in the third criteria group), the system searches using the account identifier instead of the person name.

You must specify division and/or customer class when you are searching for an account using the city.

If you have specified any other search criterion along with the account ID, the system ignores the additional search criterion and searches for the account using the account ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and policy person roles defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Policy** option from the **Search By** list to indicate that you want to search for a policy.

4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a policy. One more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the policy ID, the system ignores the additional search criterion and searches for the policy using the policy ID.

You must specify the person name when you are searching for a policy using the policy person role.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the 360° Information of a Person**Prerequisites**

To view the 360° information of a person, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Procedure

To view the 360° information of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen. It contains the following zones:

- [Person Information](#) on page 238
- [Person Characteristics](#) on page 239
- [Child Persons](#) on page 240
- [Person Hierarchy](#) on page 240

Note: The **Person Hierarchy** zone does not appear when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Person Billing Hierarchy](#) on page 241

Note: The **Person Billing Hierarchy** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Derivation and Pricing Parameters](#) on page 244

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Sorting](#) on page 246

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Customer Contacts](#) on page 247
- [Bill Groups Created Via Customer Registration](#) on page 248

Note: The **Bill Groups Created Via Customer Registration** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

3. View the basic details of the person in the **Person Information** zone.
4. View the characteristics defined for the person in the **Person Characteristics** zone.
5. View the child persons included in the person's hierarchy in the **Child Persons** zone.
6. View the accounts and policies where the person is the main customer and memberships where the person is the main subscriber in the **Person Hierarchy** zone.
7. View the parent customer's accounts and policies and its bill groups' accounts and policies in the **Person Billing Hierarchy** zone.
8. View the derivation and pricing parameters defined for the bill group and sort ID combinations in the **Bill Group Derivation and Pricing Parameters** zone.
9. View the sort IDs defined for the bill groups in the **Bill Group Sorting** zone.
10. View how and when the person was contacted in the **Customer Contacts** zone.
11. View the customer registration objects through which the bill groups are created for the parent customer in the **Bill Groups Created Via Customer Registration** zone.
12. If required, you can view the details of the account to which the person is associated in the **Account** tab.

Note:

If you are viewing the 360° information of a parent customer, the following zones appears in the **Account** tab when you click the **Broadcast** () icon corresponding to the account in the [Account List](#) on page 249 zone:

- [Account Information](#) on page 250
- [Auto Pay Details](#) on page 253
- [Account Characteristics](#) on page 252
- [Account Financial and Collections Summary](#) on page 253
- [Open Bills](#) on page 255
- [Billed Vs Paid](#) on page 256
- [Timeline](#) on page 259
- [Trial Bills](#) on page 262

13. If required, you can view the details of the policy to which the person is associated in the **Policy** tab.

14. If required, you can view the pricing information of a parent customer or bill group in the **Pricing Information** tab.

Viewing the 360° Information of an Account

Prerequisites

To view the 360° information of an account, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration
- Values defined for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration
- Values defined for the **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

Note: The latter two prerequisites are not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

Procedure

To view the 360° information of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.

The **Account** tab appears in the **Customer 360° Information** screen. It contains the following zones:

- [Account List](#) on page 249

Note: The **Account List** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Account Information](#) on page 250

- [Auto Pay Details](#) on page 253
- [Account Characteristics](#) on page 252
- [Administrative Contracts](#) on page 252

Note: The **Administrative Contracts** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

- [Account Financial and Collections Summary](#) on page 253
- [Billing and Adjustment Summary](#) on page 254

Note: The **Billing and Adjustment Summary** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

- [Open Bills](#) on page 255
 - [Billed Vs Paid](#) on page 256
 - [Timeline](#) on page 259
 - [Trial Bills](#) on page 262
3. View the accounts of the parent customer and its bill groups in the **Account List** zone.
 4. View the basic details of the account in the **Account Information** zone.
 5. View the automatic payment options defined for the account in the **Auto Pay Details** zone.
 6. View the characteristics defined for the account in the **Account Characteristics** zone.
 7. View the account's contracts which should be monitored closely for various administrative reasons in the **Administrative Contracts** zone.
 8. View the financial and collection details of the account in the **Account Financial and Collections Summary** zone.
 9. View the billing and adjustment summary of the account in the **Billing and Adjustment Summary** zone.
 10. View the unpaid bills of the account in the **Open Bills** zone.
 11. View various transactions of the account, such as bills, payments, adjustments, reconciliations, and so on, in the **Billed Vs Paid** zone.
 12. View the number of customer contacts, bills, and payments created for the account in a particular month in the **Timeline** zone.
 13. View the trial bills which are created for the account in the **Trial Bills** zone.

Customer 360° Information

The following table provides information about the **Customer 360° Information** screen:

If you are viewing the 360° information of...	Then
A parent customer who is associated with the self-funded policy	<p>The Customer 360° Information screen allows you to view:</p> <ul style="list-style-type: none"> • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer. • Sort IDs of all effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration. • Derivation and pricing parameters defined for the bill group and sort ID combinations. • Customer registration objects through which the bill groups are created for the parent customer. • Accounts of all effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of a particular bill group's account. • List of self-funded policies to which the parent customer's bill groups are associated. • Basic details and policy persons of a self-funded policy where the parent customer is the policy holder. • Basic details of the pricing rules which are defined for the parent customer. • Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules. • Basic details of the self-funded policies which are associated with each bill group of the parent customer. • Basic details of the pricing rules which are defined for the self-funded policies of each bill group. • Basic details of the active pricing groups which are defined for each bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.

If you are viewing the 360° information of...	Then
A bill group who is associated with the self-funded policy	<p>The Customer 360° Information screen allows you to view:</p> <ul style="list-style-type: none"> • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account. • List of self-funded policies to which the bill group is associated. • Basic details and policy persons of a self-funded policy. • Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer. • Basic details of the self-funded policies which are associated with the bill group. • Basic details of the pricing rules which are defined for the self-funded policies of the bill group. • Basic details of the active pricing groups which are defined for the bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.

If you are viewing the 360° information of...	Then
A parent customer who is associated with the fully-insured group policy	<p>The Customer 360° Information screen allows you to view:</p> <ul style="list-style-type: none"> • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer. • Sort IDs of all effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration. • Derivation and pricing parameters defined for the bill group and sort ID combinations. • Customer registration objects through which the bill groups are created for the parent customer. • List of the parent customer's and bill groups' accounts. Note that the system lists the accounts of all effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the parent customer's or bill group's account. • List of fully-insured group policies to which the parent customer or its bill groups are associated. • Basic details, policy persons, and policy plans of a fully-insured group policy to which the parent customer or its bill group is associated. • Summarized tree view listing the fully-insured group policies of the parent customer and its bill group along with their respective policy plans and pricing rules. • Basic policy plan details of the fully-insured group policy to which the parent customer or its bill group is associated. • Basic details of the pricing rules which are defined for the fully-insured group policy plans. • Basic information about the approval transactions which are created while defining, editing, and deleting a pricing rule of a policy plan.

If you are viewing the 360° information of...	Then
A bill group who is associated with the fully-insured group policy	<p>The Customer 360° Information screen allows you to view:</p> <ul style="list-style-type: none"> • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group. • Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account. • List of fully-insured group policies to which the bill group is associated. • Basic details, policy persons, and policy plans of a fully-insured group policy. • Summarized tree view listing the fully-insured group policies of the bill group along with their respective policy plans and pricing rules. • Basic policy plan details of the fully-insured group policy to which the bill group is associated. • Basic details of the pricing rules which are defined for the fully-insured group policy plans. • Basic information about the approval transactions which are created while defining, editing, and deleting a pricing rule of a policy plan.
A person whose person type is neither Parent Customer nor Bill Group	<p>The Customer 360° Information screen allows you to view:</p> <ul style="list-style-type: none"> • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the person. • Basic details, characteristics, automatic payment options, administrative contracts, financial and collections summary, billing and adjustment summary, and unpaid bills of the person's account. • List of policies to which the person is associated. • Basic details, policy persons, and policy plans of a policy.

This screen consists of the following tabs:

- [Customer 360° Information - Person](#) on page 236
- [Customer 360° Information - Account](#) on page 248
- [Customer 360° Information - Policy](#) on page 262
- [Customer 360° Information - Pricing Information](#) on page 266

Note: If a person does not have an account or policy, the data does not appear in the **Account** or **Policy** tab, respectively. And, if the pricing rules are not defined for the parent customer, bill group's policy, or fully-insured group policy plan, the data does not appear in the **Pricing Information** tab.

Customer 360° Information - Person

The following table provides information about the **Person** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded or fully-insured group policy	The Person tab displays the following: <ul style="list-style-type: none"> • Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer. • Sort IDs of all effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration. • Derivation and pricing parameters defined for the bill group and sort ID combinations. • Customer registration objects through which the bill groups are created for the parent customer.
A bill group who is associated with the self-funded or fully-insured group policy	The Person tab displays the basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group.
A person whose person type is neither Parent Customer nor Bill Group	The Person tab displays the basic details, characteristics, child persons, billing hierarchy, and customer contacts of the person.

It contains the following zones:

- [Person Information](#) on page 238
- [Person Characteristics](#) on page 239
- [Child Persons](#) on page 240
- [Person Hierarchy](#) on page 240

Note: The **Person Hierarchy** zone does not appear when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Person Billing Hierarchy](#) on page 241

Note: The **Person Billing Hierarchy** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Derivation and Pricing Parameters](#) on page 244

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Sorting](#) on page 246

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Customer Contacts](#) on page 247
- [Bill Groups Created Via Customer Registration](#) on page 248

Note: The **Bill Groups Created Via Customer Registration** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

Person Information

The **Person Information** zone displays the details of the person. It contains the following sections:

- **Main** - Displays the basic information about the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the person.
Person Type	Indicates the type of the person. The valid values are: <ul style="list-style-type: none"> • Business • Bill Group • Group • Broker • Person • Parent Customer
Date of Birth	Displays the date when the person was born.
	Note: This field appears only when the respective data is available for the person.

- **Person Names** - Lists the primary and non-primary names of the person. It contains the following columns:

Column Name	Column Description
Name Type	Indicates the type of the name.
Person Name	Displays the name of the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.

Field Name	Field Description
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

Note: The above mentioned fields appear in the **Contact Information** section only when the respective data is available for the person.

- **Phone Details** – Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.

Person Characteristics

The **Person Characteristics** zone lists the characteristics defined for the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column only when the type of characteristic value is set to Predefined Value or Foreign Key Value .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Child Persons

The **Child Persons** zone lists the child persons included in the person's hierarchy. It contains the following columns:

Column Name	Column Description
Child Person Information	Displays information about the child person.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the child person.
Relationship Type	Indicates how the child person is related to the parent person.
Start Date	Displays the date from when the child person is related to the parent person.
End Date	Displays the date till when the child person is related to the parent person.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a child person by clicking the **View** (🔗) icon corresponding to the child person in this zone.

You can create a new child person through the **Customer Registration** feature by clicking the **Add** link in the upper right corner of this zone. While adding a child person to a parent person, the child person is related to the parent person using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim and enrollment transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group and sort ID combination. These parameters are used to derive the bill group against which the claim and enrollment transactions should be billed in the system. For example, if you want bill group 1 to handle claim and enrollment transactions of employees who reside in the western location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 1 where the source system is set to X, parameter 1 is set to Western, and parameter 2 is set to Grade A. Similarly, if you want bill group 2 to handle claim and enrollment transactions of employees who reside in the eastern location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 2 where the source system is set to X, parameter 1 is set to Eastern, and parameter 2 is set to Grade A.

Note: In the above examples, the bill group is derived based on the specified attributes only when the source system, parameter 1, and parameter 2 are mapped to the appropriate transaction fields in the pricing rule type using which the pricing rules are defined for the bill group.

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4. If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group.

The **Bill Group Derivation and Pricing Parameters** zone lists the derivation and pricing parameters defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define and edit the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination through this zone. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for a bill group and sort ID combination either from this zone or from the **Upload Request** screen. While creating an upload request for the derivation and pricing parameters, you need to specify the parent customer whose bill groups' derivation and pricing parameters you want to upload. Once the upload request is processed, the derivation and pricing parameters are defined for the bill group and sort ID combination in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the derivation and pricing parameters are defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Source System	Indicates the source system from where the claim and enrollment transactions are received.
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.

Column Name	Column Description
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.
Sort ID	Indicates the sort ID of the bill group.
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.
Status	Indicates the status of the derivation and pricing parameters defined for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> Active Inactive

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the derivation and pricing parameters of a bill group and sort ID combination.

If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header in this zone, and then click the **Edit** button. However, if you want to edit the derivation and pricing parameters of one or more bill group and sort ID combination, you need to select the check box corresponding to the bill group and sort ID combination, and then click the **Edit** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing.

You can define the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination by clicking the **Add** link in the upper right corner of this zone. You can also upload the derivation and pricing parameters for one or more bill group (who is effective child person of the parent customer) and sort ID combinations by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using various search criteria (such as, **Parameter 1, Parameter 2, Parameter 3, Parameter 4, Bill Group ID, Sort ID, Status, and Bill Group Name**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Bill Group Sorting

Oracle Revenue Management and Billing allows you to define unique sort IDs for a bill group in a given date range. In future, the sort ID will be used to club transactions based on certain parameters and present them in the bill in the ascending or descending order. It may also be used to sort data while generating various reports.

The **Bill Group Sorting** zone lists the sort IDs defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define, edit, and delete a sort ID of a bill group (who is effective child person of the parent customer) through this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) at the same time using the **Upload Request** feature. You can upload the sort IDs for bill groups either from this zone or from the **Upload Request** screen. While creating an upload request for bill group sort IDs, you need to specify the parent customer whose bill groups' sort IDs you want to upload. Once the upload request is processed, the sort ID is defined for the respective bill group in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the sort ID is defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Sort ID	Displays the sort ID.
Description	Displays the description of the sort ID.
Start Date	Displays the date from when the sort ID is effective for the bill group.
End Date	Displays the date till when the sort ID is effective for the bill group.

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of a bill group's sort ID.
Delete	Used to delete a bill group's sort ID. Note: You can delete a bill group's sort ID only when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

If you want to edit or delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header in this zone, and then accordingly click the **Edit** or **Delete** button. However, if you want to edit or delete

one or more sort IDs of effective bill groups, you need to select the check box corresponding to the bill group and sort ID combination, and then accordingly click the **Edit** or **Delete** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing or deleting.

You can define a sort ID for a bill group (who is effective child person of the parent customer) by clicking the **Add** link in the upper right corner of this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using the **Bill Group Name** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Customer Contact Information	Displays information about the customer contact. Note: It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the customer contact.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and **Show Open Contacts Only**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

Bill Groups Created Via Customer Registration

The **Bill Groups Created Via Customer Registration** zone lists the customer registration objects through which the parent customer's bill groups are created in the system. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**. It contains the following columns:

Column Name	Column Description
Customer Registration Information	Indicates the customer registration object through which the bill group is created. Note: It has a link. On clicking the link, the Customer Registration screen appears where you can view the details of the respective customer registration object.
Person Name	Displays the name of the bill group.
Person Relationship Type	Indicates how the bill group is related to the parent customer.
Status	Indicates the status of the customer registration object. The valid value is: <ul style="list-style-type: none"> Bill Group Approved

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Customer 360° Information - Account

The following table provides information about the **Account** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded or fully-insured group policy	The Account tab displays the following: <ul style="list-style-type: none"> List of the parent customer's and bill groups' accounts. Note that the system lists the accounts of all effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration. Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the parent customer's or bill group's account.
A bill group who is associated with the self-funded or fully-insured group policy	The Account tab displays the basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account. Note: If the bill group has multiple accounts, the system, by default, picks and displays the details of any one of its account.

If you are viewing the 360° information of...	Then...
A person whose person type is neither Parent Customer nor Bill Group	<p>The Account tab displays the basic details, characteristics, automatic payment options, administrative contracts, financial and collections summary, billing and adjustment summary, and unpaid bills of the person's account.</p> <p>Note: If the person has multiple accounts, the system, by default, picks and displays the details of any one of its account.</p>

It contains the following zones:

Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** – Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Management Group	Indicates the account management group to which the account belongs.
	<p>Note:</p> <p>It has a link. On clicking the link, the Account Management Group screen appears where you can view the details of the respective account management group.</p> <p>This field appears only when the respective data is available for the account.</p>

- **Contact Information** – Displays the contact details of the account’s main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account’s bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer’s address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer’s address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer’s address. It may contain the landmark details.
Address 4	Displays the fourth line of the main customer’s address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

Note: The above mentioned fields except **Address Source** appear in the **Contact Information** section only when the address source of the main customer is set to **Account Override** and the respective data is available for the account.

- **Account Identifiers** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

- **Billing** – Displays the billing information of the account. It contains the following fields:

Field Name	Field Description
Bill Cycle	Indicates the bill cycle of the account. Note: It has a link. On clicking the link, the Bill Cycle screen appears where you can view the details of the respective bill cycle. This field appears only when the respective data is available for the account.
Bill After Date	Displays the date when the billing should be resumed for the account. Note: This field appears only when the respective data is available for the account.

Account Characteristics

The **Account Characteristics** zone lists the characteristics defined for the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. Note: The data appears in this column only when the type of characteristic value is set to Predefined Value or Foreign Key Value .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Administrative Contracts

The **Administrative Contracts** zone lists the account's contracts which should be monitored closely for various administrative reasons. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following columns:

Column Name	Column Description
Contract ID	Displays the contract ID.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Contract Type	Indicates the type of the contract.
Currency	Indicates the currency in which the contract balance is maintained.
Current Balance	Displays the current balance on the contract.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The data appears in this zone only when you have defined the value for the **Administrative Contract Type** option type in the **C1_CMO** feature configuration.

Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options defined for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card.
	Note: The data appears in this column only when the external type of the auto pay source code's tender type is set to Credit Card Withdrawal .
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Account Financial and Collections Summary

The **Account Financial and Collections Summary** zone displays the financial and collection details of the account. It contains the following fields:

Field Name	Field Description
Collection Class	Indicates the collection class to which the account belongs.
Current Credit Rating	Indicates the account's credit rating which is effective on the current date.
Last Credit Review Date	Displays the date when the account's debt was last reviewed.
Last Payment Date	Displays the date when the last payment was made for the account.
	Note: The system considers the last payment which is in the Frozen status.
Last Payment Amount	Displays the amount of the last payment.
	Note: The system considers the last payment which is in the Frozen status.
Current Balance	Displays the current balance of the account.
Payoff Balance	Displays the payoff balance of the account.
Account on Hold	Indicates whether the account is on hold or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Account on Promise to Pay	Indicates whether any promise to pay is scheduled for the account on the current or future date. The valid values are: <ul style="list-style-type: none"> • Yes • No
Account on Payment Arrangement	Indicates whether any payment arrangement exists for the account. The valid values are: <ul style="list-style-type: none"> • Yes • No
Account on Payment Agreement	Indicates whether any active payment agreement request exists for the account. The valid values are: <ul style="list-style-type: none"> • Yes • No

Billing and Adjustment Summary

The **Billing and Adjustment Summary** zone displays the billing and adjustment summary of the account. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following sections:

- **Quote Billed Balance** – Displays information about the account's billed balance. It contains the following fields:

Field Name	Field Description
Past Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a past due date.
Future Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a future due date.
Quote Billed Balance	Displays the sum of past due billed balance and future due billed balance.

- **Future Adjustments and Retroactivity** – Displays information about the account’s future adjustments and retro activities. It contains the following fields:

Field Name	Field Description
Future Adjustments	Displays the sum of adjustment financial transactions of the account which are swept onto the next bill.
Future Retro Terms (Credits)	Displays the sum of canceled bill segment financial transactions of the account which are presented on the next bill.
Future Retro Adds (Debits)	<p>Displays the sum of membership premium billable charges which are not yet billed to the account.</p> <p>Note: The data appears in this field only when the values are defined for the Premium Amount SQI and Coverage End Date SQI option types in the C1-BILLADJSQ feature configuration.</p>
Future Balance with Adjustments & Debits/Credits	Displays the sum of quote billed balance, future adjustments, future retro terms (credits), and future retro adds (debits).

Open Bills

The **Open Bills** zone lists the unpaid bills of the account. By default, the bills where the unpaid amount is greater than zero are listed in this zone. It contains the following columns:

Column Name	Column Description										
Bill Date	<p>Displays the date when the bill was generated.</p> <p>Note: The data in this column is presented in a different color depending on the age bucket in which the bill’s days past due falls. The following table lists the color used for presentation in various age buckets:</p> <table border="1"> <thead> <tr> <th>Age Bucket</th> <th>Color</th> </tr> </thead> <tbody> <tr> <td>Age 0 to 30 DPD</td> <td>Black</td> </tr> <tr> <td>Age 31 to 60 DPD</td> <td>Green</td> </tr> <tr> <td>Age 61 to 90 DPD</td> <td>Orange</td> </tr> <tr> <td>Age > 90 DPD</td> <td>Red</td> </tr> </tbody> </table>	Age Bucket	Color	Age 0 to 30 DPD	Black	Age 31 to 60 DPD	Green	Age 61 to 90 DPD	Orange	Age > 90 DPD	Red
Age Bucket	Color										
Age 0 to 30 DPD	Black										
Age 31 to 60 DPD	Green										
Age 61 to 90 DPD	Orange										
Age > 90 DPD	Red										
Bill ID	<p>Displays the bill ID.</p> <p>Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p>										
Due Date	Displays the date when the bill is due for payment.										

Column Name	Column Description
Bill Amount	Displays the bill amount.
Bill Status	Indicates the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete
Unpaid Amount	Displays the unpaid amount of the bill.
Age Bucket	Indicates the age bucket in which the bill's days past due falls. The valid values are: <ul style="list-style-type: none"> • Age 0 to 30 DPD • Age 31 to 60 DPD • Age 61 to 90 DPD • Age > 90 DPD
Days Past Due	Displays the number of days past after the due date.
Overdue Process Information	Indicates the overdue process which is initiated for the bill and is currently in the Active status. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the respective overdue process.
Payment Agreement Request Information	Indicates the active payment agreement request in which the bill is included.
	Note: It has a link. On clicking the link, the Payment Agreement Request screen appears where you can view the details of the respective payment agreement request.

You can view additional information about the bill by clicking the **View** () icon corresponding to the bill in the **Open Bills** zone.

You can filter the list using various search criteria (such as, **On or Before Bill Date** and **Show All Bills**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: If you select the **Show All Bills** option, the system lists all bills where the unpaid amount is greater than or equal to zero.

Billed Vs Paid

The **Billed Vs Paid** zone lists the following transactions of the account:

- Bills which are created for the account

Note: The system lists the bills which are created for the account either manually from the user interface or automatically through the batches. It also lists the bills which are created for the account through a manual or automatic invoice request.

- Any excess credit which is made for the account
- Payments which are created or canceled for the account
- Adjustments which are created or canceled for the account
- Refund or Write Off adjustments which are created or canceled for the account
- Payment transfer to the reconciliation contract of the account
- Payment transfer from the reconciliation contract to the payor account's contract
- Reconciliations through which the account's bill segments are reconciled
- Automatic payments sent to the auto clearing house for review before freezing them

Note: The excess credit information for the account appears only when you have defined the value for the **On Account Contract Type** option type in the **C1_CMO** feature configuration. Accordingly, the excess credit information (if any) on the respective contracts is listed in this zone.

It contains the following columns:

Column Name	Column Description

Transaction Type	<p>Indicates the type of the transaction. The valid values are:</p> <ul data-bbox="573 1188 984 1646" style="list-style-type: none"> • Bill • Payment • Adjustment • Payment Cancellation • Adjustment Cancellation • Excess Credit (overpayment) • Reconciliation Contract • Reconciliation Contract - Returned • Payment Transfer • Payment Transfer Cancellation 																						

Column Name	Column Description
Transaction Description	Displays the description of the transaction. Note: The data appears in this column only when the transaction type is set to Adjustment, Adjustment Cancellation, Reconciliation Contract - Returned, Payment Transfer, and Payment Transfer Cancellation . In addition, the data appears in this column when the automatic payments are sent to the auto clearing house for review before freezing them. The transaction description for such payments is set to Pending Payment .
Transaction Amount	Displays the transaction amount.
Unpaid Amount	Displays the unpaid amount of the bill. Note: The data appears in this column only when the transaction type is set to Bill .
Payment Date	Displays the date when the payment is created or canceled for the account. Note: The data appears in this column only when the transaction type is set to Payment, Payment Cancellation, or Excess Credit (overpayment) .
Tender Type	Indicates the type of tender through which the payment was made.
Check Number/External Reference ID	Displays the check number or external reference ID.
Transaction ID	Displays the payment, adjustment, or reconciliation ID. Note: It has a link. On clicking the link, the Payment, Adjustment, or Reconciliation screen appears where you can view the details of the respective transaction.

The **View** (🔍) icon appears corresponding to a bill in this zone. On clicking the **View** (🔍) icon corresponding to a bill, the **Bill Information** screen appears where you can view the details of the respective bill.

You can filter the list using the **On or Before Due Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Timeline

The **Timeline** zone displays the following information in a graphical form:

- Number of customer contacts which are created for the account's main customer in a particular month
- Number of bills which are created for the account in a particular month
- Number of payments which are created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information.	Yes
	Note: By default, the current month appears in this field.	
Year	Used to indicate the year till when you want to display the above stated information.	Yes
	Note: By default, the current year appears in this field.	

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (🔍) icon.

You can use the **Previous 12 Months** (⏮), **Previous Month** (⏪), **Go To Today** (🕒), **Next Month** (⏩), and **Next 12 Months** (⏭) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description						
Customer Contacts	<p>A small icon appears for each customer contact which is created for the account's main customer in the respective month. For example, if two customer contacts are created for the main customer in the month of Jan 2017 and one customer contact is created in the month of Feb 2017, then two icons appear in the Jan 2017 column and one icon appear in the Feb 2017 column. A text indicating the day of the month when the customer contact was created appears on the icon. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1"> <thead> <tr> <th>If the contact action on the customer contact type is...</th> <th>Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td>Set to Send Letter</td> <td>Red</td> </tr> <tr> <td>Set to Action Algorithm</td> <td>Yellow</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding customer contact information appears at the bottom of this zone. It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer contact.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-CC-EVT algorithm.</p>	If the contact action on the customer contact type is...	Then the icon appears in...	Set to Send Letter	Red	Set to Action Algorithm	Yellow
If the contact action on the customer contact type is...	Then the icon appears in...						
Set to Send Letter	Red						
Set to Action Algorithm	Yellow						

Row Name	Row Description										
Bills	<p>A small icon appears for each bill which is created for the account in the respective month. For example, if three bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month when the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1" data-bbox="467 485 1463 737"><thead><tr><th data-bbox="467 485 964 535">If the bill is...</th><th data-bbox="964 485 1463 535">Then the icon appears in...</th></tr></thead><tbody><tr><td data-bbox="467 535 964 585">Fully Matched</td><td data-bbox="964 535 1463 585">Green</td></tr><tr><td data-bbox="467 585 964 636">Unmatched</td><td data-bbox="964 585 1463 636">Red</td></tr><tr><td data-bbox="467 636 964 686">Credit Note</td><td data-bbox="964 636 1463 686">Blue</td></tr><tr><td data-bbox="467 686 964 737">Scheduled for billing in the next bill cycle</td><td data-bbox="964 686 1463 737">Black</td></tr></tbody></table> <p>On clicking the icon, the corresponding bill information appears at the bottom of this zone. It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p> <p>Note:</p> <p>If you want to display the day of the due date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to D. However, if you want to display the day of the bill date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to B.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-OI-EVT algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red	Credit Note	Blue	Scheduled for billing in the next bill cycle	Black
If the bill is...	Then the icon appears in...										
Fully Matched	Green										
Unmatched	Red										
Credit Note	Blue										
Scheduled for billing in the next bill cycle	Black										

Row Name	Row Description												
Payments	<p>A small icon appears for each payment which is created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month when the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:</p> <table border="1"> <thead> <tr> <th>Status</th> <th>Color</th> </tr> </thead> <tbody> <tr> <td>Frozen</td> <td>Green</td> </tr> <tr> <td>Canceled</td> <td>Red</td> </tr> <tr> <td>Freezable</td> <td>Blue</td> </tr> <tr> <td>Error</td> <td>Red</td> </tr> <tr> <td>Incomplete</td> <td>Yellow</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding payment information appears at the bottom of this zone. It has a link. On clicking the link, the Payment screen appears where you can view the details of the respective payment.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-PY-EVT algorithm.</p>	Status	Color	Frozen	Green	Canceled	Red	Freezable	Blue	Error	Red	Incomplete	Yellow
Status	Color												
Frozen	Green												
Canceled	Red												
Freezable	Blue												
Error	Red												
Incomplete	Yellow												

Trial Bills

The **Trial Bills** zone lists the trial bills which are created for the account. It contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the trial bill is created.
Trial Bill Information	<p>Displays information about the trial bill.</p> <p>Note: It has a link. On clicking the link, the Trial Bill screen appears where you can view the details of the respective trial bill.</p>
Current Charges	Displays the trial bill amount.

Customer 360° Information - Policy

The following table provides information about the **Policy** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of self-funded policies to which the parent customer's bill groups are associated. <div data-bbox="769 373 1469 453" style="border: 1px solid black; padding: 5px;"> <p>Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.</p> </div> <ul style="list-style-type: none"> Basic details and policy persons of a self-funded policy where the parent customer is the policy holder.
A parent customer who is associated with the fully-insured group policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of fully-insured group policies to which the parent customer or its bill groups are associated. <div data-bbox="769 688 1469 768" style="border: 1px solid black; padding: 5px;"> <p>Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.</p> </div> <ul style="list-style-type: none"> Basic details, policy persons, and policy plans of a fully-insured group policy to which the parent customer or its bill group is associated.
A bill group who is associated with the self-funded policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of self-funded policies to which the bill group is associated. Basic details and policy persons of a self-funded policy.
A bill group who is associated with the fully-insured group policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of fully-insured group policies to which the bill group is associated. Basic details, policy persons, and policy plans of a fully-insured group policy.
A person whose person type is neither Parent Customer nor Bill Group	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of self-funded or fully-insured group policies to which the person is associated. Basic details, policy persons, and policy plans of a self-funded or fully-insured group policy.

It contains the following zones:

- [Policy List](#) on page 264

Note: The **Policy List** zone appears when there is more than one policy associated with the person.

- [Policy Information](#) on page 265
- [Policy Persons](#) on page 265
- [Policy Plans](#) on page 266

Note: The **Policy Plans** zone appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy.

Policy List

If you are viewing 360° information of a parent customer, the **Policy List** zone lists the policies to which the parent customer and its bill groups are associated. Note that the system lists the policies of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration.

Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.

If you are viewing 360° information of a bill group, the **Policy List** zone lists the policies to which the bill group is associated. If you are viewing 360° information of a person who is neither a parent customer nor a bill group, the **Policy List** zone lists the policies to which the person is associated. This zone appears when there is more than one policy associated with the person. It contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays information about the policy. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
Policy Type	Indicates the type of the policy.
Status	Indicates the status of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a policy, the following zones appear in the **Policy** tab:

- Policy Information
- Policy Persons
- Policy Plans

You can filter the list using various search criteria (such as, **Policy Number**, **Start Date**, **Policy Type**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Policy Information

The **Policy Information** zone displays the details of the policy. It contains the following sections:

- **Main** – Displays the basic information about the policy. It contains the following fields:

Field Name	Field Description
Policy Information	Displays information about the policy. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
Source System	Displays the name of the external system in which the policy is created.
Policy Number	Displays the policy number.
Status	Indicates the status of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Runout End Date	Displays the date when the runout period of the policy ends. Note: This field appears only when you are viewing the 360° information of a person who is associated with a self-funded policy.
Runout Administration Fees	Indicates whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> • None • Percentage of Claim Note: This field appears only when you are viewing the 360° information of a person who is associated with a self-funded policy. At present, this field is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.

- **Characteristics** – Lists the characteristics defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Policy Persons

The **Policy Persons** zone lists the persons associated with the policy. It contains the following columns:

Column Name	Column Description
Person Name	Indicates the person who is associated with the policy.
Policy Person Role	Indicates the role of the person with respect to the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a policy person by clicking the **View** () icon corresponding to the person in the **Policy Persons** zone.

Policy Plans

The **Policy Plans** zone lists the plans defined in the policy. It appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy. It contains the following columns:

Column Name	Column Description
Policy Plan Information	Displays information about the policy plan. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Plan	Indicates the price item associated with the policy plan.
Policy Plan Description	Displays the description of the price item.
No. of Subscribers	Indicates the number of main subscribers in the policy plan.
No. of Members	Indicates the number of members in the policy plan.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the pricing rules defined for a policy plan by clicking the **View** () icon corresponding to the policy plan in the **Policy Plans** zone.

You can filter the list using various search criteria (such as, **Plan Start Date** and **Plan End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Customer 360° Information - Pricing Information

The following table provides information about the **Pricing Information** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	<p>The Pricing Information tab displays the following:</p> <ul style="list-style-type: none"> • Basic details of the pricing rules which are defined for the parent customer. • Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules. • Basic details of the self-funded policies which are associated with each bill group of the parent customer. • Basic details of the pricing rules which are defined for the self-funded policies of each bill group. • Basic details of the active pricing groups which are defined for each bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	<p>The Pricing Information tab displays the following:</p> <ul style="list-style-type: none"> • Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer. • Basic details of the self-funded policies which are associated with the bill group. • Basic details of the pricing rules which are defined for the self-funded policies of the bill group. • Basic details of the active pricing groups which are defined for the bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.

Bill Group ASO Policy Information

The **Bill Group ASO Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy. If you are viewing the 360° information of a parent customer, the **Bill Group ASO Policy Information** zone lists the policies to which each bill group of the parent customer is associated. However, if you are viewing the 360° information of a bill group, the **Bill Group ASO Policy Information** zone lists the policies to which the bill group is associated. It contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the bill group to which the policy is associated.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective bill group (i.e. person).
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
Renew	On clicking the Renew  icon, the Policy screen appears where you can renew the policy.
	Note: The Renew icon appears only when the policy is in the In Force/Active status and it is not yet renewed.

Column Name	Column Description
Policy Number	Displays the policy number.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Status	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout
Runout End Date	Displays the date when the runout period of the policy ends.
Renewal Date	Displays the date when the policy is renewed.
	Note: The data appears in this column only when the policy is renewed.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a bill group and policy combination, the **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

You can filter the list using various search criteria (such as, **Bill Group Name**, **Policy Start Date**, and **Policy End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Bill Group Pricing Groups

The **Bill Group Pricing Groups** zone lists the pricing groups which are defined for the bill group. By default, the active pricing groups are listed in this zone. It appears when you are viewing 360° information of a bill group who is associated with the self-funded policy. It contains the following columns:

Column Name	Column Description
Pricing Group	Indicates the pricing group which is created for the bill group.
Status	Indicates the status of the pricing group. The valid values are: <ul style="list-style-type: none"> Active Inactive
Edit	On clicking the Edit (✎) icon, the Pricing Group screen appears where you can edit the details of the pricing group.
Delete	On clicking the Delete (🗑) icon, you can delete the pricing group. <p>Note: You can delete a pricing group only when it is not yet used while defining a pricing rule for the bill group.</p>
Duplicate	On clicking the Duplicate (📄) icon, the Pricing Group screen appears where you can define a new pricing group using an existing pricing group.
Associated Price Items	Indicates the price items whose pricing is defined using the pricing group.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Group Pricing Groups** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to a bill group in the **Bill Group Policy Information** zone.

You can define a new pricing group for the bill group by clicking the **Add** link in the upper right corner of this zone.

You can filter the list using the **Show All** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Note: If you select the **Yes** option from the **Show All** list, the system lists both the active and inactive pricing groups in the **Bill Group Pricing Groups** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Policy Plan Pricing Rules

The **Policy Plan Pricing Rules** zone lists the pricing rules which are defined for a fully-insured group policy plan. It appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group policy. It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created.
	Note: It has a link. On clicking the link, the Pricing Rule Type screen appears where you can view the details of the respective pricing rule type.
Pricing Rule Information	Displays information about the pricing rule.
	Note: It has a link. On clicking the link, the Pricing Rule screen appears where you can view the details of the respective pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Price List Information	Indicates the price list that contains the price item pricing which is created through the pricing rule.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define and edit a pricing rule for a policy plan through a health care inbound message and not from the user interface.

By default, the **Policy Plan Pricing Rules** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to a policy plan in the **Policy Plan Information** zone.

You can filter the list using various search criteria (such as, **Price Item**, **Start Date**, **Pricing Rule Type**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Defining a Sort ID for a Bill Group**Prerequisites**

To define a sort ID for a bill group, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration

Procedure

To define a sort ID for a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Add** link in the upper right corner of the **Bill Group Sorting** zone.

The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Used to indicate the bill group for whom you want to define the sort ID. Note: The values appear in this list only when there are effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type parameter of the C1-ASOBLNG feature configuration.	Yes
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Used to specify the sort ID.	Yes
Start Date	Used to specify the date from when the sort ID is effective for the bill group. Note: The start date cannot be later than the end date.	Yes
End Date	Used to specify the date till when the sort ID is effective for the bill group. Note: The end date cannot be earlier than the start date.	No

5. Enter the required details in the grid.
6. If you want to define more than one sort ID for a bill group, click the **Add** () icon and then repeat step 5.

Note: However, if you want to remove a sort ID of a bill group, click the **Delete** (🗑) icon corresponding to the bill group and sort ID combination.

7. Click **Save**.

A sort ID is defined for the bill group.

Editing a Sort ID of a Bill Group

Procedure

To edit a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

Note: If you want to edit all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group whose sort ID you want to edit.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Displays the sort ID.	Not applicable
Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes
	Note: The start date cannot be later than the end date. The start date cannot be later than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	
End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
	Note: The end date cannot be earlier than the start date. The end date cannot be earlier than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	

6. Modify the details of a bill group's sort ID, if required.
7. Click **Save**.

The changes made to the bill group's sort ID are saved.

Deleting a Sort ID of a Bill Group

Procedure

To delete a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination that you want to delete.

Note: If you want to delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for deleting.

- Click **Delete**.

A message appears confirming whether you want to delete the bill group's sort ID.

Note: You can delete a bill group's sort ID only when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

- Click **OK**.

The bill group's sort ID is deleted.

Creating a Bill Group Sorting Upload Request

Procedure

To create a bill group sorting upload request:

- Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- Click the **Upload** link in the upper right corner of the **Bill Group Sorting** zone.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request.	Yes
	Note: The list includes only those upload request types where the upload request business object with the Upload Type option type set to BG is selected.	

Note: The **Select Upload Request Type** screen appears only when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BG** is selected. If there is only one such upload request type defined in the application, the **Bill Group Sorting Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

The **Bill Group Sorting Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group sorting upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting upload request.	Yes
	<p>Note:</p> <p>By default, the parent customer's ID appears in this field. You can change the person, if required.</p> <p>The system allows you to create a bill group sorting upload request for a person whose person type is set to Parent Customer.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.

- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.

- Define characteristics for the upload request, if required.

- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, a bill group sorting upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

Defining the Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

Prerequisites

To define the derivation and pricing parameters for a bill group and sort ID combination, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration
- Sort ID defined for the bill group
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define the derivation and pricing parameters for a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Add** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the source system from where the claim and enrollment transactions are received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in this field.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in this field.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
	Note: You must not specify the ampersand (&) character in this field.	
Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
	Note: The effective date must be within the date range of the sort ID defined for the bill group.	
Status	Indicates the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Not applicable
	Note: By default, the value is set to Active .	
Bill Group Information	Used to indicate the bill group for whom you want to define the derivation and pricing parameters.	Yes
	Note: The values appear in this list only when there are effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type parameter of the C1-ASOBLNG feature configuration.	
Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Sort ID Search window appears.	

- Enter the required details in the grid.
- If you want to define the derivation and pricing parameters for more than one bill group and sort ID combination, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove the derivation and pricing parameters of a bill group and sort ID combination, click the **Delete** (🗑) icon corresponding to the bill group and sort ID combination.

- Click **Save**.

The derivation and pricing parameters are defined for the bill group and sort ID combination.

Editing the Derivation and Pricing Parameters of a Bill Group and Sort ID Combination

Procedure

To edit the derivation and pricing parameters of a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Derivation and Pricing Parameters** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

Note: If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Indicates the source system from where the claim and enrollment transactions are received.	Not applicable
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Not applicable
Status	Used to indicate the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Bill Group Information	Indicates the bill group for whom the derivation and pricing parameters are defined.	Not applicable
Sort ID	Indicates the sort ID of the bill group for which the derivation and pricing parameters are defined.	Not applicable

- If required, you can inactivate the derivation and pricing parameters of a bill group and sort ID combination.
- Click **Save**.

The changes made to the derivation and pricing parameters of a bill group and sort ID combination are saved.

Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy only when it is in the **In Force/Active** status and is not yet renewed. For more information, see [Self-Funded Policy Renewal](#) on page 1898.

Procedure

To renew a self-funded policy of a bill group:

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
The **Pricing Information** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Renew** () icon in the **Renew** column corresponding to the self-funded policy which you want to renew.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the renewed policy.
- **Persons** - Used to associate or disassociate persons from the renewed policy.

Note: You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration.

- **Characteristics** - Used to define characteristics for the renewed policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes
Start Date	Used to specify the date from when the renewed policy is effective.	Yes
	<p>Note:</p> <p>By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.</p> <p>The start date cannot be later than the end date.</p> <p>The start date cannot be earlier than or equal to the base policy's end date.</p>	
End Date	Used to specify the date till when the renewed policy is effective.	Yes
	<p>Note: The end date cannot be earlier than the start date.</p>	
Runout End Date	Used to specify the date when the runout period of the renewed policy ends.	No
	<p>Note: The runout end date cannot be earlier than or equal to the renewed policy's end date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> • None • Percentage of Claim 	No
	Note: At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.	
Copy Pricing Rules	Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the Copy Pricing Rules option, the system copies the following pricing rules of the base policy: <ul style="list-style-type: none"> • Claim • Retention Type Claim Based • Retention Type Enrollment Based • Recurring Flat Fees • Ancillary 	No
	Note: While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.	

Note: The **Renew** icon appears only when the policy is in the **In Force/Active** status and it is not yet renewed.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics from the renewed policy, if required.
8. Click **Save**.

The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group ASO Policy Information** zone.

Viewing the Bill Details

Procedure

To view the details of a bill:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account whose details you want to view.
The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** (🔍) icon corresponding to the bill whose details you want to view.
The **Bill Information** screen appears.
4. View the basic details of the bill in the **Bill Information** zone.
5. View the adjustments which are swept onto the bill in the **Adjustments** zone.
6. View the activities, such as payment, transfer, offset, refund, or write off through which the bill is settled, in the **Settlement Activities** zone.
7. View the bill segment information, which is summarized based on the date range and price item combination, in the **Bill Segment Summary** zone.
8. View the details of the bill segments in the **Bill Segment Details** zone.
9. View the SQ details of the bill segment in the **SQ Details** zone.
10. View the calculation lines of the bill segment in the **Bill Segment Calculation Lines** zone.
11. View the transactions whose charges are billed through the bill segment in the **Transaction Details** zone.
12. View the calculation lines of all transaction legs (which are rated before billing) in the **Transaction Leg Calculation Lines** zone.
13. View the active hold requests due to which the bill is kept on hold in the **Hold Details** zone.
14. View the offset requests through which the bill is offset against another bill in the **Offset Details** zone.
15. View the refund and write off requests through which the bill or its bill segment is either refunded or written off in the **Refund and Write Off Details** zone.

Viewing the Pricing Rules Defined for a Fully-Insured Group Policy Plan

Procedure

To view the pricing rules defined for a fully-insured group policy plan:

1. Search for the person who is associated with the fully-insured group policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
The **Pricing Information** tab appears.
4. In the **Policy Plan Information** zone, click the **Broadcast** () icon corresponding to a policy plan whose details you want to view.
The **Policy Plan Pricing Rules** zone appears.
5. View the pricing rules which are defined for the policy plan in the **Policy Plan Pricing Rules** zone.

Tip: Alternatively, you can access the **Policy Plan Pricing Rules** zone by clicking the **View** () icon corresponding to a policy plan in the **Policy Plans** zone of the **Policy** tab.

Bill Information

The **Bill Information** screen allows you to view:

- Basic details of the bill
- Adjustments which are swept onto the bill
- Activities, such as payment, offset, refund, write off, or transfer through which the bill is settled
- High-level summary and details of the bill segments which are included in the bill
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Refund and write off requests through which the bill or its bill segment is either refunded or written off

It contains the following zones:

- [Bill Information](#) on page 303
- [Adjustments](#) on page 304
- [Settlement Activities](#) on page 304
- [Bill Segment Summary](#) on page 305
- [Bill Segment Details](#) on page 305
- [SQ Details](#) on page 307
- [Bill Segment Calculation Lines](#) on page 307
- [Transaction Details](#) on page 308
- [Transaction Leg Calculation Lines](#) on page 309
- [Hold Details](#) on page 310
- [Offset Details](#) on page 310
- [Refund and Write Off Details](#) on page 311

Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** - Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID.
	Note: This field appears only when the respective data is available for the bill.
Account Information	Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Adjustments

The **Adjustments** zone lists the adjustments which are swept onto the bill. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustment.
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.
Contract Information	Indicates the contract against which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

Settlement Activities

You may settle a bill or its bill segment by making a payment, offsetting, refunding, writing off, or by reconciling against pay instructions. The **Settlement Activities** zone lists the activities related to the bill or its bill segment settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity was performed in the system.

Column Name	Column Description
Activity Type	Indicates the type of the settlement activity. The valid values are: <ul style="list-style-type: none"> • Payment • Offset • Refund • Write Off • Transfer
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the settlement activity.
Related Object ID	Indicates the payment, offset request, refund request, write off request, or reconciliation adjustment which is created during settlement. <p>Note: It has a link. On clicking the link, the Payment, Offset Request, Refund Request, Write Off Request, or Adjustment screen appears where you can view the details of the respective activity.</p>

Bill Segment Summary

The system groups the bill segments with the same date range and price item combination and then provides the summarized information for each combination in the **Bill Segment Summary** zone. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segments.
End Date	Displays the end date of the bill segments.
Policy Number	Indicates the policy for which the bill segments are generated.
Price Item Description	Indicates the price item for which the bill segments are generated.
Amount	Displays the sum of the bill segment amount.
Unpaid Amount	Displays the sum of the unpaid amount of the bill segments.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Bill Segment Details

The **Bill Segment Details** zone displays the details of the bill segments which are included in the bill. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Policy Number	Indicates the policy for which the bill segment is generated.
Price Item Description	Displays the description of the price item.
Price Item	Indicates the price item for which the bill segment is generated.

Column Name	Column Description
Status	Indicates the status of the bill segment. The valid values are: <ul style="list-style-type: none"> • Incomplete • Error • Freezable • Pending Cancel • Frozen • Canceled
Amount	Displays the bill segment amount.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated. Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge.
Unpaid Amount	Displays the unpaid amount of the bill segment.
Price Item Parameters	Displays the concatenated string consisting of a list of parameters and their values based on which the price item pricing is defined.
External Membership ID	Indicates the membership for which the bill segment is generated.
Member's Primary Identifier	Displays the concatenated string consisting of member's primary identifier type and its value which are separated by a colon (:).
Member Name	Indicates the member for whom the bill segment is generated.
Plan Information	Indicates the plan to which the membership belongs. Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.
Auto Pay ID	Indicates the auto pay instruction through the automatic payment is created for the bill segment. Note: It has a link. On clicking the link, the Auto Pay Instruction screen appears where you can view the details of the respective auto pay instruction.
Bill Segment ID	Displays the bill segment ID. Note: It has a link. On clicking the link, the Bill Segment screen appears where you can view the details of the respective bill segment.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **View** () icon corresponding to a bill segment, the **Bill Segment** screen appears where you can view the additional details of the respective bill segment.

On clicking the **Broadcast** () icon corresponding to a bill segment, the **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

Note:

The **SQ Details** zone appears only when the bill segment is generated for an SQI based billable charge.

The **Transaction Details** zone appears only when the bill segment is generated for a billable charge which is created through the transaction aggregation process.

You can filter the list using various search criteria (such as, **Start Date** and **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

SQ Details

The **SQ Details** zone lists the service quantity identifiers (SQIs) used in the bill segment calculation. It appears only when the bill segment is generated for an SQI based billable charge. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Billed Service Quantity	Displays the service quantity used by the rates engine for calculation. This amount differs from the initial service quantity when the rate's SQ rules manipulate the service quantity.

By default, the **SQ Details** zone does not appear in the **Bill Information** screen. It appears only when you click the **Broadcast** (⦿) icon corresponding to a bill segment in the **Bill Segment Details** zone.

Bill Segment Calculation Lines

The **Bill Segment Calculation Lines** zone lists the calculation lines of the bill segment. It contains the following columns:

Column Name	Column Description
Header Sequence	Indicates the sequence in which the calculation line is generated.
Sequence	Ideally, the sequence would be 1 unless multiple versions of the rate were effective during the bill period. If there is more than one effective rate version, there will be a separate set of calculation lines for each version applied. The lines that apply to the first part of the bill period would have a Sequence of 1, the lines for the next part of the bill period would have a Sequence of 2 and so on.
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Amount	Displays the charge amount.
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.

Column Name	Column Description
Service Quantity	Indicates the service quantity which is used for calculation.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Segment Calculation Lines** zone does not appear in the **Bill Information** screen. It appears only when you click the **Broadcast** () icon corresponding to a bill segment in the **Bill Segment Details** zone.

Transaction Details

The **Transaction Details** zone lists the transactions whose charges are billed through the bill segment. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the respective transaction.
Transaction Date	Displays the date and time when the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Displays the currency in which the transaction was performed.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the respective rule.
Transaction Information	Displays information about the transaction.
	Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the respective transaction.

By default, the **Transaction Details** zone does not appear in the **Bill Information** screen. It appears only when you click the **Broadcast** () icon corresponding to a bill segment in the **Bill Segment Details** zone.

On clicking the **Broadcast** () icon corresponding to a transaction, the **Transaction Leg Calculation Lines** zone appears with the details of the respective transaction.

Related Topics

For more information on...	See...
How to view the calculation lines of all legs of a transaction	Viewing the Calculation Lines of All Legs of a Transaction on page 314

Transaction Leg Calculation Lines

The **Transaction Leg Calculation Lines** zone lists the calculation lines of all legs of the transaction which are rated before billing. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Indicates the rate which is used for the calculation.
SQI	Indicates the service quantity identifier (SQI) which is used in the calculation.
Billable Service Quantity	Indicates the service quantities used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off (i.e. amount in precision). For example, 100. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> • Y • N
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction legs are aggregated during calculation.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Bill Information** screen. It appears only when you click the **Broadcast** () icon corresponding to a transaction in the **Transaction Details** zone.

Hold Details

The **Hold Details** zone lists the active hold requests due to which the bill is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> • Person • Account • Bill
Entity Information	Indicates the entity for which the hold request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person , Account , or Bill screen appears where you can view the details of the respective entity.
Start Date	Displays the date from when the entity is kept on hold.
End Date	Displays the date till when the entity is kept on hold.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request.
	Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request.
Offset Amount	Indicates the bill amount which is offset against another bill.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request. Note: It has a link. On clicking the link, the Refund Request or Write Off Request screen appears depending on whether the request is created for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Cancelled • Deferred Processing • Draft • Processed • Rejected • Voided
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off
Account Information	Indicates the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Created By	Indicates the user who has created the refund or write off request.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Viewing the SQ Details of a Bill Segment

Procedure

To view the SQ details of a bill segment:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.

The **Account** tab appears in the **Customer 360° Information** screen.

- In the **Open Bills** zone, click the **View** () icon corresponding to the bill whose details you want to view.

The **Bill Information** screen appears.

- In the **Bill Segment Details** zone, click the **Broadcast** () icon corresponding to the bill segment whose details you want to view.

The **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

Note:

The **SQ Details** zone appears only when the bill segment is generated for an SQI based billable charge.

The **Transaction Details** zone appears only when the bill segment is generated for a billable charge which is created through the transaction aggregation process.

- View the SQ details of the bill segment in the **SQ Details** zone.

Chapter 5

Pricing Management (Health Insurance Business)

Topics:

- [Prerequisites \(Health Insurance Business\)](#)
- [Pricing Methodologies and Pricing Variation Based on Parameters \(Health Insurance Business\)](#)
- [Parameter](#)
- [Price Item \(Health Insurance Business\)](#)
- [Price List](#)
- [Rate Definition](#)
- [Tiering Criterion](#)

Oracle Revenue Management and Billing allows you to define prices for premiums, various fees, credits, discounts, and taxes that are defined as price items. Price for the price item may vary based on various attributes, which are defined as parameters in the system. Parameter values are derived either from transaction attributes (for example, for calculating claim based fees for a self-funded customer, pricing may vary based on claim transaction's health coverage class) or based on a field or characteristic of entities (for example, for calculating premium, pricing may vary based on member person's characteristic; whether a smoker or non-smoker). The system also supports deriving the pricing parameter through an algorithm, thereby enabling the custom derivation based on requirements.

Based on the line of business and the type of charge, you can define standard pricing which is common for multiple customers (for example, pricing defined for a health plan is applicable for all the subscribers subscribing to the health plan) or customer-specific pricing (for example, for fully-insured group customer, the pricing is specific to the group and you can define the policy plan level pricing in the system to achieve this. For more information about the fully-insured pricing, see [Fully-Insured Pricing](#) on page 2691.

The system enables you to define pricing at various levels in a customer hierarchy (for example, for a self-funded group customer, the pricing can be defined at the bill group level as well as at the parent customer level). If pricing is defined at multiple levels for a customer, the precedence is given to the pricing based on the level while searching for the pricing. For example, if pricing is defined for a price item at the bill group level as well as the parent customer level, the bill group level pricing takes precedence over the parent customer level pricing. Also, the parent customer level pricing is inherited by all the bill groups.

The pricing is triggered based on the transactions to calculate various charges or credit amounts eligible for a transaction. For example, for a self-funded customer, claim amounts with additional fees and markups, claim based fees, stop loss is calculated for claim transactions, enrollment based retention fees are calculated based on enrollment transactions, and ancillary fees are calculated based on ancillary transactions. For more information about the self-funded pricing, see [Self-Funded Pricing](#) on page 2143.

Transaction Based Pricing is invoked using the **Transaction Feed Management** module which processes different types of transactions (for example, claim, capitation, ancillary, enrollment, etc.) using the configurable validation and mapping rules to invoke the eligible pricing rules. For more information about the transaction feed management, see [Transaction Feed Management](#) on page 683.

Pricing can also be triggered **based on qualifying life events** (for example, premium is calculated when a new membership is added, or a new member

is added to an existing membership, or every time the plan pricing is revised, etc.). The entity audit framework enables you to define various events for which pricing should be revised. For example, **addition of a new membership, addition of a new member, updates to the plan pricing, or the membership attributes which you want to monitor for premium change, etc.** The system enables you to define the algorithms to price the eligible events by invoking pricing rules. For more information about the entity audit framework, see [Entity Audit](#) on page 2799.

Prerequisites (Health Insurance Business)

To setup the pricing management feature, you need to do the following:

- Define the required SQIs and divisions in the system.
- Define the required parameters in the system.
- Define the tiering setup for rate components in the system.
- Define the required price items in the system.

Pricing Methodologies and Pricing Variation Based on Parameters (Health Insurance Business)

The specialized pricing methodologies are required for pricing the fully-insured and self-funded customers. Therefore, an out of box pricing solution is provided to the fully-insured and self-funded customers through distinct pricing rule types.

Fully-Insured Pricing

Age Banded Premium Pricing

Age banded premium pricing is one of the methodologies for premium calculation. In this methodology, Premium calculation is done **by determining the premium of each member separately mainly based on the age band in which the member falls, and then aggregating** these to derive the overall premium amount for a membership.

Apart from member's age, premium of age banded plans can vary based upon **different parameters; be it member's attribute or plan level attribute or LOB specific attributes**. For example, pricing can vary by different population segment characteristics such as Employee Type (Retiree, COBRA and Active) and/or by different regions, Employee Status (Permanent/contractual) etc. Age-banded pricing may also vary by different modifiers such as Tobacco usage, Gender etc.

OIRMB provides Out of Box Pricing Rule Type 'Age Banded'. Using the same you can define pricing rule to define age-banded plan pricing. Pricing variation can be defined based on the pricing eligibility parameters where the source can be defined as Membership characteristics or Member characteristics or Plan characteristics. User can set **base fee** for set of parameters and can also set the **percentage or flat amount to be added over the base fee for each modifiers**.

Age-banded premium calculation algorithm which is configured in Age-banded pricing rule type process the premium pricing for each membership, derive the premium amount for each member and then aggregates the amount to derive the overall premium amount for a membership. **Maximum number of eligible dependents and the order of selection of the dependents like oldest first or youngest first is also configurable at Plan or State level.**

Age Banded Example:

Demo Corporation has a Group policy for the employees the Monthly premium for the policy is rated as follows

Base Premium Rate

Age Band	Location/Rating Area	Base Premium
Up to 15 Years	North California	\$200
	South California	\$210
16 to 18 Years	North California	\$210
	South California	\$220

Age Band	Location/Rating Area	Base Premium
18 to 40 Years	North California	\$220
	South California	\$240
40 to 60 Years	North California	\$250
	South California	\$260
60+ Years	North California	\$280
	South California	\$290

On Top of the base premium, additional 2% premium will be charged if the member is smoker

State of California is configured with the following pricing rules :

Max. No of Eligible Dependents = 2

Order of Dependent Selection = Oldest first

New Born Gift Days = 30

Proration Rule Defined for the account : Mid Month i.e. Member joining before 15th will be charged the premium for the entire month

Example 1:

North California Based Employee John Doe, a 45 years old smoker who enrolled himself with his spouse Mary Doe (Age 40) and daughter Elsa Doe aged 13, son Bob Doe aged 10 and daughter Laura Doe aged 8 the premium will be calculated as follows:

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
	Smoker	\$5
Mary Doe	Base Premium	\$250
Elsa Doe	Base Premium	\$200
Bob Doe	Base Premium	\$200
Total Premium		\$905

Example 2 :

North California Based Employee John Doe a California based Employee is enrolled in to the plan along with his spouse Mary Doe, John enrolls his new born daughter Laura born on 3rd of July on 20th of July.

John's Premium for all the months till July will be calculated as follows

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
Mary Doe	Base Premium	\$250
Total Premium		\$500

With the new enrolment in the month of July, The premium for July and the following months will be recalculated, As the state of California has New Born Gift days = 30 days, the premium will be calculated as follows:

For the Month of July:

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
Mary Doe	Base Premium	\$250
Laura Doe	Base Premium	\$200
	New Born Waiver	-\$200
Total Premium		\$500

For Month of August:

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
Mary Doe	Base Premium	\$250
Laura Doe	Base Premium	\$200
Total Premium		\$700

Tiered Premium Pricing

Tiered based premium pricing is another methodology for premium calculation. In this methodology, Premium calculation is done by determining the **subscription tier** level for the membership directly to derive the premium amount for that membership.

Standard tier based pricing structure contains different tiers such as Employee only (E), Employee+ Spouse (ES), Family (F), Employee + Children (EC). A member can subscribe his/her dependents to a plan and fall into one of the tier. Tier-based premium varies based upon **membership tier level and different parameters**; parameters can be member's attribute or Plan level attribute or LOB specific attributes. For example, for a particular tier, pricing can vary by different population segment characteristics such as Employee Type (Retiree, COBRA and Active) and/or by different regions, Employee Status (Permanent/contractual) etc.

Like age-based pricing, tier-based pricing can be defined using pricing rule with tier-based pricing rule type You can set premium fee for set of parameters and tier level. Tier-based premium calculation algorithm which is configured in tier-based pricing rule type process the premium pricing for each membership based on the applicable rate for the parameters and tier value for that membership which is defined as membership characteristic.

Tier Based Pricing Example

Tier	Location/Rating Area	Premium
Employee Only	N. California	\$200
	S. California	\$210
Employee + Spouse	N. California	\$300
	S. California	\$310
Family	N. California	\$450

Tier	Location/Rating Area	Premium
	S. California	\$500

Example : North California Based Employee John Doe, a 45 years old smoker who enrolled himself with his spouse Mary Doe (Age 40) and daughter Elsa Doe aged 13 the premium charged will be \$450 per month.

State Level Configurations

Various state specific rules are defined in OIRMB using state specific characteristics e.g. Gift Days to provide no additional premium when New Born is enrolled into the plan or various rules such as maximum dependents to be covered etc. The state and state characteristics can be defined state specific parameters. These parameters which define business rules may have overridden values at Plan or Membership levels. OIRMB pricing calculation always checks for the parameters at membership and plan level first, if not found then the state level parameters are considered for the price calculations.

Premium Holiday and Proration

OIRMB provides several options for correctly handling of proration; when a rate changes in middle of a billing period or when new Membership is added or terminated during the bill period. Configurable Proration Rule allows to define various options such as; mid-month proration where full premium is applicable if the membership starts before mid-coverage or proration based on covered days etc.

A configuration option can be set to handle special cases where proration is not to be applied even during a long or short bill period (e.g. when a flat charge is to be applied in full; even though the billing period is half of the standard period).

OIRMB allows configuring or uploading the period for which premium holiday or waive off of premium needs to be given to the membership, based on which the premium is waived off, the rate configurations allow you to provide these details on the bill lines providing the required transparency to the customer.

Self-funded Pricing

OIRMB provides you with a complete solution in terms of pricing, billing and revenue management to support ASO plans and also to provide risk coverage of offering self-funded plans through the stop loss or re-insurance services.

Claim Amount Processing

OIRMB provides capability to calculate the final claim amount to be charged to the customer by summing up all the claim line items configured as billable for the customer. It also provides a facility to mark up or markdown these line items amounts as per customer specific pricing. You can also define the capping amounts per claim.

In order to support new '**Payments Integrity model**' OIRMB enables you to define **the additional fees i.e. recovery fees / savings amounts** to be calculated as **flat or percentage based** on the claim charges and charge the same to the customers along with **Max / Min capping amounts**

OIRMB allows you to define pricing rules, having different pricing strategy based on policy status e.g. **during the active policy period various chargeable items** like consumer driven health insurance charges, traditional health insurance charges, **are charged to the customer** whereas during **post runout period the entire claim amount will be written off.**

To enable easy configurations OIRMB provides you a capability to define **claim templates** and with definition of multiple add-on fees and its usage with default pricing. Using a file upload utility or other custom process the claim transactions can be uploaded to OIRMB.

Claim transactions contain information about the membership and details of various claim line items such as **ASO service provider charges, fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor**, and so on.

OIRMB allows the ASO service provider to bill employers for claim amount and various additional fees based on the pricing defined. Claim pricing rules can be defined at the parent customer and bill group levels. Claim pricing rule enables you to define whether a particular claim line item should be billable to the customer or should be written off. Eligibility for billing can be defined based on rules using the transaction attributes.

Retention fee – Claim based

Retention fee is based upon claim amount either the percentage of claim or flat amount per claim transaction can also be calculated. OIRMB provides you an ability to select the Claim line items eligible for claim based fees calculations. Claim based fees pricing can **vary based on either membership attributes or based on the claim transaction attributes** e.g. different claim based fees can be charged for claim with health coverage class as ‘Medical’ than that of the ‘Dental’

Retention fee – Enrolment based

In order to calculate fees / premium amount / various limits (e.g. ASL Limit based on the enrolments), OIRMB provides out of box pricing rule type – retention fee – enrolment based. Enrolment based pricing rules can be defined at both customer or bill group level where, enrolment fees are defined as per member or per subscriber charges where **pricing variation can be provided based on parameters e.g. coverage tier or health coverage class(HCC) etc.** It also calculates the retention fee based upon enrollment count.

Flat and Recurring Fees

Ad-hoc one time fees (e.g. one time admin fees), recurring premium fees / charges e.g. charge the stop loss premium can be defined in OIRMB using the flat and recurring fees pricing rule type. These types of charges are independent of no. of enrolments or claims and are charged as a flat fee per month over a period of time. OIRMB provides flexibility to set up pricing rules for charging flat / one time fees or flat recurring fees with configurable recurring frequencies e.g. claim funds.

Ancillary fees

Ancillary service charges are basically an adjustments charge which are either pre-calculated charges which need to be included into the bill or to be calculated based on the utilization of the ancillary services Ancillary pricing rule can be defined at the parent customer and bill group levels. The ancillary in OIRMB enables you to create an ancillary charge in either of the following ways:

- As **pass through charge without markup or markdown** (i.e. flat charge)
- As **pass through charge** where OIRMB adds a **flat or percentage based markup or markdown** to charge the customer
- Or by creating a **rate based charge** using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge

Specific Stop Loss (SSL)

SSL is the form of excess risk coverage that provides protection for the **employer against a high claim on any one individual**. OIRMB provides a pricing rule type – specific stop loss to support SSL calculations. SSL pricing rules are defined at two levels – parent level defines all the accumulation specific details which are common for all the bill groups and bill group – policy level pricing to define the limits and also **information about which charges are to be re-insured against SSL**. OIRMB provides **complete flexibility** to define the **accumulation criteria** e.g. you can choose to calculate SSL only on the medical claims, out of network claim, etc. based on configurations. Ability to calculate and invoice the specific stop loss based on per subscriber or per member basis with a **facility to laser or excludes the subscribers / members**. OIRMB’s flexible accumulation criteria definitions allow you to define SSL pricing for various types of policies -12/12 or 15/12 or 12/15 with ease. With OIRMB you can choose the settlement frequency for the SSL

OIRMB enables you to setup **SSL retrospectively or allow pricing updates by reprocessing**

Aggregated Stop Loss (ASL)

OIRMB enables you to provide a **ceiling on the dollar amount of eligible expenses** that an employer would pay, **in total for all members or subscribers**, during a contract period. **ASL limit** can be configured as **either flat limit or based on the PSPM (Per subscriber per month) basis or enrolment based**. Similar to SSL, ASL pricing rules **enables to define eligibility rules for the transactions and claim line items** for the calculations of ASL. With OIRMB you can choose the settlement frequency for the ASL. OIRMB enables you to setup **ASL retrospectively or allow pricing updates by reprocessing**

Discount Arrangements Fees

OIRMB discount arrangement pricing rule type enables to calculate and bill the discounts using two different methods – i.e: **discount share Fees** where discount amount to be charged to customer is calculated as percentage of the total

discount savings amount per claim and **discount guarantee Fees** where discount amount calculated based **on discount savings amount and guaranteed percentage of the covered amount**.

Pricing Rule type allows you to define maximum discount amount that can be charged per claim transaction and/or allow to configure the **minimum and maximum discount limit on the contract level**. It also allows defining the **rule based eligibility criteria to apply discount** and exclude few transactions based upon the parameters.

Level Funding Arrangements

OIRMB level funding pricing rule type allows defining the required setup for monthly contribution mechanism which can be a **fixed monthly amount** or amount based upon enrollment **count**. OIRMB enables you to collect the funds during **active policy period** to settle not only the claims and other fees during active period but also to take care of the **terminal liability** or the **claims and other fees during runout period**. OIRMB also provides configurable setup to define the charges to be considered for settlement with specific criteria. OIRMB enables to setup pricing rules for level funding products where the **claims, ancillary, retention based fees, discounts** can be settled against the level funded amounts.

OIRMB has two variations of Level funding based on the method to calculate premium fund. The portal enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level-funding. If the price items are eligible for level-funding, you can then include them in the level-funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some **surplus or deficit** in funds at the time of settlement which is ideally at the end of year. In such case, the system enables to configure whether **a flat amount or percentage of surplus should be retained** by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer. It allows you for different settlement options – **Close out – where the final settlement is done**. In case the customer is continuing for the next cycle with the payer you can provide an option to **Roll Forward the surplus funds to the next years funds**.

Level Funding Arrangements

OIRMB level funding pricing rule type allows defining the required setup for monthly contribution mechanism which can be a **fixed monthly amount** or amount based upon enrollment **count**. OIRMB enables you to collect the funds during **active policy period** to settle not only the claims and other fees during active period but also to take care of the **terminal liability** or the **claims and other fees during runout period**. OIRMB also provides configurable setup to define the charges to be considered for settlement with specific criteria. OIRMB enables to setup pricing rules for level funding products where the **claims, ancillary, retention based fees, discounts** can be settled against the level funded amounts.

OIRMB has two variations of Level funding based on the method to calculate premium fund. The portal enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level-funding. If the price items are eligible for level-funding, you can then include them in the level-funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some **surplus or deficit** in funds at the time of settlement which is ideally at the end of year. In such case, the system enables to configure whether **a flat amount or percentage of surplus should be retained** by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer. It allows you for different settlement options – **Close out – where the final settlement is done**. In case the customer is continuing for the next cycle with the payer you can provide an option to **Roll Forward the surplus funds to the next years funds**.

Parameter

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQI, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

Another example, you can create a parameter named **Health Coverage Class** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
MEDICAL	Medical
DENTAL	Dental
VISION	Vision

In such case, while defining the pricing for a price item using the **Health Coverage Class** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI_COUNTRY_L** (i.e. where the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI_COUNTRY_L** table in the parameter value.

Parameter (Used for Searching)

The **Parameter** screen allows you to define, edit, delete and copy a parameter. It contains the following zone:

- [Search Parameter](#) on page 325

Search Parameter

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
Value Type	Used to search parameters in which you can store a particular type of value. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	No
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Person • Product • Service Quantity Identifier • Transaction 	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter 	No
Description	Used to search parameters with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter name.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference
Description	Displays the description of the parameter.

Column Name	Column Description
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Person • Product • Service Quantity Identifier • Transaction
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter
View	On clicking the View () icon, the Parameter screen appears where you can view the details of the parameter.
Edit	On clicking the Edit () icon, the Parameter screen appears where you can edit the details of the parameter.
Delete	On clicking the Delete () icon, you can delete the parameter. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>You can delete a parameter only when the following conditions are met:</p> <ul style="list-style-type: none"> • It is not yet associated to any price item or price item bundle. • It is not yet used while defining the pricing, price list, or product eligibility criteria. </div>
Copy	On clicking the Copy () icon, the Parameter screen appears where you can define a new parameter using an existing parameter.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Parameter

Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of parameters that meet the search criteria appears in the **Search Results** section.

Defining a Parameter

Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.

2. From the **Admin** menu, select **P** and then click **Parameter**.

The **Parameter** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Parameter** screen.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> Account Algorithm Person Product 	Yes
	Note: This option is not applicable for the health insurance business. <ul style="list-style-type: none"> Service Quantity Identifier Transaction 	
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> Characteristic Field Usage Amount Usage Counter 	Yes
	Note: This field appears only when the Account , Person , or Product option is selected from the Source Entity list. The Usage Amount and Usage Counter options do not appear in the Source Type list when the Product option is selected from the Source Entity list.	
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> Adhoc Predefined Reference 	Yes

Field Name	Field Description	Mandatory (Yes or No)																																				
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p> <table border="1" data-bbox="480 604 1222 1969"> <thead> <tr> <th data-bbox="480 604 670 653">Source Entity</th> <th data-bbox="675 604 881 653">Source Type</th> <th data-bbox="886 604 1222 653">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="480 659 670 768">Account</td> <td data-bbox="675 659 881 768">Characteristic</td> <td data-bbox="886 659 1222 768">Lists all characteristics where the characteristic entity is set to Account.</td> </tr> <tr> <td data-bbox="480 774 670 852">Account</td> <td data-bbox="675 774 881 852">Field</td> <td data-bbox="886 774 1222 852">Lists all fields of the CI_ACCT table.</td> </tr> <tr> <td data-bbox="480 858 670 936">Account</td> <td data-bbox="675 858 881 936">Usage Amount</td> <td data-bbox="886 858 1222 936">Lists all values defined for the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="480 942 670 1020">Account</td> <td data-bbox="675 942 881 1020">Usage Counter</td> <td data-bbox="886 942 1222 1020">Lists all values defined for the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="480 1026 670 1125">Person</td> <td data-bbox="675 1026 881 1125">Characteristic</td> <td data-bbox="886 1026 1222 1125">Lists all characteristics where the characteristic entity is set to Person.</td> </tr> <tr> <td data-bbox="480 1131 670 1209">Person</td> <td data-bbox="675 1131 881 1209">Field</td> <td data-bbox="886 1131 1222 1209">Lists all fields of the CI_PER table.</td> </tr> <tr> <td data-bbox="480 1215 670 1293">Person</td> <td data-bbox="675 1215 881 1293">Usage Amount</td> <td data-bbox="886 1215 1222 1293">Lists all values defined for the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="480 1299 670 1377">Person</td> <td data-bbox="675 1299 881 1377">Usage Counter</td> <td data-bbox="886 1299 1222 1377">Lists all values defined for the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="480 1383 670 1629">Product</td> <td data-bbox="675 1383 881 1629">Characteristic</td> <td data-bbox="886 1383 1222 1629"> Lists all characteristics where the characteristic entity is set to Product. <div data-bbox="886 1503 1222 1629" style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> </td> </tr> <tr> <td data-bbox="480 1635 670 1860">Product</td> <td data-bbox="675 1635 881 1860">Field</td> <td data-bbox="886 1635 1222 1860"> Lists all fields of the C1_PRODUCT table. <div data-bbox="886 1734 1222 1860" style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> </td> </tr> <tr> <td data-bbox="480 1866 670 1969">Service Quantity Identifier</td> <td data-bbox="675 1866 881 1969">—</td> <td data-bbox="886 1866 1222 1969">Lists all service quantity identifiers available in the CI_SQI table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Account	Characteristic	Lists all characteristics where the characteristic entity is set to Account . Product	Field	Lists all fields of the C1_PRODUCT table. <div data-bbox="886 1734 1222 1860" style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div>																																				
Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.																																				

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note: This field appears only when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** (🗑) icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)														
Price Item	Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)														
	<p>Note:</p> <p>The following table lists the source entity and source type combinations when the Price Item option is disabled in the Parameter Usage section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Quantity Identifier</td> <td>—</td> </tr> </tbody> </table>		Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—
Source Entity	Source Type															
Account	Usage Amount															
Account	Usage Counter															
Person	Usage Amount															
Person	Usage Counter															
Source Entity	Source Type															
Algorithm	—															
Service Quantity Identifier	—															

Option Name	Option Description	Mandatory (Yes or No)
Pricing Eligibility Criteria	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: You must select this option when you want to define a pricing eligibility criteria using the parameter.
Price List Eligibility Criteria	Used to indicate whether the parameter can be used while defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list. This option is not applicable for the health insurance business.	Note: You must select this option when you want to define a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Service Quantity Identifier, or Transaction option is selected from the Source Entity list. This option is not applicable for the health insurance business.	Note: You must select this option when you want to define a product eligibility criteria using the parameter.

Note: You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.

The parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Editing a Parameter

Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To edit a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the parameter whose details you want to edit.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter name.	Not applicable
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Person • Product <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Service Quantity Identifier • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source Type	<p>Used to indicate the type of source from where the parameter value should be derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears only when you select the Account, Person, or Product option from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Product option is selected from the Source Entity list.</p>	Yes
Value Type	<p>Indicates the type of value that you can store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Not applicable
Source Type Code	Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes

Field Name	Field Description	Mandatory (Yes or No)

Pricing Eligibility Criteria	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.	Yes (Conditional)															
Price List Eligibility Criteria	<p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>	Yes (Conditional)															
	<p>Note:</p> <p>This option does not appear when the Transaction option is selected from the Source Entity list.</p> <p>This option is not applicable for the health insurance business.</p>	<p>Note: This field is required when you want to define a price list eligibility criteria using the parameter.</p>															

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	<p>Note:</p> <p>This option does not appear when the Algorithm, Service Quantity Identifier, or Transaction option is selected from the Source Entity list.</p> <p>This option is not applicable for the health insurance business.</p>	<p>Note: This field is required when you want to define a product eligibility criteria using the parameter.</p>

Note:

You must select at least one option in the **Parameter Usage** section.

If the parameter is already associated to a price item or used while defining the pricing, price list, or product eligibility criteria, you cannot deselect the respective option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

How to search for a parameter	Searching for a Parameter on page 328

Deleting a Parameter**Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

Note:

You can delete a parameter only when the following conditions are met:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, price list, or product eligibility criteria.

3. Click **OK**.

The parameter is deleted.

Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with other parameter details. You can then edit the details, if required.

Note: You cannot change the type of value that you can store in the new parameter (which is created using an existing parameter).

Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;): in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	<p>Used to indicate the entity from where the parameter value should be derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Person • Product <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Service Quantity Identifier • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	<p>Used to indicate the type of source from where the parameter value should be derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field appears only when you select the Account, Person, or Product option from the Source Entity list. The Usage Amount and Usage Counter options do not appear in the Source Type list when the Product option is selected from the Source Entity list.</p> </div>	Yes
Value Type	<p>Indicates the type of value that you can store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)																																				
Source Type Code	<p>Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p> <table border="1" data-bbox="448 575 1243 1940"> <thead> <tr> <th data-bbox="448 575 651 625">Source Entity</th> <th data-bbox="651 575 878 625">Source Type</th> <th data-bbox="878 575 1243 625">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 625 651 741">Account</td> <td data-bbox="651 625 878 741">Characteristic</td> <td data-bbox="878 625 1243 741">Lists all characteristics where the characteristic entity is set to Account.</td> </tr> <tr> <td data-bbox="448 741 651 825">Account</td> <td data-bbox="651 741 878 825">Field</td> <td data-bbox="878 741 1243 825">Lists all fields of the CI_ACCT table.</td> </tr> <tr> <td data-bbox="448 825 651 909">Account</td> <td data-bbox="651 825 878 909">Usage Amount</td> <td data-bbox="878 825 1243 909">Lists all values defined for the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="448 909 651 993">Account</td> <td data-bbox="651 909 878 993">Usage Counter</td> <td data-bbox="878 909 1243 993">Lists all values defined for the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="448 993 651 1108">Person</td> <td data-bbox="651 993 878 1108">Characteristic</td> <td data-bbox="878 993 1243 1108">Lists all characteristics where the characteristic entity is set to Person.</td> </tr> <tr> <td data-bbox="448 1108 651 1192">Person</td> <td data-bbox="651 1108 878 1192">Field</td> <td data-bbox="878 1108 1243 1192">Lists all fields of the CI_PER table.</td> </tr> <tr> <td data-bbox="448 1192 651 1276">Person</td> <td data-bbox="651 1192 878 1276">Usage Amount</td> <td data-bbox="878 1192 1243 1276">Lists all values defined for the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="448 1276 651 1360">Person</td> <td data-bbox="651 1276 878 1360">Usage Counter</td> <td data-bbox="878 1276 1243 1360">Lists all values defined for the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="448 1360 651 1602">Product</td> <td data-bbox="651 1360 878 1602">Characteristic</td> <td data-bbox="878 1360 1243 1602"> Lists all characteristics where the characteristic entity is set to Product. <div data-bbox="886 1476 1235 1591" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> </td> </tr> <tr> <td data-bbox="448 1602 651 1822">Product</td> <td data-bbox="651 1602 878 1822">Field</td> <td data-bbox="878 1602 1243 1822"> Lists all fields of the CI_PRODUCT table. <div data-bbox="886 1707 1235 1801" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> </td> </tr> <tr> <td data-bbox="448 1822 651 1940">Service Quantity Identifier</td> <td data-bbox="651 1822 878 1940">—</td> <td data-bbox="878 1822 1243 1940">Lists all service quantity identifiers available in the CI_SQI table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Account	Characteristic	Lists all characteristics where the characteristic entity is set to Account . Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.																																				

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note: This field appears only when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	<p>Used to specify the parameter value.</p> <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the parameter value.	Yes

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** (🗑) icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)															
Price Item	Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)															
	<p>Note:</p> <p>The following table lists the source entity and source type combinations when the Price Item option is disabled in the Parameter Usage section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Quantity Identifier</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—
Source Entity	Source Type																
Account	Usage Amount																
Account	Usage Counter																
Person	Usage Amount																
Person	Usage Counter																
Source Entity	Source Type																
Algorithm	—																
Service Quantity Identifier	—																

Option Name	Option Description	Mandatory (Yes or No)
Pricing Eligibility Criteria	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: This field is required when you want to define a pricing eligibility criteria using the parameter.
Price List Eligibility Criteria	Used to indicate whether the parameter can be used while defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list. This option is not applicable for the health insurance business.	Note: This field is required when you want to define a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Service Quantity Identifier , or Transaction option is selected from the Source Entity list. This option is not applicable for the health insurance business.	Note: This field is required when you want to define a product eligibility criteria using the parameter.

Note: You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.

The parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Viewing the Parameter Details

Procedure

To view the details of a parameter:

- Search for the parameter in the **Parameter** screen.

- In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the parameter whose details you want to view.

The **Parameter** screen appears.

- View the details of the parameter in the **Parameter** screen.

Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- [Parameter](#) on page 347

Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- Main** – Displays basic information about the parameter. It contains the following fields:

Field Name	Field Description
Parameter	Displays the parameter name.
Description	Displays the description of the parameter.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> Adhoc Predefined Reference
Validation Algorithm	Indicates the algorithm which is used to validate the adhoc parameter value. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note:</p> <p>This field appears only when the Adhoc option is selected from the Value Type list.</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> </div>

Field Name	Field Description
Referenced Table	<p data-bbox="641 205 1468 275">Indicates the table whose primary key (i.e. column) is used to validate the parameter value.</p> <p data-bbox="641 296 1468 485">Note: This field appears only when the Reference option is selected from the Value Type list. It has a link. On clicking the link, the Table screen appears where you can view the details of the respective table.</p>
Source Entity	<p data-bbox="641 539 1468 606">Indicates the entity from where the parameter value is derived. The valid values are:</p> <ul data-bbox="667 621 997 890" style="list-style-type: none"> <li data-bbox="667 621 802 653">• Account <li data-bbox="667 667 821 699">• Algorithm <li data-bbox="667 714 781 745">• Person <li data-bbox="667 760 797 791">• Product <li data-bbox="667 806 997 837">• Service Quantity Identifier <li data-bbox="667 852 834 884">• Transaction
Source Type	<p data-bbox="641 915 1468 982">Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul data-bbox="667 997 870 1171" style="list-style-type: none"> <li data-bbox="667 997 857 1029">• Characteristic <li data-bbox="667 1043 764 1075">• Field <li data-bbox="667 1089 870 1121">• Usage Amount <li data-bbox="667 1136 870 1167">• Usage Counter <p data-bbox="641 1192 1468 1260">Note: This field appears only when the Account, Person, or Product option is selected from the Source Entity list.</p>
Source Type Code	<p data-bbox="641 1293 1468 1360">Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p data-bbox="641 1386 1468 1453">Note: This field does not appear when the Transaction option is selected from the Source Entity list.</p>

- **Parameter Usage** – Indicates where the parameter can be used in the system. It contains the following options:

Option Name	Option Description						
Price Item	<p>Indicates whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Quantity Identifier</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—
Source Entity	Source Type						
Algorithm	—						
Service Quantity Identifier	—						
Pricing Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the pricing eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>						
Price List Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the price list eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>						
Product Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the product eligibility criteria.</p> <p>Note: This option does not appear when the Algorithm, Service Quantity Identifier, or Transaction option is selected from the Source Entity list.</p>						

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns in the grid:

Column Name	Column Description
Parameter Value	Displays the parameter value.
Description	Displays the description of the parameter value.

Note: The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

Price Item (Health Insurance Business)

The various charges that are to be charged to the customer (for example, premium or optional administration fees to a fully-insured group customer and claim based fees or enrollment based fees to a self-funded customer) are defined as price items in the system. Similarly, various charges credited to the customer are also defined as price items. Stop-loss

arrangements for a self-funded customer (for example, specific stop-loss that is calculated and credited to customer) is represented using a price item in the system.

Once you define a price item, you can also define the pricing for the price item at various levels using pricing rules based on the requirements. For a fully-insured group customer, the pricing is defined at the policy plan level. Whereas, for a self-funded customer, the pricing can be defined either at the bill group policy level or at the parent customer level. For more information about the fully-insured pricing, see [Fully-Insured Pricing](#) on page 2691. And, for more information about the self-funded pricing, see [Self-Funded Pricing](#) on page 2143.

The system enables you to create price items which can be used for pricing and billing. It means that pricing can be defined for the price item and charges can be created against it in the system. The system enables you to create the following type of price items:

- **Fees Based Price Items** - The fees based services would include services on which fees is charged to the customers either annually or at regular intervals (for example, for the administrative services offered to the self-funded customer, the admin fees will be charged). You can create fees based price items which can be used for pricing and billing in the system.

You need to associate a contract type with a price item. The system allows you to create a charge (i.e. billable charge) for a price item on an account only when a contract of the contract type which is associated with the price item is already present on the account.

You can create price items which can be assigned to any price list except global price list or which can assigned to only global price lists. For more information about global price list, see [Price List](#) on page 405.

You can associate one or more parameters where the parameter usage is set to **Price Item** with a price item. These parameters can then be used for:

- Aggregating transactions which are mapped to the price item
- Defining multi parameter based pricing for the price item

If the parameter usage is set to **Aggregation** while associating a parameter with a price item, the parameter is only used for aggregating transactions which are mapped to the price item. However, if the parameter usage is set to **Pricing** while associating a parameter with a price item, the parameter is used for aggregating transactions as well as for defining multi parameter based pricing for the price item.

You can associate a price item to one or more divisions. In addition, you can do the following when a price item is associated to a division:

- Associate the Service Quantity Identifiers (SQIs) with the Price Item for the Division
- Define the Division-Specific Characteristics for the Price Item

Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It also allows you to create and copy a price item or price item bundle. It contains the following zone:

- [Search Price Item](#) on page 350

Through this screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 390
- [Price Item Relationship](#)
- [Price Item Assignments](#)

Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> • Price Item Details 	Yes
	Note: By default, the Price Item Details option is selected.	
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item Usage	Used to search price items or price item bundles which is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	No
	Note: By default, the Pricing and Billing option is selected.	
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> • Fees • Rate 	No
	Note: This field appears only when the Pricing option is selected from the Price Item Usage list.	

Note: You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Bundle Type	<p>Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> • Phantom • Ratio • Regular <p>However, if the price item bundle is available for pricing and its price item type is set to Fees, the valid value is:</p> <ul style="list-style-type: none"> • Regular
Price Item Type	<p>Indicates the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate • Fees
Price Item Usage	<p>Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing • Pricing and Billing
Copy	On clicking the Copy () icon, the Price Item screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.
Price Item Assigned To	On clicking the View () icon in the Price Item Assigned To column, the Price Item Assignments screen appears where you can view the persons, accounts, and active price lists to which the price item or price item bundle is assigned.
Price Item Relationship	On clicking the View () icon in the Price Item Relationship column, the Price Item Relationship screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Price Item or Price Item Bundle

Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

Defining a Price Item or Price Item Bundle

Prerequisites

To define a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the Service Quantity Identifiers (SQIs) with the Price Item or Price Item Bundle for a Division
 - Define the Accrual Type Criteria of the Price Item or Price Item Bundle for a Division

Note: This step is not applicable for the health insurance business.

- Associate the Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of a Division

Note: This step is not applicable for the health insurance business.

- Define the Cost of the Price Item or Price Item Bundle for a Division

Note: This step is not applicable for the health insurance business.

- Define the Average Price Floor and Ceil Limits of the Price Item or Price Item Bundle for a Division

Note: This step is not applicable for the health insurance business.

- Define the Division-Specific Characteristics for the Price Item or Price Item Bundle
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: By default, the Pricing and Billing option is selected.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This field appears only when the Pricing option is selected from the Price Item Usage list. By default, the Fees option is selected. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> </div>	Yes
Bundle	<p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: By default, the No option is selected. This field is not applicable for the health insurance business.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Phantom</i> • <i>Ratio</i> • <i>Regular</i> <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p>	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Note: This field is required when you are creating a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the No option is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>This field appears only when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	Yes
Price Item Manager To Do Type	<p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p>	No
Price Item Manager To Do Role	<p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price only when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears only when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Floor and Ceiling Type	Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is: <ul style="list-style-type: none"> Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. <p>This field is not applicable for the health insurance business.</p>	Yes (Conditional)
		Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.

Tip: Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.
5. Associate the parameters with the price item or price item bundle, if required.
6. For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.
7. Associate the price item or price item bundle with the required divisions.
8. Associate the SQIs with the price item or price item bundle for the required divisions.
9. Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

10. Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define the cost of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

13. Define the division-specific characteristics for the price item or price item bundle, if required.

14. Define the characteristics for the price item or price item bundle, if required.

15. Click **Save**.

The price item is defined.

Note: While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

Associating a Parameter with a Price Item or Price Item Bundle

You can define multi parameter based pricing for a price item or price item bundle only when the parameters using which you want to define the price item pricing are associated with the respective price item or price item bundle during the pricing date range. For example, a bank (from the financial services domain) may want to charge different price for the following price item depending on the return codes:

Service	Price Item	Parameter	Parameter Value	Price
SEPA Direct Debit Return	SEPADDR	Return Code (RTURNCD)	AC01	0.1\$
			AC04	0.2\$
			AC06	0.3\$
			AG01	0.10\$

In such case, you need to first define a predefined parameter named Return Code where the parameter usage is set to **Price Item**). In the Return Code parameter, you must specify the above listed return codes (i.e. AC01, AC04, AC06, and AG01) as the predefined values. Then, in order to define multi parameter based pricing for the SEPADDR price item using the Return Code parameter, you must associate the Return Code parameter with the SEPADDR price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Return Code	10	Yes	-

Another example, a self-funded customer (from the health insurance domain) may be charged different claim based admin fees depending on the health coverage class and network type:

Service	Price Item	Health Coverage Class	Network Type	Fees
Claim Based Fees	CLBDFS	Medical	In	\$100
		Medical	Out	\$150
		Dental	In	\$50
		Dental	Out	\$75

In such case, you need to first define two predefined parameters named Health Coverage Class and Network Type where the parameter usage is set to **Price Item**). In the Health Coverage Class parameter, you must specify the above listed values (i.e. Medical and Dental)) as the predefined values. And, in the Network Type parameter, you must specify the above listed values (i.e. In and Out)) as the predefined values. Then, in order to define parameter based pricing for the CLBDFS price item using the Health Coverage Class and Network Type parameters, you must associate these parameters with the CLBDFS price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Health Coverage Class	10	Yes	-
Network Type	20	Yes	-

Prerequisites

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the parameter usage is set to **Price Item**)

Procedure

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the parameter is associated with the price item or price item bundle.	Yes
Effective End Date	Used to specify the date till when the parameter is associated with the price item or price item bundle.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p> <p>In the Parameter Search window, the system allows you to search only those parameters where the parameter usage is set to Price Item.</p> <p>If you select a predefined parameter, the Add (+) icon appears corresponding to the Parameter field. On clicking the Add icon, a grid appears where you can specify a list of predefined parameter values which are valid for the price item or price item bundle while defining its pricing. If you do not list any predefined parameter value in this grid, the system enables you to specify any predefined value of the parameter while defining the pricing for the price item or price item bundle.</p>	Yes
Business Label	Used to specify a business label for the parameter. If you specify the business label for a parameter, the business label appears throughout the application instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should appear in the pricing parameter information string across the application.	Yes
Parameter Usage	<p>Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Aggregation – Used when you want to use the parameter for aggregating transactions. • Pricing – Used when you want to use the parameter for aggregating transactions as well as for defining the price item pricing. 	Yes
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional)
	Note: This field is disabled when the Mandatory option is selected.	Note: This field is required when the Mandatory option is not selected.

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- Enter the required details in the **Parameters** section.
- If you want to associate more than one parameter with the price item or price item bundle, click the **Add (+)** icon and then repeat step 2.

Note:

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which is used for aggregation, whenever required. However, you can add a parameter which is used for pricing only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

- For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.
- Click **Save**.

The parameters are associated with the price item or price item bundle.

Note: By default, the priority of all parameters which are mandatory is set to 0.

How to copy a price item or price item bundle	Copying a Price Item or Price Item Bundle on page 382
How to define the valid predefined parameter values for a price item or price item bundle	Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle on page 363

Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle

A predefined parameter may have hundreds of values defined in the system. But, there might be situations when only certain predefined parameter values are applicable for a price item or price item bundle while defining its pricing. In

such case, you can define a set of valid predefined parameter values for a price item or price item bundle. For example, the Return Code parameter has the following predefined parameter values:

Parameter Value	Description
AC01	Account Identifier Incorrect (i.e. invalid IBAN)
AC04	Account Closed
AC06	Account Blocked
AG01	Direct Debit Forbidden for Regulatory Reasons
AG02	Operation/Transaction Code Incorrect
AM04	Insufficient Funds
AM05	Duplicate Collection
MD01	Unauthorized Transaction
MD06	Disputed Authorized Transaction

If only the MD01 and MD06 predefined parameter values are applicable for the SEPA Debit Refund (SEPADRF) price item, you can define MD01 and MD06 as the valid predefined parameter values for the SEPADRF price item. In such case, the system will allow you to define the pricing for the SEPADRF price item only using the MD01 or MD06 parameter value. However, if all the above listed predefined parameter values are applicable for the SEPA Direct Debit Return (SEPADDR) price item, you must not define the valid predefined parameter values for the SEPADDR price item. In such case, the system will allow you to define the pricing for the SEPADDR price item using any of the above listed parameter value.

Another example, the Health Coverage Class parameter has the following predefined parameter values:

Parameter Value	Description
MEDICAL	Medical
DENTAL	Dental
VISION	Vision

If only the MEDICAL and DENTAL predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you can define MEDICAL and DENTAL as the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item only using the MEDICAL or DENTAL parameter value. However, if all the above listed predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you must not define the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item using any of the above listed parameter value.

Prerequisites

To define the valid predefined parameter values for a price item or price item bundle, you should have:

- Predefined values defined for the parameter which is associated with the price item or price item bundle
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the valid predefined parameter values for a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears.

- Click the **Add** (+) icon in the **Parameter** column corresponding to the predefined parameter which is associated with the price item or price item bundle.

The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search window appears.</p> <p>On specifying the valid predefined parameter value for a price item or price item bundle, the description of the predefined parameter value appears corresponding to the Parameter Value field.</p>	<p>Note: This field is required when you are defining the valid predefined parameter values for the price item or price item bundle.</p>

- Enter a predefined parameter value which is valid for the price item or price item bundle while defining its pricing.
- If you want to define more than one valid predefined parameter value for the price item or price item bundle, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the parameter value. You can remove a valid predefined parameter value from the price item or price item bundle only when the parameter value is not yet used for defining the price item pricing.

- Click **Save**.

The valid predefined parameter values are defined for the price item or price item bundle.

How to associate a parameter with a price item or price item bundle	Associating a Parameter with a Price Item or Price Item Bundle on page 360

Associating a Price Item or Price Item Bundle with a Division

You can assign a price item or price item bundle to a person or account only when the price item or price item bundle is associated with the division to which the person or account belongs. For example, if the SEPA Direct Debit Return (SEPADDR) and Stop Payment (STPPMT) price items are associated with the following divisions:

Price Item	Division
SEPA Direct Debit Return (SEPADDR)	001-AL
	002-CA
	003-FL

Price Item	Division
	004-IN
Stop Payment (STPPMT)	002-CA
	003-FL
	004-IN

In such case, you can assign the SEPADDR price item to any person or account which belongs to the 001-AL, 002-CA, 003-FL, or 004-IN division. However, you can assign the STPPMT price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Another example, if the Claim Based Fees (CLBDFS) price item is associated with the following divisions:

Price Item	Division
Claim Based Fees (CLBDFS)	002-CA
	003-FL
	004-IN

In such case, you can charge the CLBDFS price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Prerequisites

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application
- Divisions associated with the access group to which the user (i.e. who is performing this action) belongs

Procedure

To associate a price item or price item bundle with a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQIs	On clicking the Add  icon, you can associate an SQI with the price item or price item bundle for the division.	Not applicable
Division Characteristics	On clicking the Add  icon, you can define a division-specific characteristic for the price item or price item bundle.	Not applicable
Accrual Type Criteria	On clicking the Add  icon, you can define the accrual type criteria of the price item or price item bundle for the division.	Not applicable
	Note: This feature is not applicable for the health insurance business.	

Field Name	Field Description	Mandatory (Yes or No)
Entity Hierarchy	On clicking the Add (+) icon, you can associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the division.	Not applicable
	Note: This feature is not applicable for the health insurance business.	
Costs	On clicking the Add (+) icon, you can define the cost of the price item or price item bundle for the division.	Not applicable
	Note: This feature is not applicable for the health insurance business.	
Average Price Floor and Ceil Limits	On clicking the Add (+) icon, you can define the average price floor and ceil limits of the price item or price item bundle for the division.	Not applicable
	Note: This feature is not applicable for the health insurance business.	
Division	Used to indicate the division to which you want to associate the price item or price item bundle.	Yes (Conditional)
	Note: You can only view those divisions to which you have access in the Division list.	Note: This field is required while associating the price item or price item bundle with a division.

2. Select the division from the respective field.
3. If you want to associate the price item or price item bundle with more than one division, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove the price item or price item bundle from a division, click the **Delete** (🗑️) icon corresponding to the division. You cannot remove the price item or price item bundle from a division when it is assigned to a person or account which belongs to the division.

4. Associate the SQIs with the price item or price item bundle for the required divisions.
5. Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

6. Associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the required divisions.

Note: This step is not applicable for the health insurance business object.

7. Define the cost of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

8. Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business object.

9. Define the division-specific characteristics for the price item or price item bundle, if required.
10. Click **Save**.

The price item or price item bundle is associated with the divisions.

Tip: Alternatively, you can associate a price item or price item bundle with a division using the **Division** screen. For more information, see [Associating a Price Item or Price Item Bundle with a Division](#) on page 504.

How to define a division-specific characteristic for a price item or price item bundle	Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle on page 370

Associating an SQI with a Price Item or Price Item Bundle for a Division

In the transaction aggregation process, an SQI based billable charge is created for a price item or price item bundle (to which a transaction is mapped) only when:

- The SQIs are associated with the price item or price item bundle for the division to which the account (i.e. for which the billable charge is created) belongs.
- The transaction aggregation rules are defined for such SQIs in the system.

Let us assume that the A1 account belongs to the 201-NJ division and the A2 account belongs to the 209-CA division. And, the Stop Payments (STPY) price item is associated with the following SQIs:

Price Item	Division	Service Quantity Identifiers (SQIs)
Stop Payments (STPY)	201-NJ	Number of Transactions (NBRTXN)
		Transaction Volume (TXNVOL)
		Transaction Amount (TXNAMT)

Price Item	Division	Service Quantity Identifiers (SQIs)
	209-CA	Number of Transactions (NBRTXN)
		Transaction Amount (TXNAMT)

Now, when an SQI based billable charge is created for the A1 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Volume (TXNVOL)
- Transaction Amount (TXNAMT)

And, when an SQI based billable charge is created for the A2 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Amount (TXNAMT)

Another example, you can calculate the enrollment based fees for a self-funded customer based on Per Subscriber Per Month or Per Member Per Month for the 201-NJ and 209-CA divisions. Therefore, you need to associate two SQIs — Subscriber Count and Member Count with the Enrollment Based Fees (ERBDFS) price item:

Price Item	Division	Service Quantity Identifiers (SQIs)
Enrollment Based Fees (ERBDFS)	201-NJ	Subscriber Count (SUBCNT)
		Member Count (MEMCNT)
	209-CA	Subscriber Count (SUBCNT)
		Member Count (MEMCNT)

Prerequisites

To associate an SQI with a price item or price item bundle for a division, you should have:

- Service Quantity Identifiers (SQIs) defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To associate an SQI with a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **SQIs** column corresponding to the division for which you want to associate SQIs with the price item or price item bundle.

The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI that you want to associate with the price item or price item bundle for the division.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the SQI field. On clicking the Search icon, the Service Quantity Identifier Search window appears.</p> <p>On specifying the SQI, the description of the SQI appears corresponding to the SQI field.</p>	<p>Note: This field is required while associating an SQI with the price item or price item bundle for the division.</p>

- Enter the required details in the **SQIs** grid.
- If you want to associate more than one SQI with the price item or price item bundle for the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an SQI from the price item or price item bundle for the division, click the **Delete** (🗑) icon corresponding to the SQI. You cannot remove an SQI from the price item or price item bundle for the division when an SQI based billable charge is created using the SQI.

- Click **Save**.

The SQIs are associated with the price item or price item bundle for the division.

Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle

Prerequisites

To define a division-specific characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define a division-specific characteristic for a price item or price item bundle:

- Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

- Click the **Add** (+) icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

The following fields appear in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required while defining a division-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination .	Note: This field is required while defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required while defining a division-specific characteristic for the price item or price item bundle.

- Enter the required details in the **Divisions** section.
- If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The division-specific characteristics are defined for the price item or price item bundle.

Defining the Accrual Type Criteria of a Price Item or Price Item Bundle for a Division

Note: This topic is not applicable for the health insurance business.

The accrual type criteria of a price item or price item bundle is referred only when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

If the accrual type criteria of a price item or price item bundle is set to...	Then...
Actual	The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> The price item is not excluded in the accrual type. The accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual.
Historical	The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> The price item is not excluded in the accrual type. The accrual is calculated for an account using the accrual type where the accrual criteria is set to Historical.
Not Applicable	The system considers the billable charges of the price item for accrual when the following conditions are met: <ul style="list-style-type: none"> The price item is not excluded in the accrual type The accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual or Historical.

The system enables you to define accrual type criteria of a price item or price item bundle for each division. For example, you can maintain different accrual type criteria of the Stop Payments (STPY) price item for each division as shown below:

Price Item	Division	Accrual Type Criteria
Stop Payments (STPY)	201-NJ	Actual
	209-CA	Historical
	210-FL	Not Applicable
	215-OX	Actual
	220-AL	Historical
	223-NJ	Not Applicable

Prerequisites

To define the accrual type criteria of a price item or price item bundle for a division, you should have:

- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the accrual type criteria of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Accrual Type Criteria** column corresponding to the division for which you want to define accrual type criteria of the price item or price item bundle.

The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type Criteria	Used to indicate whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Actual. • Historical - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Historical. • Not Applicable - Used when you want the system to consider billable charges of the price item for accrual when the accrual criteria in the accrual type is set to Actual or Historical. 	Yes (Conditional)
		Note: This field is required while defining the accrual type criteria of the price item or price item bundle for the division.
		Note: By default, the Not Applicable option is selected.

3. Select the accrual type criteria from the respective field.

4. Click **Save**.

The accrual type criteria of the price item or price item bundle is defined for the division.

How to associate a price item or price item bundle with a division	Associating a Price Item or Price Item Bundle with a Division on page 365

Associating a Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of a Division

Note: This topic is not applicable for the health insurance business.

Once you design the structure of an entity hierarchy relationship, you can associate a price item or price item bundle with a hierarchy entity at any level in the entity hierarchy relationship. You can associate a price item or price item bundle with a hierarchy entity only from the **Price Item** screen. The system enables you to define division-specific hierarchy for a price item or price item bundle. Therefore, while associating a price item or price item bundle with a hierarchy entity, you can select a hierarchy entity from any entity hierarchy relationship which is created for the division. However, the system checks whether the association date range is within the entity hierarchy relationship date range.

For example, you can associate the ACH Transfer (ACHTRN) price item with the Payments hierarchy entity in the Cash Management entity hierarchy relationship as shown below:

```
Cash Management
  Payments
    ACH Transfer
```

Associating a price item or price item bundle with a hierarchy entity does not have any impact on the billing module. At present, the price item hierarchy is only displayed in the Deal Modelling and Simulation module.

Prerequisites

To associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division, you should have:

- Entity hierarchy relationships defined for the required divisions
- Hierarchy entities included at the required levels in the entity hierarchy relationship
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To associate a price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Entity Hierarchy** column corresponding to the division for which you want to define price item or price item bundle hierarchy.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy	Used to indicate the entity hierarchy relationship in which you want to include the price item or price item bundle.	Yes (Conditional)
	Note: The Search  icon appears corresponding to the Hierarchy field. On clicking the Search icon, the Hierarchy Search window appears.	Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division.

Field Name	Field Description	Mandatory (Yes or No)
Parent Entity	Used to indicate the hierarchy entity to which you want to associate the price item or price item bundle.	Yes (Conditional)
	Note: The list appears when the entity hierarchy relationship is specified in the Hierarchy field. It contains the hierarchy entities which are included at the root and subsequent levels in the entity hierarchy relationship.	Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division.
Start Date	Used to specify the date from when the price item or price item bundle is associated with the hierarchy entity in the entity hierarchy relationship.	Yes (Conditional)
	Note: The start date cannot be later than the end date. The start date cannot be earlier than the entity hierarchy relationship start date.	Note: This field is required while associating the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the division.
End Date	Used to specify the date till when the price item or price item bundle is associated with the hierarchy entity in the entity hierarchy relationship.	No
	Note: The end date cannot be earlier than the start date. The end date cannot be later than the entity hierarchy relationship end date.	

- Enter the required details in the **Entity Hierarchy** grid.
- If you want to associate the price item or price item bundle to more the one hierarchy entity in the same or different entity hierarchy relationship, click the **Add (+)** icon and then repeat step 3.

Note:

You cannot associate the price item or price item bundle to multiple hierarchy entities in the same or different entity hierarchy relationship for the same or overlapping date range.

However, if you want to disassociate the price item or price item bundle from a hierarchy entity of an entity hierarchy relationship, click the **Delete (🗑)** icon corresponding to the hierarchy and parent entity combination.

- Click **Save**.

The price item or price item bundle is associated with a hierarchy entity in an entity hierarchy relationship of the division.

Defining the Cost of a Price Item or Price Item Bundle for a Division

Note: This topic is not applicable for the health insurance business.

Oracle Revenue Management and Billing enables you to maintain the different types of fixed and variable costs of a price item or price item bundle for each division. The system uses the fixed and variable cost information while calculating the cost of a price item or price item bundle in a deal. It considers the cost which is defined for the division to which the account or person belongs. It derives the fixed and/or variable cost which is effective on the deal start date.

The system enables you to maintain the following types of costs in different currencies:

- Additional Fixed Cost
- Additional Variable Cost
- Fixed Third Party Cost
- Fixed Internal Cost
- Variable Internal Cost
- Variable Third Party Cost

While calculating the cost of a price item or price item bundle in a deal, the system converts the cost in the deal currency when the cost currency is different from the deal currency. As the name implies, the fixed cost is an expense that does not change with the increase or decrease in the price item volume or commitments. Therefore, the total fixed cost is equal to the sum of fixed cost which is effective on the deal start date for the division. However, the variable cost is an expense that change with the increase or decrease in the price item volume or commitments. Therefore, the total variable cost is equal to the sum of multiplication of variable cost (which is effective on the deal start date for the division) and price item volume or commitments.

Let us understand this with the help of an example:

Price Item	Division	Cost Type	Cost Amount
PI1	201-NJ	Fixed Third Party Cost	\$5
		Fixed Internal Cost	\$3
		Additional Fixed Cost	\$1
		Variable Third Party Cost	\$0.1
		Variable Internal Cost	\$0.65
		Additional Variable Cost	\$0.5

If a deal is created for a person who belongs to the 201-NJ division and if the PI1 price item is assigned to the person in the deal and if the original volume and proposed commitment of the PI1 price item in the deal is set to 100 and 200, respectively, the system calculates the cost of the PI1 price item in the following manner:

Original Cost	
Total Fixed Cost	$\$5 + \$3 + \$1 = \9
Total Variable Cost	$(100 * \$0.1) + (100 * \$0.65) + (100 * \$0.5) = \$10 + \$65 + \$50 = \$125$
Total Cost	$\$9 + \$125 = \$134$
Proposed Cost	
Total Fixed Cost	$\$5 + \$3 + \$1 = \9
Total Variable Cost	$(200 * \$0.1) + (200 * \$0.65) + (200 * \$0.5) = \$20 + \$130 + \$100 = \$250$
Total Cost	$\$9 + \$250 = \$259$

Here, the assumption is the deal and cost currency is same (i.e. USD). The system then uses the total original and proposed costs for calculating the original and proposed profitability of the deal.

Prerequisites

To define the cost of a price item or price item bundle for a division, you should have:

- Currencies defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the cost of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **Costs** column corresponding to the division for which you want to define the costs of the price item or price item bundle.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the cost of the price item or price item bundle is effective for the division.	Yes (Conditional)
		Note: This field is required while defining the cost of the price item or price item bundle for the division.

Field Name	Field Description	Mandatory (Yes or No)
Cost Type	Used to indicate the type of cost incurred in the division for the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Additional Fixed Cost • Additional Variable Cost • Fixed Third Party Cost • Fixed Internal Cost • Variable Internal Cost • Variable Third Party Cost 	Yes (Conditional)
		Note: This field is required while defining the cost of the price item or price item bundle for the division.
Cost Value	Used to specify the cost amount.	Yes (Conditional)
		Note: This field is required while defining the cost of the price item or price item bundle for the division.
Cost Currency	Used to specify the currency in which you want to define the cost. The system does currency conversion when the cost currency is different from the deal currency. Note: The list includes only those currencies which are already defined in the system.	Yes (Conditional)
		Note: This field is required while defining the cost of the price item or price item bundle for the division.

- Enter the required details in the **Costs** grid.
- If you want to define more than one cost of the price item or price item bundle for the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove the cost of the price item or price item bundle from the division, click the **Delete (🗑)** icon corresponding to the cost.

- Click **Save**.

The cost of the price item or price item bundle is defined for the division.

Defining the Average Price Floor and Ceil Limits of a Price Item or Price Item Bundle for a Division

Note: This topic is not applicable for the health insurance business.

Oracle Revenue Management and Billing enables you to define the average price floor and ceil limits of a price item or price item bundle for each division. Before you define the average price floor and ceil limits, you need to specify the floor and ceiling type for the price item or price item bundle. At present, the system supports the following floor and ceiling type for a price item or price item bundle:

- Absolute Value Range

Once the floor and ceiling type of a price item or price item bundle is set to **Absolute Value Range**, you can define the average price floor and ceil limits of the price item or price item bundle for the required divisions. The system enables you to define different average price floor and ceil limits for different To Do roles. The system uses the average price floor and ceil limits while approving the average price of the price item or price item bundle in a deal. The deal creator or an approver at any level in the division or deal approval hierarchy can approve the average price of a price item or price item bundle only when the average price is within the floor and ceil limits of the To Do role to which the deal creator or approver belongs. For example, if the average price of the P1 price item in a deal is \$25 and the floor and ceil limits of the deal creator's To Do role is set to \$10-\$15, then the deal creator cannot approve the average price of the P1 price item in the deal.

If the average price floor and ceil limits is not defined for the deal creator's or approver's To Do role, the status of the price item or price item bundle in the deal is changed to **Error**. If the average price floor and ceil limits is defined for the deal creator's or approver's To Do role, but the average price of the price item or price item bundle is not within the floor and ceil limits, the status of the price item or price item bundle in the deal is changed to **Pending for Approval**. However, if the average price floor and ceil limits is defined for the deal creator's or approver's To Do role and the average price of the price item or price item bundle is within the floor and ceil limits, the status of the price item or price item bundle in the deal is changed to **Approved**.

Here, you can also define the average price floor and ceil limits for the price item manager's To Do role. Note that the price item manger can approve the average price of the price item or price item bundle in a deal only when the average price of the price item or price item bundle is within the floor and ceil limits of the price item manager's To Do role.

Prerequisites

To define the average price floor and ceil limits of a price item or price item bundle for a division, you should have:

- To Do roles and currencies defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the average price floor and ceil limits of a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add**  icon in the **Average Price Floor and Ceil Limits** column corresponding to the division for which you want to define the average price floor and ceil limits of the price item or price item bundle.

The following fields appear in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Role	Used to indicate that users with the specified To Do role can approve the average price of the price item or price item bundle in a deal when it is within the specified floor and ceil limits.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the To Do Role Search window appears.</p> <p>On specifying the To Do role, the description of the To Do role appears corresponding to the To Do Role field.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>
Floor Value	Used to specify the floor (i.e. lower) limit for the To Do role. The users who belong to the To Do role cannot approve the average price of the price item or price item bundle when it is below the floor limit.	Yes (Conditional)
	<p>Note: The floor value cannot be greater than the ceil value.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>
Ceil Value	Used to specify the ceil (i.e. upper) limit for the To Do role. The users who belong to the To Do role cannot approve the average price of the price item or price item bundle when it is above the ceil limit.	Yes (Conditional)
	<p>Note: The ceil value cannot be lower than the floor value.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>
Floor and Ceil Currency	Used to indicate the currency in which you want to define the floor and ceil limits. The system does the currency conversion when the pricing currency is different from the floor and ceil currency.	Yes (Conditional)
	<p>Note: The list includes only those currencies which are already defined in the system.</p>	<p>Note: This field is required while defining the average price floor and ceil limits of the price item or price item bundle for the division.</p>

- Enter the required details in the **Average Price Floor and Ceil Limits** grid.
- If you want to define the average price floor and ceil limits for more than one To Do role, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove the average price floor and ceil limits of a To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do role.

- Click **Save**.

The average price floor and ceil limits of the price item or price item bundle are defined for the division.

Defining a Characteristic for a Price Item or Price Item Bundle

Prerequisites

To define a characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item or price item bundle:

- Click the **Price Item Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Price Item Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item or price item bundle.	Yes (Conditional) Note: This field is required while defining a characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price Item .	Yes (Conditional) Note: This field is required while defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required while defining a characteristic for the price item or price item bundle.

- Enter the required details in the **Price Item Characteristics** section.

- If you want to define more than one characteristic for the price item or price item bundle, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item or price item bundle.

Related Topics

For more information on...	See...
How to define a price item or price item bundle	Defining a Price Item or Price Item Bundle on page 353
How to edit a price item or price item bundle	Editing a Price Item or Price Item Bundle on page 399
How to copy a price item or price item bundle	Copying a Price Item or Price Item Bundle on page 382

Copying a Price Item or Price Item Bundle

Instead of creating a price item or price item bundle from scratch, you can create a new price item or price item bundle using an existing price item or price item bundle. This is possible through copying a price item or price item bundle. On copying a price item or price item bundle, the details including the following are copied to the new price item or price item bundle:

- Parameters and Divisions associated with the price item or price item bundle
- SQIs associated with the price item or price item bundle for the divisions
- Division-specific characteristics of the price item or price item bundle
- Accrual type criteria of the price item or price item bundle for the divisions
- Hierarchy entity to which the price item or price item bundle is associated in the divisions
- Cost of the price item or price item bundle for the divisions
- Average price floor and ceil limits of the price item or price item bundle for the divisions

You can then edit the details, if required.

Prerequisites

To copy a price item or price item bundle, you should have:

- Price item or price item bundle (whose copy you want to create) defined in the application
- Price item or price item bundle (whose copy you want to create) associated with the division to which the user (i.e. who is performing this action) belongs
- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To copy a price item or price item bundle:

- Search for the price item or price item bundle in the **Price Item** screen.
- In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the price item or price item bundle whose copy you want to create.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the Service Quantity Identifiers (SQIs) with the Price Item or Price Item Bundle for a Division
 - Define the Accrual Type Criteria of the Price Item or Price Item Bundle for a Division
- Note:** This step is not applicable for the health insurance business.
- Associate the Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of a Division
- Note:** This step is not applicable for the health insurance business.
- Define the Cost of the Price Item or Price Item Bundle for a Division
- Note:** This step is not applicable for the health insurance business.
- Define the Average Price Floor and Ceil Limits of the Price Item or Price Item Bundle for a Division
- Note:** This step is not applicable for the health insurance business.
- Define the Division-Specific Characteristics for the Price Item or Price Item Bundle
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <div data-bbox="703 470 1157 548" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. 	Yes
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <div data-bbox="703 978 1157 1056" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <div data-bbox="643 1220 1157 1717" style="border: 1px solid black; padding: 2px;"> <p>Note:</p> <p>This field appears only when the Pricing option is selected from the Price Item Usage list.</p> <p>You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle	<p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: This field is not applicable for the health insurance business.</p>	Yes
Bundle Type	<p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Phantom</i> • <i>Ratio</i> • <i>Regular</i> <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p> <p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p>	Yes (Conditional) Note: This field is required when you are creating a price item bundle.
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>This field appears only when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	Yes
Price Item Manager To Do Type	<p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p>	No
Price Item Manager To Do Role	<p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price only when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears only when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Floor and Ceiling Type	Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is: <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. 	Yes (Conditional)
	Note: This field is not applicable for the health insurance business.	Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.

3. Enter the required details in the **Main** section.
4. Associate, edit, or disassociate parameters from the price item or price item bundle, if required.
5. For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.
6. Associate or disassociate the price item or price item bundle from the required divisions.
7. Associate or disassociate the SQIs from the price item or price item bundle for the required divisions.
8. Define, edit, or remove the accrual type criteria of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

9. Associate or disassociate the price item or price item bundle from a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define, edit, or remove the cost of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define, edit, or remove the average price floor and ceil limits of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define, edit, or remove the division-specific characteristics from the price item or price item bundle. if required.
13. Define, edit, or remove characteristics from the price item or price item bundle, if required.
14. Click **Save**.

The new price item is defined.

Note:

While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

The system allows you to add a price item to the new price item bundle only when:

- Price item and price item bundle (whose copy you are creating) are associated to the same contract type.
- Price item is associated with the division to which the price item bundle (whose copy you are creating) is associated.
- Another price item bundle with the same price item, relationship type, and date range combination does not exist in the system.

Viewing the Price Item or Price Item Bundle Details**Procedure**

To view the details of a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.

2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to view.

The **Price Item** screen appears. It contains the following zones:

- [Price Item](#) on page 390
 - [Parameters](#) on page 392
 - [Predefined Parameter Values for Price Item](#) on page 393
 - [Divisions](#) on page 393
 - [Division-Specific SQIs for Price Item](#) on page 394
 - [Division-Specific Characteristics for Price Item](#) on page 394
 - [Division-Specific Accrual Type Criteria for Price Item](#) on page 395
 - [Division-Specific Hierarchy for Price Item](#) on page 395
 - [Division-Specific Cost for Price Item](#) on page 396
 - [Division-Specific Floor and Ceil Values for Price Item](#) on page 397
 - [Price Item Relationship](#) on page 398
3. View the basic details and characteristics of the price item or price item bundle in the **Price Item** zone.
 4. View the parameters associated with the price item or price item bundle in the **Parameters** zone.
 5. View the valid predefined parameter values of the price item or price item bundle in the **Predefined Parameter Values for Price Item** zone.
 6. View the divisions to which the price item or price item bundle is associated in the **Divisions** zone.
 7. View the SQIs associated with the price item or price item bundle for a division in the **Division-Specific SQIs for Price Item** zone.
 8. View the division-specific characteristics of the price item or price item bundle in the **Division-Specific Characteristics for Price Item** zone.
 9. View the accrual type criteria of the price item or price item bundle for a division in the **Division-Specific Accrual Type Criteria for Price Item** zone.

Note: This step is not applicable for the health insurance business.

10. View the hierarchy entity to which the price item or price item bundle is associated in a division in the **Division-Specific Hierarchy for Price Item** zone.

Note: This step is not applicable for the health insurance business.

11. View the cost of the price item or price item bundle for a division in the **Division-Specific Cost for Price Item** zone.

Note: This step is not applicable for the health insurance business.

12. View the average price floor and ceil limits of the price item or price item bundle for a division in the **Division-Specific Floor and Ceil Values for Price Item** zone.

Note: This step is not applicable for the health insurance business.

13. View the price items or price item bundles related to the parent price item or price item bundle in the **Price Item Relationship** zone.

Note: This step is not applicable for the health insurance business.

- [Division-Specific Floor and Ceil Values for Price Item](#) on page 397
- [Price Item Relationship](#) on page 398

Price Item

The **Price Item** zone displays the details of the price item or price item bundle. It contains the following sections:

- **Main** – Displays basic information about the price item or price item bundle. It contains the following fields:

Field Name	Field Description
Price Item	Displays the price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Price Item Usage	Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees
	Note: This field appears only when the Pricing option is selected from the Price Item Usage list.

Field Name	Field Description
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular <p>Note: This field appears when the Yes option is selected from the Bundle list.</p>
Global Price List	Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No
Contract Type	Displays the contract type to which the price item or price item bundle is associated.
Price Item Manager To Do Type	Indicates the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal. <p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Price Item Manager To Do Role	Indicates that users with the specified To Do role can approve the average price of the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price only when it is within the average price floor and ceil limits of the To Do role. <p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Floor and Ceiling Type	Indicates the manner in which you want to define the average price floor and ceil limits of the price item or price item bundle. The valid value is: <ul style="list-style-type: none"> • Absolute Value Range

- **Price Item Characteristics** – Lists the characteristics defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item or price item bundle.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price item or price item bundle.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item or price item bundle is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Parameters

The **Parameters** zone lists the parameters which are associated with the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the parameter is associated with the price item or price item bundle.
Effective End Date	Displays the date till when the parameter is associated with the price item or price item bundle.
Parameter	Indicates the parameter which is associated with the price item or price item bundle.
	Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the respective parameter.
Business Label	Displays the business label of the parameter.
Display Order	Indicates the order in which the parameter and its value should appear in the pricing parameter information string across the application.
Parameter Usage	Indicates whether you can use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Aggregation • Pricing
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing.
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.

On clicking the **Broadcast** () icon corresponding to a parameter, the **Predefined Parameter Values for Price Item** zone appears where you can view the valid predefined parameter values of the price item or price item bundle.

Division-Specific Hierarchy for Price Item

Note: This topic is not applicable for the health insurance business.

The **Division-Specific Hierarchy for Price Item** zone lists the following in a tree view:

- Information string of the hierarchy entity at the first level in the entity hierarchy relationship
- Information string of the hierarchy entities at the subsequent levels in the entity hierarchy relationship
- Information string of the price items which are associated with the hierarchy entities at different levels in the entity hierarchy relationship

For example,

- ▲ [Cash Management, US](#)
 - ▲ [Payments, US](#)
 - > [ACH Payment](#)
 - > [ACH Return](#)
 - > [ACH Reversal](#)
 - ▲ [Statements, US](#)
 - > [Mini Statement](#)
 - > [Yearly Statement](#)

Here, the Cash Management, US (at the first level), Payments, US (at the second level), and Statements, US (at the second level) are the hierarchy entity nodes. And, the ACH Payment, ACH Return, ACH Reversal, Mini Statement, and Yearly Statement are the price item nodes.

Each node in the tree has a link. If you click the link on the hierarchy entity node, the **Hierarchy Entity** screen appears where you can view the details of the respective hierarchy entity. However, if you click the link on the price item node, the **Price Item** screen appears where you can view the details of the respective price item.

It contains the following field:

Field Name	Field Description
Hierarchy	Displays the entity hierarchy relationship code.

In addition, it contains the following buttons:

Button Name	Button Description
Expand All	Used to expand all nodes at once in the entity hierarchy relationship.
Collapse All	Used to collapse all nodes at once in the entity hierarchy relationship.

By default, the **Division-Specific Hierarchy for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to a division in the **Divisions** zone.

Price Item Relationship

Note: This topic is not applicable for the health insurance business.

The **Price Item Relationship** zone lists the price items or price item bundles which are associated with the parent price item or added to the price item bundle. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Relationship Type	Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Bundle • Child Price Item • Custom • Denominator • Numerator • Other • Price Item • Product Group • Service • Service Group
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular Note: The data appears in this column only when the associated price item is a bundle.

Column Name	Column Description
Price Item Parameters	Displays the parameters and their values based on which you want to determine pricing for the price item or price item bundle.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Price Item**, **Description**, **Effective Start Date**, and **Relationship Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

You can associate or disassociate a price item or price item bundle from a parent price item and add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

Editing a Price Item or Price Item Bundle

Prerequisites

To edit a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To edit a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to edit.

The **Price Item** screen appears.

3. Click the **Edit** button in the **Price Item** zone.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.

- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:

- Associate the Service Quantity Identifiers (SQIs) with the Price Item or Price Item Bundle for a Division
- Define the Accrual Type Criteria of the Price Item or Price Item Bundle for a Division

Note: This step is not applicable for the health insurance business.

- Associate the Price Item or Price Item Bundle with a Hierarchy Entity in an Entity Hierarchy Relationship of a Division

Note: This step is not applicable for the health insurance business.

- Define the Cost of the Price Item or Price Item Bundle for a Division

Note: This step is not applicable for the health insurance business.

- Define the Average Price Floor and Ceil Limits of the Price Item or Price Item Bundle for a Division

Note: This step is not applicable for the health insurance business.

- Define the Division-Specific Characteristics for the Price Item or Price Item Bundle
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item or price item bundle.	Not applicable
Description	Used to specify the description for the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: You can change the price item usage of a price item or price item bundle from Pricing to Pricing and Billing. But, you cannot change the price item usage of a price item or price item bundle from Pricing and Billing to Pricing.</p> </div>	Yes
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <p>Note: This field appears only when the Pricing option is selected from the Price Item Usage list. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to create a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: This field is not applicable for the health insurance business.	
Bundle Type	Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are: <ul style="list-style-type: none"> • <i>Phantom</i> • <i>Ratio</i> • <i>Regular</i> <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p>	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p>	Note: This field is required when you are creating a price item bundle.
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>This field appears only when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	Yes
Price Item Manager To Do Type	<p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p>	No
Price Item Manager To Do Role	<p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price only when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears only when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Floor and Ceiling Type	Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is: <ul style="list-style-type: none"> Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. 	Yes (Conditional)
	Note: This field is not applicable for the health insurance business.	Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.

- Modify the required details in the **Main** section.
- Associate, edit, or disassociate parameters from the price item or price item bundle, if required.

Note:

You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which is used for aggregation, whenever required. However, you can add a parameter which is used for pricing only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

- For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.
- Associate or disassociate the price item or price item bundle from the divisions, if required.

Note: If the price item or price item bundle is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

- Associate or disassociate the SQIs from the price item or price item bundle for the required divisions.
- Define, edit, or remove the accrual type criteria of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

- Associate or disassociate the price item or price item bundle from a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

- Define, edit, or remove the cost of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

- Define, edit, or remove the average price floor and ceil limits of the price item or price item bundle from the required divisions.

Note: This step is not applicable for the health insurance business.

- Define, edit, or remove the division-specific characteristics from the price item or price item bundle. if required.

14. Define, edit, or remove characteristics from the price item or price item bundle, if required.

15. Click **Save**.

The changes made to the price item or price item bundle are saved.

Price List

A price list allows you to define standard prices for a group of price items. In other words, a price list is a rate card for price items or services which are offered to the accounts or persons. You can create more than one price list. For example, you can create a price list for large, medium-sized, and small customers. You can also create a set of price lists for different regions. You can define two types of price lists — **Standard** and **Promotional**. You can also set eligibility criteria for the price list with effective start date, end date, and description. At present, there is no functionality associated with the price list type. The implementation team can use the price list type to define the custom logic as per the business requirements.

A price list and price item pricing within the price list are effective for a particular duration. You can define multiple pricing for the same price item and variance parameter or product parameters combination within a price list only when the price item pricing date range is different. You can assign the same price item in multiple price lists and define different pricing for the price item in each price list based on the business requirements.

The system enables you to specify the duration for which the price list is available for assignment to an account or a person. However, note that at present, the availability start and end dates are not used in the product while assigning a

price list to an account or a person. If required, the implementation team can build the custom logic using the availability start and end dates in the product.

Once you create a price list, you have to assign price items to the price list and define pricing for each price item assigned to the price list. The price lists are then assigned to accounts or persons to indicate the prices that will be charged for various price items or services offered to them. You can assign multiple price lists to an account or a person for an overlapping date range. But, you need to specify the priority or order for the price list in which the pricing from the price list should be considered. You can also assign the same price list to multiple accounts or persons.

You can define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit price item pricing from the price list hierarchy.

The system allows you to create the following:

- **Default Price List** – You can create a price list and set it as a default price list for a particular division. To define a default price list for a division, you need to set the value for the **Default Price List ID** parameter in the price assignment search algorithm which is attached to the division. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list and accordingly uses the price item pricing. You can have the same price list as a the default price list for multiple divisions.
- **Global Price List** – You can create one global price list in the system. It is used only when the price item pricing is not available at any level in the customer hierarchy and in the default price list associated with the division. You can assign only those price items in the global price list whose the **Global Price List** option is set to **Yes**. The global price list is used while searching an effective price item pricing only when the **Global Price List** parameter in the price assignment search algorithm (attached to the division) is set to **Y**. Finally, if the effective price item pricing is not available in the default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.
- **Template Price List** – You can define a template price list and assign template price item pricing to a template price list. You cannot assign template price list to an account or a person. You can only create a copy of a template price item pricing which is assigned to a template price list. Once you create a copy of the template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

Price List (Used for Searching)

The **Price List** screen allows you to search for a price list using various search criteria. It also allows you to create a price list. This screen consists of the following zones:

- [Search Price List](#) on page 406
- [Price List Price Items](#) on page 409

Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price list using the price list details. The valid value is: <ul style="list-style-type: none"> • Price List Details 	Yes
	Note: By default, the Price List Details option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search a price list with a particular description.	No
Effective Start Date	Used to search price lists which are effective from a particular date.	No
Effective End Date	Used to search price lists which are effective till a particular date.	No
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> Promotional Standard 	No
	Note: By default, the Standard option is selected.	
Global Price List	Used to indicate whether you want to search a global price list. The valid values are: <ul style="list-style-type: none"> Yes No 	No
Availability Start Date	Used to search price lists which are available for assignment to an account or a person from a particular date.	No
	Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	
Availability End Date	Used to search price lists which are available for assignment to an account or a person till a particular date.	No
	Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> Active Proposed Template 	No
	Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	
Division	Used to search price lists which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List	Used to search price lists which inherit pricing from a particular parent price list.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears.</p> <p>By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.</p>	
Parent Price List Effective Date	Used to search price lists that can inherit pricing from a parent price list which is effective from a particular date.	No
	<p>Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.</p>	

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active • Proposed • Template
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.
Copy	On clicking the Copy (📄) icon, the Price List screen appears where you can create a new price list using an existing price list.
Price List Pricing	On clicking the View (🔗) icon in the Price List Pricing column, the Price List Price Item Pricing screen appears where you can view and edit a list of price items pricing information assigned to the price list.

Column Name	Column Description
Price List Assigned To	On clicking the View (🔗) icon in the Price List Assigned To column, the Price List Assignments screen appears where you can view the details of the persons and accounts to which the price list is assigned.
Eligible Accounts/ Persons	On clicking the View (🔗) icon in the Eligible Accounts/Persons column, the Entities Eligible for Price List Assignment screen appears where you can search for a list of eligible accounts and persons to which you want to assign the price list in a particular division.

Note:

However, when you search for a price list by specifying the date (which can be current, past or future date) in the **Parent Price List Effective Date** field, the system retrieves the price lists that meet the search criteria along with the details of the parent price list that is effective on that date.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🗑️) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to the **Price List Information** field, the **Price List Price Items** zone appears where you can view a list of price items to which the price list is assigned.

Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma (,) for the price list.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the pricing information of the respective price list.

Column Name	Column Description
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True .
Pricing Status	Displays the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Copy	On clicking the Copy (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the price list in the **Search Price List** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Searching for a Price List

Prerequisites

To search for a price list, you should have:

- Divisions defined in the application

- Price list associated with the division to which the user belongs

Procedure

To search for a price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.
The **Price List** screen appears.
4. Enter the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Viewing Price Items Assigned to a Price List

Prerequisites

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

Procedure

To view price items assigned to a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the price list whose price items details you want to view.
The **Price List Price Items** zone appears.
3. View the price items that are assigned to the price list in the **Price List Price Items** zone.

Defining a Price List

Procedure

To define a price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
3. Click the **Add** option from the **Price List** sub-menu.

The **Price List** screen appears. It consists the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a particular duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define characteristics for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	Note: By default, the current date appears in this field.	
Effective End Date	Used to specify the date till when the price list is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional 	Yes
	Note: By default, the Standard option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person. <div style="border: 1px solid black; padding: 2px;">Note: At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.</div>	No
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person. <div style="border: 1px solid black; padding: 2px;">Note: The availability end date cannot be earlier than the availability start date. At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.</div>	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active - Used to indicate that the price list is used for billing. • Proposed - Used to indicate that the price list is used for quotations. • Template - Used to indicate that the price list is a template price list. <div style="border: 1px solid black; padding: 2px;">Note: By default, the Active option is selected.</div>	Yes

Tip: Alternatively, you can access the **Price List** screen by clicking the **Add** button in the **Page Title** area of the **Price List** screen.

4. Enter the required details in the **Main** section.

Note: By default the **Main** section is displayed.

5. Click the **Show All** link from the **Section** to view all the sections and define or associate the following:
- Associate the price list with one or more parent price list, if required.
 - Associate price list with one or more divisions, if required.
 - Define eligibility criteria for the price list, if required.

- Define characteristics for the price list, if required.

6. Click **Save**.

Note: The price list ID is generated automatically when the price list is created.

Defining the Price List Hierarchy

Oracle Revenue Management and Billing allows you to define the price list hierarchy. It helps you to inherit the price item pricing from the parent price list if the price item pricing is not available in the price list (assigned to the account, person, or parent person). And, if the price item pricing is not available in the parent price list, the system will search for the price item pricing in the parent's parent price list (i.e. in the grandparent price list) and continue till it reaches the last level in the hierarchy.

In other words, when you define the price list hierarchy and assign the price list to an account or a person, the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. However, if the price item pricing is available on both the assigned and parent price lists, the system derives the price item pricing from the assigned price list.

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Two or more price lists can have the same parent price list.

Procedure

To define the price list hierarchy:

1. Click the **Hierarchy** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Hierarchy** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective From Date	Used to specify the date from when the price list inherits pricing from the parent price list.	Yes (Conditional)
		Note: This field is required when you are associating the price list with a parent price list.
Parent Price List Effective To Date	Used to specify the date till when the price list inherits pricing from the parent price list.	No
	Note: The parent price list effective to date cannot be earlier than the parent price list effective from date and later than price list effective end date.	

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List	Used to specify the parent price list ID to which you want to associate the price list.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears.</p> <p>On specifying the parent price list, the description of the parent price list appears corresponding to the Parent Price List field.</p>	<p>Note: This field is required when you are associating the price list with a parent price list.</p>

- Enter the required details in the **Hierarchy** section.

Note: You can search for a price list by clicking the **Search** (🔍) icon corresponding to the **Parent Price List** field.

- If you want to associate the price list with more than one parent price list, click the **Add** (+) icon corresponding to the parent price list and then repeat step 2.

Note:

You can associate a price list with multiple parent price lists. But, only one parent price list is effective for a particular duration. Also, while associating a price list with a parent price list, you can only specify a price list which is effective during the specified duration.

If you want to remove a parent price list from the price list hierarchy, click the **Delete** (🗑️) icon corresponding to the parent price list.

- Click **Save**.

The price list is associated with the parent price lists.

Defining a Characteristic for a Price List

Prerequisites

To define a characteristic for a price list, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List**)

Procedure

To define a characteristics for a price list:

- Click the **Characteristics** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.
Characteristic Value	Used to specify the value for the characteristic type. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list.

Associating a Price List with a Division

You can assign a price list only to those accounts or persons which belong to the division to which the price list is associated. Therefore, you need to associate the price list with appropriate divisions.

Prerequisites

To associate a price list with a division, you should have:

- Divisions defined in the application

Procedure

To associate a price list with a division:

1. Click the **Divisions** or **Show All** link from the **Section** in the **Price List** window when you are defining, editing, or copying a price list.

The **Divisions** section appears. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the price list.	No
	Note: You can only view those divisions to which you have access in the Division list.	

2. Select the required division from the list.
3. If you want to associate the price list with more than one division, click the **Add (+)** icon corresponding to the division and then repeat step 2.

Note: However, if you want to remove the price list from a division, click the **Delete** (🗑️) icon corresponding to the division.

4. Click **Save**.

The price list is associated with the divisions.

Tip: Alternatively, you can associate a price list with a division using the **Division** screen.

Defining Eligibility Criteria for a Price List**Prerequisites**

To define eligibility criteria for a price list, you should have:

- The **Price List Eligibility Criteria** check box selected in the **Parameter Usage** section while defining the parameter

Procedure

To define eligibility criteria for a price list:

1. Click the **Eligibility** or **Show All** link from the **Section** in the **Price List** screen when you are defining, editing, or copying a price list.

The **Eligibility** section appears. It contains the following fields in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Criteria	On clicking the Add (+) icon, you can associate eligibility criteria of parameters for the price list.	Yes (Conditional) Note: This field is required when you are defining an eligibility criteria for the price list.
Effective Start Date	Used to specify the date from when the criteria is effective for the price list.	Yes (Conditional) Note: This field is required when you are defining an eligibility criteria for the price list.
Effective End Date	Used to specify the date till when the criteria is effective for the price list.	No
Description	Used to specify the description for the criteria type.	Yes

- Enter the required details in the **Eligibility** section.
- If you want to define more than one eligibility criteria for the price list, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove the eligibility criteria, click the **Delete** (🗑️) icon corresponding to the criteria.

- Associate eligibility criteria of parameter for the price list, if required.
- If you want to define more than one eligibility criteria of parameter for the price item, click the **Add** (+) icon corresponding to the parameter.

Note: However, if you want to remove the eligibility criteria of parameter for the price item, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The eligibility criteria are defined for the price list.

How to associate eligibility criteria of parameter for a price list	Associating Eligibility Criteria of Parameters for a Price List

Copying a Price List

Instead of creating a price list from scratch, you can create a new price list using an existing price list. This is possible through copying a price list. On copying a price list, the details including the pricing parameters, divisions,

characteristics, eligibility criteria, and the assigned price items are copied to the new price list. You can then edit the details, if required.

Prerequisites

To copy a price list, you should have:

- Price list (whose copy you want to create) defined in the application
- Price list (whose copy you want to create) associated with the division to which the user belongs

Procedure

To copy a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the price list using which you want to define a new price list.

The **Price List** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price list.
- **Hierarchy** – Used to define parent price list for the price list for a particular duration.
- **Divisions** – Used to associate price list with one or more divisions.
- **Eligibility Criteria** – Used to define eligibility criteria for price list.
- **Characteristics** – Used to define characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective	Yes
Effective End Date	Used to specify the date till when the price list is effective.	No
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional 	Yes
Global Price List	Used to Indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Availability Start Date	Used to specify the date from when the price list is available for assignment to an account or a person.	Yes
Availability End date	Used to specify the date till when the price list is available for assignment to an account or a person.	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> Active Proposed Template 	Yes
Copy Pricing	Used to indicate whether you want to copy the pricing information to the price list. The valid values are: <ul style="list-style-type: none"> All None 	Yes (Conditional)

- Enter the required details in the **Main** section.
- Add, edit, or remove the parent price list details, if required.
- Associate or disassociate the price list from the required divisions.
- Define, edit, or remove the price list eligibility criteria and parameter eligibility criteria for price list in the, if required.
- Define, edit, or remove characteristics from the price list, if required.
- Click **Save**.

The new price list is defined.

Note: The price list ID is generated automatically when the price list is defined.

Viewing the Price List Details

Procedure

To view the details of a price list:

- Search for the price list in the **Price List** screen.
- In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to view.

The **Price List** screen appears. It contains the following zones:

- [Price List](#) on page 421
 - [Eligibility Criteria](#) on page 423
 - [Price List Price Items](#) on page 409
- View the basic details, hierarchy, divisions, and characteristics of the price list in the **Price List** zone.

4. View the eligibility criteria to which the price list is associated in the **Eligibility Criteria** zone.
5. View the price items that are assigned to the price list in the **Price List Price Items** zone.

Price List (Used for Viewing)

The **Price List** screen allows you to view the details of a price list. It also allows you to edit a price list. It contains the following zones:

- **Price List** - Displays the basic details of the price list.
- **Eligibility Criteria** - Displays the eligibility criteria for the price list.
- **Price List Price Items** - Displays the price items that are assigned to the price list.

Price List

The **Price List** zone displays the details of the price list. It contains the following sections:

- **Main** - Displays basic information about the price list. It contains the following fields:

Field Name	Field Description
Price List ID	Displays the price list ID.
Price List Description	Displays the description for the price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Price List Type	Indicates the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional
Global Price List	Indicates whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End date	Displays the date till when the price list is available for assignment to an account or a person.
Validity Period (in Days)	Displays the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.

Field Name	Field Description
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active – Indicates that the price list is used for billing. • Proposed – Indicates that the price list is used for quotations. • Template – Indicates that the price list is a template price list.

- **Hierarchy** - Lists the parent price list from which the price list has inherited the price item pricing for a particular duration. It contains the following columns:

Column Name	Column Description
Parent Price List ID	Displays the ID of the parent price list.
Parent Price List Effective From Date	Displays the date from when the price list can inherit pricing from the parent price list.
Parent Price List Effective To Date	Displays the date till when the price list can inherit pricing from the parent price list.

- **Divisions** - Lists the divisions to which the price list is associated. It contains the following column:

Column Name	Column Description
Division	Displays the division to which the price list is associated. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.

- **Characteristics** - Lists the characteristics that are associated with the price list. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price list.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price list.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price list is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Eligibility Criteria

The **Eligibility Criteria** zone lists the eligibility criteria of the price list. It contains the following columns:

Field Name	Field Description
Effective Start Date	Displays the date from when the criteria is effective for the price list.
Effective End Date	Displays the date till when the criteria is effective for the price list.
Description	Displays the description for the criteria type.
Sequence	Indicates the order in which the price list eligibility criteria should be executed.
Parameter	Indicates the parameter (on the left hand side) is used in the pricing eligibility criteria.
Operator	Displays the relational operator to define the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you want to compare the parameter (on the left hand side).
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed.
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed.

Field Name	Field Description
Is Insufficient	<p>Indicates what happens when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Indicates that the condition with consecutive sequence number should be executed. • Rule Is False – Indicates that the action specified in the Rule False Action field should be executed • Rule Is True – Indicates that the action specified in the Rule True Action field should be executed.

Editing a Price List

Procedure

To edit a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to edit.

The **Price List** screen appears.

3. Click the **Edit** button in the **Price List** zone.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to define parent price list to inherit price item pricing for the price list for a particular duration.
- **Divisions** - Used to associate price list with one or more divisions.
- **Eligibility Criteria** - Used to define eligibility criteria for the price list.
- **Characteristics** - Used to define characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	<p>Used to specify the date from when the price list is effective.</p> <p>Note: The system will not allow you to change the effective start date when:</p> <ul style="list-style-type: none"> • There is a price item assigned to the price list on that date. • The price list is assigned to an account or a person on that date. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the price list is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> • Standard • Promotional 	Yes
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.	No
	Note: At present, the availability start date is not used in the product while assigning a price list to an account or a person. It is available for future use.	
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.	No
	Note: The availability end date cannot be earlier than the availability start date. At present, the availability end date is not used in the product while assigning a price list to an account or a person. It is available for future use.	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> • Active – Used to indicate that the price list is used for billing. This value appears only when you are editing a proposed price list • Proposed – Used to indicate that the price list is used for quotations. • Template – Used to indicate that the price list is a template price list. <p>Note: You cannot change the status of an active and a template price list.</p>	Yes

4. Modify the details in the **Main** section, if required.

Note: By default the **Main** section is displayed.

5. Add, edit or remove parent price list from the price list hierarchy, if required.
6. Associate or disassociate the price list from the divisions, if required.

Note: You can only view those divisions to which you have access in the **Division** list. If the price list is associated to a division to which you do not have access, then the **Divisions** section is grayed out.

7. Define, edit, or remove eligibility criteria from the price list, if required
8. Define, edit, or remove characteristics from the price list, if required.
9. Click **Save**.

The changes made to the price list are saved.

Price List Price Item Pricing

Once a price list is created, you can either assign a price item to the price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to the price list. The **Price List Price Item Pricing** screen allows you to:

- View and filter the price items that are assigned to the price list
- Search and assign price items to the price list
- Copy a price item pricing and assign it to the price list

This screen consists of the following zones:

- [Price List Price Items](#) on page 427
- [Search Price Item](#) on page 428

Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	Displays the details of price item pricing.
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).</p> <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>
Pricing Status	<p>Indicates the status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>
Edit	On clicking the Edit () icon, you can edit the price item from the price list.
Delete	<p>On clicking the Delete () icon, you can remove the price item from the price list.</p> <p>Note:</p> <p>The Delete icon appears in this column only when the price list is not yet assigned to any account or person.</p> <p>This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Search Price Item

You can assign a price item or price item bundle to a price list and then define pricing for the price item or price item bundle, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price item, pricing assigned to price list and override pricing for an account, or person. The valid values are: <ul style="list-style-type: none"> • Price Item • Price list Pricing • Account Override Pricing • Person Override Pricing 	Yes
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description. Note: This field appears only when you select the Price Item option from the Search By list.	No
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to search for price item bundles. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price List ID	Used to search pricing of price items or price item bundles which are assigned to a particular price list. Note: This field appears only when you select the Price List Pricing option from the Search By list.	No
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards. Note: This field appears only when you select the Price List Pricing , Account Override Pricing , or Person Override Pricing option from the Search By list.	No
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date. Note: This field appears only when you select the Price List Pricing , Account Override Pricing , or Person Override Pricing option from the Search By list.	No
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template Note: This field appears only when you select the Price List Pricing , Account Override Pricing , or Person Override Pricing option from the Search By list.	No
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based Note: This field appears only when you select the Price List Pricing , Account Override Pricing , or Person Override Pricing option from the Search By list.	No

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search pricing of price items or price item bundles which are assigned to a particular account.	Yes
	Note: This field appears only when you select the Account Override Pricing option from the Search By list.	
Person ID	Used to search pricing of price items or price item bundles which are assigned to a particular person.	Yes
	Note: This field appears only when you select the Person Override Pricing option from the Search By list.	

Note: You must specify at least one search criterion while searching for a price item or price item bundle. You can search for an account, person by clicking the Search (🔍) icon corresponding to the respective field.
--

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the price list belongs. It may also include price items or price item bundles that are already assigned to the price list in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the Assign (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing.
Price Item Information	Displays details of the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Copy	On clicking the Copy (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.
	Note: It has a link. On clicking the link, the View Price Item Pricing window appears with the details of the respective price item pricing.

Column Name	Column Description
Account Information	<p data-bbox="570 212 1463 302">Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 331 1463 632">Note: This column appears only when you select the Account Override Pricing option from the Search By list. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Person Information	<p data-bbox="570 688 1463 779">Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 808 1463 1108">Note: This column appears only when you select the Person Override Pricing option from the Search By list. It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. The person information string appears only when an algorithm defined using the PERS-INFO algorithm type is attached to the Person Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Price List Information	<p data-bbox="570 1165 1463 1255">Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 1285 1463 1480">Note: This column appears only when you select the Price List Pricing option from the Search By list. It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective person.</p>
Variance Parameter	<p data-bbox="570 1528 1463 1562">Indicates the variance parameter which is used for defining the price item pricing.</p> <p data-bbox="570 1591 1463 1682">Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> • AC • NC
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item	Displays the price item or price item bundle code.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can define the pricing for the respective price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Global Price List	Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Y • N

Column Name	Column Description
Unit of Measure	Indicates the unit of measure associated with the price item or price item bundle.
Bundle	Indicates whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> • Y • N
Owner ID	Displays the ID of the person for whose account the price list is created.
Party ID	Displays the third party ID.
Price List ID	Indicates the price list to which the price item pricing is assigned. Note: This column appears only when you select the Price List Pricing option from the Search By list.
Price Assignment ID	Displays the price assignment ID.
Price Assignment Owner Type Flag	Displays whether price list or party is the owner of the price assignment.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular <p>However, if the price item bundle is available for only pricing and the price item type is Fees then the valid value is Regular.</p> Note: This column appears only when you select the Yes option from the Bundle list.
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees

Editing a Price Item Pricing of a Price List

Prerequisites

To edit a price item pricing of a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the price list whose details you want to view.

The **Price List Price Item Pricing** screen appears.

3. Price assignments effective for the price list appears in the **Price List Price Items** zone.
4. Click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="607 642 1203 884" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="607 1108 1203 1192" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="607 1417 1203 1501" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="545 1577 1203 1692" style="border: 1px solid black; padding: 5px;"> <p>Note: This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Active – Indicates that the price assignment is used for billing. • Inactive – Indicates that the price assignment is no longer used for billing. • Proposed – Indicates that the price assignment is to be used for quotations. • Template – Indicates that the price assignment is a template price list. <p>Note: If a price assignment is in Active status, you can change its status to Inactive. If a price assignment is in Draft status, you cannot change its status to Proposed.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p>Note: Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search screen appears.</p>	Yes

Defining a Characteristic for a Price Item Pricing

Prerequisites

To define a characteristic for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price Item Pricing .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item pricing.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the price item pricing.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item pricing.

Defining Parameters for a Price Item Pricing

Prerequisites

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected.	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> • Parameter Description • Mandatory (Yes or No) • Priority 	Not applicable
Parameter Value	Used to specify the value of the parameter.	Yes

2. Enter the required details in the **Price Item and Parameter Information** section.
3. If you want to define more than one parameter information for the price item pricing, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

4. Click **Save**.

The parameters are defined for the price item pricing.

Price List Assignment

Once a price list is defined, you can assign it to accounts or persons to indicate the prices that will be charged for the price items or services offered to the accounts or persons. You can assign multiple price lists to an account or a person along with the priority or order in which the pricing should be considered. You can also define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit the price item pricing from the price list hierarchy.

For example, suppose you have PL1 (with priority 10) and PL2 (with priority 20) assigned to an account or a person. While determining pricing for a price item, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing in PL2. The system will behave in this manner only when the price list inheritance for PL1 is set to **No** during the price list assignment.

If the price list inheritance while assigning PL1 and PL2 to an account or a person is set to **Yes**, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing from the price list hierarchy defined for PL1. However, if the system does not find the price item pricing from the price list hierarchy of PL1, it will then search for the price item pricing in PL2 (assigned to the account or person with priority 20). If the system still does not find the price item pricing in PL2, it will search for the price item pricing from the price list hierarchy defined for PL2.

The **Price List Assignment** screen allows you to search and assign a price list to an account or a person. It also allows you to view the price lists that are already assigned to an account or a person. It contains the following zones:

- [Price List Assignments](#) on page 448
- [Price List Price Items](#) on page 450
- [Search Price List for Assignment](#)

Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You can also search for the price lists assigned to the account or person which are either inactive or expired. You will not find any records in this zone if the account does not have any price lists assigned to it. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the current, inactive, or historical price list assignments. The valid values are: <ul style="list-style-type: none"> • Current Price List Assignments • Inactive Price List Assignments • Historical Price List Assignments 	Yes
	Note: By default, the Current Price List Assignments option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to search a particular price list assigned to an account or a person.	No
	Note: The Search (🔍) icon appears corresponding to the Price List ID field. On clicking the Search icon, the Price List Search window appears.	
Price List Description	Used to search price lists which are assigned to the account or person having a particular description.	No
Effective Start Date	Used to search price lists which are assigned to the account or person from a particular date.	No
Effective End Date	Used to search price lists which are assigned to the account or person till a particular date.	No
Assignment Status	Used to search price list assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Rejected • Proposed • Inactive 	No
	Note: The Inactive option is not available in the Assignment Status list when you have selected the Current Price List Assignments or Historical Price List Assignments option from the Search By list. This field is disabled, and by default, the Inactive option is selected when you select the Inactive Price List Assignments option from the Search By list.	
Price List Inheritance	Used to search price list assignments where the account or person inherits price item pricing from the price list hierarchy. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Note: You must specify at least one search criterion while searching for price list assignments.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list which is assigned to the account or person.
	Note: It has a link. On clicking the link, the Price List screen appears with the details of the respective price list.

Column Name	Column Description
Effective Start Date	Displays the date from when the price list is assigned to the account or person.
Effective End Date	Displays the date till when the price list is assigned to the account or person.
Priority	Indicates the order in which the assigned price list must be considered while determining the price item pricing for the account or person.
Assignment Status	Indicates the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Rejected • Proposed • Inactive
Price List Inheritance	Indicates whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the account or person can inherit the price item pricing from the price list hierarchy.
Edit	On clicking the Edit (✎) icon, the Price List Assignment screen appears where you can edit the price list assignment details.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays information about the price item pricing. Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the price item pricing.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price assignment for price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Copy	On clicking the Copy (📄) icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Search Price List for Assignment

The **Search Price List for Assignment** zone allows you to search for a price list that you want to assign to the account or person. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search against all price lists or against those price lists which are already assigned to an account or a person. The valid values are: <ul style="list-style-type: none"> • Price List • Assigned Price List 	Yes
	Note: By default, the Price List option is selected.	
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective from a particular date onwards. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person from a particular date onwards.	No
Effective End Date	If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective till a particular date. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person till a particular date.	No
Account ID	Used to search price lists assigned to a particular account.	No
	Note: This field appears only when you have selected the Assigned Price List option from the Search By list.	
Person ID	Used to search price lists assigned to a particular person.	No
	Note: This field appears only when you have selected the Assigned Price List option from the Search By list.	
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No
	Note: This field appears only when you have selected the Price List option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> Standard Promotional 	No
	Note: This field appears only when you have selected the Price List option from the Search By list.	
Only Eligible Price Lists	Used to search price lists which are eligible for the account or person.	No
	Note: This field appears only when you have selected the Price List option from the Search By list.	
Eligibility Date	Used to search price lists which are eligible for the account or person from a particular date.	No
	Note: This field appears only when you have selected the Price List option from the Search By list. By default, the current date appears in this field when the Only Eligible Price Lists option is selected. You can change the value, if required.	

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the Assign () icon, the Price List Assignment screen appears where you can assign the price list to the account or person.
Price List Information	Displays the information about the price list.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.
Account Information	Displays the information about the account.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Column Name	Column Description
Person Information	Displays the information about the person.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Effective Start Date	If you have selected the Price List option from the Search By list, the date from when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date from when the price list is assigned to the account or person appears in this column.
Effective End Date	If you have selected the Price List option from the Search By list, the date till when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date till when the price list is assigned to the account or person appears in this column.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.

Assigning a Price List to an Account

Prerequisites

To assign a price list to an account, you should have:

- Price list defined in the application
- Price list associated with the division to which the account belongs
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to edit.

A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the account.
 - **Price List Price Items** – Lists the price items that are assigned to the price list.
 - **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the account.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
 5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the account.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the account.
- **Characteristics** – Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account to which you want to assign the price list.	Not applicable
Price List Information	Displays the information about the price list.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)										
Effective Start Date	<p>Used to specify the date from when you want to assign the price list to the account.</p> <p>Note: The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.</p>	Yes										
Effective End Date	<p>Used to specify the date till when you want to assign the price list to the account.</p> <p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> • Price list assignment validity end date (which is price list assignment start date + validity period) • Price list effective end date <p>Let us understand this with the help of the following example:</p> <table border="1" data-bbox="521 974 1141 1352"> <tbody> <tr> <td>Price List Effective Start Date</td> <td>01-Jan-2015</td> </tr> <tr> <td>Price List Effective End Date</td> <td>31-Jan-2015</td> </tr> <tr> <td>Validity Period</td> <td>15 Days</td> </tr> <tr> <td>Price List Assignment Start Date</td> <td>15-Jan-2015</td> </tr> <tr> <td>Price List Assignment Validity End Date</td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </tbody> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>	Price List Effective Start Date	01-Jan-2015	Price List Effective End Date	31-Jan-2015	Validity Period	15 Days	Price List Assignment Start Date	15-Jan-2015	Price List Assignment Validity End Date	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)	No
Price List Effective Start Date	01-Jan-2015

Assigning a Price List to a Person

Prerequisites

To assign a price list to a person, you should have:

- Price list defined in the application
- Price list associated with the division to which the person belongs
- Value defined for the **Default Price List Priority** option type in the **C1_PRICING** feature configuration

Procedure

To assign a price list to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to edit.

A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the person.
- **Price List Price Items** – Lists the price items that are assigned to the price list.
- **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the person.

4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: The search results include only those price lists that are associated with the division to which the person belongs. It may also include price lists that are already assigned to the person in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign**  icon corresponding to the price list that you want to assign to the person.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the person.
- **Characteristics** – Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Information	Indicates the person to whom you want to assign the price list.	Not applicable
Price List Information	Displays the information about the price list.	Not applicable
Effective Start Date	Used to specify the date from when you want to assign the price list to the person. Note: The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.	Yes

Field Name	Field Description	Mandatory (Yes or No)										
Effective End Date	<p>Used to specify the date till when you want to assign the price list to the person.</p> <p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> • Price list assignment validity end date (which is price list assignment start date + validity period) • Price list effective end date <p>Let us understand this with the help of the following example:</p> <table border="1" data-bbox="516 747 1138 1129"> <tbody> <tr> <td>Price List Effective Start Date</td> <td>01-Jan-2015</td> </tr> <tr> <td>Price List Effective End Date</td> <td>31-Jan-2015</td> </tr> <tr> <td>Validity Period</td> <td>15 Days</td> </tr> <tr> <td>Price List Assignment Start Date</td> <td>15-Jan-2015</td> </tr> <tr> <td>Price List Assignment Validity End Date</td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </tbody> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>	Price List Effective Start Date	01-Jan-2015	Price List Effective End Date	31-Jan-2015	Validity Period	15 Days	Price List Assignment Start Date	15-Jan-2015	Price List Assignment Validity End Date	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)	No

Defining a Characteristic for a Price List Assignment

Prerequisites

To define a characteristic for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define a characteristic for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing characteristics for a price list assignment.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list assignment.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment .	Note: This field is required when you are defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the price list assignment.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

Viewing Accounts and Persons where Price List is Assigned

Prerequisites

To view accounts and persons where price list is assigned, you should have:

- Accounts and persons created in the application
- Price list defined and assigned to the accounts and persons

Procedure

To view accounts and persons where price list is assigned:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
The **Price List** screen appears.
3. You can search for a price list by entering the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of price lists that meet the search criteria appears in the search results.
5. In the **Search Results** section, click the **Assigned To** (🔗) icon in the **Assigned To** column corresponding to the price list whose details you want to view.
The **Price List Assignments** screen appears.
6. You can view the accounts and persons list where price list is assigned in the **Price List Assignments** screen.

Defining a Characteristic for a Price List Assignment

Prerequisites

To define characteristics for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define a characteristic for a price list assignment:

1. Click the **Characteristics** tab in the **Price List Assignment** screen when you are assigning a price list to multiple persons or accounts and also editing the price list assignment details of multiple persons or accounts.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment.

2. Enter the required details in the **Characteristics** tab.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price list assignment.

Rate Definition

Rate schedules, rate versions, and rate components are used to define the formulas to calculate the total amount charged to a customer for a product. Some examples of formulas are: price times the number of transactions used and a flat monthly charge plus a percentage of the average daily balance.

The rate is a formula with variables whose values are supplied by a user by setting up a price list or override price. For example, a rate might add a flat monthly charge and a percentage of the average daily balance to arrive at the amount charged to the customer. This rate might be used to calculate the charge for multiple products, each product with its own flat amount and percentage. So, these two factors are defined as variables whose values must be entered by users when they setup price list or override price. In Oracle Revenue Management and Billing (ORMB), these variables are defined as rate components.

The system provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. The **Rate Definition** screen allows you to indicate whether the rate component supports standard flat pricing or tiered pricing. It allows you to define, edit, and delete the tiering setup of a rate component. This screen consists of the following zones:

- [Rate Schedule Components](#) on page 479
- [Create/Edit Rate Definition](#) on page 480

Rate Schedule Components

The **Rate Schedule Components** zone allows you to select the rate schedule whose rate components' tiering setup you want to define or edit. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to select the rate schedule.	Yes

- **Search Results** — On clicking the **Search** button, the rate components of the rate schedule appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Rate Schedule	Displays the rate schedule.
Rate Component Sequence	Displays the sequence number of the rate component.
Rate Component Description	Displays the description of the rate component.
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.
Tiering Type	Displays the tiering type.
Maximum Tiering Combinations	Displays the maximum number of tiering ranges supported by the rate component.
	Note: Each tiering range supports more than one tiering criteria. For example, a rate component supports tiering based on two different criteria such as transaction volumes from a bundle and balances of the priced product. In such case, for a single rate, it is possible to enter separate tiering range information for each criterion and vary this information by product.

Column Name	Column Description
Rate Component Map Description	Displays the description of the tiering setup of the rate component.
Action	Indicates the action that can be performed on the rate component. The valid values are: <ul style="list-style-type: none"> • Add — Allows you to define the tiering setup of the rate component • Edit — Allows you to edit the tiering setup of the rate component
Rate Component Map ID	Displays the rate component map ID. Note: This ID is generated automatically when you define the tiering setup of the rate component.

On clicking the **Broadcast** () icon corresponding to the rate component, the **Create/Edit Rate Definition** zone appears with the details of the respective rate component.

Create/Edit Rate Definition

The **Create/Edit Rate Definition** zone allows you to define and edit tiering setup of the rate component. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Displays the code of the rate schedule.	Not applicable
Rate Component Description	Displays the description of the rate component.	Not applicable
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.	Not applicable
Rate Component Sequence	Displays the sequence number of the rate component.	Not applicable
Tiering Type	Used to specify the tiering type. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD Note: This field is non-editable when you edit the tiering setup of the rate component.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Tiering Combinations	Used to specify the maximum number of tiering ranges supported by the rate component. Note: This field is non-editable when you: <ul style="list-style-type: none"> Select the tiering type as FLAT or STEP Edit the tiering setup of the rate component By default, 0 appears in this field when you select the tiering type as FLAT , and 1 appears when you select the tiering type as STEP .	Yes
Rate Component Map Description	Used to specify the description for the tiering setup of the rate component. For example, if you want the user to enter price per transaction for a tiering range, enter Price Per Transaction in the Rate Component Map Description field.	Yes

This zone contains the following buttons:

Button Name	Button Description (When the Action is Add)	Button Description (When the Action is Edit)
Save	Used to create the tiering setup.	Used to save the changes made in this zone.
Delete	Note: This button is disabled when you define the tiering setup of the rate component.	Used to delete the tiering setup of the rate component.
		Note: You can delete the tiering setup only when the rate component is not yet used for any product pricing.
Cancel	Used to clear the fields in this zone.	Used to reset the changes made in this zone.

Defining Tiering Setup of a Rate Component

Prerequisites

To define tiering setup of a rate component, you should have:

- Rate schedules defined in the application
- Rate components of the rate schedule defined in the application

Procedure

To define tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.

The **Rate Definition** screen appears.

- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.

The rate components of the rate schedule appear as the search results.

- Click the **Broadcast** (📡) icon corresponding to the rate component whose tiering setup you want to define.

The **Create/Edit Rate Definition** zone appears.

- Select the tiering type from the list.
- Enter the maximum number of tiering ranges supported by the rate component.

Note:

The **Maximum Tiering Combinations** field is non-editable when you select the tiering type as **FLAT** or **STEP**. By default, **0** appears in the **Maximum Tiering Combinations** field when you select the tiering type as **FLAT**, and **1** appears when you select the tiering type as **STEP**.

- Enter the description for the tiering setup of the rate component.

For example, if you want the user to enter price per transaction for a tiering range, enter `Price Per Transaction` in the **Rate Component Map Description** field.

- Click **Save**.

The rate component map ID is generated automatically when you define the tiering setup of the rate component.

Editing Tiering Setup of a Rate Component

Procedure

To edit tiering setup of a rate component:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.
The **Rate Definition** screen appears.
- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.

The rate components of the rate schedule appear as the search results.

5. Click the **Broadcast** (📡) icon corresponding to the rate component whose tiering setup you want to edit.
The **Create/Edit Rate Definition** zone appears.
6. Modify the details of the tiering setup.

Note: You can only modify the rate component map description.

7. Click **Save**.
The changes made to the tiering setup are saved.

Deleting Tiering Setup of a Rate Component

Procedure

To delete tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.
The **Rate Definition** screen appears.
3. Select the rate schedule in the **Rate Schedule Components** zone.
4. Click **Search**.
The rate components of the rate schedule appear as the search results.
5. Click the **Broadcast** (📡) icon corresponding to the rate component whose tiering setup you want to delete.
The **Create/Edit Rate Definition** zone appears.
6. Click **Delete**.

The tiering setup of the rate component is deleted, and the action that can be performed on the rate component changes from **Edit** to **Add** in the **Rate Schedule Components** zone.

Note:

The **Delete** button is disabled when you define the tiering setup of the rate component.

You can delete the tiering setup only when the rate component is not yet used for any product pricing.

Tiering Criterion

Oracle Revenue Management and Billing (ORMB) provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization.

Let us understand this with the help of an example. ABC company uses wire transfer services provided by a large bank. If ABC company initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If ABC company initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, you will have to define tiered pricing with the following tiering ranges:

- If the number of wire transfers is greater than 0 and less than or equal to 1000, then charge \$5 per transfer to ABC company.
- If the number of wire transfers is greater than 1000, then charge \$3 per transfer to ABC company.

In the above example, number of wire transfers is the tiering criterion, 0 – 1000 and 1000 – BLANK are tiering ranges, and \$5 and \$3 are rates per transfer.

The **Tiering Criteria** screen allows you to create and edit a tiering criterion. This screen consists of the following zones:

- [Tiering Criterion List](#) on page 484
- [Edit Tiering Criterion](#) on page 484
- [Create Tiering Criterion](#) on page 485

Tiering Criterion List

The **Tiering Criterion List** zone displays tiering criterion that are already defined in the system. This zone contains the following columns:

Column Name	Column Description
Tiering Criterion	Displays the code of the tiering criterion.
Description	Displays the description of the tiering criterion.
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

On clicking the **Broadcast** () icon corresponding to the tiering criterion, the **Edit Tiering Criterion** zone appears with the details of the respective tiering criterion.

Edit Tiering Criterion

The **Edit Tiering Criterion** zone allows you to edit the tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Displays the code of the tiering criterion.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to modify the description of the tiering criterion.	Yes
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.	Not applicable

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Cancel	Used to clear the changes made in this zone.

By default, the **Edit Tiering Criterion** zone does not appear in the **Tiering Criteria** screen. It appears only when you click the **Broadcast** () icon corresponding to the tiering criterion in the **Tiering Criteria List** zone.

Create Tiering Criterion

The **Create Tiering Criterion** zone allows you to create tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to specify the code that uniquely identifies the tiering criterion.	Yes
Description	Used to specify the description for the tiering criterion.	Yes
Service Quantity Identifier	Used to specify the Service Quantity Identifier (SQI) for the tiering criterion. Note: During billing, the rating engine uses the SQI to determine which service quantities are applied to tiers.	Yes

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to create the tiering criterion.
Cancel	Used to clear the fields in this zone.

Creating a Tiering Criterion

Prerequisites

To create a tiering criterion, you should have:

- Service Quantity Identifiers (SQIs) defined in the application

Procedure

To create a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.
The **Tiering Criterion** screen appears.
3. In the **Create Tiering Criterion** zone, enter the code that uniquely identifies the tiering criterion.
4. Enter the description for the tiering criterion.
5. Select the Service Quantity Identifier (SQI) that you want to associate with the tiering criterion.
6. Click **Save**.
The tiering criterion is created.

Division

Topics:

- [Division](#)

The following two types of divisions are used while defining a contract type:

- **General Ledger (GL) Division** — GL divisions typically comprise of individual entities (for example, companies) in the general ledger. You must set up a GL division for each such entity. The GL division is used to define the accounting period for financial transactions linked to contracts. Contracts are associated with GL divisions through their contract type. The system uses accounting periods to prevent a user from creating financial transactions in the closed periods. It also uses accounting periods when it generates the flat file that contains the consolidated journal entry that is interfaced to the general ledger.
- **Division** — A division is associated with a jurisdiction. A jurisdiction is a geographic-oriented entity with unique business rules. For example, if you conduct business in California and Japan, each jurisdiction has different set of rules, and therefore you need to have a separate jurisdiction for each division. You must set up a division for each jurisdiction in which you conduct the business. For the Pricing Management functionality, setting up a division is mandatory, and the system must contain information about at least one division.

A division is associated with the following:

- **Person** — You may or may not associate person to a division. It is optional. But, when you are using division specific functionality, you have to associate person to a division while creating a local person.
- **Contract** — Contract is associated to a division through its contract type. The contract type controls multiple business rules which are defined for a given jurisdiction and contract type combination. In addition to controlling the business rules defined on the contract's contract type, the contract's division also controls the type of collection criteria used to determine if and how to collect overdue debt.
- **Account** — The division on account when combined with the account's customer class defines the jurisdiction that governs financial business rules (for example, the bill's due date, when and how late payment charges are calculated, etc.). It also allows you to assign To Do entries associated with the account to a given To Do role based on the account's division.

Division

The **Division** screen allows you to define, edit, and delete a division. It consists of the following tabs:

Tab Name	Tab Description	Mandatory (Yes or No)
Main	Used to define basic details of a division.	Yes
Access Groups	Used to define the users who have right to associate objects (such as persons, accounts, price items, price lists, etc.) with this division. The users can only view those divisions to which they have access in the Division list used across the application.	No
Price Items	Used to define which price items are available to persons or accounts in a division.	No
	Note: Once the price item is created, you need to associate it with a division.	
Price Lists	Used to define which price lists are available to persons or accounts in a division.	No
	Note: Once the price list is created, you need to associate it with a division. You can associate a price list with a division only when all price items in the price list are already associated with the division.	
Languages	Used to limit the languages that you can select for a person's bills and correspondence in a division.	No
Invoice Currencies	Used to limit the invoice currencies that you can select for accounts in a division.	No
	Note: Invoice currency is a currency in which the accounts in the division can be billed.	
Person Identifier Types	Used to limit the person identifier types that you can select for persons in a division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Algorithms	<p>Used to associate algorithms with the division. Once a division is created, you must associate the Price Assignment Search algorithm to it. For the Banking functionality, this is required to ensure that the price item pricing is displayed in the correct order as defined by the algorithm. Each division can have unique hierarchy order or more than one division can have the same hierarchy order. The hierarchy order is also used in billing when the price determination is controlled by the sort order definition of the algorithm.</p> <p>You can define algorithms in the Algorithm screen. The search order is governed by the second parameter of the algorithm, and the valid values for the same are:</p> <ul style="list-style-type: none"> • AGREED_PRICELIST - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Account Price List, Account Inherited Price List, Customer Agreed, Customer Price List, Customer Inherited Price List, Parent Customer Agreed, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 961 1112 1104" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> <ul style="list-style-type: none"> • AGREED_FIRST - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Customer Agreed, Parent Customer Agreed, Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 1394 1112 1537" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div>	No
Characteristics	Used to define characteristics for a division.	No
Bill Messages	Used to specify the bill messages that are valid for accounts in a division.	No
Party Char Types	Used to limit the characteristic types that you can select for persons and accounts in a division.	No
Bill Cycles	Used to limit the bill cycles that you can select for accounts in a division.	No
Account Identifier Types	Used to limit the account identifier types that you can select for accounts in a division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Price Item Characteristics	Used to define division-specific characteristics for price items associated with the division.	No

Division - Main

The **Main** tab displays the basic information about the division. It contains the following fields:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.
Description	Displays the description of the division.
Work Calendar	Indicates the work calendar which is associated with the division.

Field Name	Field Description
Status	Indicates the status of the division. The valid values are: <ul style="list-style-type: none"> • Active • Pending • Retired
Bill Format	Indicates the format in which the bills should be printed for the accounts which belong to the division. The valid values are: <ul style="list-style-type: none"> • Detailed • Summary
Bill Route Type	Indicates how the bills must be sent to the main customer of the accounts which belong to the division.
Base Currency	Indicates the currency in which the GL entries should be created for the accounts which belong to the division.
Time Zone	Indicates the time zones in which the division is operational.
Eligible for Accrual	Indicates whether accrual should be calculated for the accounts which belong to the division.
Accrual Cycle	Indicates the accrual cycle of the accounts which belong to the division.
Comments	Displays additional details about the division.
Business Object	Indicates the business object using which the division is created in the system.

In addition, the **Main** tab contains the following fields in a grid:

Field Name	Field Description
To Do Type	Indicates the To Do type for which division-specific To Do role is defined.
To Do Role	Indicates the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.

Division - Price Items

The **Price Items** tab lists the price items which are associated with the division. It contains the following field:

Field Name	Field Description
Division	Indicates the division.

In addition, the following fields appear in a grid:

Field Name	Field Description
Price Item	Indicates the price item which is associated with the division.
Description	Displays the description of the price item.
Accrual Type Criteria	Indicates whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are: <ul style="list-style-type: none"> • Actual • Historical • Not Applicable

Related Topics

Searching for a Division

Procedure

To search for a division:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
3. Click the **Search** option from the **Division** sub-menu.

The **Division Search** window appears. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search for a particular division.	No
Description	Used to search division with a particular name.	No

Note: You must specify at least one search criterion while searching for a division.

- **Search Results** - On clicking the **Search** button corresponding to the respective field, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Displays the division.
Description	Displays the description of the division.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- In the **Search Results** section, click the division whose details you want to view or edit.

The **Division** screen appears.

Defining a Division

Prerequisites

To define a division, you should have:

- Required division business object defined in the application
- Work calendars, bill route types, currencies, time zones, accrual cycles, To Do types, and To Do roles defined in the application
- Values defined for the **BILL_FORMAT_FLG** lookup field

Procedure

To define a division:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
- Click the **Add** option from the **Division** sub-menu.
The **Division** screen appears.
- Ensure that the **Main** tab is selected.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division.	Yes
Description	Used to specify the description for the division.	Yes
Work Calendar	Used to indicate the work calendar that you want to associate with the division. The work calendar indicates the days when the division is operational. It is used to ensure that the system calculated dates (for example, bill due date, credit and collection event dates, etc.) fall on a working day.	Yes
	Note: The list includes only those work calendars which are already defined in the system.	

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the division. The valid values are:</p> <ul style="list-style-type: none"> • Active - Indicates that you can use the division in the system. • Pending - Indicates that the division is not yet available for use. • Retired - Indicates that the division is no longer available for use. <p>Note: The list includes only those statuses which are defined in the DIVISION_STATUS_FLG lookup field.</p>	No
Bill Format	<p>Used to specify the format in which the bills should be printed for the accounts which belong to the division. The valid values are:</p> <ul style="list-style-type: none"> • Detailed • Summary <p>Note: The list includes only those bill formats which are defined in the BILL_FORMAT_FLG lookup field.</p>	No
Bill Route Type	<p>Used to indicate how the bills must be sent to the main customer of the accounts which belong to the division.</p> <p>Note: The list includes only those bill route types which are already defined in the system.</p>	No
Base Currency	<p>Used to specify the currency in which the GL entries should be created for the accounts which belong to the division. If the account's invoice currency and division's base currency are different, the system converts the GL amount from the account's invoice currency to the division's base currency. In such cases, the system creates the financial transactions for the accounts in both the currencies (i.e. account's invoice currency and division's base currency).</p> <p>Note: The list includes only those currencies which are already defined in the system.</p>	Yes
Time Zone	<p>Used to indicate the time zone in which the division is operational.</p> <p>Note: The list includes only those time zones which are already defined in the system.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Accrual	Used to indicate whether you can calculate accrual for the accounts which belong to the division.	No
Accrual Cycle	Used to indicate the accrual cycle for the accounts which belong to the division.	Yes (Conditional) Note: The field is required when the Eligible for Accrual option is selected.
	Note: This field is enabled when the Eligible for Accrual option is selected. The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search window appears.	
Comments	Used to specify additional details about the division.	No
Business Object	Used to indicate the business object using which you want to create the division.	Yes
	Note: The Search (🔍) icon appears corresponding to the Business Object field. On clicking the Search icon, the Business Object Search window appears.	

In addition, the **Main** tab contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Type	Used to indicate the To Do type for which you want to define division-specific To Do role.	Yes (Conditional) Note: This field is required when you are defining the division-specific To Do role for a To Do type.
	Note: The Search (🔍) icon appears corresponding to the To Do Type field. On clicking the Search icon, the To Do Type Search window appears.	
To Do Role	Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.	Yes (Conditional) Note: This field is required when you are defining the division-specific To Do role for a To Do type.
	Note: The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the Role for To Do Type window appears.	

- Enter the required details in the **Main** tab.
- Associate access groups, price items, price lists, languages, invoice currencies, person identifier types, algorithms, bill messages, party characteristic types, bill cycles, and account identifier types with the division, if required.
- Define characteristics for the division, if required.
- Define division-specific characteristics for the price items, if required.

- Click the **Save** button in the **Page Title** area.

The division is defined. The status of the division is set to **Pending**.

Associating an Access Group with a Division

On associating an access group with a division, the users which belong to the access group can view the division in the respective list across the system. These users can then create and edit the accounts of the division.

Prerequisites

To associate an access group with a division, you should have:

- Access groups defined in the application

Procedure

To associate an access group with a division:

- Search for the division to which you want to associate an access group.
- Click the **Access Groups** tab in the **Division** screen.

The **Access Groups** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to indicate the access group which you want to associate with the division.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying an access group, the description of the access group appears in the Description field.	Note: This field is required when you are associating an access group with the division.
Description	Displays the description of the access group.	Not applicable

- Enter the required details in the **Access Groups** tab.
- If you want to associate more than one access group with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an access group from the division, click the **Delete** (🗑️) icon corresponding to the access group.

- Click the **Save** button in the **Page Title** area.

The access group is associated with the division.

Associating a Price Item or Price Item Bundle with a Division

On associating a price item with a division, you can assign the price item to the persons and accounts which belong to the division. While associating a price item with a division, you can specify the accrual type criteria for the price item. The accrual type criteria is referred only when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

If the accrual type criteria is set to...	Then...
Actual	The system considers the billable charges of the price item only when the accrual is calculated for an account using the accrual type where the accrual criteria is set to Actual .
Historical	The system considers the billable charges of the price item only when the accrual is calculated for an account using the accrual type where the accrual criteria is set to Historical .

Prerequisites

To associate a price item with a division, you should have:

- Price items defined in the application

Procedure

To associate a price item with a division:

1. Search for the division to which you want to associate a price item.
2. Click the **Price Items** tab in the **Division** screen.

The **Price Items** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to associate with the division. Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On specifying a price item, the description of the price item appears in the Description field.	Yes (Conditional) Note: This field is required when you are associating a price item with the division.
Description	Displays the description of the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type Criteria	<p>Used to indicate whether the billable charges of the price item should be considered for accrual depending on the accrual criteria specified in the accrual type. The valid values are:</p> <ul style="list-style-type: none"> Actual <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to Actual. Historical <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual when the accrual criteria in the accrual type is set to Historical. Not Applicable <ul style="list-style-type: none"> - Used to indicate that the billable charges of the price item should be considered for accrual irrespective of the accrual criteria specified in the accrual type 	No

- Enter the required details in the **Price Items** tab.
- If you want to associate more than one price item with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a price item from the division, click the **Delete** (🗑️) icon corresponding to the price item.

- Click the **Save** button in the **Page Title** area.
The price item is associated with the division.

Associating a Price List with a Division

Prerequisites

To associate a price list with a division, you should have:

- Price lists defined in the application

Procedure

To associate a price list with a division:

1. Search for the division to which you want to associate a price list.
2. Click the **Price Lists** tab in the **Division** screen.

The **Price Lists** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to specify the price list which you want to associate with the division. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears. On specifying a price list, the description of the price list appears in the Description field.	Yes (Conditional) Note: This field is required when you are associating a price list with a division.
Description	Displays the description of the price list.	Not applicable

3. Enter the required details in the **Price Lists** tab.
4. If you want to associate more than one price list with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a price list from the division, click the **Delete** (🗑️) icon corresponding to the price list.

5. Click the **Save** button in the **Page Title** area.

The price list is associated with the division.

Associating a Language with a Division

Prerequisites

To associate a language with a division, you should have:

- Languages defined in the application

Procedure

To associate a language with a division:

1. Search for the division to which you want to associate a language.
2. Click the **Languages** tab in the **Division** screen.

The **Languages** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Language	Used to specify the language which you want to select for generating invoice and correspondence for the accounts in the division.	No

3. Select the language from the list.
4. If you want to associate more than one language with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a language from the division, click the **Delete** (🗑️) icon corresponding to the language.

5. Click the **Save** button in the **Page Title** area.

The language is associated with the division.

Associating an Invoice Currency with a Division

Prerequisites

To associate an invoice currency with a division, you should have:

- Currencies defined in the application

Procedure

To associate an invoice currency with a division:

1. Search for the division to which you want to associate an invoice currency.
2. Click the **Invoice Currencies** tab in the **Divisions** screen.

The **Invoice Currencies** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to indicate the currency which you want to use for generating the invoice of the accounts in the division.	Yes (Conditional) Note: This field is required when you are associating an invoice currency with the division.
Rounding Type	Used to indicate the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> • Down • Nearest • Up 	Yes (Conditional) Note: This field is required when you are associating an invoice currency with the division.

3. Select the currency and its rounding type from the respective list.
4. If you want to associate more than one invoice currency with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an invoice currency from the division, click the **Delete** (🗑️) icon corresponding to the currency.

5. Click the **Save** button in the **Page Title** area.

The invoice currency is associated with the division.

Associating a Person Identifier Type with a Division

Prerequisites

To associate a person identifier type with a division, you should have:

- Person identifier types defined in the application

Procedure

To associate a person identifier type with a division:

1. Search for the division to which you want to associate a person identifier type.
2. Click the **Person Identifier Types** tab in the **Division** screen.

The **Person Identifier Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)
		Note: This field is required when you are associating a person identifier type with a division.

3. Select the person identifier type from the list.
4. If you want to associate more than one person identifier type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a person identifier type from the division, click the **Delete** (🗑️) icon corresponding to the person identifier type.

5. Click the **Save** button in the **Page Title** area.

The person identifier type is associated with the division.

Associating an Algorithm with a Division

Prerequisites

To associate an algorithm with a division, you should have:

- Required algorithms defined in the application

Procedure

To associate an algorithm with a division:

1. Search for the division to which you want to associate the algorithm.

The **Division** screen appears.

2. Click the **Algorithms** tab.

The **Algorithms** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division Algorithm Entity	<p>Used to indicate the algorithm entity to which you want to attach the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • ASL Accumulation Post-Processing - Used to attach an algorithm which must be triggered for undertaking some post-processing activities on the aggregate stop-loss accumulation amount. This algorithm is invoked when you execute the C1-ACASL batch. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: No algorithm types for this algorithm entity are shipped with the product. Sequence Number	Used to specify the order in which the algorithms with the same entity should be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the division.
Algorithm	Used to specify the algorithm code. Note: The Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the division.

Field Name	Field Description	Mandatory (Yes or No)
Description	Displays the description of the algorithm.	Not applicable
	Note: The description appears automatically when you specify the algorithm code in the Algorithm field.	

- Enter the required details in the **Algorithms** tab.
- If you want to associate more than one algorithm with the division, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove an algorithm from the division, click the **Delete (🗑)** icon corresponding to the algorithm.

- Click the **Save** button in the **Page Title** area.
The algorithm is associated with the division.

Defining a Characteristic for a Division

Prerequisites

To define a characteristic for a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To define a characteristic for a division:

- Search for the division for which you want to define a characteristic.
- Click the **Characteristics** tab in the **Division** screen.

The **Characteristics** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the division.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the division.
Characteristic Value	Used to specify the value for the characteristic type. Note: The Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Characteristic Value Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the division.

- Enter the required details in the **Characteristics** tab.
- If you want to define more than one characteristic for the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the division, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.
The characteristic is defined for the division.

Associating a Bill Message with a Division

Prerequisites

To associate a bill message with a division, you should have:

- Bill messages defined in the application

Procedure

To associate a bill message with a division:

1. Search for the division to which you want to associate a bill message.
2. Click the **Bill Messages** tab in the **Division** screen.

The **Bill Messages** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want the bill message to appear on the bill for the accounts in the division.	Yes (Conditional) Note: This field is required when you are associating a bill message with the division.
End Date	Used to specify the date till when you want the bill message to appear on the bill for the accounts in the division.	No
Bill Message	Used to specify the bill message which is valid for the accounts in the division. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Bill Message Search window appears. On specifying a bill message, the description of the bill message appears in the Description field.	Yes (Conditional) Note: This field is required when you are associating a bill message with the division.
Description	Displays the description of the bill message.	Not applicable

3. Enter the required details in the **Bill Messages** tab.
4. If you want to associate more than one bill message with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a bill message from the division, click the **Delete** (🗑️) icon corresponding to the bill message.

5. Click the **Save** button in the **Page Title** area.

The bill message is associated with the division.

Associating a Party Characteristic Type with a Division

Prerequisites

To associate a party char type with a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To associate a party char type with a division:

1. Search for the division to which you want to associate a party char type.
2. Click the **Party Char Types** tab in the **Division** screen.

The **Party Char Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	Used to indicate whether the characteristic type is valid for a person or an account in the division.	Yes (Conditional) Note: This field is required when you are associating a party char type with the division.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional) Note: This field is required when you are associating a party char type with the division.

3. Enter the required details in the **Party Char Types** tab.
4. If you want to associate more than one party char type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a party char type from the division, click the **Delete** (🗑️) icon corresponding to the characteristic type.

5. Click the **Save** button in the **Page Title** area.

The party char type is associated with the division.

Associating a Bill Cycle with a Division

Prerequisites

To associate a bill cycle with a division, you should have:

- Bill cycles defined in the application

Procedure

To associate a bill cycle with a division:

1. Search for the division to which you want to associate a bill cycle.
2. Click the **Bill Cycles** tab in the **Division** screen.

The **Bill Cycles** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Cycle	Used to specify the bill cycle that is valid for the accounts associated with the division.	Yes (Conditional) Note: This field is required when you are associating a bill cycle with the division.

3. Select the bill cycle from the list.
4. If you want to associate more than one bill cycle with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a bill cycle from the division, click the **Delete** (🗑️) icon corresponding to the bill cycle.

5. Click the **Save** button in the **Page Title** area.

The bill cycle is associated with the division.

Associating an Account Identifier Type with a Division**Prerequisites**

To associate an account identifier type with a division, you should have:

- Account identifier types defined in the application

Procedure

To associate an account identifier type with a division:

1. Search for the division to which you want to associate an account identifier type.
2. Click the **Account Identifier Types** tab in the **Division** screen.

The **Account Identifier Types** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division. Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type valid for the accounts associated with the division.	Yes (Conditional) Note: This field is required when you are associating an account identifier type with the division.

3. Select the account identifier type from the list.
4. If you want to associate more than one account identifier type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an account identifier type from the division, click the **Delete** (🗑️) icon corresponding to the account identifier type.

5. Click the **Save** button in the **Page Title** area.

The account identifier type is associated with the division.

Defining a Division-Specific Characteristic for a Price Item

Prerequisites

To define a division-specific characteristics for a price item, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division/Price Item Combination)
- Price item associated with the division to which the user belongs

Procedure

To define a division-specific characteristic for a price item:

1. Search for the division for which you want to define a price item characteristic.
2. Click the **Price Item Characteristics** tab in the **Division** screen.

The **Price Item Characteristics** tab appears. It contains the following field:

Field Name	Field Description
Division	Indicates the division.
	Note: The Search (🔍) icon appears corresponding to the Division field. On clicking the Search icon, the Division Search window appears where you can search for a division.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item count associated with the selected division.	No
Price Item	Indicates the price item code associated with the division to which the user belongs.	Not applicable
Effective Date	Used to specify the date from when the price item characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required when you are defining a division-specific characteristic for the price item.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination.	Note: This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Characteristic Value Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a division-specific characteristic for the price item.

- If the division has multiple price items associated with it, navigate to define a characteristic for the required price item.

Note: You can use the **Previous** (⬅️) and **Next** (➡️) buttons to navigate through the price items while defining their characteristics.

- Enter the required details in the **Price Item Characteristics** tab.
- If you want to define more than one division-specific characteristic for the price item, click the **Add** (+) icon and then repeat step 4.

Note: However, if you want to remove a division-specific characteristic from the price item, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The division-specific characteristic is defined for the price item.

Associating a To Do Type and To Do Role with a Division

Prerequisites

To associate a To Do type and To Do role with a division, you should have:

- To Do types and to do roles defined in the application
- To Do roles associated to the respective to do types

Procedure

To associate a To Do type and To Do role with a division:

1. Search for the division to which you want to associate a To Do type and To Do role.
2. Click the **Main** tab in the **Divisions** screen.
The **Main** tab appears.
3. The **To Do** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
To Do Type	Used to indicate the To Do type for which you want to define division-specific To Do role.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the To Do Type field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when you are defining a To Do type for the division
To Do Role	Used to indicate the To Do role whose users must receive the To Do entries of the specified To Do type for the accounts which belong to the division.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the To Do Role field. On clicking the Search icon, the Role for To Do Type window appears.	Note: This field is required when you are defining a division-specific To Do role for a To Do type

4. If you want to associate more than one To Do type and To Do role with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a To Do type and To Do role from the division, click the **Delete** (🗑️) icon corresponding to the To Do type.

5. Click the **Save** button in the **Page Title** area.

The To Do type and To Do role is associated with the division.

Oracle Revenue Management and Billing may optionally be configured to use the approval workflow process whenever any addition, modification, or deletion is done manually by a user. The approval workflow process routes any changes made to the business objects (such as person, account, contract, division, and so on) to a group of people for approval. The approval workflow process allows you to manage and track all tasks involved in the approval process.

Approval workflow allows you to define the rules for requiring an approval step before the data changes are committed to the database. Once you establish the approval workflow rules, the application manages the business process flow for having data changes approved before they are reflected in the database.

The system provides you with a flexible set of options used to determine when approvals are required, and how the approval process is to be managed including:

- Turning approval on or off for individual business objects within the application
- Grouping business objects so that approval is required for the group rather than the individual business objects within the group
- Who should approve
- How many levels of approvals are required
- Different approval workflow chains based on different criteria

Once you have turned approval workflow on for an object, or a group of objects, the system will use the approval workflow configuration to manage the entire approval process including:

- Determining whether approval is required based on data changes submitted by a user
- Routing approval workflow requests to one or more qualified approvers
- Managing rejected data changes and sending these back to the submitter for resolution
- Committing the changes once all required approvals are received

- *Approval Workflow Reason
(Used for Viewing)*

Most Commonly Used Terms

Before you understand the approval workflow process, you must familiarize yourself with the following terms:

Term	Description
Submitter	A person who adds, modifies or deletes a business object, such as person, account, contract, and division is called a submitter.
Approver	A person who approves any changes made to a business object is called an approver.
Approval Workflow Group	A group of one or more business objects for which approval is required, under some or all conditions, when data changes are made.
Approval Workflow Chain	The approval workflow chain indicates how many levels of approvals are required to approve the changes made by the submitter.

Approval Workflow Process

When a submitter adds, edits or deletes a business object (for example, an account) that belongs to an approval workflow group, the system checks whether approval workflow is activated for the approval workflow group. If the approval workflow is activated for the group, the system creates an approval workflow request. Every approval workflow request is uniquely identified in the system through the Approval Transaction ID.

The system identifies the approval workflow chain that must be used for approval depending on the pre-configured conditions or criteria. Based on the number of levels defined in the approval workflow chain, the request is sent to the approver at each level in the chain or hierarchy for approval. When the approver at the first level approves the request, a notification is sent to the approver at the second level for approval. This process continues till the approval is received from all levels in the hierarchy. Once the approvers at all levels approve the request, the changes are committed to the database.

However, if an approver at any level in the hierarchy rejects the request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments and resubmits the changes for approval. In this case, the approval process starts once again from the beginning and not from the level at which the request was rejected.

The submitter also has the facility to modify the request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval. The submitter also has the facility to cancel the request.

The following figure indicates the flow of the approval workflow process:

To implement the approval workflow process, you need to define the following:

- [Approval Workflow Group \(Used for Searching\)](#) on page 584
- [Approval Workflow Chain \(Used for Searching\)](#) on page 601
- [Approval Workflow Criterion Type \(Used for Searching\)](#) on page 608
- [Approval Workflow Group Chain Linkage \(Used for Searching\)](#) on page 614
- [Approval Workflow Reason \(Used for Searching\)](#) on page 631
- [Approval Workflow Setting \(Used for Searching\)](#) on page 624

For price list, price item and price assignment, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1PRODUCT** – Contains the C1_PRICEITEM_BO business object
- **C1PRICELST** – Contains the C1_F_ADDPLBO business object
- **C1PRICEASG** – Contains the C1_PRICECOMP and C1_PRICEASGN_BO business objects

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains. To setup the approval workflow process for price assignment, you need to do the following:

For Price Item	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICEITEM maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEITEM_BO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEITEM MO. 3. Link the C1PRODUCT group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRODUCT group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.
----------------	---

For Price List	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICELIST maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_F_ADDPLBO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICELIST MO. 3. Link the C1PRICELST group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRICELST group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.
For Price Assignments	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICECOMP maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICECOMP as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICECOMP MO. 3. If a Determine BO algorithm is not specified for the C1_PRICEASGN maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEASGN_BO as the business object on this algorithm. 4. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEASGN MO. 5. Link the C1PRICEASG group to the appropriate approval workflow chain. 6. Activate the approval workflow for the C1PRICEASG group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.

Similarly, for invoicing group, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1IGADD**
- **C1IGUPD**

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains, and activate the approval workflow for these groups by setting the following in the **Approval Workflow Settings** screen:

- Set **Active** flag to **Yes**
- Set **Prevalidation** flag to **Yes**

Note: You must set the **Active** flag to **No** for both the groups in case you do not want to activate the approval workflow for invoicing group. If you set the **Active** flag to **Yes** for either of the groups, approval workflow is triggered when you add and/or edit an invoicing group.

Prerequisites

You need to setup the following prerequisites to implement the approval workflow process:

- **Setup Feature Configuration for Approval Workflow** — If you create new Maintenance Objects (MOs) and want the access control for these MOs in the approval workflow transactions to be based on the access group and division, then you have to create a custom algorithm and attach it to the **Approval Transaction Entity Access Algorithms** option type of the **C1_AXENTITY** feature configuration. Note that you will then have two access algorithms; one default algorithm (that is, **C1-APPTXN**) and another custom algorithm. For more information

about the **C1_AXENTITY** feature configuration, see [Setting the C1_AXENTITY Feature Configuration](#) on page 2964.

- **Create and Attach Determine BO Algorithm** — To use approval workflow for a business object, check the corresponding maintenance object to see if a **Determine BO** algorithm is already attached to it. If not, create a **Determine BO** algorithm using the **F1-MOBO** algorithm type, and specify the appropriate business object name on the newly created algorithm. Attach this algorithm on the **Determine BO** algorithm spot of the maintenance object.
- **Attach Audit Algorithm to Business Objects** — To use the approval workflow process for a business object, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object. Unless you attach the audit algorithm to a business object, the approval workflow process will not be triggered for the respective business object. This step is only required when you are using the base panels. If you have created custom UI maps to enter or modify data for a specific business object, this step is not needed.
- **Attach Validation Algorithms to Business Objects** — The following algorithms are shipped with ORMB:

Business Object	Basic Validation Algorithm	Pending Transaction Validation Algorithm
C1-AppBOChain	C1-GRPCHNALG	C1-APPGRPCHL
C1-AppGrp	C1-GRPALG	C1-APPGROUPV
C1-ApprovalChainEligible	C1-ADMALG	C1-APGBYPORT
C1-ApprovalTransactionChain	C1-APCHALGO	C1-APCHNPEND

The basic validation algorithms are attached to the respective business objects, and then shipped with ORMB. However, the pending transaction validation algorithms are not attached to the respective business objects. If you want to restrict the users from either editing or deleting the approval workflow group, approval workflow settings, approval workflow chain, or approval workflow group chain linkage when the respective approval workflow requests are in the **Pending**, **Work-in-Progress**, or **Rejected** state, then you must attach the pending transaction validation algorithm on the **Validation** algorithm spot of the respective business object.

- **Set Colors for Highlighting during Comparison** — While approving, rejecting, or cancelling approval workflow requests where the submitter action is Update (UPD), you will be able to compare the existing and new data. By default, any modifications are highlighted in the Yellow (9933FF) color and new additions are highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Changing the Highlighting Colors](#).
- **Create To Do Types** — You need to create the To Do types that you want to use in the approval workflow process. Once the To Do type is created, you need to link it to the required To Do roles so that users belonging to the To Do role can view and work on the To Do type.
- **Create To Do Roles** — You need to create the To Do roles that you want to use in the approval workflow process. Once the To Do role is created, you need to add the users whom you want to assign this role.

Note: User who is withdrawing the approval workflow request must be assigned to the To Do role to which the approver at the first level in the hierarchy is assigned. Otherwise, the user will not be able to withdraw the approval workflow request.

- **Create Input UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group. For more information on how to create an Input UI map manually, see [Creating Input UI Map for an Approval Workflow Group](#) on page 2947.
- **Create Display UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group. For more information on

how to create a Display UI map manually, see [Creating Display UI Map for an Approval Workflow Group](#) on page 2946.

Approval Transaction

If an approver at any level in the hierarchy rejects a request, a notification is sent to the submitters having the To Do role to resolve. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Approval Transaction** screen allows you to resolve or withdraw a request. It consists of the following zones:

- [Search Approval Transaction](#)
- [Approval Transaction Log](#)

Search Approval Transaction

The **Search Approval Transaction** zone allows you to search for an approval transaction using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an approval transaction using the task or approval transaction details. The valid values are: <ul style="list-style-type: none"> • Task Details • Approval Transaction Details 	Yes
	Note: By default, the Task Details option is selected.	
Status	Used to search approval transactions with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Inprocess • Pending • Deleted 	No
	Note: This field appears only when you select the Approval Transaction Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Task	Used to search approval transactions with a particular task. The valid values are: <ul style="list-style-type: none"> • Approve • Modify • Resolve 	Yes (Conditional)
	Note: This field appears only when you select the Task Details option from the Search By list.	Note: This field is required when you want to search approval transactions using the task details.
Approval Workflow Group	Used to search approval transactions created for the business objects that belong to a particular approval workflow group.	No
Division	Used to search approval transactions which belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Reference ID	Used to search approval transactions created for the business object with a particular reference ID.	No
Approval Transaction ID	Used to search for a particular approval transaction.	No
Created From	Used to search approval transactions which are created from a particular date onwards.	No
Created Until	Used to search approval transactions which are created till a particular date.	No
Action	Used to search approval transactions which are created while adding, updating, or deleting a business object.	No
Submitter ID	Used to search approval transactions which are created by a particular submitter.	No
	Note: This field appears either when you select the Task Details from the Search By list and Approve option from the Task list or when you select the Approval Transaction Details from the Search By list and Processing, Pending, or Deleted option from the Approval Transaction Status list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Submitter Id for Status window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Approver ID	Used to search approval transactions which are rejected by a particular approver. Note: The Approver ID is displayed when the approval transaction is searched by Task Details and Task is Resolve . It is also displayed when the approval transaction is searched by Approval Transaction Details and Status is Approved, Canceled, or Rejected . The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approver ID Search window appears.	No

Note: You must specify at least one search criterion while searching for an approval transaction. One more search criterion is required when you are searching for an approval transaction using the **Task** field.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID. Note: It has a link. The link appears when you select Task Details option from the Search By list. If the Approve option is selected from the Task list then on clicking the link, Comparison: New versus Existing window appears with the compared details of the new and existing approval transactions. If the Modify option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment. If the Resolve option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment.
Approval Workflow Group	Displays the code of the approval workflow group.
Submitter Name	Displays the name of submitter who submits the approval transaction details list. Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Processing, Pending, or Deleted option from the Approval Transaction Status list.
Approver Name	Displays the name of an approver who approves an approval transaction details list. Note: This column appears either when you select the Resolve option from the Task list or when you select the Approved, Canceled, or Rejected option from the Approval Transaction Status list.

Column Name	Column Description
Submitted On	Displays the date and time on which approval transaction is submitted for approval.
	Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Approved , Pending , or Deleted option from the Approval Transaction Details list.
Action	Indicates the various types of action. The valid values are: <ul style="list-style-type: none"> • Add • Delete (DEL) • Update (UPD)
Division	Displays the division to which the approval transaction belongs.
Status	Displays the status of approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Processing • Pending • Deleted
	Note: This column appears either when you select Approval Transaction Details option from the Search By list of the search criteria.
To Do Type	Displays the type of To Do (notification) received for the approval transaction.
Approval Transaction Information	Displays additional information about the approval transaction.
Rejected On	Displays the date and time on which the transaction is rejected.
	Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected , option from the Approval Transaction Details list.
Reject Reason	Displays the reason for which the approval transaction is rejected by the approver.
	Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected option from the Approval Transaction Details list.
Canceled On	Displays the date and time on which the approval transaction is canceled by the user.
	Note: This column appears when you select the Cancelled option from the Approval Transaction Details list.

Column Name	Column Description
Cancel Reason	Displays the reason for which the approval transaction is canceled by the user.
	Note: This column appears either when you select the Canceled option from the Approval Transaction Details list.
Withdraw	Displays a link to withdraw an approval transaction.
	Note: This column appears either when you select the Modify or Resolve option from the Task list. It has a link and on clicking the link, a message appears to confirm the withdrawal of the respective approval transaction.

On clicking the **Broadcast** (📢) icon corresponding to the approval transaction the **Approval Transaction Log** zone appears with the approval transaction log details.

Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Displays the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • InProcess • Pending • Deleted
View	It has a link. On clicking the View link, the Comparison: New versus Existing window appears where you can view the existing and new compared transactions”.
Status Reason	Displays the status reason of the approval transaction.
Comments	Displays additional information about the approval transaction.

By default, the **Banking Approval Transaction Log** zone does not appear. It appears only when you click the **Broadcast** (📢) icon corresponding to the approval transaction in the **Approval Transaction** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Searching for an Approval Transaction**Procedure**

To search for an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.
The **Approval Transaction** screen appears.
3. Click the **Search** option from the **Approval Transaction** sub-menu.
The **Approval Transaction** screen appears.
4. Enter the search criteria in the **Search Approval Transaction** zone depending on whether you want to search for a task or approval transaction details.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of task or approval transactions that meet the search criteria appears in the **Search Results** section.

Comparison: New versus Existing

You have to define the reason codes which are used when the approval workflow request is either rejected or cancelled. The reason code helps to indicate the reason why a particular request was rejected or cancelled.

The **Comparison: New versus Existing** screen allows you to view the changes in the new approval transaction compared to the existing one. It contains the following sections:

- New
- Existing

Through this screen you can do the following:

- Approve an approval transaction
- Reject an Approval Transaction
- Cancel an approval transaction
- Modify an approval transaction
- Withdraw an Approval Transaction
- Resolve an approval transaction

Approving an Approval Transaction

You can view the number of approval transactions which are pending for approval in the **Approval Transaction** screen. The approver can review, and accordingly approve, return to the submitter, revert to the original, or cancel the approval transaction based on the observations.

Note: The system will not allow you to approve, return to the submitter, revert to the original or cancel an approval transaction submitted by you.

Procedure

To approve an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Approve**.

A message appears with confirmation on transaction approved successfully.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **OK**.

The approval transaction is removed from the search results.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2964.

6. Review the changes and click **Approve** to accept the changes.

The changes in the approval transaction are approved.

Rejecting an Approval Transaction

Prerequisites

To return an approval transaction to its submitter, you should have:

- Rejection reasons defined in the application

Note:

While returning an approval transaction, you need to specify the reason why you want to return the approval transaction. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To reject an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.

4. Click Return to Submitter.” With stepresult, “The Rejection/Cancelation Reason window appears. It contains the following fie

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.
6. Click **OK**.

The approval transaction is removed from the search results.

Canceling an Approval Transaction

Prerequisites

To revert an approval transaction to its initial status, you should have:

- Cancellation reasons defined in the application

Note:

While reverting an approval transaction, you need to specify the reason why you want to revert the approval transaction. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To cancel an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Revert to Original**.

The **Rejection/Cancellation Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.

A **Comparison: New versus Existing** screen appears where you can view the changes in the new transaction as compared to the existing ones.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2964.

6. Click OK.

The approval transaction is removed from the search results.

Modifying an Approval Transaction**Prerequisites**

To modify an approval transaction, you should have:

- Characteristic Types defined in the application.

Procedure

To Modify an approval transaction:

1. Search for approval transactions with task details and status as Modify in the **Approval Transaction** screen.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is **Update (UPD)**, you will be able to compare the existing and new data, and accordingly take an action.

3. Modify the required details.
4. Click **Save**.

The modifications made to the approval transaction are saved.

Withdrawing an Approval Transaction

Procedure

To withdraw an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. In the **Search Results** section, click the link in the **Withdraw** column corresponding to the approval transaction which you want to withdraw.

A message appears confirming whether you want to withdraw the approval transaction.

3. Click **OK**.

A message appears confirming whether you want to delete the approval transaction.

4. Click **OK**.

The approval transaction is deleted.

Resolving an Approval Transaction

Prerequisites

To resolve an approval transaction, you should have:

- Characteristic Types defined in the application.

Procedure

To resolve an approval transaction:

1. Search for approval transactions with task details and status as Resolve in the **Approval Transaction** screen.

A list appears.

2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to resolve.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is Update (UPD), you will be able to compare the existing and new data, and accordingly take an action.

3. Make the required changes.

4. Click **Save**.

The changes resolve for the approval transaction are saved.

Approve Price Assignment

The **Approve Price Assignment** screen allows you to search for the price assignment requests that are pending in your workflow for approval. You can review the changes, and accordingly approve, reject or cancel the request based on your observations. It contains the following zones:

- [Search](#) on page 544
- [List of Price Assignments](#) on page 547
- [Approve Price Assignment - Comparison: New versus Existing](#) on page 548
- [Approval Transaction Log](#) on page 537

Search

The **Search** zone allows you to search for the price assignment requests that are pending in your workflow for approval. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approval Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list. This field appears only when you select the Person or Account option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the value for the person identifier type.	Yes (Conditional)
	Note: If you enter the person identifier as a search criteria, you have to select the person identifier type.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search price assignments which are created for a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Price List Description	Used to search price lists with a particular description.	No
	Note: This field appears only when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears only when you select the Submitter ID option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction ID	<p>This field appears only when you select the Approval Transaction ID option from the Search By list.</p> <p>Note:</p> <p>The approval transaction ID is generated automatically when the price assignment request is created.</p> <p>This field appears only when you select the Transaction ID option from the Search By list.</p>	No

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. It contains the following columns:

Column Name	Column Description
Account ID	<p>Displays the account ID.</p> <p>Note: This column appears only when you select the Account option from the Search By list.</p>
Account Identifier Type	<p>Indicates the account identifier type of the account for the price assignments.</p> <p>Note: This column appears only when you select the Account option from the Search By list.</p>
Account Identifier	<p>Displays the value of the account identifier type.</p> <p>Note: This column appears only when you select the Account option from the Search By list.</p>
Price List ID	<p>Note: This column appears only when you select the Price List option from the Search By list.</p>
Price List Description	<p>Displays the description for the price list.</p> <p>Note: This column appears only when you select the Price List option from the Search By list.</p>
Person Identifier	<p>Note: This column appears only when you select the Person option from the Search By list.</p>
Person Name	<p>Displays the name of the person.</p> <p>Note: This column appears only when you select the Person option from the Search By list.</p>
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Submitter ID	Displays the ID of the submitter.
	Note: This column appears only when you select the Submitter ID option from the Search By list.
Approval Transaction ID	Displays the approval transaction ID.
	Note: This column appears only when you select the Approval Transaction ID option from the Search By list.

On clicking the **Broadcast** () icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction id.
	Note: The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Displays the name of the submitter.
Action	Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) performed by the submitter during price assignment.
Submitted On	Indicates the submitter who has created the price assignment request.

Column Name	Column Description
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays the additional information of an approval transaction.

Note:

By default, the **List of Price Assignments** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to the account, person, or price list in the **Search** zone.

Approve Price Assignment - Comparison: New versus Existing

The **Comparison: New versus Existing** zone lists the existing and the new price assignments defined in the system. You can approve, cancel, reject a price assignment through this zone. It contains the following fields:

Field Name	Field Description
Approval Transaction ID	Displays the approval transaction id.
Submitter ID	Displays the submitter id who has created the price assignment request.

Field Name	Field Description
Approval Transaction Information	Displays information about the approval transaction
Action	Indicates the action that can be performed on the price assignment. The valid values are: <ul style="list-style-type: none"> • Add – Allows you to define the tiering setup of the price assignment • DEL – Allows you to delete the tiering setup of the price assignment. • UPD – Allows you to upload the tiering setup of the price assignment.

In addition to the above fields, this zone also contains the following two sections:

- **New** – It consists of the new approved price assignments.
- **Existing** – It consists of the existing or old price assignments.

In addition, this zone also contains the following buttons:

Button Name	Button Description
Approve	Used to approve the price assignment.
Return to Submitter	Used to reject the price assignment.
Revert to Original	Used to cancel the price assignment.

Note:

By default, the **Comparison: New versus Existing** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast** (📢) icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

The changes made are highlighted in both the sections for the respective fields. The fields change according to the price assignments.

You can click on **Approve** button, **Return to Submitter** button, or **Revert to Original** button to **Approve**, **Reject** or **Cancel** the price assignments, respectively.

Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Indicates the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Inprocess • Pending • Initial • Deleted
Status Reason	Indicates the reason why the approval transaction was rejected or cancelled.
Comments	Displays the additional details entered by the approver on rejecting or cancelling the approval transaction.

Note:

By default, the **Approval Transaction Log** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

List Of Price Assignments zone	List of Price Assignments on page 566

Approving a Price Assignment for an Account

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. The approver can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To approve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast** () icon corresponding to the account whose price assignments you want to review for approval.
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast** () icon corresponding to the price assignment whose details you want to review and approve.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2964.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.
A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.
8. Click **Approve**.
A message appears with confirmation on transaction approved successfully.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve and then click **Approve**.

9. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

Approving a Price Assignment for a Person

Procedure

To approve a price assignment for a person:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria by selecting **Person** in the **Search By** field.

Note:

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Search Results** appear only when **Person Identifier Type** and **Person Identifier** fields are entered.

4. Click **Search**.
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast** (📡) icon corresponding to the person whose price assignments you want to review for approval.
The **List of Price Assignments** zone appears.
6. Click the **Broadcast** (📡) icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2964.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are accurate, then click **Approve**.

A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.

- Click **OK**.

A To Do (notification) is sent to the approver at the next level in the hierarchy. You will no longer be able to view this request in your workflow for approval. In case you are the last approver in the hierarchy, the changes are committed to the database.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve, and then click **Approve**.

Modify Price Assignment

The submitter has the facility to modify or withdraw a price assignment request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval.

The **Modify Price Assignment** screen allows you to modify or withdraw a price assignment request. It contains the following zones:

- [Search](#) on page 562
- [List of Price Assignments](#) on page 577

Search

The **Search** zone allows you to search for the price assignment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approval Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list. This field appears only when you select the Person or Account option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search price assignments through which the person's record is created or updated in the system.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.	
Account ID	Used to search price assignments which are created for a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	
		Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
	Note: This field appears only when you select the Account option from the Search By list.	
Price List Description	Used to search price lists with a particular description.	No
	Note: This field appears only when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears only when you select the Submitter ID option from the Search By list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears only when you select the Approval Transaction ID option from the Search By list.	

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Indicates the person for whom the price assignment is created.
	Note: This column appears only when you select the Person or Submitter ID option from the Search By list.
Person Name	Displays the name of the person.
	Note: This column appears only when you select the Person or Submitter ID option from the Search By list.
Person Identifier Type	Displays the person identifier type.
	Note: This column appears only when you select the Submitter ID option from the Search By list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This column appears only when you select the Account or Submitter ID option from the Search By list.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Account Identifier Type	Indicates the account identifier type of the account for the price assignments.
	<p>Note: This column appears only when you select the Account or Submitter ID option from the Search By list.</p>
Account Identifier	Displays the value of the account identifier type.
	<p>Note: This column appears only when you select the Account or Submitter ID option from the Search By list.</p>
Price List ID	Displays the price list ID.
	<p>Note: This column appears only when you select the Price List option from the Search By list.</p>
Price List Description	Displays the description for the price list.
	<p>Note: This column appears only when you select the Price List option from the Search By list.</p>
	<p>Note: This column appears only when you are searching for price assignment requests of a price list.</p>
Submitter ID	Displays the ID of the submitter.
	<p>Note: This column appears only when you select the Submitter ID option from the Search By list.</p>

On clicking the **Broadcast** (📢) icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) , performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays information about the approval transaction.
	Note: This information string is generated using the C1-APPTXNINF algorithm.
Modify	It has a link. On clicking the Modify link, the Modify/Resolve Price Assignment screen appears where you can modify the price assignment.
Withdraw	It has a link. On clicking the Withdraw link, you can withdraw and remove the approval transaction from the list of price assignments.
View	It has a link. On clicking the Log link, you can view the approval transaction log details.

By default, the **List of Price Assignments** zone does not appear in the **Modify Price Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to the account, person, or price list in the **Search** zone.

Modifying a Price Assignment for an Account

You can view the number of price assignments which are pending for modification in the **Modify Price Assignment** screen. The modifier can review, and accordingly modify, withdraw or view log of the price assignment based on the observations.

Procedure

To modify a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.
The **Modify Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast** () icon corresponding to the account whose price assignments you want to review.
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment that you want to modify.
The **Modify/Resolve Price Assignment** screen appears.

Note: Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Modify the required details.

The changes made to the price assignment are saved.

Resolve Price Assignment

If an approver at any level in the hierarchy rejects a price assignment request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver’s comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Resolve Price Assignment** screen allows you to resolve or withdraw a price assignment request. It consists of the following zones:

- [Search](#) on page 573
- [List of Price Assignments](#) on page 577

Search

The **Search** zone allows you to search for the price assignment requests rejected by approvers and pending for you to resolve. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price assignments using various details. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approver Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Person Identifier Type	Used to specify the identifier type based on which you want to search for price assignment requests of a person.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Account ID	Used to search for price assignment requests created for an account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to specify the account identifier type of the account whose price assignment requests you want to search.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	
		Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to search for price assignment requests created for a price list.	No
	Note: This field appears only when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears only when you select the Submitter ID option from the Search By list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears only when you select the Approval Transaction ID option from the Search By list.	

Note: You must specify at least one search criterion while searching for a price assignments.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Displays the ID linked to the person.
	Note: This column appears only when you are searching for price assignment requests of a person.
Person Name	Displays the name of the person.
	Note: This column appears only when you are searching for price assignment requests of a person.
Division	Displays the division to which the account, person, or price list belongs.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: This column appears only when you are searching for price assignment requests of an account. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Column Name	Column Description
Account Identifier Type	Displays the account identifier type.
	Note: This column appears only when you are searching for price assignment requests of an account.
Account Identifier	Displays the value of the account identifier type.
	Note: This column appears only when you are searching for price assignment requests of an account.
Price List ID	Displays the price list ID.
	Note: This column appears only when you are searching for price assignment requests of a price list.
Price List Description	Displays the description of the price list.
	Note: This column appears only when you are searching for price assignment requests of a price list.
Owner ID	Displays the ID of the person for whose account the approval workflow request is created.
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction ID is generated automatically when the price assignment request is created.
Person Identifier Type	Displays the person identifier type.
	Note: This column appears only when you are searching for price assignment requests of a person.

On clicking the **Broadcast** () icon corresponding to the account, person, or price list, the **List of Price Assignments** zone appears.

Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of price lists that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast** (📡) icon corresponding to the price list whose price assignment requests you want to resolve.
The **List of Price Assignments** zone appears.
6. Click the **Resolve** link in the **Resolve** column corresponding to the price assignment request that you want to resolve.
The **Modify/Resolve Price Assignment** screen appears where you can modify the pricing details, tiering ranges, and price assignment characteristics.

Note: Only those users who have access to the application services for each business object within the approval workflow group will be able to resolve the request, and resubmit it for approval.

7. Make the required changes.
8. Click **Save**.
The price assignment is updated and resubmitted for approval.

Withdrawing a Price Assignment for an Account

Procedure

To withdraw a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- Do the following:

If you want to...	Then...
Withdraw a price assignment request when it is in the Pending Approval status	From the Main menu, select Approval Workflow Management and then click Modify Price Assignment . The Modify Price Assignment screen appears.
Withdraw a price assignment request when it has been rejected by an approver at any level in the hierarchy	From the Main menu, select Approval Workflow Management and then click Resolve Price Assignment . The Resolve Price Assignment screen appears.

- In the **Search** zone, enter the search criteria, such as the division to which the account belongs, account ID, or account identifier.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

- Click the **Broadcast** (📢) icon corresponding to the account whose price assignment requests you want to withdraw.

The **List of Price Assignments** zone appears.

Note: The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

- Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.

A message box appears confirming whether you want to delete the price assignment request.

- Click **OK**.

You will no longer be able to view this request in your workflow.

Withdrawing a Price Assignment for a Person

Procedure

To withdraw a price assignment for a person:

- Click the **Menu** link in the **Application** toolbar.

A list appears.

2. Select the **Main** menu and do the following:

If you want to...	Then...
Withdraw a price assignment request when it is in the Pending Approval status	From the Main menu, select Approval Workflow Management and then click Modify Price Assignment . The Modify Price Assignment screen appears.
Withdraw a price assignment request when it has been rejected by an approver at any level in the hierarchy	From the Main menu, select Approval Workflow Management and then click Resolve Price Assignment . The Resolve Price Assignment screen appears.

3. In the **Search** zone, enter the search criteria, such as the division to which the person belongs or the person identification type and value.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast** () icon corresponding to the person whose price assignment requests you want to withdraw.

The **List of Price Assignments** zone appears.

Note: The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

6. Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.

A message box appears confirming whether you want to delete the price assignment request.

7. Click **OK**.

You will no longer be able to view this request in your workflow.

Defining an Approval Workflow Group

Prerequisites

To define an approval workflow group, you should have:

- Input and Display UI maps created in the application in case you want to use custom UI maps.
- Dependency, Approval, and Approval Post Processing algorithms defined in the application in case you want to use any of them.

Note: Before you define an approval workflow group for the User BO, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object belonging to the USER-SC MO, and not the USER MO.

Procedure

To define an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
3. Click the **Add** button in the **Page Title** area of **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group.
- **Business Objects and Group BO Relation** - Used to add business objects and define group BO Relation for the approval workflow group.

The **Main** section contains the following:

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction Type	Used to indicate the transaction type to which the approval workflow group belongs.	Yes
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Description	Used to specify the approval workflow group with a particular description.	Yes
Display UI Map	Used to specify the UI map that you want to use for viewing data of the business objects within the approval workflow group.	No
	Note: You can search for a UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Display UI Map field.	
	Note: If you clear the Display UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.	
Input UI Map	Used to specify the UI map that you want to use for modifying data of the business objects within the approval workflow group.	No
	Note: You can search for a UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Input UI Map field.	
	Note: If you clear the Input UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.	
Dependency Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow group.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Dependency Algorithm field.	
	Note: This algorithm can be used to check all prerequisites before creating the approval workflow group.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Algorithm	<p>Used to specify the algorithm that will be triggered after the approval workflow group is approved by the approver at the last level in the hierarchy. The following approval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPPROD - This approval algorithm is used for the C1PRODUCT group, which is shipped with ORMB. • C1-APPPL - This approval algorithm is used for the C1PRICELST group, which is shipped with ORMB. • C1-APPASG - This approval algorithm is used for the C1PRICEASG group, which is shipped with ORMB. • C1-APPALG - This is a standard approval algorithm that you can use for approval workflow groups where custom logic is not required. <p>You can also create your own approval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Algorithm field.</p>	No
Approval Post Processing Algorithm	<p>Used to specify the algorithm that will be triggered after the changes (which are approved by all approvers' in the hierarchy) are committed to the database.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Creation Algorithm	<p>Used to specify the algorithm that will create approval workflow group. The following transaction creation algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPASGCR - Used to create approval workflow group for price assignment. • C1-AXPROD - Used to create approval workflow group for price item. • C1-AXUSR - Used to create approval workflow group for user. • C1-IGCREATE - Used to create approval workflow group for invoicing group. • C1-AXCREATE - This is a standard transaction creation algorithm that you can use to create approval workflow group for most of the base objects. <p>You can also create your own transaction creation algorithms for custom UIs.</p> <p>In case of the base UIs, this algorithm is only used while modifying or resolving a group. The initial approval transaction creation for base UIs takes place through the Audit algorithm attached on the business object.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Transaction Creation Algorithm field.</p>	Yes
Data Retrieval Algorithm	<p>Used to specify the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). The following data retrieval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPIGDR - Used to retrieve data for invoicing group. • C1-AXPRICEOV - Used to retrieve data for price assignment. • C1_APPDATA - This is a standard data retrieval algorithm that you can use to retrieve data for most of the base objects. <p>You can also create your own data retrieval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Data Retrieval Algorithm field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Information Algorithm	Used to specify the algorithm information.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Compare Map	Used to specify the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Input Script	Used to specify the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	

- Enter the required details.
- Add business objects and group BO relation with the approval workflow group, if required.
- Click **Save**.

The approval workflow group is defined.

How to add business objects and group BO relation	Adding a Business Object

Adding a Business Object

Prerequisites

To add a business object in the approval workflow group, you should have:

- Business object and approval workflow group created in the application.

Procedure

To add a business object in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, Select **A**, and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

- Click the **Add** button in the page-title area of the **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains following sections:

- Main** - Used to specify basic details of the approval workflow group.
- Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects and link them with the approval workflow group.

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the Business Object Code that you want to include in the Approval Workflow Group.	Yes
Reference ID 1	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 2	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 3	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 4	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference Foreign Key 1	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 3	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
List	Used to indicate whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Used to specify the XPATH key of the field or list of fields in the parent business object.	No
To Key	Used to specify the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a business object and parent business object, by clicking the **Search** (🔍) icon placed corresponding to the **Business Object** field.

- If you want to define more than one business and parent business object for the approval workflow group, click the **Add** (+) icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**

The business object is added in the approval workflow group.

Note: When you add business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** (🔄) icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

Defining a Group BO Relation

Prerequisites

To define a relationship between business object in the approval workflow group, you should have:

- Business objects added in the approval workflow group.

Procedure

To define a relationship between business objects in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

3. Search for an approval workflow group in the **Approval Workflow Group** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
5. The **Approval Workflow Group** screen appears. It contains following sections:
 - **Main** - Used to specify basic details of the approval workflow group.
 - **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects, and link them with the approval workflow group.
6. Define and edit the approval workflow group details from the **Main** section, if required.
7. If you only want to define a business object, enter the required details in the **Business Objects and Group BO Relation** section.
8. If you want to define a group BO relation with the business object, enter the required details in the following fields.
 - a) **Parent Business Object**
 - b) **From Key**
 - c) **To Key**

Note: If you want to define more than one business or parent object, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a business or parent object, click the **Delete** (🗑) icon corresponding to the business or parent object field.

9. Click **Save**.

The business object is defined, and its relationship with the parent object is also defined in the approval workflow group.

Approval Workflow Group (Used for Viewing)

Once you define an approval workflow group, the **Approval Workflow Group** screen allows you to:

- Edit the details of an approval workflow group
- Edit the details of business objects and group business object relation
- Delete an approval workflow group
- Delete a business object and a group business object relation
- View the details of an approval workflow group

This screen consists of the following zone:

- [Approval Workflow Group](#) on page 594

Approval Workflow Group

The **Approval Workflow Group** zone displays the details of the approval workflow group. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the name of the approval workflow group.
Description	Displays the description of the approval workflow group.
Display UI Map	Indicates the UI map that will be used for viewing data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map.
Input UI Map	Indicates the UI map that will be used for modifying data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map.
Dependency Algorithm	Indicates the algorithm that will be triggered before creating the approval workflow request. Note: This algorithm can be used to check all prerequisites before creating the approval workflow request.
Approval Algorithm	Indicates the algorithm that will be triggered after the approval workflow request is approved by the approver at the last level in the hierarchy.
Approval Post Processing Algorithm	Indicates the algorithm that will be triggered after the changes (which are approved by all approvers in the hierarchy) are committed to the database.
Transaction Creation Algorithm	Indicates the algorithm that will create approval workflow requests. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Data Retrieval Algorithm	Indicates the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Information Algorithm	Indicates the Approval Transaction information from the Approval Transactions that are created for a particular entity, based on the inputs of the XPath paths provided in the Reference IDs.
Compare Map	Indicates the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field.
Input Script	Indicates the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit the approval workflow group. It is also used to delete the business objects and group BO relation.
Delete	Used to delete an approval workflow group.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow group is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Business Objects And Group BO Relation** - The Business Objects And Group BO Relation contains the following fields:

Field Name	Field Description
Business Object	Indicates the Business Object that you want to include in the Approval Workflow Group.
Reference ID 1	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 2	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 3	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 4	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference Foreign Key 1	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 2	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 3	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 4	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 5	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 6	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.

Field Name	Field Description
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.
Parent Business Object	Indicates the parent business object. This should be one of the business objects within the group.
From Key	Indicates the XPATH key of the field or list of fields in the parent business object.
To Key	Indicates the XPATH key of the field or list of fields in the current business object.

Editing an Approval Workflow Group

Procedure

To edit an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Group** screen appears.

3. Click the **Edit** button in the **Approval workflow Group** zone.

The **Approval Workflow Group** screen appears.

4. Modify the details of the approval workflow group, if required.
5. Define, edit, or remove business objects and group BO relation from the approval workflow group, if required.
6. Click **Save**.

The changes made to the approval workflow group are saved.

Deleting an Approval Workflow Group

Procedure

To delete an approval workflow group:

1. Search for the approval workflow group in the **Search Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group that you want to delete.
3. Click the **Delete** button in the **Approval Workflow Group** zone.

A message appears confirming whether you want to delete the approval workflow group.

4. Click **OK**.

The approval workflow group is deleted.

Editing a Business Object

Procedure

To edit a business object in the approval workflow group:

1. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
2. Search for an approval workflow group in the **Search Approval Workflow Group** zone.
3. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.
4. The **Approval Workflow Group** zone appears. Click the **Edit** button from **Record Action** sections.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business objects and link them with the approval workflow group

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the Business Object Code that is included in the Approval Workflow Group.	Yes
Reference ID 1	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 2	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 3	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 4	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference Foreign Key 1	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference Foreign Key 3	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Display the XPATH key of the field or list of fields in the parent business object.	No
To Key	Display the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a business object or parent business object by clicking the **Search** (🔍) icon placed corresponding to the **Business Object** and **Parent Business Object** field.

- If you want to define more than one business object or parent object for the approval workflow group, click the **Add** (+) icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**.

The changes made to the business object in approval workflow group are saved.

Note: When you change business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** (🔄) icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

Editing a Group BO Relation

Procedure

To edit the business object's relationship details in the approval workflow group:

1. If required, filter the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** screen appears. It contains following two sections:

- **Main** - Displays the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Displays the fields that allow to define or edit business objects, and link them with the approval workflow group.

3. If required, define and edit the approval workflow group details from the **Main** section.
4. The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the business object that you want to add in the approval workflow group.	Yes
Reference ID 1	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 2	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference ID 3	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 4	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference Foreign Key 1	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 2	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 3	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 4	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 5	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 6	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Displays the parent business object. This should be one of the business objects within the group.	No
From Key	Displays the XPATH key of the field or list of fields in the parent business object.	No
To Key	Displays the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a parent business object by clicking the **Search** (🔍) icon placed corresponding to the field. You can also define a new parent business object by clicking the **Add** (+) icon placed corresponding to the field.

5. Modify the required details in **Business Objects and Group BO Relation** section.
6. Click **Save**.

The changes made to business object's relationship are saved in the approval workflow group.

Approval Workflow Chain (Used for Searching)

The **Approval Workflow Chain** screen allows you to search for approval workflow chain using various search criteria. Through this screen, you can navigate to the following screen:

- [Approval Workflow Chain \(Used for Viewing\)](#) on page 605

This screen consists of the following zone:

- [Search Approval Workflow Chain](#) on page 601

Search Approval Workflow Chain

The **Search Approval Workflow Chain** zone allows you to search for an approval workflow chain using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to search a particular approval workflow chain.	No
Description	Used to search approval workflow chains with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Chain	Displays the approval workflow chain.
Description	Displays the description of the approval workflow chain.
	Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears where you can view the details of the respective approval workflow chain.

Note: You must specify at least one search criterion while searching for an approval workflow chain.

Searching for an Approval Workflow Chain

Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

3. Enter the search criteria in the **Search Approval Workflow Chain** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

Defining an Approval Workflow Chain

Prerequisites

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.

The **Approval Workflow Chain** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the approval workflow chain.
- **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to specify the approval workflow chain	Yes
Description	Used to specify the description for the approval workflow chain	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Role To Resolve	Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy.	Yes

- Enter the required details.
- Define approval levels for the approval workflow chain, if required.
- Click **Save**.

The approval workflow chain is defined.

Defining Approval Levels for an Approval Workflow Chain

Prerequisites

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval levels for an approval workflow chain:

- Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.

The **Approval Levels** section contains the following fields

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request. Note: You can search for an action algorithm by clicking the Search (🔍) icon corresponding to the Action Algorithm field.	Yes
Approver To Do Role	Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy. Note: You can search for an approver to do role by clicking the Search (🔍) icon corresponding to the Approver To Do Role field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approver To Do Type	Used to specify the type of notification that you want to generate when the approver approves or rejects the request.	Yes
	Note: You can search for an approver to do type by clicking the Search (🔍) icon corresponding to the Approver To Do Type field.	

- Enter the required details in the **Approval Levels** section.
- If you want to define more than one approval level for the approval workflow chain, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete** (🗑) icon corresponding to the approval level.

Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 605

Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- Main** - Displays basic information about the approval workflow chain. It contains the following fields:

Field Name	Field Description
Approval Workflow Chain	Displays the approval workflow chain and levels.
Description	Displays the description of the approval workflow chain and levels.
To Do Role To Resolve	Displays the description of To Do Role role type.

- Approval Levels** - Displays the levels defined in the approval workflow chain.

Field Name	Field Description
Action Algorithm	Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request.

Field Name	Field Description
Level	Indicates the level in the hierarchy.
Approver To Do Role	Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy.
Approval To Do Type	Indicates the type of notification that will be generated when the approver approves or rejects the request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit and delete the approval workflow chain and approval levels.
Delete	Used to delete the approval workflow chain.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing an Approval Workflow Chain

Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Chain** screen appears.

3. Click the **Edit** button in the **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

- **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Displays the approval workflow chain.	Yes
Description	Displays the description for the approval workflow chain.	Yes
To Do Role To Resolve	Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy.	Yes

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
Approver To Do Role	Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
Approval To Do Type	Displays the type of notification that you want to generate when the approver approves or rejects the request.	Yes

4. Modify the required details in the **Main** section.
5. Edit, or remove approval levels from the approval workflow chain, if required.
6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

Deleting an Approval Workflow Criterion Type

Procedure

To delete an approval workflow criterion type:

1. Search for the approval workflow criterion type in the **Approval Workflow Criterion Type** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow criterion type whose details you want to delete.

The **Approval Workflow Criterion Type** screen appears.

3. Click the **Delete** button in the **Approval Workflow Criterion Type** zone.

A message appears confirming whether you want to delete the approval workflow criterion type.

4. Click **OK**.

The approval workflow criterion type is deleted.

Search Approval Workflow Group Chain Linkage

The **Search Approval Workflow Group Chain Linkage** zone allows you to search for an approval workflow group chain linkage using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Used to search a particular approval workflow group chain linkage.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to search a group chain linkage for which an approval workflow group is defined.	Yes
Approval Workflow Chain	Used to search a group chain linkage for which an approval workflow chain is defined.	Yes

Note: You must specify at least one search criterion while searching for an approval workflow group chain linkage.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.
Approval Workflow Group	Indicates the approval workflow group for which the link is created. Note: It has a link. On clicking the link, the Approval Workflow Group Chain Linkage screen appears with the details of the respective business object.
Approval Workflow Chain	Indicates the approval workflow chain for which the link is created.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes • No

Searching for an Approval Workflow Group Chain Linkage

Procedure

To search an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.
The **Approval Workflow Group Chain Linkage** screen appears.
3. Enter the search criteria in the **Search Group Chain Linkage** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of group chain linkages that meet the search criteria appears in the **Search Results** section.

Defining an Approval Workflow Group Chain Linkage

Prerequisites

To define an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group and Approval Workflow Chain defined in the application.

Procedure

To define an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.

The **Approval Workflow Group Chain Linkage** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Group Chain Linkage** screen.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the approval workflow group chain linkage.
- Group Chain Linkage Criteria** - Used to define group chain linkage criteria for the approval workflow type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to indicate the approval workflow group.	Yes
	Note: You can search for an approval workflow group type by clicking the Search (🔍) icon corresponding to the field.	
Approval Workflow Chain	Used to indicate the approval workflow chain.	Yes
	Note: You can search for an approval workflow chain by clicking the Search (🔍) icon corresponding to the field.	
Field Approval Rule	Used to indicate whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes

- Enter the required details.
- Define group chain linkage criteria for the approval workflow, if required.
- Define field approval rule criteria for the approval workflow, if required.
- Click **Save**.

The approval workflow group chain linkage is created.

Defining Group Chain Linkage Criteria for an Approval Workflow

Prerequisites

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

Procedure

To define group chain linkage criteria for an approval workflow:

1. Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.

The **Group Chain Linkage Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Displays the Group Chain Linkage ID.	Yes
	Note: The data appears in this field only when you are editing the details of an approval workflow criterion type.	
Criterion Type	Used to indicate the criteria type needed for defining the criterion.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears.	
Operator	Used to indicate the relational operator used to define the relation between the criterion type and criterion value.	Yes
Criterion Value	Used to specify the criterion value.	Yes

2. Enter the required details.
3. If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add (+)** icon, and then repeat step 2.

Note: However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete (🗑)** icon corresponding to the group chain linkage criteria.

Defining a Field Approval Rule

Prerequisites

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

Procedure

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the

Field Approval Rule Criteria section is expanded when you select the Yes option from the Field Approval Rule field of the M

The **Field Approval Rule Criteria** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence.	Used to indicate the order in which the rule criteria should be executed while adding or updating the field value.	Yes
Applicable For	Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"> • Add • Update • Add and Update 	Yes
Business Object	Used to indicate the business object in which the field is included.	Yes
	Note: The Search (🔍) icon appears corresponding to the Business Object field. On clicking the search icon, the Search Group Based Business Object search window appears.	
Field	Used to indicate the field for which you want to define the approval rule criteria.	Yes
	Note: The Search (🔍) icon appears corresponding to the Field search field. On clicking the search icon, the Field Search search window appears.	
Approval Workflow Chain	Used to indicate the approval workflow chain that you want to use for the field value approval.	Yes
	Note: The Search (🔍) icon appears corresponding to the Approval Workflow Chain field. On clicking the search icon, the Approval Workflow Chain Search search window appears.	
Value Range	Used to indicate whether you want to define value based threshold limit for each approval level.	No
	Note: This field is enabled only when the data type of the field is Numeric .	

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical	Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.	No

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Used to specify the threshold value using which you want to control the approval hierarchy.
Approval Level	Used to indicate the approval level at which approval is required when the field value is within the threshold value. Note: The Search (🔍) icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears. Note: The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

- Enter the required details in the **Field Approval Rule Criteria** section.
- If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow chain linkage, click the **Delete** (🗑) icon corresponding to the sequence field.
- Click **Save**.

The approval workflow field rule is defined.

Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group for which a link is created. Note: It has a link. On clicking the link, the Approval Workflow Group screen appears with the details of the respective approval workflow group.
Approval Workflow Chain	Displays the approval workflow chain for which a link is created. Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow group.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes • No

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria.
Delete	Used to delete the approval workflow group chain linkage.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.

Column Name	Column Description
Criterion Type	Displays the criterion type needed for defining the criterion.
	Note: It has a link. On clicking the link, the Approval Workflow Criterion Type screen appears where you can view the details of the respective criterion type.
Operator	Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> EQUALS IN
Criterion Value	Displays the criterion value.

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the rule criteria should be executed while adding or updating the field value.
Applicable For	Displays the rule criteria which should be considered while adding and/or updating the field value.
Business Object	Displays the business object in which the field is included.
Field	Displays the field for which you want to define the approval rule criteria.
	Note: The Context Menu () icon appears corresponding to the Field search field. On clicking the context menu icon, the Go to Field menu appears. On clicking the Go to Field menu item, the Field screen appears with the details of the respective field.
	Note: It has a link. On clicking the link, the Field screen appears with the details of the respective field.
Approval Workflow Chain	Indicates the approval workflow chain that you want to use for the field value approval.
	Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow chain.
Value Range	Indicates whether you want to define value based threshold limit for each approval level.
	Note: This field is enabled only when the data type of the field is Numeric .

Column Name	Column Description
Hierarchical Approval	Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.
	Note: This field is enabled only when the Value Range check box is selected.

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Displays the threshold value using which you want to control the approval hierarchy.
Approval Level	Displays the approval level at which approval is required when the field value is within the threshold value.
	Note: The Search (🔍) icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears.
	Note: The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

Editing an Approval Workflow Group Chain Linkage

Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.
The **Approval Workflow Group Chain Linkage** screen appears.
4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

Defining Approval Workflow Group Settings

Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

Procedure

To define an approval workflow group setting:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.
The **Approval Workflow Settings** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.

The **Approval Workflow Settings** screen appears. It contains the following section:

- **Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Approval Chain Selection Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow request.	Yes
	Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.	
	Note: You can search for an approval chain selection algorithm by clicking the Search (🔍) icon corresponding to the Approval Chain Selection Algorithm field.	
Prevalidation	Used to indicate whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: You can search for a prevalidation by clicking the Search (🔍) icon corresponding to the Prevalidation field.	
Approval Reason Required	Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Active	Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. • No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. • Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Conditional Algorithm	Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated.	Yes
	Note: This field appears only when the Conditional option is selected from the Active list.	

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group.

Field Name	Field Description
Approval Chain Selection Algorithm	Displays the algorithm that will be triggered after creating the approval workflow request.
	Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective approval chain selection algorithm.
Prevalidation	Indicates whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> • Yes • No
Approval Reason Required	Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> • Yes • No
Active	Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. • No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. • Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.
Conditional Algorithm	Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.
	Note: This field appears only when the Conditional option is selected from the Active list.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective conditional algorithm.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the settings of the approval workflow group.
Delete	Used to delete the approval workflow group setting.
Regenerate UI Maps	Used to regenerate the approval workflow group setting UI Maps.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing Approval Workflow Group Settings

Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

Procedure

To edit approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Settings** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.

The **Approval Workflow Group Settings** screen appears.

4. Edit the settings for the approval workflow group, if required.
5. Click **Save**.

The changes made to the approval workflow group settings are saved.

Filtering the Approval Workflow Reasons

Procedure

To filter the approval workflow reasons:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.
The **Approval Workflow Reason** screen appears.
3. Enter the required search criteria in the **Approval Workflow Reason List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The search results are filtered based on the specified criteria.

Viewing the Approval Workflow Reason Details**Procedure**

To view the details of an approval workflow reason:

1. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to view.

The **Approval Workflow Reason** screen appears. It contains the following zone:

- [Approval Workflow Reason](#) on page 634
3. View the details of the approval workflow reason in the **Approval Workflow Reason** zone.

Related Topics

Defining an Approval Workflow Reason**Prerequisites**

To define an approval workflow reason, you should have:

- Values defined for the **APPTXN_REASON_TYPE** lookup field

Procedure

To define an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.
The **Approval Workflow Reason** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Reason** screen.

The **Approval Workflow Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to specify the approval workflow reason.	Yes
Description	Used to specify the description for the approval workflow reason.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Reason Category	Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> • Approve • Cancel • Reject 	Yes

4. Enter the required details in the **Approval Workflow Reason** screen.

5. Click **Save**.

The approval workflow reason is defined.

Approval Workflow Reason (Used for Viewing)

Once you define an approval workflow reason, the **Approval Workflow Reason** screen allows you to:

- View the details of an approval workflow reason
- Edit and delete an approval workflow reason

This screen contains the following zone:

- [Approval Workflow Reason](#) on page 634

Approval Workflow Reason

The **Approval Workflow Reason** zone displays the details of the approval workflow reason. It contains the following sections:

- **Main** - Displays basic information about the approval workflow reason. It contains the following fields:

Field Name	Field Description
Approval Workflow Reason	Displays the approval workflow reason.
Description	Displays the description of the approval workflow reason.
Reason Category	Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> • Approve • Cancel • Reject

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow reason.
Delete	Used to delete the approval workflow reason.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Chapter 8

Rules Engine

Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [View Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule**

Is True and the rule true action is set to **Success**. Oracle Revenue Management and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

Note: The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 639

Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to search a particular rule type.	No
Description	Used to search rule types with a particular description.	No
Rule Type Usage	Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> • Auto Pay <p>Note: If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Type	Displays the rule type.
Description	Displays the description of the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.

Column Name	Column Description
View	On clicking the View () icon, the Rule Type screen appears where you can view the details of the rule type.
Edit	On clicking the Edit () icon, the Rule Type screen appears where you can edit the details of the rule type.
Delete	On clicking the Delete () icon, you can delete the rule type.
	Note: You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.
Copy	On clicking the Copy () icon, the Rule Type screen appears where you can create a new rule type using an existing rule type.

Searching for a Rule Type

Prerequisites

To search for a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rule types that meet the search criteria appears in the **Search Results** section.

Defining a Rule Type

Prerequisites

To define a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> Auto Pay <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. <p>Note:</p> <p>This field appears only when you select the Auto Pay option from the Rule Type Usage list.</p> <p>The maximum rule count cannot be less than or equal to zero.</p>	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

- Enter the required details in the **Main** section.
- Define input and output parameters for the rule type.
- Associate one or more characteristic entities with the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The rule type is defined.

Defining Input and Output Parameters for a Rule Type

Prerequisites

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

Procedure

To define the input and output parameters for a rule type:

1. Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the input or output parameter.	Yes
Field	Used to indicate the field that you want to use as the input or output parameter. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Field Search window appears.	Yes
Rule Input/Output	Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are: <ul style="list-style-type: none"> • Input • Input and Output • Output Note: By default, the Input option is selected. This field appears only when you do not select the Auto Pay option from the Rule Type Usage list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Search Zone	Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone Search window appears.</p> <p>This field appears only when you select the Auto Pay option from the Rule Type Usage list.</p>	

- Enter the required details in the **Input and Output Parameters** section.

Note:

At present, the following fields are only supported while defining a rule type where the **Rule Type Usage** field is set to **Auto Pay**:

- Policy Number
- Plan Number
- Price Item

If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.

- If you want to define more than one input or output parameter for the rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an input or output parameter from the rule type, click the **Delete** (🗑️) icon corresponding to the parameter.

Associating a Characteristic Entity with a Rule Type

Prerequisites

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE_CRITERIA_ENTITY_FLG** lookup field

Procedure

To associate a characteristic entity with a rule type:

- Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	<p>Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are:</p> <ul style="list-style-type: none"> • Adjustment • Billable Charge • Policy • Policy Plan • Price Item 	Yes
	<p>Note: At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement.</p>	

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- Enter the required details in the **Rule Criteria Characteristic Entities** section.
- If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

Associating an Algorithm with a Rule Type

Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

Procedure

To associate an algorithm with a rule type:

- Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm should be executed.	Yes
Algorithm	<p>Used to attach an algorithm which you want to use for deriving the following from the financial transaction:</p> <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Derivation Algorithms** section.
3. If you want to associate more than one algorithm with the rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an algorithm from the rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

Related Topics

How to edit a rule type	Editing a Rule Type on page 646
How to copy a rule type	Copying a Rule Type on page 648

Editing a Rule Type

Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.	Not applicable
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. Note: This field appears only when the Rule Type Usage field is set to Auto Pay . The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.	No

Tip: Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove input or output parameters from the rule type, if required.

Note: You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

5. Associate or remove one or more characteristic entities from the rule type, if required.

Note:

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

6. Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

7. Click **Save**.

The changes made to the rule type are saved.

Deleting a Rule Type

Procedure

To delete a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule type that you want to delete.

A message appears confirming whether you want to delete the rule type.

Note: You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.

3. Click **OK**.

The rule type is deleted.

How to search for a rule type	Searching for a Rule Type on page 640

Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> • Auto Pay <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. Note: This field appears only when you select the Auto Pay option from the Rule Type Usage list. The maximum rule count cannot be less than or equal to zero.	No

- Enter the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.
- Associate or remove one or more characteristic entities from the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The new rule type is defined.

Viewing the Rule Type Details

Procedure

To view the details of a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

- View the details of the rule type in the **Rule Type** zone.

Rule Type zone	Rule Type

Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 651

Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- **Main** - Displays basic information about the rule type. It contains the following fields:

Field Name	Field Description
Rule Type	Displays the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. Note: This field appears only when the rule type usage is specified while defining the rule type.
Description	Displays the description of the rule type.
Maximum Rule Count	Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. Note: This field appears only when the Rule Type Usage field is set to Auto Pay .

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the input or output parameter.
Field	Indicates the field which is used as the input or output parameter.
Type	Indicates whether the field is used as input and/or output parameter while defining a business rule.
Search Zone	Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions. Note: It has a link. On clicking the link, the Zone screen appears where you can view the details of the zone.

- **Rule Criteria Characteristic Entities** - This section contains the following column:

Column Name	Column Description
Characteristic Entity	Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> • Adjustment • Billable Charge • Policy • Policy Plan • Price Item

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm should be executed.
Algorithm	Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear only when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

Viewing the Rule Type Details

Procedure

To view the details of a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

3. View the details of the rule type in the **Rule Type** zone.

Editing a Rule Type

Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.	Not applicable
Description	Used to specify the description for the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. Note: This field appears only when the Rule Type Usage field is set to Auto Pay . The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.	No

Tip: Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

- Modify the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.

Note: You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

- Associate or remove one or more characteristic entities from the rule type, if required.

Note:

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

Rule

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search](#) on page 655

Search

The **Search** zone allows you to search for a rule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	No
Rule Type	Used to specify the type of rule.	No
Description	Used to specify the description for the rule.	No
Rule Priority	Used to specify the priority of the rule.	No
Effective Start Date	Used to specify the date from when the rule is effective.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Priority	Displays the priority of the rule.
Code	Displays the rule code.
Description	Displays the description of the rule.
Type	Displays the type of rule.
Start Date	Displays the date from when the rule is effective.
End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
View	On clicking the View () icon, the View Rule screen appears where you can view the details of the rule.
Edit	On clicking the Edit () icon, the Edit Rule screen appears where you can edit the details of the rule.

Column Name	Column Description
Delete	On clicking the Delete (🗑️) icon, you can delete the rule.
	Note: You can delete a rule only if it is not used.
Copy	On clicking the Copy (📄) icon, the Copy Rule screen appears where you can create a rule using an existing rule.

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

Searching for a Rule

Procedure

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of rules that meet the search criteria appears in the **Search Results** section.

Defining a Rule

Prerequisites

To define a rule, you should have:

- Rule types defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

Procedure

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.

A sub-menu appears.

3. Click the **Add** option from the **Rule** sub-menu.

The **Add Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.	Yes
	Note: You cannot define two rules with the same rule type and priority in the same duration.	

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.	Yes (Conditional)
		Note: This field is required when you select Next Dependent Rule from the Rule True Action list.

Field Name	Field Description	Mandatory (Yes or No)
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. • Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list.	Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule False Action list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter. Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination . The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.	Yes
Parameter Value	Used to specify the value for the parameter. Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	<p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.</p> <p>Note: If a business label is defined for a user defined field (that you have selected), the business label appears in the Parameter Name field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value	<p>Used to specify the parameter value.</p> <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Tip: Alternatively, you can access the **Add Rule** screen by clicking the **Add** link in the upper right corner of the **Search** zone in the **Rule** screen.

4. Enter the required details.

Note:

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The rule is defined.

Editing a Rule

Prerequisites

To edit a rule, you should have:

- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them.

Procedure

To edit a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule whose details you want to edit.

The **Edit Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.	Yes
	Note: You cannot define two rules with the same rule type and priority in the same duration.	
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.	Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule True Action list.
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. • Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list.	Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule False Action list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.	Yes
	<p>Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	
Parameter Value	Used to specify the value for the parameter.	Yes
	<p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter Name	Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.	Yes
	<p>Note:</p> <p>If a business label is defined for a user defined field (that you have selected), the business label appears in the Parameter Name field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value	Used to specify the parameter value.	Yes
	<p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	

Column Name	Column Description	Mandatory (Yes or No)
Is True	Used to indicate what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Tip: Alternatively, you can access the **Edit Rule** screen by clicking the **Edit** link in the **View Rule** screen.

3. Modify the required details.

Note: You can search for a parameter, dependent rule and an algorithm by clicking the **Search**  icon corresponding to the respective field.

4. Add or remove output parameters or criteria from the rule, if required.

Note: If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add**  icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete**  icon corresponding to it.

5. Click **Save**.

The changes made to the rule are saved.

Related Topics

For more information on...	See...
Rule screen	Rule on page 655

Deleting a Rule

Procedure

To delete a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the rule that you want to delete.

A message appears confirming whether you want to delete the rule.

Note: You can delete a rule only if it is not used.

3. Click **OK**.

The rule is deleted.

Copying a Rule

Instead of creating a rule from scratch, you can also create a new rule using an existing rule. You can do this by copying a rule. When you copy a rule, the output parameters and criteria defined for the original rule are copied to the new rule. You can then add or remove parameters or criteria from the new rule.

Prerequisites

To copy a rule, you should have:

- Rule (whose copy you want to create) defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

Procedure

To copy a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Copy** () icon corresponding to the rule whose copy you want to create.

The **Copy Rule** screen appears.

3. Enter the new rule code and the description for the new rule.

4. Modify the required details.
5. Add or remove output parameters or criteria from the new rule.

Note:

You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

For more information about the output parameters that you can specify while defining a rule, see [Transaction Validation and Initial Price Item Determination](#).

6. Click **Save**.

The new rule is defined.

View Rule

The **View Rule** screen allows you to view the details of a rule. This screen consists of the following zones:

- [Rule Information](#) on page 667

Rule Information

The **Rule Information** zone displays information about the rule. This zone contains the following fields:

Field Name	Field Description
Rule Code	Displays the rule code.
Rule Type	Indicates the type of rule.
Description	Displays the description of the rule.
Rule Priority	Indicates the priority of the rule. Note: You can use the Move Up (⬆️) and Move Down (⬇️) icons corresponding to this field to view the details of a rule (having the same rule type) with a higher or lower priority. Note that this functionality is available only when you access the View Rule screen through the Rule screen.
Effective Start Date	Displays the date from when the rule is effective.
Effective End Date	Displays the date till when the rule is effective.

Field Name	Field Description
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered after executing the criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
Rule True Action	Indicates what should happen when all conditions in the rule are satisfied and returns Rule is True .
Dependent Rule	Indicates the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.
Rule False Action	Indicates what should happen when any of the criteria in the rule is not satisfied and returns Rule is False .
Dependent Rule	Indicates the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Lists the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the name of the parameter. In addition, this column has a context menu which helps in navigating to the Field screen.
Parameter Value	Displays the value of the parameter.

- **Criteria** — Lists the criteria defined in the rule. This section contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the order in which the criteria should be executed in the rule.
Parameter Type	Indicates whether the input parameter is a field or an algorithm.
Parameter Name	Displays the field or algorithm name which is used as an input parameter.
Operator	Indicates the relational operator used to define the relation between the parameter name and value.
Parameter Value	Displays the parameter value.
Is True	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed.

Column Name	Column Description
Is False	<p>Indicates what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed.
Is Insufficient	<p>Indicates what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed.

The **Edit** link appears in the upper-right corner of the **Rule Information** zone. On clicking the **Edit** link, the **Edit Rule** screen appears where you can edit the details of the rule.

Viewing the Rule Details

Procedure

To view the details of a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule whose details you want to view.

The **View Rule** screen appears.

3. View the details of the rule in the **Rule Information** zone.

Rule Check

The **Rule Check** screen allows you to validate whether rules of a particular rule type are executed as expected. On validating, it indicates the sequence in which all effective rules were executed, the total execution time, and the output parameters of the rule that was successfully executed. This screen consists of the following sections:

- Rule Type Input Parameters
- Rule Output Parameters
- Rule Execution

Rule Type Input Parameters

The **Rule Type Input Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
	Note: If you do not specify the effective date, the system executes all rules which are effective on the system date.	
Parameter Name	Indicates the input parameter.	Not applicable
	Note: The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

Rule Output Parameters

The **Rule Output Parameters** section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> • Success — Indicates that one of the rule was successfully executed and returned the output parameters. • Fail — Indicates that none of the rules with the specified rule type were successfully executed. • Error — Indicates that an error occurred while executing a rule.
Execution Time	Displays the total time taken to execute all effective rules with the specified rule type.
Error	Displays the error message indicating the error that occurred while executing a rule.
	Note: This field appears only when the status is Error .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

Rule Execution

The **Rule Execution** section indicates the sequence in which all effective rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Indicates the rule that was executed.
Rule Type	Indicates the type of rule.
Rule Priority	Indicates the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

Rule Check

The **Rule Check** zone allows you to validate whether rules of a particular rule type are executed as expected. It indicates the sequence in which all effective rules were executed along with the total execution time. This zone consists of the following sections:

- **Rule Type Input Parameters** — This sections contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
Parameter Name	Indicates the input parameter. Note: The input parameters listed change depending on the rule type that you have selected.	Not applicable
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

- **Rule Output Parameters** — This section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> • Success — Indicates that one of the rule was successfully executed and returned the output parameters. • Fail — Indicates that none of the rules with the specified rule type were successfully executed. • Error — Indicates that an error occurred while executing a rule.
Execution Time	Displays the total time taken to execute a set of rules.

Field Name	Field Description
Error	Displays the error message indicating the error that occurred while executing a rule.
	Note: This field appears only when the status is Error .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

- **Rule Execution** — Indicates the sequence in which the rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Displays the rule code.
Rule Type	Displays the type of rule.
Rule Priority	Displays the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

Chapter 9

Alternate Sequential Bill Numbers

Topics:

- [Sequential Bill Number Generation Algorithms](#)
- [Enabling the Alternate Sequential Bill Numbers Feature](#)

Each bill is uniquely identified by its bill ID. Bill ID is a random, system-generated number. In some locales, bills have an additional identifier known as alternate sequential bill number. Alternate sequential bill numbers are system-generated, sequential numbers. For example, the first bill generated by the system is assigned a sequential bill number of 1, the next bill is assigned a value of 2, and so on.

If you want to generate alternate sequential bill numbers, you must select the **Use Sequential Bill Numbers** check box in the **Billing** tab of the **Installation Options** screen. However, you can only generate alternate sequential bill numbers for bills that are complete and for which the alternate sequential bill numbers are not yet generated.

You can configure the application to generate alternate sequential bill numbers which are either unique throughout the system or within the division. The **Assign Sequential Bill Numbers (ASSGNSBN)** batch allows you to generate alternate sequential bill numbers for completed bills. You need to configure this batch such that it is executed at regular intervals. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Sequential Bill Number Generation Algorithms

The following table lists the sequential bill number generation algorithm types shipped with the product:

If you want to generate...	Then create algorithm using the following algorithm type....
Alternate sequential bill numbers unique throughout the system	C1_ALTBLLSYS on page 674
Alternate sequential bill numbers unique within the division	C1_ALTBLDV on page 677
Alternate sequential bill numbers unique throughout the system and in the required format using a set of parameters	C1_ALTBSYSI on page 674
	Note: The alternate sequential bill number will be unique throughout the system only when you configure the algorithm parameters appropriately.
Alternate sequential bill numbers unique within the division and in the required format using a set of parameters	C1_ALTBLDIVI on page 677
	Note: The alternate sequential bill number will be unique within the division only when you configure the algorithm parameters appropriately.

C1_ALTBLLSYS

The **C1_ALTBLLSYS** algorithm type is used to generate alternate bill ID for a completed bill. The alternate bill ID is sequenced using the sequence number, and is unique throughout the system. This algorithm type does not have any parameters.

C1_ALTBSYSI

The **C1_ALTBSYSI** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.

Parameter	Description
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> • "yyyy" or "yy" for year • "MM" or "M" for month • "dd" or "d" for day <p>Note: The date format should either start or end with the year.</p>
SEQ_NBR	The sequence number generated by the database. It should not be more than 12 characters.
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.

You can specify the above mentioned parameters against any of the following parameters available in the **C1_ALTBLSYS1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7

- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — ‘|’
- Field3 — SEQ_NBR
- Field4 — ‘-’
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|SEQ_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ_NBR** parameter while creating an algorithm using the **C1_ALTBSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1_ALTBSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBSYS1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

C1_ALTBLDV

The **C1_ALTBLDV** algorithm type is used to generate alternate bill ID for a completed bill which is unique within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Initial Bill Sequence Number	Used to specify the initial alternate bill ID that you want to use while sequencing. Note: If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing.	No

C1_ALTBLDIV1

The **C1_ALTBLDIV1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
‘X’	Here, X stands for a separator. For example, ‘;’. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.

Parameter	Description
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> • “yyyy” or “yy” for year • “MM” or “M” for month • “dd” or “d” for day <p>Note: The date format should either start or end with the year.</p>
FIXED_SUFFIX=XX	<p>Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.</p>
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the **C1_ALTBLDIV1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9

- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — ‘|’
- Field3 — BILL_DT=MMddy
- Field4 — ‘-’
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|MMddy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for a completed bill.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

Enabling the Alternate Sequential Bill Numbers Feature

Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1_ALTBLLSYS**, **C1_ALTBLSYS1**, **C1_ALTBLDV**, or **C1_ALTBLDIV1** algorithm type depending on which you want to use for alternate sequential bill number generation

Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Installation Options**.

The **Installation Options** screen appears.

3. Click the **Billing** tab.

The **Billing** tab appears.

4. Select the **Use Sequential Bill Numbers** check box to indicate that you want to generate alternate sequential bill numbers for completed bills.

The **Sequential Invoice** field is enabled.

5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.

6. Do either of the following:

If you want to generate...	Then
Alternate sequential bill numbers unique throughout the system	<ol style="list-style-type: none"> 1. Attach an algorithm created using the C1_ALTBLLSYS algorithm type to the Sequence Generation Algorithm field to indicate how the alternate bill numbers which are unique throughout the system should be sequenced.

If you want to generate...	Then
	<p data-bbox="721 212 1401 310">Note: The Sequence Generation Algorithm field is enabled only when you select the System-wide option from the Sequential Invoice list.</p> <ol data-bbox="686 344 1401 422" style="list-style-type: none"> <li data-bbox="686 344 1401 422">2. Click the Save button in the Page Title area. The changes made to the installation options are saved.

- [Transaction Details](#)
- [Transaction Source](#)
- [Transaction Record Type](#)
- [Transaction Aggregation Rule](#)
- [Schedule](#)
- [Disaggregation Request](#)

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 739.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#)
- [Transaction Disaggregation](#) on page 721
- [Transaction Cancellation](#) on page 732
- [Transaction Rollback](#) on page 736

Prerequisites

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item —division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE_NUMBER lookup field
- Create an algorithm of the **C1_RTCL_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- *Rule Engine (C1_RLENG)*
- *Dummy Header (C1-TXNDMYID)*
- *Multi Parameter Based Pricing (C1_PPARAM_FLG)*
- *Feed Management (C1_FM)*

Transaction Rating Before Billing

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
 - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation

parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

3. Ignore the Transaction Leg for Billing – In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

Note:

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups — Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created only when you attach an algorithm of the **C1_RTCL_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3a	Yes	Not applicable	Do Not Rate Transactions (DNRT)	Not applicable because ignored transactions are not considered for billing.

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3b	Yes	Not applicable	Rate Transactions (RITX)	Update Status (C1-TXNEX)
1b	No	Yes	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2b	No	Yes	Aggregate transactions and then rate aggregated SQs (AGTR)	Service Quantity Calculation (C1-TXNSQ)
2a	No	Yes	Rate individual transactions and aggregate calc lines across transactions (RITA)	Update Status (C1-TXNEX)
1a	No	No	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2c	No	No	Rate Transactions (RITX)	Service Quantity Calculation (C1-TXNSQ)

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

Transaction	Transaction Volume	Transaction Date	Account	Price Item	Price Item Parameter Group ID	Price Assignment ID	Aggregation Schedule
T1	300	01/01/2015	A1	P1	PG1	PA1	Monthly
T1	300	01/01/2015	A2	P1	PG1	PA2	Monthly
T2	200	15/01/2015	A1	P1	PG1	PA1	Monthly
T2	200	15/01/2015	A3	P1	PG1	PA3	Monthly

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T1	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T1	PA2	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T1	PA2	RC4-0.2*Transaction Volume	USD	BK-AR4	ABC	Char2=Y
T2	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T2	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T2	PA3	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T2	PA3	RC4-0.2*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1– A1P1PG1– PA1, T2– A1P1PG1– PA1	RC1	$300 * 0.1 = 30$, $200 * 0.1 = 20$	$30 + 20 = 50$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC1	01/01/2015	31/01/2015	T1– A1P1PG1– PA1, T2– A1P1PG1– PA1	RC2	$300 * 0.2 = 60$, $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2– A3P1PG1– PA3	RC3, RC4	$200 * 0.3 = 60$, $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC1	$300 * 0.1 = 30$	30	The pass through charge is calculated for the transaction leg.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC2	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC1	$200 * 0.1 = 20$	20	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC2	$200 * 0.2 = 40$	40	The pass through charge is calculated for the transaction leg.

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC4	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	200*0.3 = 60, 200*0.2 = 40	60+40 = 100	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
AIP1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC1	500*0.1 = 50	50	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC2	500*0.2 = 100	100	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.

Account-Price Item-Price Item Parameter Group-Price Assignment-Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A3P1PG1-PA3-Monthly	200	BC3	01/01/2015	31/01/2015	RC3, RC4	$200 * 0.3 = 60$, $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

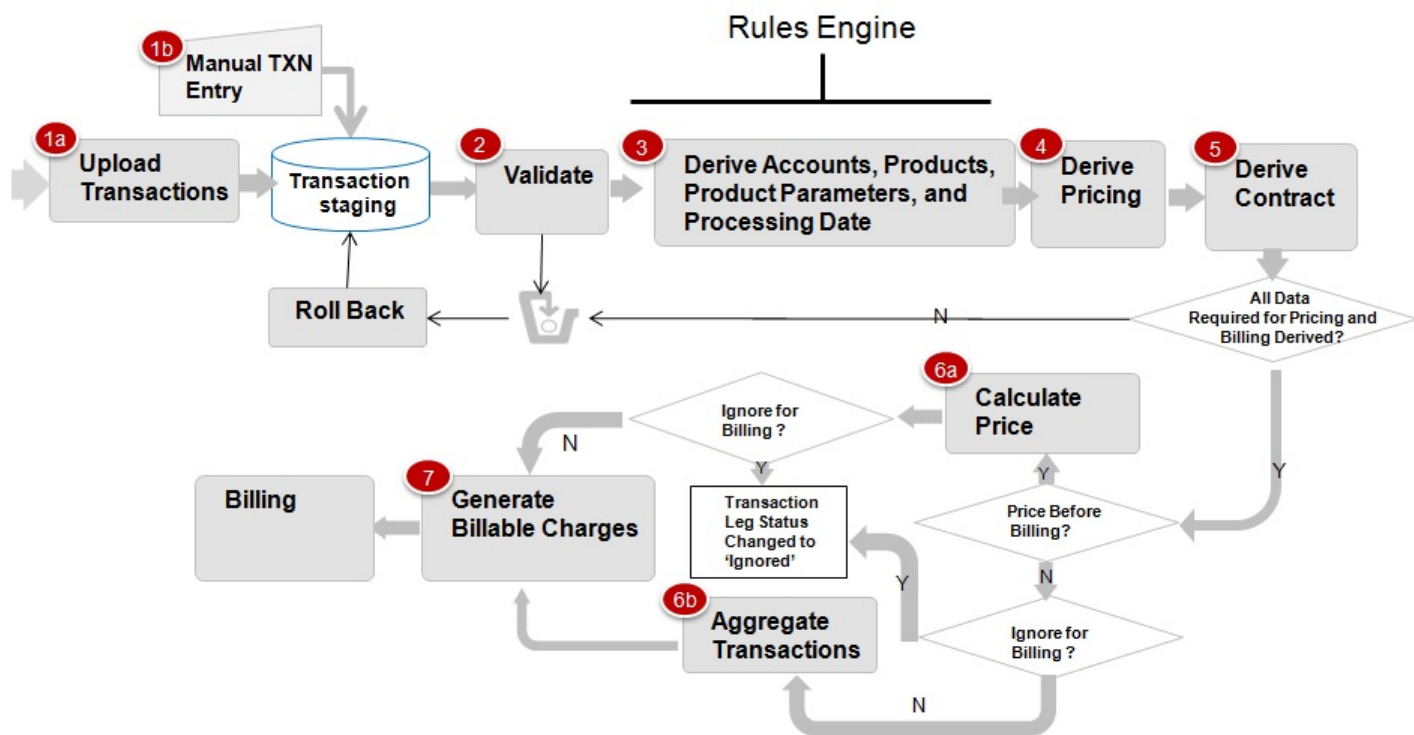

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Transaction Aggregation

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 694
- [Transaction Validation and Initial Price Item Determination](#) on page 696
- [Price Item Pricing Verification](#) on page 707
- [Aggregation](#) on page 712
- [Clean Up](#) on page 716

The following figure graphically explains the transaction aggregation process:

Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to validate a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to validate the transaction feeds which are received from a particular transaction source.	No
Checksum Validation Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> The number of transaction records in the file matches the total transaction records in the header. The sum of transaction amount matches the total transaction amount in the header. The sum of transaction volume matches the total transaction volume in the header. The valid values are: <ul style="list-style-type: none"> Y N 	No
Duplicate Check Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> File with the same header date and external header ID is not available in the system. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: The duplicate check is done only against the transaction feeds which are in the Validated (VALI) status and not against the transaction feeds which are in the Uploaded (UPLD) status.</p>	No
Allow Positive Transaction Volume in Header	Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to Y.</p>	Yes
Allow Negative Transaction Volume in Header	Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to N.</p>	Yes

Parameter Name	Description	Mandatory (Yes or No)
Allow Zero Transaction Volume in Header	Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes
	Note: By default, the parameter value is set to N.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Validation and Initial Price Item Determination

This process includes the following two sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
 - Transaction source is defined in the system.
 - Transaction record type is defined for the transaction source in the system.
 - Division and currencies are defined in the system.
 - The account with the specified account identifier, account identifier type and division exists in the system.

Note: This validation is done only when the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- **Pricing Rule Type or Rule Type Determination** - If the transaction validation is successful, the system checks whether a primary pricing rule type is specified in the respective transaction record type. If a primary pricing rule type is specified in the transaction record type, the system calls the primary pricing rule type and invokes the algorithms which are attached to the following system events of the primary pricing rule type in the specified sequence:
 1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
 2. **Bill Group Derivation** - For more information, refer to the [Bill Group Derivation](#) on page 2637 section.
 3. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a primary pricing rule types with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Claim	C1_ACCPRIDRV	Account and Price Item Derivation (for the Claim Pricing Rule Type Category) on page 2640
Retention Type Enrollment Based	C1_ACCPRIDRV	Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category) on page 2670
Ancillary	C1_ACCPRIDRV	Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category) on page 2680

Once the primary pricing rule type is called, the system calls the eligible related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. The system invokes the algorithms which are attached to the following system events of the related pricing rule type in the specified sequence:

1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
2. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a related pricing rule type with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Specific Stop-Loss	C1_ACCPRISL	Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories) on page 2645
Aggregate Stop-Loss	C1_ACCPRISL	Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories) on page 2645

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Retention Type Claim Based	C1_ACCPRIDRV	<i>Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category) on page 2658</i>

However, if a primary pricing rule type is not specified in the transaction record type, the system determines the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped using rules which are invoked through the rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Note: The system determines rules which are effective based on the **TFM - Processing Date** characteristic defined for the division to which the transaction belongs. The system uses the **TFM - Processing Date** characteristic which is effective on the transaction date. If the **TFM - Processing Date** characteristic type is set to BATCH_DT, the system executes rules which are effective on the batch business date. However, if the **TFM - Processing Date** characteristic type is set to TXN_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **TFM - Processing Date** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT_NO1_Val - Account 1
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT_NO1_Val, DIVISION1_VAL and PRODUCT1_1_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT_NO1_Val set to Account 1, DIVISION1_VAL set to D1, PRODUCT1_1_Val set to Price Item X, and PRODUCT1_2_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - US
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country

- PVL1_2_1_VAL - US
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - UK
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - UK
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD
- ACCT_NO2_Val - Account B
- DIVISION2_VAL - D2
- PRODUCT2_1_Val - Price Item A
- PCD2_1_1_VAL - Country
- PVL2_1_1_VAL - US
- PCD2_1_2_VAL - Currency
- PVL2_1_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

Charges Borne By	Division to which the account belongs...	Price Item	Country	Currency
Account A	D1	Price Item X	UK	USD
Account A	D1	Price Item Y	UK	USD
Account B	D2	Price Item A	US	USD

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 830. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

Output Parameter	Naming Convention	Example	Description
Account Identifier	ACCT_NOX_Val	ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val,	Used to indicate the account which must bear the charges for the transaction.
Account Identifier Column Name	ACCT_NOX_Col	ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ...	Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked.
Account Identifier Type	ACCT_NO_TYPEX_Val	ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ...	Used to indicate the type of account identifier.
Account Identifier Type Column Name	ACCT_NO_TYPEX_Col	ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ...	Used to indicate the column from where the account identifier type corresponding to the transaction (in the transaction details) must be picked.
Account Division	DIVISIONX_VAL	DIVISION1_VAL	Used to indicate the division to which the account belongs.
Account Division Column Name	DIVISIONX_COL	DIVISION1_COL	Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked.
Price Item Name	PRODUCTX_Y_Val	PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val,	Used to indicate the price item to which the transaction must be mapped.
	Note: Here, X represents the account and Y represents the price item.		
Price Item Column Name	PRODUCTX_Y_Col	PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ...	Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked.
	Note: Here, X represents the account and Y represents the price item.		

Output Parameter	Naming Convention	Example	Description
TOU	TOUX_Y_Val	TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ...	Used to indicate the variance parameter which you want to use along with the price item for price determination. Note: This output parameter appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
	Note: Here, X represents the account and Y represents the price item.		
TOU Column Name	TOUX_Y_Col	TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ...	Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked. Note: This output parameter appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
	Note: Here, X represents the account and Y represents the price item.		
Parameter Code	PCDX_Y_Z_VAL	PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ...	Used to indicate the parameter which you want to use along with the price item for price determination. Note: This output parameter appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (EROR) .
	Note: At present, the system does not support the Parameter Code Column output parameter.		
	Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.		

Output Parameter	Naming Convention	Example	Description
Parameter Value	PVLX_Y_Z_VAL	PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ...	Used to specify the value for the parameter.
	<p>Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.</p>		<p>Note:</p> <p>This output parameter appears only when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR).</p>
Parameter Value Column Name	PVLX_Y_Z_COL	PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ...	Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked.
	<p>Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.</p>		<p>Note:</p> <p>This output parameter appears only when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR).</p>

Output Parameter	Naming Convention	Example	Description
Processing Date Type	PRCS_DTX_Y_TYP	PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ...	<p>Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:</p> <ul style="list-style-type: none"> • TXN_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date. • Batch_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date.
	<p>Note: Here, X represents the account and Y represents the price item.</p>		

Output Parameter	Naming Convention	Example	Description
Processing Date	PRCS_DTX_Y_VAL	PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ...	<p>Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate.</p> <p>Note:</p> <p>The custom date must be a date other than the transaction or batch business date.</p> <p>Based on the TFM - Processing Date characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p>
	<p>Note: Here, X represents the account and Y represents the price item.</p>		
Ignore Transaction	IGNORE_SW		<p>Used to ignore transactions based on the transaction attributes. The valid values are:</p> <ul style="list-style-type: none"> • Y • N

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Item Parameters
T1	A1	D1	P1	-	Country - US, Currency - USD
T1	A1	D1	P2	-	Country - Germany, Currency - USD
T1	A2	D2	P3	USD	-
T2	A1	D1	P1	-	Country - US, Currency - USD
T2	A2	D2	P2	USD	-
T3	A1	D1	P3	-	Country - Germany, Currency - USD

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

Note:

During this sub-process, the system validates the following:

- Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.
- Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.
- Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.

If any of the above validation fails, the status of the transaction is changed to **Error (EROR)** and no transaction legs are created.

Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:

- Account A, Price Item X, Country - US, Currency - USD
- Account A, Price Item Y, Country - Germany, Currency - USD
- Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped only when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Batch Business Date	Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date.	No
	<p>Note:</p> <p>If you do not specify any date, the batch business date is set to the current date.</p> <p>The batch business date used while executing the C1-TXNIP batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.</p>	
Transaction Header ID	Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to validate and derive price item for the transactions which are received from a particular transaction source.	No
Division	Used when you want to validate and derive price item for the transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

Note:

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1_PRDR_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1_PRDR_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

Price Item Pricing Verification

In this process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the effective pricing is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR).</p>
Enabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see Multi Parameter Based Pricing. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR).</p>

Note:

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

In addition, the system invokes the algorithms attached to the following algorithm spots of the derived account's division in the specified sequence for the self-funded health insurance business:

1. **TFM - Contract Derivation** - You can attach an algorithm created using the **SA_DERV_POPC** algorithm type to this algorithm spot. If the account has multiple active contracts of the contract type which is associated with the price item, this algorithm derives the contract which is associated with the policy and maps it to the transaction leg. The manner in which the system derives the active contract for the account differs in the following scenarios:

If the effective pricing rule stamped against the transaction leg is defined at ...	Then...
The bill group level	The system first fetches the policy derived for the transaction and then derives the active contract which is associated with the policy.
The parent customer level	The system first fetches the bill group to which the account belongs and then the policy where the bill group is associated with the policy using the policy person role which is specified in the Bill Group Policy Person Role option type of the C1-ASOBLLNG feature configuration. Once the policy is derived, the system derives the active contract which is associated with the policy.

2. **TFM - Verify Pricing Post-Processing** - You can attach an algorithm created using the **C1-VRPR_POPC** algorithm type to this algorithm spot. This algorithm removes the price assignment ID and price item parameter group ID from the summary ID column of each transaction leg.

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to find the price item pricing for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to find the price item pricing for transactions which are received from a particular transaction source.	No
Division	Used when you want to find the price item pricing for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 684.

You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI_PRC_AGRD
- CI_PRC_PL
- CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the

transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to update the price item pricing information of accounts belonging to a particular division.	No
Chunk Size	Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Aggregation

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the SQI values in the billable charge. In the aggregation process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>

If the Multi Parameter Based Pricing feature is...	Then...
Enabled	<p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item — division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 684.

Note: If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

In addition, the system invokes the algorithm attached to the following algorithm spot of the derived account's division for the **self-funded health insurance** business:

- **TFM - Billable Charge Post Processing** - You can attach an algorithm created using the **C1_BCHG_POPC** algorithm type to this algorithm spot. This algorithm invokes the algorithm which is attached to the **Bill After Date Determination** system event of the respective pricing rule type. For more information, refer to the [Bill After Date Determination](#) on page 2689 section.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item — division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to create the billable charges for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to create the billable charges for transactions which are received from a particular transaction source.	No
Division	Used when you want to create the billable charges for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

Rate for other transaction leg is determined using the following set of pricing attributes...	Then....
Ignore Transaction is set to Yes and Rating Criteria is set to Rate Transactions (RITX)	The corresponding calculation lines of the transaction leg are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Rate Transactions (RITX)	The corresponding billable charge and calculation lines of the transaction leg are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA)	The corresponding calculation lines of the transaction leg are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR)	The corresponding billable charge and calculation lines are not deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Do Not Rate Transactions	The corresponding non-aggregated billable charge is deleted.

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	Transaction Leg Status Transition on page 740

Clean Up

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions	The SQIs are recalculated in the billable charge.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR)	The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA)	The pass through charges are recalculated and accumulated accordingly.

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions	The aggregated billable charge is deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR)	The aggregated billable charge and the corresponding calculation lines are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA)	The aggregated billable charge is deleted.

Note:

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** — During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** — During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed.	Yes (Conditional) Note: This parameter is required when you set the request type to CNCL .
	Note: This parameter should not be used during the disaggregation process.	
Transaction Source	Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source.	No
	Note: This parameter should not be used during the cancellation and disaggregation processes.	
Division	Used when you want to update or delete billable charges created for transactions belonging to a particular division.	No
	Note: This parameter should not be used during the cancellation process.	

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update or delete billable charges created for transactions of a particular account.	No
	Note: This parameter should be used only during the disaggregation process.	
Bill Cycle	Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle.	No
	Note: This parameter should be used only during the disaggregation process.	
Disaggregate Transactions From Date	Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards.	Yes (Conditional)
	Note: You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process.	
Request Type	Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"> • CNCL • EROR • DISAGG 	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	Transaction Leg Status Transition on page 740
How to set the C1_FM feature configuration	Setting the C1_FM Feature Configuration on page 2977

Transaction Aggregation Batch Processing

During the transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)

4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI_TXN_DTL_PRITM_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

Note:

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
 - CI_PRC_AGRD
 - CI_PRC_PL
 - CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

Transaction Disaggregation

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI_TXN_DISAGG_REQ table:

If...	Then
A price item is assigned to an account	A disaggregation request is created for the account.

If...	Then
<p>The following values in the price item pricing assigned to an account is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter 	<p>A disaggregation request is created for the account.</p>
<p>A price item is assigned to a person</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price item pricing assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter 	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>A price list is assigned to an account.</p>	<p>A disaggregation request is created for the account.</p>
<p>The following values in the price list assigned to an account is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance 	<p>A disaggregation request is created for the account.</p>
<p>A price list is assigned to a person.</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price list assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance 	<p>A disaggregation request is created for each account of the person and its child person.</p>

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CL_TXN_DISAGG_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a

disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.
- The following details in the price item pricing assigned to a price list is changed:
 - Variance Parameter
 - Effective Start Date
 - Effective End Date
 - Aggregation Schedule
 - Ignore Transaction
 - Rating Criteria
 - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

Transaction	Account	Price Item
T1	A1	P1
T1	A1	P2
T1	A2	P1
T1	A2	P2

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to create disaggregation request for accounts belonging to a particular division.	No
Person ID	Used when you want to create disaggregation request for accounts belonging to a particular person.	No
Bill Cycle	Used when you want to create disaggregation request for accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards.	Yes
	Note: You must specify the date in the YYYY-MM-DD format.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note: The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI_TXN_DISAGG_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation.	No
Account ID	Used when you want to identify the transactions of a particular account for disaggregation.	No
Bill Cycle	Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation.	No

Parameter Name	Description	Mandatory (Yes or No)
Disaggregate Transactions From Date	Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation.	No
	<p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the Disaggregate Transactions From Date parameter.</p>	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Post-Processing Algorithm	Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the Canceled status during the disaggregation process. The valid values are:	No
	<ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify any value, by default, the parameter value is set to N.</p>	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The corresponding transaction leg and calculation lines (if any) are deleted.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to disaggregate the transactions of accounts belonging to a particular division.	No
Account ID	Used when you want to disaggregate the transactions of a particular account.	No
Bill Cycle	Used when you want to disaggregate the transactions of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to disaggregate the transactions which were performed from a particular date onwards. Note: You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTEXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_DSAG_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_DSAG_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 716.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the **CI_TXN_DISAGG_REQ** table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update the disaggregation requests' status of a particular account.	No
Division	Used when you want to update the disaggregation requests' status of accounts belonging to a particular division.	No
Bill Cycle	Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the Pending Cancel or Frozen status. Note: You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Update Status Algorithm	Used to attach a custom algorithm which indicates when the status of the disaggregation request in the CI_TXN_DISAGG_REQ table must be changed to COMPLETE . Note: If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to change the status of the disaggregation request to COMPLETE when the canceled billable charges are excluded during the disaggregation process. The valid values are: <ul style="list-style-type: none"> • Y • N Note: If you do not specify any value, by default, the parameter value is set to N. You must specify the same value for this parameter while executing the Identify Transactions for Disaggregation (C1-IDENT) and Update Disaggregation Request Status (C1-DRSUA) batches during the disaggregation process. Otherwise, erroneous results will occur.	No

Parameter Name	Description	Mandatory (Yes or No)
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	Transaction Leg Status Transition on page 740
How to create a disaggregation request manually	Creating a Disaggregation Request on page 860

Transaction Disaggregation Batch Processing

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

Reseeding

In the self-funded health insurance business, there might be situations when you may want to disaggregate the claim, enrollment, and ancillary transactions. The system enables you to disaggregate the claim, enrollment, and ancillary transactions until these transactions are not billed to the customer. If a transaction is billed to the customer, you cannot disaggregate the transaction using the normal transaction disaggregation process.

In the following scenarios, you may want to disaggregate the claim or ancillary transactions once these are billed to the customer:

- The changes are made to the specific stop-loss (SSL), aggregate stop-loss (ASL), discount arrangement, or level funded pricing rule which is used during the transaction aggregation process.
- A new pricing rule is created using a specific stop-loss (SSL) or aggregate stop-loss (ASL) pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a discount arrangement pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a level funded pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

- A specific stop-loss, aggregate stop-loss, discount arrangement, or level funded pricing rule type is added as related pricing rule type in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

The former scenario arises due to change in pricing rule, whereas the latter four scenarios arise due to the late setup. In such scenarios, you can create the **Accumulation Group Based Disaggregation Request** (also known as **Reseeding Request**) to disaggregate the claim and ancillary transactions. In the **Accumulation Group Based Disaggregation** (also known as **Reseeding**) feature, the system allows you to create the reseeding requests for the accounts using a parent accumulation group. At present, you can create the reseeding requests for the accounts only from the user interface and not through the **Disaggregation Request Creation (C1-DISTG)** batch.

While creating a reseeding request using the **Parent Accumulation Group** request type, you can specify the accumulation type (i.e. whether it is stop-loss or discount arrangement). If the accumulation type is set to **Stop Loss**, the system provides the **Disaggregate All Account** option. If you select the **Disaggregate All Account** option, the system considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a reseeding request for each such account. However, if you do not select the **Disaggregate All Account** option, the system considers accounts of only those bill groups where the parent accumulation group is used for creating the specific stop-loss and aggregate stop-loss pricing rules and then creates a reseeding request for each such account. In addition, the system creates a reseeding request for the ASSL and ASL Credit accounts which are specified in the specific stop-loss and aggregate stop-loss pricing rules, respectively. Note that the reseeding requests are created for the ASSL and ASL Credit accounts irrespective of whether the **Disaggregate All Account** option is selected or not.

However, if the accumulation type is set to **Discount Arrangement**, the system does not provide the **Disaggregate All Account** option. In this case, the system, by default, considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a reseeding request for each such account.

Note: In the late setup scenarios, you need to ensure that the pricing rules are created before you create the reseeding requests for accounts.

In the **Reseeding** process, you need to execute the following batches in the specified sequence:

1. **Identify Transactions for Disaggregation (C1-IDENT)** - It fetches the reseeding requests for accounts and then identifies the claim or ancillary transactions for disaggregation. If the reseeding request is created due to change in a pricing rule, the **BILLABLE_CHG_ACT_CD** column corresponding to the specific stop-loss, aggregate stop-loss, discount, or level-funded billable charges in the **CI_DISAGG_BCHG_DETAIL** table is set to **Billable Charge is Part of Frozen Bill Segment (40)**. It indicates that no action must be taken on these billable charges. And, if the reseeding request is created due to the late setup scenarios, the claim or ancillary transaction and its legs are moved to the **CI_TXN_DETAIL_STG** and **CI_TXN_DTL_PRITM_STG** tables, respectively. In addition, the status of the claim or ancillary transaction is changed to **Uploaded**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.
2. **Process Non-Aggregated Transactions (C1-PDTXN)** - If the reseeding request is created due to change in a pricing rule, it does the following:
 - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in the **Frozen** or **Pending Cancel** status, are forcibly deleted from the **CI_TXN_DTL_PRITM** table.
 - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in a status other than **Frozen** or **Pending Cancel**, are moved to the **CI_TXN_DTL_PRITM_STG** table. And, the claim or ancillary transaction is moved to the **CI_TXN_DETAIL_STG** table and its status is changed to **Uploaded**.

Irrespective of whether the reseeding request is created due to change in a pricing rule or the late setup scenarios, this batch does not perform any actions on the claim, claim based fee, and ancillary transaction legs and their billable charges. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

3. **Transaction Cleanup Batch (C1-TXNCU)** - While executing the **Clean Up (C1-TXNCU)** batch during reseeding, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

- 4. Update Disaggregation Request Status (C1-DRSUA)** - Once the claim or ancillary transaction is successfully disaggregated, the status of the reseeded request is changed to **COMPLETE**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

When you re-aggregate the claim or ancillary transactions which were disaggregated due to late setup, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and their billable charges. However, when you re-aggregate the claim or ancillary transactions which were disaggregated due to change in a pricing rule, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and the billable charges for the delta amount (which resulted due to change in pricing).

If the accumulation type is set to **Stop Loss**, the system deletes the specific stop-loss transaction legs. In addition, it deletes the aggregate stop-loss transaction legs (if any), discount arrangement transaction legs (if any), and level funded transaction legs (if any) whose calculation is based on the specific stop-loss transaction legs.

However, if the accumulation type is set to **Discount Arrangement**, the system deletes the discount arrangement transaction legs. It deletes the specific stop-loss transaction legs (if any), aggregate stop-loss transaction legs (if any), and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the specific stop-loss pricing rule. However, it deletes the aggregate stop-loss transaction legs (if any) and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the aggregate stop-loss pricing rule.

For example, the CLAIM pricing rule type contains the SSL, ASL, DISCOUNT, and LEVEL FUNDED pricing rule types as the related pricing rule types, and the SSL and ASL pricing rules contain the following discount arrangement pricing rules:

Discount Arrangement Pricing Rule	Included in the SSL Pricing Rule (Yes or No)	Included in the ASL Pricing Rule (Yes or No)
DISCOUNT1	Yes	No
DISCOUNT2	No	Yes

Now, if the reseeded request (where the accumulation type is set to **Stop Loss**) is created for an account due to change in the SSL pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Yes	Yes	No	Yes
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	Yes	Yes	No	Yes
DISCOUNT2	Yes	Yes	No	Yes

However, if the reseeded request (where the accumulation type is set to **Discount Arrangement**) is created for an account due to change in the DISCOUNT2 pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	No	No	No	No
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	No	No	No	No
DISCOUNT2	Yes	Yes	No	Yes

Let us take another example where the related pricing rule types are not specified in the CLM1 pricing rule type. Therefore, the system just created claim-specific transaction legs and billable charges for the C2 claim transaction. These claim billable charges are then billed to the customer. Now, if you add the SSL and ASL pricing rule types as the related pricing rule types in the CLM1 pricing rule type and create a reseeding request (where the accumulation type is set to **Stop Loss**) for an account, the system behaves in the following manner for the C2 claim transaction when the transaction incurred and paid dates fall within the incurred and paid date ranges defined in the parent accumulation group:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Not applicable	Yes	Not applicable	Yes
ASL	Not applicable	Yes	Not applicable	Yes
DISCOUNT1	Not applicable	Yes	Not applicable	Yes
DISCOUNT2	Not applicable	Yes	Not applicable	Yes

Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

When you cancel a transaction feed for which...	Then
<p>A bill (with the Pending status) is already generated in the system</p>	<p>The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL).</p> <p>Note:</p> <p>If a pending bill has a bill segment in the Frozen or Pending Cancel status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the Cancel status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • Deletes all other bill segments which are not in the Cancel status. • The billable charge corresponding to the bill segment which is not in the Cancel status is deleted if the billable charge is in the Billable status and if the billable charge only includes transactions from the feed that you want to cancel. • The billable charge corresponding to the bill segment which is not in the Cancel status is not deleted or recalculated if the billable charge is in the Cancelled status. • The billable charge corresponding to the bill segment which is in the Cancel status is cancelled if the billable charge only includes transactions from the feed that you want to cancel. • The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds. <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The bill and their corresponding bill segments are deleted. • The SQIs are recalculated in the corresponding billable charges. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)).
<p>A bill (with the Complete status) already exists in the system</p>	<p>The system does not allow you to cancel the transaction feed.</p>

When you cancel a transaction feed for which...	Then
A bill (with the Complete status) has all bill segments in the Cancelled status	The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL) .
A billable charge (with the Billable status) exists in the system	<p>The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL).</p> <p>Note:</p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The SQIs are recalculated in the billable charge. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)).
A billable charge (with the Cancelled status) exists in the system	The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to Cancelled (CNCL) .

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** — This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

2. **Clean Up (C1-TXNCU)** — This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted only when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 716.

3. **Cancellation (C1-TXCNC)** — This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to cancel a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_CNCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_CNCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	Transaction Leg Status Transition on page 740

Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

Transaction Rollback

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item — division combination.
- Transaction aggregation rule is not defined for the SQL.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)

Note: You must execute the **Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)** batch only when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Status	Used to indicate whether you want to rollback transactions which are in the Ignored or Error status. The valid values are: <ul style="list-style-type: none"> • IGNR • EROR 	Yes
Transaction Header ID	Used when you want to rollback transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to rollback transactions which are received from a particular transaction source.	No
Division	Used when you want to rollback transactions belonging to a particular division.	No
Rollback From Date	Used when you want to rollback transactions which were performed from a particular date onwards. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.</p> </div>	No
Rollback To Date	Used when you want to rollback transactions which were performed till a particular date. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.</p> </div>	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_ROBK_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_ROBK_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Feed Status Transition

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

Transaction Status Transition

Aggregation

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

Note: This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

Note: This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNIP	Transaction validation fails due to incomplete transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	INVALID	Not applicable as the transaction legs are not yet created
2	C1-TXNIP	Transaction validation fails due to invalid or incorrect transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
3	C1-TXNIP	Transaction validation is successful but no product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
4	C1-TXNIP	Transaction validation is successful and product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
5	C1-TXNIP	Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes	UPLOADED	Not applicable as the transaction legs are not yet created	IGNORED	Not applicable as the transaction legs are not yet created
6	C1-TXNVP and C1-TXNEX	Effective pricing is not found for any of the transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
7	C1-TXNVP and C1-TXNEX	Ignore Transaction flag is set to Y in the effective pricing for one or more transaction legs but not for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED (when Ignore Transaction flag is set to Y in the effective pricing) INITIAL PRODUCT DETERMINED (when Ignore Transaction flag is set to N in the effective pricing)
8	C1-TXNVP and C1-TXNEX	Ignore Transaction flag is set to Y in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED	IGNORED

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
9	C1-TXNVP and C1-TXNEX	Ignore Transaction flag is set to N in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
10	C1-TXNSQ and C1-TXNCM	SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	COMPLETED	COMPLETED

Transaction Rollback

The following table indicates how a transaction leg moves from one status to another during the rollback process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNRB	Transactions with the Error (EROR) status are rolled back	ERROR	ERROR	UPLOADED	Not applicable as the transaction legs are not yet created
2	C1-TXNRB	Transactions with the Ignored (IGNR) status are rolled back	IGNORED	IGNORED	UPLOADED	Not applicable as the transaction legs are not yet created

Transaction Cancellation

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXCNC	Transactions in any status are cancelled	UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED	INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED	CANCELLED	CANCELLED

Transaction Disaggregation

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-DISTG	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
2	C1-DISTG	Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated.	CANCELLED, INVALID, or UPLOADED	Not applicable as the transactions will not have any legs in these statuses	No change in the status	Not applicable as the transactions will not have any legs in these statuses
3	C1-IDENT	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
4	C1-IDENT	Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status.	UPLOADED	UPLOADED	No change in the status	No change in the status
5	C1-PDTXN	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	UPLOADED	Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table.

Transaction Reaggregation

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
1	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED
2	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
3	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg.	COMPLETED	COMPLETED	ERROR	Derived Leg: No new transaction leg was created Existing Legs: COMPLETED
4	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction.	ERROR	No Transaction Legs Exist	ERROR	Derived Leg: No new transaction leg was created Existing Legs: None
5	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a product was derived for the transaction.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Leg: INITIAL PRODUCT DETERMINED Existing Legs: None

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
6	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg.	COMPLETED	COMPLETED, IGNORED	ERROR	Derived Leg: ERROR Existing Legs: COMPLETED and IGNORED
7	C1-TXNVP and C1-TXNEX	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Legs: INITIAL PRODUCT DETERMINED Existing Legs: None
8	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
9	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED
10	C1-TXNSQ and C1-TXNCM	While reaggregating transaction legs, SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion.	COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	ERROR	Derived Legs: ERROR Existing Legs: No change in the status
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated.	COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	COMPLETED	Derived Leg: COMPLETED Existing Legs: No change in the status

Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

Header Data	Description	Mandatory (Yes or No)
Transaction Source	Used to specify the source from where the transactions are received.	Yes
Header Date (YYYYMMDD)	Used to specify the header date.	Yes
Transaction Header ID	Used to specify the external transaction header ID.	Yes
File Name	Used to specify the file name.	Yes
Number of Transactions	Used to specify the total number of transaction records in the file.	Yes
Total Transaction Volume	Used to specify the total transaction volume.	Yes
Total Transaction Amount	Used to specify the total transaction amount.	Yes

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

Record Data	Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Source	Used to specify the source from where the transaction is received.	Yes
Transaction Date (YYYYMMDD)	Used to specify the date when the transaction was performed.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	Yes
Customer Reference Number	Used to indicate the customer who has performed the transaction.	No
Division	Used to specify the division to which the transaction belongs.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Transaction Amount	Used to specify the transaction amount.	Yes

Record Data	Description	Mandatory (Yes or No)
Transaction Currency	Used to specify the currency in which the transaction was performed.	Yes
	Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"> • Plus (+) • Minus (-) 	Yes
Account Identifier Type	Used to indicate the account identifier type.	Yes
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes
UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20	Used to specify additional information about the transaction.	No
UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10	Used to specify additional transaction amount.	Yes (Conditional)
		Note: The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified.
UDF_CCY_1, UDF_CCY_2, UDF_CCY_3,, UDF_CCY_10	Used to specify additional transaction currency. Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	Yes (Conditional)
		Note: The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified.
UDF_DTTM_1, UDF_DTTM_2,, UDF_DTTM_5	Used to specify additional information about the transaction.	No
UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50	Used to specify additional information about the transaction.	No
	Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	

Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	102	{Checksum Validation Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Checksum Validation Required parameter.
C1-TXNHV	102	{Duplicate Check Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Duplicate Check Required parameter.
C1-TXNHV	1314	The Transaction Source is mandatory.	17000	The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Source column.
C1-TXNHV	1332	Sum of transaction records in the header does not match the total number of records in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.
C1-TXNHV	1333	Sum of transaction volume in the header does not match the total transaction volume in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.
C1-TXNHV	1334	Sum of transaction amount in the header does not match the total transaction amount in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.
C1-TXNHV	1338	The Transaction Header ID already exists in the system. Please enter unique header ID.	17000	The possible issues could be: <ul style="list-style-type: none"> The same file is uploaded multiple times in the system.
C1-TXNHV	1341	Exception occurred during the transaction header validation.	17000	The possible issues could be: <ul style="list-style-type: none"> The data is not available in the required format.
C1-TXNHV	1421	Transaction records does not exist in the file. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	1422	Sum of transaction records in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> The value available in the Number of Transactions column is less than or equal to zero.
C1-TXNHV	1423	Sum of transaction volume in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Volume column is less than or equal to zero.
C1-TXNHV	1663	Transaction Header External Id is missing.	17000	The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Header ID column.
C1-TXNHV	1664	Header Transaction Amount should be greater than 0.	17000	The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Amount column is less than or equal to zero.
C1-TXNIP	102	{Chunk Size} field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Chunk Size parameter is less than or equal to one.
C1-TXNIP	102	{ Maximum Batch Size } field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Maximum Batch Count parameter is greater than the value specified for the Chunk Size parameter.
C1-TXNIP	106	Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id}	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Header ID parameter exceeds the maximum length of 14 characters.
C1-TXNIP	106	Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code}	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Source parameter exceeds the maximum length of 30 characters.
C1-TXNIP	106	Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division}	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Division parameter exceeds the maximum length of 5 characters.

Feed Management Dashboard

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics defined for each calculation line

This screen consists of the following zones:

- [Search - Feed Level](#) on page 787
- [Division Level Information](#) on page 789
- [Transaction Level Information](#) on page 790
- [Transaction Leg Information](#) on page 791
- [Transaction Leg Service Quantity](#) on page 792
- [Transaction Leg Calculation Lines](#) on page 792
- [Transaction Leg Calc Line Characteristics](#) on page 794

Search - Feed Level

The **Search - Feed Level** zone allows you to search for a transaction feed using various search criteria. You can view the details of a transaction feed which is already uploaded in the system. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Feed Header Date From	Used to search for transaction feeds having header date later than or equal to the specified date.	No
Feed Header Date To	Used to search for transaction feeds having header date earlier than or equal to the specified date.	No
Transaction Source	Used to search for transaction feeds received from a particular transaction source.	No
File Name	Used to search for a transaction feed based on the file name.	No
Feed Load Date From	Used to search for transaction feeds which are uploaded on or later than the specified date.	No
Feed Load Date To	Used to search for transaction feeds which are uploaded on or earlier than the specified date.	No
Transaction Header ID	Used to search for a transaction feed based on the header ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the file from where the transaction feed is uploaded.
Transaction Source	Displays the transaction source from where the transaction feed is received.
Transaction Header ID	Displays the transaction header ID.
	Note: The transaction header ID is generated automatically when the file is uploaded.
Transaction Header External ID	Displays the ID mentioned in the file header.
Feed Header Date	Displays the date mentioned in the file header.
Feed Load Date	Displays the date when the transaction feed was uploaded in the system.
Feed Status	Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> • Uploaded - Indicates that the transaction feed is uploaded. • Validated - Indicates that the file header is validated. • Cancelled - Indicates that the transaction feed is cancelled. • Invalid - Indicates that the file header validation failed.
Error Message	Indicates the reason why the file header validation failed.
Total Volume	Displays the total transaction volume of the feed.
Uploaded Volume	Displays the total transaction volume which is uploaded in the system.
INPD Volume	Displays the total transaction volume which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume for which billable charges are created and completed in the system.

Column Name	Column Description
Error Volume	Displays the total transaction volume which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume which is cancelled in the system.
Ignored Volume	Displays the total transaction volume which is ignored in the system.
Invalid Volume	Displays the total transaction volume which is invalid.

Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used when you want to view the transaction volume details of a particular division received through the feed. Note: You can only view those divisions to which you have access in the Division list.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division.
Total Volume	Displays the total transaction volume of the division.
Uploaded Volume	Displays the total transaction volume (of the division) which is uploaded in the system.
INPD Volume	Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume (of the division) for which billable charges are created and completed in the system.
Error Volume	Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume (of the division) which is cancelled in the system.
Ignored Volume	Displays the total transaction volume (of the division) which is ignored in the system.
Invalid Volume	Displays the total transaction volume (of the division) which is invalid.

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the transaction feed in the **Search — Feed Level** zone.

Transaction Level Information

The **Transaction Level Information** zone lists transactions in a feed which belong to a division. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Transaction Status	Used to search transactions with a particular status.	No
External Reference Number	Used to search a transaction with a particular external reference number.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
External Reference Number	Displays the external reference number of the transaction.
Division	Indicates the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.

Column Name	Column Description
Customer Reference Number	Indicates the customer who performed the transaction.
Transaction Status	Indicates the status of the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Rule	Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.

Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Sequence	Displays the sequence number of transaction leg.
Account Identifier Type	Indicates the type of account identifier to which the transaction is mapped.
Account Identifier	Indicates the account which will bear the charges for the transaction.
Price Item	Indicates the price item to which the transaction is mapped.
Variance	Indicates the variance parameter which is used along with the price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
Billable Charge ID	Indicates the billable charge which is created for the transaction leg.
	<p>Note:</p> <p>The data appears in this column only when the billable charge is created for the transaction leg.</p> <p>It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the billable charge.</p>
Transaction Calculation ID	Displays the transaction calculation ID.
	Note: The data appears in this column only when the transaction leg is rated before billing.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** () icon corresponding to the transaction in the **Transaction Level Information** zone.

Transaction Leg Service Quantity

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Daily Service Quantity	Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item - division combination.

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** () icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Displays the rate which is used for calculation.
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> • Y • N
Description on Bill	Displays the summarized information about the calculation line that will be printed on the bill.
Distribution Code	Indicates the distribution code associated with the rate component.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** () icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics defined for each calculation line. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** () icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Searching for a Transaction Feed

Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Feed Management Dashboard**.
The **Feed Management Dashboard** screen appears.
3. Enter the search criteria in the **Search — Feed Level** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

Transaction Details

The **Transaction Details** screen allows you to search for transactions using various search criteria. It also allows you to add and copy a transaction. This screen consists of the following zones:

- [Search](#) on page 798

Search

The **Search** zone allows you to search for transactions using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. You can select either of the following query options:
 - **Uploaded** — Used to indicate that you want to search for a transaction which is recently uploaded in the system.
 - **Initial Price Item Determined** — Used to indicate that you want to search for a transaction for which a price item is determined in the system.
 - **Ignored** — Used to indicate that you want to search for a transaction which is ignored in the system.
 - **Error** — Used to indicate that you want to search for a transaction which could not pass through the validation, price item determination, or billable charge creation process.
 - **Cancelled** — Used to indicate that you want to search for a transaction which is cancelled in the system.
 - **Completed** — Used to indicate that you want to search for a transaction for which billable charge is completed in the system.
 - **Invalid** — Used to indicate that you want to search for a transaction which is invalid.

- **Search Results** — The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

You can also add a transaction manually by clicking the **Add** link in the upper right corner of this zone.

Searching for an UPLD Transaction

Procedure

To search for an uploaded transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Select the **Uploaded** option from the **Search By** list to indicate that you want to search for a transaction which is recently uploaded in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division. Note: You can only view those divisions to which you have access in the Division list.	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.

Column Name	Column Description
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No
Manual Entry	Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"> • Yes • No
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.</p> </div>

6. View the legs of the transaction in the **Transaction Legs** zone, if required.

Note: You can only view the legs of an uploaded transaction which is partially disaggregated.

Searching for an IGNR Transaction

Procedure

To search for an ignored transaction:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
- Select the **Ignored** option from the **Search By** list to indicate that you want to search for a transaction which is ignored in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division. Note: You can only view those divisions to which you have access in the Division list.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No

Column Name	Column Description
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Rule	Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.

- View the legs of the transaction in the **Transaction Legs** zone, if required.

Searching for an INVL Transaction

Procedure

To search for an invalid transaction:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
- Select the **Invalid** option from the **Search By** list to indicate that you want to search for a transaction which is invalid.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search transactions that belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.

Column Name	Column Description
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.
Error Message	Indicates the reason why the transaction is invalid. Note: A generic message appears indicating that the error occurred due to one or more reasons. You can view all error messages logged for the transaction in the Transaction Error Messages zone.

6. View the error messages logged for the transaction in the **Transaction Error Messages** zone, if required.

Viewing the Transaction Legs

Procedure

To view the legs of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction whose legs you want to view.

The **Transaction Legs** zone appears. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
Transaction Leg Status	Indicates the status of the transaction leg. The valid values are: <ul style="list-style-type: none"> • Uploaded (UPLD) • Initial Price Item Derived (INPD) • Ignored (IGNR) • Error (EROR) • Completed (COMP)
Account Information	Indicates the account which will bear the charges for the transaction. The string includes the account identifier type, account identifier, and division (to which the derived account belongs).
Initial Price Item Code	Indicates the initial price item to which the transaction is mapped.
Variance Parameter	Indicates the variance parameter which is used along with the final price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Final Price Item Code	Indicates the final price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.
Price Assignment ID	Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date.
Aggregate Transaction	Indicates whether the transaction leg is aggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No
Billable Charge ID	Indicates the billable charge in which the transaction leg is included for billing.
Division	Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction.
Sequence Number	Displays the sequence number of the transaction leg.

Column Name	Column Description
Error Message	Indicates the reason why the price item pricing verification or billable charge creation process failed.

Note:

The **Broadcast** (📡) icon appears corresponding to an UPLD, INPD, IGNR, EROR and COMP transaction. This is because you can only view legs of an UPLD, INPD, IGNR, EROR and COMP transaction.

You can only view the legs of an uploaded transaction which is partially disaggregated.

- View the details of the transaction legs in the **Transaction Legs** zone.

Viewing Error Messages**Procedure**

To view the error messages logged for a transaction:

- Search for the transaction which is in the **Invalid (INVL)** or **Error (EROR)** status in the **Transaction Details** screen.
- In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction whose error messages you want to view.

The **Transaction Error Messages** zone appears. It contains the following columns:

Column Name	Column Description
Error Message	Indicates the reason why the transaction is in the Invalid (INVL) or Error (EROR) status.

Note: The **Transaction Error Messages** zone appears when the transactions are in the **Invalid (INVL)** status and when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

- View the error messages in the **Transaction Error Messages** zone.

Viewing the Transaction Details

Procedure

To view the details of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose details you want to view.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description
Transaction ID	Displays the transaction ID. Note: The transaction ID is generated automatically when the transaction is uploaded or manually created in the system.
Transaction Source	Displays the transaction source from where the transaction was received.
Division	Displays the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Manual Entry	Indicates whether the transaction was manually entered in the system.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Indicates the person who performed the transaction.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Indicates the currency in which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Account ID	Indicates the account for which the transaction was performed.

Field Name	Field Description
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Additional Date 1, Additional Date 2,, Additional Date 5	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Additional Data 1, Additional Data 2, Additional Data 3,, Additional Data 50	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.

Adding a Transaction

Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To add a transaction manually:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)
		Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction. Note: These fields appear only when you select the transaction source and record type from the respective list.	Yes (Conditional) Note: This field is required when you are specifying the currency in the corresponding field.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction. Note: These fields appear only when you select the transaction source and record type from the respective list.	Yes (Conditional) Note: This field is required when you are specifying the amount in the corresponding field.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction. Note: These fields appear only when you select the transaction source and record type from the respective list.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20	Used to specify additional information about the transaction. Note: These fields appear only when you select the transaction source and record type from the respective list.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

Field Name	Field Description	Mandatory (Yes or No)
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Note: These fields appear only when you select the transaction source and record type from the respective list.	

4. Enter the required details.

5. Click **Save**.

The transaction is added in the system. If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

Note: The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

Copying a Transaction

Instead of adding a transaction from scratch, you can create a copy of similar transaction and then edit it accordingly.

Prerequisites

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application
- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.

- In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose copy you want to create.

The **Transaction Details** screen appears. Note that the fields are in the read-only mode.

- Click **Copy**.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Price Item Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)
		Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional)
		Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional)
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		Note: This field is required when you are specifying the currency in the corresponding field.
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional)
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		Note: This field is required when you are specifying the amount in the corresponding field.
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

4. Enter the required details.
5. Click **Save**.

The new transaction is added in the system.

Transaction Source

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. This screen consists of the following zones:

- [Search Transaction Source](#) on page 824

Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search a particular transaction source.	No
Description	Used to search transaction sources with a particular description.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Source	Displays the transaction source.
Description	Displays the description of the transaction source.
Account Identifier Type	Indicates the type of account identifier that will be received from the transaction source.
Edit	On clicking the Edit (✎) icon, the Transaction Source screen appears where you can edit the details of the transaction source.
Delete	On clicking the Delete (🗑) icon, you can delete the transaction source.
	Note: You can only delete a transaction source which is not yet used.
Copy	On clicking the Copy (📄) icon, the Transaction Source screen appears where you can create a transaction source using an existing transaction source.

You can create a new transaction source by clicking the **Add** link in the upper right corner of this zone.

Searching for a Transaction Source

Procedure

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.
The **Transaction Source** screen appears.
3. Enter the search criteria in the **Search Transaction Source** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction sources that meet the search criteria appears in the **Search Results** section.

Defining a Transaction Source

Prerequisites

To define a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To define a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.

The **Transaction Source** screen appears.

- Click the **Add** link in the upper right corner of the **Search Transaction Source** zone.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Enter the required details.
- Click **Save**.

The transaction source is defined.

Editing a Transaction Source

Prerequisites

To edit a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To edit a transaction source:

- Search for the transaction source in the **Transaction Source** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Displays the transaction source.	Not applicable
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Modify the required details.

4. Click **Save**.

The changes made to the transaction source are saved.

How to search for a transaction source	Searching for a Transaction Source on page 825

Copying a Transaction Source

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. Once you create a copy of a transaction source, the record types defined for the original transaction source are also copied to the new transaction source.

Prerequisites

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

Procedure

To copy a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

3. Enter the required details.

4. Click **Save**.

The new transaction source is defined.

Related Topics

For more information on...	See...
How to search for a transaction source	Searching for a Transaction Source on page 825

Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

Note: At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- [Search Transaction Record Type](#) on page 828

Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search transaction record types defined for a particular transaction source.	No
Transaction Record Type	Used to search a particular transaction record type.	No
Description	Used to search transaction record types with a particular description.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Record Type	Displays the transaction record type.
Description	Displays the description of the transaction record type.
Transaction Source	Indicates the transaction source for which the transaction record type is defined.
Rule Type	Indicates the rule type that is invoked for the transaction record type. Note: It has a link. On clicking the link, the View Rule Type screen appears where you can view the details of the respective rule type.
Edit	On clicking the Edit (✎) icon, the Transaction Record Type screen appears where you can edit the details of the transaction record type.
Delete	On clicking the Delete (🗑) icon, you can delete the transaction record type. Note: You can delete a transaction record type when: <ul style="list-style-type: none"> • It is not yet used. • Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination.
Copy	On clicking the Copy (📄) icon, the Transaction Record Type screen appears where you can create a new transaction record type using an existing transaction record type.

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

Searching for a Transaction Record Type

Procedure

To search for a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.
The **Transaction Record Type** screen appears.
3. Enter the search criteria in the **Search Transaction Record Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The search results appear.

Defining a Transaction Record Type**Prerequisites**

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.
The **Transaction Record Type** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.
The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.</p>	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<p>Note: You cannot specify any special character except underscore (_) in the transaction record type.</p>	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<p>Note: You cannot specify any special character except underscore (_) in the rule type.</p>	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No
	<p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.	No
	<p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 	Yes
	<p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p>	

- Enter the required details.

Note: You can search for a transaction source and algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

- Click **Save**.

The transaction record type is defined.

Editing a Transaction Record Type

Prerequisites

To edit a transaction record type, you should have:

- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To edit a transaction record type:

- Search for the transaction record type in the **Transaction Record Type** screen.

2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the transaction record type whose details you want to edit.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	Note: You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No
	Note: This algorithm checks whether: <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 	Yes
	<p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p>	

3. Modify the required details.

Note:

You can search for an algorithm and field by clicking the **Search** (🔍) icon corresponding to the respective field.

You can edit and remove an input or output parameter from a rule type only when it is not yet used in a rule (which is created using the rule type).

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then specify the details in the **Temporary Fields** section. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

4. Click **Save**.

The changes made to the transaction record type are saved.

Related Topics

How to search for a transaction record type	Searching for a Transaction Record Type on page 829

Deleting a Transaction Record Type

Procedure

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the transaction record type that you want to delete.

A message appears confirming whether you want to delete the transaction record type.

Note: You can only delete a transaction record type which is not yet used.

3. Click **OK**.

The transaction record type is deleted.

Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. Once you create a copy of a transaction record type, the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the transaction record type whose copy you want to create.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	Note: You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Validation Algorithm	<p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	<p data-bbox="586 212 1157 302">Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul data-bbox="613 323 683 779" style="list-style-type: none"><li data-bbox="613 323 683 352">• 01<li data-bbox="613 369 683 399">• 02<li data-bbox="613 415 683 445">• 03<li data-bbox="613 462 683 491">• 04<li data-bbox="613 508 683 537">• 05<li data-bbox="613 554 683 583">• 06<li data-bbox="613 600 683 630">• 07<li data-bbox="613 646 683 676">• 08<li data-bbox="613 693 683 722">• 09<li data-bbox="613 739 683 768">• 10 <p data-bbox="586 810 1157 903">Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 	Yes
	<p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p>	

- Enter the required details.

Note: You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon and then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑️) icon corresponding to the temporary field.

- Click **Save**.

The new transaction record type is defined.

Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQL. You can also edit and delete the transaction aggregation rule of an SQL. This screen consists of the following zones:

- [Transaction Aggregation Rules](#) on page 847

Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

Column Name	Column Description
SQL Description	Displays the description of the service quantity identifier (SQI).
Aggregation Function	Indicates the formula used in the transaction aggregation rule defined for the SQI.
Function	Indicates the function used for aggregation.
Transaction Parameter	Indicates the transaction parameter used for aggregation.
Edit	On clicking the Edit (✎) icon, the Transaction Aggregation Rule screen appears where you can edit the aggregation rule.
Delete	On clicking the Delete (🗑) icon, you can delete the transaction aggregation rule.

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2942.

Defining Transaction Aggregation Rule for an SQI

Prerequisites

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

Procedure

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.
The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQL	Used to indicate the SQI for which you want to define the transaction aggregation rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> SUM() MIN() MAX() COUNT() 	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> TXN_AMT TXN_VOL UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 	Yes

- Enter the required details.
- Click **Save**.

The transaction aggregation rule is defined for the SQI.

Editing Transaction Aggregation Rule of an SQI

Procedure

To edit the transaction aggregation rule of an SQI:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
- Click the **Edit**  icon in the **Edit** column corresponding to the SQI whose transaction aggregation rule you want to edit.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Indicates the SQI for which the transaction aggregation rule is defined.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> SUM() MIN() MAX() COUNT() 	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> TXN_AMT TXN_VOL UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 	Yes

4. Modify the required details.
5. Click **Save**.

The changes made to the transaction aggregation rule are saved.

Deleting Transaction Aggregation Rule of an SQI

Procedure

To delete the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
3. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the SQI whose transaction aggregation rule you want to delete.
A message appears confirming whether you want to delete the transaction aggregation rule.
4. Click **OK**.
The transaction aggregation rule is deleted.

Schedule

The **Schedule** screen allows you to define, edit, and delete a schedule. This screen consists of the following zones:

- [Search Schedule](#) on page 851

Search Schedule

The **Search Schedule** zone allows you to search for a schedule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to search a particular schedule.	No
Description	Used to search schedules with a particular .description	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Schedule	Displays the schedule.
Description	Displays the description of the schedule.
View	On clicking the View () icon, the View Schedule screen appears where you can view the details of the schedule.
Edit	On clicking the Edit () icon, the Edit Schedule screen appears where you can edit the details of the schedule.
Delete	On clicking the Delete () icon, you can delete the schedule.
	Note: You can only delete a schedule which is not yet used.

You can create a new schedule by clicking the **Add** link in the upper right corner of this zone.

Searching for a Schedule

Procedure

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.
The **Schedule** screen appears.
3. Enter the search criteria in the **Search Schedule** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The search results appear.

Defining a Schedule

Procedure

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **S** and then click **Schedule**.

The **Schedule** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Schedule** zone.

The **Add Schedule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to specify the schedule code.	Yes
Description	Used to specify the description for the schedule.	Yes

In addition, this screen contains the following two sections:

- **Schedule Periods** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the end date of the schedule period.	Yes
	Note: The end date cannot be earlier than the start date.	

Note: At least one schedule period must be defined in the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule. You can use a schedule for more than one functionality.	Yes

4. Enter the required details.
5. If you want to define more than one period in the schedule, click the **Add (+)** icon and then specify the *details*.

Note: However, if you want to remove a period from the schedule, click the **Delete** (🗑️) icon corresponding to the period.

6. Click **Save**.

The schedule is defined.

Disaggregation Request

Through the **Disaggregation Request Creation (C1-DISTG)** batch, you can only create a disaggregation request for an account. However, from the **Disaggregation Request** screen, you can create a disaggregation request for a person and account. When you create a disaggregation request for a person, the system does not create the disaggregation request for the person. Instead, the system creates the disaggregation request for all accounts of the person (where the person is the main customer) and its child persons.

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. This screen consists of the following zone:

- [Search Disaggregation Request](#) on page 856

Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for a disaggregation request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a disaggregation request using the person, account, or accumulation group details. The valid values are: <ul style="list-style-type: none"> • Person • Account • Accumulation Group 	Yes
	Note: By default, the Person option is selected.	
Person Name	Used to search disaggregation requests which are created for accounts belonging to persons with a particular name.	No
	Note: This field appears only when the Person option is selected from the Search By list.	
Person ID	Used to search disaggregation requests which are created for accounts of a particular person.	No
	Note: This field appears only when the Person option is selected from the Search By list.	
Request Date From	Used to search disaggregation requests which are created from a particular date onwards.	Yes
Person Identifier	Used to search disaggregation requests which are created for accounts of a particular person.	Yes (Conditional)
	Note: This field appears only when the Person option is selected from the Search By list.	
		Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Request Date To	Used to search disaggregation requests which are created till a particular date.	Yes
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)
	Note: This field appears only when the Person option is selected from the Search By list.	
		Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Processing Date From	Used to search disaggregation requests which are processed from a particular date onwards.	No
Request Source	Used to search disaggregation requests which are created automatically, manually, or through the batch process. The valid values are: <ul style="list-style-type: none"> • AUTOMATIC • BATCH • MANUAL 	No
Processing Date To	Used to search disaggregation requests which are processed till a particular date.	No
Request Status	Used to search disaggregation requests with a particular status. The valid values are: <ul style="list-style-type: none"> • COMPLETE • PENDING 	No
Request Type	Used to search disaggregation requests with a particular request type. The valid values are: <ul style="list-style-type: none"> • Account • Billable Charge • Price Assignment • Price Item 	No
	Note: This field appears only when the Person or Account option is selected from the Search By list.	
Division	Used to search disaggregation requests which are created for accounts belonging to a particular division.	Yes (Conditional)
	Note: You can only view those divisions to which you have access in the Division list. This field appears only when the Person or Account option is selected from the Search By list.	
Account ID	Used to search disaggregation requests which are created for a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
	a	

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used when you want to search disaggregation requests created for an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you specify account identifier type as a search criteria, you have to enter the account identifier.
	a	
Account Identifier Type	Used to select the account identifier type based on which you want to search disaggregation requests created for an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you enter account identifier as a search criteria, you have to select the account identifier type.
	a	
Accumulation Type	Used to select the accumulation type based on which you want to search disaggregation requests created for an accumulation group.	No
	Note: This field appears only when you select the Accumulation Group option from the Search By list.	
Parent Accumulation Group ID	Used to select the parent accumulation group id based on which you want to disaggregation requests created for an accumulation group.	Yes (Conditional) Note: If you enter accumulation type as a search criteria, you have to select the parent accumulation group id.

- **Search Results** - The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

Column Name	Column Description
Request ID	Displays the disaggregation request ID.
Request Date	Displays the date when the disaggregation request was created.
Status	Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> • COMPLETE • PENDING
Person ID	Indicates the person for whom the disaggregation request is created.

Column Name	Column Description
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears with the details of the respective person.
Account ID	Indicates the account for which the disaggregation request is created.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account. This column appears only when you select the Account option from the Search By list.
Processing Date	Displays the date when the disaggregation request is processed.
Request Type	Displays the request type based on which the disaggregation request is processed.
Price Item	Displays the price item using which the disaggregation request is processed.
Pricing	Displays the pricing details using which the disaggregation request is processed.
Billable Charge ID	Displays the charge id billable for the processed disaggregation request.
Delete	On clicking the Delete button, you can delete the disaggregation request. Note: You can only delete a disaggregation request which is in the Pending status.

You can create a disaggregation request manually by clicking the **Add** link in the upper right corner of this zone.

Searching for a Disaggregation Request

Procedure

To search for a disaggregation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Enter the search criteria in the **Search Disaggregation Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of disaggregation requests that meet the search criteria appears in the **Search Results** section.

Creating a Disaggregation Request

Prerequisites

To create a disaggregation request manually, you should have:

- Divisions, person identifier types, account identifier types, bill cycles, and invoice currencies defined in the application
- Price list assigned to the person or account (in case you want to search a person or an account based on an assigned price list)

Procedure

To create a disaggregation request manually:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Disaggregation Request** zone.

The **Add Disaggregation Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to indicate whether you want to create disaggregation request for a person or an account. The valid values are: <ul style="list-style-type: none"> • Parent Accumulation Group • Person/Account 	Yes

4. Click **OK**.

The **Add Disaggregation Request** screen appears. It contains the following fields:

Request Type	Used to indicate whether you want to create disaggregation request for a person or an account. The valid values are: <ul style="list-style-type: none"> Account Person 	
Division	Used to specify the division to which the person or account belongs.	Yes (Conditional)
	Note: You can only view those divisions to which you have access in the Division list.	Note: This field is required when you are creating a disaggregation request for an account.
Account ID	Used to indicate the account for which you want to create a disaggregation request.	No
	Note: This field is enabled only when you select the Account option from the Request Type list.	
Person ID	Used to indicate the person for whom you want to create a disaggregation request.	No
	Note: This field is enabled only when you select the Person option from the Request Type list.	
Account Identifier Type	Used to specify the account identifier type based on which you want to search for an account.	Yes (Conditional)
	Note: This field is enabled only when you select the Account option from the Request Type list.	Note: If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which you want to create a disaggregation request.	Yes (Conditional)
	Note: This field is enabled only when you select the Account option from the Request Type list.	Note: If you specify account identifier type as a search criteria, you have to enter the account identifier.
Person Identifier Type	Used to specify the person identifier type based on which you want to search for a person.	Yes (Conditional)
	Note: This field is enabled only when you select the Person option from the Request Type list.	Note: If you enter person identifier as a search criteria, you have to select the person identifier type.

Person Identifier	Used to indicate the person for whom you want to create a disaggregation request.	Yes (Conditional)
	Note: This field is enabled only when you select the Person option from the Request Type list.	Note: If you specify person identifier type as a search criteria, you have to enter the person identifier.
Bill Cycle	Used when you want to search accounts having a particular bill cycle.	No
	Note: This field is enabled only when you select the Account option from the Request Type list.	
Person Name	Used to specify the name of the person.	No
Invoice Currency	Used when you want to search accounts having a particular invoice currency.	No
	Note: This field is enabled only when you select the Account option from the Request Type list.	
With Assigned Price List	Used when you want to search for a person or an account to which a particular price list is assigned.	Yes (Conditional)
		Note: This field is required when you want to search for a person or an account based on an assigned price list.
Price List Assigned From	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		Note: This field is required when you want to search for a person or an account based on an assigned price list.
Price List Assigned To	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		Note: This field is required when you want to search for a person or an account based on an assigned price list.

5. Select the **Person** or **Account** option from the **Request Type** list depending on whether you want to search for a person or an account.
6. Enter the search criteria in the **Search** section.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE_NUMBER** lookup field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

7. Click **Search**.

A list of persons or accounts that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the account. Note: The data appears in this column only when you search for an account.
Account Identifier	Displays the value of the primary account identifier type. Note: The data appears in this column only when you search for an account.
Division	Displays the division to which the person or account belongs.
Person Identifier Type	Displays the primary person identifier type of the person. Note: The data appears in this column only when you search for a person.
Person Identifier	Displays the value of the primary person identifier type. Note: The data appears in this column only when you search for a person.
Person Name	Displays the name of the person.
With Assigned Price List	Displays the price list assigned to the person or account. Note: The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned From	Displays the date from when the price list is assigned to the person or account. Note: The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned To	Displays the date till when the price list is assigned to the person or account. Note: The data appears in this column only when you search for a person or an account based on an assigned price list.

Column Name	Column Description
Account Info	Displays additional information about the account.
	Note: The data appears in this column only when you search for an account.
Bill Cycle	Indicates the bill cycle defined for the account.
	Note: The data appears in this column only when you search for an account.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE_NUMBER** lookup field.

8. Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more persons or accounts	<ol style="list-style-type: none"> 1. In the Search Results section, select the check box corresponding to the person or account for which you want to create a disaggregation request. 2. Click Disaggregate. If you have selected an account, the disaggregation request is created for the account. However, if you have selected a person, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.
Create disaggregation request for all persons or accounts that meet the search criteria	<ol style="list-style-type: none"> 1. Click Disaggregate All. A message appears confirming whether you want to create disaggregation requests for all persons or accounts that meet the search criteria. 2. Click OK. If the accounts are listed in the Search Results section, the disaggregation request is created for each account (listed on the respective page). However, if the persons are listed in the Search Results section, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.

Deleting a Disaggregation Request

Procedure

To delete a disaggregation request:

1. Search for the disaggregation request in the **Disaggregation Request** screen.
2. In the **Search Results** section, click the **Delete** button available in the **Delete** column corresponding to the disaggregation request that you want to delete.

A message appears confirming whether you want to delete the disaggregation request.

Note:

You can only delete a disaggregation request which is in the **Pending** status.

If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

3. Click **OK**.

The disaggregation request is deleted.

Chapter 11

Upload Validated Payment Data

Topics:

- [Payment Upload Process](#)
- [Prerequisites](#)
- [CSV File Format](#)
- [Payment Data File Status Transition](#)
- [Payment Record Status Transition](#)
- [Error Messages](#)
- [Payment Upload](#)

Oracle Revenue Management and Billing until now provided you with an ability to interface payments from an external source, such as remittance processor. The system supported two mechanisms to upload payment data — one using which you can populate payment upload staging records and another using which you can populate payment event upload staging records. The system now enables you to validate the payment records before you move them to the staging area. The system provides the pre-staging area where you can upload and validate the payment records. The system provides a user interface which helps you to upload a payment data file in the pre-staging area. It also helps you to perform various tasks, such as:

- Track the status of the payment records and the payment data file
- Move the payment records to the staging area
- Cancel a payment data file
- View the log of a payment data file

You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 871. At present, the system supports only the CSV file format. This is because the payment data mapping algorithm type shipped with the product is designed to support the CSV format. If you want to use any other file format, you need to define custom mapping algorithm type that supports the required file format.

The file type using which you upload a payment data file indicates the mapping and validation algorithms that you want to use for the payment data file. On uploading a payment data file, the mapping algorithm parses the CSV file and uploads the payments records in the pre-staging area. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. Once the validation process is complete, you can move the payment records from the pre-staging to staging area. Once the payment records are moved to the staging area, the system creates payment events, tenders, payments and payment segments through a batch process. For more information about the payment upload process, see [Payment Upload Process](#) on page 868.

During the payment upload process, a payment data file and each record of the file goes through various statuses until the payment events and payments are created. For more information about the payment data file and payment record statuses, see [Payment Data File Status Transition](#) on page 873 and [Payment Record Status Transition](#) on page 873, respectively.

Payment Upload Process

The payment upload process includes the following sub-processes:

- [Upload Payment Records in the Pre-Staging Area](#) on page 868
- [Move Payment Records to the Staging Area](#) on page 869
- [Create Payment Events and Payments](#) on page 869

Upload Payment Records in the Pre-Staging Area

Oracle Revenue Management and Billing allows you to validate the payment records before you move them to the staging area. You can upload and validate the payment records in the pre-staging area. You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 871.

While uploading a payment data file, you need to specify the file type using which you want to upload the payment data file. The file type indicates the mapping and validation algorithms that you want to use for the payment data file. Therefore, while defining a file type using which you want to upload a payment data file, you need to:

- Set the feed type to **Payment Upload Data**
- Attach mapping algorithm which is created using the **C1-CSVUPLPAY** algorithm type
- Attach validation algorithm which is created using the **C1-PUPLVALID** algorithm type

On uploading a payment data file, the mapping algorithm does the following:

1. Validates whether the file is in the CSV format
2. Validates whether at least one payment record is available in the CSV file
3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database
4. Uploads the payments records in the pre-staging area

The validation process starts immediately after the payment data file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The system checks whether:

- The data is available in the **Tender ID, Tender Amount, Payment Amount, Date Received, Bank Account, and Payment Type** columns in the CSV file.
- The data is available in the **Match Type and Match Value** columns in the CSV file.

Note: This validation is done only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The payee and payor accounts specified in the payment record exists in the system.
- The payee account with the specified account identifier type and account identifier combination exists in the system.
- A valid currency code is specified in the payment record.

Note: If the currency code is not specified, the currency is set to the payor account's invoice currency.

- The payment type (i.e. tender type) specified in the payment record exists in the system.
- The account identifier type specified in the payment record exists in the system.

Note: This validation is done only when the payee account ID is not specified in the payment record.

- The match type specified in the payment record exists in the system.

Note: This validation is done only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The characteristic type specified in the payment record exists in the system.
- The characteristic value matches any predefined value when the characteristic value type is set to **Predefined Value**.
- The characteristic value is specified in the payment record when the characteristic type is specified and vice-versa.

You can upload a file by clicking the **Upload** link in the **Payment Upload** screen. On uploading a payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 873.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. Once the payment records are uploaded and validated in the pre-staging area, you can do either of the following:

- Move the payment records to the staging area
- Cancel a payment data file
- Replace the existing payment data file

Note: If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Move Payment Records to the Staging Area

Once the payment records are uploaded and validated in the pre-staging area, you can move the records to the staging area. The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area. In such scenario, you need to correct the invalid payment records and upload the same file once again in the system. In addition, if you have cancelled a payment data file, you cannot move any records (including valid and error records) of the payment data file to the staging area.

You can move the payment records to the staging area by clicking the **Move to Staging** icon corresponding to the payment data file in the **Payment Upload** screen. The **Move to Staging** icon appears only when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

On clicking the **Move to Staging** icon, the payment records are copied (and not moved) from the pre-staging to staging area and the status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**. Once you move the payment records to the staging area, you can edit the payment staging records, if required.

Create Payment Events and Payments

Once the payment records are moved to the staging area, the system creates payment events for the payment data file in the background when the **Payment Upload (PUPL)** batch is invoked. You can configure the **Payment Upload (PUPL)** batch such that it is executed at regular intervals. When the **Payment Upload (PUPL)** batch is invoked, the

system checks whether there are any deposit control, tender control, payment tender, and payment staging records in the **Pending** status. If there are staging records in the **Pending** status, the system creates the following entities:

- Deposit Control
- Tender Control
- Payment Events
- Payment Tenders
- Payments
- Payment Segments
- Financial Transactions (when the payments are frozen)

The status of the deposit control, tender control, payment tender, and payment staging records is changed to **Complete**. If any error occurs while creating payment event for a payment record, the status of the deposit control, tender control, payment tender, and payment staging records is changed to **Error**. In addition, the status of the payment record in the pre-staging area is changed to **Error in Staging**.

Traditionally, the **Payment Upload (PUPL)** batch considered staging records which are in the **Error** or **Pending** status. If a staging record is in the **Error** status, the system used to reset the status to **Pending** and then further processed the staging record. This system behavior still exists for staging records which are not uploaded through the **Payment Upload** process. If the staging records are uploaded through the **Payment Upload** process, you need to manually correct the staging records and change the status of deposit control, tender control, payment tender, and payment staging records to **Pending**. The corrected staging records will then be processed when the **Payment Upload (PUPL)** batch is invoked at subsequent interval.

Prerequisites

To setup the payment upload process, you need to do the following:

- Define the required match types with the appropriate payment distribution override and manual distribution algorithms.
- Define the required tender types in the system.
- Define the required currency codes in the system.
- Define the required tender sources in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment**.
- Create a mapping algorithm using the **C1-CSVUPLPAY** algorithm type.
- Create a validation algorithm using the **C1-PUPLVALID** algorithm type.
- Define the required file types where the feed type is set to **Payment Upload Data**.
- Assign the **PUPL To Do** type to a To Do role whose users must receive the To Do generated while executing the **Payment Upload (PUPL)** batch.
- Set the batch control type of the **Payment Upload (PUPL)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

CSV File Format

Before uploading a payment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account ID	Used to specify the payee account ID.	Yes
Match Type	Used to specify the match type using which you want to match the payment.	Yes (Conditional) Note: This data is required when the match value is specified.
Match Value	Used to specify the entity (such as bill, contract, and so on) against which you want to match the payment.	Yes (Conditional) Note: This data is required when the match type is specified.
Tender ID	Used to specify the payment tender ID. Note: If the tender ID is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event.	Yes
Tender Amount	Used to specify the tender amount. Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	Yes
Payment Amount	Used to specify the amount paid through the tender. Note: You must not specify the value less than or equal to 0. The precision specified for the payment amount must not exceed the decimal places defined for the currency in the system.	Yes
Date Received	Used to specify the date when the payment is made. Note: You must specify the date in the MM/DD/YYYY format.	Yes
Bank Account	Used to specify the external source ID which is associated with the tender source.	Yes

Column Name	Description	Mandatory (Yes or No)
Payment Type	Used to specify the type of tender through which the payment is made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Currency	Used to specify the currency in which the payment is made. Note: If the currency is not specified, it is set to the payor account's invoice currency.	No
Account ID Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the account identifier is specified.
Account Identifier	Used to specify the account for which the payment is made.	Yes (Conditional) Note: This data is required when the account identifier type is specified.
Payment Char Type1, Payment Char Type2,, Payment Char Type5	Used to indicate the characteristic that must be defined for the payment.	Yes (Conditional) Note: This data is required when the characteristic value is specified.
Payment Char Value1, Payment Char Value2,, Payment Char Value5	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required when the characteristic type is specified.
MICR ID	Used to specify the MICR code.	No
Payor ID	Used to specify the payor account ID. Note: If the payor account ID is not specified, the payor account ID is set to the payee account ID assuming that the payor and payee are the same.	No

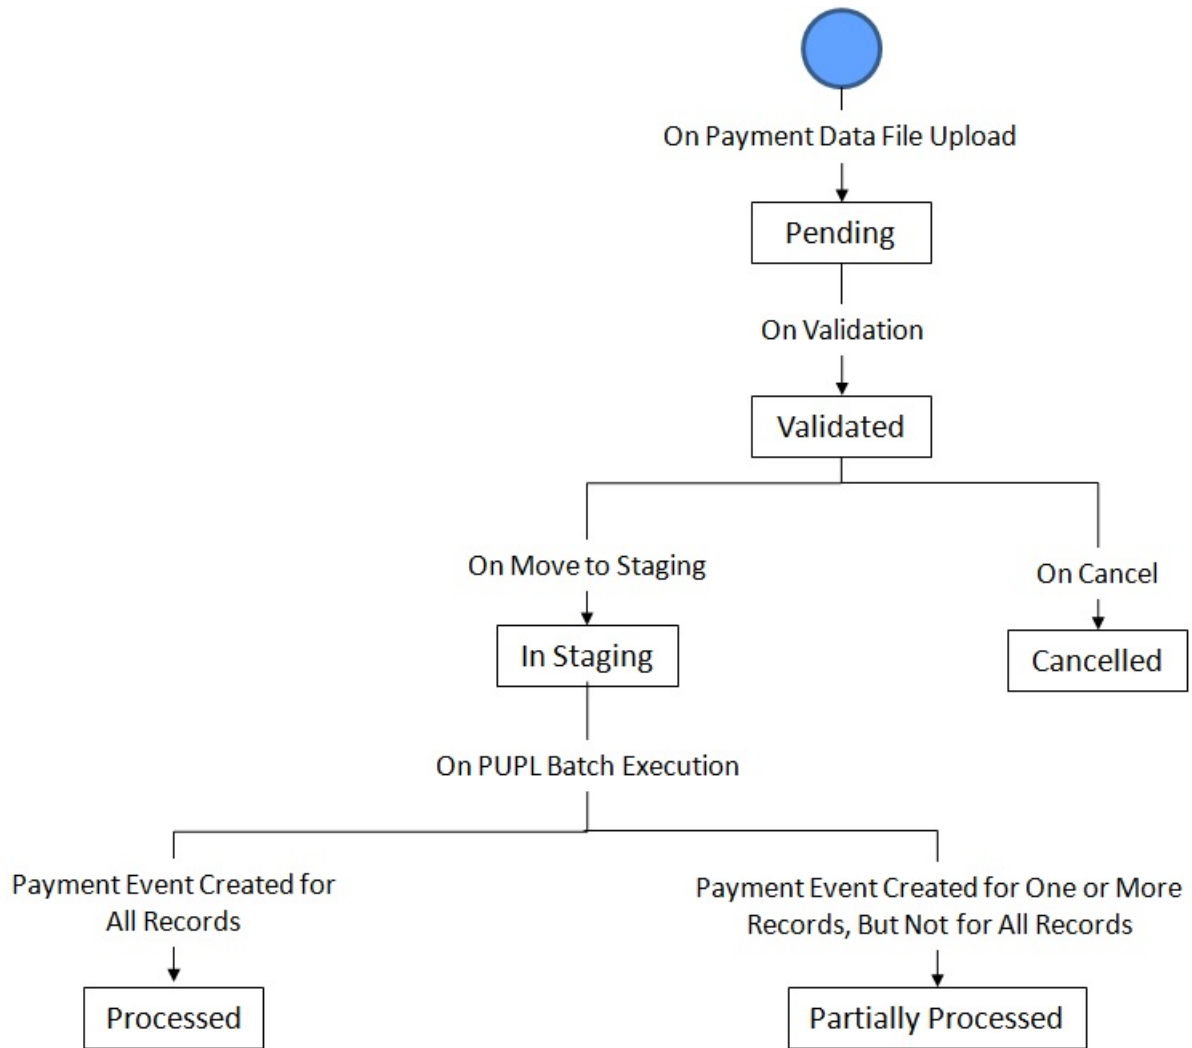

Note:

If a payment data file contains column names other than those mentioned in the above table, the system will not upload the payment data file.

If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

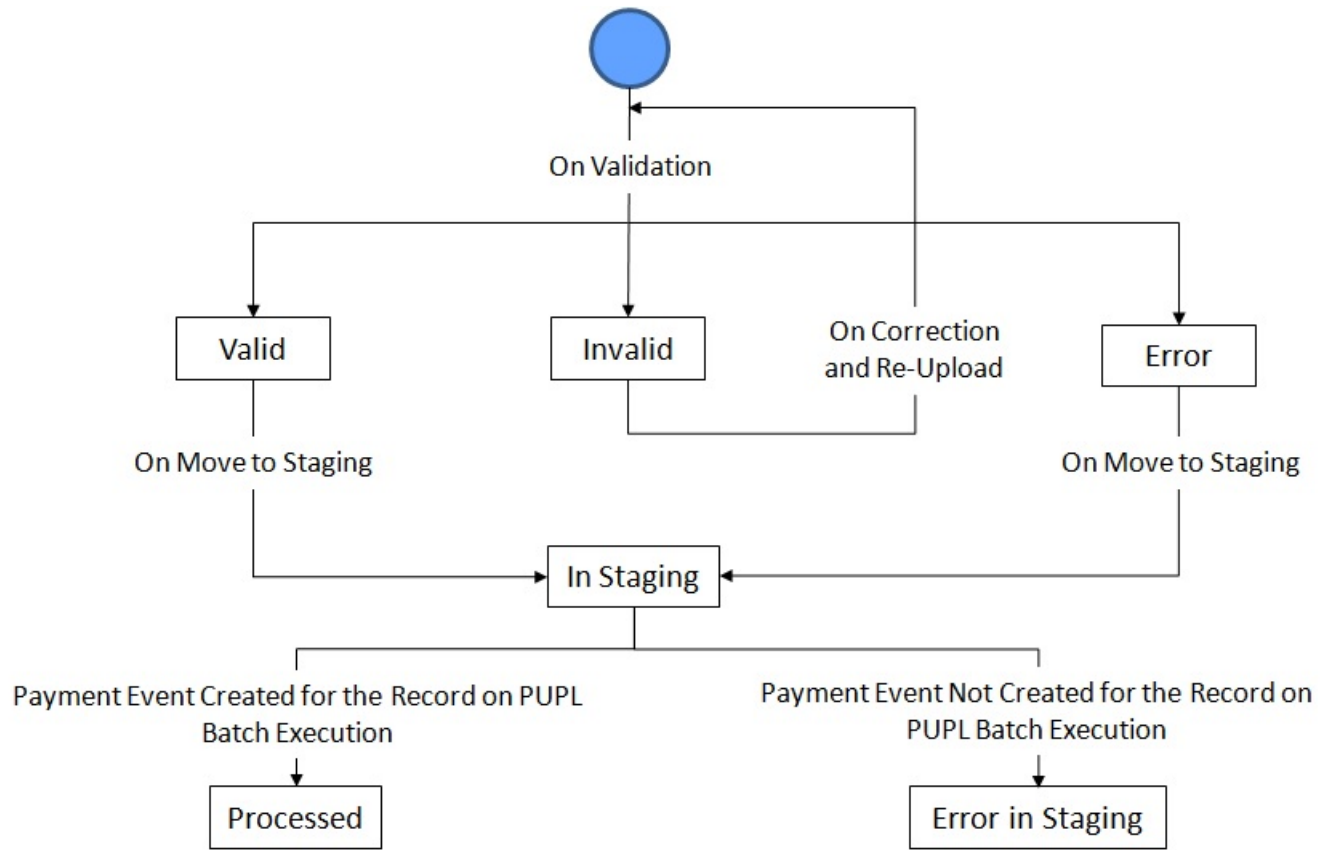

Payment Data File Status Transition

The following figure graphically indicates how a payment data file moves from one status to another during the payment upload process:

Payment Record Status Transition

The following figure graphically indicates how a payment record moves from one status to another during the payment upload process:

The following table lists the scenarios when a payment record is set to **Invalid** or **Error** status:

Scenario	Payment Record Status
The system could not find the payee account ID for a given account identifier type and account identifier combination when the payee account ID is not specified in the payment record.	Invalid
The payee account ID specified in the payment record does not exist in the system.	Invalid
The payee account ID, account identifier type, or account identifier are not specified in the payment record.	Invalid
The match type is not specified in the payment record.	Invalid
The match type specified in the payment record does not exist in the system.	Error
The match value is not specified in the payment record.	Invalid
The currency code does not exist in the system.	Invalid
The tender amount is either zero or not specified in the payment record.	Invalid
The payment amount is either zero or not specified in the payment record.	Invalid
The bank account is not specified in the payment record.	Invalid
The payment type (i.e. tender type) does not exist in the system.	Invalid

Scenario	Payment Record Status
The payment type is not specified in the payment record.	Invalid
The tender ID is not specified in the payment record.	Invalid
The date received is not specified in the payment record.	Invalid
The payor account ID specified in the payment record does not exist in the system.	Invalid
The characteristic type specified in the payment record does not exist in the system.	Invalid
If a characteristic type is specified, but the characteristic value is not specified in the payment record.	Invalid
If a characteristic value is specified, but the characteristic type is not specified in the payment record.	Invalid
The characteristic value does not match any predefined value when the characteristic value type is set to Predefined Value .	Invalid

Note: The system does the match type and match value related validations only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

Error Messages

The following table lists the errors that may occur during the payment upload process. It also indicates how you can resolve these errors.

Message Number	Error Message	Message Category	Possible Issues
80110	File cannot be reuploaded as some records have already been processed.	11111	The possible issues could be: <ul style="list-style-type: none"> You are trying to replace an existing file whose payment records are already moved to the staging area and/or for which payment events are already created.
1463	This file already exists in the system. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is already uploaded in the system without selecting the Replace Existing File check box.
1465	Please upload a file in the CSV format.	17000	The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is not in the CSV format.
80113	Duplicate Header for column %1 in file.	11111	The possible issues could be: <ul style="list-style-type: none"> The file has two or more columns with the same header.

Message Number	Error Message	Message Category	Possible Issues																																				
80111	Length of value %1 too long for Field %2. Maximum length: %3 Found %4.	11111	<p>The possible issues could be:</p> <ul style="list-style-type: none"> The length of value specified in the column exceeds the maximum field length. The following table lists the maximum length of each field: <table border="1" data-bbox="1089 436 1461 1659"> <thead> <tr> <th data-bbox="1089 436 1317 520">Column Name</th> <th data-bbox="1317 436 1461 520">Maximum Length</th> </tr> </thead> <tbody> <tr> <td data-bbox="1089 520 1317 569">Account ID</td> <td data-bbox="1317 520 1461 569">10</td> </tr> <tr> <td data-bbox="1089 569 1317 617">Match Type</td> <td data-bbox="1317 569 1461 617">8</td> </tr> <tr> <td data-bbox="1089 617 1317 665">Match Value</td> <td data-bbox="1317 617 1461 665">30</td> </tr> <tr> <td data-bbox="1089 665 1317 714">Tender ID</td> <td data-bbox="1317 665 1461 714">12</td> </tr> <tr> <td data-bbox="1089 714 1317 762">Tender Amount</td> <td data-bbox="1317 714 1461 762">15</td> </tr> <tr> <td data-bbox="1089 762 1317 810">Payment Amount</td> <td data-bbox="1317 762 1461 810">15</td> </tr> <tr> <td data-bbox="1089 810 1317 858">Date Received</td> <td data-bbox="1317 810 1461 858">10</td> </tr> <tr> <td data-bbox="1089 858 1317 907">Bank Account</td> <td data-bbox="1317 858 1461 907">30</td> </tr> <tr> <td data-bbox="1089 907 1317 955">Payment Type</td> <td data-bbox="1317 907 1461 955">4</td> </tr> <tr> <td data-bbox="1089 955 1317 1003">Check Number</td> <td data-bbox="1317 955 1461 1003">10</td> </tr> <tr> <td data-bbox="1089 1003 1317 1052">Currency</td> <td data-bbox="1317 1003 1461 1052">3</td> </tr> <tr> <td data-bbox="1089 1052 1317 1100">Account ID Type</td> <td data-bbox="1317 1052 1461 1100">8</td> </tr> <tr> <td data-bbox="1089 1100 1317 1192">Account Identifier</td> <td data-bbox="1317 1100 1461 1192">30</td> </tr> <tr> <td data-bbox="1089 1192 1317 1381">Payment Char Type1, Payment Char Type2,, Payment Char Type5</td> <td data-bbox="1317 1192 1461 1381">8</td> </tr> <tr> <td data-bbox="1089 1381 1317 1560">Payment Char Value1, Payment Char Value2,, Payment Char Value5</td> <td data-bbox="1317 1381 1461 1560">254</td> </tr> <tr> <td data-bbox="1089 1560 1317 1608">MICR ID</td> <td data-bbox="1317 1560 1461 1608">30</td> </tr> <tr> <td data-bbox="1089 1608 1317 1659">Payor ID</td> <td data-bbox="1317 1608 1461 1659">10</td> </tr> </tbody> </table>	Column Name	Maximum Length	Account ID	10	Match Type	8	Match Value	30	Tender ID	12	Tender Amount	15	Payment Amount	15	Date Received	10	Bank Account	30	Payment Type	4	Check Number	10	Currency	3	Account ID Type	8	Account Identifier	30	Payment Char Type1, Payment Char Type2,, Payment Char Type5	8	Payment Char Value1, Payment Char Value2,, Payment Char Value5	254	MICR ID	30	Payor ID	10

80194	File has no records to upload	11111	The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file without any payment records.
80195	Incorrect header: %1	11111	The possible issues could be: <ul style="list-style-type: none"> One or more column names in the payment data file are incorrect.
80196	Maximum file name size allowed is 60 characters	11111	The possible issues could be: <ul style="list-style-type: none"> The file name contains more than 60 characters.
80199	Missing value for column %1	11111	The possible issues could be: <ul style="list-style-type: none"> The match type is not specified in the payment record. The match value is not specified in the payment record. The payment type is not specified in the payment record.

Payment Upload

The **Payment Upload** screen allows you to search for a payment data file using various search criteria. Through this screen, you can:

- Upload a payment data file
- Cancel a payment data file
- View the records uploaded through a payment data file
- View the log of a payment data file
- Move the payment records to the staging area
- Edit a payment staging record
- Replace an existing payment data file
- View the reasons why the payment record is in the **Error** or **Invalid** status

This screen consists of the following zones:

- [Search Payment Data File](#) on page 880
- [Payment Data Records](#) on page 882
- [Payment Data File Log](#) on page 883

Search Payment Data File

The **Search Payment Data File** zone allows you to search for a payment data file which is uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to search a particular payment data file.	No
User ID	Used to search payment data files which are uploaded by a particular user.	No
Upload From Date	Used to search payment data files which are uploaded from a particular date onwards. Note: By default, the date is set to the current date minus 7 days. You can change the date, if required.	No
To	Used to search payment data files which are uploaded till a particular date. Note: By default, the date is set to the current date. You can change the date, if required.	No
File Type	Used to search payment data files which are uploaded using a particular file type.	No
File Status	Used to search payment data files with a particular status. The valid values are: <ul style="list-style-type: none"> • Cancelled • In Staging • Partially Processed • Pending • Processed • Validated 	No

Note: You must specify at least one search criterion while searching for a payment data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the payment data file.
File Type	Indicates the type of the payment data file.
Upload Date	Displays the date and time when the payment data file was uploaded in the system.

Column Name	Column Description
Status	Indicates the status of the payment data file. The valid values are: <ul style="list-style-type: none"> Cancelled In Staging Partially Processed Pending Processed Validated
Total	Displays the total number of records that are uploaded through the payment data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Error	Displays the number of records where the data is incorrect.
In Staging	Displays the number of records which are copied from the pre-staging to staging area.
Processed	Displays the number of records for which payment events are created.
Staging Error	Displays the number of records for which payment events could not be created.
Cancel	On clicking the Cancel () icon, you can cancel the payment data file. <p>Note: The Cancel icon appears only when the status of the payment data file is Validated. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.</p>
Move to Staging	On clicking the Move to Staging () icon, you can move the valid and error records of the payment data file to the staging area. <p>Note: The Move to Staging icon appears only when:</p> <ul style="list-style-type: none"> The status of the payment data file is Validated. There are no invalid records in the payment data file. The Disable Move to Staging check box is not selected in the respective file type.

You can upload a payment data file by clicking the **Upload** link in the upper right corner of this zone. On clicking the **Broadcast** () icon corresponding to the payment data file, the **Payment Data Records** and **Payment Data File Log** zones appear.

Payment Data Records

The **Payment Data Records** zone lists the records of the payment data file. This zone contains the following columns:

Column Name	Column Description
Payor Account ID	Indicates the account which made the payment.
Payee Account ID	Indicates the account for which the payment was made.
Match Type	Indicates the match type using which the payment must be matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment must be matched.
Pay Tender ID	Displays the payment tender ID.
Tender Amount	Displays the tender amount.
Payment Amount	Displays the amount paid through the tender.
Currency	Indicates the currency in which the payment was made.
Date Received	Displays the date when the payment was made.
Bank Account	Displays the bank account from which the payment was made.
Tender Type	Indicates the type of tender through which the payment was made.
Check Number	Displays the check number if the payment was made through check.
MICR ID	Displays the MICR code.
Status	Indicates the status of the payment record. The valid values are: <ul style="list-style-type: none"> • Valid • Invalid • Error • In Staging • Processed • Error in Staging

Column Name	Column Description
Payment Information Event	Displays information about the payment event which is created for the payment record.
	<p>Note:</p> <p>It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event.</p> <p>The data appears in this column only when the status of the payment record is Processed.</p>
Payment Staging Record	On clicking the Edit (✎) icon, the Payment Upload Staging screen appears where you can edit the details of the payment staging record.
	<p>Note: The Edit icon appears only when the status of the payment record is In Staging.</p>
Error Message	On clicking the View (🔗) icon, the Error Messages window appears where you can view the reasons why the status of the payment record is Invalid or Error .
	<p>Note: The View icon appears only when the status of the payment record is Error or Invalid.</p>

Note: Pagination is used to display limited number of records in the **Payment Data Records** zone. By default, 20 records are displayed in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Payment Data Records** zone does not appear in the **Payment Upload** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Payment Data File Log

The **Payment Data File Log** zone lists the complete trail of actions performed on the payment data file. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment data file.
Log Details	Displays the details about the action performed on the payment data file.
User	Indicates the user who has performed the action on the payment data file.

By default, the **Payment Data File Log** zone does not appear in the **Payment Upload** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Searching for a Payment Data File

Prerequisites

To search for a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)

Procedure

To search for a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Enter the search criteria in the **Search Payment Data File** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of payment data files that meet the search criteria appears in the **Search Results** section.

Uploading a Payment Data File

Prerequisites

To upload a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

Procedure

To upload a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.
The **Payment Upload** screen appears.

- Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.

The **Upload Payment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to indicate the type of payment data file.	Yes
	Note: The list includes only those file types where the feed type is set to Payment Upload Data .	
File Name	Used to specify the name and path of the payment data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the payment data file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No

- Select the type of payment data file from the **File Type** list.
- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the payment data file that you want to upload is available.
- Click **Open**.

The payment data file name and path appears in the **File Name** field.

- Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

Note: If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

- Click **OK** in the message box.

On uploading the payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 873.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Replacing an Existing File

Prerequisites

To replace an existing payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

Procedure

To replace an existing payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.
The **Upload Payment Data File** screen appears.
4. Select the type of payment data file from the **File Type** list.
5. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the payment data file that you want to upload is available.
7. Click **Open**.
The payment data file name and path appears in the **File Name** field.
8. Select the **Replace Existing File** check box.

Note: You can replace an existing file only when the payment data file is in the **Validated** status. In other words, you cannot replace a file whose payment records are already moved to the staging area and/or for which payment events are already created.

9. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

10. Click **OK** in the message box.

Once the payment data file is successfully uploaded, the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is changed to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is changed to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 873. You can view the details of the uploaded payment data file and its records in the **Payment Upload** screen.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to

correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Cancelling a Payment Data File

There might be situations when incorrect payment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel a payment data file only when it is in the **Validated** status. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.

Procedure

To cancel a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Cancel** () icon in the **Cancel** column corresponding to the payment data file that you want to cancel.

A message appears confirming whether you want to cancel the payment data file.

Note: The **Cancel** icon appears only when the status of the payment data file is **Validated**.

3. Click **OK**.

The status of the payment data file is changed to **Cancelled**.

How to search for a payment data file	Searching for a Payment Data File on page 884

Moving the Payment Records to the Staging Area

Procedure

To move the payment records to the staging area:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Move to Staging** () icon in the **Move to Staging** column corresponding to the payment data file whose records you want to move to the staging area.

A message appears confirming whether you want to move all payment records to the payment upload staging area.

Note:

The **Move to Staging** icon appears only when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area.

3. Click **OK** in the message box.

A message appears indicating that the payment records are successfully copied from the pre-staging to staging area.

4. Click **OK** in the message box.

The status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**.

Editing a Payment Staging Record

You can edit a payment record only when it is moved from the pre-staging to staging area. On editing a payment record in the staging area, the system does not reflect the changes in the pre-staging area. It only reflects the changes in the staging area.

Procedure

To edit a payment staging record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose staging records you want to edit.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **Edit** () icon in the **Payment Staging Record** column corresponding to the payment record whose details you want to edit in the staging area.

The **Payment Upload Staging** screen appears. It contains the following tabs:

- **Tender Details** — Enables you to view and edit the tender control staging details.
- **Payment Advice** — Enables you to view and edit the payment staging details.
- **Payment Characteristics** — Enables you to view and edit the payment characteristic staging details.

Note: The **Edit** icon appears only when the status of the payment record is **In Staging**.

4. Modify the required details.
5. Click the **Save** link in the **Application** toolbar.

The changes made to the payment staging record are saved.

Viewing the Error Messages

The system allows you to view the reasons why the payment record in a payment data file is in the **Error** or **Invalid** status.

Procedure

To view the error messages:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the payment data file whose payment records are in the **Error** or **Invalid** status.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **View** () icon in the **Error Message** column corresponding to the payment record which is in the **Error** or **Invalid** status.

The **Error Messages** window appears. It lists the reasons why the payment record is in the **Error** or **Invalid** status. If the payment record is in the **Invalid** status, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Note: The **View** icon appears only when the status of the payment record is **Error** or **Invalid**.

4. View the reasons in the **Error Messages** window.
5. Click **OK**.

Chapter 12

Freeze Payments on Notification

Topics:

- [Freeze Payments on Notification Process](#)
- [Prerequisites](#)
- [Automatic Payment or Refund Clearing Staging Record Status Transition](#)
- [EDI 824 File Format](#)
- [Sample EDI 824 File Format](#)
- [Automatic Payment and Refund Upload Reason](#)
- [Automatic Payment and Refund Clearing Staging](#)

Oracle Revenue Management and Billing facilitates you to create automatic payments and refunds when the automatic payment option is enabled for an account. A clearing record is created for each automatic payment and refund in the system. You can then send the automatic payment and refund clearing records to the auto clearing house for verification. The system provides the mechanism to extract the automatic payment clearing records in a flat file. You can then send the flat file to the auto clearing house for verification. However, the implementation team will have to write the custom logic to extract the automatic refund clearing records in a file which you can then send to the auto clearing house for verification.

Once the auto clearing house reviews the automatic payment clearing records, the system allows you to upload review comments received in the EDI 824 file format. On uploading an EDI 824 file, an automatic payment clearing staging record is created for each valid automatic payment clearing ID. The data received from the auto clearing house is stored in the following staging tables:

- CI_APAY_STAGE_UP
- CI_APAY_STAGE_UP_REM
- CI_APAY_STGUP_CHAR

The implementation team will have to write the custom logic to upload review comments for automatic refund clearing records in the above mentioned staging tables. The review comments for automatic payment clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. payment cancelation reason or NOC reason) which will help you to determine whether the automatic payment must be frozen or cancelled in the system. Similarly, the review comments for automatic refund clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) which will help you to determine whether the refund request must be voided and refund adjustments must be cancelled in the system.

Once the review comments are received from the auto clearing house, you can do the following:

- Freeze or cancel the automatic payments
- Void the refund requests and cancel the refund adjustments

For more detailed information about the freeze payments on notification process, see [Freeze Payments on Notification Process](#) on page 893.

The system allows you to define upload reasons, payment cancelation reasons, NOC reasons, and void status reasons. The system also allows you to edit and delete the automatic payment and refund clearing staging records through the user interface. However, you can edit an automatic payment or refund clearing staging record only when it is in the **Pending** or **Error** status, and you can

delete an automatic payment or refund clearing staging record only when it is in the **Pending** status. During the freeze payments on notification process, the automatic payment and refund clearing staging records go through various statuses in its lifecycle. For more information about the statuses, see [Automatic Payment or Refund Clearing Staging Record Status Transition](#) on page 897.

For more information on how to setup the freeze payments on notification process, see [Prerequisites](#) on page 896.

Freeze Payments on Notification Process

The Freeze Payments on Notification process includes the following sub-processes:

1. [Creating Automatic Payments and Refunds](#) on page 893
2. [Generating a Flat File](#) on page 893
3. [Uploading Response from Auto Clearing House \(ACH\)](#) on page 893
4. [Freezing or Canceling Automatic Payments](#) on page 894
5. [Voiding Refund Requests and Canceling Refund Adjustments](#) on page 895
6. [Generating To Do Entries](#) on page 895
7. [Creating Tender Controls](#) on page 895

Note that during the freeze payments on notification process, you need to execute the following batches in the specified order:

1. Create Automatic Payments and Refunds (APAYCRET)
2. Activate Automatic Payments (ACTVTAPY)
3. Extract Automatic Payments (APAYACH)
4. Upload Response from Auto Clearing House (C1-APACK)
5. Freeze or Cancel Automatic Payments (APAYRA)
6. Cancel Automatic Refunds (AREFRA)
7. To Do Creation for Automatic Payment Exception Records (APAYUPTD)
8. Create Tender Controls for Automatic Payments (BALAPY)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Creating Automatic Payments and Refunds

If you have configured the automatic payment option for an account, the system calculates the automatic payment amount and extract date during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. The **Create Automatic Payments and Refunds (APAYCRET)** batch allows you to create automatic payment and refund request depending on whether the automatic payment amount is in debit or credit. It also creates a clearing record for each automatic payment and refund in the **CI_APAY_CLR_STG** and **CI_ADJ_CLR_STG** tables, respectively. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Generating a Flat File

Unless you activate a clearing record, you cannot extract the clearing record in a flat file. The **Activate Automatic Payments (ACTVTAPY)** batch allows you to activate a clearing record. It stamps the **APAYACH** batch control and incremental batch run number on the clearing record.

Once the clearing records are activated, you can extract the clearing records in a flat file. The **Extract Automatic Payments (APAYACH)** batch allows you to extract the clearing records with the latest batch run number in a flat file. The flat file is then sent to the auto clearing house for review. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to write the custom logic to activate and extract automatic refund clearing records in a flat file.

Uploading Response from Auto Clearing House (ACH)

Once the auto clearing house reviews the automatic payment clearing records, the review comments can be shared in the EDI 824 file format. An EDI 824 file may contain the review comments for one or more automatic payment clearing records. You can upload these EDI 824 files and store the review comments in the staging area using the **Upload Response from Auto Clearing House (C1-APACK)** batch.

On uploading an EDI 824 file, the system checks whether the automatic payment clearing ID specified in each record exists in the system. If so, it creates an automatic payment clearing staging record for the automatic payment clearing

ID in the **CI_APAY_STAGE_UP** table. If the acknowledgement code in the record is set to **TE** or **TR**, the system considers that the auto clearing house has rejected the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Reject Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. payment cancelation reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table.

However, if the acknowledgement code is blank or if the acknowledgement code is set to a value other than **TE** or **TR**, the system considers that the auto clearing house has accepted the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Success Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. NOC reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In this case, the record may contain more than one error code.

The status of the automatic payment clearing staging record is set to **Pending**. If the error code (i.e. payment cancelation reason or NOC reason) is invalid, the status of the automatic payment clearing staging record is set to **Error**. An exception is logged in the **CI_APAY_STGUP_EXC** table. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is set to **Error** and an exception is logged in the **CI_APAY_STGUP_EXC** table.

The system sets the automatic payment distribution and freeze date (i.e. **APAY_DIST_FRZ_DT**) for each automatic payment clearing record (for which automatic payment clearing staging record is added in the system) to the payment date (which is stored on the payment event). For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note: An additional table named **CI_APAY_STGUP_CHAR** is available which the implementation team can use to store additional information about the automatic payment clearing staging record in the form of characteristics.

To ensure that the EDI 824 files are uploaded successfully, you need to set the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:

- **Line Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of line.
- **Field Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of data record.
- **Reject Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has rejected the automatic payment clearing record.
- **Success Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has accepted the automatic payment clearing record with or without Notice to Change (NOC).

Note: You must specify an upload reason which is already defined in the system.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 897.

Freezing or Canceling Automatic Payments

Once the review comments are received in the form of reason and error codes for an automatic payment clearing record, you need to freeze or cancel the automatic payment based on the reason code. You can freeze or cancel automatic payments through the **Freeze or Cancel Automatic Payments (APAYRA)** batch.

On executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, the system checks whether the reason code (i.e. upload reason) and error code (i.e. payment cancelation reason or NOC reason) specified in the automatic payment clearing staging record exist in the system. This batch considers only those automatic payment clearing staging records which are in the **Pending** status and for which payment freeze date is specified in the automatic payment clearing record. If the reason code and error code exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm cancels the automatic payment and payment event. If the type of reason code is **Success**, the attached algorithm freezes the automatic payment on the payment freeze date. However, if the type of reason code is **Success** and the error code is specified along with the reason code, the attached algorithm freezes the automatic payment on the payment freeze date, stores error codes (i.e.

NOC reasons) as payment tender characteristics and then creates a To Do entry to notify user about these NOC reasons. Finally, the status of the automatic payment clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, payment cancelation reason, or NOC reason) specified in the automatic payment clearing staging record does not exist in the system, the status of the automatic payment clearing staging record is changed to **Error**. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is changed to **Error**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Voiding Refund Requests and Canceling Refund Adjustments

Once the auto clearing house reviews the automatic refund clearing records and shares the review comments, the implementation team will have to store the review comments in the following staging tables:

- **CI_APAY_STAGE_UP** – Used to store the automatic payment or refund clearing staging record for an automatic payment or refund clearing record, respectively. The status of the automatic payment or refund clearing staging record must be set to **Pending**.
- **CI_APAY_STAGE_UP_REM** – Used to store the reason and error codes of each automatic payment or refund clearing staging record.
- **CI_APAY_STGUP_CHAR** – Used to store additional information about the automatic payment or refund clearing staging record in the form of characteristics.

The review comments must be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) for an automatic refund clearing record. On executing the **Cancel Automatic Refunds (AREFRA)** batch, it checks whether the reason and error codes specified in the automatic refund clearing staging record exist in the system. If the reason and error codes exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm changes the status of the refund request to **Voided** and the corresponding refund adjustments are canceled. If the type of reason code is **Success**, no changes are made to the refund request and refund adjustments. Finally, the status of the automatic refund clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, void status reason) specified in the automatic refund clearing staging record does not exist in the system, the status of the automatic refund clearing staging record is changed to **Error**.

Generating To Do Entries

If an exception occurs while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, you can notify the user about such exception. The **To Do Creation for Automatic Payment Exception Records (APAYUPTD)** batch allows you to create a To Do using the APAYUPTD To Do type when an exception is logged for an automatic payment clearing staging record in the **CI_APAY_STGUP_EXC** table. The system creates one To Do entry for all exceptions that have occurred for an automatic payment clearing staging record. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, a To Do is not created when an exception is logged for an automatic refund clearing staging record in the **CI_APAY_STGUP_EXC** table while executing the **Cancel Automatic Refunds (AREFRA)** batch.

Creating Tender Controls

Once you freeze the automatic payments, you need to create tender and deposit controls. The **Create Tender Controls for Automatic Payments (BALAPY)** batch allows you to create tender and deposit controls for each automatic payment which is frozen, but not yet linked to any tender control. One tender control is created for the **APAYACH** batch control and batch run number combination. The payment tenders of these automatic payments are then linked to the tender control.

This batch also balances the open tender control records and changes the status of the tender and deposit controls, accordingly. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the freeze payments on notification process, you need to do the following:

- Define the automatic payment instructions for the account for which you want to enable the automatic payment option.

Note: You can either define non-rule based effective dated automatic payment instructions in the **Auto Pay** tab of the **Account** screen or define rule based effective dated automatic payment instructions through the **Auto Pay Rule** screen.

- Set the **Autopay Creation Option** field to **Freeze Payment on Notification** in the **Billing** tab of the **Installation Options** screen.
- Create an automatic payment creation algorithm using the **APAY-CREATE** algorithm type and attach it to the **Automatic Payment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create an automatic refund creation algorithm using the **C1-AREF-CRET** algorithm type and attach it to the **Automatic Adjustment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create a date calculation algorithm using the **APAY-DTCALC** algorithm type and attach it to the **Autopay Date Calculation Alg** spot of the auto pay route type which is specified on the account's automatic payment instruction.
- Define the required upload reasons in the system.
- Define the required payment cancelation reasons in the system.
- Define values for the **APAY_UPL_NOC_LOOKUP** lookup field.

Note: The **APAY_UPL_NOC_LOOKUP** lookup field is used to define NOC reasons. The NOC reason specified in the automatic payment clearing staging record must exist in this lookup field and its status must be **Active**. Otherwise, the status of the automatic payment clearing staging record is changed to **Error**.

- Define voided status reasons for the **C1-RefundReq** business object.
- Create an automatic payment success algorithm using the **C1-APAY-SUCC** algorithm type and attach it to the reason code where the reason type is set to **Success**.

Note: You must attach the automatic payment success algorithm to an upload reason which you want to use while freezing automatic payments.

- Create an automatic payment cancel algorithm using the **C1-APAY-CAN** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the automatic payment cancel algorithm to an upload reason which you want to use while canceling automatic payments.

- Create a void automatic refund algorithm using the **C1-AREF-VOID** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the void automatic refund algorithm to an upload reason which you want to use while voiding automatic refunds.

- Create a characteristic type where the characteristic entity is set to **Payment Tender**. And, then specify this characteristic type as the value for the **Tender Characteristic Type** parameter in an algorithm which is created using the **C1-APAY-SUCC** algorithm type.

- Assign the **C1-ACH** To Do type to a To Do role whose users must receive the To Do entries generated when automatic payments are frozen with a Notice to Change (NOC).
- Assign the **APAYUPTD** To Do type to a To Do role whose users must receive the To Do entries generated when exceptions have occurred while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch.
- Define values for the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:
 - Line Separator
 - Field Separator
 - Reject Upload Reason
 - Success Upload Reason

Automatic Payment or Refund Clearing Staging Record Status Transition

The following figure graphically indicates how an automatic payment or refund clearing staging record moves from one status to another during the freeze payments on notification process:

EDI 824 File Format

Before uploading the EDI 824 file, you need to ensure that the file contains the following tags and attributes:

Tag	Attribute	Description	Mandatory (Yes or No)
OTI	Reference Number	Used to specify the automatic payment clearing ID. It indicates the automatic payment clearing record for which the review comments are received from the auto clearing house.	Yes
OTI	Acknowledgement Code	Used to indicate whether the automatic payment clearing record is accepted or rejected by the auto clearing house. If you want to reject the automatic payment clearing record, you must specify TE or TR as the acknowledgement code. However, if you want to approve the automatic payment clearing record, you can either specify any value other than TE or TR or leave this attribute blank.	No
TED	Error Code	Used to indicate either of the following: <ul style="list-style-type: none"> The payment cancellation reason when the automatic payment clearing record is rejected by the auto clearing house. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: You must specify a payment cancellation reason which is already defined in the system.</div> <ul style="list-style-type: none"> The Notice to Change (NOC) reason when the automatic payment clearing record is accepted by the auto clearing house with a Notice to Change (NOC). <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: You must specify a NOC reason which is already defined in the APAY_UPL_NOC_LOOKUP lookup field.</div>	Yes (Conditional)
		Note: This attribute is required when the automatic payment clearing record is rejected by the auto clearing house.	
TED	Error Description	Used to specify the reason why the automatic payment clearing record is either rejected or accepted with a Notice to Change (NOC).	No

Sample EDI 824 File Format

```

OTI*TR*TN*411302586842\
TED*WA01*WRONG ACCOUNT\
OTI*TF*TN*411302525641\
OTI*TO*TN*806152348038\
TED*BR01*Bill Reopened\
OTI*TO*TN*806152307159\
OTI*TE*TN*806152307229\
TED*WA01*WRONG ACCOUNT\

```

Here, TR, TF, TO, and TE are acknowledgement codes. TR and TE indicate that the automatic payment clearing records are rejected. And, TF and TO indicate that the automatic payment clearing records are accepted with or without a Notice to Change (NOC).

Here, 411302586842, 411302525641, 806152348038, 806152307159, and 806152307229 are automatic payment clearing records, and WA01 and BR01 are error codes. WA01 is a payment cancellation reason and BR01 is a NOC reason. The string “WRONG ACCOUNT” and “Bill Reopened” are error descriptions.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 897.

Automatic Payment and Refund Upload Reason

Once the auto clearing house reviews the automatic payment and refund clearing records, an appropriate upload reason must be received for each clearing record. The upload reason indicates the following:

- Whether the automatic payment must be frozen or cancelled in the system
- Whether the automatic refund must be canceled in the system (i.e. the refund request must be voided and refund adjustments must be canceled)

The **Automatic Payment and Refund Upload Reason** screen allows you to define, edit, and delete an upload reason. It contains the following zone:

- [Upload Reasons](#) on page 899

Upload Reasons

The **Upload Reasons** zone lists upload reasons that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Reason	Displays the upload reason.
Reason Type	Indicates the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel • Success
Eligible for Processing	Indicates whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. The valid values are: <ul style="list-style-type: none"> • Y • N
Description	Displays the description of the upload reason.
Edit	On clicking the Edit (✎) icon, the Automatic Payment and Refund Upload Reason screen appears where you can edit the details of the upload reason.
Delete	On clicking the Delete (🗑) icon, you can delete the upload reason.

You can define an upload reason by clicking the **Add** link in the upper right corner of this zone.

Defining an Upload Reason

Prerequisites

To define an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To define an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. Click the **Add** link in the upper right corner of the **Upload Reasons** zone.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason.	Yes
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.

- Enter the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.

The upload reason is defined.

Editing an Upload Reason

Prerequisites

To edit an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To edit an upload reason:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.

The **Automatic Payment and Refund Upload Reason** screen appears.

3. In the **Upload Reasons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the upload reason whose details you want to edit.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Displays the upload reason.	Not applicable
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.

4. Modify the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑️) icon corresponding to the algorithm.

5. Click **Save**.

The changes made to the upload reason are saved.

Automatic Payment and Refund Clearing Staging

The **Automatic Payment and Refund Clearing Staging** screen allows you to search for automatic payment or refund clearing records using various search criteria. In addition, you can:

- View the automatic payment or refund clearing staging records associated to a clearing record
- View the upload reason and payment cancelation reason or NOC reason specified in the automatic payment clearing staging record
- View the upload reason and void status reason specified in the automatic refund clearing staging record
- View the characteristics defined for the automatic payment or refund clearing staging record
- Edit an automatic payment or refund clearing staging record
- Delete an automatic payment or refund clearing staging record

This screen contains the following zones:

- [Search Clearing Record](#) on page 905
- [Associated Clearing Staging Records](#) on page 907
- [Clearing Staging Upload Reasons](#) on page 908
- [Clearing Staging Characteristics](#) on page 908

Search Clearing Record

The **Search Clearing Record** zone allows you to search for automatic payment and refund clearing records using various search criteria. It contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the automatic payment or refund clearing records. The valid values are: <ul style="list-style-type: none"> • Automatic Payment • Automatic Refund 	Yes
Clearing ID	Used to search a particular clearing record.	No
Account ID	Used to search clearing records which are created for a particular account. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	No
Person Name	Used to search clearing records which are created for accounts of a particular person.	No
Extract From Date	Used to search clearing records that are extracted on or after a particular date.	No
Extract To Date	Used to search clearing records that are extracted on or before a particular date.	No
Bill ID	Used to search clearing records which are created against a bill.	No
Alternate Bill ID	Used to search clearing records which are created against a bill with the specified alternate bill ID.	No
Batch Control	Used to search clearing records where the APAYACH batch control is stamped. The valid value is APAYACH .	No
Batch Run Number	Used to search clearing records which are activated in a particular batch run.	No

Note: You must specify at least one search criterion while searching for a clearing record.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Clearing ID	Displays the clearing ID.

Column Name	Column Description
Account Information	Indicates the account for which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Bill Information	Indicates the bill against which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Payment Amount	Displays the payment amount.
	Note: This column appears only when you select the Automatic Payment option from the Search By list.
Pay Tender ID	Displays the payment tender ID.
	Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective tender. This column appears only when you select the Automatic Payment option from the Search By list.
Tender Status	Indicates the current status of the payment tender. The valid values are: <ul style="list-style-type: none"> Valid Canceled
	Note: This column appears only when you select the Automatic Payment option from the Search By list.
Extract Date	Displays the date when the clearing record is extracted in a flat file.
Payment Freeze Date	Displays the date when the automatic payment must be frozen in the system.
	Note: This column appears only when you select the Automatic Payment option from the Search By list.
External Source ID	Indicates the tender source through which the payment was remitted.
Entity Type	Indicates the type of entity which is created for automatic refund. The valid value is: <ul style="list-style-type: none"> Refund Request
	Note: This column appears only when you select the Automatic Refund option from the Search By list.
Entity ID	Displays the entity ID.
	Note: This column appears only when you select the Automatic Refund option from the Search By list.

Column Name	Column Description
Account Number	Indicates the bank account through which the automatic payment is made.
Batch Control	Indicates the batch control which is stamped on the clearing record.
Batch Run Number	Indicates the batch run in which the clearing record was activated.
Alternate Bill ID	Indicates the bill against which the clearing record is created.

Associated Clearing Staging Records

The **Associated Clearing Staging Records** zone lists the automatic payment or refund clearing staging records which are added corresponding to the clearing record. You can edit and delete an automatic payment or refund clearing staging record through this zone. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> • Pending • Complete • Error
Edit	On clicking the Edit (✎) icon, the Edit Clearing Staging Record screen appears where you can edit the details of the clearing staging record. <p>Note: You can edit a clearing staging record only when it is in the Pending or Error status.</p>
Delete	On clicking the Delete (🗑) icon, you can delete the clearing staging record. <p>Note: You can delete a clearing staging record only when it is in the Pending status.</p>

By default, the **Associated Clearing Staging Records** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the clearing record in the **Search Clearing Record** zone.

Clearing Staging Upload Reasons

The **Clearing Staging Upload Reasons** zone lists the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason, Notice to Change (NOC) reasons, or void status reason) specified in the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence in which the upload reason should be considered while freezing or canceling the automatic payment or while canceling the automatic refund.
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Upload Reason	Indicates whether the auto clearing house has accepted or rejected the clearing record.
Cancel Reason	Indicates the reason why the auto clearing house has rejected the clearing record. If the clearing record is created for an automatic payment, the payment cancellation reason appears in this column. However, if the clearing record is created for an automatic refund, the void status reason appears in this column.
NOC Reason	Indicates the reason why the auto clearing house has accepted the clearing record with a Notice to Change (NOC).
NOC Reason Description	Displays the description of the NOC reason.

By default, the **Clearing Staging Upload Reasons** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast** () icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Clearing Staging Characteristics

The **Clearing Staging Characteristics** zone lists the characteristics defined for the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the characteristic value.

By default, the **Clearing Staging Characteristics** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast** () icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Searching for a Clearing Record

Procedure

To search for a clearing record:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Automatic Payment and Refund Clearing Staging**.
The **Automatic Payment and Refund Clearing Staging** screen appears.
3. Enter the search criteria in the **Search Clearing Record** zone depending on whether you want to search for automatic payment or refund clearing records.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of clearing records that meet the search criteria appears in the **Search Results** section.

Editing a Clearing Staging Record

Prerequisites

To edit a clearing staging record, you should have:

- Upload reasons defined in the application
- NOC reasons defined in the **APAY_UPL_NOC_LOOKUP** lookup field.
- Payment cancelation reasons defined in the application
- Reasons defined for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen

Note: You can edit a clearing staging record only when it is in the **Pending** or **Error** status. On editing a clearing staging record which is in the **Error** status, the status of the clearing staging record is changed to **Pending**. Also, the exceptions logged for the clearing staging record are deleted from the **CI_APAY_STGUP_EXC** table.

Procedure

To edit a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the clearing record whose associated clearing staging record you want to edit.

The **Associated Clearing Staging Records** zone appears.
3. In the **Associated Clearing Staging Records** zone, click the **Edit** () icon in the **Edit** column corresponding to the clearing staging record whose details you want to edit.

The **Edit Clearing Staging Record** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Clearing Staging ID	Displays the clearing staging ID.	Not applicable
Clearing ID	Indicates the clearing record against which the clearing staging record is added.	Not applicable
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> • Pending • Complete • Error 	Not applicable
Upload Date	Used to specify the date when the clearing staging record was uploaded or added in the system.	Yes

In addition, this screen contains the following two sections:

- **Upload Reasons** — Used to add, edit, or remove the reason code (i.e. upload reason) and error (sub reason) codes from the clearing staging record. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason. It indicates whether the auto clearing house has accepted or rejected the clearing record.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel • Success 	Yes
Sub Reason Code	Used to specify either of the following: <ul style="list-style-type: none"> • Payment cancellation reason or void status reason (for automatic refund) when the reason type is set to Cancel • Notice to Change (NOC) reason when the reason type is set to Success 	No
Sub Reason Description	Used to specify the description of the NOC reason.	No

Note: The upload reason, payment cancellation reason, void status reason, and NOC reasons must be already defined in the system. If you specify an invalid reason and sub reason codes, the status of the clearing staging record is changed to **Error** when you execute the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.

- **Characteristics** — Used to define characteristics for the clearing staging record.
4. Modify the required details in the **Edit Clearing Staging Record** screen.

Note: If you want to add more than one reason or sub reason code, click the **Add (+)** icon in the **Upload Reasons** section and then specify the required details. However, if you want to remove a reason or sub reason code, click the **Delete (🗑)** icon corresponding to the reason.

5. Define characteristics for the clearing staging record, if required.
6. Click **Save**.

The changes made to the clearing staging record are saved.

How to define a characteristic for a clearing staging record	Defining a Characteristic for a Clearing Staging Record on page 912

Defining a Characteristic for a Clearing Staging Record

Prerequisites

To define a characteristic for a clearing staging record, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Payment Upload**)

Procedure

To define a characteristic for a clearing staging record:

1. Ensure that the **Characteristics** section is expanded when you are editing a clearing staging record.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the clearing staging record.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Auto Payment Upload .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the clearing staging record.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the clearing staging record, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the clearing staging record, click the **Delete** (🗑️) icon corresponding to the characteristic.

Related Topics

For more information on...	See...
How to edit a clearing staging record	Editing a Clearing Staging Record on page 911

Deleting a Clearing Staging Record

Procedure

To delete a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.

2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the clearing record whose associated clearing staging record you want to delete.

The **Associated Clearing Staging Records** zone appears.

3. In the **Associated Clearing Staging Records** zone, click the **Delete** () icon in the **Delete** column corresponding to the clearing staging record that you want to delete.

A message appears confirming whether you want to delete the clearing staging record.

Note: You can delete a clearing staging record only when it is in the **Pending** status.

4. Click **OK**.

The clearing staging record is deleted.

Chapter 13

Trial Billing

Topics:

- [Prerequisites](#)
- [Trial Bill \(Used for Searching\)](#)
- [Trial Bill \(Used for Viewing\)](#)

Oracle Revenue Management and Billing facilitates you to generate trial bills before actual bill is generated for an account. This helps to review the trial bill and make the required corrections before the actual bill is generated. The Trial Billing feature is currently designed and developed for open item accounting and not for balance forward accounting.

The process of trial and actual billing is identical. The only difference is that you cannot freeze and complete the trial bills. Also, during trial billing, the account balance is not updated. It is updated only when the actual bill is generated. You can generate trial bill only in case of regular billing, and not in case of adhoc billing. The trial bills can be generated only through the batch process. To generate trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** – This batch is used to generate pending trial or actual bills for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch is used to generate bill segments for pending trial or actual bills.
3. **Bill Completion (C1-BLPPR)** – This batch is used to generate post-processing bill segments in the pending trial or actual bills during the bill completion process. The adjustments, if any, created on the accounts are swept onto the pending trial or actual bills. In addition, the bill routing information and bill messages are stamped on the pending trial or actual bills. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. However, in case of pending trial bill, the currency conversion for adjustments is done, but the transfer adjustments are not created. Finally, the status of the actual bill is set to **Complete**, whereas the status of the trial bill remains as **Pending**.

Note: The adjustments which are in the **Freezable** status are not swept onto the trial bills. Only adjustments which are in the **Frozen** status are swept onto the trial bills.

The **Trial Bill** check box is added in the **Main** tab of the **Account** screen. If you leave the **Process All or Selected Accounts** parameter blank while executing the above batches, all accounts (that meet the criteria) irrespective of whether the **Trial Bill** check box is selected or not are considered for generating the trial bills. However, if the **Process All or Selected Accounts** parameter is set to **Y**, then only those accounts that meet the criteria and where the **Trial Bill** check box is selected are considered for generating the trial bills.

You can create an actual bill using a trial bill. While creating actual bills using trial bills, you need to specify the trial billing batch run number whose trial bills

you want to convert to the actual bills. To create actual bills using trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch generates pending actual bill for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch copies regular bill segments which are generated for the trial bill and stamps them onto the pending actual bill. It also copies the corresponding financial transactions (FTs).
3. **Bill Completion (C1-BLPPR)** – This batch copies post-processing bill segments which are generated for the trial bill and stamps them onto the pending actual bill. The bill routing information and bill messages are copied from the trial bill to the pending actual bill. The adjustment, if any, created on the account are swept onto the pending actual bill. They are not copied from the respective trial bill. If the adjustment currency is different from the account’s invoice currency, the transfer adjustment is created on the pending actual bill. Finally, the status of the actual bill is set to **Complete**.

The actual bill ID, bill segment ID and FT ID are different from the trial bill ID, bill segment ID and FT ID, respectively. If an actual bill is created using a trial bill, the system will stamp the trial bill ID on the actual bill. This helps you to track the trial bill of an actual bill.

The system allows you to view a trial bill through a user interface. It also allows you to print the trial bill in the PDF format. You can print a trial bill only when Oracle Documaker is integrated with Oracle Revenue Management and Billing. For more information about the batches, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the trial billing feature, you need to do the following:

- Set the **Trial Bill Characteristics Conversion** option type of the **C1_FINTRANOP** feature configuration.

How to setup the C1_FINTRANOP feature configuration	Setting the C1_FINTRANOP Feature Configuration on page 2974

Trial Bill (Used for Searching)

The **Trial Bill** screen allows you to search for a trial bill using various search criteria. It contains the following zone:

- [Search Trial Bill](#) on page 917

Through this screen, you can navigate to the following screen:

- [Trial Bill \(Used for Viewing\)](#) on page 920

Search Trial Bill

The **Search Trial Bill** zone allows you to search for trial bills using various search criteria. It contains the following two sections:

- **Search Criteria** — The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter the criteria in the Account ID and Trial Bill Description fields (which are in different criteria groups), the system searches for trial bills using the account ID. The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a trial bill using the trial bill details. The valid value is: <ul style="list-style-type: none"> • Trial Bill Details <p>Note: By default, the Trial Bill Details option is selected.</p>	Yes
Person ID	Used to search trial bills which are generated for a particular person. <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	No
Trial Bill ID	Used to search for a particular trial bill.	No

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search trial bills which are generated for a particular account.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Division	Used to search trial bills which are generated for accounts belonging to a particular division.	No
From Trial Bill Date	Used to search trial bills which are generated from a particular date onwards.	No
Invoice Currency	Used to search trial bills which are generated in a particular invoice currency.	No
To Trial Bill Date	Used to search trial bills which are generated till a particular date.	No
Batch Run Date	Used to search trial bills which are generated on a particular batch run date.	No
Trial Bill Description	Used to search trial bills which are generated in a particular batch run.	Yes (Conditional)
		Note: This field is required when you are searching for trial bills using the batch run date.

Note: You must specify at least one search criterion while searching for a trial bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Information	Displays additional information about the trial bill.
	Note: It has a link. On clicking the link, the Trial Bill screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.
Account Information	Indicates the account for which the trial bill is generated. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Person Name	Indicates the person for whom the trial bill is generated.
Division	Indicates the division to which the account belongs.
Batch Run Date	Displays the date when the batch is executed to generate the trial bill.
Batch Run Number	Indicates the batch run in which the trial bill is generated.

Related Topics

Searching for a Trial Bill

Prerequisites

To search for a trial bill, you should have:

- Divisions and currencies defined in the application

Procedure

To search for a trial bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Trial Bill**.
The **Trial Bill** screen appears.
3. Enter the search criteria in the **Search Trial Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of trial bills that meet the search criteria appears in the **Search Results** section.

Related Topics

Viewing the Trial Bill Details

Procedure

To view the details of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.
The **Trial Bill** screen appears.
3. View the basic details of the trial bill in the **Trial Bill** zone.
4. View the segments of the trial bill in the **Trial Bill Segments** zone.
5. View the calc lines of a trial bill segment in the **Trial Bill Segment Calc Lines** zone.

6. View the service quantity details of a trial bill segment in the **Trial Bill Segment SQ Details** zone.
7. View the financial details of a trial bill segment in the **Trial Bill Segment Financial Details** zone.

Trial Bill (Used for Viewing)

The **Trial Bill** screen allows you to:

- View the details of a trial bill, such as the trial bill summary, trial bill messages, and trial bill characteristics
- View the segments of a trial bill
- View the calculation lines, service quantity details, and financial details of a trial bill segment
- View the details of the policy, plan, and membership for which a trial bill segment is created

It contains the following zones:

- [Trial Bill](#) on page 920
- [Trial Bill Segments](#) on page 922
- [Trial Bill Segment Calc Lines](#) on page 923
- [Trial Bill Segment SQ Details](#) on page 924
- [Trial Bill Segment Financial Details](#) on page 925
- [Policy Details](#) on page 925

Trial Bill

The **Trial Bill** zone displays the details of the trial bill. It contains the following sections:

- **Main** — This section provides basic information about the trial bill. It contains the following fields:

Field Name	Field Description
Trial Bill ID	Displays the trial bill ID.
Trial Bill Information	Displays additional information about the trial bill.
Trial Bill Description	Displays the description of the batch run in which the trial bill is generated.
Account Information	Indicates the account for which the trial bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

- **Trial Bill Summary** — This section summarizes the financial impact of the bill. It contains the following fields:

Field Name	Field Description
New Charges	Displays the total amount of frozen bill segment financial transactions which are linked to the trial bill.
Adjustments	Displays the total amount of frozen and/or canceled adjustment financial transactions which are linked to the trial bill.
Corrections	Displays the total amount of canceled and/or rebilled bill segment financial transactions which are linked to the trial bill.
Total	Displays the sum of new charges, adjustments, and corrections.
No. of Bill Segments in Error	Indicates the number of bill segments in the trial bill which are in the Error status.

- **Trial Bill Messages** — This section lists the bill messages that are stamped on the trial bill. It contains the following columns:

Column Name	Column Description
Message Code	Displays the code that uniquely identifies the bill message.
Message on Bill	Displays the bill message.
Priority	Indicates the priority which determines the order in which the bill message must be printed on the trial bill.
Insert Code	Indicates whether the bill message must be sent separately along with the trial bill.

- **Characteristics** — This section lists characteristics defined for the trial bill. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

In addition, this zone contains a button named **Display Trial Bill** which allows you to print a trial bill in the PDF format.

Related Topics

For more information on...	See...

Trial Bill Segments

The **Trial Bill Segments** zone lists the segments of the trial bill. You can filter the trial bill segments using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search trial bill segments which are generated for a particular usage account.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Contract Type	Used to search trial bill segments which are generated against a particular type of contract.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Trial Bill Segment Type	Used to search for a particular type of trial bill segments. The valid values are: <ul style="list-style-type: none"> • Post Processing • Regular 	No
Price Item	Used to search trial bill segments which are generated for a particular price item.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	
Trial Bill Segment Status	Used to search trial bill segments in a particular status. The valid values are: <ul style="list-style-type: none"> • Error • Freezable 	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Segment ID	Displays the trial bill segment ID.
Status	Indicates the status of the trial bill segment. The valid values are: <ul style="list-style-type: none"> • Error • Freezable
Start Date	Displays the start date of the trial bill segment.

Column Name	Column Description
End Date	Displays the end date of the trial bill segment.
Calculated Amount (Pricing Currency)	Displays the trial bill segment amount in the pricing currency.
Price Item	Indicates the price item for which the trial bill segment is generated.
Pricing Parameters	Indicates the price item parameters which are used along with the price item for determining the price item pricing.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment ID	Indicates the price item pricing which is used during calculation.
Billable Charge ID	Indicates the billable charge for which the trial bill segment is generated. Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge.
Construct ID	Indicates the construct through which the trial bill segment is generated. Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct.

On clicking the **Broadcast** (📡) icon corresponding to the trial bill segment, the **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, **Trial Bill Segment Financial Details**, and **Policy Details** zones appear with the details of the respective trial bill segment.

Trial Bill Segment Calc Lines

The **Trial Bill Segment Calc Lines** zone lists the calculation lines which indicate how the system calculated the trial bill segment amount. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the calculation line is created while calculating the trial bill segment amount.
Description on Bill	Displays the summarized information about the calculation line that will be printed on the trial bill.
Calculated Amount (Pricing Currency)	Displays the calculated charge amount associated with the calculation line in the pricing currency.
Calculated Amount (Invoice Currency)	Displays the calculated charge amount associated with the calculation line in the invoice currency.

Column Name	Column Description
Print	Indicates whether information about the calculation line will be printed on the person's trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No
Appears in Summary	Indicates whether the calculation line amount will appear in the summary of the trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Price Component ID	Indicates the price component which is used during calculation.
Service Quantity Identifier	Indicates the service quantity identifier (SQI) of the service quantity which is priced on the calculation line.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Base Amount	Displays the total amount derived from the cross-referenced lines that the current line then used to calculate the charge amount.
Rate Component Sequence	Indicates the sequence of the rate component on the effective rate version which is used while calculating the line.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Distribution Code	Indicates the distribution code associated with the rate component.

By default, the **Trial Bill Segment Calc Lines** zone does not appear in the **Trial Bill** screen. It appears only when you click the **Broadcast** () icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

How to view the service quantity details of a trial bill segment	Viewing the SQ Details of a Trial Bill Segment on page 928

Trial Bill Segment Financial Details

The **Trial Bill Segment Financial Details** zone lists the distribution codes which indicate the GL accounts that will be affected by the trial bill segment financial transaction. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the distribution code will be considered for deriving the GL account.
Distribution Code	Indicates the distribution code associated with the rate component used for calculating the trial bill segment amount.
Amount	Displays the amount that will be debited or credited to the GL account.

By default, the **Trial Bill Segment Financial Details** zone does not appear in the **Trial Bill** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Policy Details

The **Policy Details** zone lists the policy, plan, and membership for which the trial bill segment is created. It contains the following columns:

Column Name	Column Description
Policy Information	Displays the information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
External Membership ID	Indicates the membership in which the member is included.
Member's Primary Identifier	Displays the concatenated string consisting of primary identifier type and primary identifier of the member which are separated by a colon (:).
Member Name	Indicates the member for whom the trial bill segment is generated.
Plan Information	Displays information about the policy plan.
	Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.

By default, the **Policy Details** zone does not appear in the **Trial Bill** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Printing a Trial Bill in the PDF Format

Prerequisites

To print a trial bill in the PDF format, you should have:

- Oracle Documaker integrated with Oracle Revenue Management and Billing

Procedure

To print a trial bill in the PDF format:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill that you want to print in the PDF format.

The **Trial Bill** screen appears.

3. Click the **Display Trial Bill** button in the **Trial Bill** zone.

The trial bill is printed in the PDF format.

Viewing the Segments of a Trial Bill

Procedure

To view the segments of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. View the segments of the trial bill in the **Trial Bill Segments** zone.
4. If required, you can filter the trial bill segments using various search criteria.

Filtering the Trial Bill Segments

Prerequisites

To filter the trial bill segments, you should have:

- Usage accounts, contract types, and price items defined in the application

Procedure

To filter the trial bill segments:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. Enter the search criteria in the **Trial Bill Segments** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The search results are filtered based on the specified criteria.

Viewing the Calc Lines of a Trial Bill Segment

Procedure

To view the calc lines of a trial bill segment:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. If required, you can filter the trial bill segments in the **Trial Bill Segments** zone.
4. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the trial bill segment whose details you want to view.

The **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear.

- View the calc lines of the trial bill segment in the **Trial Bill Segment Calc Lines** zone.

GL Account Validation

Topics:

- [Static GL Account Validation](#)
- [Dynamic GL Account Validation](#)

Oracle Revenue Management and Billing allows you to validate the GL account statically and dynamically. The static GL account validation means you can validate the GL account while creating or editing a distribution code. And, the dynamic GL account validation means you can validate the GL account while assigning it to trial and actual financial transactions through the batch process.

For more information about static GL account validation and dynamic GL account validation, refer to [Static GL Account Validation](#) on page 932 and [Dynamic GL Account Validation](#) on page 932, respectively.

Static GL Account Validation

If you want to validate the GL account while creating or editing a distribution code, you need to select the **Validate GL Account** check box in the **Distribution Code** screen. If the GL account is valid, the following string appears below the check box while saving the distribution code:

“GL Account is validated on YYYY-MM-DD”

And, if the GL account is invalid, the following string appears below the check box while saving the distribution code:

“GL Account is invalid”

If you want to enable the static GL account validation feature on the **Distribution Code** screen, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to the **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen. Both these algorithm types have one parameter named **GL Account Length**. You need to set the value of this parameter while creating the algorithm using the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type. If you attach an algorithm of the **C1-GLVAL** algorithm type, the system checks whether the length of GL account is greater than or equal to the value defined in the **GL Account Length** parameter. If the length is greater than or equal to the specified length, the GL account is considered as valid. And, if the length is less than the specified length, the GL account is considered as invalid.

And, if you attach an algorithm of the **C1-GLVAL-COB** algorithm type, the system checks whether the length of GL account is equal to the value defined in the **GL Account Length** parameter. If the length is equal to the specified length, the GL account is considered as valid. And, if the length is less than or greater than the specified length, the GL account is considered as invalid.

Dynamic GL Account Validation

If you want to validate GL account while assigning it to trial and actual financial transactions, you need to set the **Validate GL Account** parameter to **Y** while executing the batch. If the GL account is valid, the date when the GL account is validated is added in the **GLA_VAL_DT** column of the **CI_TRL_FT_GL** or **CI_FT_GL** table, respectively, depending on whether the GL account is assigned to a trial or actual financial transaction.

If you want to enable the dynamic GL account validation feature in the **C1-GLASN** or **GLASSGN2** batch, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to either of the following:

- The **GL Account Validation** algorithm entity in the **Algorithms** tab of the **Division** screen
- The **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

If the GL account validation algorithm is defined at both these algorithm spots, the algorithm defined at the division level always takes precedence over the algorithm defined in the installation options during dynamic GL account validation.

Chapter 15

Upload Validated Adjustment Data

Topics:

- [Prerequisites](#)
- [CSV File Format](#)
- [Adjustment Upload Request \(Without Approval\) Status Transition](#)
- [Adjustment Upload Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-ADJUPLD](#)
- [Upload Request Type](#)
- [Adjustment Upload Request \(Used for Searching\)](#)
- [Adjustment Upload Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now provided you with an ability to upload adjustment data received from an external source system and create adjustments using the **C1-ADUP1** and **C1-ADUP2** batches. However, there was no user interface available through which you can upload an adjustment data file and create adjustments from the adjustment records. Now, the system provides a user interface which helps you to upload an adjustment data file.

You can upload an adjustment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. At present, the system supports only the CSV file format. For more information about the CSV file format, see [CSV File Format](#) on page 935.

While uploading an adjustment data file, you need to specify the upload request type using which you want to upload the adjustment data file. It is the upload request type which helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background)
- Whether the size of the adjustment data file exceeds the maximum file size defined in the upload request type
- Whether the adjustment data file must be approved by the approver before creating adjustments

All records are validated before uploading an adjustment data file. During the validation process, the system and custom validations (if any) are executed. If there is any invalid record, the system does not allow you to upload the adjustment data file. The system indicates the reason why the adjustment record could not pass through the validation process. You need to first correct the adjustment record in the CSV file and then upload the adjustment data file.

An upload request of the specified upload request type is created when an adjustment data file is successfully uploaded in the system. You can track an adjustment data file through an upload request. During the adjustment upload process, an adjustment upload request goes through various statuses in its lifecycle. For more information about the adjustment upload request statuses, see [Adjustment Upload Request \(Without Approval\) Status Transition](#) on page 936 and [Adjustment Upload Request \(With Approval\) Status Transition](#) on page 937.

Note that the lifecycle of an adjustment upload request is driven by the business object using which the adjustment upload request is created. An adjustment upload request business object named **C1-ADJUPLD** is shipped with the product. The adjustment upload feature explained in this section is documented based on the lifecycle and logic defined in the **C1-ADJUPLD** business object.

If required, the implementation team can create a custom adjustment upload request business object.

Once the adjustment upload request is created, you can perform various tasks, such as:

- Track the status of an adjustment upload request
- View the details of an adjustment upload request
- View all records of an adjustment data file
- Cancel an adjustment data file
- Create adjustments for an adjustment data file
- Submit the adjustment data file for approval
- Approve or reject an adjustment data file based on the observations

Prerequisites

To setup the adjustment upload process, you need to do the following:

- Define the required upload request types in the system
- Create a defer algorithm using the **C1-UPLDEFEVL** algorithm type
- Create an algorithm using the **C1-MTCIALG** algorithm type if you want to create adjustments using the Contract match type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract Type match type
- Define the required characteristic types where the characteristic entity is set to Upload Request Type
- Define cancellation and rejection reasons for the **C1-ADJUPLD** business object
- Assign the **C1-ADJUP** To Do type to a To Do role whose users must receive To Do entries generated while submitting an upload request (i.e. an adjustment data file) for approval
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

CSV File Format

Before uploading an adjustment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified.
Account Identifier	Used to specify the account identifier.	Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified.
Account ID	Used to indicate the account for which the adjustment must be created.	Yes (Conditional) Note: This data is required when the match type is Contract Type and the account identifier type and account identifier are not specified.

Column Name	Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which the adjustment must be created.	Yes
Match Value	Used to indicate the entity (such as contract, contract type, and so on) against which the adjustment must be created.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	Yes
	Note: The adjustment type must be included in the adjustment type profile which is attached to the contract type.	
Adjustment Amount	Used to specify the adjustment amount.	Yes
	Note: The adjustment amount precision must match the precision (decimal positions) defined for the currency.	
Currency Code	Used to indicate the currency in which the adjustment must be created.	Yes
Comments	Used to specify additional information about the adjustment.	No
Bill ID	Used to indicate the bill on which the adjustment must be created.	No
Arrears Date	Used to specify the date from when the amount is outstanding on the bill.	No
Char Type 1, Char Type 2,, Char Type 5	Used to indicate the characteristic that must be defined for the adjustment.	Yes (Conditional)
		Note: This data is required if the characteristic value is specified.
Char Value 1, Char Value 2,, Char Value 5	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required if the characteristic type is specified.

Note: If an adjustment data file contains column names other than those mentioned in the above table, the system will not upload the adjustment data file.

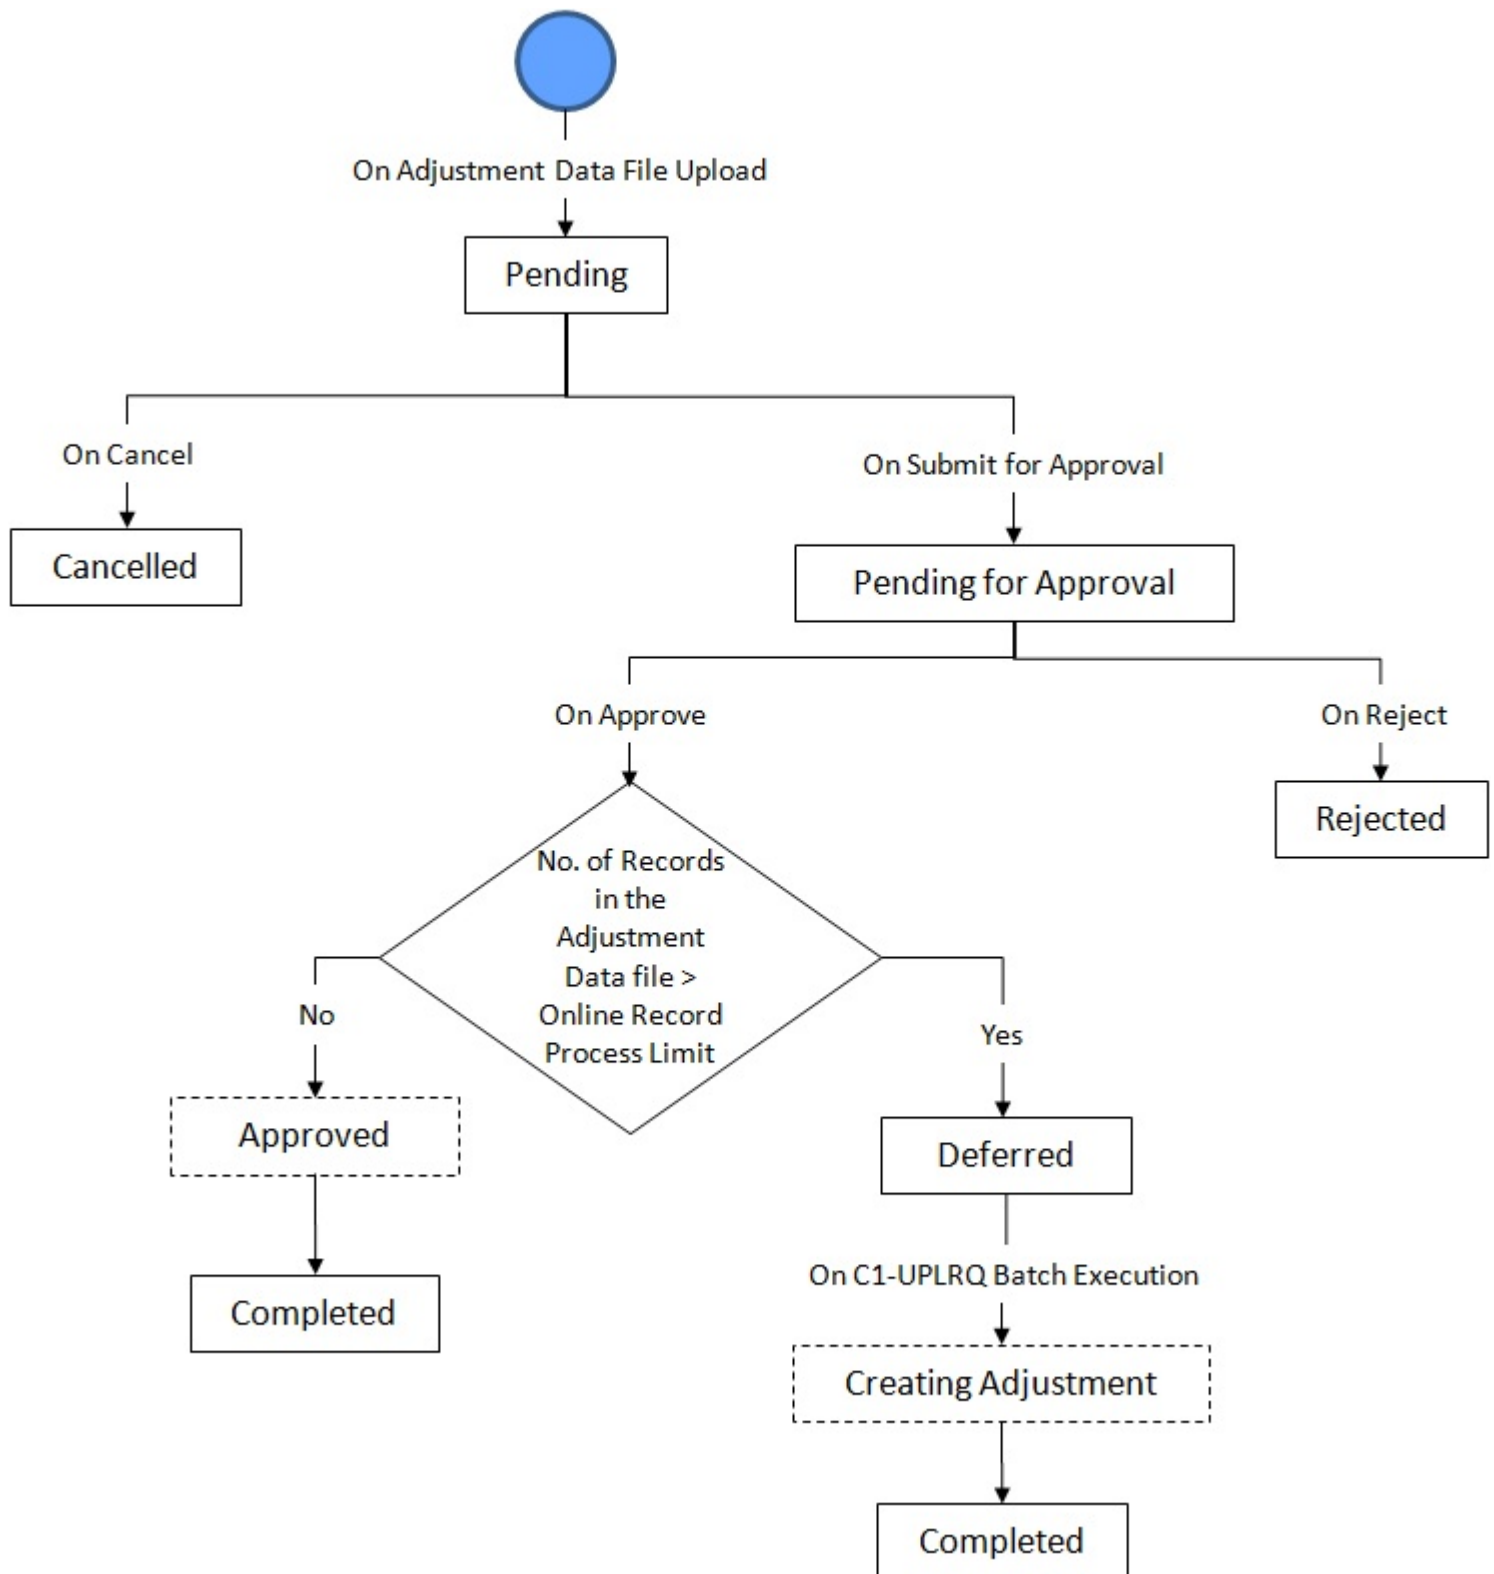

Adjustment Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is off:

Adjustment Upload Request (With Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is on:

Algorithms Used in C1-ADJUPLD

The following table lists the algorithms which are attached to the **C1-ADJUPLD** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-FLREQ-INF	C1-FLREQ-INF	<p>This algorithm formats the upload request information that appears throughout the system for the BO. The algorithm formats the information as follows: Upload Request type description, Status description, ID. This algorithm generates the upload request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> • Upload Request Type Description • Upload Request Description • Upload Request ID
Validation	C1-ADVALREQ	C1-ADVALREQ	<p>This algorithm will be called from a business service and is responsible for validating the uploaded CSV file and identify if any records are invalid. The validations to be performed are mentioned below:</p> <ol style="list-style-type: none"> 1. Mandatory column data checks 2. Check for valid values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. 3. This algorithm will also call the match type algorithm linked to the request type to derive and validate the value for contract ID. This algorithm validates the uploaded CSV file and identifies invalid records, if any. The validations performed are as follows: <ul style="list-style-type: none"> • Validating mandatory column data • Validating values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. • Invoke the match type algorithm linked to the request type to derive and validate the value for contract ID.

The following table lists the algorithms which are used in the lifecycle of the **C1-ADJUPLD** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Cancelled	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Create Adjustment	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates and creates adjustment. It evaluates, if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the Enter status algorithm when the request object is changed to Create or Approved status.
Deferred	Monitor	C1-ADJ-MNTR	C1-ADJ-MNTR	This algorithm will be invoked from the Upload Request Monitor batch. This will be responsible for BO transition from 'Deferred' to 'Creating' status. This algorithm is triggered from the Upload Request Monitor batch. This algorithm transitions the business object status from Deferred to Creating .
Pending for Approval	Enter	C1-ADJUPAPVL	C1-ADJUPAPVL	This algorithm will be responsible of creating To Do for the approver to approve or reject the uploaded file data. To Do will be created using the To Do Type linked to the request type to the approver(s) who are associated with the To Do Role linked to the request type. This will be invoked by the Enter Status algorithm when the Request object enters 'SUBMITTED - Pending For Approver' status. This algorithm creates the To Do using the To Do Type for the approver to approve or reject the uploaded file data. This To Do Type is linked to the request type to the approver(s) associated with the To Do Role linked to the request type. This algorithm is triggered by the Enter status algorithm when the request object enters Submitted - Pending For Approver status.

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the Enter status algorithm when the request object is changed to Create or Approved status.
Rejected	-	-	-	-
Completed	-	-	-	-
Creating Adjustment	Enter	C1-ADJCRTION	C1-ADJCRTION	This algorithm is responsible for creating Adjustment for the uploaded file. The adjustment ID will be updated back in the request table to link the request with the adjustments. This algorithm creates an adjustment for the uploaded file. In addition, the adjustment ID is stamped on the adjustment and on the corresponding financial transaction.

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to Contract (CONT) .

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to Contract Type (CNTY) . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination
