4. Enter the required details in the **Main** section.
 5. Associate the required algorithms with an accrual type.
 6. Add the required entities that must be excluded in an accrual type.
 7. Associate the required division with an accrual type.
 8. Define characteristics in an accrual type, if required.
 9. Click **Save**.

The accrual type is defined

Associating an Algorithm with an Accrual Type

Prerequisites

To associate algorithms with an accrual type, you should have:

- Algorithms defined in the application.

Procedure

To associate algorithms with an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

3. Click the **Edit** button in the **Accrual Type** zone.

The **Accrual Type** screen appears.

4. Ensure that the **Algorithms** section is expanded when you are editing the accrual type.

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to execute the algorithm. The valid values are: <ul style="list-style-type: none"> • Accrual Calculation • Accrual Creation • Accrual Eligibility • Accrual Post Calculation • Accrual Post Processing • Accrual Pre Processing • Accrual Reversal • Accrual Reversal Post Processing • Accrual Reversal Pre Processing • Accrual Calculation 	Yes <p>Note: This field is required when you are associating an algorithm with the accrual type.</p>
Sequence	Used to specify the order in which the algorithms with the same system event must be executed.	Yes (Conditional) <p>Note: This field is required when you are associating an algorithm with the accrual type.</p>

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to specify the algorithm that you want to execute on the system event.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the system event, the Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search (🔍) icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Note: This field is required when you are associating an algorithm with the accrual type.</p>

Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Calculation	-	Yes	Information will be available soon...
	<p>Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accrual Creation	-	No	-
	<p>Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accrual Eligibility	-	No	-
	<p>Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accrual Post Calculation	-	No	-
	<p>Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accrual Post Processing	-	No	-
	<p>Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Pre Processing	-	No	-
	Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal	-	No	-
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Post Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Pre Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Calculation	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

Note: You must associate algorithms, such as **Accrual Calculation**, **Accrual Creation**, and **Accrual Reversal** to the system events in the accrual type.

5. Enter the required details in the **Algorithms** section.
6. If you want to associate more than one algorithm to the accrual type, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to disassociate an algorithm from the accrual type, click the **Delete (🗑)** icon corresponding to the algorithm.

7. Click **Save**.

The algorithm is associated with an accrual type.

Excluding an Entity from an Accrual Type

Procedure

To exclude an entity from an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

3. Click the **Edit** button in the **Accrual Type** zone.

The **Accrual Type** screen appears.

4. Ensure that the **Objects To Exclude** section is expanded when you are editing the accrual type.

Field Name	Field Description	Mandatory (Yes or No)
Entity Type	Used to indicate the entity type.	No
Sequence	Used to specify the order in which the entities must be excluded from the accrual type.	No
Entity	Used to indicate a valid value for the selected entity type.	Yes (Conditional)
		Note: This field is required if you select an option from the Entity Type field.

5. Enter the required details in the **Objects To Exclude** section.

Note: If you select a predefined entity type, the **Search** (🔍) icon appears corresponding to the **Entity** field. On clicking the **Search** icon, you can search for a predefined entity value.

6. If you want to exclude more than one entity in the accrual type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove an excluded entity from the accrual type, click the **Delete** (🗑️) icon corresponding to the entity.

7. Click **Save**.

The entity is defined which must be excluded in an accrual type.

Associating a Division with an Accrual Type

Prerequisites

To associate an accrual type with a division, you should have:

- Divisions defined in the application.

Procedure

To associate an accrual type with a division:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

3. Click the **Edit** button in the **Accrual Type** zone.

The **Accrual Type** screen appears.

4. Ensure that the **Divisions** section is expanded when you are editing the accrual type.

The **Divisions** section contains the following fields:

Fields Name	Fields Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the division is effective for the accrual type.	No
Division	Used to indicate division to which you want to associate the accrual type.	Yes (Conditional)
		Note: This field is required when you have specified the Effective Date field.

5. Enter the required details in the **Divisions** section.
6. If you want to associate more than one division to the accrual type, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to disassociate a division from the accrual type, click the **Delete** (🗑️) icon corresponding to the division.

7. Click **Save**.

The division is associated with an accrual type.

Accrual Type (Used for Viewing)

The **Accrual Type** screen allows you to:

- View the details of an accrual type.
- Edit an accrual type.
- Delete an accrual type.

This screen contains the following zone:

- [Accrual Type](#) on page 1970

Accrual Type

The **Accrual Type** zone displays the details of an accrual type. This zone consists of the following sections:

- **Main** – This section provides basic information about the accrual type. It contains the following columns:

Column Name	Column Description
Accrual Type	Displays the name of an accrual type.
Description	Displays the description of an accrual type.
Accrual Object	Indicates the accrual object.
Adjustment Type	Indicates the adjustment type using which the adjustment is created.
Accrual Criteria	Indicates the accrual criteria used for calculation.
Accrual Source	Indicates the source of data that you want to use while calculating the accruals that are based on actual data. Note: This field appears when Actual option is selected from the Accrual Criteria field while creating an accrual type.
Historical Bill Count	Displays the number of historical bills which are considered for accrual calculation. Note: This field appears when Historical option is selected from the Accrual Criteria field while creating an accrual type.
Type of Day	Displays the type of day that is used to calculate the accrual amount.
Posting Method	Displays the posting method that is used to calculate the accrual amount.
Cancel Reason	Displays the reason of cancelation that is used while reversing the accrual.
Contract Type	Displays the contract type.

- **Algorithms** – Displays the algorithms that are associated with the accrual type. This section contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm is executed.
Sequence	Displays the order in which the algorithms for each system is executed.
Algorithm	Indicates the algorithm which is associated with the accrual type.
	Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm.

- **Objects to Exclude** – Displays the objects which are excluded from the accrual type. This section contains the following columns:

Column Name	Column Description
Entity Type	Indicates the entity type.
Sequence	Displays the order in which the entities are excluded from the accrual type.
Entity	Displays the value for the entity type.

- **Divisions** – Displays the divisions which are associated with the accrual type. This section contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the division is effective for the accrual type.
Division	Displays the division associated to the accrual type.

- **Characteristics** – Displays the characteristics for the accrual type. This section contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the accrual type.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an accrual type.
Delete	Used to delete an accrual type.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which an accrual type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing an Accrual Type

Prerequisites

To edit an accrual type, you should have:

- Adjustment Types defined in the application (where the **Print by Default** and **Influence Next Bill Balance** checkbox is not selected).

Procedure

To edit an accrual type:

- Search for the accrual type in the **Accrual Type** screen.
- In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

- Click the **Edit** button in the **Record Actions** section.

The **Accrual Type** screen appears. It contains the following section:

- Main** – Used to specify basic details about the accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type	Used to specify the name for an accrual type.	Yes
Description	Used to specify the description for an accrual type.	Yes
Accrual Object	Used to indicate the type of the accrual object that you want to create for posting the accrual amount. Note: At present, you can only create adjustments to record the accruals for the accounts in the application.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created. Note: This field appears when you select the Adjustment option from the Accrual Object field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Accrual Criteria	Used to indicate the accrual criteria that you want to use for the accrual calculation. The valid values are: <ul style="list-style-type: none"> Actual Historical 	Yes
Accrual Source	Used to indicate the source of data that you want to use for calculating the accruals that are based on the actual data. The valid values are: <ul style="list-style-type: none"> Transaction Feed Trial Bill 	Yes (Conditional)
	Note: This field appears when you select the Actual option from the Accrual Criteria field.	Note: This field is required if you select the Actual option from the Accrual Criteria field.
Historical Bill Count	Used to specify the number of historical bills that you want to consider for accrual calculation.	Yes (Conditional)
	Note: This field appears only when you select the Historical option from the Accrual Criteria field.	Note: This field is required if you select the Historical option from the Accrual Criteria field.
Accrual Request Business Object	Used to indicate the business object that you want to use while creating the accrual request. <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>On specifying the business object, the description of the business object appears corresponding to the Accrual Request Business Object field.</p>	No
Approval Required	Used to indicate whether approval is required while creating accrual requests which are created using the accrual type.	Yes
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the accrual type.	Yes
	Note: This field appears when Approval Required checkbox is selected.	Note: This field is required when the Approval Required checkbox is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the accrual adjustments using the accrual type.	Yes (Conditional)
	Note: This field appears when Approval Required check box is selected.	Note: This field is required when the Approval Required checkbox is selected.

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate the To Do type for the submitter when the accrual type is resubmitted by the approver.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when Approval Required checkbox is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	<p>Note: This field is required when the Approval Required checkbox is selected.</p>
Submitter To Do Role	Used to indicate the To Do role for the submitter when the accrual type is resubmitted by the approver.	Yes (Conditional)
	<p>Note: This field appears when Approval Required checkbox is selected.</p>	<p>Note: This field is required when the Approval Required checkbox is selected</p>
Type of Day	Used to indicate the type of day that you want to use to calculate the accrual amount. <ul style="list-style-type: none"> • Business Day • Calendar Day 	Yes
Posting Method	Used to indicate the posting method that you want to use for calculating the accrual amount. The valid values are: <ul style="list-style-type: none"> • Bill Level • Bill Segment Level 	Yes
Cancel Reason	Used to specify the cancel reason that you want to use while reversing the accrual.	Yes (Conditional)
		<p>Note: This field is required when Adjustment option is selected from the Accrual Object field.</p>
Contract Type	Used to indicate the contract type that you want to use for accrual calculation.	Yes
	<p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.</p>	

- **Algorithms** – Used to specify the algorithms that you want to use for accrual type. This section contains the following fields:

Fields Name	Fields Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to execute the algorithm. The valid values are: <ul style="list-style-type: none"> • Accrual Calculation • Accrual Creation • Accrual Eligibility • Accrual Post Calculation • Accrual Post Processing • Accrual Pre Processing • Accrual Reversal • Accrual Reversal Post Processing • Accrual Reversal Pre Processing • Accrual Calculation 	Yes
Sequence	Used to specify the order in which the algorithms with the same system event must be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the accrual type.
Algorithm	Used to specify the algorithm that you want to execute on the system event. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the accrual type.

Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Calculation	- Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.	Yes	Information will be available soon...
Accrual Creation	- Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Eligibility	-	No	-
	Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Post Calculation	-	No	-
	Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Post Processing	-	No	-
	Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Pre Processing	-	No	-
	Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal	-	No	-
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Post Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Pre Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Calculation	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

Note:

If you want to associate more than one algorithm with the accrual type, click the **Add (+)** icon and then specify the details. However, if you want to remove an algorithm from the accrual type, click the **Delete (🗑)** icon corresponding to the algorithm.

- **Objects to Exclude** – Used to specify the objects that you want to exclude from accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Entity Type	Used to indicate the entity type.	No
Sequence	Used to specify the order in which the entities must be excluded from the accrual type.	No
Entity	Used to indicate the valid value for the entity type that you have selected.	Yes (Conditional)
		Note: This field is required if you select the value for Entity Type field.

Note:

If you want to associate more than one entity with the accrual type, click the **Add (+)** icon and then specify the details. However, if you want to remove an entity from the accrual type, click the **Delete (🗑)** icon corresponding to the entity type.

- **Divisions** – Used to specify division to which you want to associate the accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the division is effective for the accrual type.	No
Division	Used to indicate division to which you want to associate the accrual type.	Yes (Conditional)
		Note: This field is required when you have specified the Effective Date field.

Note:

If you want to associate more than one division with the accrual type, click the **Add (+)** icon and then specify the details. However, if you want to remove a division from the accrual type, click the **Delete (🗑)** icon corresponding to the division.

- **Characteristics** – Used to specify the characteristics for the accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for an accrual type.
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Accrual Type .	Note: This field is required when you are defining a characteristic for an accrual type.
Characteristic Value	Used to specify the value of characteristic type.	Yes (Conditional)
	Note: Once you select the characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search (🔍) icon, the Predefined Characteristic window appears. On specifying the characteristic, the description of the characteristic appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for an accrual type.

Note:

If you want to associate more than one characteristic with the accrual type, click the **Add (+)** icon and then specify the details. However, if you want to remove a characteristic from the accrual type, click the **Delete (🗑)** icon corresponding to the characteristic.

4. Modify the required details in the **Main** section.
5. Associate the required algorithms with the accrual type.
6. Add, edit, or remove the required objects in the accrual type.
7. Add, edit, or remove the required divisions in the accrual type.
8. Add, edit, or remove the characteristics in the accrual type.
9. Click **Save**.

The changes made to an accrual type are saved.

Deleting an Accrual Type

Procedure

To delete an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type that you want to delete.

The **Accrual Type** screen appears.

3. Click the **Delete** button in the **Accrual Type** zone.

A message appears confirming whether you want to delete an accrual type.

4. Click **OK**.

An accrual type is deleted.

Accrual (Used for Searching)

The **Accrual** screen allows you to search for an accrual detail using various search criteria. This screen consists of the following zone:

- [Search Accrual](#) on page 1979

Search Accrual

The **Search Accrual** zone allows you to search an accrual detail using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an accrual using the search parameter. The valid value is: <ul style="list-style-type: none"> • Accrual Details 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to indicate whether you want to search for accruals belonging to a particular account.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Division	Used to indicate whether you want to search for accruals belonging to a particular division.	No
Accrual Type	Used to search for accruals which are created using a particular accrual type.	No
Posting Method	Used to indicate whether you want to search for accruals which use a particular posting method for calculating the accrual amount. The valid values are: <ul style="list-style-type: none"> • Bill Level • Bill Segment Level 	No
Accrual Cycle	Used to search for accruals which are created using a particular accrual cycle.	No
Creation Date From	Used to indicate whether you want to search for accruals which are created from a particular date onwards.	No
Accrual Creation Mode	Used to indicate whether you want to search for accruals which are created using a particular creation mode. The valid values are: <ul style="list-style-type: none"> • Batch • Manual 	No
Creation Date To	Used to search accruals which are created till a particular date.	No
Status	Used to search for accruals with a particular status. The valid values are: <ul style="list-style-type: none"> • Ready For Accrual • Accrued • Reversed • Approval In Progress • Cancelled • Draft • Ignore • Processed • Rejected 	No

Note: You must specify at least one search criterion while searching for an accrual.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Accrual Information	Displays information about the accrual.
	Note: It has a link. On clicking the link, the Accrual screen appears with the details of the respective accrual.
Division	Indicates the division to which the accrual account belongs.
Accrual Type	Indicates the type of the accrual.
Posting Method	Indicates the posting method used for accrual.
Accrual Creation Mode	Indicates the creation mode used for an accrual.
Status	Displays the status of the accrual.
Create Date/Time	Displays the date and time when the accrual is created.

Searching for an Accrual

Procedure

To search for an accrual :

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Accrual**.
A sub-menu appears.
3. Click the **Search** option from the **Accrual** sub-menu.
The **Accrual** screen appears.
4. Enter the search criteria in the **Search Accrual** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of accruals that meet the search criteria appears in the **Search Results** section.

Viewing the Accrual Details

Procedure

To view the details of an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1986
- [Accrual - Log](#) on page 1989

3. Ensure that the **Main** tab is selected.
4. View the details of the accrual in the **Accrual** zone.

Defining an Accrual

Prerequisites

To define an accrual, you should have:

- Batch **C1_ACCRE** defined in the application, if an accrual creation takes place through a batch.
- Algorithm **C1_ACCR_CRE** defined for accrual creation in the application.
- Algorithm **C1_ACCR_CAL** defined for accrual calculation in the application.
- Algorithm **C1_ACCR_REV** defined for accrual reversal in the application.
- Account ID defined in the application.
- Characteristic type defined in the application (where the characteristic entity is set to **Accrual**).
- Price Item defined in the application.

Procedure

To add an accrual:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Accrual**.

A sub-menu appears.

3. Click the **Add** option from the **Accrual** sub menu.

The **Accrual** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the accrual.
- **Characteristics** – Used to specify the characteristics for an accrual.
- **Accrual Details** – Used to specify the accrual details for an accrual.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular account. Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears. On specifying the account information, the description of the account appears corresponding to the Account ID field.	Yes
Contract	Used to specify the accrual contract of the account. Note: It is a read-only field and cannot be edited.	Not applicable
Accrual Cycle	Used to specify the accrual cycle for the account. Note: It is a read-only field and cannot be edited.	Not applicable
Posting Method	Used to specify the posting method used for an accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Accrual Type	Used to specify the type of an accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Accrual Creation Mode	Used to specify the creation method of an accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Currency	Used to specify the currency used for calculating the accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Comments	Used to specify the comments for an accrual.	No

Tip: Alternatively, you can access the **Accrual** screen by clicking the **Add** button in the **Page Title** area of the **Accrual** screen.

Note:

You must specify the reversal end date which must be later than the reversal start date.

You must specify the accrual date which lies earlier than the reversal start date.

4. Define characteristics for an accrual, if required.
5. Define the accrual details for an accrual.
6. Click **Save**.
7. An accrual is defined.

Adding the details for an accrual	Adding the Details for an Accrual on page 1985

Defining a Characteristic for an Accrual**Prerequisites**

To define a characteristic for an accrual, you should have:

- Characteristic type defined in the application (where the characteristic entity is set to **Accrual**).

Procedure

To define a characteristic for an accrual:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an accrual.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Detail Sequence	Used to specify the sequence in which the accrual processing must be executed.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Effective Date	Used to specify the date from when the characteristic is effective for an accrual.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for an accrual.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Accrual .	Note: This field is required when you are defining a characteristic for an accrual.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for an accrual.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for an accrual., click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an accrual, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for an accrual..

Adding the Details for an Accrual

Procedure

To define the details for an accrual:

- Ensure that **Accrual Details** section is expanded when you are defining or editing an accrual.

The **Accrual Details** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Detail Sequence	Used to specify the detailed sequence in which the accrual processing must be executed.	Not applicable
Price Item	Used to indicate the price item for an accrual.	Yes (Conditional)
	<p>Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p>	<p>Note: This field is required when the price item information is not defined for the accrual contract.</p>
Amount	Used to specify the accrual amount.	Yes
Override Reason	Used to specify the override reason for the accrual.	No

2. Enter the required details in the **Accrual Details** section.
3. Click **Save**.

The accrual details are defined for an accrual.

Accrual (Used for Viewing)

Once you create an accrual, the **Accrual** screen allows you to:

- View the details of an accrual
- Edit an accrual
- Submit an accrual
- Delete an accrual
- Approve, Reject, and Re-Submit an accrual
- View the accrual calculation lines

This screen contains the following tabs:

- [Accrual - Main](#) on page 1986
- [Accrual Log](#) on page 1989

Accrual - Main

The **Main** tab displays information about the reconciliation. It contains the following zones:

- [Accrual](#) on page 1986
- [Accrual Details](#) on page 1988
- [Accrual Calculation Lines](#) on page 1988

Accrual

The **Accrual** zone displays the details of an accrual. It contains the following sections:

- **Main** – Displays basic information about the accrual. It contains the following columns:

Column Name	Column Description
Accrual Information	Displays information about the accrual.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account

Column Name	Column Description
Contract Information	Displays information about the contract. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Division	Displays the division which is associated with the accrual.
Status	Displays the status of the accrual.
Accrual Cycle	Displays the cycle of the accrual.
Accrual Date	Displays the accrual date.
Reversal Start Date	Displays the date from when the reversal is effective for the accrual.
Reversal End Date	Displays the date till when the reversal is effective for the accrual.
Accrual Type	Displays the type of the accrual.
Accrual Creation Mode	Displays the creation mode of the accrual.
Posting Method	Displays the posting method that is used for calculating the accrual.
Accrual Amount	Displays the accrual amount.

- **Characteristics** – Lists the characteristics defined for the reconciliation. It contains the following columns:

Column Name	Column Description
Accrual Detail Sequence	Displays the sequence of the accrual.
Effective Date	Displays the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an accrual.
Delete	Used to delete an accrual.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which an accrual is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the accrual is created.

Accrual Details

The **Accrual Details** zone displays the details of an accrual. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence of the accrual.
Price Item	Displays the price item that is defined at the bill segment level for the accrual calculation. Note: It contains a link. On clicking the link, the Price Item screen appears where you can view the details of the respective accrual adjustment.
Amount	Displays the accrual amount.
Override Reason	Displays the override reason for an accrual.
Adjustment Information	Displays the information about the adjustment that is created using the accrual creation batch. Note: It contains a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.

Accrual Calculation Lines

The **Accrual Calculation** zone displays the accrual calculation lines generated after the accrual creation batch is executed. It contains the following columns:

Column Name	Column Description
Entity Information	Displays entity information. Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective entity.
Entity Type	Displays the entity type.
Inclusion Amount	Displays the inclusion amount.
Bill Cycle Days	Displays the bill cycle days.

Column Name	Column Description
Historical Calculation Days	Displays the historical calculation days.
Bill Information	Displays the bill information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Recurring Charge Calculation Days	Displays the recurring charge calculation days. Note: This column appears when the accrual status is Draft .
Recurring Charge Total Days	Displays the recurring charge calculation days. Note: This column appears when the accrual status is Draft .

Accrual - Log

The **Log** tab lists the complete trail of actions performed on the accrual. It consists of the following zone:

- [Accrual Log](#) on page 1989

Accrual Log

The **Accrual Log** zone lists the complete trail of actions performed on the accrual. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the accrual.
Details	Displays the details about the action performed on the accrual.
User	Indicates the user who has performed the action on the accrual.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the accrual.

Note:

You can manually add a log entry for the accrual by clicking the **Add Log Entry** link in the upper right corner of the **Accrual Log** zone.

Adding a Log Entry for an Accrual

Procedure

To add a log entry for an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose log you want to edit.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1986
- [Accrual - Log](#) on page 1989

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Accrual Log** zone.

The **Add Accrual Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Information	Displays the information about the accrual.	Not applicable
Log Details	Used to specify additional comments for the accrual.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Accrual Log** zone.

Approving an Accrual

Prerequisites

To approve an accrual, you should have:

- Accrual status as **Approval in Progress**.

Procedure

To approve an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1986
- [Accrual - Log](#) on page 1989

3. Ensure that the **Main** tab is selected.
4. Click the **Approve** button in the **Accrual** zone.

The status of the accrual is changed to **Processed**.

Note: The **Approve** button appears when the accrual is in the **Approval in Progress** status.

Rejecting an Accrual

Prerequisites

To reject an accrual, you should have:

- Accrual status as **Approval in Progress**.

Procedure

To reject an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1986
 - [Accrual - Log](#) on page 1989
3. Ensure that the **Main** tab is selected.
 4. Click the **Reject** button in the **Accrual** zone.

The status of the accrual is changed to **Rejected**.

Note: The **Reject** button appears when the accrual is in the **Approval in Progress** status.

Resubmitting an Accrual**Prerequisites**

To resubmit an accrual, you should have:

- Accrual status as **Approval in Progress**.

Procedure

To resubmit an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1986
 - [Accrual - Log](#) on page 1989
3. Ensure that the **Main** tab is selected.
 4. Click the **Resubmit** button in the **Accrual** zone.

The status of the accrual is changed to **Accrued**.

Note: The **Resubmit** button appears when the accrual is in the **Approval in Progress** status.

Editing an Accrual

Prerequisites

To define an accrual, you should have:

- Algorithm **C1_ACCR_CAL** defined for accrual calculation in the application.
- Algorithm **C1_ACCR_REV** defined for accrual reversal in the application.

Procedure

To edit an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to edit.

The **Accrual** screen appears.

3. Click the **Edit** button in the **Accrual** zone

The **Accrual** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the accrual. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular account.	Yes
	Note: It is a read-only field and cannot be edited.	
Contract	Used to specify the accrual contract of the account.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Accrual Cycle	Used to specify the accrual cycle for the account.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Posting Method	Used to specify the posting method used for an accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Accrual Type	Used to specify the type of an accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Accrual Creation Mode	Used to specify the creation method of an accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to specify the currency used for calculating the accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Comments	Used to specify the comments for an accrual.	No

Note:

You must specify the reversal end date which must be later than the reversal start date.

You must specify the accrual date which lies earlier than the reversal start date.

4. Add, edit, or remove the characteristics for an accrual, if required.
5. Add, edit, or remove the details for an accrual.
6. Click **Save**.

The changes made to the accrual are saved.

Deleting an Accrual**Procedure**

To delete an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual that you want to delete.

The **Accrual** screen appears.

3. Click the **Delete** button in the **Accrual** zone.

A message appears confirming whether you want to delete the accrual.

Note: The **Delete** button appears when the accrual status is **Draft**.

4. Click **OK**.

The accrual is deleted.

Chapter 31

Payment Agreement Request

Topics:

- [Payment Agreement Request \(Without Approval\) Status Transition](#)
- [Payment Agreement Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-PaymentAgreementRequest](#)
- [Payment Agreement Request Type](#)
- [Payment Agreement Request \(Used for Searching\)](#)
- [Payment Agreement Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount – 100\$, Unpaid Amount - 75\$)
- B2 (Bill Amount – 250\$, Unpaid Amount – 125\$)
- B3 (Bill Amount – 150\$, Unpaid Amount – 150\$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exist in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exist in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see [Payment Agreement Request \(Without Approval\) Status Transition](#) on page 2000 and [Payment Agreement Request \(With Approval\) Status Transition](#) on page 2000. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

Note: The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see [Prerequisites](#) on page 2001.

Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**

- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**
- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to C1-PA-INFO
Pre-Processing	C1-PA-PRE	C1-PA-PRE	C1-PA-PRE
Validation	C1-PA-VAL	C1-PA-VAL	C1-PA-VAL

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	C1-PA-SUBMIT
Approval In Progress	Enter	C1-PA-APPENT	C1-PA-APPENT	C1-PA-APPENT

Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- [Payment Agreement Request Type List](#) on page 2003
- [Payment Agreement Request Type](#) on page 2003

Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the Edit (✎) icon, the Payment Agreement Request Type screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the Duplicate (📄) icon, the Payment Agreement Request Type screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the Delete (🗑) icon, you can delete the payment agreement request type. Note: You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

Defining a Payment Agreement Request Type

Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both 	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required for creating payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the Approval To Do Type field.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the Submitter To Do Type field.

6. Enter the required details.
7. Define characteristics for the payment agreement request type, if required.
8. Click **Save**.

The payment agreement request type is defined.

Defining a Characteristic for a Payment Agreement Request Type

Prerequisites

To define a characteristic for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

Procedure

To define a characteristic for a payment agreement request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	Note: This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment agreement request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment agreement request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both 	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval. <p>Note: This field appears when the Approval Required check box is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	Yes (Conditional)
		Note: This field is required when the Approval Required check box is selected.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
	The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Agreement Request Type** zone to create a copy of the payment agreement request type.

5. Enter the required details.
6. Define, edit, or remove characteristics of the payment agreement request type, if required.
7. Click **Save**.

The new payment agreement request type is defined.

Searching for a Payment Agreement Request

Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Credit & Collection** and then click **Payment Agreement Request**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.
The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment agreement request.	Yes
Comments	Used to specify additional information while rejecting the payment agreement request.	No

Note: The **Reject** button appears when:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the payment agreement request is changed to **Rejected**.

Resubmitting a Payment Agreement Request

Prerequisites

To resubmit a payment agreement request, you should have:

- Entities added in the payment agreement request which is submitted for approval.

Procedure

To resubmit a payment agreement request:

- Search for the payment agreement request in the **Payment Agreement Request** screen.
- In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to resubmit.

The **Payment Agreement Request** screen appears.

- Click the **Resubmit** button in the **Payment Agreement Request** zone.

The **Resubmit Payment Agreement Request** screen appears.

Note: The **Resubmit** button appears when the payment agreement request is in the **Approval In Progress** status.

A To Do of the **C1-PAREQ** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the payment agreement request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

Note: While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the payment agreement request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

Filtering Overdue Bills of an Account

The **Search Bills** zone lists bills that are overdue for an account. You will not find any records in this zone if the payment agreement request does not have overdue bills in the account. This zone contains the following fields as search criteria:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using bill details.	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search for a particular bill.	No
	Note: The Search (🔍) icon appears corresponding to the field. On clicking the Search icon, the Bill Search window appears.	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

By default, the **Search Bills** zone appears in the **Bills** tab of **Payment Agreement Request** screen. By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🔼) icon in the upper right corner of this zone.

By default, the search results section displays the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Unpaid Amount	Displays the amount which is eligible for payment agreement request against the bill.
Overdue Process Information	Displays the overdue process information for the bill.

How to add an overdue bill in a payment agreement request	Adding an Overdue Bill in a Payment Agreement Request on page 2040

Adding an Overdue Bill in a Payment Agreement Request

Prerequisites

To add an overdue bill in a payment agreement request, you should have:

- Overdue bills should be available for accounts to add in payment agreement request

Procedure

To add an overdue bill in a payment agreement request:

Note: A bill with outstanding amount greater than zero which is not part of an overdue process will be allowed to be added in a payment agreement request. While a bill with negative outstanding amount will not be allowed to be added in a payment agreement request.

1. Search for the payment agreement request in the **Payment Agreement Request** screen which is in **Draft** or **Active** status.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.
The **Payment Agreement Request** screen appears.
3. Click the **Bills** tab.
The **Bills** tab appears.
4. Enter the search criteria in the **Search Bills** zone.
In the **Search Results** section, list of bills meeting the search criteria are displayed.
5. Select the check box corresponding to the bill which you want to add to the payment agreement request from the **Search Results** section.
You can add more than one bill to the payment agreement request at the same time.
6. Click **Add**.
A message appears indicating that selected bills have been successfully added to the payment agreement request.
7. Click **OK**.

Note that the bill is added in the **Bill Details** zone in the **Main** tab.

Viewing the Log of a Payment Agreement Request

Procedure

To view the log of a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to view.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
 - **Payment Agreement Request** – Displays the details of the payment agreement request.
 - **Bill Details** – Lists the bill details of the payment agreement request.
 - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Payment Agreement Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Indicates the reason why the payment agreement request was rejected.
Old Payment Schedule	Displays the details of old payment schedule.

Note: You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

How to add a log entry for a payment agreement request	Adding a Log Entry for a Payment Agreement Request on page 2042

Adding a Log Entry for a Payment Agreement Request

Procedure

To add a log entry for a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to edit.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
 - **Payment Agreement Request** – Displays the details of the payment agreement request.
 - **Bill Details** – Lists the bill details of the payment agreement request.
 - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

The **Add Payment Agreement Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Log Details	Used to specify additional comments for the payment agreement request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Payment Agreement Request Log** zone.

Chapter 32

Dispute Request

Topics:

- [Dispute Request \(Without Approval\) Status Transition](#)
- [Dispute Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-DisputeRequest](#)
- [Dispute Request Type](#)
- [Dispute Request \(Used for Searching\)](#)
- [Dispute Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to create a dispute request for an account. Through a dispute request, the dispute against a particular bill, bill segment, and/or adjustment is tracked and closed. While creating a dispute request, you need to specify the dispute request type using which you want to create the dispute request. It is the dispute request type which helps the system to determine:

- The business object using which the dispute request should be created
- Whether the dispute request must be approved before creating adjustments to settle a dispute against a bill, bill segment, or adjustment
- Approval profile using which the dispute request must be approved
- Whether multi-level or single-level approval is required for a dispute request
- Whether debit or credit hierarchy must be used for approval when the dispute request amount is zero
- Default adjustment type using which adjustments must be created

You can add completed bills, its bill segments, and adjustments in the dispute request. In other words, at present, the system enables you to resolve the dispute against a bill, bill segment, and adjustment. If the dispute is against a bill, the system, by default, sets the dispute amount and does not allow you to change the dispute amount. The dispute amount is set to the original bill amount because the original bill amount and dispute amount must be equal. However, if the original bill amount is positive, then the dispute amount is set to negative, and vice versa. If the dispute is against a bill segment or adjustment, you can change the dispute amount, if required.

Once a dispute request is created, the status of the dispute request is set to Draft. You can then edit or delete the dispute request, if required. Once you add the bills, bill segments, or adjustments in a dispute request, you can submit the dispute request. On submitting a dispute request, the system behaves in the following manner:

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill	Fully Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill. 2. Swaps the adjustment onto the next bill.
Bill	Unpaid	Yes	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Stops the automatic payment created for the current bill. 2. A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the Overdue Monitor (C1-ADMOV) batch. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: The above step (2) occurs when the approval is required for the dispute request.</p> </div> <ol style="list-style-type: none"> 3. Reopens the current bill of the account. 4. Creates the adjustment using the specified adjustment type for the bill and swaps the adjustment onto the current bill. 5. Completes and freeze the current bill.
Bill	Unpaid	No	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill. 2. Swaps the adjustment onto the current or next bill depending on the value defined for the Adjustment on Next Bill parameter in an algorithm created using the C1-ENTERADJ algorithm type.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill	Partially Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates two adjustments using the specified adjustment type for the bill. 2. Swaps one adjustment onto the current bill and another adjustment onto the next bill. <p>Example: A dispute is raised against a bill (Bill Amount – 100, Dispute Amount – 100, and Unpaid Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.</p>
Bill Segment	Fully Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill segment. 2. Swaps the adjustment onto the next bill.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill Segment	Unpaid	Yes	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Stops the automatic payment created for the current bill. 2. A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the Overdue Monitor (C1-ADMOV) batch. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: The above step (2) occurs when the approval is required for the dispute request.</p> </div> <ol style="list-style-type: none"> 3. Reopens the current bill of the account. 4. Creates the adjustment using the specified adjustment type for the bill segment and swaps the adjustment onto the current bill. 5. Completes and freeze the current bill.
Bill Segment	Unpaid	No	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill segment. 2. Swaps the adjustment onto the current or next bill depending on the value defined for the Adjustment on Next Bill parameter in an algorithm created using the C1-ENTERADJ algorithm type.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill Segment	Partially Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates two adjustments using the specified adjustment type for the bill segment. 2. Swaps one adjustment onto the current bill and another adjustment onto the next bill. <p>Example: A dispute is raised against a bill segment (Bill Segment Amount – 100, Dispute Amount – 100, and Unpaid Bill Segment Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.</p>
Adjustment	Fully Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the adjustment (against which you have raised a dispute). 2. Swaps the adjustment onto the next bill.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Adjustment	Unpaid	Yes	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Stops the automatic payment created for the current bill. 2. A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the Overdue Monitor (C1-ADMOV) batch. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: The above step (2) occurs when the approval is required for the dispute request.</p> </div> <ol style="list-style-type: none"> 3. Reopens the current bill of the account. 4. Creates the adjustment using the specified adjustment type for the adjustment (against which you have raised a dispute) and swaps the adjustment onto the current bill. 5. Completes and freeze the current bill.
Adjustment	Unpaid	No	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the adjustment (against which you have raised a dispute). 2. Swaps the adjustment onto the current or next bill depending on the value defined for the Adjustment on Next Bill parameter in an algorithm created using the C1-ENTERADJ algorithm type.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Adjustment	Partially Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates two adjustments using the specified adjustment type for the adjustment (against which you have raised a dispute). 2. Swaps one adjustment onto the current bill and another adjustment onto the next bill. <p>Example: A dispute is raised against an adjustment (Adjustment Amount – 100, Dispute Amount – 100, and Unpaid Adjustment Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.</p>

Finally, the status of the dispute request is changed to **Processed**. You can optionally configure the system to use the approval workflow process for a dispute request. If the **Approval Required** flag is set to **Yes** in a dispute request type, then on submitting the respective dispute request, the approval workflow process creates a To Do for the approver to review the dispute request. Once the approver approves the dispute request, the system behaves as mentioned in the above table. The approver can approve, reject, or resubmit the dispute request. When the dispute request is resubmitted to the submitter, the submitter can edit, cancel, or submit the dispute request.

The approval process is configured through the approval profile. The approval profile allows you to define the debit and credit hierarchy. If the dispute request amount is negative, the credit hierarchy in the approval profile is used for approval. However, if the dispute request amount is positive, the debit hierarchy in the approval profile is used for approval. You can either opt to use single-level or multi-level approval for the dispute requests.

During the dispute request process, a dispute request creation goes through various statuses in its lifecycle. For more information about the dispute request statuses, see [Dispute Request \(Without Approval\) Status Transition](#) on page 2052 and [Dispute Request \(With Approval\) Status Transition](#) on page 2052.

Note: The lifecycle of a dispute request creation is driven by the respective business object using which the request is created. The dispute request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the dispute request process, see [Prerequisites](#) on page 2053.

Dispute Request (Without Approval) Status Transition

The following figure graphically indicates how a dispute request moves from one status to another when approval workflow is off:

Dispute Request (With Approval) Status Transition

The following figure graphically indicates how a dispute request moves from one status to another when approval workflow is on:

Prerequisites

To setup the dispute request process, you need to do the following:

- Define the required refund request types in the system
- Define the required adjustment types (for creating dispute adjustments) where A/P request type is defined
- Define the required characteristic types where the characteristic entity is set to **Dispute Request Type**
- Define the required characteristic types where the characteristic entity is set to **Dispute Request**
- Define rejected status reasons for the **C1-DisputeRequest** business object

- Assign the **C1-DSPSB** To Do type to a To Do role whose users must receive To Do generated while submitting a dispute request for approval
- Define the required approval profiles with the credit/debit hierarchy and **C1_DISAP** To Do type
- Create an algorithm using the **C1-DSPTRQINF** algorithm type if you want to create Dispute Requests using the dispute request information.
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

Algorithms Used in C1-DisputeRequest

The following table lists the algorithms which are attached to the **C1-DisputeRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DSPTRQINF	C1-DSPTRQINF	This algorithm generates the dispute request information string which appears throughout the application. It concatenates the following fields: <ul style="list-style-type: none"> • Dispute Request Type Description • Dispute Request Status Description • Dispute Request ID
Validation	C1-DSPTVADN	C1-DSPTVADN	This algorithm validates following: Draft status validations: <ul style="list-style-type: none"> • At-least one entity should be selected to submit a dispute. Dispute Request with at-least one Bill or Bill Line Item should be added for submission • Dispute amount cannot be zero or null • If a bill is already present in dispute request and request is not in final status then user should not be allowed to add same bill in another dispute request • Disputed Amount should be equal to bill outstanding amount if bill Line item contain multiple contracts

The following table lists the algorithms which are used in the lifecycle of the **C1-DisputeRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DISPUTSUB	C1-DISPUTSUB	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> Whether the approval is required for the dispute request. If the approval is required for a dispute request, the status of the dispute request is changed to Approval In Progress. However, if the approval is not required for a dispute request, the status of the dispute request is changed to Creating Adjustment. At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the dispute request. Whether the approval profile attached to the Dispute Request Type has the credit hierarchy and To Do Type defined.
Submitted	Enter	C1-DPTSTAUPY	C1-DPTSTAUPY	<p>This algorithm is used to stop auto pay on bill.</p> <p>Parameter – Characteristic Type</p> <p>Characteristic Type is used to add the characteristic which is stamped on the bill to postpone overdue process</p>
Dispute	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.</p>
Dispute	Enter	C1-DPTSTAUPY	C1-DPTSTAUPY	<p>This algorithm is used to stop auto pay on bill.</p> <p>Parameter – Characteristic Type</p> <p>Characteristic Type is used to add the characteristic which is stamped on the bill to postpone overdue process</p>

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustments	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.</p>
Creating Adjustments	Enter	C1-ENTERADJS	C1-ENTERADJ	<p>This algorithm is executed on submit or on approve of a dispute request. It creates the adjustments which will be swapped on the current or next bill.</p> <p>Adjustment are created with below logic</p> <p>Unpaid Bill logic</p> <ul style="list-style-type: none"> • If stop auto pay switch is No and auto pay exist then create adjustment on next bill • If stop auto pay switch is Yes then perform below step <ul style="list-style-type: none"> • If bill cannot be reopen or adjustment need to be created on next bill then create adjustment on next bill • If approval is configured then create to do for manual creation of auto pay (Auto Pay is stopped while submitting the request) • Else <ul style="list-style-type: none"> • create adjustment on current bill <ul style="list-style-type: none"> • if approval is configured then <ul style="list-style-type: none"> • Bill reopen and complete (Auto Pay is stopped while submitting the request) • Delete overdue char from bill

Status	System Event	Algorithm	Algorithm Type	Description
				<ul style="list-style-type: none"> • Else <ul style="list-style-type: none"> • Stop auto pay • Reopen and complete <p>Paid Bill logic</p> <ul style="list-style-type: none"> • Adjustment will be created on next bill <p>Partial Bill Logic</p> <ul style="list-style-type: none"> • Adjustment will be created to balance current bill and another adjustment will be created for remaining amount and it will be stamped on next bill. • If dispute adjustment will increase the debit or credit balance then adjustment will be stamped on next bill. <p>There are four parameters for this algorithm.</p> <p>Parameter 1 – Adjustment on Next Bill (Required)</p> <ul style="list-style-type: none"> • Adjustments should be swapped on the current or next bill. It is used only for unpaid bill. <p>Parameter 2 – Match Type Entity Flag (Required)</p> <ul style="list-style-type: none"> • Valid values for this parameter are BILL, BSEG and SA. This parameter defines the open item at which the match events are to be created. For bills which are not paid yet, new match events will be created based on the value of this parameter. • Based on the flag defined Match Events are created as follows, <ul style="list-style-type: none"> • If the Match Type Flag is BILL, then all FTs on a bill have the same Match Event. • If the Match Type Flag is BSEG, then each line item (bill segment or adjustment) on the bill will have a unique match event. • If the Match Type Flag is SA, then line items belonging to the same contract within a bill will have the same match event. <p>Parameter 3 – To Do Type</p> <ul style="list-style-type: none"> • To Do will be sent to the user if bill can't be reopen and auto pay has been stopped.

Status	System Event	Algorithm	Algorithm Type	Description
				<p>Parameter 4 – Characteristic Type</p> <ul style="list-style-type: none"> Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process
Approval In Progress	Enter	C1-DSPTAPP	C1-DSPTAPP	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> A To Do using the To Do type specified in the approval profile which is attached to the dispute request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. A log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	<p>This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.</p>
Approved	Enter	C1-DSPAPPRVD	C1-DSPAPPRVD	<p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the dispute request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the dispute request is changed to Creating Adjustment.</p>
Return to Submitter	Enter	C1-DSPPTRESUB	C1-DSPPTRESUB	<p>This algorithm is invoked on Re-Submit button. It moves the status of Dispute Request into Draft. A To Do will be generated for the user as submitter whose To Do Type and To Do Role are fetched from Dispute Request Type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Enter	C1- DSPTREJT	C1- DSPTREJT	This algorithm is executed when on reject. Parameter 1 – To Do Type <ul style="list-style-type: none"> To Do will be sent to the user if bill can't be reopen and auto pay has been stopped. Parameter 2 – Characteristic Type <ul style="list-style-type: none"> Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process
Canceled	Enter	C1- DSPTREJT	C1- DSPTREJT	This algorithm is executed when on reject. Parameter 1 – To Do Type <ul style="list-style-type: none"> To Do will be sent to the user if bill can't be reopen and auto pay has been stopped. Parameter 2 – Characteristic Type <ul style="list-style-type: none"> Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process

Dispute Request Type

Oracle Revenue Management and Billing allows you to define:

- **Dispute Request Type** – It is used to create a dispute request. You can define multiple dispute request types in the system. A dispute request type helps the system to determine:
 - Whether the dispute request must be approved before creating dispute adjustments in the system
 - Approval profile using which the dispute request must be approved
 - Whether multi-level or single-level approval is required while creating dispute adjustments in the system
 - Adjustment type using which the dispute adjustment must be created when the total dispute amount is less than the minimum dispute amount
 - Default adjustment type using which dispute adjustments must be created

While defining a dispute request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the dispute request (which is created using the dispute request type) is sent for approval before creating the dispute adjustments. However, if the **Approval Required** check box is not selected, the dispute adjustments are created immediately on submitting a dispute request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy and credit approval hierarchy is used for approving dispute request. Therefore, while defining an approval profile for dispute, you need to define credit and debit hierarchy and set the To Do Type to **C1-DISAP**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the dispute request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the *Manager* To Do role will approve or reject the dispute request, and at the second level, a user with the *Senior Manager* To Do role will approve or reject the dispute request. On submitting a dispute request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in

the hierarchy. Once users at all levels approve the dispute request, the dispute adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the dispute adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval – First Level (Threshold Amount: 300, To Do Role: Manager) and Second Level (Threshold Amount: 500, To Do Role: Senior Manager). Now, if the total dispute amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total dispute amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total dispute amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the dispute request and create the dispute adjustments.

The system supports both single-level and multi-level approval process while approving dispute request. If the **Hierarchical Approval** check box is selected while defining a dispute request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a dispute request type, the approval is required only from the approval level where the total dispute amount falls within the threshold limit. Let us understand this with the help of some examples.

Dispute Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval								
D1	Dispute Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	Yes
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										
D2	Dispute Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	No
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										
D3	Dispute Analyst	<p>Debit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$100</td> <td>Senior Analyst</td> </tr> <tr> <td>\$200</td> <td>Manager</td> </tr> <tr> <td>\$300</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$100	Senior Analyst	\$200	Manager	\$300	Senior Manager	Yes
Threshold Amount	To Do Role										
\$100	Senior Analyst										
\$200	Manager										
\$300	Senior Manager										
D4	Dispute Analyst	<p>Debit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$100</td> <td>Senior Analyst</td> </tr> <tr> <td>\$200</td> <td>Manager</td> </tr> <tr> <td>\$300</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$100	Senior Analyst	\$200	Manager	\$300	Senior Manager	No
Threshold Amount	To Do Role										
\$100	Senior Analyst										
\$200	Manager										
\$300	Senior Manager										

The following table indicates how the system will behave in different dispute scenarios:

Dispute Request	Dispute Request Type	Total Refund Amount (\$)	Comments
DR1	D1	200	This dispute request is automatically approved by the system because the total dispute amount is less than \$500.
DR2	D1	750	The To Do is sent for approval to the following users in the specified order: <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role This is because the total dispute amount is either equal to \$750 or less than \$1500 and hierarchical approval is required.
DR3	D1	2000	The To Do is sent for approval to the following users in the specified order: <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role This is because the total dispute amount is greater than \$1500 and hierarchical approval is required.
DR4	D2	200	This dispute request is automatically approved by the system because the total dispute amount is less than \$500.
DR5	D2	750	The To Do is sent for approval to users with the Manager To Do role. This is because the total dispute amount is either equal to \$750 or less than \$1500 and hierarchical approval is not required.
DR6	D2	2000	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total dispute amount is greater than \$1500 and hierarchical approval is not required.
DR7	D3	90	This dispute request is automatically approved by the system because the total dispute amount is less than \$100.
DR8	D3	250	The To Do is sent for approval to the following users in the specified order: <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role This is because the total dispute amount is either equal to \$200 or less than \$300 and hierarchical approval is required.

Dispute Request	Dispute Request Type	Total Refund Amount (\$)	Comments
DR9	D3	500	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total dispute amount is greater than \$300 and hierarchical approval is required.</p>
DR10	D4	90	This dispute request is automatically approved by the system because the total dispute amount is less than \$100.
DR11	D4	250	The To Do is sent for approval to users with the Manager To Do role. This is because the total dispute amount is either equal to \$200 or less than \$300 and hierarchical approval is not required.
DR12	D4	500	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total dispute amount is greater than \$300 and hierarchical approval is not required.

The **Dispute Request Type** screen allows you to define, edit, delete, and copy a dispute request type. This screen consists of the following zones:

- [Dispute Request Type List](#) on page 2062
- [Dispute Request Type](#) on page 2063

Dispute Request Type List

The **Dispute Request Type List** zone lists dispute request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Dispute Request Type	Displays the dispute request type.
Description	Displays the description of the dispute request type.
Edit	On clicking the Edit () icon, the Dispute Request Type screen appears where you can edit the details of the dispute request type.
Duplicate	On clicking the Duplicate () icon, the Dispute Request Type screen appears where you can define a dispute request type using an existing dispute request type.
Delete	On clicking the Delete () icon, you can delete the dispute request type.
	Note: You can delete a dispute request type when you have not created a dispute request using the dispute request type.

On clicking the **Broadcast** (📡) icon corresponding to dispute request type, the **Dispute Request Type** zone appears with the details of the respective dispute request type.

Dispute Request Type

The **Dispute Request Type** zone displays the details of the dispute request type. This zone consists of the following sections:

- **Main** – This section provides basic information about the dispute request type. It contains the following fields:

Field Name	Field Description
Dispute Request Type	Displays the dispute request type.
Description	Displays the description of the dispute request type.
Dispute Request Business Object	Indicates the business object that will be used to create the dispute request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the dispute request type.
Status	Indicates the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Default Adjustment Type	Indicates the adjustment type using which the dispute adjustment must be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Approval Required	Indicates whether approval is required while creating the dispute adjustments using the dispute request type.

Field Name	Field Description
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the dispute request type.
	<p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile.</p>
Hierarchical Approval	Indicates whether multi-level or single approval is required while creating the dispute adjustments using the dispute request type.
	<p>Note: This field appears when the Approval Required check box is selected.</p>
Zero Threshold Amount Hierarchy	Indicates that based on the approval profile hierarchy, To Do Type from the hierarchy (credit/debit) will be picked up.
Submitter To Do Type	Indicates the To Do type for the submitter when the dispute request type is resubmitted by the approver.
	<p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Submitter To Do Role	Indicates the To Do role for the submitter when the dispute request type is resubmitted by the approver.
	<p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>

- **Characteristics** – This section lists the characteristics of the dispute request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the dispute request type.

Button Name	Button Description
Delete	Used to delete the dispute request type.
	Note: You can delete a dispute request type when you have not created a dispute request using the dispute request type.
Duplicate	Used to create a new dispute request type using an existing dispute request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the dispute request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Dispute Request Type** zone does not appear in the **Dispute Request Type** screen. It appears when you click the **Broadcast** () icon corresponding to the dispute request type in the **Dispute Request Type List** zone.

Defining a Dispute Request Type

Prerequisites

To define a dispute request type, you should have:

- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To define a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Dispute Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type Business Object	Used to indicate the business object that you want to use to create the dispute request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Dispute Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple dispute request type business objects defined in the application. If there is only one dispute request type business object defined in the application, the **Dispute Request Type** screen appears.

4. Select the required dispute request type business object from the respective field.
5. Click **OK**.

The **Dispute Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the dispute request type.
- **Characteristics** – Used to define the characteristics for the dispute request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to specify the dispute request type.	Yes
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No
Status	Used to indicate the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a dispute request type to Inactive if there are dispute requests which are created using the dispute request type and are currently in the Draft or Approval In Progress status.	

Field Name	Field Description	Mandatory (Yes or No)
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment must be created.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type.	No
	Note: This field appears when the Approval Required check box is selected.	
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy will be selected. The valid values are: <ul style="list-style-type: none"> • Credit • Debit 	No
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

Note:

When the threshold amount is equal to zero for the request then based on the value in **Zero Threshold Amount Hierarchy**, the to do type will be picked from the **Approval Profile** hierarchy to send notification.

Only when the **Approval Required** checkbox is selected, you will be able to select **Hierarchical Approval** and **Approval Profile** to be used. If hierarchical approval is not selected, the request has to be approved by a single approver (highest level approver determined by the dispute amount and approval profile).

6. Enter the required details depending on whether you want to define dispute request type.
7. Define characteristics for the dispute request type, if required.
8. Click **Save**.

The dispute request type is defined.

Defining a Characteristic for a Dispute Request Type

Prerequisites

To define a characteristic for a dispute request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Dispute Request Type**)

Procedure

To define a characteristic for a dispute request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a dispute request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Dispute Request Type .	Note: This field is required when you are defining a characteristic for the dispute request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the dispute request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the dispute request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the dispute request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Dispute Request Type

Prerequisites

To edit a dispute request type, you should have:

- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To edit a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Dispute Request Type** sub-menu.

The **Dispute Request Type** screen appears.

- In the **Dispute Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the dispute request type whose details you want to edit.

The **Dispute Request Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the dispute request type.
- Characteristics** – Used to define the characteristics for the dispute request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Displays the dispute request type.	Not applicable
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No
Status	Used to indicate the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> Active Inactive <p>Note: You cannot change the status of a dispute request type to Inactive if there are dispute requests which are created using the dispute request type and are currently in the Draft or Approval In Progress status.</p>	Yes
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment is created. <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.</p>	Yes
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type.	No
	Note: This field appears when the Approval Required check box is selected.	
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy is selected. The valid values are: <ul style="list-style-type: none"> • Credit • Debit 	No
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected. The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when the Approval Required check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

Tip: Alternatively, you can click the **Edit** button in the **Dispute Request Type** zone to edit the details of the dispute request type.

5. Modify the details, if required.
6. Define, edit, or remove characteristics of the dispute request type, if required.
7. Click **Save**.

The changes made to the dispute request type are saved.

Deleting a Dispute Request Type

Procedure

To delete a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Dispute Request Type** sub-menu.
The **Dispute Request Type** screen appears.
4. In the **Dispute Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the dispute request type that you want to delete.

A message appears confirming whether you want to delete the dispute request type.

Note: You can delete a dispute request type when you have not defined a dispute request using the dispute request type.

Tip: Alternatively, you can click the **Delete** button in the **Dispute Request Type** zone to delete the dispute request type.

5. Click **OK**.

The dispute request type is deleted.

Copying a Dispute Request Type

Instead of creating a dispute request type from scratch, you can create a new dispute request type using an existing dispute request type. This is possible through copying a dispute request type. On copying a dispute request type, the details including the characteristics are copied to the new dispute request type. You can then edit the details, if required.

Prerequisites

To copy a dispute request type, you should have:

- Dispute request type (whose copy you want to create) defined in the application
- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To copy a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Dispute Request Type** sub-menu.

The **Dispute Request Type** screen appears.

4. In the **Dispute Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the dispute request type whose copy you want to create.

The **Dispute Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the dispute request type.
- **Characteristics** – Used to define the characteristics for the dispute request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to specify the dispute request type.	Yes
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot change the status of a dispute request type to Inactive if there are dispute requests which are created using the dispute request type and are currently in the Draft or Approval In Progress status.	
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment must be created.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type.	Yes (Conditional)
	Note: This field appears when the Approval Required check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type.	No
	Note: This field appears when the Approval Required check box is selected.	
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy will be selected. The valid values are: <ul style="list-style-type: none"> Credit Debit 	No

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	<p>Note: This field appears when the Approval Required check box is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	<p>Note: This field is required when the Approval Required check box is selected.</p>
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	<p>Note: This field appears when the Approval Required check box is selected.</p>	<p>Note: This field is required when the Approval Required check box is selected.</p>

Tip: Alternatively, you can click the **Duplicate** button in the **Dispute Request Type** zone to create a copy of the dispute request type.

- Enter the required details.
- Define, edit, or remove characteristics of the dispute request type, if required.
- Click **Save**.

The new dispute request type is defined.

Searching for a Dispute Request

Prerequisites

To search for a dispute request, you should have:

- Dispute request types defined in the application

Procedure

To search for a dispute request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Dispute Request**.
A sub-menu appears.
3. Click the **Search** option from the **Dispute Request** sub-menu.
The **Dispute Request** screen appears.
4. Enter the search criteria in the **Search Dispute Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of dispute requests that meet the search criteria appears in the **Search Results** section.

How to define a characteristic for a dispute request	Defining a Characteristic for a Dispute Request on page 2083

Defining a Characteristic for a Dispute Request

Prerequisites

To define a characteristic for a dispute request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Dispute Request**)

Procedure

To define a characteristic for a dispute request:

- Search for the dispute request in the **Dispute Request** screen.
- In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose details you want to edit.

The **Dispute Request** screen appears.

- Click the **Edit** button in the **Dispute Request** zone.

The **Dispute Request** screen appears.

Note: The **Edit** button appears when the dispute request is in the **Draft** status.

- Ensure that the **Characteristics** section is expanded when you are editing the dispute request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the dispute request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the dispute request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Dispute Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the dispute request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the dispute request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the dispute request, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the dispute request, click the **Delete** (🗑️) icon corresponding to the characteristic.

Dispute Request - Bills

The **Bills** tab allows you to search bills with credit/debit line items, such as credit/debit bill segments and adjustments, that you want to dispute. It contains the following zones:

- [Search Bills](#) on page 2089
- [Bill Line Items](#) on page 2091

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit/debit balance or have one or more credit/debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details Note: By default, the Bill Details option is selected.	Yes
Bill ID	Used to search a particular bill. Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Bill Search window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search bills which are created for a particular price item.	No
	<p>Note:</p> <p>This field appears when you select Bill and Price Item Details option from the Search By list.</p> <p>You can search for a price item by clicking the Search (🔍) icon corresponding to the field. On clicking the Search icon, the Price Item Search window appears.</p>	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.</p>
Bill Amount	Displays the total bill amount.

If you want to dispute a bill with credit/debit balance and all credit/debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit/debit bill segments and adjustments of the bill are added in the **Dispute Details** zone on the **Main** tab. However, if you select a bill (with credit/debit balance) which contains one or more credit/debit line items or if you select a bill (with credit/debit balance) which contains one or more credit/debit line items, the system will not allow you to add the credit/debit line items by directly adding the bill. In such case, you need to individually select the credit/debit bill segments and adjustments of the bill and then add them to the dispute request.

Note:

If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Multiple bill of same account can be added to the dispute request. Multiple bill line items of any bill can also be added to the dispute request.

Procedure

To delete a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request that you want to delete.

The **Dispute Request** screen appears.

- Click the **Delete** button in the **Dispute Request** zone.

A message appears confirming whether you want to delete the dispute request.

Note: The **Delete** button appears when the dispute request is in the **Draft** status.

- Click **OK**.

The dispute request is deleted.

Submitting a Dispute Request

Prerequisites

To submit a dispute request, you should have:

- Credit/debit bill line items added in the dispute request

Procedure

To submit a dispute request:

- Search for the dispute request in the **Dispute Request** screen.
- In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request that you want to submit.

The **Dispute Request** screen appears.

- Click the **Submit** button in the **Dispute Request** zone.

The system behaves in the following manner:

If...	Then
The Approval Required and Hierarchical Approval check boxes are selected in the dispute request type using which the dispute request is created	A To Do of the C1-DSPSB To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the dispute request is changed to Approval In Progress .
The Approval Required check box is selected, but the Hierarchical Approval check box is not selected in the dispute request type using which the dispute request is created	A To Do of the C1-DSPSB To Do type is created and sent to the approver at the hierarchy level where the total dispute amount falls within the threshold limit. In addition, the status of the dispute request is changed to Approval In Progress .
The Approval Required check box is not selected in the dispute request type using which the dispute request is created	The dispute adjustments are created using the specified adjustment types and the status of the dispute request is changed to Processed .

Note:

The **Submit** button appears when the dispute request is in the **Draft** status.

Dispute request with atleast one bill or bill line item has to be added for submission.

Approving a Dispute Request

You can view the number of dispute requests which are pending for approval in the **Dispute Request** screen. The approver can review, and accordingly approve or reject the dispute request based on the observations.

Note: The system will not allow you to approve or reject a dispute request submitted by you.

Procedure

To approve a dispute request:

1. Do either of the following:

If you want to	Then
Approve a dispute request through the Dispute Request screen	<ol style="list-style-type: none"> 1. Search for the dispute request in the Dispute Request screen. 2. In the Search Results section, click the link in the Dispute Request Information column corresponding to the dispute request which you want to review.
Approve a dispute request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1_DISAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos.

If you want to	Then
	6. Click the link in the Message column corresponding to the To Do of the dispute request that you want to review.

The **Dispute Request** screen appears.

2. Review the dispute request details.
3. Click the **Approve** button in the **Dispute Request** zone.

The system behaves in the following manner:

If...	Then
The Hierarchical Approval check box is not selected in the dispute request type using which the dispute request is created	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to Processed .

Note: The **Approve** button appears when:

- The dispute request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the dispute request.

Rejecting a Dispute Request

Prerequisites

To reject a dispute request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a dispute request, you need to specify the reason why you want to reject the dispute request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-DisputeRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a dispute request submitted by you.

Procedure

To reject a dispute request:

1. Do either of the following:

If you want to	Then
Reject a dispute request through the Dispute Request screen	<ol style="list-style-type: none"> 1. Search for the dispute request in the Dispute Request screen. 2. In the Search Results section, click the link in the Dispute Request Information column corresponding to the dispute request which you want to review.
Reject a dispute request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-DISAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the dispute request that you want to review.

The **Dispute Request** screen appears.

2. Review the dispute request details.
3. Click the **Reject** button in the **Dispute Request** zone.

The **Reject Dispute Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the dispute request.	Yes
Comments	Used to specify additional information while rejecting the dispute request.	No

Note: The **Reject** button appears when:

- The dispute request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the dispute request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the dispute request is changed to **Rejected**.

Resubmitting a Dispute Request

Prerequisites

To resubmit a dispute request, you should have:

- Entities added in the dispute request which is submitted for approval.

Procedure

To resubmit a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request that you want to resubmit.

The **Dispute Request** screen appears.

3. Click the **Re Submit** button in the **Dispute Request** zone.

The **Resubmit Dispute Request** screen appears.

Note: The **Resubmit** button appears when the dispute request is in the **Approval In Progress** status.

A To Do of the **C1-DSPSB To Do** type is created and sent to the request submitter using the submitter TO DO Role and the status of the dispute request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

Note: While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the dispute request type and the request will be moved to Draft status. The submitter can do necessary changes and re-submit the request. Log will be maintained when the approver sends the request back to submitter.

Editing the Dispute Details

Prerequisites

To edit the dispute details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the dispute details:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose bill line item details you want to edit.

The **Dispute Request** screen appears.

3. Select the bill whose details you want to edit in the **Dispute Details** zone and click the **Edit** button available in the upper left corner of this zone.

The **Edit Dispute Details** screen appears.

Note: A bill line item from the dispute request can be edited when the dispute request is in the **Draft** status.

The **Edit Dispute Details** screen contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request ID	Displays the dispute request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are <ul style="list-style-type: none"> • Adjustments • Bill • Bill Segment
Entity ID	Displays the entity ID.
Entity Information	Displays the entity information.
Dispute Amount	Indicates the amount that must be disputed.
Currency	Displays the currency in which the entity was created.
Adjustment Type	Displays the adjustment type using which the dispute adjustment must be created.
Stop Auto Pay	Displays whether auto pay needs to be stopped for the entity of the dispute request.

4. Modify the details of the bill line items.
 5. Click **Save**.
- The changes made to the dispute bill line items are saved.

Viewing the Bill Line Items

Procedure

To view the bill line items of a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose log you want to view.

The **Dispute Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the dispute request. It contains the following zones:
 - **Dispute Request** – Displays the details of the dispute request.
 - **Dispute Details** – Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
 - **Dispute Adjustments** – Displays the adjustment details of dispute request.

Note: This zone appears when you click the Broadcast () icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and when the status is **Processed**.

- **Previous Dispute Requests** – Displays the details of the bill which must be disputed.

Note: This zone appears when you click the Broadcast () icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.

- **Bills** – Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute. It contains the following zones:
 - **Search Bills** – Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.

Note: Filter the bills, if required, in the **Search Bills** zone.

- **Bill Line Items** – Lists the debit and credit bill segments and adjustments of the bill.

Note: This zone appears when you click the Broadcast () icon corresponding to the entity type as **Bill** in the **Search Bills** zone.

This tab appears when the dispute request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the dispute request.

3. View the details of the bill line items in the **Bill Line Items** zone.

Adding a Bill to the Dispute Request

You can dispute the credit/debit bills to the account.

Prerequisites

To add a credit/debit bill to the dispute request, you should have:

- Completed bills for the account with one or more credit/debit line items

Procedure

To add a credit/debit bill to the dispute request:

1. Click the **Bills** tab in the **Dispute Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit/debit line items and you want to add the credit/debit bill to the dispute request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to dispute. 2. Click the Add button available at the upper left corner of the Search Bills zone.
A bill has credit balance and one or more debit line items and you want to add the credit bill to the dispute request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to dispute. 2. Click the Add button available at the upper left corner of the Search Bills zone.

4. Click **Add**.

A message appears indicating that the selected bills are added to the dispute request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the dispute request.

5. Click **OK**.

Note that all the credit/debit bill segments or adjustments of the bills are added in the **Dispute Details** zone on the **Main** tab.

Note: Irrespective of whether you select a credit/debit bill, or credit/debit bill segments or adjustments, the credit/debit bill segments or adjustments are added in the **Dispute Details** zone. The credit/debit bill is not added to the **Dispute Details** zone.

Adding a Bill Line Item to the Dispute Request

You can dispute the credit/debit bill line items, such as bill segments and adjustments, to the account. While adding a credit/debit bill line item to the dispute request, you can either:

- Directly add all credit/debit line items of a bill to the dispute request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit/debit line items) to the dispute request

Prerequisites

To add a credit/debit bill line item to the dispute request, you should have:

- Completed bills for the account with one or more credit/debit line items

Procedure

To add a credit/debit bill line item to the dispute request:

1. Click the **Bills** tab in the **Dispute Request** screen.

The **Bills** tab appears.

- Filter the bills, if required, in the **Search Bills** zone.

Note: If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

- Do either of the following:

If...	Then...
A bill has all credit line items and you want to add a particular credit bill line item to the dispute request	<ol style="list-style-type: none"> In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.

- Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the dispute request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the dispute request.

- Click **OK**.

Note that the credit bill segments or adjustments are added in the **Dispute Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit/debit bill, or credit/debit bill segments or adjustments, the credit/debit bill segments or adjustments are added in the **Dispute Details** zone. The credit bill is not added to the **Dispute Details** zone.

The system will not allow you to add a debit line item to the **Dispute Details** zone.

Chapter 33

Earnings Credit Rate

Topics:

- [Prerequisites](#)
- [Financial Transaction Distribution Object Status Transition](#)
- [Algorithms Used in C1-FTDIST](#)
- [Earnings Credit Rate Eligibility](#)
- [Financial Transaction Distribution Type](#)
- [Financial Transaction Distribution Rule](#)
- [Expiration Cycle Extendable Lookup](#)
- [Extendable Lookup \(Expiration Cycle\)](#)
- [Distribution Hierarchy Extendable Lookup](#)
- [Extendable Lookup \(Distribution Hierarchy\)](#)
- [Financial Transaction Distribution Object Extendable Lookup](#)
- [Extendable Lookup \(Financial Transaction Distribution Object\)](#)
- [Financial Transaction Distribution \(Used for Searching\)](#)
- [Financial Transaction Distribution \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to generate the earnings credit rate (ECR) when the account is eligible for earnings credit rate and is associated with a contract of a contract type where the **Financial Transaction Distribution Object** characteristic is defined. In other words, the system enables you to create the financial transaction distribution (ECR) object when the adjustment and/or bill segment financial transaction created against an ECR contract is frozen. The status of the financial transaction distribution object is set to **Pending**.

To enable the Earnings Credit Rate (ECR) feature, you need to setup the following:

- **Financial Transaction Distribution Type** – A financial transaction distribution type is an object which controls the distribution of a credit and debit bill segment or adjustment financial transaction. It is associated to a contract type through a financial transaction distribution object. It helps the system to determine:
 - Whether it is defined for adjustment or bill segment financial transactions whose credit or debit amount should be distributed.
 - The type of adjustment (such as transfer adjustment) should be created when the credit or debit amount on the financial transaction distribution object is distributed.
 - The financial transaction distribution rule using which the credit or debit amount on the financial transaction distribution object should be distributed.
 - Whether the credit or debit amount on the financial transaction distribution object should be used to offset an adjustment or bill segment of the same account (where ECR is earned), another account of the customer (for whom ECR is earned), or the account identified as per the distribution hierarchy.
 - Whether the credit or debit amount on the financial transaction distribution object should be written off when it is equal to or less than the write off threshold amount.
 - The type of adjustment that should be created when the credit or debit amount on the financial transaction distribution object is written off.
 - The type of adjustment that should be created when the credit or debit amount on the financial transaction distribution object is expired.

- The type of adjustment that should be created when the excess credit amount on the financial transaction distribution object is refunded at the end of the year.
- The business object using which the financial transaction distribution object should be created.
- **Financial Transaction Distribution Rule** – A financial transaction distribution rule is associated with one or more financial transaction distribution types. It helps the system to determine:
 - The method using which the credit or debit amount on the financial transaction distribution object should be distributed. If the distribution method is set to **Fee Based**, the system will distribute the credit or debit amount on the financial transaction distribution object to offset fees starting from the highest to lowest amount. If the distribution method is set to **Priority Based**, the system will distribute the credit or debit amount on the financial transaction distribution object to the accounts in the order of their account distribution priority. If the distribution method is set to **Weighted Average**, the system will distribute the credit or debit amount on the financial transaction distribution object to the accounts in the weighted average ratio.
 - The distribution hierarchy using which the accounts, to which the credit or debit amount on the financial transaction distribution object should be distributed, should be derived.
 - The priority in which the objects, such as adjustments of a particular adjustment type or bill segments created for a particular price item, should be offset using the credit or debit amount on the financial transaction distribution object.
 - The objects, such as adjustments of a particular adjustment type or bill segments created for a particular price item, should be excluded from offsetting.
 - Algorithms that should be used to select the accounts, interpret the order of distribution, and then distribute the credit or debit amount.
- **Expiration Cycle** – An expiration cycle is an extendable lookup reference object which indicates the frequency at which the financial transaction distribution object created for the account should be expired (i.e. after two months or 45 days from the date of creation). You can associate an expiration cycle with one or more accounts.
- **Distribution Hierarchy** – A distribution hierarchy is an extendable lookup reference object which indicates the list of hierarchies that should be considered while deriving accounts for offsetting the credit or debit amount on the financial transaction distribution object. The valid hierarchy lists are:
 - **IGA Member Accounts Same Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against other member accounts of an invoicing group in which the source account is also a member account.
 - **Person Relationship (Child) Same Division** – If this option is selected, the system will first offset the credit or debit amount on the

financial transaction distribution object against the source account, other accounts of the source customer, and then against the child persons' accounts who are related to the parent person (i.e. source customer) using a particular relationship type and belongs to the same division.

- **Person Relationship (Child) Other Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the child persons' accounts who are related to the parent person (i.e. source customer) using a particular relationship type and belongs to a different division.
- **Person Relationship (Parent) Same Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the parent persons' accounts who are related to the child person (i.e. source customer) using a particular relationship type and belongs to the same division.
- **Person Relationship (Parent) Other Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the parent persons' accounts who are related to the child person (i.e. source customer) using a particular relationship type and belongs to a different division.

You can associate a distribution hierarchy with one or more financial transaction distribution rules.

- **Financial Transaction Distribution Object** – A financial transaction distribution type is associated to a contract type through a financial transaction distribution object. You can include multiple financial transaction distribution types in a financial transaction distribution object. You can associate a financial transaction distribution object to one or more contract types.
- **Earnings Credit Rate Eligibility** – You can define earnings credit rate eligibility for each account in the system. It helps the system to determine:
 - Whether the account is eligible for generating earnings credit rate (i.e. financial transaction distribution object).
 - Whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.
 - The priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.
 - The expiration cycle for the account.

The following two batches are introduced in this release:

- **Financial Transaction Distribution Monitor (C1-FTDPR)** – It is used to monitor or check whether there are any financial transaction distribution objects in the Pending status. If there is a financial transaction

distribution object in the Pending status, the system validates the financial transaction distribution object and changes the status of the financial transaction distribution object to Validated. From the Validated status, the status of the financial transaction distribution object is changed to either of the following:

- **Refund** (when there is excess credit amount on the financial transaction distribution object at the end of the year and the source account belongs to a particular customer class where refund is allowed).
- **Write Off** (when the credit or debit amount on the financial transaction distribution object is equal to or less than the write off threshold amount)
- **Expire** (when the credit or debit amount on the financial transaction distribution object is expired)

Accordingly, the refund, write off, and expire adjustments are created. However, if none of the above conditions are met, the status of the financial transaction distribution object remains as **Validated**.

- **FT Distribution Single Threaded Transition Batch (C1-FTDTS)** – It is used to monitor or check whether there are any financial transaction distribution objects in the Validated status. If there is a financial transaction distribution object in the Validated status, the system changes the status of the financial transaction distribution object to **Apply Rule** and executes the algorithm attached to the **Apply Rule** system event on the financial transaction distribution rule version which is effective on the batch business date. Once the credit or debit distribution array of accounts is created, the status of the financial transaction distribution object is changed to **Distributed** and then the algorithm attached to the Distribute system event on the financial transaction distribution rule version which is effective on the batch business date is executed. On the credit or debit amount distribution, two adjustments are created – one against the source contract and another against the bill segment or adjustment's contract to which the amount is distributed. Once the credit or debit amount on the financial transaction distribution object is fully distributed, the status of the financial transaction distribution object is changed to **Complete**. However, if the credit or debit amount on the financial transaction distribution object is not yet fully distributed, the status of the financial transaction distribution object is changed to **Validated**.

Prerequisites

To setup the earnings credit rate process, you need to do the following:

- Add the earnings credit rate to the eligible accounts.
- Define the required financial transaction distribution types in the system.
- Define the required financial transaction distribution rules in the system.
- Define the following extendable lookup reference objects in the system:
 - Expiration Cycle
 - Distribution Hierarchy
 - Financial transaction distribution object

Financial Transaction Distribution Object Status Transition

The following figure graphically indicates how a financial transaction distribution object is created in the system:

Note: For more information about the batches, refer *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-FTDIST

The following table lists the algorithms which are attached to the **C1-FTDIST** business object:

System Event	Algorithm	Algorithm Type	Description																																
Information	C1-FTDISTINF	C1-FTDISTINF	<p>This algorithm formats the FT Distribution that appears throughout the system. It concatenates the fields and separator specified as algorithm parameters. Possible fields are:</p> <table border="1"> <thead> <tr> <th>Field</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>ACCT_ID</td> <td>Account ID</td> </tr> <tr> <td>ADJ_ID</td> <td>Adjustment ID</td> </tr> <tr> <td>BO_STATUS_CD</td> <td>Status</td> </tr> <tr> <td>BO_STATUS_REASON_CD</td> <td>Status Reason</td> </tr> <tr> <td>BSEG_ID</td> <td>Bill Segment ID</td> </tr> <tr> <td>BUS_OBJ_CD</td> <td>Business Object</td> </tr> <tr> <td>CRE_DTTM</td> <td>Creation Date/Time</td> </tr> <tr> <td>EXPIRATION_DT</td> <td>Expiration Date</td> </tr> <tr> <td>FT_DISTRIBUTION_ID</td> <td>FT Distribution</td> </tr> <tr> <td>FT_DIST_TYPE_CD</td> <td>FT Distribution Type</td> </tr> <tr> <td>FT_ID</td> <td>FT ID</td> </tr> <tr> <td>ILM_DT</td> <td>ILM Date</td> </tr> <tr> <td>SA_ID</td> <td>SA ID</td> </tr> <tr> <td>STATUS_UPD_DTTM</td> <td>Status Update Date/Time</td> </tr> <tr> <td>TOT_AMT</td> <td>Payoff Amount</td> </tr> </tbody> </table>	Field	Description	ACCT_ID	Account ID	ADJ_ID	Adjustment ID	BO_STATUS_CD	Status	BO_STATUS_REASON_CD	Status Reason	BSEG_ID	Bill Segment ID	BUS_OBJ_CD	Business Object	CRE_DTTM	Creation Date/Time	EXPIRATION_DT	Expiration Date	FT_DISTRIBUTION_ID	FT Distribution	FT_DIST_TYPE_CD	FT Distribution Type	FT_ID	FT ID	ILM_DT	ILM Date	SA_ID	SA ID	STATUS_UPD_DTTM	Status Update Date/Time	TOT_AMT	Payoff Amount

Validation	C1-VALFTDIST	C1-VALFTDIST	<p>This algorithm validates the Business Object - Financial Transaction Distribution, which includes:</p> <ul style="list-style-type: none"> Adjustment ID or Bill Segment ID must be supplied. 																																

The following table lists the algorithms which are used in the lifecycle of the **C1-FTDIST** business object:

Status	System Event	Algorithm	Algorithm Type	Description
In Progress	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Validate	Monitor	C1-FTDVALIDT	C1-FTDVALIDT	<p>This algorithm transitions the FT Distribution record from validate to any of the following statuses based on certain conditions:</p> <ul style="list-style-type: none"> • It transitions to Expire status (based on Parameter Expire Status Transition Condition) when the credit is not fully distributed and process date is before or on the same day as the Expiration Date defined in the record. • It transitions to Write Off status (based on Parameter Write Off Status Transition Condition) when the Total Amount is less than or equal to the Write Off Threshold defined in the FT Distribution Type linked to the record. It also uses Parameter Handle Negative or Positive for Write Off. If the Parameter is Negative and the Payoff Amount of the record is negative or the Parameter is Positive and the Payoff Amount of the record is positive, then proceed with Write Off. • It transitions to Refund status (based on Parameter Refund Status Transition Condition) when the Parameter Refund at End of Year is Y and the record's source account's customer class is equal to Parameter Applicable Customer Class for Refund. If none of the conditions are met, the record remains at Validate status. <p>If none of the conditions are met, the record remains at Validate status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Apply Rule	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either of the one soft parameters may be specified. If both the soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Apply Rule	Enter	C1-FTDAPRL	C1-FTDAPRL	This algorithm will call the pre-processing and apply rule algorithms that are configured in the effective rule version of the FT Distribution Rule of the Financial Transaction Distribution record's FT Distribution Type.
Distributed	Enter	C1-FTDDIST	C1-FTDDIST	This algorithm will trigger the distribute algorithms configured in the effective rule version of the FT Distribution Rule linked to the FT Distribution Type of the Financial Transaction Distribution record. After invoking the algorithms, the FT Distribution amount is compared to the sum of the distribution amounts with frozen transfer adjustments in the list. If the amounts are equal, the FT Distribution record is transitioned to Complete (based on the Parameter Complete Status Transition Condition). Otherwise, it is transitioned back to Validate (based on the Validate Status Transition Condition).
Expire	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Expire	Enter	C1-FTDEXP	C1-FTDEXP	This algorithm expires credit amount by creating an expiration adjustment defined in the FT Distribution Type. The Expiration Adjustment created will have a characteristic of type Parameter Financial Transaction Distribution Characteristic Type and value equal to the FT Distribution ID. The FT Distribution record will have a characteristic of type Write off Adjustment with value equal to the Expiration Adjustment ID.
Refund	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either of the one soft parameters may be specified. If both the soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Refund	Enter	C1-FTDREFUND	C1-FTDREFUND	This algorithm refunds the credit amount by creating a refund adjustment defined in the FT Distribution Type. The Refund Adjustment will be linked to the Refund Contract (with type equal to Parameter Refund Contract Type) attached to the source Account of the FT Distribution. The Refund Adjustment will be linked to the FT Distribution via a characteristic with type Parameter Financial Transaction Distribution Characteristic Type. Also, the FT Distribution record will have a characteristic of type Refund Adjustment with value equal to the Refund Adjustment ID.

Status	System Event	Algorithm	Algorithm Type	Description
Write Off	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Write Off	Enter	C1-FTDWRTOFF	C1-FTDWRTOFF	This algorithm writes off the credit amount by creating a write off adjustment defined in the FT Distribution Type. The Write off Adjustment created will have a characteristic of type Parameter Financial Transaction Distribution Characteristic Type and value equal to the FT Distribution ID. The FT Distribution record will have a characteristic of type Write Off Adjustment with value equal to the Write Off Adjustment ID.
Cancel	Enter	C1-FTDCANCEL	C1-FTDCANCEL	This algorithm will cancel all the transfer adjustments listed in the Financial Transaction Distribution record's Distribution List. The cancel reason code will be copied or taken from the original Distribution Object's cancel reason. If it is not provided, it will use the parameter Default Cancel Reason.
Complete	Enter	C1-FTDCOMP	C1-FTDCOMP	This algorithm will trigger the post-processing algorithms configured in the effective rule version of the FT Distribution Rule linked to the FT Distribution Type of the Financial Transaction Distribution record.

Earnings Credit Rate Eligibility

This screen allows you to add earnings credit rate eligibility for each account in the system and helps you to determine the following:

- Whether the account is eligible for generating earnings credit rate (i.e. financial transaction distribution object).
- Whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.

- The priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.
- The expiration cycle for the account.

This screen contains the following zone:

- [Earnings Credit Rate Eligibility](#) on page 2118

Earnings Credit Rate Eligibility

The **Earnings Credit Rate Eligibility** zone allows you to add earnings credit rate eligibility for each account in the system.

This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Earnings Credit Rate ID	Displays the earnings credit rate ID.	Not applicable
Account ID	Used to search for a particular account. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	Yes
Earnings Credit Rate Eligible	Used to define whether an earned credit rate can be calculated and created for the account or not.	No
Offset Eligibility	Used to define whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.	No
Offset Distribution Type	Used to search the financial transaction distribution type which would be used to offset the credit or debit amount from another account. If this field is left blank, then the financial transaction distribution type for the earning credit rate source account will be used. Note: This field is enabled when the Offset Eligibility check box is selected. This field is enabled when the Offset Eligibility check box is selected. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.	No
Account Distribution Priority	Used to indicate the priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.	No
Expiration Cycle	Used to indicate the expiration cycle for the account.	Yes

Defining Earnings Credit Rate Eligibility for an Account

Prerequisites

To define an earnings credit rate eligibility for an account, you should have:

- Accounts defined in the application.
- Expiration cycle defined in the application.
- Financial transaction distribution type defined in the application.

Procedure

To define earnings credit rate eligibility for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Earnings Credit Rate Eligibility**.

The **Earnings Credit Rate Eligibility** screen appears. It contains the following section:

- **Main** – Used to add the basic details about the earnings credit rate eligibility for an account. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Earnings Credit Rate ID	Displays the earnings credit rate ID.	Not applicable
Account ID	Used to search for a particular account. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	Yes
Earnings Credit Rate Eligible	Used to define whether an earned credit rate can be calculated and created for the account or not.	No
Offset Eligibility	Used to define whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.	No

Field Name	Field Description	Mandatory (Yes or No)
Offset Distribution Type	Used to search the financial transaction distribution type which would be used to offset the credit or debit amount from another account. If this field is left blank, then the financial transaction distribution type for the earning credit rate source account will be used.	No
	<p>Note:</p> <p>This field is enabled when the Offset Eligibility check box is selected. This field is enabled when the Offset Eligibility check box is selected.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.</p>	
Account Distribution Priority	Used to indicate the priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.	No
Expiration Cycle	Used to indicate the expiration cycle for the account.	Yes

3. Enter the required details.

4. Click **Save**.

The earnings credit rate eligibility is defined for the account.

Financial Transaction Distribution Type

The **Financial Transaction Distribution Type** screen allows you to define, edit, copy, and delete a financial transaction distribution object type.

This screen contains the following zones:

- [Financial Transaction Distribution Type List](#) on page 2120
- [Financial Transaction Distribution Type](#) on page 2122

Financial Transaction Distribution Type List

The **Financial Transaction Distribution Type List** zone allows you to view the list of financial transaction distribution types that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
FT Distribution Type	Displays the financial transaction distribution type.
Description	Displays the description of the financial transaction distribution type.
	Note: It has a link. On clicking the link, the Financial Transaction Distribution Type zone appears with the details of the respective financial transaction distribution type.
Related Transaction BO	Displays the corresponding transaction business object. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.
FT Adjustment Type	Displays the adjustment type used in the financial transaction adjustment.
Distribution Object Type	Displays the financial transaction object type used in distributing the credit.
Edit	On clicking the Edit (✎) icon, the FT Distribution Type screen appears where you can edit the details of the financial transaction distribution type.
Duplicate	On clicking the Duplicate (📄) icon, the FT Distribution Type screen appears where you can define a financial transaction distribution type using an existing financial transaction distribution type.
Delete	On clicking the Delete (🗑) icon, you can delete the financial transaction distribution type.

On clicking the **Broadcast** (📡) icon corresponding to the financial transaction distribution type, the **Financial Transaction Distribution Type** zone appears with the details of the respective financial transaction distribution type.

You can filter the list using the **Financial Transaction Distribution Type**, **Description**, or **Financial Transaction Object Type** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Financial Transaction Distribution Type

The **Financial Transaction Distribution Type** zone displays the details of the financial transaction distribution types that are already defined in the system. This zone contains the following sections:

- **Main** – This section provides basic information about the financial transaction distribution type. It contains the following fields:

Field Name	Field Description
FT Distribution Type	Displays the financial transaction distribution type.
Description	Displays the description of the financial transaction distribution type.
FT Object Type	Indicates the business object that will be used to create the financial transaction distribution type. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
FT Adjustment Type	Displays the adjustment type used in the financial transaction adjustment.
Distribution Object Type	Displays the financial transaction object type used in distributing the credit.
Distribution Adjustment Type	Displays the adjustment type which is used for distribution if the Transfer Adjustment option is selected from the Distribution Object Type list. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
FT Distribution Rule	Displays the financial transaction distribution rule to be used for distributing the credit or debit in an account. Note: It has a link. On clicking the link, the Financial Transaction Distribution Rule screen appears where you can view the details of the respective financial transaction distribution rule.
Write Off Threshold Amount	Displays the minimum credit amount for write off. Any amount specified in this field is assumed to be negative. For example, a value of “2” is treated as “-2”. Such that if the credit is only “-2”, then this will written off instead of distributing it to offset.
Write Off Adjustment Type	Displays the adjustment type used for write off. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Expiration Adjustment Type	Displays the adjustment type used for expiration.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Refund Adjustment Type	Displays the adjustment type used for refund.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Offset Indicator	Displays whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.
Related Transaction BO	Displays the object using which financial transaction object is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** – This section lists the characteristics of the financial transaction distribution type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the financial transaction distribution type.
Delete	Used to delete the financial transaction distribution type.
Duplicate	Used to create a new financial transaction distribution type using an existing financial transaction distribution type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Financial Transaction Distribution Type** zone does not appear in the **Financial Transaction Distribution Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the financial transaction distribution type in the **Financial Transaction Distribution Type List** zone.

Defining a Financial Transaction Distribution Type

Prerequisites

To define a financial transaction distribution type, you should have:

- Financial transaction distribution objects defined in the application.
- Adjustment types defined in the application.
- Financial transaction distribution rule defined in the application.
- Required characteristics defined in the application.

Procedure

To define a financial transaction distribution type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Type**.
A sub-menu appears.
3. Click the **Add** option from the **Financial Transaction Distribution Type** sub-menu.

The **Financial Transaction Distribution Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details of the financial transaction distribution type.
- **Characteristics** – Used to define the characteristics for the financial transaction distribution type.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to specify the financial transaction distribution type.	Yes
Description	Used to specify the description of the financial transaction distribution type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
FT Object Type	Used to indicate the business object that will be used to create the financial transaction distribution type. The valid values are: <ul style="list-style-type: none"> • Adjustment • Bill Segment 	Yes
FT Adjustment Type	Used to indicate the adjustment type used in the financial transaction adjustment.	Yes (Conditional)
	Note: By default, this field is disabled. This field gets enabled when you select Adjustment option from the FT Object Type list.	Note: This field is required when you are selecting the Adjustment option for the FT Object Type list.
Distribution Object Type	Used to indicate the financial transaction object type used in distribution.	Yes
Distribution Adjustment Type	Used to indicate the adjustment type which is used for distribution if the Transfer Adjustment option is selected from the Distribution Object Type list.	No
FT Distribution Rule	Used to indicate the financial transaction distribution rule to be used for distributing the credit or debit in an account.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.	
Offset Indicator	Used to indicate whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.	No
Write Off Threshold Amount	Used to specify the minimum credit amount for write off.	Yes (Conditional)
		Note: This field is required when you do not check the Offset Indicator check box.

Field Name	Field Description	Mandatory (Yes or No)
Write Off Adjustment Type	Used to indicate the adjustment type used for write off.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Expiration Adjustment Type	Used to indicate the adjustment type used for expiration.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Refund Adjustment Type	Used to indicate the adjustment type used for refund.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Related Transaction BO	Used to indicate the object using which financial transaction object is created.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Business Object Search window appears.	

Characteristics – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the financial transaction distribution type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the financial transaction distribution type.

Tip: Alternatively, you can access the **Financial Transaction Distribution Type** screen by clicking the **Add** button in the **Page Title** area of the **Financial Transaction Distribution Type** screen.

4. Enter the required details.
5. Define characteristics for the financial transaction distribution type, if required.
6. Click **Save**.

The financial transaction distribution type is defined.

Financial Transaction Distribution Type screen	<i>Financial Transaction Distribution Type</i> on page 2120
How to define a characteristic for a financial transaction distribution type	<i>Defining a Characteristic for a Financial Transaction Distribution Type</i> on page 2127

Defining a Characteristic for a Financial Transaction Distribution Type

Procedure

To define a characteristic for a financial transaction distribution type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a financial transaction distribution type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the financial transaction distribution type.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the financial transaction distribution type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the financial transaction distribution type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the financial transaction distribution type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Financial Transaction Distribution Type

Procedure

To edit a financial transaction distribution type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Type**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Type** sub-menu.
The **Financial Transaction Distribution Type** screen appears.
4. In the **Financial Transaction Distribution Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the financial transaction distribution type whose details you want to edit.

The **FT Distribution Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the financial transaction distribution type.
- **Characteristics** — Used to define the characteristics for the financial transaction distribution type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to specify the financial transaction distribution type.	Yes
Description	Used to specify the description of the financial transaction distribution type.	Yes
FT Object Type	Used to indicate the business object that will be used to create the financial transaction distribution type. The valid values are: <ul style="list-style-type: none"> • Adjustment • Bill Segment 	Yes

Field Name	Field Description	Mandatory (Yes or No)
FT Adjustment Type	Used to indicate the adjustment type used in the financial transaction adjustment.	Yes (Conditional)
	Note: By default, this field is disabled. This field gets enabled when you select Adjustment option from the FT Object Type list.	Note: This field is required when you are selecting the Adjustment option for the FT Object Type list.
Distribution Object Type	Used to indicate the financial transaction object type used in distribution.	Yes
Distribution Adjustment Type	Used to indicate the adjustment type which is used for distribution if the Transfer Adjustment option is selected from the Distribution Object Type list.	No
FT Distribution Rule	Used to indicate the financial transaction distribution rule to be used for distributing the credit or debit in an account.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.	
Offset Indicator	Used to indicate whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.	No
Write Off Threshold Amount	Used to specify the minimum credit amount for write off.	Yes (Conditional)
		Note: This field is required when you do not check the Offset Indicator check box.
Write Off Adjustment Type	Used to indicate the adjustment type used for write off.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.

Field Name	Field Description	Mandatory (Yes or No)
Expiration Adjustment Type	Used to indicate the adjustment type used for expiration.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Refund Adjustment Type	Used to indicate the adjustment type used for refund.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Related Transaction BO	Used to indicate the object using which financial transaction object is created.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Business Object Search window appears.	

5. Modify the details of the financial transaction distribution type.
6. Define, edit, or remove characteristics of the financial transaction distribution type, if required.
7. Click **Save**.

The changes made to the financial transaction distribution type are saved.

Copying a Financial Transaction Distribution Type

Instead of creating a financial transaction distribution type from scratch, you can create a new financial transaction distribution type using an existing financial transaction distribution type. This is possible through copying a financial transaction distribution type. On copying a financial transaction distribution type, the details including the characteristics are copied to the new financial transaction distribution type. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution type, you should have:

- Financial transaction distribution type (whose copy you want to create) defined in the application
- Financial transaction distribution type business objects defined in the application

Procedure

To copy a financial transaction distribution type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Type**.
A sub-menu appears.
- Click the **Search** option from the **Financial Transaction Distribution Type** sub-menu.
The **Financial Transaction Distribution Type** screen appears.
- In the **Financial Transaction Distribution Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the financial transaction distribution type whose copy you want to create.

The **Financial Transaction Distribution Type** screen appears. It contains the following sections:

- Main** — Used to specify basic details about the financial transaction distribution type.
- Characteristics** — Used to define the characteristics for the financial transaction distribution type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to specify the financial transaction distribution type.	Yes
Description	Used to specify the description of the financial transaction distribution type.	Yes
FT Object Type	Used to indicate the business object that will be used to create the financial transaction distribution type. The valid values are: <ul style="list-style-type: none"> • Adjustment • Bill Segment 	Yes
FT Adjustment Type	Used to indicate the adjustment type used in the financial transaction adjustment.	Yes (Conditional)
	Note: By default, this field is disabled. This field gets enabled when you select Adjustment option from the FT Object Type list.	Note: This field is required when you are selecting the Adjustment option for the FT Object Type list.
Distribution Object Type	Used to indicate the financial transaction object type used in distribution.	Yes
Distribution Adjustment Type	Used to indicate the adjustment type which is used for distribution if the Transfer Adjustment option is selected from the Distribution Object Type list.	No
FT Distribution Rule	Used to indicate the financial transaction distribution rule to be used for distributing the credit or debit in an account.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.	
Offset Indicator	Used to indicate whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.	No

Field Name	Field Description	Mandatory (Yes or No)
Write Off Threshold Amount	Used to specify the minimum credit amount for write off.	Yes (Conditional)
		Note: This field is required when you do not check the Offset Indicator check box.
Write Off Adjustment Type	Used to indicate the adjustment type used for write off. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Yes (Conditional)
		Note: This field is required when you do not check the Offset Indicator check box.
Expiration Adjustment Type	Used to indicate the adjustment type used for expiration. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Yes (Conditional)
		Note: This field is required when you do not check the Offset Indicator check box.
Refund Adjustment Type	Used to indicate the adjustment type used for refund. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Yes (Conditional)
		Note: This field is required when you do not check the Offset Indicator check box.
Related Transaction BO	Used to indicate the object using which financial transaction object is created. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Business Object Search window appears.	Yes

Tip: Alternatively, you can click the **Duplicate** button in the **Financial Transaction Distribution Type** zone to create a copy of the financial transaction distribution type

5. Enter the required details.
6. Define, edit, or remove characteristics of the financial transaction distribution type, if required.
7. Click **Save**.

The new financial transaction distribution type is defined.

Defining a Financial Transaction Distribution Rule Version

Prerequisites

To define a financial transaction distribution rule version, you should have:

- Financial transaction distribution rule defined in the application.
- Object types and algorithms defined in the application.

Procedure

To define a financial transaction distribution rule version:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.

A sub-menu appears.

- Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.

The **Financial Transaction Distribution Rule** screen appears.

- In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** () icon corresponding to the financial transaction distribution rule whose details you want to edit.

The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.

- Click the **Add** link in the upper right corner of the **Financial Transaction Distribution Rule Version List** zone.

The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the financial transaction distribution rule version.
- Included Objects** – Used to include the objects in financial transaction distribution rule version.
- Excluded Objects** – Used to exclude the objects in financial transaction distribution rule version.
- Algorithms** – Used to define the algorithms that are added for financial transaction distribution rule version.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

The **Included Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No
Bill Status	Used to indicate the status of the bill.	No

Note: If you include object, then all the fields are mandatory.

The **Excluded Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No

Note: If you exclude object, then all the fields are mandatory.

The **Algorithms** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code. Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	No

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Enter the required details.
7. Include or exclude the object types, if required.
8. Add the algorithms, if required.
9. Click **Save**.

The financial transaction distribution rule version is defined.

The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** () icon corresponding to the financial transaction distribution rule whose details you want to edit.
The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zones appear.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** () icon in the **Edit** column corresponding to the financial transaction distribution rule version whose details you want to edit.
The **Financial Transaction Distribution Rule Version** screen appears.
6. Ensure that the **Included Objects** section is expanded when you are editing the financial transaction distribution rule version.
7. Enter the required details in the **Included Objects** section.

Note: If you select a predefined object type, the **Search** () icon appears corresponding to the **Value** field. On clicking the **Search** icon, you can search for a predefined object value.

8. If you want to include more than one object in the financial transaction distribution rule version, click the **Add** () icon and then repeat step 7.

Note: However, if you want to remove an included object from the financial transaction distribution rule version, click the **Delete** () icon corresponding to the object.

Excluding Objects in a Financial Transaction Distribution Rule Version

Procedure

To exclude objects from a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** () icon corresponding to the financial transaction distribution rule whose details you want to edit.
The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zones appear.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** () icon in the **Edit** column corresponding to the financial transaction distribution rule version whose details you want to edit.
The **Financial Transaction Distribution Rule Version** screen appears.
6. Ensure that the **Excluded Objects** section is expanded when you are editing the financial transaction distribution rule version.
7. Enter the required details in the **Excluded Objects** section.

Note: If you select a predefined object type, the **Search** () icon appears corresponding to the **Value** field. On clicking the **Search** icon, you can search for a predefined object value.

8. If you want to exclude more than one object in the financial transaction distribution rule version, click the **Add** () icon and then repeat step 7.

Note: However, if you want to remove an excluded object from the financial transaction distribution rule version, click the **Delete** () icon corresponding to the object.

Associating Algorithms with a Financial Transaction Distribution Rule Version

Prerequisites

To associate algorithms with a financial transaction distribution rule version, you should have:

- Algorithms defined in the application.

Procedure

To associate algorithms with a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** (📡) icon corresponding to the financial transaction distribution rule whose details you want to edit.
The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the financial transaction distribution rule version whose details you want to edit.
The **Financial Transaction Distribution Rule Version** screen appears.
6. Ensure that the **Algorithms** section is expanded when you are editing the financial transaction distribution rule version.
7. Enter the required details in the **Algorithms** section.

Note: On clicking the **Search** (🔍) icon corresponding to the **Algorithm** column, you can search for a predefined algorithm.

8. If you want to associate more than one algorithm to the financial transaction distribution rule version, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to disassociate an algorithm from the financial transaction distribution rule version, click the **Delete** (🗑) icon corresponding to the algorithm.

How to edit a financial transaction distribution rule version	Editing a Financial Transaction Distribution Rule Version on page 2151

Editing a Financial Transaction Distribution Rule Version

Procedure

To edit a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.

A sub-menu appears.

3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.

The **Financial Transaction Distribution Rule** screen appears.

4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** () icon corresponding to the financial transaction distribution rule whose details you want to edit.

The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.

5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** () icon in the **Edit** column corresponding to the financial transaction distribution rule version whose details you want to edit.

The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the financial transaction distribution rule version.
- **Included Objects** – Used to include the objects in financial transaction distribution rule version.
- **Excluded Objects** – Used to exclude the objects in financial transaction distribution rule version.
- **Algorithms** – Used to define the algorithms in the financial transaction distribution rule version.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

The **Included Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No

Column Name	Column Description	Mandatory (Yes or No)
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type.	No
	Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type.	
Bill Status	Used to indicate the status of the bill.	No

Note: If you include object, then all the fields are mandatory.

The **Excluded Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type.	No
	Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type.	

Note: If you exclude object, then all the fields are mandatory.

The **Algorithms** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code.	No
	Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm.	

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Modify the details of the financial transaction distribution rule version.
7. Modify the included or excluded objects from the financial transaction distribution rule version, if required.
8. Edit the algorithms, if required
9. Click **Save**.

The changes made to the financial transaction distribution rule version are saved.

Deleting a Financial Transaction Distribution Rule Version

Procedure

To delete a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** () icon corresponding to the financial transaction distribution rule whose details you want to edit.
The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Delete** () icon in the **Delete** column corresponding to the financial transaction distribution rule version that you want to delete.
A message appears confirming whether you want to delete the financial transaction distribution rule version.
6. Click **OK**.
The financial transaction distribution rule version is deleted.

Copying a Financial Transaction Distribution Rule Version

Instead of creating a financial transaction distribution rule version from scratch, you can create a new financial transaction distribution rule version using an existing financial transaction distribution rule version. This is possible through copying a financial transaction distribution rule version. On copying a financial transaction distribution rule version, the details are copied to the new financial transaction distribution rule. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution rule, you should have:

- Financial transaction distribution rule version (whose copy you want to create) defined in the application
- Financial transaction distribution rule version business objects defined in the application

Procedure

To copy a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.

A sub-menu appears.

3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.

The **Financial Transaction Distribution Rule** screen appears.

4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** () icon corresponding to the financial transaction distribution rule whose details you want to edit.

The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.

5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the financial transaction distribution rule version whose copy you want to create.

The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the financial transaction distribution rule version.
- **Included Objects** – Used to include the objects in financial transaction distribution rule version.
- **Excluded Objects** – Used to exclude the objects in financial transaction distribution rule version.
- **Algorithms** – Used to define the algorithms in the financial transaction distribution rule version.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

Note: If you include object, then all the fields are mandatory.

Included Objects – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No
Bill Status	Used to indicate the status of the bill.	No

Excluded Objects – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No

Note: If you exclude object, then all the fields are mandatory.

Algorithms – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code. Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	No

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Enter the required details.
7. Define, edit, or remove objects from the financial transaction distribution rule version , if required.
8. Associate or dissociate the algorithms from the financial transaction distribution rule version, if required

9. Click **Save**.

The new financial transaction distribution rule version is defined.

Expiration Cycle Extendable Lookup

The **Expiration Cycle Extendable Lookup** screen allows you to search for an expiration cycle. An expiration cycle is an extendable lookup reference object which indicates the frequency at which the financial transaction distribution object created for the account should be expired (i.e. after two months or 45 days from the date of creation). You can associate an expiration cycle with one or more accounts. This screen contains the following zone:

- [Extendable Lookup Search](#) on page 2159

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of expiration cycle business object. This zone contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description
Business Object	Used to search the expiration cycle business object.
Description	Used to search the expiration cycle business object with a particular description.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the business objects.
Description	Displays description of the business object. Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the expiration cycle business object.

How to search for an expiration cycle	Searching for an Expiration Cycle Extendable Lookup on page 2159

Searching for an Expiration Cycle Extendable Lookup

Prerequisites

To search for an expiration cycle extended lookup, you should have:

- Expiration cycle extended lookup defined in the application.

Procedure

To search for an expiration cycle extended lookup:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. Search for **C1-EXPCYCLE** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business object.
The **Extended Lookup** screen appears.
5. View the list of expiration cycle extended lookup values in the **Extendable Lookup Value List** zone.

Note:

You must specify at least one search criterion while searching for an expiration cycle extended lookup.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Extendable Lookup (Expiration Cycle)

Once you create an expiration cycle, the **Extendable Lookup** (Expiration Cycle) screen allows you to:

- Edit the details of an expiration cycle
- Copy an expiration cycle
- Delete an expiration cycle
- View the details of an expiration cycle

This screen contains the following zones:

- [Extendable Lookup Value List](#) on page 2160
- [Extendable Lookup Value](#) on page 2161

Extendable Lookup Value List

The **Extendable Lookup Value List** zone allows you to view the list of expiration cycle extended lookup values that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
Value	Displays the expiration cycle extended lookup value.
Description	Displays the description of the expiration cycle extended lookup value.
Detailed Description	Displays the additional information about the expiration cycle extended lookup value.

Column Name	Column Description
Owner	Displays the owner of the expiration cycle extended lookup value.
Edit	On clicking the Edit (✎) icon, the Expiration Cycle screen appears where you can edit the details of the expiration cycle extended lookup value.
Duplicate	On clicking the Duplicate (📄) icon, the Expiration Cycle screen appears where you can define a expiration cycle extended lookup value using an existing expiration cycle extended lookup value.
Delete	On clicking the Delete (🗑) icon, you can delete the expiration cycle extended lookup value.

On clicking the **Broadcast** (📡) icon corresponding to the expiration cycle extended lookup value, the **Extendable Lookup Value** zone appear with the details of the respective expiration cycle extended lookup value.

You can filter the list using the **Value** or **Description** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone allows you to view the details of the expiration cycle extended lookup value. This zone contains the following section:

- **Main** – This section allows you to view the details of the expiration cycle extended lookup value. It contains the following fields:

Field Name	Field Description
Expiration Cycle	Displays the expiration cycle extended lookup value.
Description	Displays the description of the expiration cycle extended lookup value.
Override Description	Displays the overridden description of the expiration cycle extended lookup value.
Detailed Description	Displays the additional information about the expiration cycle extended lookup value.
Status	Displays the status of expiration cycle extended lookup value.
Duration Unit	Displays the duration unit of the expiration cycle extended lookup value.

Field Name	Field Description
Duration Value	Displays the period till when the expiration cycle extended lookup value is active.
Consider Holiday	Displays whether to consider holidays or not while calculating the duration value.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the expiration cycle extended lookup value.
Delete	Used to delete the expiration cycle extended lookup value.
Duplicate	Used to create a new expiration cycle extended lookup value using an existing expiration cycle extended lookup value.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the expiration cycle extended lookup value is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.
Owner	Indicates the person or entity that created the expiration cycle business object.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the extendable lookup value of the **Extendable Lookup Value List** zone.

Defining an Expiration Cycle

Procedure

To define an expiration cycle:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
The **Extended Lookup Query** screen appears.
3. Search for **C1-EXPCYCLE** business object.

- In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business object.

The **Extended Lookup** screen appears.

- Click the **Add** button in the **Page Title** area of the **Extended Lookup** screen.

The **Expiration Cycle** screen appears. It contains the following section:

- Main** – Used to specify basic details about the expiration cycle.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

- Enter the required details.
- Click **Save**.

The expiration cycle is defined.

Copying an Expiration Cycle

Instead of creating an expiration cycle from scratch, you can create a new expiration cycle using an existing expiration cycle. This is possible through copying an expiration cycle. On copying an expiration cycle, the details are copied to the new expiration cycle. You can then edit the details, if required.

Prerequisites

To copy an expiration cycle, you should have:

- Expiration cycle(whose copy you want to create) defined in the application
- Expiration cycle business objects defined in the application

Procedure

To copy an expiration cycle:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **E** and then click **Extended Lookup**.

The **Extended Lookup Query** screen appears.

- Search for **C1-EXPCYCLE** business object.

- In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business object.

The **Extended Lookup** screen appears.

- In the **Extended Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the expiration cycle whose copy you want to create.

The **Expiration Cycle** screen appears. It contains the following section:

- Main** – Used to specify basic details about the expiration cycle.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the expiration cycle.

- Enter the required details.
- Click **Save**.

The new expiration cycle is defined.

Distribution Hierarchy Extendable Lookup

The **Distribution Hierarchy Extendable Lookup** screen allows you to search for a distribution hierarchy. A distribution hierarchy is an extendable lookup reference object which indicates the list of hierarchies that should be considered while deriving accounts for offsetting the credit or debit amount on the financial transaction distribution object. This screen contains the following zone:

- [Extendable Lookup Search](#) on page 2167

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of distribution hierarchy business object. This zone contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description
Business Object	Used to search the distribution hierarchy business object.
Description	Used to search the distribution hierarchy business object with a particular description.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the business object.
Description	Displays information about the business object. Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the distribution hierarchy business object.

Searching for a Distribution Hierarchy Extendable Lookup

Prerequisites

To search for a distribution hierarchy extended lookup, you should have:

- Distribution hierarchy extended lookup defined in the application.

Procedure

To search for a distribution hierarchy extended lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. Search for **C1-HIERARCHY** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business object.
The **Extended Lookup** screen appears.
5. View the list of distribution hierarchy extended lookup values in the **Extendable Lookup Value List** zone.

Note:

You must specify at least one search criterion while searching for a distribution hierarchy extended lookup.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Extendable Lookup (Distribution Hierarchy)

The **Extendable Lookup** (Distribution Hierarchy) screen allows you to add, edit, copy, and delete a distribution hierarchy. This screen contains the following zones:

- [Extendable Lookup Value List](#) on page 2169
- [Extendable Lookup Value](#) on page 2169

Extendable Lookup Value List

The **Extendable Lookup Value List** zone allows you to view the list of distribution hierarchy extended lookup values that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
Value	Displays the distribution hierarchy extended lookup value.
Description	Displays the description of the distribution hierarchy extended lookup value.
Detailed Description	Displays the additional information about distribution hierarchy extended lookup value.
Owner	Displays the person or entity that created the distribution hierarchy extended lookup value.
Edit	On clicking the Edit (✎) icon, the Distribution Hierarchy screen appears where you can edit the details of the distribution hierarchy extended lookup value.
Duplicate	On clicking the Duplicate (📄) icon, the Distribution Hierarchy screen appears where you can define a distribution hierarchy extended lookup value using an existing distribution hierarchy extended lookup value.
Delete	On clicking the Delete (🗑) icon, you can delete the distribution hierarchy extended lookup value.

On clicking the **Broadcast** (📡) icon corresponding to the distribution hierarchy extended lookup value, the **Extendable Lookup Value** zone appear with the details of the respective distribution hierarchy extended lookup value.

You can filter the list using the **Value** or **Description** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone allows you to view the details of the distribution hierarchy extended lookup value. This zone consists of the following section:

- **Main** - This section lists the distribution hierarchy extended lookup values. It contains the following fields:

Field Name	Field Description
Hierarchy Code	Displays the unique hierarchy code.

Field Name	Field Description
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.
Description	Displays the description of the distribution hierarchy extended lookup value.
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.
Status	Displays the status of the distribution hierarchy extended lookup value.

- **Hierarchy List** - This section lists the hierarchy of the distribution. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order of priority according to which the distribution will be made in hierarchy.
Value	Displays the value of hierarchy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the distribution hierarchy extended lookup value.
Delete	Used to delete the distribution hierarchy extended lookup value.
Duplicate	Used to create a new distribution hierarchy extended lookup value using an existing distribution hierarchy extended lookup value.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the distribution hierarchy extended lookup value is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.
Owner	Indicates the person or entity that created the distribution hierarchy business object.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** () icon corresponding to the extendable lookup value of the **Extendable Lookup Value List** zone.

Defining a Distribution Hierarchy

Procedure

To define a distribution hierarchy:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
The **Extended Lookup Query** screen appears.
3. Search for **C1-HIERARCHY** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business object.

The **Extended Lookup** screen appears.

5. Click the **Add** button in the **Page Title** area of the **Extended Lookup** screen.

The **Hierarchy** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the distribution hierarchy.
- **Hierarchy List** – Used to specify the hierarchy of the distribution.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

Hierarchy List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Note:

You must specify at least one hierarchy list while defining a distribution hierarchy.

If you want to specify more than one hierarchy within the hierarchy list, click the **Add (+)** icon in the **Hierarchy List** section and then specify the details. However, if you want to remove a hierarchy from the hierarchy list, click the **Delete (🗑)** icon corresponding to the hierarchy.

- Enter the required details.
- Click **Save**.

The distribution hierarchy is defined.

Editing a Distribution Hierarchy**Procedure**

To edit a distribution hierarchy:

- Search for the **C1-HIERARCHY** business object in the **Extended Lookup Query** screen.
- In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business object.

The **Extended Lookup** screen appears.

- In the **Extended Lookup Value List** zone, click the **Edit (📎)** icon in the **Edit** column corresponding to the extended lookup value whose details you want to edit.

The **Hierarchy** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the distribution hierarchy.
- Hierarchy List** – Used to specify the hierarchy of the distribution.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

Hierarchy List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Note:

You must specify at least one hierarchy list while defining a distribution hierarchy.

If you want to specify more than one hierarchy within the hierarchy list, click the **Add (+)** icon in the **Hierarchy List** section and then specify the details. However, if you want to remove a hierarchy from the hierarchy list, click the **Delete (🗑)** icon corresponding to the hierarchy.

Tip: Alternatively, you can click the **Edit** button in the **Extended Lookup Value** zone to edit the details of the distribution hierarchy.

4. Modify the details, if required.
5. Add to the hierarchy list, if required.
6. Click **Save**.

The changes made to the distribution hierarchy are saved.

Copying a Distribution Hierarchy

Instead of creating a distribution hierarchy from scratch, you can create a new distribution hierarchy using an existing distribution hierarchy. This is possible through copying a distribution hierarchy. On copying a distribution hierarchy, the details are copied to the new distribution hierarchy. You can then edit the details, if required.

Prerequisites

To copy a distribution hierarchy, you should have:

- Distribution hierarchy (whose copy you want to create) defined in the application
- Distribution hierarchy business object defined in the application

Procedure

To copy a distribution hierarchy:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **E** and then click **Extended Lookup**.

The **Extended Lookup Query** screen appears.

- Search for **C1-HIERARCHY** business object.

- In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business object.

The **Extended Lookup** screen appears.

- In the **Extended Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the distribution hierarchy whose copy you want to create.

The **Hierarchy** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the distribution hierarchy.
- Hierarchy List** – Used to specify the hierarchy list of distribution.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

Hierarchy List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Note:

You must specify at least one hierarchy list while defining a distribution hierarchy.

If you want to specify more than one hierarchy within the hierarchy list, click the **Add (+)** icon in the **Hierarchy List** section and then specify the details. However, if you want to remove a hierarchy from the hierarchy list, click the **Delete (🗑)** icon corresponding to the hierarchy.

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the distribution hierarchy.

6. Enter the required details.
7. Add to the hierarchy list, if required.
8. Click **Save**.

The new distribution hierarchy is defined.

Copying a Financial Transaction Distribution Object

Instead of creating a financial transaction distribution object from scratch, you can create a new financial transaction distribution object using an existing financial transaction distribution object: This is possible through copying a financial transaction distribution object. On copying a distribution hierarchy, the details are copied to the new financial transaction distribution object. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution object, you should have:

- Financial transaction distribution object(whose copy you want to create) defined in the application
- Financial transaction distribution object business object defined in the application

Procedure

To copy a financial transaction distribution object:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **E** and then click **Extended Lookup**.
The **Extended Lookup Query** screen appears.
- Search for **C1-FTDISTOBJECT** business object.
- In the **Search Results** section, click the **Description** link corresponding to the **C1-FTDISTOBJECT** business object.
The **Extended Lookup** screen appears.
- In the **Extended Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the financial transaction distribution object whose copy you want to create.

The **Financial Transaction Distribution Object** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the financial transaction distribution object.
- Financial Transaction Distribution Type List** – Used to specify the financial transaction distribution types associated to a financial transaction distribution object.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Object Code	Used to specify the financial transaction distribution object code.	Yes
Description	Used to specify the description of the financial transaction distribution object extended lookup value.	Yes
Override Description	Used to specify the override description of the financial transaction distribution object extended lookup value.	No
Detailed Description	Used to specify the additional information about the financial transaction distribution object extended lookup value.	No
Status	Used to indicate the status of the financial transaction distribution object extended lookup value.	No

Financial Transaction Distribution Type List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to indicate the financial transaction distribution type to be associated to a financial transaction distribution object.	Yes

Note:

You must specify at least one financial transaction distribution type while defining a financial transaction distribution object.

If you want to specify more than one financial transaction distribution type within the financial transaction distribution type list, click the **Add (+)** icon in the **Financial Transaction Distribution Type List** section and then specify the details. However, if you want to remove a financial transaction distribution type from the financial transaction distribution type list, click the **Delete (🗑)** icon corresponding to the financial transaction distribution type.

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the financial transaction distribution object.

6. Enter the required details.
7. Add financial transaction distribution type, if required.
8. Click **Save**.

The new financial transaction distribution object is defined.

Financial Transaction Distribution (Used for Searching)

The **Financial Transaction Distribution** screen allows you to search a financial transaction distribution object using various search criteria. This screen contains the following zone:

- [Financial Transaction Distribution Search](#) on page 2185

Financial Transaction Distribution Search

The **Financial Transaction Distribution Search** zone allows you to search the details of the financial transaction distribution using various search criteria. This zone contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description
Search By	Used to indicate whether you want to search for financial transaction distribution object using which of the following options: <ul style="list-style-type: none"> • FT Distribution Type/Status/Expiry Date • FT Distribution ID

Field Name	Field Description
FT Distribution ID	Used to specify the financial transaction distribution ID.
	Note: This field appears when you select the FT Distribution ID option from the Search By list.
FT Distribution Type	Used to indicate the financial transaction distribution type against which the object is created.
	<p>Note:</p> <p>This field appears only when you select the FT Distribution Type/Status/Expiry Date option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Distribution Type FK Search window appears.</p>
FT Object Type	Used to indicate the business object that was used to create the financial transaction distribution type.
	Note: This field appears when you select the FT Distribution Type/Status/Expiry Date option from the Search By list.
Contract	Used to specify the contract on which financial transaction distribution object is created.
	<p>Note:</p> <p>This field appears when you select the FT Distribution Type/Status/Expiry Date option from the Search By list.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Search window appears.</p>
Expiration Date	Used to specify the credit expiration date of the financial transaction distribution object.
	Note: This field appears when you select the FT Distribution Type/Status/Expiry Date option from the Search By list.
Status	Used to indicate the status of the financial transaction distribution object.
	Note: This field appears when you select the FT Distribution Type/Status/Expiry Date option from the Search By list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Information	Indicates the information about the financial transaction distribution object.
	Note: It has a link. On clicking the link, the Financial Transaction Distribution screen appears with the details of the respective financial transaction distribution.
Status	Indicates the status of financial transaction distribution object.
Financial Transaction Distribution Type	Indicates the financial transaction distribution type information against which the object is created.
	Note: It has a link. On clicking the link, the Financial Transaction Distribution Type screen appears where you can view the details of the respective financial transaction distribution type.
Contract	Indicates the contract information on which the financial transaction distribution object is created.
	Note: It has a link. On clicking the link, the Contract screen appears with the details of the respective contract.
Create Date Time	Displays the date and time when the financial transaction distribution object is created.
Expiration Date	Displays the expiration date of the financial transaction distribution object.

How to search for a financial transaction distribution	Searching for a Financial Transaction Distribution Object on page 2187

Searching for a Financial Transaction Distribution Object

Prerequisites

To search for a financial transaction distribution, you should have:

- Financial transaction distribution types defined in the application.

Procedure

To search for a financial transaction distribution:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Financial Transaction Distribution**.
The **Financial Transaction Distribution** screen appears.
3. Enter the search criteria in the **Financial Transaction Distribution Search** zone depending on whether you want to search for a financial transaction distribution.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required. In case of **Financial Transaction Distribution ID**, wild card search is not supported.

Viewing the Financial Transaction Distribution Object Details

Procedure

To view the details of a financial transaction distribution object:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
The **Extended Lookup Query** screen appears.
3. Search for **C1-FTDISTOBJECT** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-FTDISTOBJECT** business object.
The **Extended Lookup** screen appears.
5. In the **Extended Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the financial transaction distribution object extended lookup value whose details you want to view.
The **Extended Lookup Value** zone appears.
6. View the details of the financial transaction distribution object in the **Extended Lookup Value** zone.

Financial Transaction Distribution (Used for Viewing)

The **Financial Transaction Distribution** screen allows you to view the details of the financial transaction distribution. This screen consists of the following tabs:

- [Financial Transaction Distribution - Main](#) on page 2189

- [Financial Transaction Distribution - Log](#) on page 2191

Financial Transaction Distribution - Main

The **Main** tab on the **Financial Transaction Distribution** screen contains the following zone:

- [Financial Transaction Distribution](#) on page 2189

Financial Transaction Distribution

The **Financial Transaction Distribution** zone displays the details of the financial transaction distribution types that are already defined in the system. This zone consists of the following sections:

- **Main** – This section provides basic information about the financial transaction distribution type. It contains the following fields:

Field Name	Field Description
Information	Indicates the information about the financial transaction distribution object.
FT Distribution Type	Displays the financial transaction distribution type. Note: It has a link. On clicking the link, the Financial Transaction Distribution Type screen appears with the details of the respective financial transaction distribution type. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Distribution Type FK Search window appears.
Account	Indicates the account on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Contract	Indicates the contract on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective account. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Search window appears.
Status	Indicates the status of the financial transaction distribution object.
Financial Transaction ID	Displays the financial transaction ID.

Field Name	Field Description
Bill segment	Indicates the bill segment information on which the financial transaction distribution object is distributed. a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill Segment screen appears where you can view the details of the respective bill segment.
Amount	Displays the distributed amount.
Expiration Date	Displays the expiration date of the financial transaction distribution object.

- **Distribution List** – This section displays the distribution list of the financial transaction distribution object. It contains the following columns:

Column Name	Column Description
Account	Indicates the account on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Contract	Indicates the contract on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective account.
Transfer Adjustment	Indicates the transfer adjustments made on the financial transaction distribution object.
Distribution Amount	Displays the distributed amount.

- **Characteristics** – This section lists the characteristics of the financial transaction distribution type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the financial transaction distribution object.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution object is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the financial transaction distribution object status is updated.
Create Date/Time	Displays the date and time when the financial transaction distribution object is created.

Financial Transaction Distribution - Log

The **Log** tab contains the following zone:

- [Financial Transaction Distribution Log](#) on page 2191

Financial Transaction Distribution Log

The **Financial Transaction Distribution Log** zone on the **Financial Transaction Distribution** screen lists the complete trail of actions performed on the financial transaction distribution object. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the financial transaction distribution object.
Details	Displays the details about the action performed on the financial transaction distribution object.
User	Indicates the user who has performed the action on the financial transaction distribution object.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the financial transaction distribution object.
Status Reason	Displays the status reason of action performed on the financial transaction distribution object.

Note: You can manually add a log entry for the financial transaction distribution object by clicking the **Add Log Entry** link in the upper right corner of the **Financial Transaction Distribution** zone.

The **Add Log Entry** window appears. Enter **Log Details** and click **Save**. The financial transaction distribution object log is added.

Adding a Log Entry for a Financial Transaction Distribution**Procedure**

To add a log entry for a financial transaction distribution:

1. Search for the financial transaction distribution object in the **Financial Transaction Distribution** screen.
2. In the **Search Results** section, click the link in the **Information** column corresponding to the financial transaction distribution whose log you want to edit.

The **Financial Transaction Distribution** screen appears. It consists of the following tabs:

- **Main** – Displays information about the financial transaction distribution. It contains the following zone:
 - **Financial Transaction Distribution** – Displays information about the financial transaction distribution object.

- **Log** – Lists the complete trail of actions performed on the financial transaction distribution object. This tab contains the following zone:
 - **Financial Transaction Distribution Log** – Displays the trail of actions performed on the particular financial transaction distribution object.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Financial Transaction Distribution Log** zone.

The **Add Log Entry** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution	Displays information about the financial transaction distribution object.	Not applicable
Log Details	Used to specify additional comments for the financial transaction distribution object.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Financial Transaction Distribution Log** zone.

Chapter 34

Deferred Revenue Recognition

Topics:

- [Prerequisites](#)
- [Deferred Revenue Recognition Status Transition](#)
- [Algorithms Used in Deferred Revenue Recognition](#)
- [Deferred Revenue Recognition Template \(Used for Searching\)](#)
- [Deferred Revenue Recognition Template \(Used for Viewing\)](#)
- [Deferred Revenue Recognition \(Used for Searching\)](#)
- [Deferred Revenue Recognition \(Used for Viewing\)](#)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is \$1200. When this new business is booked, the revenue of \$1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, \$200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information

about the deferred revenue recognition statuses, see [Deferred Revenue Recognition Status Transition](#) on page 2197.

Note: The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see [Prerequisites](#) on page 2197.

Prerequisites

To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
 - Use Calendar or Business Days (C or B)
 - Override Default Recognition Date (Y or N)
 - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
 - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Deferred Revenue Recognition Status Transition

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	<p>This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter:</p> <ul style="list-style-type: none"> • Use Contract Expiration Date (Y or N) – Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECITM	C1-REVRECITM	<p>This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon (which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters:</p> <ul style="list-style-type: none"> • Use Calendar or Business Days (C or B) - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory. • Override Default Recognition Date (Y or N) – Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory. • Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun) – Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day. • Override Default Monthly Recognition Date (1-31) - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, ..., 31. This parameter is required when you want to override the default monthly recognition date.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.
		C1-REVITMREC	C1-REVITMREC	<p>If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter:</p> <ul style="list-style-type: none"> • Create Adjustments (Y or N) – Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.
		C1-DRRTM-INF	C1-DRRTM-INF	<p>This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Description

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	<p>This algorithm validates the deferred revenue recognition template. It checks the following:</p> <ul style="list-style-type: none"> • Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule. • Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events. • Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination. • Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field. • Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.>> Whether the low proration limit is between 0 to 31 and is less than the high proration limit. <p>In addition, it does not allow you to:</p> <ul style="list-style-type: none"> • Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition. • Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status. • Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status. <p>You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRSC-INF	C1-DRRSC-INF	<p>This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Deferred Revenue Recognition Status 3. Distribution Code 4. Deferred Revenue Recognition ID
		C1-REVMON	C1-REVMON	<p>This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.</p>
		C1-REVRECINP	C1-REVRECINP	<p>This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.</p>

Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition Template \(Used for Viewing\)](#) on page 2212

This screen consists of the following zone:

- [Search Deferred Revenue Recognition Template](#) on page 2204

Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly 	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are: <ul style="list-style-type: none"> Active Inactive 	No

Note: You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition. Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

Searching for a Deferred Revenue Recognition Template

Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

Defining a Deferred Revenue Recognition Template

Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the deferred revenue recognition template.
- **Parameters** – Used to specify the various parameters for the deferred revenue recognition template.
- **Algorithms** – Used to associate algorithms with the deferred revenue recognition template.
- **Divisions** – Used to associate a deferred revenue recognition template with a division.
- **Characteristics** – Used to define the characteristics for the deferred revenue recognition template.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

The **Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition.	Yes
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Distribution Code Search window appears.	
Contract Type	Used to indicate a particular type of contract.	Yes
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: The Search (🔍 icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual 	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly 	Yes
Allow Proration	Used to allow proration.	Yes
	Note: The Allow Proration field appears when you select Recognition Schedule as Monthly .	

Field Name	Field Description	Mandatory (Yes or No)
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.	Yes (Conditional)
	Note: This field appears when you check the tick-box for Allow Proration .	Note: This field is required when the recognition schedule is selected as monthly and when the Allow Proration check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.	Yes (Conditional)
	Note: This field appears when you check the tick-box for Allow Proration .	Note: This field is required when the recognition schedule is selected as monthly and when the Allow Proration check box is selected.

- Enter the required details.
- Associate algorithms with the deferred revenue recognition template, if required.
- View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
- Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
- Click **Save**.

The deferred revenue recognition template is created.

Associating Algorithms with a Deferred Revenue Recognition Template

Procedure

To associate algorithms with a deferred revenue recognition template:

- Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number.	Yes
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the Algorithm field.	

2. Enter the required details in the **Algorithms** section.
3. If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add** (+) icon, and then repeat 2.

Note: However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete** (🗑️) icon corresponding to the algorithm.

Associating Deferred Revenue Recognition Template With A Division

Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

Procedure

To associate deferred revenue recognition template with a division:

1. Ensure that the **Divisions** section is expanded when you are creating or editing a deferred revenue recognition template.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template.	No
	Note: You can only view those divisions to which you have access in the Division list.	

- Select the required division from the list.
- If you want to associate the deferred revenue recognition template with more than one division, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑️) icon corresponding to the division.

- Click **Save**.

The deferred revenue recognition template is associated with the divisions.

Defining a Characteristic for a Deferred Revenue Recognition Template

Prerequisites

To define a characteristic for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

Procedure

To define a characteristic for a deferred revenue recognition template:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Valued field.	Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete (🗑)** icon corresponding to the characteristic.

Viewing the Deferred Revenue Recognition Template Details

Procedure

To view the details of a deferred revenue recognition template:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
The **Deferred Revenue Recognition Template** screen appears.
- Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to view.
The **Deferred Revenue Recognition Template** screen appears.
- View the details of the deferred revenue recognition template in the **Deferred Revenue Recognition Template** zone.

Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- [Deferred Revenue Recognition Template](#) on page 2212

Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Parameters** – Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code. Note: It has a link. On clicking the link, the Distribution Code screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the Deferred Revenue Recognition Template which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly
Allow Proration	Used to allow proration. Note: The Allow Proration field appears when you select Recognition Schedule as Monthly .
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. Note: This field appears when you check the tick-box for Allow Proration .
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated. Note: This field appears when you check the tick-box for Allow Proration .

- **Divisions** – Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** – Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Displays an algorithm that needs to be attached to the selected system event.	No
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.	

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template. Note: The Edit button appears when the deferred revenue recognition template is in the Active status.
Delete	Used to delete the deferred revenue recognition template.

-
- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing a Deferred Revenue Recognition Template

Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to edit.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.

The **Deferred Revenue Recognition Template** screen appears.

Note: The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.

4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics of the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition template are saved.

Deleting a Deferred Revenue Recognition Template

Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template that you want to delete.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.

A message appears confirming whether you want to delete the deferred revenue recognition template.

4. Click **OK**.

The deferred revenue recognition template is deleted.

Deferred Revenue Recognition (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition \(Used for Viewing\)](#) on page 2222

This screen consists of the following zone:

- [Search Deferred Revenue Recognition](#) on page 2216

Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: <ul style="list-style-type: none"> • Account Details • Person Details • Deferred Revenue Recognition Details • Financial Transaction Details • Policy Details 	Yes
	Note: By default, the Account Details option is selected.	
Person ID	Used to search deferred revenue recognition which are assigned to a particular person.	No
	Note: This field appears when you select the Person Details option from the Search By list.	
Account ID	Used to search the account ID.	No
	Note: This field appears only when you select the Account Details option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional)
		Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
		Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)
		Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
	Note: This field appears when you select the Account Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the value of the account identifier.	Yes (Conditional)
	Note: This field appears when you select the Account Details option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account.	No
	Note: This field appears when you select the Account Details option from the Search By list.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	Note: This field appears when you select the Person Details option from the Search By list.	
Status	Used to search deferred revenue recognition with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft 	No
	Note: This field appears when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition.	No
	Note: This field appears when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid.	No
	Note: This field appears when you select the Person Details or Account Details option from the Search By list.	
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No
	Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description of the deferred revenue recognition.	No
	Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly 	No
	Note: This field appears when you select the Deferred Revenue Recognition Details option from the Search By list.	
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction.	
	Note: This field appears only when you select the Financial Transaction Details option from the Search By list.	
Policy Type	Used to indicate the type of policy.	Yes
	Note: This field appears when you select the Policy Details option from the Search By list.	
Policy Number	Used to indicate the policy number.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	
Plan Number	Used to indicate the plan number of the policy.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	
Source System	Used to indicate the name of the external system from where the policy originated.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	
Start Date	Used to indicate the date from when the policy is effective.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to indicate the date till when the policy is effective.	No
	Note: This field appears when you select the Policy Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective financial transaction.

Searching for a Deferred Revenue Recognition

Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application
- Recognition Schedules defined in the application
- Source Systems defined in the application

Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deferred Revenue Recognition**.
A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.
The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

Viewing the Deferred Revenue Recognition Details**Procedure**

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2222
- [Deferred Revenue Recognition - Log](#) on page 2225

3. Ensure that the **Main** tab is selected.
4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

Related Topics

Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2222
- [Deferred Revenue Recognition - Log](#) on page 2225

Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- [Deferred Revenue Recognition](#) on page 2222
- [Associated Deferred Revenue Recognitions](#) on page 2224
- [Recognition Schedule](#) on page 2224
- [Revenue Recognition Items](#) on page 2225

Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template. Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition. Note: It has a link. On clicking the link, the Financial Transaction Information screen appears where you can view the details of the financial transaction.

Field Name	Field Description
Total Revenue Deferred	Displays the total revenue deferred.
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	Note: The Edit button appears when the deferred revenue recognition is in the Active status.
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	Note: The Generate Schedule button appears only when the deferred revenue recognition is in the Draft status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.

Field Name	Field Description
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled

Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

Note: This zone appears when the deferred revenue recognition is in the **Active** status.

Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. “
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the deferred revenue recognition.

Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- [Deferred Revenue Recognition Log](#) on page 2225

Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

Editing a Deferred Revenue Recognition

Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.
The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.
The **Deferred Revenue Recognition** screen appears.

Note: The **Edit** button appears when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics of the deferred revenue recognition, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition are saved.

Creating the Deferred Revenue Recognition Schedule

Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.

The **Deferred Revenue Recognition** screen appears.

3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

Note: The **Generate Schedule** button appears when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

Defining a Characteristic for a Deferred Revenue Recognition

Prerequisites

To define a characteristic for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

Procedure

To define a characteristic for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Deferred Revenue Recognition .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the deferred revenue recognition.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the deferred revenue recognition.

- Enter the required details in the **Characteristics** section.

Note: If you select a characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

- If you want to define more than one characteristic for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to edit a deferred revenue recognition	Editing a Deferred Revenue Recognition on page 2226

Adding Related Deferred Revenue Recognitions

Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

Procedure

To add related deferred revenue recognitions:

- Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Deferred Revenue Recognition Search window appears.	
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transactions Search window appears.	

- Enter the required details in the **Related Deferred Revenue Recognitions** section.
- If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑️) icon corresponding to the related deferred revenue recognition.

Editing the Deferred Revenue Recognition Schedule Details

Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

Procedure

To edit the details of the deferred revenue recognition schedule:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

The **Deferred Revenue Recognition** screen appears.

- Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.

The **Edit Recognition Schedule** screen appears.

Note: A recognition schedule from the deferred revenue recognition can be edited when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

- Modify the details of the recognition schedule.
- If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add (+)** icon and then repeat step 4.

Note: However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete (🗑)** icon corresponding to the recognition schedule.

- Click **Save**.

The changes made to the recognition schedule are saved.

Viewing the Log of a Deferred Revenue Recognition

Procedure

To view the log of a deferred revenue recognition:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2222
- [Deferred Revenue Recognition - Log](#) on page 2225

- Click the **Log** tab.

The **Log** tab appears.

- View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.

Column Name	Column Description
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

Adding a Log Entry for a Deferred Revenue Recognition

Procedure

To add a log entry for a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to edit.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2222
- [Deferred Revenue Recognition - Log](#) on page 2225

3. Click the **Log** tab.

The **Log** tab appears.

4. Click on the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

The **Add Deferred Revenue Recognition Schedule Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes Or No)
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.	Not applicable
Log Details	Used to specify additional comments for the deferred revenue recognition.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Deferred Revenue Recognition Log** zone.

Chapter 35

Product Lifecycle Management

Topics:

- *Prerequisites*
- *Product Status Transition through User Interface*
- *Product Status Transition through a Batch Process*
- *Product Version Status Transition*
- *Product Enrollment Status Transition through User Interface*
- *Product Enrollment Status Transition through a Batch Process*
- *Product Service (Used for Searching)*
- *Product Service (Used for Viewing)*
- *Product (Used for Searching)*
- *Product Version (Used for Viewing)*
- *Product (Used for Viewing)*
- *Product Enrollment (Used for Searching)*
- *Product Enrollment (Used for Viewing)*

Oracle Revenue Management and Billing facilitates a process of managing the entire lifecycle of a product from inception to service and then to retirement. The system allows you to create the following types of products:

- **Standard** - This type of product is a standalone product.
- **Packaged** - This type of a product is a bundle or group of products.
- **Informational** - This type of a product is used in the product hierarchy, but does not have its own pricing.

On creating a product, the status of the product is set to **Draft**. You can associate a product to one or more divisions. You can create a product to product relationship in the system. You can add product versions in the product. A product version is the entity which holds the following information:

- Product services which are offered with the product
- Price list from where the pricing for offered product services should be obtained.
- Eligibility criteria which must be satisfied when the account enrolls for the product.

The above information is captured when you create a product version for a standard product. However, when you create a product version for a packaged product, it holds the following information:

- Standard products which are offered in the packaged product.

Note: Some of these products might be compulsorily offered with the packaged product while some of the products might be optional.

- Standard products' services which are offered in the packaged product.

Note: Some of these product services might be compulsorily offered with the standard product while some of the product services might be optional.

- Add-on product services which are offered in the packaged product.
- Price list from where the pricing for offered product services and add-on product services should be obtained.
- Eligibility criteria which must be satisfied when the account enrolls for the packaged product.

A product version is effective from a particular date and its effective date must fall within the product date range. On creating a product version, the status of the product version is set to **In Progress**. You can activate a product when at least one of its product versions is in the **Finalized** status.

A product service can be associated to one or more price items. A product service can be offered with a product when it is associated with at least one price item in the system.

Once the product is activated, you can enroll the account for the product. On enrolling for a product, the system retrieves the product details from the product version which is effective on the system date. While enrolling for a standard product, you cannot remove mandatory product services from the product. However, you can enroll for optional product services which are offered with the product.

Similarly, while enrolling for a packaged product, you cannot remove mandatory products and product services from the packaged product. However, you can enroll for optional products and product services which are offered with the packaged product. While enrolling an account for a product, you can set the product enrollment priority for the account.

Once you create the product enrollment, the status of the enrollment is set to **Pending**. On submitting the product enrollment, the validation process is initiated. If all conditions are met, the status of the product enrollment is changed to **Enrolled**. You can unenroll for the product, whenever required.

You can retire a product, whenever required. The product, product version, and product enrollment goes through various statuses in their lifecycle.

The following batches are newly introduced for the Product Lifecycle Management feature:

- Product BO Monitor (C1-PRTRN)
- Product Enrollment Monitor (C1-ENTRN)

For more information on how to setup the product lifecycle management feature, see [Prerequisites](#) on page 2235.

Prerequisites

To setup the product lifecycle management feature, you need to do the following:

- Define the required customer and account in the system.
- Create an approval workflow group with a group name **PRODUCTPLM** for the product and product version.
- Define the feature configuration as **C1-PRODCH**.
- Define the sequence of execution of **C1-PROD-TDCC**, **C1-TRAN-RETR**, and **C1-PROD-ACTV** algorithms, in the **ACTIVE** status of the **C1_PRODUCT_BO** business object.
- Define the following parameters for the predefined **C1-PROD-TDCC** algorithm-type.
 - To Do Type1
 - Number of Days
 - Customer Contact
- Define the parameters for the predefined **C1-PRTRN** batch control.

Note: If the batch date is not defined while creating the batch control, system date is assigned as the batch date.

- Define at least one packaged or standard product for product enrollment purposes.
- Associate at least one price list with a product, when you are defining single or multiple product versions.

Product Status Transition through User Interface

The following figure graphically indicates how a product moves from one status to another through the user interface:

Product Service (Used for Searching)

The **Product Service** screen allows you to search for a product service using various search criteria. Through this screen, you can navigate to the following screen:

- [Product Service \(Used for Viewing\)](#) on page 2248

This screen consists of the following zone:

- [Search Product Service](#) on page 2241

For more information on...	See...
How to search for a product service	Searching for a Product Service on page 2242
How to view the details of a product service	Viewing the Product Service Details on page 2247

Search Product Service

The **Product Service Search** zone allows you to search for a product service using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to search for a product service based on the unique user-defined product service.	No
Description	Used to specify the description of a product service.	No
Start Date	Used to search for product service which starts from a particular date onwards.	No
End Date	Used to search for product service which is created till a particular date.	No
Price Item Information	Used to search for product service for which a price item information is created or updated in the system.	No

Note: You must specify at least one search criterion while searching for a product service.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Product Service	Displays the service code of a product service.
Description	Displays the description of product service.
	Note: It has a link. On clicking the link, the Product Service screen appears where you can view the details of the respective product service.
Start Date	Displays the date from when the product service is effective.

Column Name	Column Description
End Date	Displays the date till when the product service is effective.

On clicking the **Broadcast** () icon corresponding to a service code, the **Price Items** zone appears with the details of the respective product service.

Associated Price Items

The **Product Service Price Item** zone lists various price items that are associated with a service. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays the price item information that is associated with a service. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the product service will begin.
End Date	Displays the date till when the product service will be available.

Searching for a Product Service

Prerequisite

To search for a product service, you should have:

- Product Service defined in the application.
- Price Item defined in the application.

Procedure

To search for a product service:

1. From the **Main** menu, select **Pricing Management** and then click **Product Service**.
A sub-menu appears.
2. Click the **Search** option from the **Product Service** sub-menu.
The **Product Service** screen appears.

- Enter the search criteria in the [Search Product Service](#) on page 2241 zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of product services that meet the search criteria appear in the **Search Results** section.

Viewing the Product Service Price Items

Procedure

To view the price items of the product:

- Search for a product service in the **Product Service** screen.
- In the **Search Results** section, click the **Broadcast** () icon corresponding to a service code whose details you want to view.

The **Price Items** zone appears. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code that is set for each product service. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the product service will begin.
End Date	Displays the date till when the product service will be available.

Defining a Product Service

Prerequisites

To define a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)
- Price Item business object defined in the application.

Procedure

To define a product service:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Menu** list, select **Pricing Management**, and then click **Product Service**.

The sub-menu appears.

3. Click the **Add** option from the **Product Service** sub-menu.

The **Product Service** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the product service.
- **Characteristics** - Used to define the characteristics for a product service.
- **Price Items** - Used to define price item for a product service.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to specify the product service. Note: While defining a product service, ensure that at least one price item is associated with the product service.	Yes
Description	Used to specify the description of a product service.	Yes
Start Date	Used to specify the date from when the product service is effective. Note: The product service end date cannot be earlier than the product service start date.	Yes
End Date	Used to specify the date till when the product service is effective. Note: The product service end date cannot be earlier than the product service start date.	Yes

Note:

If the product service is used in one or more product versions, the product service's end date cannot be earlier than the product version's effective date.

4. Enter the required details in the **Main** section.

Note:

The Start Date field is mandatory.

5. Define the characteristics for a product service, if required.
6. Define the price item for a product service.

7. Click **Save**.

The product service is defined.

Related Topics

For more information on...	See...
Defining the characteristics for a product service	Defining a Characteristics for a Product Service on page 2246
Associating the product service with a Price Item	Associating a Product Service with a Price Item on page 2245

Associating a Product Service with a Price Item

Prerequisites

To associate a product service with a price item, you should have:

- Price Item business object defined in the application.

Procedure

To associate a product service with a price item:

1. Ensure that the **Price Items** section is expanded when you are defining, editing, or copying a product service.

The Price Item section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item which is associated with this product service. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	No
Start Date	Used to specify the date from when the product service is effective.	No
End Date	Used to specify the date till when the product service is effective. Note: The price item end date cannot be earlier than the price item start date.	No

2. Enter the required details in the **Price Items** section.

Note: The product service is used in one or more product versions, and therefore the product service's start date cannot be later than the product version's effective date.

3. If you want to associate one or more price items with the product service, click the **Add** (+) icon and then repeat step 2. However, if you want to remove the price items from the product service, click the **Delete** (🗑️) icon corresponding to the price item.
4. Click **Save**.

Note:

You cannot associate the same price item multiple times with the product service.

You can remove a price item from the product service even though the product version is in the Finalized status. A To Do Type named **C1-SVCU1** gets created whenever any modifications are made to the product service.

You can associate a price item with a product service when the price item's date range is within the product service's date range.

If there are changes with respect to the price items associated with the product service, then you must create a new version for that product.

The product service is associated with the price item.

Defining a Characteristics for a Product Service**Prerequisites**

To define a characteristic for a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)

Procedure

To define a characteristic for a product service:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a product service.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the product service.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the product service.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Product Service	Yes (Conditional) Note: This field is required when you are defining a characteristic for the product service.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the product service.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the product service, click the **Add (+)** icon and then repeat step 2. However, if you want to remove a characteristic from the product service, click the **Delete (🗑)** icon corresponding to the characteristic.
- Select an appropriate characteristic type from the **Characteristic Type** list.

Product Service (Used for Viewing)

The **Product Service** screen allows you to:

- View the details and characteristics of the product service
- Edit, Delete, and Copy the details of the product service
- View the product service business object
- View the price items that are associated with the product service

The **Product Service** screen consists of the following zones:

- [Product Service](#) on page 2248
- [Price Items](#) on page 2249

Product Service

The **Product Service** zone displays the details of the product service. It contains the following sections:

- **Main** - Displays the basic information about the product service. It contains the following fields:

Field Name	Field Description
Product Service	Displays the product service that is assigned to a product service.
Description	Displays the description of the product service.
Start Date	Displays the date when the product service starts.
End Date	Displays the date when the product service ends.

- **Characteristics** - Lists the characteristics defined for the product service. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the product service.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the product service.
Delete	Used to delete the product service.
Duplicate	Used to create a new product service using an existing product service information.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product service is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Price Items

The **Product Service Price Item** zone lists various price items that are associated with a service. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays the price item information that is associated with a service.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the product service will begin.
End Date	Displays the date till when the product service will be available.

Editing a Product Service

Procedure

To edit a product service:

1. Search for the product service in the **Product Service**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the product service whose details you want to edit.

The **Product Service** screen appears.

3. Click the **Edit** button in the **Product Service** zone.

The **Product Service** screen appears.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Modify the details of the product service in the main section, if required.
5. Modify the characteristics for a product service, if required.

6. Associate the price items with a product service, if required.
7. Click **Save**.

The changes made to the product service are saved.

Copying a Product Service

Instead of creating a product service from scratch, you can create a new product service using an existing product service. This is possible through copying a product service. On copying a product service, the details including the algorithms and characteristics are copied to the new product service. You can then edit the details, if required.

Prerequisites

To define a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)
- Price Item business object defined in the application.

Procedure

To define a product service:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product Service**.
The sub-menu appears.
3. Click the **Search** option from the **Product Service** sub-menu.

The **Product Service** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the product service.
- **Characteristics** - Used to define the characteristics for a product service.
- **Price Items** - Used to define price item for a product service.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to specify the product service.	Yes
Description	Used to specify the description of a product service.	Yes
Start Date	Used to specify the date from when the product service is effective.	Yes
End Date	Used to specify the date till when the product service is effective.	Yes

Tip: Alternatively, you can click the **Duplicate** button in the **Record Actions** section, in the **Product Service** zone to create a copy of the product service.

4. Enter the required details in the **Main** section.
5. Define the characteristics for a product service, if required.
6. Define the price item for a product service, if required.
7. Click **Save**.

The new product service is defined.

Searching for a Product

Prerequisite

To search for a product, you should have:

- Product Type defined in the application.
- Product Category defined in the application.
- Division defined in the application.
- Relationship Type defined in the application.

Procedure

To search for a product:

1. From the **Main** menu, select **Pricing Management** and then click **Product**.

A sub-menu appears.

- Click the **Search** option from the **Product** sub-menu.

The **Product** screen appears.

- Enter the search criteria in the **Search Product** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of products that meet the search criteria appear in the **Search Results** section.

Defining a Product

Prerequisites

To define a product, you should have:

- Product Type should be defined in the application.
- Product Category should be defined in the application.

Procedure

To define a product:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product**.
The sub-menu appears.
3. Click the **Add** option from the **Product** sub-menu.

The **Product** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the product.
- **Divisions** - Used to define the characteristics for a product.
- **Product to Product Relationship** - Used to define product to product relationship for a product.
- **Characteristics** - Used to define the characteristics for a product.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product.	Yes
Description	Used to specify the description of a product.	Yes
Status	Displays the status of the product.	Yes
	Note: Whenever a new product is added, it will have the status as Draft .	
Product Type	Used to indicate the type of a product.	Yes
Product Category	Used to indicate the category of a product.	Yes
Start Date	Used to specify the date from when the product is effective.	Yes
End Date	Used to specify the date till when the product is effective.	No
Compliance Number	Used to specify the compliance number received from the legal department.	No
Product Manager To Do Role	Used to specify all the To Do raised against this product that are further assigned to this product manager To Do role.	No

4. Enter the required details in the **Main** section.

Note:

You cannot add or edit a product version when the product is in the Retired status.

The Start Date field is mandatory.

5. Associate a division with a product, if required.
6. Define the characteristics for a product, if required.

Note:

Ensure that the value is specified for the characteristic type option type in the C1-PRODCH feature configuration.

Ensure that a valid value is specified for the characteristic type.

7. Define the price item for a product, if required.

8. Click **Save**.

The product is defined.

Associating a Product with a Division

Prerequisites

To associate product with a division, you should have:

- Division defined in the application.

Procedure

To associate product with a division:

1. Ensure that the **Divisions** section is expanded when you are defining, editing, or copying a product.

The Division section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division of the product.	Yes

2. Enter the required details in the **Divisions** section.

Note:

At least one division must be associated with the product.

3. If you want to associate one or more divisions with the product, click the **Add (+)** icon and then repeat step 2.

Note:

However, if you want to remove the divisions from the product, click the **Delete (🗑)** icon corresponding to the product.

4. Click **Save**.

Note:

Ensure that the division associated with the product is associated to the price list.

You cannot remove the division from the product because the price list associated to the product version which is effective on (mention date) is associated to the division.

The divisions are associated with the product.

Defining a Product to Product Relationship

Prerequisites

To define a product to product relationship, you should have:

- Relationship Type defined in the application.

Procedure

To define a product to product relationship:

1. Ensure that the **Product to Product Relationship** section is expanded when you are defining, editing, or copying a product.

The Product to Product Relationship section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product.	Yes
Relationship Type	Used to indicate the relationship type with the product. The valid values are: <ul style="list-style-type: none"> • Child product • Parent product 	Yes
Effective Start Date	Used to specify the date from when the product to product relationship will begin.	No
Effective End Date	Used to specify the date till when the product to product relationship will be available.	No

2. Define the details of the product in the main section, if required.

Note:

The product to product relationship start and end dates must be within the product's start and end dates.

3. Define the division for a product, if required.

Note:

The division associated with the child product is not associated with the packaged product.

4. Define the product to product relationship for a product, if required.

Note:

The child product that you want to add in the product version is not effective, as it must be in an active state.

5. Define the characteristics for a product, if required.

6. Click **Save**.

The product to product relationship is defined.

How to define a characteristic for a product version	Defining a Characteristic for a Product Version on page 2270

Defining a Characteristic for a Product Version**Procedure**

To define a characteristic for a product version:

1. Search for a product in the **Search Product** zone.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the product whose details you want to view.

The **Product** screen appears. It consists of the following tabs:

- Product — Main
- Product — Log

3. Ensure that the **Main** tab is selected.
4. Click the **Add** link in the **Product Version** zone.

The **Product Version** screen appears.

5. Click the **Product Services** link mentioned in the **Sections** navigation panel.

The **Characteristics** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the product version.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price item or price item bundle.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Price Item.	Note: This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the price item or price item bundle.

6. Enter the required details in the **Characteristics** section.
7. If you want to add more than one characteristic to the product version, click the **Add** (+) icon. However, if you want to remove a characteristic from the **Characteristics** section, click the **Delete** (🗑) icon corresponding to the effective date field.
8. Click **Save**.

The characteristics are defined for the product version.

Product Version - Main

The **Product Version - Main** tab displays information about the product version and services. It contains the following zones:

- [Product Version](#) on page 2272
- [Services](#) on page 2275
- [Add-on Product Services](#) on page 2275
- [Price Items](#) on page 2249
- [Eligibility Criteria](#) on page 2276

Product Version

The **Product Version** zone displays the details of the product version. It contains the following sections:

- **Main** - Displays the basic information about the product version. It contains the following fields:

Field Name	Field Description
Product	Displays information about the product. Note: It has a link. On clicking the link, the Product screen appears where you can view the details of the product.
Effective Date	Displays the date from when the product version will be effective.
Product Type	Displays the type of product for which the product version is created.
Status	Displays the status of the product version.
Description	Displays the description of the product version.
Terms and Conditions	Displays the terms and conditions that are applicable for the product version.

- **Record Actions** - This section contains the following fields:

Button Name	Button Description
Edit	Used to edit the details of the product version.
	Note: The Edit button appears when the product version status is In Progress, Finalized, and Draft .
Delete	Used to delete the details of the product version.
	Note: The Delete button appears when the product version status is In Progress, Finalized, and Draft .
Duplicate	Used to create a new version using an existing product version.
	Note: The Duplicate button appears when the product version status is In Progress, Finalized, and Draft .
Finalized	Used to finalize all the changes and make the product Active .

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product version is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the product version is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- Enter the required details in the [Products](#) on page 2274 zone.
- Enter the required details in the [Product Services](#) on page 2274 zone.

Note: Products and Product Services section is displayed when the product type is selected as **Packaged** product from the [Search Product](#) on page 2252 zone in the **Product** screen.

- Enter the required details in the [Add-on Product Services](#) on page 2275 zone.
- Enter the required details in the [Services](#) on page 2275 zone.

Note: The services section appear when the product type is selected as a **Standard** product from the [Search Product](#) on page 2252 zone in the **Product** screen.

- Enter the required details in the [Price List](#) on page 2276 zone.
- Enter the required details in the [Eligibility Criteria](#) on page 2276 zone.

Products

The **Products** zone displays the details of the product. It contains the following fields:

Field Name	Field Description
Product	Displays the product service that is assigned to a product.
Effective Date	Displays the date from when the product is effective.
Description	Displays the description of the product

Product Version - Log

The **Product Version - Log** tab contains the following zone:

- [Product Version Log](#) on page 2278

Product Version Log

The **Product Version - Log** zone lists the complete trail of actions performed on the product version. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the product version.
Details	Displays the details about the action performed on the product version.
User	Displays the user who has performed the action on the product version.
Log Type	Displays the type of log.
Related Object	Displays the object or entity that is generated when the action is performed on the product version.
Status Reason	Displays the status reason of action performed on the product version.

Editing a Product Version

Procedure

To edit a product version:

1. Search for the product in the **Search Product** zone.
2. In the **Search Results** section, click the **Broadcast** () icon, corresponding to the product column.

The **Product Version List** zone appears.

- Click the link in the **Description** column, corresponding to the status column.

The **Product Version** screen appears.

- Click the **Edit** button in the **Product Version** zone.

The **Product Version** screen appears.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Modify the details of the product version in the main section, if required.

Note:

The effective date of a product version cannot be later than the product end date.

- Define, edit, or remove the products and/or services for a product version, if required.

Note:

You must select the Inclusion check box when the product service is defined as mandatory in the effective product version.

- Modify the price list for a product version, if required.
- Define, edit, or remove the eligibility for a product version, if required.
- Define, edit, or remove the characteristics for a product version, if required.
- Click **Save**.

Note:

You cannot edit the details of the product version except the characteristics when the product version is in the Finalized status.

The changes made to the product version are saved.

Deleting a Product Version

Procedure

To delete a product version:

1. Search for the product in the **Search Product** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the **Broadcast** () icon, corresponding to the product column.

The **Product Version List** zone appears.

3. Click the link in the **Description** column, corresponding to the status column.

The **Product Version** screen appears.

4. Click the **Delete** button in the **Product Version** zone.

A message appears confirming whether you want to delete the product version.

5. Click **OK**.

Note:

You cannot delete the product version which is in the Finalized status.

The product version is deleted.

Copying a Product Version

Instead of creating a product version from scratch, you can create a new product version using an existing product version. This is possible through copying a product version. On copying a product version, the details including the algorithms and characteristics are copied to the new product version. You can then edit the details, if required.

Prerequisites

To copy a product version, you should have:

- Product and Product Type defined in the application.
- Product Status and Service Code defined in the application.
- Product Category, Division, and Product To Do Role defined in the application.
- Eligibility Type, Characteristic Type, Price List, and Terms and Conditions defined in the application.
- Parameter, Operator, Parameter Value Type, Is True, Is False, and Is Sufficient defined in the application.

Procedure

To copy a product version:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product**.
The sub-menu appears.
3. Click the **Search** option from the **Product** sub-menu.
The **Product** screen appears.
4. In the **Search Results** section, click the **Broadcast** () icon corresponding to the product column whose version you want to copy.
The **Product Version List** zone appears.
5. Click the link in the **Description** column, to view the details of the product version.
The **Product Version** screen appears.
6. Click the **Duplicate** button in the **Record Actions** section.

The **Product Version** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the product version.
- **Products and Services** - Used to define the products and services for a product version.
- **Price List**
- Used to define the Price List for the product version.
- **Eligibility**
- Used to define the Eligibility for the product version.
- **Characteristics**
- Used to define the Characteristics for the product version.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Type	Displays the product type.	Not applicable
Product	Displays the product code.	Not applicable
Effective Date	Used to specify the effective date from when the product version will be effective.	Yes
Status	Used to specify the status of the version.	Yes
	Note: It is a read-only field, and cannot be edited.	
Description	Used to specify the description for the version.	No

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	Used to specify the terms and conditions for the version.	Yes
	Note: Click the Search (🔍) icon appearing corresponding to the Terms and Conditions field. On clicking the Search icon, you can search for a predefined terms and conditions.	

7. Enter the required details in the **Products and Services** and/or **Product Services** section.

Note: If the product type is **Packaged** then **Products and Services** section appears. If the product type is **Standard** then **Product Services** section appears. If the product type is **Information Only** neither of these sections are displayed.

8. Enter the required details in the **Price List** section.
9. Enter the required details in the **Eligibility** section.
10. Enter the required details in the **Characteristics** section.
11. Click **Save**.

The new product service is defined.

Finalizing a Product Version

Prerequisites

To finalize a product version, you should have:

- Product Version status as In Progress

Procedure

To finalize a product version:

1. Search for the product in the **Product Search** screen.

2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the product whose details you want to view.

The **Product Version List** screen appears.

3. In the **Product Version List** zone, click the link in the **Description** column, for that product version, whose product version log you want to view.

The **Product Version** screen appears.

4. Click the **Finalize** button in the **Product Version** zone.

The status of the product version is changed to **Finalized**.

Note:

You cannot finalize the product version when its effective date is earlier than the product start date.

Note:

The **Finalize** button appears when the product version is in the **In Progress** status.

Relationship Type	Displays the type of relationship.
Effective Start Date	Displays the date from when the product to product relationship will be effective.
Effective End Date	Displays the date till when the product to product relationship will be effective.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics for the product will be effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the characteristic value.

Product Version List

The **Product Version List** zone lists the information related to the product version.

Column Name	Column Description
Effective Date	Displays the date from when the product version is effective.
Description	Displays the description of the product version.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective product version.
Status	Displays the status of the product version.

Related Topics

Product - Log

The **Product - Log** tab contains the following zone:

- [Product Log](#) on page 2287

Product Log

The **Product Log** zone lists the complete trail of actions performed on the product. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the product.
Details	Displays the details about the action performed on the product.
User	Displays the user who has performed the action on the product.
Log Type	Displays the type of log.
Related Object	Displays the object or entity that is generated when the action is performed on the product.
Status Reason	Displays the status reason of action performed on the product.

Editing a Product

Procedure

To edit a product:

1. Search for the product in the **Search Product** zone.
2. In the **Search Results** section, click the link in the **Description** column, corresponding to the product column whose details you want to edit.

The **Product** screen appears.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

3. Click the **Edit** button in the **Record Actions** zone.

The **Product** screen appears.

4. Modify the details of the product in the main section, if required.

Note:

The product start date cannot be later than its product version's effective date.

The product end date cannot be earlier than its product version's effective date.

You cannot update the product type field because a product version is already defined for the product.

You cannot add or edit a product version when the product is in the Retired status.

5. Define, edit, or remove the divisions for a product, if required.

Note:

You cannot remove the division from the product because an account from this division is already enrolled to the product.

You cannot remove the division from the packaged product because the child product is associated to the division.

6. Define, edit, or remove the product to product relationship for a product, if required.

- Define, edit, or remove the characteristics for a product, if required.

Note:

You cannot change the value of the characteristic when the product is in the Active status. To change the value of the characteristic, the characteristic type should not be of **C1-STOPE** type.

- Click **Save**.

The changes made to the product are saved.

Copying a Product

Instead of creating a product from scratch, you can create a new product using an existing product. This is possible through copying a product. On copying a product, the details including the algorithms and characteristics are copied to the new product. You can then edit the details, if required.

Prerequisites

To copy a product, you should have:

- Product, Product Type, Product Category, and Product Manager's To Do Role defined in the application.
- Division defined in the application.
- Relationship Type and Characteristic Type defined in the application.

Procedure

To copy a product:

- Search for a product in the **Product** screen.
- In the **Search Results** section, click the link in the **Description** column, corresponding to the product column, whose details you want to copy.

The **Product** screen appears.

- Click the **Duplicate** button in the **Record Actions** section.

The **Product** screen appears.

- Enter the required product details in the **Main** section, if required.
- Define, edit, or remove the divisions for a product, if required.
- Define, edit, or remove the product to product relationship for a product, if required.
- Define, edit, or remove the characteristics for a product, if required.
- Click **Save**.

The new product is defined.

Activating a Product

Prerequisites

To activate a product, you should have:

- Product must have the status as Draft.
- Product Version Status should be Finalized.

Procedure

To activate a product:

1. Search for a product in the **Product** screen.
2. In the **Search Results** section, click the link in the **Description** column, corresponding to the product column that needs to be activated.

The **Product** screen appears.

3. Click the **Active** button in the **Record Actions** section.

Note:

You can activate a product when there is at least one product version in the Finalized status.

The product is activated, as the status is changed from **Draft** to **Active**.

How to retire a product	Retiring a Product on page 2289

Retiring a Product

Prerequisites

To retire a product, you should have:

- Product Status must be Active.
- Product End Date less than equal to current date.

Procedure

To retire a product:

1. Search for a product in the **Product** screen.

- In the **Search Results** section, click the link in the **Description** column, corresponding to the product column that needs to be activated.

The **Product** screen appears.

- Click the **Retire** button in the **Record Actions** section.

The **Retire Product** screen appears.

- Mention the **End Date** of the product.

Note:

The enrollments for the product, which you are retiring, are still effective.

- Click **Save**.

The product is retired, as the status is changed from **Active** to **Retired**.

Note:

On retiring the product, the end date of the effective product enrollments is set to the system date.

Viewing the Log of a Product

Procedure

To view the log of a Product:

- Search for the product in the **Product** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the product, whose log you want to view.

The **Product** screen appears. It consists of the following tabs:

- [Product - Main](#) on page 2284
- [Product - Log](#) on page 2286

- Click the **Log** tab.

The **Log** tab appears.

- View the complete trail of actions performed on the product version in the **Product Log** zone.

Search Enrollment

The **Search Enrollment** zone allows you to search for the enrolled products using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an enrolled product using the option of Product Enrollment. The valid values are: <ul style="list-style-type: none"> • Product Enrollment 	Yes
	Note: By default, the Product Enrollment option is selected.	
Enrollment ID	Used to search an enrollment, based on the enrollment ID.	No
Account ID	Used to search an enrollment, based on the account ID.	No
Person ID	Used to search an enrollment, based on the person ID.	No
Product	Used to search an enrollment, based on the product ID.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search an enrollment with a particular status. The valid values are: <ul style="list-style-type: none"> • Canceled • Enrolled • Error • Pending • Unenrolled • Validated 	No
Start Date	Used to search enrollments which are initiated from a specific date.	No
Enrollment Channel	Used to search enrollments based on a enrollment source. The valid values are: <ul style="list-style-type: none"> • Oracle Revenue Management and Billing 	No
End Date	Used to search enrollments which are initiated till a specific date.	No

Note: You must specify at least one search criterion while searching for an enrollment.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Enrollment ID	Displays the enrollment ID of the enrolled product.
	Note: It has a link. On clicking the link, the Product Enrollment screen appears where you can view the details of the respective enrolled product.
Account Information	Displays the account ID of the enrolled product.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Start Date	Displays the date from when the enrolled product is effective.
End Date	Displays the date till when the enrolled product is effective.

On clicking the **Broadcast** () icon corresponding to an enrollment ID, the **Enrolled Products** zone appears with the details of the products that are enrolled.

- **Enrolled Products** - The **Enrolled Products** section contains the following columns:

Column Name	Column Description
Product Type	Displays the type of product which is enrolled.
Product	Displays the name of the enrolled product.

Column Name	Column Description
Version Description	Displays the description of the enrolled product version.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective enrolled product.
Start Date	Displays the date from when the enrolled product is effective.
End Date	Displays the date till when the enrolled product is effective.

- **Enrolled Services** - The **Enrolled Services** section contains the following columns:

Column Name	Column Description
Service Code	Displays the type of service which is enrolled.
Description	Displays the description of the enrolled service.
	Note: It has a link. On clicking the link, the Product Service screen appears where you can view the details of the respective enrolled service.
Start Date	Displays the date from when the enrolled service is effective.
End Date	Displays the date till when the enrolled service is effective.

Searching for a Product Enrollment

Prerequisite

To search for a product enrollment, you should have:

- Enrollment Details defined in the application.
- Account ID and Person ID defined in the application.
- Product and Status defined in the application.
- Enrollment defined in the application.

Procedure

To search for a product enrollment:

1. From the **Main** menu, select **Pricing Management** and then click **Product Enrollment**.
A sub-menu appears.
2. Click the **Search** option from the **Product Enrollment** sub-menu.

The **Product Enrollment** screen appears.

3. Enter the search criteria in the [Search Enrollment](#) on page 2291 zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of enrolled products that meet the search criteria appear in the **Search Results** section.

Note: If you have specified any other search criterion other than the product enrollment ID, the system generates a message saying that the product enrollment ID is invalid.

Enrolling an Account for One or More Products and Services

Prerequisites

To enroll an account for one or more products and services, you should have:

- Account Information defined in the application.
- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To enroll an account for one or more products and services:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product Enrollment**.
The sub-menu appears.
3. Click the **Add** option from the **Product Enrollment** sub-menu.

The **Product Enrollment** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the account for product enrollment. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Used to specify the enrollment ID once the product is defined for an enrollment.	Yes
	Note: Enrollment ID is displayed when the product is added for enrollment.	
Account ID	Used to specify the account ID.	Yes
	Note: You can search for an account by clicking the Search () icon corresponding to the Account Information field.	

Field Name	Field Description	Mandatory (Yes or No)
Status	Displays the status of the product.	No
	Note: The product enrollment will always have the status as Pending .	
Start Date	Used to specify the date from when the product enrollment is effective.	Yes
End Date	Used to specify the date till when the product enrollment is effective.	Yes
Enrollment Channel	Used to specify the source for product enrollment.	Yes
Comments	Used to specify the comments for product enrollment.	No

- **Product and Services** - Used to define products and services for a product. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product for enrollment.	No
	Note: You can search for a product by clicking the Search (🔍) icon corresponding to the Product field.	
Start Date	Used to specify the date from when the product is effective.	No
End Date	Used to specify the date till when the product is effective.	No
Inclusion	Used to indicate whether the product is used for enrollment.	No
Standard Product	Displays the standard product which is included within the main product.	No
Start Date	Used to specify the date from when the standard product is effective.	No
End Date	Used to specify the date till when the standard product is effective.	No
Inclusion	Used to indicate whether the standard product is used for enrollment.	No
Services	Displays the service that is a part of the standard product.	No
Start Date	Used to specify the date from when the service is effective.	No
End Date	Used to specify the date till when the service is effective.	No
Inclusion	Used to indicate whether the service is used for enrollment.	No
	Note: The inclusion check-box is already checked, if the service has been marked as Mandatory in the Product Version zone.	
Add on Services	Displays the add-on service which is a part of the packaged product.	No

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the add-on service is effective.	No
End Date	Used to specify the date till when the add-on service is effective.	No
Inclusion	Used to indicate whether the add-on service is used for enrollment.	No

- **Product Priority** - Used to define the product priority for product enrollment.

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Displays the enrollment ID.	No
Packaged Products	Displays the packaged product which is added for enrollment.	No
Standard Products	Displays the standard product which is added for enrollment.	No
Product Enrolled Start Date	Displays the date from when the product's enrolled date is effective.	No
Product Enrolled End Date	Displays the date till when the product's enrolled date is effective.	No
Priority	Displays the priority of the product in terms of enrollment.	No

- **Characteristics** - Used to define the characteristics for a product enrollment.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic will be effective.	No
Characteristics Type	Used to indicate the characteristic type for a characteristic.	No
Characteristics Value	Used to indicate the characteristic value.	No

4. Enter the required details in the **Main** section.

Note:

The Start Date field is mandatory.

5. Enter the required details in the **Product and Services** section.

Note:

At least one product service must be added in the product version.

6. Enter the required details in the **Product Priority** section.

Note:

Ensure that priority for the product is specified.

7. Enter the required details in the **Characteristics** section.
8. Click **Save**.

Note:

You cannot enroll for a product where none of its product versions are effective within the enrollment date range.

You cannot enroll for a product where the product start date is later than the enrollment start date.

The enrollment start and end dates should be within the start and end dates of the product.

At least one product must be selected while enrolling products for an account.

At least one price item associated with the product service must be effective during enrollment.

The account is added for enrollment.

	Note: The Unenroll button appears when the product enrollment status is Enrolled .
Submit	Used to submit the product for an enrollment.
	Note: The Submit button appears when the product enrollment status is Pending .

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product enrollment is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective for product enrollment.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the characteristic value.

Enrolled Products

The **Enrolled Products** zone displays the products that have been enrolled. It contains the following columns:

Columns Name	Column Description
Product Type	Displays the type of the product.
Product	Displays the name of the product.
Version Description	Displays the description of the enrolled product version.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective product version.
Start Date	Displays the date from when the enrollment is effective.
End Date	Displays the date till when the enrollment is effective.

Note: By default, the **Enrolled Services** zone does not appear. It appears when the product type is **Standard** and you click the **Broadcast** () icon corresponding to the product type column.

Product Enrollment - Log

The **Product Enrollment - Log** tab contains the following zone:

- [Enrollment Log](#) on page 2307

Enrollment Log

The **Enrollment Log** zone lists the complete trail of actions performed in the product enrollment. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed in the product enrollment.
Details	Displays the details about the action performed in the product enrollment.
User	Displays the user who has performed the action in the product enrollment.
Log Type	Displays the type of log.
Related Object	Displays the object or entity that is generated when the action is performed in the product enrollment.
Status Reason	Displays the status reason of action performed in the product enrollment.

Viewing the Standard Products Included in an Enrolled Product

Procedure

To view the standard product included in an enrolled product:

1. Search for an enrolled product in the **Product** screen.
2. In the **Search Results** section, click the link in the **Enrollment ID** column whose details you want to view.

The **Product Enrollment** screen appears.

Note: To view the standard products that are included in an enrolled product, the product must be a **Packaged** product.

- In the **Enrolled Products** zone, click the **Broadcast** () icon corresponding to the product type, whose enrolled standard products you want to view.

The **Enrolled Standard Products** zone appears.

- View the list of the standard products that are enrolled in the **Enrolled Standard Products** screen.

Note: The **Enrolled Standard Products** zone appears when the product is of **Business** type, displayed in the **Enrolled Products** zone.

Related Topics

Editing a Product Enrollment

Procedure

To edit a product enrollment:

- Search for the product in the **Search Enrollment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.

The **Product Enrollment** screen appears.

- Click the **Edit** button in the **Product Enrollment** zone.

The **Product Enrollment** screen appears.

- Modify the details of the product version in the main section, if required.
- Define, edit, or remove the products and/or services for a product enrollment, if required.
- Modify the product priority for a product enrollment, if required.

Note:

The priority for the enrolled product must be greater than zero (0).

- Define, edit, or remove the characteristics for a product enrollment, if required.

- Click **Save**.

Note:

You cannot edit the details of the product enrollment when it is in the enrolled status.

The changes made to the product enrollment are saved.

You cannot enroll for more than one product with the same product type and priority combination.

Copying a Product Enrollment

Instead of creating a product enrollment from scratch, you can create a new product enrollment using an existing enrollment. This is possible through copying a product enrollment. On copying a product enrollment, the details including the algorithms and characteristics are copied to the new product. You can then edit the details, if required.

Prerequisites

To copy a product enrollment, you should have:

- Account ID, Account Start and End Date, and Enrollment Channel defined in the application.
- Product and Characteristic Type defined in the application.

Procedure

To copy a product enrollment:

1. Search for a product in the **Product Enrollment** screen.
2. In the **Search Results** section, click the link in the **Description** column, corresponding to the product column, whose details you want to copy.

The **Product Enrollment** screen appears.

3. Click the **Duplicate** button in the **Record Actions** section.

The **Product Enrollment** screen appears.

4. Enter the required product details in the **Main** section, if required.
5. Define, edit, or remove the products and services, if required.
6. Define, edit, or remove the product priority, if required.
7. Define, edit, or remove the characteristics, if required.
8. Click **Save**.

The new product enrollment is defined.

Enrolling a Product Enrollment

Prerequisites

To enroll a product for an enrollment, you should have:

- Status of the product defined as Pending or Validated.
- Account Information defined in the application.

- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To enroll a product for an enrollment:

1. Search for the product in the **Search Enrollment** zone.
2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.
The **Product Enrollment** screen appears.
3. Click the **Submit** button in the **Product Enrollment** zone.

The product status gets changed to **Enroll**.

Note: Once the submit button is clicked the ORMB application validates the account information, enrollment channel, product, and characteristic type field to ensure that they contain appropriate data. If any information is missing then an error message is displayed.

Unenrolling a Product Enrollment

Prerequisites

To unenroll a product for an enrollment, you should have:

- Status of the product defined as enrolled.
- Account Information defined in the application.
- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To unenroll a product for an enrollment:

1. Search for the product in the **Search Enrollment** zone.
2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.
The **Product Enrollment** screen appears.
3. Click the **Unenroll** button in the **Product Enrollment** zone.

The Unenroll Product Enrollment Pre Transition window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Displays the enrollment ID of the enrolled product.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Displays the status of the enrolled product.	Not applicable
Start Date	Displays the start date of the enrolled product.	Not applicable
End Date	Displays the end date of the enrolled product.	No

Note: If the user manually performs the unenrollment process, the application will simply change the product enrollment status from **Enroll** to **Unenroll**. If in-case the **End Date** is not mentioned during the enrollment, the application keeps the **End Date** in an **Open** state. If the user does not performs the unenrollment process, then a batch named **C1-EXTRN** gets executed. This batch performs a check to ensure that the product end date and the business date make a match. If they both match, then all of the enrollments with relation to the product are unenrolled.

4. Click **Save**.

The product enrollment status is changed to **Unenroll**.

Viewing the Log of a Product Enrollment

Procedure

To view the log of a Product Enrollment:

1. Search for the product enrollment in the **Product Enrollment** screen.
2. In the **Search Results** section, click the **Enrollment ID** link corresponding to the broadcast icon, whose product enrollment log you want to view.

The **Product Enrollment** screen appears. It consists of the following tabs:

- [Product Enrollment - Main](#) on page 2303
- [Product Enrollment - Log](#) on page 2307

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the product enrollment in the **Product Enrollment Log** zone.

Chapter 36

Subscription Billing

Topics:

- [Prerequisites](#)
- [Subscription Type \(Used for Searching\)](#)
- [Subscription Type \(Used for Viewing\)](#)
- [Account Subscription \(Used for Searching\)](#)
- [Account Subscription \(Used for Viewing\)](#)

Oracle Revenue Management and Billing (ORMB) facilitates the service based billing wherein the customers pay a subscription price to have access to a product or service. For example, the customer may subscribe for newspaper service, cable service, internet service, video service (like Netflix, Amazon Prime Video), cloud service, and so on. The consumers may have to pay one or more charges with respect to the subscribed service. These charges can be one-time or recurring charges in nature.

In **ORMB**, you can carry out service based billing for an account by creating subscription on the account. While creating an account subscription, you need to specify the subscription type using which you want to create the account subscription. It is the subscription type which helps the system to determine:

- The business object using which the account subscription must be created in the system.
- The division and contract type for which the subscription type is created.
- The default duration for which the account subscription or service charge must be renewed when the automatic renewal option is selected.
- Whether the service charges should be prorated when the account subscription is suspended for a particular duration, or when one or more services or the entire account subscription is terminated.
- Whether already billed charges should be adjusted on the next bill in case of suspension and termination.
- The adjustment type using which the adjustments must be created when the account subscription is edited, suspended, or resumed.
- The adjustment type using which the adjustments must be created when one or more services or the entire account subscription is terminated.
- The services which the consumer can subscribe when the account subscription is created using the subscription type.
- The charges which can be charged when the consumer subscribes for a particular service.
- The distribution code for each charge which indicates the GL account to which the corresponding financial transaction must be posted.
- Whether the monthly recurring revenue is exempted for the service.
- The algorithm which must be executed when the account subscription is terminated, suspended, or resumed.

While creating an account subscription, the system allows you to use only those subscription types for the account which are defined for the division to which the account belongs and which are associated with the contract type whose

contract exists on the account. You can specify whether the account subscription must be automatically renewed for the default duration (which is specified in the subscription type). In case of subscription renewal, you can specify whether there is any cost escalation at the time of renewal. You can add services and its charges in the account subscription depending on the subscription type. The system allows you to indicate whether the charge is a one-time charge or a recurring charge. You can specify the frequency at which the recurring charges should be created for the subscribed services. In case of service charge renewal, you can specify whether there is any cost escalation at the time of renewal.

Once an account subscription is created, the status of the account subscription is set to **Draft**. You can then edit, delete, submit, or cancel the account subscription, if required. You can optionally configure approval workflow for the account subscription. On submitting an account subscription when the approval workflow is off, the status of the account subscription is changed to Active. However, on submitting an account subscription when the approval workflow is on, an approval transaction is created for the account subscription. Only when the approver approves the approval transaction, the status of the account subscription is changed to Active. Note that the status of the account subscription is changed to Active when the subscription start date is past dated. However, if the subscription start date is a future date, the status of the account subscription is changed to **Validated** irrespective of whether the approval workflow is on or off.

A new batch named **Account Subscription Periodic Monitor (C1-ASUBM)** batch is introduced in this release. It monitors or checks whether there are any account subscriptions in the **Validated** status. If there is an account subscription in the **Validated** status and its subscription start date is earlier than or equal to batch business date, the status of the account subscription is changed to **Active**. You can then edit the details, if required. However, while editing, you can only change end dates and add the services and charges in the account subscription. You cannot remove a service or charge from the account subscription once it is in the Active status. For more information on batch, see **Oracle Revenue Management and Billing Batch Guide**.

The system allows you to suspend the account subscription for a particular duration. While suspending the account subscription, you need to specify the suspension reason and suspension condition indicating whether fees should be charged or not for the suspended period. Based on the suspension condition and proration options defined, the system will accordingly update or cancel billable charges.

The system also allows you to terminate a particular service or all services at the same time. While terminating a service, you can specify the termination charges, if any. If the termination charges are specified, the adjustments will be created and posted accordingly on the next bill.

Prerequisites

To setup the subscription billing feature, you need to do the following:

- Define the required subscription billing types in the system.
- Define the required characteristic types where the characteristic entity is set to **Subscription Type**.
- Define the required characteristic types where the characteristic entity is set to **Account Subscription**.
- Define values for the option types in the feature configuration.
- Define values for the lookup field.
- Define predefined values for the characteristic type.
- Adjustment Type will be validated based on the adjustment type profile attached on the Contract Type.
- At least one subscription charge is mandatory, for each subscription service.
- An account with a division same as the division of the selected subscription type.
- An account with a unique contract ID on the contract type.
- At least one subscription service is mandatory, for each subscription type.

Subscription Type (Used for Searching)

The **Subscription Type** screen allows you to search for the subscription type details using various search criteria. It contains the following zone:

- [Search Subscription Type](#) on page 2315

Through this screen, you can navigate to the following screen:

- [Subscription Type \(Used for Viewing\)](#) on page 2321

Search Subscription Type

The **Search Subscription Type** zone allows you to search for a subscription type using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to search by a subscription type.	Yes
Description	Used to search a subscription type with a particular description.	No
Division	Used to search a subscription type which is associated with a particular division.	No

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	Used to specify the contract type to which the contract to which the subscription type belongs.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Status	Used to search the subscription type with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No

Note: You must specify at least one search criterion while searching for a subscription type.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Subscription Type Information	Displays the basic information about the subscription type.
	Note: It has a link. On clicking the link, the Subscription Type screen appears where you can view the details of the respective subscription type.
Status	Indicates the status of the subscription type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Division	Displays the division to which the subscription type belongs.
Contract Type	Displays the contract type that you want to associate with the subscription type.

Searching for a Subscription Type

Prerequisites

To search for a subscription type, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To search for a subscription type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Subscription Type**.
The **Subscription Type** screen appears.
3. Enter the search criteria in the **Search Subscription Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of subscription types that meet the search criteria appears in the **Search Results** section.

Note: You must specify at least one search criterion while searching for a subscription type.

Defining a Subscription Type

Prerequisites

To define a subscription type, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To define a subscription type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Subscription Type**.
The **Subscription Type** screen appears.
3. Enter the search criteria in the **Search Subscription Type** zone.
4. Click **Add** button in the page title area of the **Subscription Type** screen.

The **Subscription Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services** – Used to specify the details of the subscription services.
- **Algorithms** – Used to specify the algorithms used in the subscription type.
- **Characteristics** – Used to define the characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to specify the subscription type.	Yes
Description	Used to specify the description for the subscription type.	Yes
Account Subscription Business Object	Used to indicate the business object using which you want to create a person when the corresponding account subscription is processed.	Yes
Detailed Description	Used to specify additional information about the subscription type.	No
Division	Used to indicate the division to which you want to associate the subscription type.	Yes
Contract Type	Used to indicate the Contract Type to which you want to associate the subscription type. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	Yes
Renewal Duration Type	Used to indicate the renewal cycle. The valid values are: <ul style="list-style-type: none"> • Day • Month • Week • Year 	Yes
Renewal Duration	Used to specify the duration of the renewal of the subscription.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the subscription type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Prorate Charges	Indicates whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.	No
Adjust Billed Charges	Indicates the billed charges adjusted.	No
	Note: This field appears when you check the Prorate Charges check box.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: This field appears when you check the Prorate Charges and Adjust Billed Charges check box.	
Termination Adjustment Type	Used to indicate the adjustment type used for termination of the subscription service.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	

The **Subscription Services** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Monthly Recurring Revenue (MRR) Exempted	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Distribution Code	Used to indicate distribution code linked to the service that will be used on the billable charge.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Distribution Code Search window appears.	

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event.	Yes
Sequence	Used to specify the sequence number.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

- Enter the required details in the **Main** section.
- Add algorithms for the subscription type, if required.
- Define characteristics for the subscription type, if required.
- Click **Save**.

The subscription type is defined.

How to define a characteristic for a subscription type	Defining a Characteristic for a Subscription Type on page 2320

Defining a Characteristic for a Subscription Type

Prerequisites

To define a characteristic for a subscription type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Subscription Type**)

Procedure

To define a characteristic for a subscription type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a subscription type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for a subscription type.
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for a subscription type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value of characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for a subscription type.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the subscription type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the subscription type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Subscription Type

Procedure

To edit a subscription type:

1. Search for the subscription type in the **Subscription Type** screen.
2. In the **Search Results** section, click the link in the **Subscription Type Information** column corresponding to the subscription type whose details you want to edit.

The **Subscription Type** screen appears.

3. Click the **Edit** button in the **Subscription Type** zone.

The **Subscription Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services** – Used to specify the details of the subscription services.
- **Algorithms** – Used to specify the algorithms used in the subscription type.
- **Characteristics** – Used to define the characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to specify the subscription type.	Yes
Description	Used to specify the description for the subscription type.	Yes
Account Subscription Business Object	Used to indicate the business object using which you want to create a person when the corresponding account subscription is processed.	Yes
Detailed Description	Used to specify additional information about the subscription type.	No

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the subscription type.	Yes
Contract Type	Used to indicate the Contract Type to which you want to associate the subscription type.	Yes
Renewal Duration Type	Used to indicate the renewal cycle. The valid values are: <ul style="list-style-type: none"> • Day • Month • Week • Year 	Yes
Renewal Duration	Used to specify the duration of the renewal of the subscription.	Yes
Status	Used to indicate the status of the subscription type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Prorate Charges	Indicates whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.	No
Adjust Billed Charges	Indicates the billed charges adjusted.	No
	Note: This field appears when you check the Prorate Charges check box.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: This field appears when you check the Prorate Charges and Adjust Billed Charges check box.	
Termination Adjustment Type	Used to indicate the adjustment type used for termination of the subscription service.	No

The **Subscription Services** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Monthly Recurring Revenue (MRR) Exempted	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Distribution Code	Used to indicate distribution code linked to the service that will be used on the billable charge.	No

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event.	Yes
Sequence	Used to specify the sequence number.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

4. Add algorithms for the subscription type, if required.
5. Define, edit, or remove characteristics of the subscription type, if required.
6. Click **Save**.

The changes made to the subscription type are saved.

Copying a Subscription Type

Prerequisites

To copy a subscription type, you should have:

- Subscription type (whose copy you want to create) defined in the application
- Account Subscription business objects defined in the application

Procedure

To copy a subscription type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Subscription Type**.
The **Subscription Type** screen appears.
3. Enter the search criteria in the **Search Subscription Type** zone.
4. In the **Search Results** section, click the link in the **Subscription Type Information** column whose details you want to view.
5. Click the **Duplicate** button in the **Subscription Type** zone.

The **Subscription Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services** – Used to specify the details of the subscription services.
- **Algorithms** – Used to specify the algorithms used in the subscription type.
- **Characteristics** – Used to define the characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to specify the subscription type.	Yes
Description	Used to specify the description for the subscription type.	Yes
Account Subscription Business Object	Used to indicate the business object using which you want to create a person when the corresponding account subscription is processed.	Yes
Detailed Description	Used to specify additional information about the subscription type.	No
Division	Used to indicate the division to which you want to associate the subscription type.	Yes
Contract Type	Used to indicate the Contract Type to which you want to associate the subscription type.	Yes
Renewal Duration Type	Used to indicate the renewal cycle. The valid values are: <ul style="list-style-type: none"> • Day • Month • Week • Year 	Yes
Renewal Duration	Used to specify the duration of the renewal of the subscription.	Yes
Status	Used to indicate the status of the subscription type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Prorate Charges	Used to indicate whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.	No
Adjust Billed Charges	Used to indicate the billed charges adjusted.	No
	Note: This field appears when you check the Prorate Charges check box.	

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: This field appears when you check the Prorate Charges and Adjust Billed Charges check box.	
Termination Adjustment Type	Used to indicate the adjustment type used for termination of the subscription service.	No

The **Subscription Services** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Monthly Recurring Revenue Exempted (MRR)	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Distribution Code	Used to indicate distribution code linked to the service that will be used on the billable charge.	No

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event.	Yes
Sequence	Used to specify the sequence number.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

6. Enter the required details in the **Main** section.
7. Add algorithms for the subscription type, if required.
8. Define characteristics for the subscription type, if required.
9. Click **Save**.

The new subscription type is defined.

Searching for an Account Subscription

Prerequisites

To search for an account subscription, you should have:

- Subscription type defined in the application
- Subscription Services defined in the application

Procedure

To search for an account subscription:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Account Subscription**.
A sub-menu appears.
3. Click the **Search** option from the **Account Subscription** sub-menu.
The **Account Subscription** screen appears.
4. Enter the search criteria in the **Search Account Subscription** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of account subscriptions that meet the search criteria appears in the **Search Results** section.

Note: You must specify at least one search criterion while searching for an account subscription.

Defining an Account Subscription

Prerequisites

To define an account subscription, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To define an account subscription:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Account Subscription**.
A sub-menu appears.
3. Click the **Add** option from the **Account Subscription** sub-menu.

The **Account Subscription** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to search a particular subscription type. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular subscription type.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	

Tip: Alternatively, you can access the **Account Subscription** screen by clicking the **Add** button in the page title area of the **Account Subscription** screen.

4. Click **OK**.

The **Account Subscription** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services and Charges** – Used to specify the details of the subscription services.
- **Characteristics** – Used to define the characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type Information	Displays the basic information about the subscription type.	Not applicable
Account Information	Displays the basic information about the account linked to the subscription type.	Not applicable
Subscription Start Date	Used to specify the date from when the subscription is effective.	Yes
	Note: The subscription start date cannot be later than the subscription end date.	
Subscription End Date	Used to specify the date till when the subscription is effective.	Yes
	Note: The subscription end date cannot be earlier than the subscription start date.	
Automatic Renewal	Used to indicate whether you want to renew the subscription automatically.	No
Cost Escalation (in Percentage)		No
	Note: This field appears when Automatic Renewal check box is selected.	
Comments	Used to specify additional information about the account subscription.	No

The **Subscription Services and Charges** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Service Start Date	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Service End Date	Used to indicate distribution code linked to the service that will be used on the billable charge.	No
Subscription Charge	Used to specify the type of the subscription charges.	Yes
Charge Amount	Used to specify the charges related to the subscription charge.	Yes
Charge Start Date	Used to specify the date from when the charges are effective.	Yes
Charge End Date	Used to specify the date till when the charges are effective.	Yes
One-Time Charge	Used to indicate whether you want to pay the subscription charges one-time.	No
Recurring Charge Frequency	Used to specify whether you want to pay the subscription charges on regular recurring basis.	No
	Note: This field gets enabled when you select the check box corresponding to the One-Time Charge field.

Defining a Characteristic for an Account Subscription

Prerequisites

To define a characteristic for an account subscription, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Account Subscription**)

Procedure

To define a characteristic for an account subscription:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an account subscription.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional) Note: This field is required when you are defining a characteristic for an account subscription.
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional) Note: This field is required when you are defining a characteristic for an account subscription.
Characteristic Value	Used to specify the value of characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for an account subscription.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for an account subscription, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an account subscription, click the **Delete** (🗑️) icon corresponding to the characteristic.

Adding Services and Charges in the Account Subscription

Prerequisites

To add services and charges in the account subscription, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To add services and charges in the account subscription:

1. Search for the account subscription in the **Account Subscription** screen.

A list appears.

2. In the **Search Results** section, click the link in the **Account Subscription Information** column whose details you want to view.

The **Account Subscription** screen appears.

3. Click **Add** button in the upper right corner of the **Subscription Services** zone.

The **Account Subscription Services and Charges** screen appears, where you can add the subscription services. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Service Start Date	Used to indicate whether the service type is exempted from MRR calculation.	Yes

In addition, **Account Subscription Services and Charges** screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Charge Amount	Used to specify the charges related to the subscription charge.	Yes
Charge Start Date	Used to specify the date from when the charges are effective.	Yes
Charge End Date	Used to specify the date till when the charges are effective.	Yes
One-Time Charge	Used to indicate the one-time charges related to the subscription services.	No
Recurring Charge Frequency	Used to indicate the recurring charges paid for the subscription service.	No
	Note: It appears when one-time charge option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Automatic Renewal	Used to indicate whether the subscription service charges are set to automatic renewal.	No
Cost Escalation (in Percentage)	Used to specify percentage in which the subscription charge amount must increase when the automatic renewal of the subscription is triggered. Note: This field gets enabled when Automatic Renewal check box is selected.	No
Description on Bill	Used to specify the description on the bill.	No

- Enter the required details in the **Account Subscription Services and Charges** screen.
- Click **Save**.

The services and charges are added in the account subscription.

Editing an Account Subscription

Procedure

To edit an account subscription:

- Search for an account subscription in the **Account Subscription** screen.
- In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to an account subscription whose details you want to edit.

The **Account Subscription** screen appears.

- Click the **Edit** button in the **Account Subscription** zone.

The **Account Subscription** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the account subscription.
- **Account Subscription Suspension History** – Used to specify the suspension history of the account subscription.
- **Characteristics** – Used to define the characteristics for the account subscription.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Subscription Information	Displays the basic information about the account subscription.	Not applicable
Subscription Information Type	Displays the basic information about the subscription type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Displays the basic information about the account.	Not applicable
Subscription Start Date	Displays the start date of the account subscription.	No
Subscription End Date	Displays the end date of the account subscription.	Yes
Automatic Renewal	Used to indicate whether yo want the account subscription to be renewed automatically.	Yes
Comments	Used to specify additional information about the account subscription.	Yes

The **Account Subscription Suspension History** section contains the following columns:

Column Name	Column Description
Suspension Start Date	Used to specify the start date of the account subscription suspension.
Suspension End Date	Used to specify the end date of the account subscription suspension.
Suspension Condition	Used to indicate the condition of the account subscription suspension.
Suspension Reason	Used to indicate the reason of the account subscription suspension.

The **Characteristics** contains the following columns:

Column Name	Column Description
Effective Date	Used to indicate the date from when the characteristic is effective for the account subscription.
Characteristic Type	Used to indicate the characteristic type.
Characteristic Value	Used to specify the value of the characteristic type.

- Define, edit, or remove characteristics of the account subscription, if required.
- Click **Save**.

The changes made to the account subscription are saved.

Deleting an Account Subscription

Procedure

To delete an account subscription:

- Search for an account subscription in the **Account Subscription** screen.

- In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to an account subscription whose details you want to delete.

The **Account Subscription** screen appears.

- Click the **Delete** button in the **Account Subscription** zone.

A message appears confirming whether you want to delete an account subscription.

- Click **OK**.

An account subscription is deleted.

Note: You can delete only those account subscriptions whose status is in **Draft** status.

Editing the Subscription Service Details

Procedure

To edit the subscription service details:

1. Search for an account subscription in the **Account Subscription** screen.
2. In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to an account subscription whose details you want to edit.

The **Account Subscription** screen appears.

3. Click the **Edit** (✎) icon in the **Subscription Services** zone.

The **Account Subscription Service Charges** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Displays the type of subscription service.	Not applicable
Service Start Date	Displays the start date of the subscription service.	Not applicable
Service End Date	Used to indicate end date of the subscription service.	Yes
Termination Date	Displays the date on which the subscription service is terminated.	Not applicable
Termination Reason	Displays the reason for which the account subscription is terminated.	Not applicable

In addition, this section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Subscription Charge	Displays the subscription charge.	Not applicable
Charge Amount	Displays the charges related to the of the subscription service.	Not applicable
Charge Start Date	Displays the start date of the subscription charges.	Not applicable
Charge End Date	Used to indicate the end date of the subscription charges.	Yes
One-Time Charge	Displays whether the charges are one-time.	Not applicable
Recurring Charge Frequency	Displays the frequency of the recurring charges, if opted.	Not applicable

4. Click **Save**.

The changes made to the subscription service details are saved.

Terminating an Account Subscription

Procedure

To terminate an account subscription:

1. Search for an account subscription in the **Account Subscription** screen.
2. In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to an account subscription whose details you want to edit.

The **Account Subscription** screen appears.

3. Click the **Terminate** button in the **Account Subscription** zone.

The **Account Subscription Service Termination** window appears. It contains the following sections:

- **Main**
 - Used to specify basic details about the subscription services.
- **Termination Charges** – Used to specify the charges related to the termination of the account subscription services.

The **Main** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to indicate the type of subscription service.	Yes
Termination Date	Used to specify date of the termination subscription service.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Termination Reason	Used to specify reason of the termination subscription service.	Yes

The **Termination Charges** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Termination Charge Type	Used to indicate the type of account subscription termination charges.	Yes
Charge Amount	Used to indicate the charges for the termination of the account subscription.	Yes
Termination Adjustment Type	Used to specify termination adjustment type. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search screen appears.	Yes

4. Click **Save**.

An account subscription is terminated.

Note: You can terminate only those account subscriptions whose status is in **Active** or **Suspended** status.

Chapter 37

Mass Pricing Update

Topics:

- [Prerequisites](#)
- [Mass Pricing Update Request \(Without Approval\) Status Transition](#)
- [Mass Pricing Update Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-MassPricingReq](#)
- [Request Type](#)
- [Mass Pricing Update Request \(Used for Searching\)](#)
- [Mass Pricing Update Request \(Used for Viewing\)](#)
- [Mass Pricing Update Request](#)

Oracle Revenue Management and Billing provides the ability for mass price item pricing update. In other words, the system enables you to update multiple active price item pricing assigned to a person, account, price list, or product at the same time. You can search for the price assignments which you want to update using the following fields:

- Price Item
- Price Item Parameters
- Account ID
- Person ID
- Division
- Update Date
- Pricing Entity Type

On specifying the search criteria, the system fetches the number of entities on which the price item pricing is defined and the number of price assignments on a particular type of pricing entity. Once you select one or more price item pricing, you can create the mass pricing update request by clicking the **Mass Pricing Update** button. While creating a mass pricing update request, you need to specify the mass pricing update request type using which you want to create the mass pricing update request. It is the mass pricing update request type which helps the system to determine:

- The business object using which the mass pricing update request should be created in the system.
- Whether the approval is required for the mass pricing update request.
- Whether the mass pricing update must be performed in the deferred mode when the number of price assignments in the mass pricing update request exceeds the defer processing count.

Once the mass pricing update request type is selected, you need to specify the mass pricing update criteria, mass pricing update type, and rate value. Once a mass pricing update request is created in the **Draft** status, you can submit the mass pricing update request. On submitting a mass pricing update request, the status of the mass pricing update request is changed to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count. If the status is changed to **Deferred Processing**, you need to click the **Submit Batch** button. On clicking the **Submit Batch** button, the system automatically creates a batch job using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined for the **Thread Count** and **Thread Pool Name** option types in the **C1-MASPRI** feature configuration.

Once the batch job is executed, the status of the mass pricing update request is changed to **Updating Price Assignments**. If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. However, if a price assignment is not yet referred in the system, the existing price assignment is updated. Once the price assignment is newly created or updated, the status of the record in the mass pricing update request is changed to **Processed**. However, if a price assignment is referred for a future date, the status of the record in the mass pricing update request is changed to **Error**. In addition, if any error occurs while updating an existing price assignment or creating a new price assignment, the status of the record in the mass pricing update request is changed to Error. Finally, the status of the mass pricing update request is changed to **Processed**.

You can optionally configure the approval workflow for the mass pricing update request. If the **Approval Required** field is set to **Yes** in the mass pricing update request type, the status of the mass pricing update request is changed to **Approval In Progress** when you submit the mass pricing update request. Once the approver approves the mass pricing update request, the status of the mass pricing update request is changed to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count. However, if the approver rejects a mass pricing update request, the status of the mass pricing update request is changed to **Rejected**.

For more information on how to setup the mass pricing update process, see [Prerequisites](#) on page 2355.

Prerequisites

To setup the mass pricing update feature, you need to do the following:

- Define the required mass pricing update request types in the system.
- Set the **Mass Pricing Update (C1-MASPRI)** feature configuration
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions
- Define one To Do type for submitter and another To Do type for approver when the approval is required for a mass pricing update request
- Assign a To Do role to the required To Do types in the application

C1-REQST-INF

This algorithm generates the request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Request Type Description
2. Request Status
3. Request ID

C1-MPRIVALDN

This algorithm is invoked when you create a mass pricing update request. It checks the following:

- Whether the mass pricing update criteria is specified.
- Whether the mass pricing update type is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
- Whether the rate value is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
- Whether the currency is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price** and the mass pricing update type is set to **Absolute**.
- If any of the above conditions are not met, the system does not allow you to create the mass pricing update request.

C1-MPRISUBMT

This algorithm is invoked when you submit a mass pricing update request. If the approval workflow is configured on the respective mass pricing update request type, it changes the status of the mass pricing update request to **Approval in Progress**. However, if the approval workflow is not configured on the respective mass pricing update request type, it changes the status of the mass pricing update request to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count.

C1-MPRIAPTD

This algorithm is invoked when the status of the mass pricing update request is changed to **Approval in Progress**. It creates a To Do using the approval To Do type which is specified in the respective mass pricing update request type. Once a To Do is created, it is assigned to all users with an approval To Do role which is specified in the respective mass pricing update request type.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-MPRIDEFER

This algorithm is invoked when the status of the mass pricing update request is changed to **Running C1-GENRQ Batch**. It creates a batch job using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined in the **Thread Count** and **Thread Pool Name** option types of the **Mass Pricing Update (C1-MASPRI)** feature configuration. It also creates a log for the mass pricing update request which indicates the batch job ID.

C1-MPRIAPRD

This algorithm is invoked when you approve a mass pricing update request. If the number of price assignments in the mass pricing update request exceeds the defer processing count, the status of the mass pricing update request is changed to **Deferred Processing**. However, if the number of price assignments in the mass pricing update request does not exceed the defer processing count, the status of the mass pricing update request is changed to **Updating Price Assignments**.

C1-MPRIUPDPA

This algorithm is invoked when the status of the mass pricing update request is changed to **Updating Price Assignments**. If a price assignment is referred in past, this algorithm ends the existing price assignment and creates a new price assignment. However, if a price assignment is not yet referred in the system, this algorithm updates the existing price assignment. Once the price assignment is newly created or updated, the status of the record in the mass pricing update request is changed to **Processed**. However, if a price assignment is referred for a future date, the status of the record in

the mass pricing update request is changed to **Error**. In addition, if any error occurs while updating an existing price assignment or creating a new price assignment, the status of the record in the mass pricing update request is changed to **Error**. Note that if a price assignment is included multiple times in a mass pricing update request, the system will update the price assignment only once.

C1-MPRIRJTD

This algorithm is invoked when the status of the mass pricing update request is changed to **Rejected**. It creates a To Do using the submitter To Do type which is specified in the respective mass pricing update request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the respective mass pricing update request type.

Request Type

Oracle Revenue Management and Billing allows you to define a mass pricing update request type using which you can create mass pricing update requests. It is the mass pricing request type which helps the system to determine:

- The business object using which the mass pricing update request should be created in the system.
- Whether the approval is required for the mass pricing update request.
- Whether the mass pricing update must be performed in the deferred mode when the number of price assignments in the mass pricing update request exceeds the defer processing count.

The **Request Type** screen allows you to define, edit, copy, and delete a mass pricing update request type. It contains the following zones:

- [Request Type List](#) on page 2360
- [Request Type](#) on page 2361

Request Type List

The **Request Type List** zone lists the mass pricing update request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Request Type	Displays the mass pricing update request type.
Description	Displays the description of the mass pricing update request type.
Edit	On clicking the Edit () icon, the Mass Pricing Request Type screen appears where you can edit the details of the mass pricing update request type.
Duplicate	On clicking the Duplicate () icon, the Mass Pricing Request Type screen appears where you can define a new mass pricing update request type using an existing mass pricing update request type.
Delete	On clicking the Delete () icon, you can delete the mass pricing update request type. Note: You can delete the mass pricing update request type when you have not created a mass pricing update request using the mass pricing update request type.

On clicking the **Broadcast** () icon corresponding to a mass pricing update request type, the **Request Type** zone appears with the details of the respective mass pricing update request type.

You can define a new mass pricing update request type by clicking the **Addlink** in the upper right corner of the **Request Type List** zone.

Related Topics

How to delete a mass pricing update request type	Deleting a Mass Pricing Update Request Type on page 2373
How to view the details of a mass pricing update request type	Viewing the Mass Pricing Update Request Type Details on page 2373

Request Type

The **Request Type** zone displays the details of the mass pricing update request type. It contains the following sections:

- **Main** - Displays the basic information about the mass pricing update request type. It contains the following fields:

Field Name	Field Description
Request Type	Displays the mass pricing update request type.
Request Business Object	Indicates the business object using which you want to create a mass pricing update request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description for the mass pricing update request type.
Detailed Description	Displays the additional information about the mass pricing update request type.
Status	Indicates the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Defer Processing Count	Indicates whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count. Note: Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i> . If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).
Approval Required	Indicates whether approval is required before updating the price item pricing through a mass pricing update request.

Field Name	Field Description
Approval Type	Indicates the type of approval. The valid value is: <ul style="list-style-type: none"> Request Level Approval
Approval To Do Type	Indicates that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval. <p>Note: This field appears when the Approval Required option is selected. It has a link. On clicking the link, the To Do Type screen appears where you can view the details of respective To Do type.</p>
Approval To Do Role	Indicates that the users with the specified To Do role will receive the mass pricing update request when it is submitted for approval. <p>Note: This field appears when the Approval Required option is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of respective To Do role.</p>
Submitter To Do Type	Indicates that To Do entry of the specified To Do type must be created when an approver rejects a mass pricing update request. <p>Note: This field appears when the Approval Required option is selected. It has a link. On clicking the link, the To Do Type screen appears where you can view the details of respective To Do type.</p>
Submitter To Do Role	Indicates that the users with the specified To Do role will receive the mass pricing update request when it is rejected by an approver. <p>Note: This field appears when the Approval Required option is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of respective To Do role.</p>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the mass pricing update request type.
Delete	Used to delete the mass pricing update request type. <p>Note: You can delete a mass pricing update request type when you have not created a mass pricing update request using the mass pricing update request type.</p>
Duplicate	Used to create a new mass pricing update request type using an existing mass pricing update request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the mass pricing update request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Request Type** zone does not appear in the **Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a mass pricing update request type in the **Request Type List** zone.

You can define a new mass pricing update request type by clicking the **Add** link in the upper right corner of this zone.

Defining a Mass Pricing Update Request Type

Prerequisites

To define a mass pricing update request type, you should have:

- Mass pricing update request type business objects defined in the application.
- Mass pricing update request business objects defined in the application.
- One To Do type defined for submitter and another To Do type defined for approver when the approval is required for a mass pricing update request
- A To Do role assigned to the required To Do types in the application

Procedure

To define a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Request Type Business Object	Used to indicate the business object using which you want to create the mass pricing update request type.	Yes
	Note: You can create a mass pricing update request type using the Mass Pricing Request Type (C1-MassPricingReqType) business object.	

Note: Alternatively, you can access this screen by clicking the **Add** link in the upper right corner of the **Request Type List** zone.

4. Select the **Mass Pricing Request Type** business object from the respective field.
5. Click **OK**.

The **Mass Pricing Update Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: <ul style="list-style-type: none"> • Mass Pricing Request 	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.	No
	<p>Note:</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).</p>	
Approval Required	Used to indicate whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	Used to indicate the type of approval. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> • Request Level Approval <p>Note: This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Approval To Do Type field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that the users with the specified To Do role must receive the mass pricing update request for approval.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Submitter To Do Type field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

6. Enter the required details in the **Main** section.

7. Click **Save**.

The mass pricing update request type is defined.

Editing a Mass Pricing Update Request Type

Prerequisites

To edit a mass pricing update request type, you should have:

- Mass pricing update request business objects defined in the application.

Procedure

To edit a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Request Type** sub-menu.

The **Request Type** screen appears.

4. In the **Request Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the mass pricing update request type whose details you want to edit.

The **Mass Pricing Update Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: <ul style="list-style-type: none"> • Mass Pricing Request 	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.	No
	<p>Note:</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).</p>	
Approval Required	Indicates whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	Indicates the type of approval. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> Request Level Approval <p>Note: This field appears when the Approval Required option is selected.</p>	
Approval To Do Type	Indicates that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Approval To Do Type field appears when the Approval Required option is selected.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Indicates that the users with the specified To Do role must receive the mass pricing update request for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: This field appears when the Approval Required option is selected. The list includes only those To Do roles which are associated to the specified approval To Do type.	
Submitter To Do Type	Indicates that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears. The Submitter To Do Type field appears when the Approval Required option is selected.	
Submitter To Do Role	Indicates that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: This field appears when the Approval Required option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	

Tip: Alternatively, you can edit the details of a mass pricing update request type by clicking the **Edit** button in the **Request Type** zone.

5. Modify the required details in the **Main** section.
6. Click **Save**.

The changes made to the mass pricing update request type are saved.

Copying a Mass Pricing Update Request Type

Instead of creating a mass pricing update request type from scratch, you can create a new mass pricing update request type using an existing mass pricing update request type. This is possible through copying a mass pricing update request type. On copying a mass pricing update request type, the details including the characteristics are copied to the new mass pricing update request type. You can then edit the details, if required.

Prerequisites

To copy a mass pricing update request type, you should have:

- Mass pricing update request type (whose copy you want to create) defined in the application.
- Mass pricing update request business objects defined in the application.

Procedure

To copy a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Request Type**.
A sub-menu appears.

3. Click the **Search** option from the **Request Type** sub-menu.

The **Request Type** screen appears.

4. In the **Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the request type whose copy you want to create.

The **Mass Pricing Update Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: <ul style="list-style-type: none"> • Mass Pricing Request 	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	<p>Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.</p> <p>Note:</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. Searching for a Mass Pricing Update Request

Prerequisites

To search for a mass pricing update request, you should have:

- Mass pricing update request types defined in the application

Procedure

To search for a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
A sub-menu appears.
3. Click the **Search** option from the **Mass Pricing Update Request** sub-menu.
The **Mass Pricing Update Request** screen appears.
4. Enter the search criteria in the **Search Mass Pricing Update Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of mass pricing update requests that meet the search criteria appears in the **Search Results** section.

Creating a Mass Pricing Update Request

Prerequisites

To define a mass pricing update request, you should have:

- Mass pricing update request types defined in the application
- A currency conversion algorithm attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division

Procedure

To define a mass pricing update request:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
A sub-menu appears.
- Click the **Add** option from the **Mass Pricing Update Request** sub-menu.
The **Mass Pricing Update Request** screen appears.
- Search for the required price assignments which you want to update in the **Search Price Assignments** zone.
- Do either of the following:

If you want to...	Then...
Update all price assignments of a particular pricing entity type	<ol style="list-style-type: none"> Select the check box corresponding to the respective pricing entity type. Click Mass Pricing Update.
Update all price assignments of one or more pricing entity type	<ol style="list-style-type: none"> Select the check box corresponding to the respective pricing entity types. Click Mass Pricing Update.
Update all price assignments of all pricing entity types	<ol style="list-style-type: none"> Select the check box corresponding to all pricing entity types.

If you want to...	Then...
	<ol style="list-style-type: none"> 2. Click Mass Pricing Update.
Update the price item pricing assigned to a particular person	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Customer Agreed pricing entity type. The Customer Agreed Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Customer Agreed Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular account	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Account Agreed pricing entity type. The Account Agreed Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Account Agreed Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular price list	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Price List pricing entity type. The Price list Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Price list Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular price list associated to a particular product	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Product pricing entity type. The Product Price list Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Product Price list Price Assignments zone. 3. Click Mass Pricing Update.

The **Select Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Mass Pricing Update Request Type	Used to indicate the mass pricing update request type using which you want to create a mass pricing update request.	Yes

6. Select the required mass pricing update request type from the respective field.
7. Click **OK**.

The **Mass Pricing Update Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Mass Pricing Update Criteria	Used to indicate whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: <ul style="list-style-type: none"> • Decrease Price • End Date Price • Increase Price 	Yes
Mass Pricing Update Type	Used to indicate whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: <ul style="list-style-type: none"> • Absolute • Percentage 	Yes (Conditional)
	Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price .	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .
Rate Value	Used to specify the rate by which you want to increase or decrease the price.	Yes (Conditional)
	Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price . You cannot specify a negative value or zero in the Rate Value field.	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to indicate the currency in which the rate is specified.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the mass pricing update type is set to Absolute.</p> <p>If the pricing currency is different from the currency which is specified in the mass pricing update request, the system does the currency conversion using the algorithm which is attached to the Currency Conversion For Bill Segments algorithm spot of the respective division.</p>	<p>Note: This field is required when the mass pricing update type is set to Absolute.</p>
Update Date	<p>Displays the date when you want to update the price assignments. The system fetches the price assignments which are effective on the update date. If you want to forcibly end a price item pricing through the mass pricing update request, the end date in the price item pricing is set to the update date. However, if you want to increase or decrease the rate in a price item pricing through the mass pricing update request, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. • If a price assignment is not yet referred in the system, the existing price assignment is updated. <p>Note: You cannot update a price assignment through a mass pricing update request when the start or end date of the price assignment is equal to the update date.</p>	Not applicable

8. Enter the required details in the **Mass Pricing Update Request** screen.

9. Click **Save**.

The mass pricing update request is defined in the **Draft** status. And, the status of all price assignment records in the mass pricing update request is set to **Pending**.

Mass Pricing Update Request (Used for Viewing)

The **Mass Pricing Update Request** screen allows you to:

- View the details of a mass pricing update request
- Edit the details of a mass pricing update request
- Delete a mass pricing update request
- Submit a mass pricing update request for processing
- Approve or reject a mass pricing update request
- Submit a batch job for a mass pricing update request
- View the log of a mass pricing update request
- Add a log entry for a mass pricing update request

It consists of the following tabs:

- [Mass Pricing Update Request - Main](#) on page 2381
- [Mass Pricing Update Request - Log](#) on page 2384

Mass Pricing Update Request - Main

The **Main** tab displays information about the mass pricing update request. It contains the following zones:

- [Mass Pricing Update Request](#) on page 2381
- [Price Assignments](#) on page 2383

Mass Pricing Update Request

The **Mass Pricing Update Request** zone displays the details of the mass pricing update request. It contains the following sections:

- **Main** - Displays basic information about the mass pricing update request. It contains the following fields:

Field Name	Field Description
Request Information	Displays information about the mass pricing update request.
Mass Pricing Update Request Type	Indicates the mass pricing update request type using which the mass pricing update request is created. Note: It has a link. On clicking the link, the Request Type screen appears where you can view the details of the respective mass pricing update request type.
Status	Indicates the status of the mass pricing update request. The valid values are: <ul style="list-style-type: none"> • Approval in Progress • Deferred Processing • Draft • Processed • Rejected • Running C1-GENRQ Batch

Field Name	Field Description
Mass Pricing Update Criteria	Indicates whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: <ul style="list-style-type: none"> • Decrease Price • End Date Price • Increase Price
Mass Pricing Update Type	Indicates whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: <ul style="list-style-type: none"> • Absolute • Percentage <p>Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price.</p>
Rate Value	Displays the rate by which you want to increase or decrease the price. <p>Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price.</p>
Currency	Indicates the currency in which the rate is specified. <p>Note: This field appears when the mass pricing update type is set to Absolute.</p>
Update Date	Displays the date when you want to update the price assignments.

- **Statistics** - Displays summarized information about the records which are included in the mass pricing update request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of price assignments which are included in the mass pricing update request.
Processed Records	Displays the total number of price assignments which are successfully updated through the mass pricing update request.
Error Records	Displays the total number of price assignments which could not be updated through the mass pricing update request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the mass pricing update request. <p>Note: The Edit button appears when the mass pricing update request is in the Draft status.</p>
Delete	Used to delete the mass pricing update request. <p>Note: The Delete button appears when the mass pricing update request is in the Draft status.</p>

Button Name	Button Description
Submit	Used to submit the mass pricing update request for updating the price assignments.
	Note: The Submit button appears when the mass pricing update request is in the Draft status.
Submit Batch	Used to generate a batch job using the Generic Request Periodic Monitor (C1-GENRQ) batch control.
	Note: The Submit Batch button appears when the mass pricing update request is in the Deferred Processing status.
Approve	Used to approve the mass pricing update request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> • The mass pricing update request is in the Approval in Progress status. • A user with the approval To Do role is reviewing the mass pricing update request.
Reject	Used to reject the mass pricing update request.
	Note: The Reject button appears when: <ul style="list-style-type: none"> • The mass pricing update request is in the Approval in Progress status. • A user with the approval To Do role is reviewing the mass pricing update request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the mass pricing update request is created. In addition, a context menu appears corresponding to the Business Object field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the mass pricing update request status is updated.
Creation Date Time	Displays the date and time when the mass pricing update request is created.

Price Assignments

The **Price Assignments** zone lists the price assignments which you want to update through the mass pricing update request. It contains the following columns:

Column Name	Column Description
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).
Entity ID	Indicates the entity to which the price item pricing is assigned.
Pricing Entity Type	Indicates the type of entity on which the price assignment is done. The valid values are: <ul style="list-style-type: none"> Account Agreed Customer Agreed Price List Product
Mass Pricing Update Status	Indicates the status of the price assignment record which is included in the mass pricing update request. The valid values are: <ul style="list-style-type: none"> Pending Processed Error

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Mass Pricing Update Request - Log

The **Log** tab contains the following zone:

- [Mass Pricing Update Request Log](#) on page 2384

Mass Pricing Update Request Log

The **Mass Pricing Update Request Log** zone lists the complete trail of actions performed on the mass pricing update request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the mass pricing update request.
Details	Displays the details of the action performed on the mass pricing update request.
User	Indicates the user who has performed the action on the mass pricing update request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the mass pricing update request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the status of the mass pricing update request is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the mass pricing update request by clicking the **Add Log Entry** link in the upper right corner of the **Mass Pricing Update Request Log** zone.

Creating a Mass Pricing Update Request

Prerequisites

To define a mass pricing update request, you should have:

- Mass pricing update request types defined in the application
- A currency conversion algorithm attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division

Procedure

To define a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
A sub-menu appears.
3. Click the **Add** option from the **Mass Pricing Update Request** sub-menu.
The **Mass Pricing Update Request** screen appears.
4. Search for the required price assignments which you want to update in the **Search Price Assignments** zone.
5. Do either of the following:

If you want to...	Then...
Update all price assignments of a particular pricing entity type	<ol style="list-style-type: none"> 1. Select the check box corresponding to the respective pricing entity type. 2. Click Mass Pricing Update.
Update all price assignments of one or more pricing entity type	<ol style="list-style-type: none"> 1. Select the check box corresponding to the respective pricing entity types. 2. Click Mass Pricing Update.

If you want to...	Then...
Update all price assignments of all pricing entity types	<ol style="list-style-type: none"> 1. Select the check box corresponding to all pricing entity types. 2. Click Mass Pricing Update.
Update the price item pricing assigned to a particular person	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Customer Agreed pricing entity type. The Customer Agreed Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Customer Agreed Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular account	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Account Agreed pricing entity type. The Account Agreed Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Account Agreed Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular price list	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Price List pricing entity type. The Price list Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Price list Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular price list associated to a particular product	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Product pricing entity type. The Product Price list Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Product Price list Price Assignments zone.

If you want to...	Then...
	3. Click Mass Pricing Update.

The **Select Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Mass Pricing Update Request Type	Used to indicate the mass pricing update request type using which you want to create a mass pricing update request.	Yes

6. Select the required mass pricing update request type from the respective field.
7. Click **OK**.

The **Mass Pricing Update Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Mass Pricing Update Criteria	Used to indicate whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: <ul style="list-style-type: none"> • Decrease Price • End Date Price • Increase Price 	Yes
Mass Pricing Update Type	Used to indicate whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: <ul style="list-style-type: none"> • Absolute • Percentage 	Yes (Conditional)
	Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price .	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .
Rate Value	Used to specify the rate by which you want to increase or decrease the price.	Yes (Conditional)
	Note: This field appears when the mass pricing update criteria is set to Increase Price or Decrease Price . You cannot specify a negative value or zero in the Rate Value field.	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to indicate the currency in which the rate is specified.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the mass pricing update type is set to Absolute.</p> <p>If the pricing currency is different from the currency which is specified in the mass pricing update request, the system does the currency conversion using the algorithm which is attached to the Currency Conversion For Bill Segments algorithm spot of the respective division.</p>	<p>Note: This field is required when the mass pricing update type is set to Absolute.</p>
Update Date	<p>Displays the date when you want to update the price assignments. The system fetches the price assignments which are effective on the update date. If you want to forcibly end a price item pricing through the mass pricing update request, the end date in the price item pricing is set to the update date. However, if you want to increase or decrease the rate in a price item pricing through the mass pricing update request, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. • If a price assignment is not yet referred in the system, the existing price assignment is updated. <p>Note: You cannot update a price assignment through a mass pricing update request when the start or end date of the price assignment is equal to the update date.</p>	Not applicable

8. Enter the required details in the **Mass Pricing Update Request** screen.

9. Click **Save**.

The mass pricing update request is defined in the **Draft** status. And, the status of all price assignment records in the mass pricing update request is set to **Pending**.

Mass Pricing Update Request

The **Mass Pricing Update Request** screen allows you to search for price assignments using various search criteria. The search results (i.e. price assignments) are grouped based on the pricing entity type, such as **Account Agreed**, **Customer Agreed**, **Price List**, and **Product**. You can then create a mass pricing update request for the following:

- All price assignments of a particular pricing entity type
- All price assignments of one or more pricing entity type
- All price assignments of all pricing entity types
- A price item pricing assigned to a particular person, account, or price list
- A price item pricing assigned to a price list which is associated to a product
- One or more price assignments of a person, account, or price list
- One or more price assignments of a price list which is associated to a product

It contains the following zones:

- [Search Price Assignments](#) on page 2397
- [Account Agreed Price Assignments](#) on page 2399
- [Customer Agreed Price Assignments](#) on page 2400

- [Price List Price Assignments](#) on page 2400
- [Product Price List Price Assignments](#) on page 2401

Search Price Assignments

The **Search Price Assignments** zone allows you to search for active price assignments on different pricing entity type. It contains the following sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search pricing which is defined for a particular price item.	Yes
	Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.	
Account ID	Used to search pricing which is assigned to a particular account.	No
	Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.	
Person ID	Used to search pricing which is assigned to a particular person.	No
	Note: The Search (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.	
Division	Used to search pricing which belongs to a particular division.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	
Update Date	Used to search pricing which is effective on a particular date.	Yes
	Note: By default, this field is set to the current date. The update date cannot be earlier than the system date.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Entity Type	Used to search pricing which is defined on a particular type of entity. The valid values are: <ul style="list-style-type: none"> Account Agreed Customer Agreed Price List Product 	No
	Note: This field appears when you click the Advanced Search link available in the right side of the Search Price Assignments zone.	

In addition, it contains the **Price Item Parameters** section which has the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search pricing which is defined using a particular parameter.	No
	Note: The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.	
Parameter Value	Used to search pricing which is defined using a particular parameter value.	Yes (Conditional)
	Note: If the value type of the parameter is Adhoc or Predefined , the Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Parameter Value Search window appears.	

Note: If you want to add more than one parameter while searching for price assignments, click the **Add** (+) icon and then specify the parameter and parameter value. However, if you want to remove a parameter and parameter value combination from the search criteria, click the **Delete** (🗑️) icon corresponding to the parameter and parameter value combination.

- **Search Result** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Result** section contains the following columns:

Column Name	Column Description
Pricing Entity Type	Indicates the type of entity on which the price item pricing is defined. The valid values are: <ul style="list-style-type: none"> Account Agreed Customer Agreed Price List Product

Column Name	Column Description
Pricing Entity Count	Indicates the number of entities on which the price item pricing is defined.
Price Assignment Count	Indicates the number of price assignments on a particular type of pricing entity.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

On clicking the **Broadcast** (📡) icon corresponding to a pricing entity type, the **Account Agreed Price Assignments**, **Customer Agreed Price Assignments**, **Price List Price Assignments**, or **Product Price List Price Assignments** zone appears depending on the pricing entity type.

A check box appears corresponding to each pricing entity type. On selecting the check box, you can create a mass pricing update request for all price assignments which are done on the respective pricing entity type. You can also create a mass pricing update request for all price assignments which are done on one or more pricing entity types at the same time. In addition, you can select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are done on all pricing entity types.

Account Agreed Price Assignments

The **Account Agreed Price Assignments** zone lists the active pricing of a price item which is assigned to an account. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account to which the price item pricing is assigned. In addition, the Account Information column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Account Identifier Type	Indicates the primary identifier type of the account.
Account Identifier	Indicates the account to which the price item pricing is assigned.
Pricing Information	Displays information about the price item pricing. Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined. Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined at the account level.

Customer Agreed Price Assignments

The **Customer Agreed Price Assignments** zone lists the active pricing of a price item which is assigned to a person. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person to whom the price item pricing is assigned. In addition, the Person Information column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Person Identifier Type	Indicates the primary identifier type of a person.
Person Identifier	Indicates the person to whom the price item pricing is assigned.
Pricing Information	Displays information about the price item pricing. Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined. Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined at the person level.

Price List Price Assignments

The **Price List Price Assignments** zone lists the active pricing of a price item which is assigned to a price list. It contains the following columns:

Column Name	Column Description
Price List Information	Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined in the price lists.

Product Price List Price Assignments

The **Product Price List Price Assignments** zone lists the active pricing of a price item which is added in the price lists associated with the products. It contains the following columns:

Column Name	Column Description
Product	Displays information about the product.
Product Version	Displays information about the effective product version.
Price List Information	Indicates the price list associated with the product to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of respective price list.
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in the Pricing Parameters field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined in the price lists associated with the products.

Searching for Price Assignments on a Pricing Entity

Prerequisites

To search for price assignments on a pricing entity, you should have:

- Price items, accounts, persons, and divisions defined in the application
- Price item associated with the required division
- Access to the required division

Procedure

To search for price assignments on a pricing entity:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
A sub-menu appears.
3. Click the **Add** option from the **Mass Pricing Update Request** sub-menu.
The **Mass Pricing Update Request** screen appears.
4. Enter the search criteria in the **Search Price Assignments** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

The number of price assignments on the following types of pricing entity are listed in the **Search Results** section:

- Account Agreed

- Customer Agreed
- Price List
- Product

Chapter 38

Price Item, Parameter, and SQI Upload

Topics:

- [Uploading a Price Item File in the XML Format](#)
- [Uploading a Price Item File in the CSV Format](#)
- [XML File Format for Uploading Price Items](#)
- [Sample XML Format for Uploading Price Items](#)
- [CSV File Format for Uploading Price Items](#)
- [Sample CSV Format for Uploading Price Items](#)
- [Uploading a Parameter File in the XML Format](#)
- [Uploading a Parameter File in the CSV Format](#)
- [XML File Format for Uploading Parameters](#)
- [Sample XML Format for Uploading Parameters](#)
- [CSV File Format for Uploading Parameters](#)
- [Sample CSV Format for Uploading Parameters](#)
- [Uploading an SQI File in the XML Format](#)
- [Uploading an SQI File in the CSV Format](#)
- [XML File Format for Uploading Service Quantity Identifiers \(SQIs\)](#)

There might be situations when the customer wants to move the price item, parameter, and service quantity identifier information from the legacy system to Oracle Revenue Management and Billing (ORMB). In such situations, you can use the **Price Item, Parameter, and SQI Upload** feature in ORMB to create new price items or edit the existing price items using the **File Upload Interface** utility. You can also use the **Price Item, Parameter, and SQI Upload** feature to create new parameters and SQIs using the **File Upload Interface** utility. However, at present, you cannot edit the existing parameters and SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters and SQIs from the respective user interface.

Note: If you want to edit an existing price item in the system, you must provide all details of the price item and not just the details which you want to update. This is because the **File Upload Interface** utility supports the **Replace** operation and not the **Edit** operation while editing the price item.

You can upload the price item, parameter, and SQI files in the XML or CSV format using the **File Upload Interface** utility. You can specify the following in the XML and CSV files along with the basic details of the price item:

- Parameters and divisions which you want to associate with the price item
- Characteristics for the price item
- Division-specific characteristics for the price item
- Division-specific SQIs for the price item
- Details of the price item relationship

Note: While uploading the price item file, you need to ensure that the parameters and service quantity identifiers mentioned in the price item file are already present in the system.

You can upload the price items, parameters, and SQIs from the same file or from individual files based on the business requirements. For more information, refer to [Uploading Price Items, Parameters, and SQIs from the Same File](#) on page 2471.

At present, the system does not allow you to configure the approval process for the **Price Item, Parameter, and SQI Upload** feature. Therefore, you must ensure that the files are pre-approved before uploading them in the system.

- *Sample XML Format for Uploading Service Quantity Identifiers (SQIs)*
- *CSV File Format for Uploading Service Quantity Identifiers (SQIs)*
- *Sample CSV Format for Uploading SQIs*
- *Uploading Price Items, Parameters, and SQIs from the Same File*

Uploading a Price Item File in the XML Format

To upload a price item file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading price items in the XML format
2. Upload the price item file
3. Create or update the price items in the system

Related Topics

For more information on...	See...
How to define a file request type for uploading price items in the XML format	Defining a File Request Type for Uploading Price Items in the XML Format on page 2407
How to upload a price item file	Uploading a Price Item File on page 2408

Defining a File Request Type for Uploading Price Items in the XML Format

Procedure

To define a file request type for uploading price items in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRICEITEM_BO** business object or custom price item business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRCITM-PR** algorithm type to the **Pre-Processing Algorithm** field corresponding to the price item business object.

Note: For more information about the **C1-PRCITM-PR** algorithm, refer to [C1-PRCITM-PR](#).

11. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new price items or edit the existing price items using the file request type.
12. Click **Save**.

The file request type is defined for uploading price items in the XML format.

Uploading a Price Item File

You can upload a price item file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Price Items

You can create or edit the price items in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Price Item File in the CSV Format

To upload a price item file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading price items in the CSV format
2. Upload the price item file
3. Create or update the price items in the system

Related Topics

For more information on...	See...
How to define a file request type for uploading price items in the CSV format	Defining a File Request Type for Uploading Price Items in the CSV Format on page 2408
How to upload a price item file	Uploading a Price Item File on page 2409
How to create or update the price items in the system	Creating or Updating Price Items on page 2409

Defining a File Request Type for Uploading Price Items in the CSV Format

Procedure

To define a file request type for uploading price items in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.

11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRICEITEM_BO** business object or custom price item business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRCITM-PR** algorithm type to the **Pre-Processing Algorithm** field corresponding to the price item business object.

Note: For more information about the **C1-PRCITM-PR** algorithm, refer to [C1-PRCITM-PR](#).

14. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new price items or edit the existing price items using the file request type.
15. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
16. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
17. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRICEITEMCODE	C1_PRICEITEM_BO/priceItemCode
2	DESCRIPTION	C1_PRICEITEM_BO/description

18. Click **Save**.

The file request type is defined for uploading price items in the CSV format.

Uploading a Price Item File

You can upload a price item file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Price Items

You can create or edit the price items in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Price Items

Before uploading a price item file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1_PRICEITEM_BO	Used to specify the details of the price item or price item bundle whose record you want to create or update in the system.	Yes
priceItemCode	Used to specify the price item or price item bundle.	Yes
description	Used to specify the description for the price item or price item bundle.	Yes
priceItemAvailFor	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • PRIC - Enables you to use the price item or price item bundle for only pricing. • PRBL - Enables you to use the price item or price item bundle for pricing and billing. 	Yes
priceItemType	Used to indicate the type of the price item or price item bundle. If the price item or price item bundle is used for only pricing, the valid values are: <ul style="list-style-type: none"> • FEES • RATE However, if the price item or price item bundle is used for the pricing and billing, the valid value is: <ul style="list-style-type: none"> • FEES 	Yes
piStatusFlag	Used to indicate the status of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • ACTV - Enables you to set the price item or price item bundle to Active. • INAC - Enables you to set the price item or price item bundle to Inactive. 	Yes
bundleSw	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
bundleTypeFlg	<p>Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> • PHAN - Enables you to create a phantom price item bundle. • REGU - Enables you to create a regular price item bundle. • RTIO - Enables you to create a ratio price item bundle. <p>However, if the price item bundle is available for only pricing and the price item type is set to FEES, the valid value is:</p> <ul style="list-style-type: none"> • REGU - Enables you to create a regular price item bundle. <p>Note: You cannot define a price item bundle when it is available for only pricing and when the price item type is set to RATE.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are creating a price item bundle.</p>
asgnGlobalPIsw	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
saType	Used to indicate the contract type that you want to associate with the price item or price item bundle.	<p>Yes (Conditional)</p> <p>Note: This data is required when the price item or price item bundle is used for pricing and billing.</p>
priceItemParm	Used to specify the details of the parameter which you want to associate with the price item or price item bundle.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
startDate	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="570 268 1154 835"> <thead> <tr> <th data-bbox="570 268 889 352">If this tag is used within...</th> <th data-bbox="889 268 1154 352">Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 352 889 531">priceItemParm</td> <td data-bbox="889 352 1154 531">Used to specify the date from when the parameter is effective for the price item or price item bundle.</td> </tr> <tr> <td data-bbox="570 531 889 835">priceItemRel</td> <td data-bbox="889 531 1154 835">Used to specify the date from when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the version tag is...	priceItemParm	Used to specify the date from when the parameter is effective for the price item or price item bundle.	priceItemRel	Used to specify the date from when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a parameter with the price item or price item bundle • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle
If this tag is used within...	Then the purpose of the version tag is...							
priceItemParm	Used to specify the date from when the parameter is effective for the price item or price item bundle.							
priceItemRel	Used to specify the date from when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.							
endDate	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="570 928 1154 1495"> <thead> <tr> <th data-bbox="570 928 889 1012">If this tag is used within...</th> <th data-bbox="889 928 1154 1012">Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 1012 889 1190">priceItemParm</td> <td data-bbox="889 1012 1154 1190">Used to specify the date till when the parameter is effective for the price item or price item bundle.</td> </tr> <tr> <td data-bbox="570 1190 889 1495">priceItemRel</td> <td data-bbox="889 1190 1154 1495">Used to specify the date till when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the version tag is...	priceItemParm	Used to specify the date till when the parameter is effective for the price item or price item bundle.	priceItemRel	Used to specify the date till when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.	No
If this tag is used within...	Then the purpose of the version tag is...							
priceItemParm	Used to specify the date till when the parameter is effective for the price item or price item bundle.							
priceItemRel	Used to specify the date till when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.							
priceParmCode	<p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>You must specify a parameter which is already defined in the system.</p> <p>The system allows you to specify only those parameters where the parameter usage is set to Price Item.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
overridePriceParmLabel	Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.	No
displayOrder	Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Yes (Conditional) Note: This data is required when you want to associate a parameter with the price item or price item bundle.
parmUsageFlg	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • AGG - Indicates that you want to use the parameter for aggregating transactions. • PRI - Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing. 	Yes (Conditional) Note: This data is required when you want to associate a parameter with the price item or price item bundle.
isRequired	Used to indicate whether the parameter is mandatory while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
priorityNum	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional) Note: This data is required when you want to associate an optional parameter with the price item or price item bundle.
priceItemParmVal	Used to specify a list of predefined parameter values which are valid for the price item or price item bundle. Note: The data should be added in this tag when the value type of the parameter is set to Predefined .	No
priceParmVal	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional) Note: This data is required when you want to define valid predefined parameter values for the price item or price item bundle.
divPriceitem	Used to specify a list of divisions which you want to associate with the price item or price item bundle.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
division	Used to indicate the division to which you want to associate the price item or price item bundle.	Yes
priceItemSqi	Used to specify a list of division-specific SQIs for the price item or price item bundle.	No
serviceQuantityIdentifier	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional) Note: This data is required when you want to define a division-specific SQI for the price item or price item bundle.
sqlFragment	At present, the data from this tag is not stored in the system. If you want to use this tag, you need to implement a custom logic to meet the requirements.	Not applicable
sqiCalcAlgCd	At present, the data from this tag is not stored in the system. If you want to use this tag, you need to implement a custom logic to meet the requirements.	Not applicable
allowIncrUpdateSw	At present, the data from this tag is not stored in the system. If you want to use this tag, you need to implement a custom logic to meet the requirements.	Not applicable
divPriceItemChar	Used to specify a list of division-specific characteristics for the price item or price item bundle.	No

Tag Name	Tag Description	Mandatory (Yes or No)								
characteristicType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="570 268 1154 1014"> <thead> <tr> <th data-bbox="570 268 889 348">If this tag is used within...</th> <th data-bbox="889 268 1154 348">Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 348 889 594">divPriceItemChar</td> <td data-bbox="889 348 1154 594">Used to specify a characteristic type when you are defining a division-specific characteristic for the price item or price item bundle.</td> </tr> <tr> <td data-bbox="570 594 889 741">priceItemChar</td> <td data-bbox="889 594 1154 741">Used to specify a characteristic type for the price item or price item bundle.</td> </tr> <tr> <td data-bbox="570 741 889 1014">priceItemRelCharacteristic</td> <td data-bbox="889 741 1154 1014">Used to specify a characteristic type when you are defining a relationship-specific characteristic for the price item or price item bundle.</td> </tr> </tbody> </table> <p>Note: You must specify a characteristic type which is already defined in the system. However, you must use the BNDL relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the DENB and NUMB relationship type while adding a price item or price item bundle in the ratio price item bundles.</p>	<p data-bbox="1170 814 1370 844">Yes (Conditional)</p> <p data-bbox="1170 873 1463 966">Note: This data is required when you want to do either of the following:</p> <ul data-bbox="1203 987 1463 1222" style="list-style-type: none"> <li data-bbox="1203 987 1463 1113">• Associate a price item or price item bundle with the parent price item <li data-bbox="1203 1134 1463 1222">• Add a price item or price item bundle to the price item bundle

Tag Name	Tag Description	Mandatory (Yes or No)
priceItemParmGroup	Used to specify the parameter and its value based on which you want to determine pricing for the price item or price item bundle.	No
priceParmCode	Used to specify the parameter using which you want to determine the pricing for the price item or price item bundle.	Yes (Conditional) Note: This data is required when you want to determine the pricing for the price item or price item bundle using a parameter.
	Note: You must specify a parameter which is associated with the price item or price item bundle and whose parameter usage is set to Pricing . You cannot specify any special character except underscore (_) in the parameter name.	
priceParmVal	Used to specify the parameter value using which you want to determine the pricing for the price item or price item bundle.	Yes (Conditional) Note: This data is required when you want to determine the pricing for the price item or price item bundle using a parameter.
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	
priceItemRelCharacteristic	Used to specify a list of relationship-specific characteristics for the price item or price item bundle.	No

Note: When you want to edit the existing price items using the **File Upload Interface** utility, you need to provide all details of the price item and not just the details which you want to update. This is because the system supports replace operation and not the edit operation while editing the price items.

Sample XML Format for Uploading Price Items

Using the below example, you can create the following price items:

Price Items	Related Price Item	Relationship Type
Overdraft Returned	-	-
Additional Negative Balance Fees	-	-
Overdraft Assistance	Overdraft Returned	Service
	Additional Negative Balance Fees	Service Group

Note: The system will create the above price items when the required contract types, parameters, predefined parameter values, divisions, SQIs, characteristic types, predefined characteristic values are defined in the application.

CSV File Format for Uploading Price Items

Before uploading a price item file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes

Data	Description	Mandatory (Yes or No)
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • PRIC - Enables you to use the price item or price item bundle for only pricing. • PRBL - Enables you to use the price item or price item bundle for pricing and billing. 	Yes
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. If the price item or price item bundle is used for only pricing, the valid values are:</p> <ul style="list-style-type: none"> • FEES • RATE <p>However, if the price item or price item bundle is used for the pricing and billing, the valid value is:</p> <ul style="list-style-type: none"> • FEES 	Yes
Status	<p>Used to indicate the status of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • ACTV - Enables you to set the price item or price item bundle to Active. • INAC - Enables you to set the price item or price item bundle to Inactive. 	Yes
Bundle	<p>Used to indicate whether you want to define a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes

Data	Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> • PHAN - Enables you to create a phantom price item bundle. • REGU - Enables you to create a regular price item bundle. • RTIO - Enables you to create a ratio price item bundle. <p>However, if the price item bundle is available for only pricing and the price item type is set to FEES, the valid value is:</p> <ul style="list-style-type: none"> • REGU - Enables you to create a regular price item bundle. <p>Note: You cannot define a price item bundle when it is available for only pricing and when the price item type is set to RATE.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are creating a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when the price item or price item bundle is used for pricing and billing.</p>
Price Item Parameter Information		
Effective Start Date	<p>Used to specify the date from when the parameter is effective for the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p>
Effective End Date	<p>Used to specify the date till when the parameter is effective for the price item or price item bundle.</p>	No

Data	Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <div data-bbox="483 304 1049 562" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>You must specify a parameter which is already defined in the system.</p> <p>The system allows you to specify only those parameters where the parameter usage is set to Price Item.</p> </div>	<p>Yes (Conditional)</p> <div data-bbox="1092 275 1437 422" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p> </div>
Business Label	<p>Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.</p>	No
Display Order	<p>Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 804 1437 951" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p> </div>
Parameter Usage	<p>Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • AGG - Indicates that you want to use the parameter for aggregating transactions. • PRI - Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing. 	<p>Yes (Conditional)</p> <div data-bbox="1092 1029 1437 1176" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p> </div>
Mandatory	<p>Used to indicate whether the parameter is mandatory while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	No
Priority	<p>Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 1659 1437 1806" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate an optional parameter with the price item or price item bundle.</p> </div>
Predefined Parameter Values for Price Item		

Data	Description	Mandatory (Yes or No)
Predefined Parameter Value for Price Item	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional) Note: This data is required when you want to define valid predefined parameter values for the price item or price item bundle.
Division Information		
Division	Used to indicate the division to which you want to associate the price item or price item bundle.	Yes
Division-Specific SQIs for Price Item		
SQI	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional) Note: This data is required when you want to define a division-specific SQI for the price item or price item bundle.
Division-Specific Characteristics for Price Item		
Characteristic Type	Used to specify the characteristic type. Note: You must specify a characteristic type which is already defined in the system. You must specify a characteristic type where the characteristic entity is set to Division/Price Item Combination .	Yes (Conditional) Note: This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional) Note: This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Price Item Characteristics		

Data	Description	Mandatory (Yes or No)
Characteristic Type	<p>Used to specify the characteristic type.</p> <div data-bbox="483 275 1049 499" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>You must specify a characteristic type which is already defined in the system.</p> <p>You must specify a characteristic type where the characteristic entity is set to Price Item.</p> </div>	<p>Yes (Conditional)</p> <div data-bbox="1092 275 1438 422" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you are defining a characteristic for the price item or price item bundle.</p> </div>
Effective Date	<p>Used to specify the date from when the characteristic is effective for the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 583 1438 730" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you are defining a characteristic for the price item or price item bundle.</p> </div>
Characteristic Value	<p>Used to specify the value for the characteristic type.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 810 1438 957" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you are defining a characteristic for the price item or price item bundle.</p> </div>
Price Item Relationship		
Price Item	<p>Used to indicate the price item or price item bundle that you want to associate with the parent price item or add to the price item bundle.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 1094 1438 1451" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle </div>
Effective Start Date	<p>Used to specify the date from when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 1530 1438 1887" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle </div>

Data	Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.	No
Relationship Type	<p>Used to indicate how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • BNDL - Enables you to set the relationship type to Bundle. • CG - Enables you to set the relationship type to Custom. • DENB - Enables you to set the relationship type to Denominator. • NUMB - Enables you to set the relationship type to Numerator. • OTHR - Enables you to set the relationship type to Other. • PROD - Enables you to set the relationship type to Price Item. • SVC - Enables you to set the relationship type to Service. • SVCG - Enables you to set the relationship type to Service Group. <p>Note: You must use the OTHR, CG, PROD, SVC, or SVCG relationship type while associating a price item or price item bundle to the parent price item. However, you must use the BNDL relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the DENB and NUMB relationship type while adding a price item or price item bundle in the ratio price item bundles.</p>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle </div>

Data	Description	Mandatory (Yes or No)
Price Item Parameter=Parameter Value	<p>Used to specify the parameter and its value using which you want to determine the pricing for the child price item or price item bundle.</p> <p>Note:</p> <p>You must specify a parameter which is associated with the price item or price item bundle and whose parameter usage is set to Pricing.</p> <p>You cannot specify any special character except underscore (_) in the parameter name.</p> <p>You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>You cannot specify more than 50 parameter and parameter value combinations while uploading the price item file in the CSV format.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to determine the pricing for the child price item or price item bundle using a parameter.</p>
Relationship-Specific Characteristics for Price Item		
Characteristic Type	<p>Used to specify the characteristic type.</p> <p>Note:</p> <p>You must specify a characteristic type which is already defined in the system.</p> <p>You must specify a characteristic type where the characteristic entity is set to Price Item Relationship.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.</p>
Effective Date	<p>Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.</p>
Characteristic Value	<p>Used to specify the value for the characteristic type.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.</p>

Sample CSV Format for Uploading Price Items

Using the below example, you can create the following price items:

Price Item	Related Price Item	Relationship Type
Overdraft Returned	-	-
Additional Negative Balance Fees	-	-
Overdraft Assistance	Overdraft Returned	Service
	Additional Negative Balance Fees	Service Group

Note: The system will create the above price items when the required contract types, parameters, predefined parameter values, divisions, SQIs, characteristic types, predefined characteristic values are defined in the application.

In addition, the file request type which is used for uploading the price item file in the CSV format must contain the following field transformation details:

Sequence	Field Name	Map Field XPath
1	Price Item	C1_PRICEITEM_BO/priceItemCode

Uploading a Parameter File in the XML Format

To upload a parameter file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading parameters in the XML format

2. Upload the parameter file
3. Create the parameters in the system

Related Topics

Defining a File Request Type for Uploading Parameters in the XML Format

Procedure

To define a file request type for uploading parameters in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRICE_PARM** business object or custom parameter business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRICEUPL** algorithm type to the **Pre-Processing Algorithm** field corresponding to the parameter business object.

Note: For more information about the **C1-PRICEUPL** algorithm, refer to [C1-PRICEUPL](#).

11. Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing parameters using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters from the user interface.

12. Click **Save**.

The file request type is defined for uploading parameters in the XML format.

Uploading a Parameter File

You can upload a parameter file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating Parameters

You can create the parameters in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Parameter File in the CSV Format

To upload a parameter file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading parameters in the CSV format
2. Upload the parameter file
3. Create the parameters in the system

Defining a File Request Type for Uploading Parameters in the CSV Format

Procedure

To define a file request type for uploading parameters in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.
11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRICE_PARM** business object or custom parameter business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRICEUPL** algorithm type to the **Pre-Processing Algorithm** field corresponding to the parameter business object.

Note: For more information about the **C1-PRICEUPL** algorithm, refer to [C1-PRICEUPL](#).

14. Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing parameters using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters from the user interface.

15. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
16. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
17. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRICEPARMCODE	C1_PRICE_PARM/priceParmCode
2	DESCRIPTION	C1_PRICE_PARM/description

18. Click **Save**.

The file request type is defined for uploading parameters in the CSV format.

Uploading a Parameter File

You can upload a parameter file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating Parameters

You can create the parameters in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Parameters

Before uploading a parameter file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)														
C1_PRICE_PARM	Used to specify the details of the parameter whose record you want to create or update in the system.	Yes														
pricingEligibilitySw	<p>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains TRN.</p>	No														
priceItemSw	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must ensure that this tag contains N when a parameter is defined using the following source entity and source type combinations:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>ACCT</td> <td>BAL</td> </tr> <tr> <td>ACCT</td> <td>CNT</td> </tr> <tr> <td>PERS</td> <td>BAL</td> </tr> <tr> <td>PERS</td> <td>CNT</td> </tr> <tr> <td>ALGO</td> <td>—</td> </tr> <tr> <td>SQI</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	ACCT	BAL	ACCT	CNT	PERS	BAL	PERS	CNT	ALGO	—	SQI	—	No
Source Entity	Source Type															
ACCT	BAL															
ACCT	CNT															
PERS	BAL															
PERS	CNT															
ALGO	—															
SQI	—															
priceListEligibilitySw	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains TRN.</p>	No														

Tag Name	Tag Description	Mandatory (Yes or No)
productEligibilitySw	Used to indicate whether the parameter can be used while defining the product eligibility criteria. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains ALGO , SQI , or TRN .	
priceParmCode	Used to specify the parameter name.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	
description	Used to specify the description for the parameter.	Yes
priceParmTypeFlag	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> • ADV - Enables you to store an adhoc value in the parameter. • DFV - Enables you to store a predefined value in the parameter. • FKV - Enables you to store a reference value in the parameter. 	Yes
sourceEntityFlg	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • ACCT - Enables you to derive the parameter value from the account. • ALGO - Enables you to derive the parameter value from an algorithm. • PERS - Enables you to derive the parameter value from the person. • PRD - Enables you to derive the parameter value from the product. • SQI - Enables you to derive the parameter value from a service quantity identifier. • TRN - Enables you to derive the parameter value from a transaction. 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)																																				
sourceTypeCode	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.</p> <p>Note:</p> <p>You must ensure that this tag contains no value when the sourceEntityFlg tag contains TRN.</p> <p>You must ensure that this tag contains the following information depending on the source entity and source type combination:</p> <table border="1" data-bbox="570 575 1154 1976"> <thead> <tr> <th data-bbox="570 575 719 653">Source Entity</th> <th data-bbox="719 575 885 653">Source Type</th> <th data-bbox="885 575 1154 653">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 653 719 800">ACCT</td> <td data-bbox="719 653 885 800">CHAR</td> <td data-bbox="885 653 1154 800">A characteristic type where the characteristic entity is set to Account.</td> </tr> <tr> <td data-bbox="570 800 719 884">ACCT</td> <td data-bbox="719 800 885 884">FLD</td> <td data-bbox="885 800 1154 884">A field from the CI_ACCT table.</td> </tr> <tr> <td data-bbox="570 884 719 999">ACCT</td> <td data-bbox="719 884 885 999">BAL</td> <td data-bbox="885 884 1154 999">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 999 719 1115">ACCT</td> <td data-bbox="719 999 885 1115">CNT</td> <td data-bbox="885 999 1154 1115">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 1115 719 1262">PERS</td> <td data-bbox="719 1115 885 1262">CHAR</td> <td data-bbox="885 1115 1154 1262">A characteristic type where the characteristic entity is set to Person.</td> </tr> <tr> <td data-bbox="570 1262 719 1346">PERS</td> <td data-bbox="719 1262 885 1346">FLD</td> <td data-bbox="885 1262 1154 1346">A field from the CI_PER table.</td> </tr> <tr> <td data-bbox="570 1346 719 1461">PERS</td> <td data-bbox="719 1346 885 1461">BAL</td> <td data-bbox="885 1346 1154 1461">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 1461 719 1577">PERS</td> <td data-bbox="719 1461 885 1577">CNT</td> <td data-bbox="885 1461 1154 1577">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 1577 719 1724">PRD</td> <td data-bbox="719 1577 885 1724">CHAR</td> <td data-bbox="885 1577 1154 1724">A characteristic type where the characteristic entity is set to Product.</td> </tr> <tr> <td data-bbox="570 1724 719 1839">PRD</td> <td data-bbox="719 1724 885 1839">FLD</td> <td data-bbox="885 1724 1154 1839">A field from the C1_PRODUCT table.</td> </tr> <tr> <td data-bbox="570 1839 719 1976">SQI</td> <td data-bbox="719 1839 885 1976">—</td> <td data-bbox="885 1839 1154 1976">A service quantity identifier which is already defined in the system.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	ACCT	CHAR	A characteristic type where the characteristic entity is set to Account .	ACCT	FLD	A field from the CI_ACCT table.	ACCT	BAL	A value from the BAL_FLG lookup field.	ACCT	CNT	A value from the CNT_FLG lookup field.	PERS	CHAR	A characteristic type where the characteristic entity is set to Person .	PERS	FLD	A field from the CI_PER table.	PERS	BAL	A value from the BAL_FLG lookup field. CSV File Format for Uploading Parameters

Before uploading a parameter file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name. <div style="border: 1px solid black; padding: 5px;"> Note: You cannot specify any special character except underscore (_) in the parameter name. </div>	Yes
Description	Used to specify the description for the parameter.	Yes
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> • ADV - Enables you to store an adhoc value in the parameter. • DFV - Enables you to store a predefined value in the parameter. • FKV - Enables you to store a reference value in the parameter. 	Yes
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • ACCT - Enables you to derive the parameter value from the account. • ALGO - Enables you to derive the parameter value from an algorithm. • PERS - Enables you to derive the parameter value from the person. • PRD - Enables you to derive the parameter value from the product. • SQI - Enables you to derive the parameter value from a service quantity identifier. • TRN - Enables you to derive the parameter value from a transaction. 	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • CHAR - Enables you to derive the parameter value from a characteristic. • FLD - Enables you to derive the parameter value from a field. • BAL - Enables you to derive the parameter value from a usage amount. • CNT - Enables you to derive the parameter value from a usage counter. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> Note: You must not specify the source type when the source entity is set to ALGO, SQI, or TRN. You must not specify the source type as BAL or CNT when the source entity is set to PRD. </div>	Yes

Data	Description	Mandatory (Yes or No)																																				
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.</p> <p>Note:</p> <p>You must not specify the source type code when the source entity is set to TRN.</p> <p>You must specify the source type code depending on the following source entity and source type combination:</p> <table border="1" data-bbox="435 590 1154 1738"> <thead> <tr> <th data-bbox="443 596 618 674">Source Entity</th> <th data-bbox="618 596 821 674">Source Type</th> <th data-bbox="821 596 1146 674">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="443 674 618 789">ACCT</td> <td data-bbox="618 674 821 789">CHAR</td> <td data-bbox="821 674 1146 789">A characteristic type where the characteristic entity is set to Account.</td> </tr> <tr> <td data-bbox="443 789 618 867">ACCT</td> <td data-bbox="618 789 821 867">FLD</td> <td data-bbox="821 789 1146 867">A field from the CI_ACCT table.</td> </tr> <tr> <td data-bbox="443 867 618 945">ACCT</td> <td data-bbox="618 867 821 945">BAL</td> <td data-bbox="821 867 1146 945">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 945 618 1022">ACCT</td> <td data-bbox="618 945 821 1022">CNT</td> <td data-bbox="821 945 1146 1022">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 1022 618 1138">PERS</td> <td data-bbox="618 1022 821 1138">CHAR</td> <td data-bbox="821 1022 1146 1138">A characteristic type where the characteristic entity is set to Person.</td> </tr> <tr> <td data-bbox="443 1138 618 1215">PERS</td> <td data-bbox="618 1138 821 1215">FLD</td> <td data-bbox="821 1138 1146 1215">A field from the CI_PER table.</td> </tr> <tr> <td data-bbox="443 1215 618 1293">PERS</td> <td data-bbox="618 1215 821 1293">BAL</td> <td data-bbox="821 1215 1146 1293">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 1293 618 1371">PERS</td> <td data-bbox="618 1293 821 1371">CNT</td> <td data-bbox="821 1293 1146 1371">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 1371 618 1486">PRD</td> <td data-bbox="618 1371 821 1486">CHAR</td> <td data-bbox="821 1371 1146 1486">A characteristic type where the characteristic entity is set to Product.</td> </tr> <tr> <td data-bbox="443 1486 618 1564">PRD</td> <td data-bbox="618 1486 821 1564">FLD</td> <td data-bbox="821 1486 1146 1564">A field from the C1_PRODUCT table.</td> </tr> <tr> <td data-bbox="443 1564 618 1732">SQI</td> <td data-bbox="618 1564 821 1732">—</td> <td data-bbox="821 1564 1146 1732">A service quantity identifier which is already defined in the system.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	ACCT	CHAR	A characteristic type where the characteristic entity is set to Account . Uploading an SQI File in the XML Format

To upload an SQI file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading SQIs in the XML format
2. Upload the SQI file
3. Create the SQIs in the system

Related Topics

For more information on...	See...
How to define a file request type for uploading SQIs in the XML format	Defining a File Request Type for Uploading SQIs in the XML Format on page 2465

How to create the SQIs in the system	Creating SQIs on page 2466

Defining a File Request Type for Uploading SQIs in the XML Format

Procedure

To define a file request type for uploading SQIs in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.

3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Service** option from the **Service Type** list.
9. Enter the **C1-SQIUPLOAD** business service or custom SQI business service in the **Service Name** field.
10. Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing SQIs from the user interface.

11. Click **Save**.

The file request type is defined for uploading SQIs in the XML format.

Uploading an SQI File

You can upload an SQI file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating SQIs

You can create the SQIs in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading an SQI File in the CSV Format

To upload an SQI file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading SQIs in the CSV format
2. Upload the SQI file
3. Create the SQIs in the system

Related Topics

Defining a File Request Type for Uploading SQIs in the CSV Format

Procedure

To define a file request type for uploading SQIs in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **File Request Type**.

A sub-menu appears.

- Click the **Add** option from the **File Request Type** sub-menu.

The **File Request Type** screen appears.

- Enter the file request type and description in the respective fields.
- Select the **Data Transformation Required** option.
The **File Format** field is enabled.
- Select the **Comma Separated Values** option from the **File Format** list.
- Enter `csv` in the **File Extension** field.
- Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
- Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
- In the **Services** section, enter the required sequence number.
- Select the **Business Service** option from the **Service Type** list.
- Enter the **C1-SQIUPLOAD** business service or custom SQI business service in the **Service Name** field.
- Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing SQIs from the user interface.

- If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
- Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
- In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	DECIMALPOSITIONS	C1-SQIUPLOAD/decimalPositions
2	DESCRIPTION	C1-SQIUPLOAD/description

- Click **Save**.

The file request type is defined for uploading SQIs in the CSV format.

Uploading an SQI File

You can upload an SQI file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating SQIs

You can create the SQIs in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Service Quantity Identifiers (SQIs)

Before uploading an SQI file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-SQIUPLOAD	Used to specify the details of the SQI whose record you want to create or update in the system.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier (SQI).	Yes (Conditional) Note: This data is required when you want to define an SQI.
description	Used to specify the description for the SQI.	Yes (Conditional) Note: This data is required when you want to define an SQI.
decimalPositions	Used to specify the appropriate number of decimal positions for the SQI. Note: If you do not specify the value in this tag, by default, it is set to zero (0). You can specify maximum precision of 18 decimal positions for an SQI.	No

Sample XML Format for Uploading Service Quantity Identifiers (SQIs)

Using the below example, you can create the following SQIs:

- ACCTBAL
- AVGDBAL
- OVDLMT

```
<root>
<request>
<payload>
<C1-SQIUPLOAD>
  <serviceQuantityIdentifier>ACCTBAL</serviceQuantityIdentifier>
  <description>Account Balance</description>
  <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
<C1-SQIUPLOAD>
  <serviceQuantityIdentifier>AVGDBAL</serviceQuantityIdentifier>
  <description>Average Daily Balance</description>
  <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
<C1-SQIUPLOAD>
  <serviceQuantityIdentifier>OVDLMT</serviceQuantityIdentifier>
  <description>Overdraft Limit</description>
  <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
</payload>
</request>
</root>
```

Uploading Price Items, Parameters, and SQIs from the Same File

If the price item, parameter, and SQI information is given in the same file, you need to use a file request type where the following business objects and business service are added in the **Services** section:

- C1_PRICE_PARM
- C1-SQIUPLOAD
- C1_PRICEITEM_BO

Note that the **C1_PRICE_PARM** business object and the **C1-SQIUPLOAD** business service should have higher sequence compared to the **C1_PRICEITEM_BO** business object in such file request type. Otherwise, erroneous results might occur.

Chapter 39

Product and Product Version Upload

Oracle Revenue Management and Billing enables you to create new products and edit the existing products using the **File Upload Interface** utility. You can upload the product file in the XML or CSV format using the **File Upload Interface** utility. You can specify the following in the XML and CSV files along with the basic details of the product:

- Divisions which you want to associate with the product
- Characteristics for the product
- Details of the product to product relationship

The system also enables you to create new product versions and edit the existing product versions using the **File Upload Interface** utility. You can upload product versions along with the product or separately based on the requirements. You can specify the following in the XML and CSV files along with the basic details of the product version:

- Characteristics for the product version
- Eligibility criteria for the product version
- Services and price list which you want to add in the product version
- Standard products and their services which you want to add in the product version (in case of packaged product)

Chapter 40

Price List and Price Item Pricing Upload

Oracle Revenue Management and Billing enables you to create new price lists and edit the existing price lists using the **File Upload Interface** utility. You can upload the price list file in the XML or CSV format using the **File Upload Interface** utility.

You can specify the following in the XML and CSV files along with the basic details of the price list:

- Divisions which you want to associate with the price list
- Characteristics for the price list
- Eligibility criteria for the price list
- Hierarchy details for the price list

To upload the price list file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
 - Set the **File Format** field to **Extensible Markup Language**.
 - Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
 - Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
 - Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price lists or edit the existing price lists using the file request type.
2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price list file.
3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price lists in the system.

Note: For more information about the XML file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

To upload the price list file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
 - Set the **File Format** field to **Comma Separated Values**.
 - Select the **Data Transformation Required** option.

- Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
- Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
- Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
- Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price lists or edit the existing price lists using the file request type.
- Specify the following details in the Field Transformation section:
 - **Sequence** – Used to specify the data field in the CSV record which should be uploaded in the system.
 - **Field Name** – Used to indicate the field for which the data is uploaded in the system.
 - **Map Field XPath** – Used to specify the XPath of the field where you want to store the data field from the CSV record.

For example,

Sequence	Field Name	Map Field XPath
1	PRICELISTID	C1_PRICEASSIGN_SERVICE/0/pricelist/priceListId
2	DESCRIPTION	C1_PRICEASSIGN_SERVICE/0/pricelist/description

This means that the system should upload the first value (i.e. price list ID) and second value (i.e. price list description) from the CSV record in the **priceListId** and **description** fields using the **C1_PRICEASSIGN_SERVICE** business service.

2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price list file.
3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price lists in the system.

Note: For more information about the CSV file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

The system also enables you to create new price item pricing for an account, customer, or price list and edit the existing price item pricing assigned to an account, customer, or price list using the **File Upload Interface** utility. You can upload price item pricing along with the price list or separately based on the requirements.

You can specify the following in the XML and CSV files along with the basic details of price item pricing:

- Person, account, or price list to which you want to assign the price item pricing
- Characteristics for the price item pricing

- Price item parameters based on which you want to define the price item pricing
- Basic details for the price components
- Tiering criteria for the price component (if the **Tiering Type** of the corresponding rate component is set to **STEP** or **Threshold**)
- Eligibility criteria for the price component (if the **Tiering Type** of the corresponding rate component is set to **STEP** or **Threshold**)

To upload the price assignments file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
 - Set the **File Format** field to **Extensible Markup Language**.
 - Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
 - Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
 - Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price item pricing or edit the existing price item pricing using the file request type.
2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price assignments file.
3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price item pricing in the system.

Note: For more information about the XML file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

To upload the price assignments file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
 - Set the **File Format** field to **Comma Separated Values**.
 - Select the **Data Transformation Required** option.
 - Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
 - Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
 - Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
 - Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price item pricing or edit the existing price item pricing using the file request type.
 - Specify the following details in the Field Transformation section:
 - **Sequence** – Used to specify the data field in the CSV record which should be uploaded in the system.

- **Field Name** – Used to indicate the field for which the data is uploaded in the system.
 - **Map Field XPath** – Used to specify the XPath of the field where you want to store the data field from the CSV record.
2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price assignments file.
 3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price item pricing in the system.

Note: For more information about the CSV file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

- [Invoice Request Automatic Regular Bill Generation \(Without Approval\) Status Transition](#)
- [Invoice Request Type](#)
- [Invoice Request \(Used for Searching\)](#)
- [Invoice Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to generate an adhoc regular or trial bill for an account through an invoice request. The system enables you to create an invoice request manually or automatically. It enables you to create an invoice request for a person or an account. You can create an invoice request for an account where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

If you create an invoice request for a person, the system will consider all those accounts of the person where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**. You can then exclude an account from the invoice request, if required. The system also enables you to consider all accounts of the person and its child persons where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

Note: The system searches for the characteristic type which is specified in the **Invoice Request Account Eligibility Char Type** option type of the **C1-INVREQ** feature configuration. By default, this option type is set to **INVRACTE**. You can change the characteristic type, if required.

In other words, the system enables you to create the following types of invoice request:

- **Manual Regular Bill Generation Invoice Request** - It is used to generate an adhoc regular bill for an account. You can create a manual regular bill generation invoice request for a person or an account from the user interface.
- **Manual Trial Bill Generation Invoice Request** - It is used to generate an adhoc trial bill for an account. You can create a manual trial bill generation invoice request for a person or an account from the user interface.
- **Automatic Regular Bill Generation Invoice Request** - It is used to generate an adhoc regular bill for an account. You can configure the system such that an automatic regular bill generation invoice request is created for an account automatically when a fully-insured group policy is activated, terminated, reinstated, or renewed from the user interface or through a health care inbound message.

Note:

The automatic invoice request creation feature is only designed to work for the fully-insured group health insurance business and not for the financial services or self-funded health insurance business.

You cannot create an automatic regular bill generation invoice request for a person.

At present, the system is not designed to create an automatic trial bill generation invoice request.

While creating an invoice request, you need to specify an invoice request type using which you want to create the invoice request. The system enables you to create the invoice request types with the following combinations:

Invoice Mode	Bill Generation Type	Approval Process
Manual	Regular	On
Manual	Regular	Off
Manual	Trial	Off
Automatic	Regular	Off

It is the invoice request type which helps the system to determine:

- The business object using which the invoice request should be created in the system

Note: Two invoice request business objects named **Invoice Request - Regular Bill Generation (C1-InvoiceRequest)** and **Invoice Request - Trial Bill Generation (C1-InvoiceRequestTrial)** are introduced in this release. If the **Bill Generation Type** field is set to **Regular**, you must select the **Invoice Request - Regular Bill Generation** business object from the **Invoice Request Business Object** list. However, if the **Bill Generation Type** field is set to **Trial**, you must select the **Invoice Request - Trial Bill Generation** business object from the **Invoice Request Business Object** list.

- Whether a manual or automatic invoice request should be created in the system
- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode

Note:

The system will process a manual regular bill generation invoice request for an account in the deferred mode when the number of billable charges of the account exceeds the defer processing billable charge count.

The defer processing billable charge count is not considered when a manual regular bill generation invoice request is created for a person.

You can specify the defer processing billable charge count when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- Whether the approval is required for the invoice request

Note: You can only set the **Approval Required** flag when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- The wait days which is used to calculate the processing date for an invoice request

Note:

If the invoice request is processed in the online mode, the system will process the invoice request when the processing date is earlier than or equal to the system date. However, if the invoice request is processed in the deferred mode, the system will process the invoice request when the processing date is earlier than or equal to the batch business date.

If required, you can configure the system such that the processing date does not fall on a holiday. To implement this requirement you need to specify the work calendar which helps to determine the working day.

- The date calculation algorithm which is used to calculate the processing date for an automatic regular bill generation invoice request

Note: In addition, you can configure threshold days for automatic invoice request creation. It is used to determine whether the number of days between the bill cycle date and processing date is greater than the threshold days. This parameter is used in Invoice Request Date Calculation algorithm to check whether the processing date of the invoice request is within threshold period. If so, the automatic invoice request is not created for the account. This parameter is only applicable while activating or renewing a fully-insured group policy.

While creating a manual invoice request, you need to specify the following – invoice request type, entity (i.e. person or account for which the invoice request should be created), cutoff date, accounting date, and bill date.

Note: The cutoff date, accounting date, and bill date are derived while creating an automatic invoice request for an account.

For more information about the types of invoice request, see [Types of Invoice Request](#) on page 2482.

For more information on how to setup the invoice request feature, see [Prerequisites](#) on page 2482.

Prerequisites

To setup the invoice request process, you need to do the following:

- Define the required invoice request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Invoice Request Type**
- Define the required characteristic types where the characteristic entity is set to **Invoice Request**
- Assign the **C1-INVRA** To Do type to a To Do role whose users must receive To Do generated while submitting an invoice request for approval
- Assign the **C1-INVRS** To Do type to a To Do role whose users must receive To Do generated while resubmitting an invoice request
- Set the batch control type of the **Invoice Request Periodic Monitor (C1-INVQR)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about the **Invoice Request Periodic Monitor (C1-INVQR)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

- Set the batch control type of the **Pending Bill Generation (BILLOPEN)**, **Bill Segment Generation (BSGENREG)**, and **Bill Completion (POSTPROC)** batches to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Set the following feature configuration in the system:

- **Invoice Request Configuration (C1-INVREQ)**

Types of Invoice Request

The system allows you to create the following types of invoice requests:

- [Manual Regular Bill Generation Invoice Request](#) on page 2482
- [Manual Trial Bill Generation Invoice Request](#) on page 2484
- [Automatic Regular Bill Generation Invoice Request](#) on page 2484

Manual Regular Bill Generation Invoice Request

Once a manual regular bill generation invoice request is created in the **Draft** status, the system checks whether it is created for a person or an account. If a manual regular bill generation invoice request is created for an account,

you can submit the invoice request. On submitting the invoice request, the system checks whether the number of the billable charges of the account exceed the defer processing billable charge count. If the number of the billable charges of the account exceed the defer processing billable charge count, the status of the invoice request is changed to **Defer Processing Batch**. However, if the number of the billable charges of the account does not exceed the defer processing billable charge count, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is later than the system date, the status of the invoice request is changed to **Defer Processing**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Defer Processing** status. If there is an invoice request in the **Defer Processing** status, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is later than the system date, the status of the invoice request remains as **Defer Processing**.

Note: The system enables you to cancel an invoice request which is in the **Defer Processing Batch** or **Defer Processing** status.

However, if the processing date is earlier than or equal to the system date, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the online mode. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

However, if a manual regular bill generation invoice request is created for a person, the system checks whether the number of accounts of the person (if the **Include Person Hierarchy** option is not selected) or the number of accounts of the person and its child persons (if the **Include Person Hierarchy** option is selected) exceeds the limit defined in the **Account Limit** option type of the **C1-INVREQ** feature configuration. If the number of accounts does not exceed the account limit, the system derives the account of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

However, if the number of accounts exceeds the account limit, the status of the invoice request is changed to **Account Derivation Pending**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Account Derivation Pending** status. If there is an invoice request in the **Account Derivation Pending** status, the system derives the accounts of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

When you execute the **BILLOPEN** batch with the **Off Cycle Switch** parameter set to **Y**, the system checks whether the account that meets the search criteria is included in any invoice request which is in the **Defer Processing Batch** status. If the account is included in the invoice request, the system checks whether the processing date of the invoice request is earlier than or equal to the batch business date. If processing date is earlier than or equal to the batch business date, the system checks whether there is any record in the **Processing** status for the account in the invoice request. If so, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the **Pending** status. When you execute the **BSGENREQ** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the bill segments for the adhoc regular bill. When you execute the **POSTPROC** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the post-processing bill segments (if any) and completes the adhoc regular bill of the account. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, or if a To Do is generated for the bill review, the status of the record in the invoice request is changed to **Error**. If all records in the invoice request are in the **Error** status, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

You can optionally configure the approval process for the manual regular bill generation invoice request. If the **Approval Required** flag is set to **Yes** in the invoice request type, the status of the manual regular bill generation invoice request is changed to **Approval In Progress** when you submit the invoice request. The approver can then approve or reject the manual regular bill generation invoice request based on the observations.

Manual Trial Bill Generation Invoice Request

The manual regular bill generation invoice request and manual trial bill generation invoice request are created and processed identically with the following exceptions:

- On submitting the manual trial bill generation invoice request for an account, the system does not check whether the number of the billable charges of the account exceed the defer processing billable charge count. Therefore, the manual trial bill generation invoice request is always processed in the deferred mode.
- You need to specify the following parameters while executing the **BILLOPEN**, **BSGENREQ**, and **POSTPROC** batches:
 - Bill Generation Type (set to **Trial**)
 - Description for Trial Billing Batch Run
 - Off Cycle Switch (set to **Y**)
- The **BSGENREQ** batch will not freeze and complete a trail bill for the account.
- At present, a To Do is not generated for a trial bill review, and therefore the system does not check whether a To Do is generated for a trial bill review.

Automatic Regular Bill Generation Invoice Request

To enable the automatic invoice request creation feature for the fully-insured group health insurance business, you need to attach the following algorithms:

If you want to create an automatic invoice request for an account while...	Then attach the algorithm....			
	Business Object	Status	System Event	Algorithm
Activating a Fully-Insured Group Policy <div style="border: 1px solid black; padding: 5px;"> <p>Note: This happens only on the customer onboarding. If an invoice request is already processed for any account in the person's hierarchy, the system will not create an invoice request for the account.</p> </div>	C1-POLICY	In Force/ Active	Enter	C1- INVREQCRE
Terminating a Fully-Insured Group Policy		Terminated	Enter	C1- INVREQPT
Reinstating a Fully-Insured Group Policy		Reinstated	Enter	C1- INVREPRIN
Renewing a Fully-Insured Group Policy		-	Audit	C1- IRPOLREW

If you want to create an automatic invoice request for an account while...	Then attach the algorithm....			
	Business Object	Status	System Event	Algorithm
Creating an Account for a Parent Customer or Bill Group who is the Main Customer of the Fully-Insured Group Policy <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This happens only on the customer onboarding. If an invoice request is already processed for any account in the person's hierarchy, the system will not create an invoice request for the account.</p> </div>	C1-AccountBO	-	Post-Processing	C1-INVRCTPO

The above algorithms contain a parameter wherein you can specify the invoice request type using which the automatic invoice request should be created in the system.

If the automatic invoice request creation feature is configured for the fully-insured group health insurance business, the system creates an automatic regular bill generation invoice request in the **Defer Processing Batch** status for an account when:

- A fully-insured group policy is activated, terminated, reinstated, or renewed
- An account is created for a parent customer or bill group who is the main customer of the fully-insured group policy

The deferred mode processing for manual regular bill generation invoice request and automatic regular bill generation invoice request is identical.

Invoice Request Manual Trial Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the manual trial bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

Invoice Request Manual Regular Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the manual regular bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

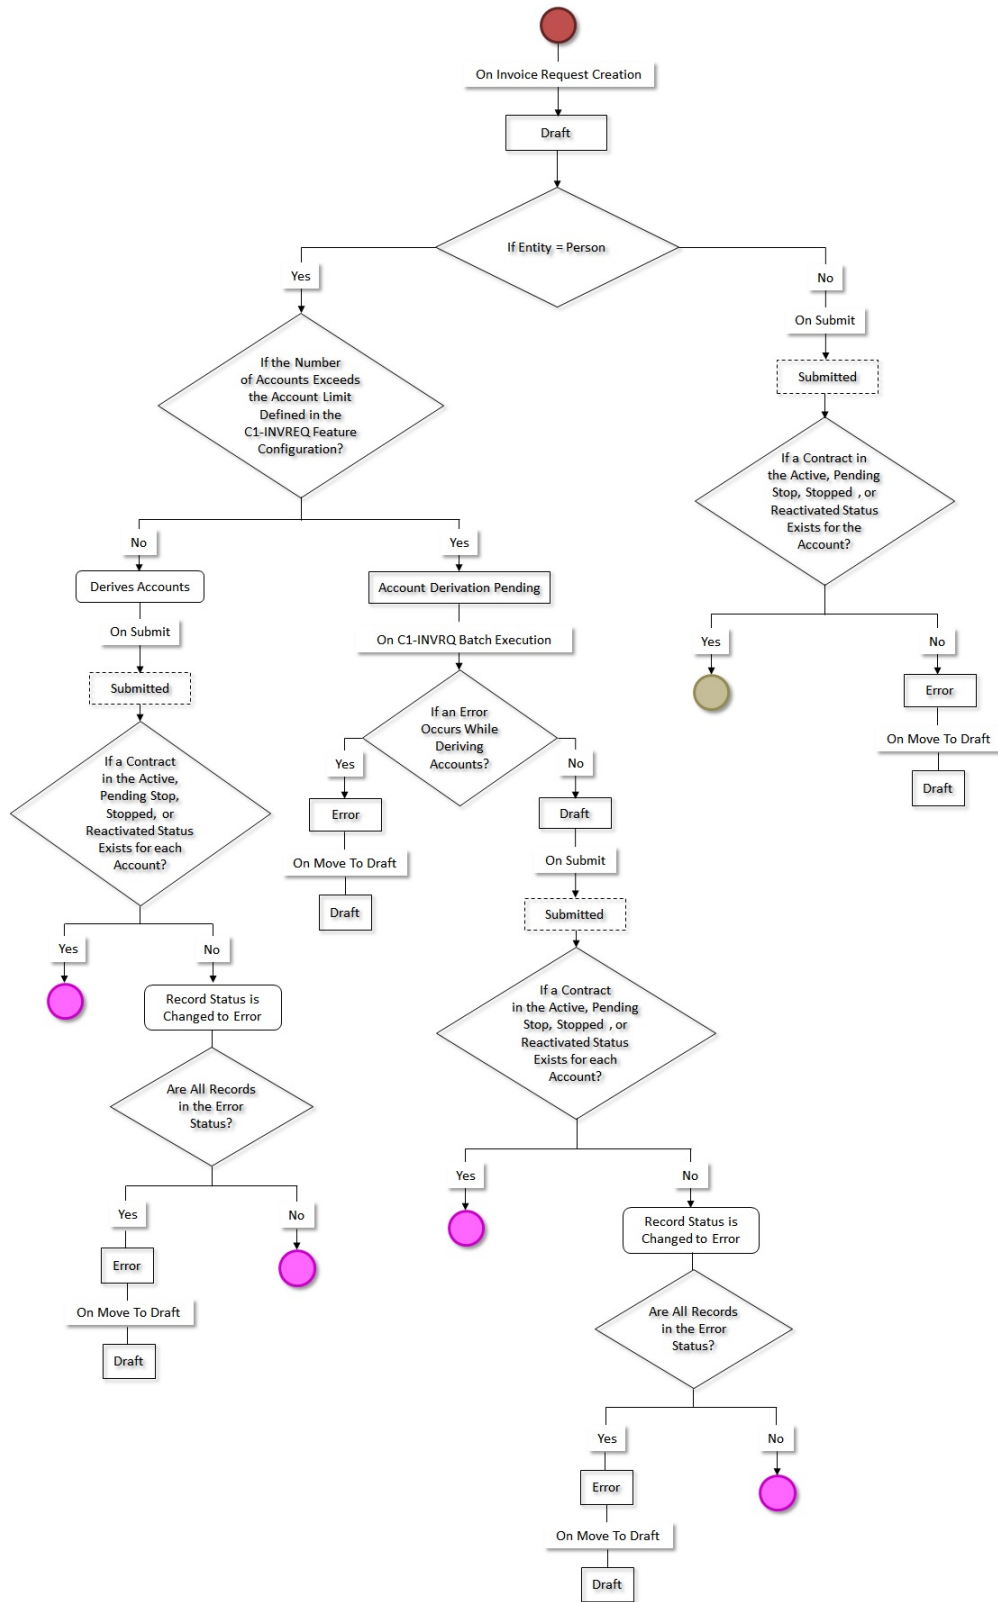

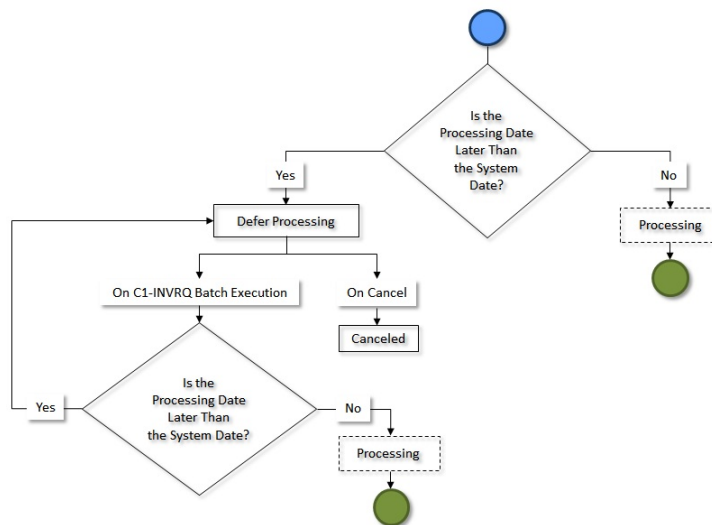

Invoice Request Manual Regular Bill Generation (With Approval) Status Transition

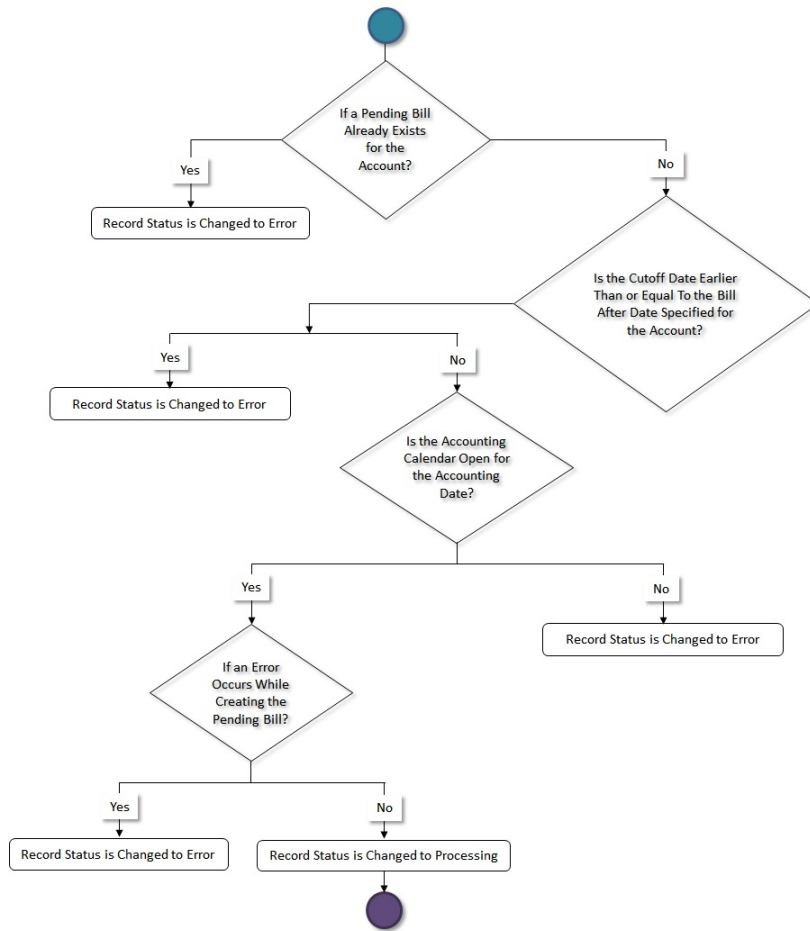

The following figure graphically indicates how an invoice request in the manual regular bill generation process moves from one status to another when the approval process is configured in the invoice request type:

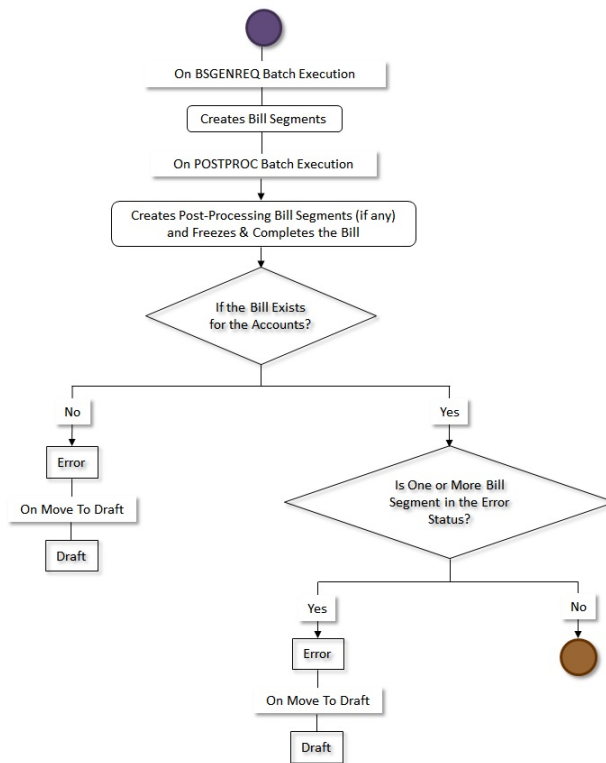

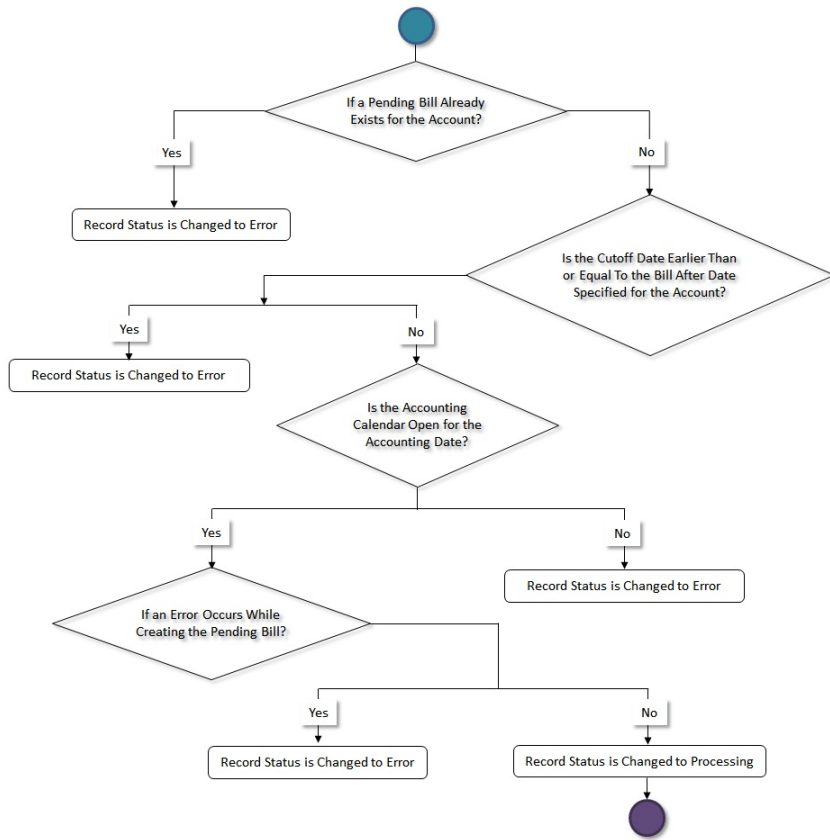

Invoice Request Automatic Regular Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the automatic regular bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

Invoice Request Type

Oracle Revenue Management and Billing enables you to define an invoice request type using which you can create an invoice request. The invoice request type helps the system to determine:

- The business object using which the invoice request should be created in the system
- Whether a manual or automatic invoice request should be created in the system
- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode
- Whether the approval is required for the invoice request
- The wait days which is used to calculate the processing date for an invoice request
- The date calculation algorithm which is used to calculate the processing date for an automatic regular bill generation invoice request

Note: The automatic invoice request is only designed to work for the fully-insured group and individual health insurance businesses and not for the financial services or self-funded health insurance businesses.

The **Invoice Request Type** screen allows you to define, edit, copy, and delete an invoice request type. It contains the following zones:

- [Invoice Request Type List](#) on page 2503
- [Invoice Request Type](#) on page 2504

Invoice Request Type List

The **Invoice Request Type List** zone lists the invoice request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Invoice Request Type	Displays the invoice request type.
Description	Displays the description of the invoice request type.
Edit	On clicking the Edit (✎) icon, the Invoice Request Type screen appears where you can edit the details of the invoice request type.

Column Name	Column Description
Duplicate	On clicking the Duplicate (📄) icon, the Invoice Request Type screen appears where you can define a new invoice request type using an existing invoice request type.
Delete	On clicking the Delete (🗑️) icon, you can delete the invoice request type. Note: You can delete an invoice request type when an invoice request is not created using the invoice request type.

On clicking the **Broadcast** (📡) icon corresponding to an invoice request type, the **Invoice Request Type** zone appears with the details of the respective invoice request type.

Invoice Request Type

The **Invoice Request Type** zone displays the details of the invoice request type. It contains the following sections:

- **Main** - Displays basic information about the invoice request type. It contains the following fields:

Field Name	Field Description
Invoice Request Type	Displays the invoice request type.
Description	Displays the description of the invoice request type.
Invoice Request Business Object	Indicates the business object using which an invoice request should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the invoice request type.
Status	Indicates the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Invoice Mode	Indicates the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Field Name	Field Description
Bill Generation Type	<p>Indicates the bill generation type, using which an invoice request should be created. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Trial <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p>
Defer Processing Billable Charge Count	<p>Displays the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>
Date Calculation Algorithm	<p>Indicates the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> <p>This field appears when the Automatic option is selected from the Invoice Mode list.</p>
Invoice Request Approval Required	<p>Indicates whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>

Field Name	Field Description
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type.</p> <p>This field appears when the Approval Required option is selected.</p>
Approval To Do Role	Indicates that users with the specified To Do role can only approve an invoice request which is submitted for approval.
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role.</p> <p>This field appears when the Approval Required option is selected.</p>
Submitter To Do Type	Indicates the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an invoice request. It is only used to fetch the roles associated with the submitter To Do type while defining or editing the invoice request type.
	<p>Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Submitter To Do Role	Indicates that users with the specified To Do role cannot approve an invoice request which is submitted for approval.
	<p>Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>
Freeze and Complete	Indicates whether the invoice request raised through an automatic or manual invoice mode should be freeze and complete.
	<p>Note:</p> <p>This field is not mandatory if the Invoice Mode - Manual option is selected.</p> <p>By default, this field is selected and disabled when the Invoice Mode - Automatic option is selected.</p> <p>The field should not be checked when the Bill Generation Type - Trial option is selected.</p> <p>Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.</p> <p>For the Batch mode, this field value will be passed to the batch parameter Freeze and Complete.</p>

Field Name	Field Description
Wait Days	Displays the maximum wait period (in days) after which the bills in an invoice request are processed.
	Note: You cannot specify a negative value in the Wait Days field.

- **Characteristics** - Lists the characteristics defined for the invoice request type. It contains the following columns:

Field Name	Field Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the invoice request type.
Delete	Used to delete the invoice request type.
	Note: You can delete an invoice request type when an invoice request is not created using the invoice request type.
Duplicate	Used to create a new invoice request type using an existing invoice request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the invoice request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Invoice Request Type** zone does not appear in the **Invoice Request Type** screen. It appears when you click the **Broadcast** () icon corresponding to an invoice request type in the **Invoice Request Type List** zone.

Defining an Invoice Request Type

Prerequisites

To define an invoice request type, you should have:

- Invoice request type business objects defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To define an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Invoice Request Type** sub-menu.

The **Invoice Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request type.
- **Characteristics** - Used to define the characteristics for the invoice request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to specify the invoice request type.	Yes
Business Object	Indicates the business object using which you are defining the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation 	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No
Status	Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Invoice Mode	Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic 	Yes
	Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Generation Type	<p>Used to indicate the bill generation type, using which an invoice request should be created. The valid values are:</p> <ul style="list-style-type: none"> • Regular • Trial <p>Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular.</p>	Yes
Defer Processing Billable Charge Count	<p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note:</p> <p>You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Date Calculation Algorithm	Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p>	<p>Note:</p> <p>This field is required when Invoice mode is Automatic.</p>
Invoice Request Approval Required	Used to indicate whether approval is required while invoicing bills through an invoice request.	No
	<p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>	
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search () icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional) Note: This field is required when the Approval Required option is selected.
	Note: The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field. The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected. Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	
Wait Days	Used to indicate the threshold days before which no other invoice request for any bill generation process will be initiated.	No
	Note: By default, the value displayed for wait days is 0 .	

4. Enter the required details in the **Main** section.
5. Define characteristics for the invoice request type, if required.
6. Click **Save**.

The invoice request type is defined.

How to define a characteristic for an invoice request type	Defining a Characteristic for an Invoice Request on page 2538

Defining a Characteristic for an Invoice Request Type

Prerequisites

To define a characteristic for an invoice request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request Type**)

Procedure

To define a characteristic for an invoice request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an invoice request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Invoice Request Type .	Note: This field is required when you are defining a characteristic for the invoice request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the invoice request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the invoice request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the invoice request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing an Invoice Request Type

Prerequisites

To edit an invoice request type, you should have:

- Invoice request type business objects defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To edit an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.
The **Invoice Request Type** screen appears.
4. In the **Invoice Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the invoice request type whose details you want to edit.

The **Invoice Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the invoice request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Displays the invoice request type.	Not applicable
Business Object	Indicates the business object using which you are defining the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation 	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Invoice Mode	Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic 	Yes
	Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.	
Bill Generation Type	Used to indicate the bill generation type, using which an invoice request should be created. The valid values are: <ul style="list-style-type: none"> • Regular • Trial 	Yes
	Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Billable Charge Count	<p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>	No
Date Calculation Algorithm	<p>Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when Invoice mode is Automatic.</p>
Invoice Request Approval Required	<p>Used to indicate whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.	Yes (Conditional)
	<p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.</p>	<p>Note:</p> <p>This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected. Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	
Wait Days	Used to specify the maximum wait period (in days) after which the bills in an invoice request are processed.	No
	Note: You cannot specify a negative value in the Wait Days field.	

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Invoice Request Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the invoice request type, if required.
7. Click **Save**.

The changes made to the invoice request type are saved.

Deleting an Invoice Request Type

Procedure

To delete an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.

The **Invoice Request Type** screen appears.

- In the **Invoice Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the invoice request type that you want to delete.

A message appears confirming whether you want to delete the invoice request type.

Note: You can delete an invoice request type when an invoice request is not created using the invoice request type.

Tip: Alternatively, you can delete an invoice request type by clicking the **Delete** button in the **Invoice Request Type** zone.

- Click **OK**.

The invoice request type is deleted.

Copying an Invoice Request Type

Instead of creating an invoice request type from scratch, you can create a new invoice request type using an existing invoice request type. This is possible through copying an invoice request type. On copying an invoice request type, the details including the characteristics are copied to the new invoice request type. You can then edit the details, if required.

Prerequisites

To copy an invoice request type, you should have:

- Invoice request type (whose copy you want to create) defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To copy an invoice request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **I** and then click **Invoice Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Invoice Request Type** sub-menu.
The **Invoice Request Type** screen appears.
- In the **Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the invoice request type whose copy you want to create.

The **Invoice Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request type. It contains the following fields:

- **Characteristics** - Used to define the characteristics for the invoice request type.

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to specify the invoice request type.	Yes
Business Object	Indicates the business object using which you are defining the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the business object using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation 	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No
Status	Used to indicate the status of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Invoice Mode	Used to indicate the mode of the invoice request type. The valid values are: <ul style="list-style-type: none"> • Manual • Automatic 	Yes
	Note: The automatic mode is not supported while creating an invoice request type for the financial services domain.	
Bill Generation Type	Used to indicate the bill generation type, using which an invoice request should be created. The valid values are: <ul style="list-style-type: none"> • Regular • Trial 	Yes
	Note: If Automatic option is selected from the Invoice Mode list, this field is disabled, and by default, is set to Regular .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Billable Charge Count	<p>Used to specify the count which helps to determine whether an invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).</p> <p>Note: You cannot specify a negative value in this field.</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>This field appears when the Manual option is selected from the Invoice Mode list, and Regular option is selected from the Bill Generation Type list.</p> <p>If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.</p>	No
Date Calculation Algorithm	<p>Used to indicate the algorithm using which the date should be calculated while adding a bill in an invoice request.</p> <p>Note: The Search  icon appears corresponding to the Date Calculation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p> <p>On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the Date Calculation Algorithm field.</p> <p>You can specify the date calculation algorithm when the Invoice Mode is selected as Automatic.</p>	Yes (Conditional) Note: This field is required when Invoice mode is Automatic .
Invoice Request Approval Required	<p>Used to indicate whether approval is required while invoicing bills through an invoice request.</p> <p>Note: This field appears when the Automatic option is selected from the Invoice Mode list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	<p>Used to indicate that the To Do entry of the specified To Do type must be created when an invoice request is submitted for approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required option is selected.</p> <p>The C1-INVRA To Do type is shipped with the product. You can use the C1-INVRA To Do type or a custom To Do type, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>
Approval To Do Role	<p>Used to indicate that users with the specified To Do role can only approve an invoice request which is submitted for approval.</p> <p>Note:</p> <p>The list includes only those To Do roles which are associated with the approval To Do type.</p> <p>This field appears when the Approval Required option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Type	<p>Used to indicate the submitter To Do type. At present, the submitter To Do type is not used to create To Do entry when the approver rejects an offset request. It is only used to fetch the roles associated with the submitter To Do type.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p> <p>The C1-INVRS To Do type is shipped with the product. You can use the C1-INVRS To Do type or a custom To Do type, if required.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate that users with the specified To Do role cannot approve an invoice request which is submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required option is selected. Once it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	
Wait Days	Used to indicate the threshold days before which no other invoice request for any bill generation process will be initiated.	No
	Note: By default, the value displayed for wait days is 0 .	

Tip: Alternatively, you can copy an invoice request type by clicking the **Duplicate** button in the **Invoice Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the invoice request type, if required.
7. Click **Save**.

The new invoice request type is defined.

Invoice Request (Used for Searching)

The **Invoice Request** screen allows you to search for an invoice request using various search criteria. It also allows you to define an invoice request. It contains the following zone:

- [Search Invoice Request](#) on page 2523

Through this screen, you can navigate to the following screen:

- [Invoice Request \(Used for Viewing\)](#) on page 2530

Search Invoice Request

The **Search Invoice Request** zone allows you to search for an invoice request using various search criteria. It contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an invoice request using the invoice request or bill details. The valid values are: <ul style="list-style-type: none"> Invoice Requests for Accounts Invoice Requests for Persons <p>Note: By default, the Invoice Requests for Accounts option is selected.</p>	Yes
Invoice Request ID	Used to search a particular invoice request.	No
Created From	Used to search invoice requests which are created from a particular date onwards.	No
Created To	Used to search invoice requests which are created till a particular date.	No
Cutoff From	Used to indicate the date from when the billable charges are considered for processing the invoice request.	No

Field Name	Field Description	Mandatory (Yes or No)
Cutoff To	Used to indicate the date till when the billable charges are considered for processing the invoice request.	No
Invoice Request Type	Used to search invoice requests which are created using a particular invoice request type.	No
Status	Used to search invoice requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Account Derivation Pending • Approved • Approval In Progress • Canceled • Deferred Processing • Deferred Processing Batch • Draft • Error • Processed • Rejected 	No
Person ID	Used to search invoice requests which include bills of a particular person. Note: The Search  icon appears corresponding to Person ID field. On clicking the Search icon, the Person Search window appears.	No
Account ID	Used to search invoice requests which include bills of a particular account. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	No
Bill Generation Type	Used to indicate the bill generation type. The valid values are: <ul style="list-style-type: none"> • Regular • Trial Note: This field appears when the Invoice Requests for Accounts option is selected from the Search By list.	No

Field Name	Field Description	Mandatory (Yes or No)
External Reference Type	Used to indicate the external reference type. The valid value is: <ul style="list-style-type: none"> Policy 	No
	Note: This is a read-only field. This field is populated when the invoice request is created with the invoice mode option as Automatic .	
External Reference ID	Used to specify the external reference ID of the invoice request.	No
	Note: The Search  icon appears corresponding to the External Reference ID field. On clicking the Search icon, the Policy Search window appears.	

Note: You must specify at least one search criterion while searching for an invoice request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the invoice request is created.
Invoice Request Information	Displays information about the invoice request.
	Note: It has a link. On clicking the link, the Invoice Request screen appears where you can view the details of the respective invoice request.
Created By	Indicates the user who has created the invoice request.
Cutoff Date	Displays the date till when all the billable charges are considered for processing the invoice request.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This column appears when the Invoice Requests for Accounts option is selected from the Search By list.

Column Name	Column Description						
Person Information	<p>Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. How to search for an invoice request	Searching for an Invoice Request on page 2527

Searching for an Invoice Request

Prerequisites

To search for an invoice request, you should have:

- Invoice request types defined in the application

Procedure

To search for an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Invoice Request**.
A sub-menu appears.
3. Click the **Search** option from the **Invoice Request** sub-menu.
The **Invoice Request** screen appears.
4. Enter the search criteria in the **Search Invoice Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of invoice requests that meet the search criteria appears in the **Search Results** section.

Manually Creating an Invoice Request

Prerequisites

To create an invoice request, you should have:

- Invoice request types defined in the application
- Bills created in the application
- Account and Person entity defined in the application

Procedure

To create an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Invoice Request**.
A sub-menu appears.

3. Click the **Add** option from the **Invoice Request** sub-menu.

The **Add Invoice Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to indicate the invoice request type using which you want to create the invoice request.	Yes

Tip: Alternatively, you can access this window by clicking the **Add** button in the **Page Title** area of the **Invoice Request** screen.

4. Select the required invoice request type from the **Invoice Request Type** list.
5. Click **OK**.

The **Invoice Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request.
- **Characteristics** - Used to define the characteristics for the invoice request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Indicates the invoice request type using which the invoice request is created.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Entity	Used to indicate the entity using which you want to create an invoice request. The valid values are: <ul style="list-style-type: none"> Account Person <p>Note: By default, the Account option is selected.</p>	Not applicable

Invoice Request (Used for Viewing)

The **Invoice Request** screen allows you to:

- View the details of the invoice request
- Edit the details of the invoice request
- Delete the invoice request
- Submit the invoice request for processing
- Approve or reject the invoice request
- Cancel the invoice request
- View the log of the invoice request
- Add a log entry for the invoice request

It consists of the following tabs:

- [Invoice Request - Main](#) on page 2530
- [Invoice Request - Log](#) on page 2535

Invoice Request - Main

The **Main** tab displays information about the invoice request. It contains the following zones:

- [Invoice Request](#) on page 2531

- [Invoice Request Details/Account List](#) on page 2534

Invoice Request

The **Invoice Request** zone displays the details of the invoice request. It contains the following sections:

- **Main** - Displays basic information about the invoice request. It contains the following fields:

Field Name	Field Description
Invoice Request Information	Displays information about the invoice request.
Invoice Request Type	Indicates the invoice request type using which the invoice request is created. Note: It has a link. On clicking the link, the Invoice Request Type screen appears where you can view the details of the respective invoice request type.
Entity	Indicates the entity using which an invoice request is created.
Account Information	Indicates the account using which an invoice request is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Cutoff Date	Indicates the date till when the billable charges are considered for processing the invoice request. Note: This field is applicable only for Entity Type as Account .
Accounting Date	Indicates the accounting date for which the financial transaction of the bill is created.
Bill Date	Indicates the date when the bill is completed. Note: The bill date must not be equal to or earlier than the last bill date of the account for which the invoice request is generated.
Processing Date	Indicates the date when the invoice request is processed. Note: Processing Date = Invoice Request Creation Date + Wait Day + Work Days

Field Name	Field Description
Status	<p>Indicates the status of the invoice request. The valid values are:</p> <ul style="list-style-type: none"> • Draft • Account Derivation Pending • Submitted • Approval In Progress • Approved • Deferred Processing • Deferred Processing - Batch • Rejected • Cancelled • Error • Processing • Processed • Return to Submitter
Status Reason	<p>Indicates the reason why the status of the invoice request is changed.</p> <p>Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status.</p>

- **Characteristics** - Lists the characteristics defined for the invoice request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the invoice request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the invoice request.</p> <p>Note: The Edit button appears when the invoice request is in the Draft status.</p>
Delete	<p>Used to delete the invoice request.</p> <p>Note: The Delete button appears when the invoice request is in the Draft status.</p>
Submit	<p>Used to submit the invoice request.</p> <p>Note: The Submit button appears when the invoice request is in the Draft status.</p>

Button Name	Button Description
Cancel	Used to cancel the invoice request.
	Note: The Cancel button appears when the invoice request is in the Deferred Processing Batch status.
Approve	Used to approve the invoice request.
	Note: The Approve button appears when: <ul style="list-style-type: none"> The invoice request is in the Approval In Progress status. A user with the approval To Do role is reviewing the invoice request.
Reject	Used to reject the invoice request.
	Note: The Reject button appears when: <ul style="list-style-type: none"> The invoice request is in the Approval In Progress status. A user with the approval To Do role is reviewing the invoice request.
Re Submit	Used to request for resubmitting the invoice request.
	Note: The Re Submit button appears when: <ul style="list-style-type: none"> The invoice request is in the Approval In Progress status. A user with the approval To Do role is reviewing the invoice request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the invoice request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the invoice request status is updated.
Create Date/Time	Displays the date and time when the invoice request is created.

- **External Reference** - Lists the external references defined for the invoice request. This section contains the following columns:

Note: This section appears when the invoice request is in the **Deferred Processing Batch** or **Canceled** status.

Column Name	Column Description
External Reference Type	Indicates the external reference type of the invoice request.
External Reference Information	Displays additional information about the external reference type.
	Note: It has a link. On clicking the link, the Policy screen appears with the details of the respective policy.

Invoice Request Details/Account List

The **Invoice Request Details/Account List** zone lists the bills or the accounts which are added to the invoice request. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Information	Indicates the person for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Record Status	Indicates the status of the bills in the invoice request. The valid values are: <ul style="list-style-type: none"> • Pending • Error • Processing
Bill Information	Indicates the bill which is added to the invoice request. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Error Message	Displays the error message indicating the error that occurred while processing the bills in the invoice request.
Recent Billed Date	Displays the date of the bill that has been recently processed from the invoice request.

A check box appears corresponding to each account. On selecting the check box, and clicking the **Exclude** button, you can exclude the account from the invoice request. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to exclude all accounts listed in the respective page from the invoice request.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Filter** icon appears when the zone is **Account List**.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Excluded Accounts

The **Excluded Accounts** zone lists the accounts which are excluded from the invoice request. It appears when **Invoice Requests for Persons** option is selected from the **Search By list** in the **Search Invoice Request** zone. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Information	Indicates the person for which the invoice request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.

A check box appears corresponding to each account. On selecting the check box, and clicking the **Include** button, you can include the account to the invoice request. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all accounts listed in the respective page to the invoice request.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Filter** icon appears when the zone is **Account List**.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Invoice Request - Log

The **Log** tab contains the following zone:

- [Invoice Request Log](#) on page 2535

Invoice Request Log

The **Invoice Request Log** zone lists the complete trail of actions performed on the invoice request. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the invoice request.
Details	Displays the details of the action performed on the invoice request.
User	Indicates the user who has performed the action on the invoice request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the invoice request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the invoice request was rejected by the approver.
	Note: The data appears in this column when the invoice request is in the Rejected status.

Note: You can manually add a log entry for the invoice request by clicking the **Add Log Entry** link in the upper right corner of the **Invoice Request Log** zone.

Editing an Invoice Request

Prerequisites

To edit an invoice request, you should have:

- Invoice request types defined in the application
- Bills created in the application
- Account and Person entity defined in the application

Procedure

To edit an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request whose details you want to edit.

The **Invoice Request** screen appears.

3. Click the **Edit** button in the **Invoice Request** zone.

The **Edit Invoice Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the invoice request.
- **Characteristics** - Used to define the characteristics for the invoice request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Information	Displays information about the invoice request.	Not applicable
Invoice Request Type	Indicates the invoice request type using which the invoice request is created.	Not applicable
Entity	Used to indicate the entity using which you want to edit an invoice request. The valid values are: <ul style="list-style-type: none"> Account Person 	Not applicable
	Note: This field is in the read-only mode.	
Account ID	Used to indicate the account using which you want to edit an invoice request.	Yes
	Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.	
Cutoff Date	Used to specify the date till when the billable charges are considered for processing the invoice request.	No
	Note: If the cutoff date is not mentioned, the system considers current date as the cutoff date.	
Accounting Date	Used to specify the accounting date of the bill.	No
	Note: If the accounting date is not mentioned, the system considers current date as the accounting date.	
Bill Date	Used to specify the processing date on which the bill is completed.	No
	Note: The bill date cannot be on or earlier than the last bill date of the account. If the bill date is not mentioned, the system considers current date as the bill date.	
Comments	Used to specify additional information about the invoice request.	No

Note: The **Edit** button appears when the invoice request is in the **Draft** status.

4. Modify the details of the invoice request, if required.

5. Define, edit, or remove characteristics of the invoice request, if required.
6. Click **Save**.

The changes made to the invoice request are saved.

Defining a Characteristic for an Invoice Request

Prerequisites

To define a characteristic for an invoice request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request**)

Procedure

To define a characteristic for an invoice request:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an invoice request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the invoice request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the invoice request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Invoice Request .
		Note: This field is required when you are defining a characteristic for the invoice request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the invoice request.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the invoice request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the invoice request, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the invoice request.

Oracle Revenue Management and Billing enables you to create a deal for an existing customer, account, or prospect person. A deal facilitates you to simulate the proposed pricing on the proposed commitments, and thereby analyze the cost, revenue, and profitability of the deal. The system provides different ways in which you can simulate the pricing for an existing customer, account, or prospect person. You can use the following simulation types while creating a deal:

- **Customer** - This simulation type can be used while creating a deal for an existing customer or a prospect person. If you use this simulation type for an existing customer, the system does the following:
 - Copies the customer, all its accounts, and the customer hierarchy (i.e. its child persons and child persons' accounts), and creates the corresponding prospect persons and accounts in the system
 - Copies the price list assignments and price assignments of the customer, accounts, child persons and child persons' accounts, and assigns the price lists and pricing to the respective prospect persons and accounts in the **Proposed** status
 - Copies the product enrollments of the customer's and child persons' accounts, and enrolls the respective prospect accounts for the products in the **Proposed** status
 - Copies the commitments from the SQI-based billable charges of the customer's and child persons' accounts (based on the deal frequency and usage period), and accordingly adds proposed commitments for the respective prospect accounts

However, if you use this simulation type for a prospect person, you need to manually:

- Assign a price list and pricing to the prospect person, its accounts, and to its hierarchy
 - Enroll the prospect account for a product
 - Add commitments for the prospect account
- **Account** - This simulation type can be used while creating a deal for an existing account. If you use this simulation type, the system does the following:
 - Copies the account and creates the corresponding prospect account in the system
 - Copies the price list assignments and price assignments of the account and assigns the price lists and pricing to the respective prospect account in the **Proposed** status

- Copies the product enrollments of the account, and enrolls the respective prospect account for the products in the **Proposed** status
- Copies the commitments from the SQI-based billable charges of the account (based on the deal frequency and usage period), and accordingly adds proposed commitments for the respective prospect account
- **Deal** - This simulation type can be used while creating a deal for an existing customer or a prospect person. If you use this simulation type for an existing customer, the system does the following:
 - Copies the customer and creates the corresponding prospect customer in the system
 - Copies the price list assignments and price assignments of the customer, and assigns the price lists and pricing to the respective prospect person in the **Proposed** status
 - Copies the commitments from the SQI-based billable charges of the customer's accounts (based on the deal frequency and usage period), and accordingly adds the rolled up proposed commitments for the respective prospect person

However, if you use this simulation type for a prospect person, you need to manually:

- Assign a price list and pricing to the prospect person
- Add commitments for the prospect person

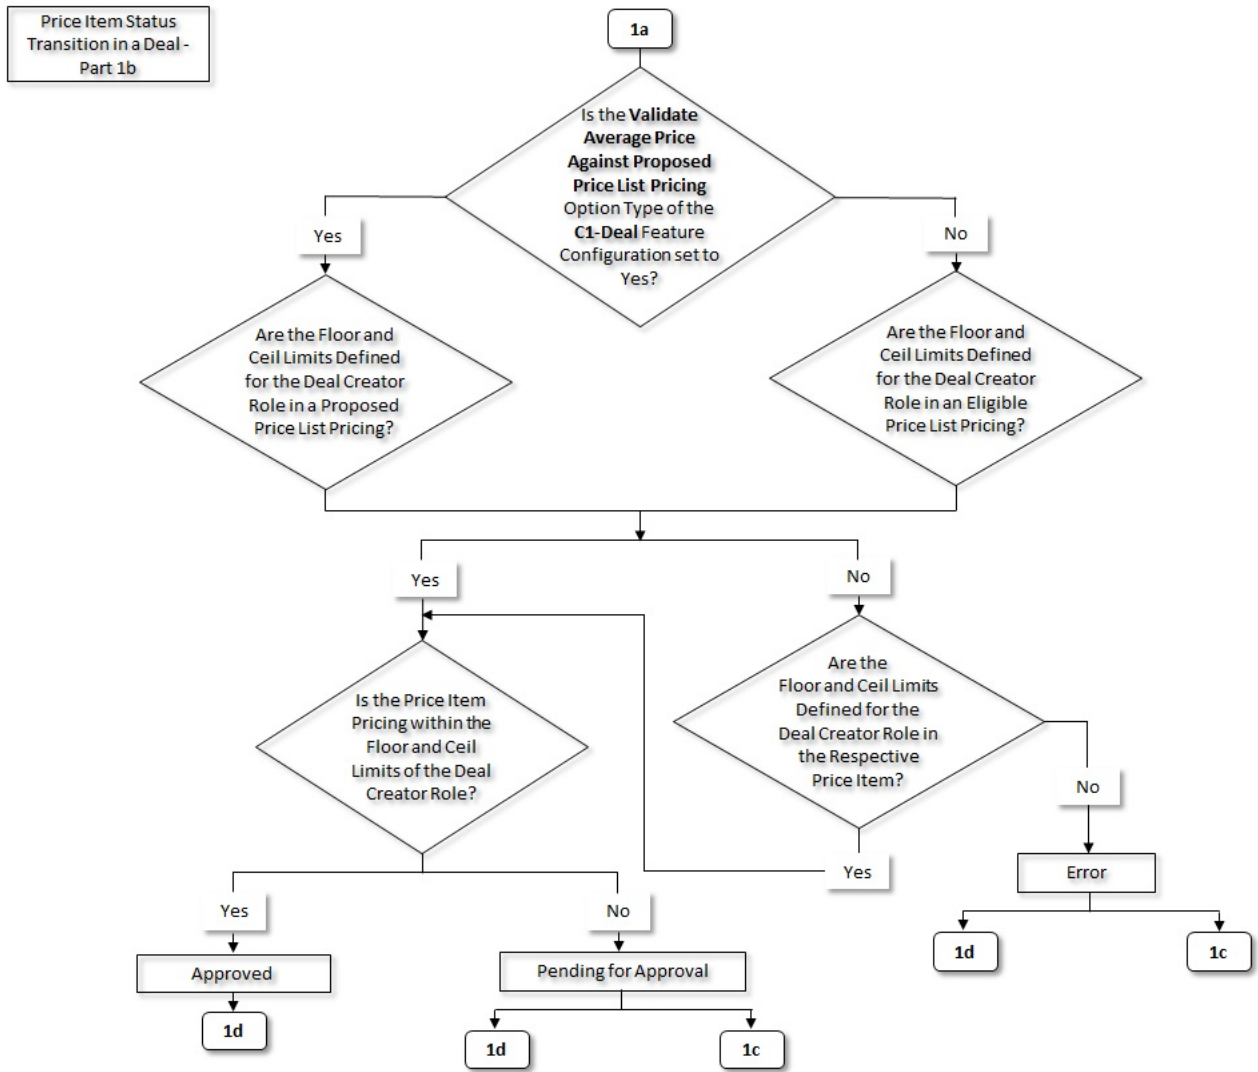

For more information about different stages involved in the deal lifecycle, see [Different Stages in Deal Lifecycle](#) on page 2584.

Note: The **Deal Modelling and Simulation** feature is tested and certified on Google Chrome and not on Internet Explorer.

Price Item Status Transition in a Deal

The following figure graphically indicates how a price item moves from one status to another in a deal lifecycle. Since the price item status transition flow spans across multiple pages, we have split the flow into four parts — Part 1a, Part 1b, Part 1c, and Part 1d.

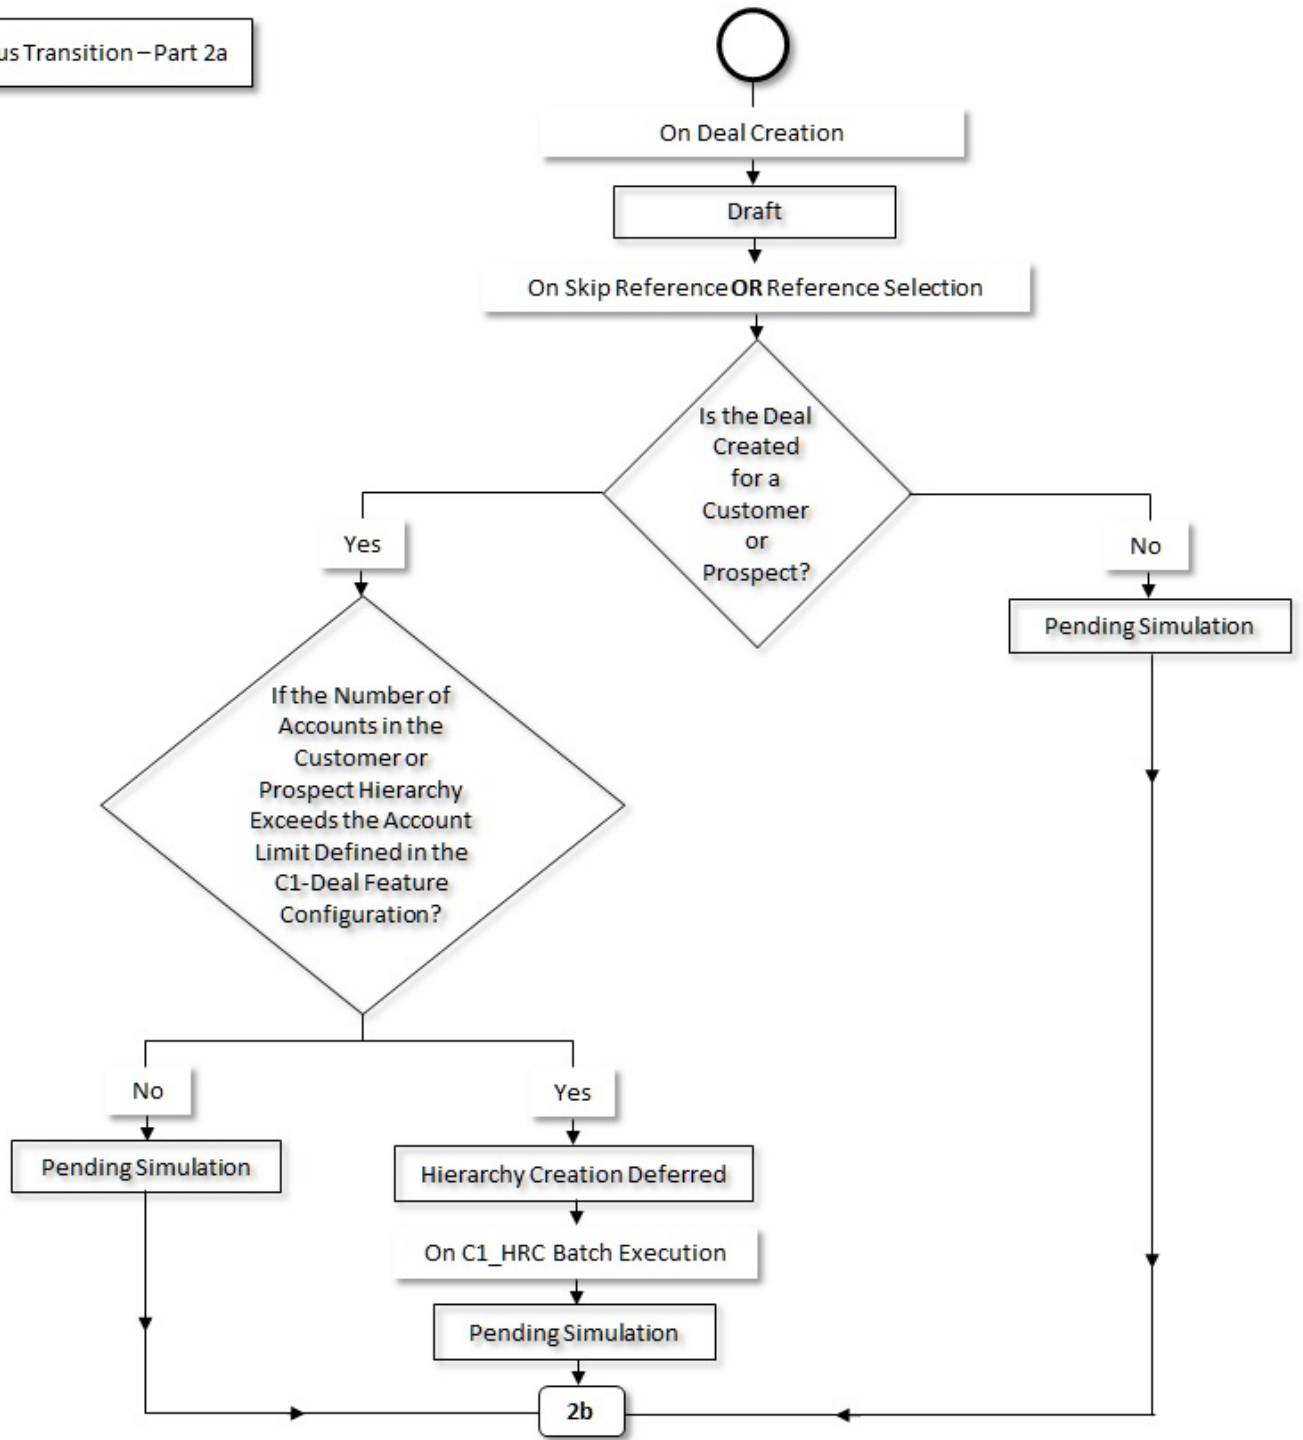

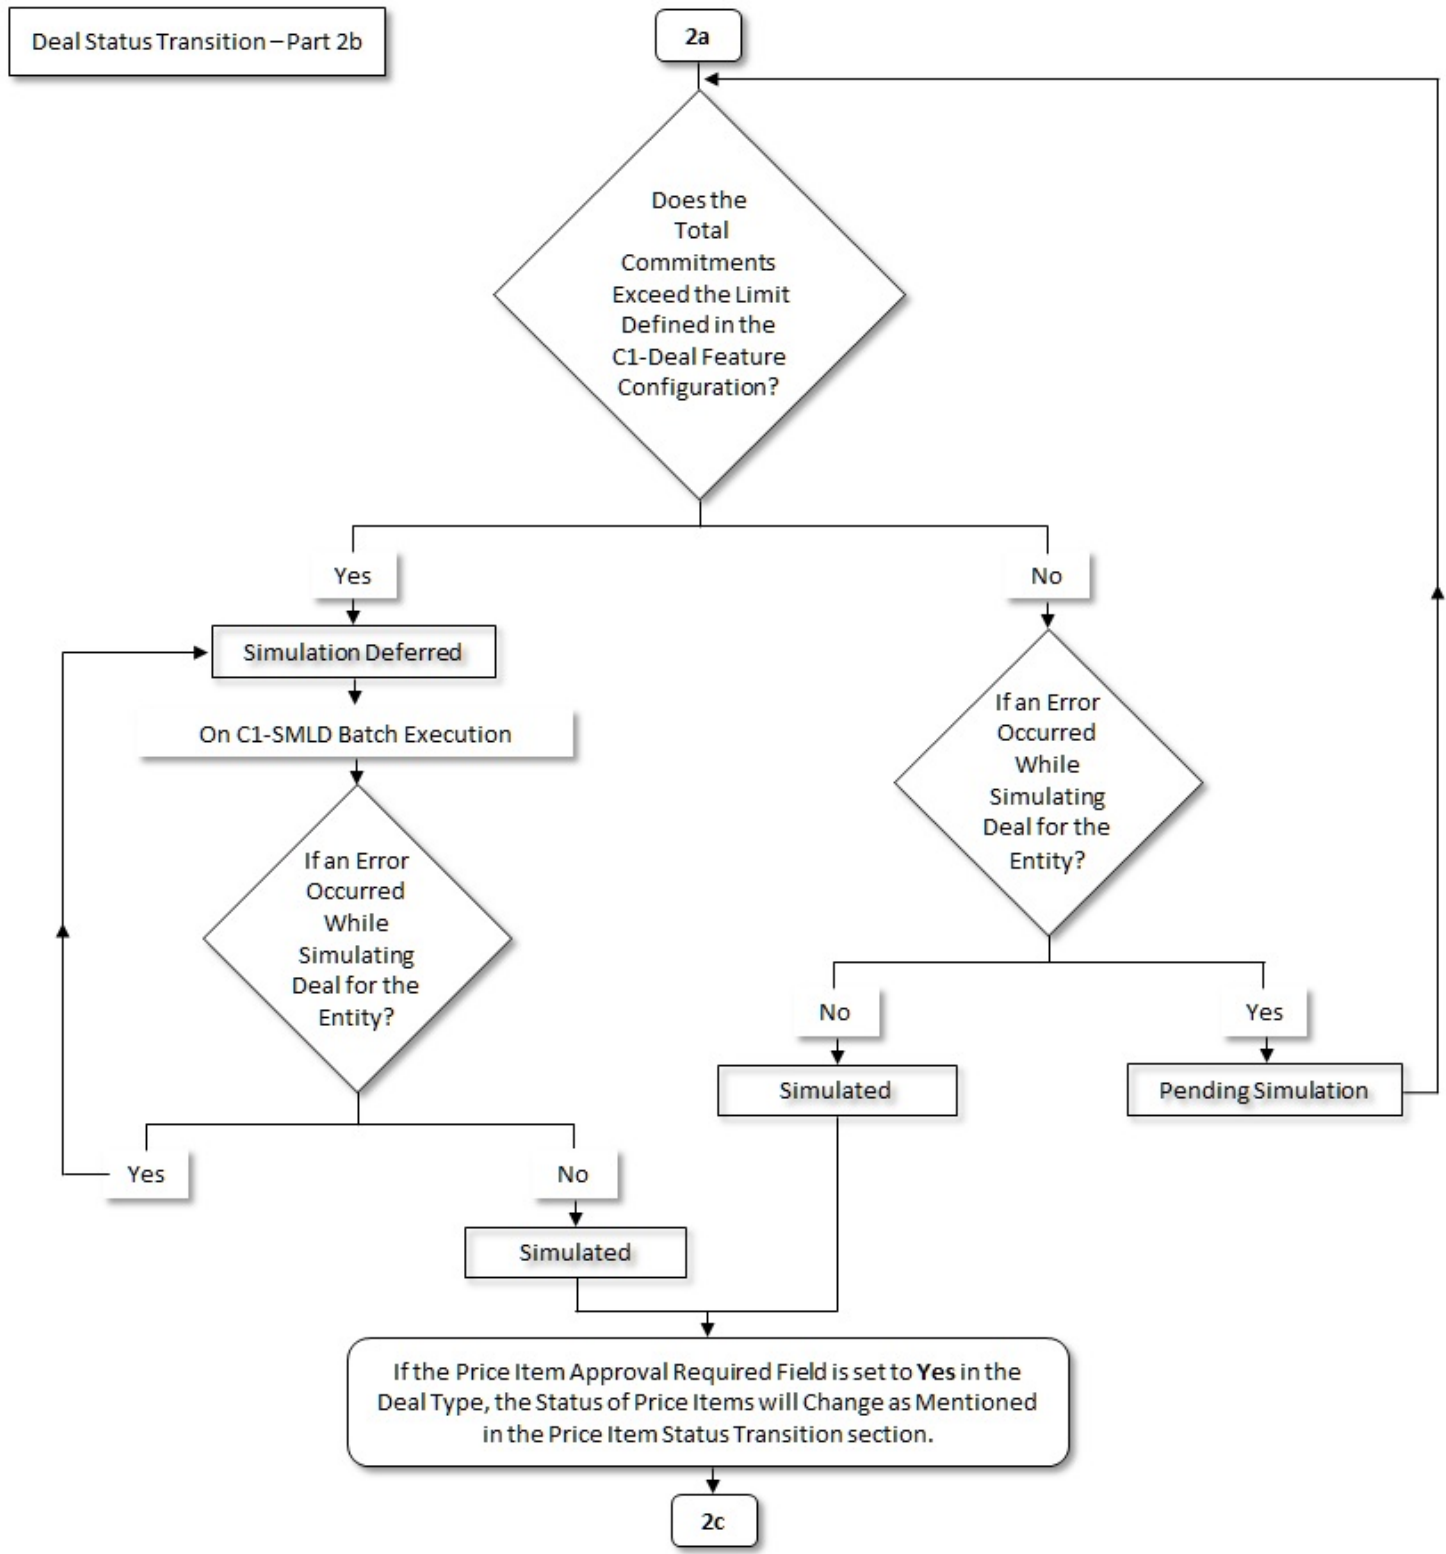

Deal Status Transition

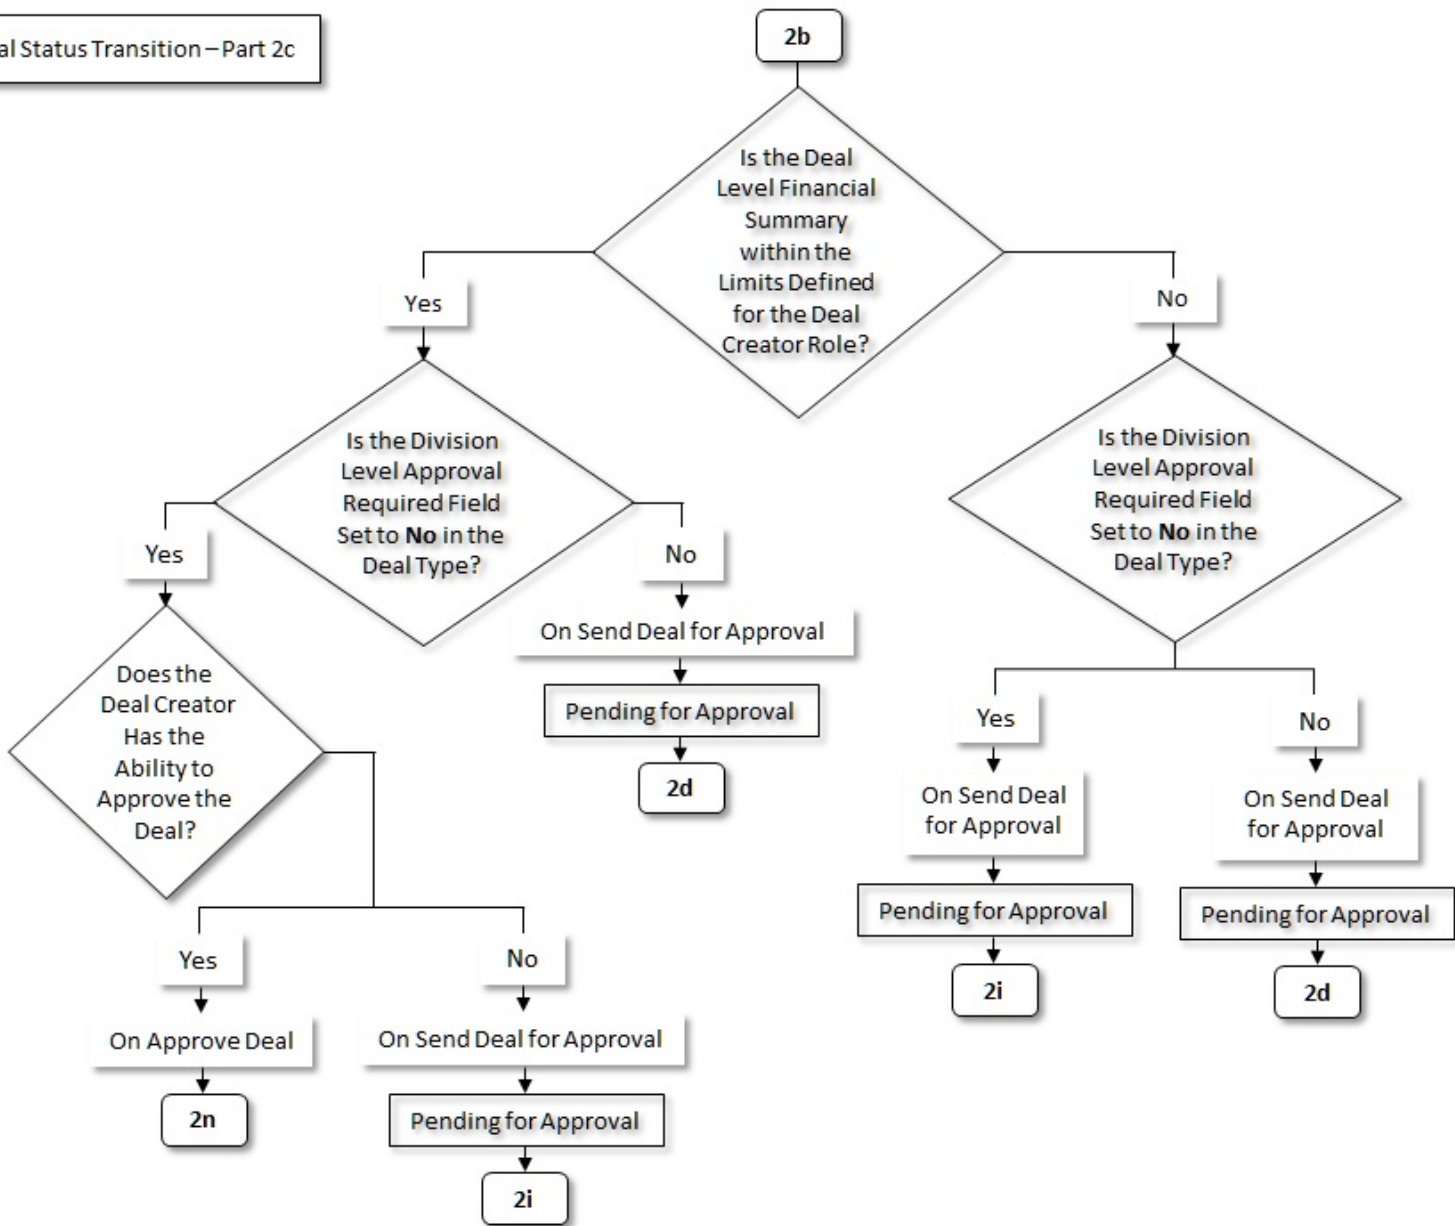

The following figure graphically indicates how a deal moves from one status to another in its lifecycle. Since the deal status transition flow spans across multiple pages, we have split the flow into multiple parts — Part 2a, Part 2b, Part 2c, Part 2d, Part 2e, Part 2f, Part 2g, Part 2h, Part 2i, Part 2j, Part 2k, Part 2l, Part 2m, and Part 2n.

Deal Approval Scenarios

The following figures graphically indicate how a deal moves from one approver to another in the given deal approval scenarios:

Scenario 1	Price Item Approval Required	No
	Product Level Approval Required	No
	Division Level Approval Required	No
	Parallel Approval in the Deal Approval Hierarchy	No
	Highest Level Approval Required	Yes
Deal Approval Hierarchy		
Approval Level	To Do Role	Approve Deal
Level 0	Relationship Manager (RM)	No
Level 1	Pricing Manager (PM)	No
Level 2	Senior Pricing Manager (SPM)	No
Level 3	Executive Pricing Manager (EPM)	Yes

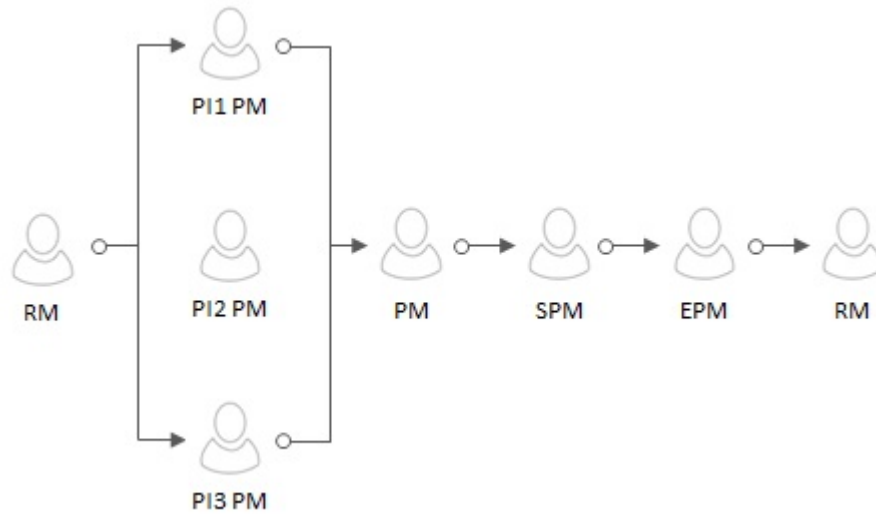

Scenario 2	Price Item Approval Required	No
	Product Level Approval Required	No
	Division Level Approval Required	No
	Parallel Approval in the Deal Approval Hierarchy	Yes
	Highest Level Approval Required	Yes
Deal Approval Hierarchy		
Approval Level	To Do Role	Approve Deal
Level 0	Relationship Manager (RM)	Yes
Level 1	Pricing Manager 1 (PM1)	No
Level 1	Pricing Manager 2 (PM2)	No
Level 2	Senior Pricing Manager 1 (SPM1)	No
Level 2	Senior Pricing Manager 2 (SPM2)	Yes
Level 3	Executive Pricing Manager (EPM)	Yes

Scenario 3	Price Item Approval Required	Yes
	Product Level Approval Required	No
	Division Level Approval Required	No
	Parallel Approval in the Deal Approval Hierarchy	No
	Highest Level Approval Required	Yes

Deal Approval Hierarchy		
Approval Level	To Do Role	Approve Deal

Different Stages in Deal Lifecycle

Following stages are involved in deal modelling:

- [Deal Creation](#) on page 2584
- [Reference Selection](#) on page 2585
- [Simulation](#) on page 2586
- [Price Item Approval](#) on page 2586
- [Division Level Approval](#) on page 2587
- [Deal Level Approval](#) on page 2587
- [Deal Finalization](#) on page 2587
- [Customer Acceptance or Rejection](#) on page 2587
- [Apply Back or Orchestration](#) on page 2587

Deal Creation

While creating a deal, you need to specify various details, such as entity for which you want to create the deal, simulation type, deal type, deal date range, price selection date, deal frequency, usage period, review frequency, deal version, etc. You can maintain different versions of a deal. A deal version feature facilitates you to perform what-if analysis. Through each deal version, you can analyze the cost, revenue, and profitability for a different set of proposed pricing and commitments. However, you can only send one best version of a deal for the approval. The system then automatically discards the other versions in a deal.

A deal type helps the system to determine:

- Whether the pricing for each price item should be approved in the deal.
- Whether the deal should be assigned to users for approval as per the limits defined in the deal approval profile.

- Whether the pricing and financial summary should be approved by the respective division.
- Whether the highest level approval is required for the deal.
- Whether the existing pricing should be pre-approved in the deal.
- The deal approval profile that should be used for a division level approval.
- The deal approval profile that should be used for the deal level approval based on the division, customer segment, and customer tier combination.

Whereas, the deal approval profile helps the system to determine:

- Different levels in the division or deal approval hierarchy which can approve the pricing and financial summary of the deal.

Note: At present, you can add an approval level from 0 to 10. If required, you can add more approval levels in the system through the **C1_DEALHIERARCHYLEVEL** lookup field.

- To Do type using which a To Do should be created for the approver at each level.
- To Do role whose users must receive the To Do for approval.
- Whether the users at the approval level can propose a new pricing for a price item while approving the deal.

Note: As per the business requirements, a deal level approver can only propose a new pricing for a price item while approving a deal. However, this feature is currently not implemented and would be available for use in the future release.

- Whether the users at the approval level can request the respective price item manager to approve the pricing for the price item.
- Whether the users at the approval level can approve the deal.
- Whether the users at the approval level should only view those price items for approval for whom floor and ceil limits are defined for the price item.
- The minimum and maximum profitability, deviation, and revenue which the users at the approval level can approve in the deal.

The system enables you to configure parallel approval at any level in the division or deal approval hierarchy. Once the deal is created in the **Draft** status, you can either skip the reference or provide the reference.

Reference Selection

The system enables you to refer another customer, account, or deal for pricing and commitments. The system does the following when you select the respective reference:

- **Customer** - You can refer another customer while creating a deal for an existing customer or a prospect person. If you use this reference, the system does the following:
 - Copies the price list assignments and price assignments of the referenced customer and assigns the price lists and pricing to the prospect person in the **Proposed** status.
 - Copies the commitments from the SQI-based billable charges of the referenced customer's accounts (based on the deal frequency and usage period), and accordingly adds rolled up proposed commitments for the prospect person.

In addition, if you use this reference for a prospect person, the system copies the hierarchy of the referenced customer when the **Refer Customer Hierarchy** option is selected.

- **Account** - You can refer another account while creating a deal for an existing account. If you use this reference, the system does the following:
 - Copies the price list assignments and price assignments of the referenced account and assigns the price lists and pricing to the prospect account in the **Proposed** status.

- Copies the commitments from the **SQI**-based billable charges of the referenced account (based on the deal frequency and usage period), and accordingly adds proposed commitments for the prospect account.
- **Deal** - You can refer another deal which is created for a customer while creating a deal for an existing customer or a prospect person. And, you can refer another deal which is created for an account while creating a deal for an existing account. If you use this reference for an existing customer or a prospect person, the system does the following:
 - Copies the price list assignments and price assignments of the referenced deal's customer and assigns the price lists and pricing to the prospect person in the **Proposed** status.
 - Copies the commitments from the **SQI**-based billable charges of the referenced deal's customer (based on the deal frequency and usage period), and accordingly adds proposed commitments for the prospect person.

However, if you use this reference for an existing account, the system does the following:

- Copies the price list assignments and price assignments of the referenced deal's account and assigns the price lists and pricing to the prospect account in the **Proposed** status.
- Copies the commitments from the **SQI**-based billable charges of the referenced deal's account (based on the deal frequency and usage period), and accordingly adds proposed commitments for the prospect account.

Once you select or skip the reference, the system checks whether the number of accounts in the customer hierarchy exceeds the account limit defined in the **C1-Deal** feature configuration. If the number of accounts in the customer hierarchy does not exceed the account limit, the system creates the corresponding prospect persons and accounts immediately and then changes the status of the deal to **Pending Simulation**. However, if the number of accounts in the customer hierarchy exceeds the account limit, the status of the deal is changed to **Hierarchy Creation Deferred**. On executing the **C1_HRC** batch, the system checks whether there are any deals in the **Hierarchy Creation Deferred** status. If so, the system creates the corresponding prospect persons and accounts for the deal and then changes the status of the deal to **Pending Simulation**.

Simulation

Once the deal is in the **Pending Simulation** status, you can do the following:

- Assign a new price list to the prospect person or account
- Edit/override the proposed price assignment of the prospect person or account
- Enroll the prospect account for a new product
- Edit the proposed commitments of the prospect account

Once the required changes are made to the deal, you can simulate the proposed pricing on the proposed commitments. In other words, you can simulate the deal version. On simulating a deal version, the system checks whether the proposed commitments exceed the limit defined in the **C1-Deal** feature configuration. If the proposed commitments do not exceed the limit, the system calculates the cost, revenue, and profitability for the deal version immediately and then changes the status of the deal to **Simulated**. However, if the proposed commitments exceed the limit, the status of the deal is changed to **Simulation Deferred**. On executing the **C1_SMLD** batch, the system checks whether there are any deals in the **Simulation Deferred** status. If so, the system calculates the cost, revenue, and profitability for the deal version and then changes the status of the deal and its version to **Simulated**.

Price Item Approval

If the **Price Item Approval Required** field is set to **Yes** in the deal type, the pricing of all the price items should be approved before the deal is approved. An approver at any level in the division or deal approval hierarchy can approve the pricing of a price item when the pricing falls within the floor and ceil limits of the approver. Additionally, if the **Submit Price Item for Approval** field is set to **Yes** for an approval level, the approver at the respective level can request the price item manager to approve the pricing for the price item. On clicking the **Submit Price Item for Approval** button, the status of the deal is changed to **Pending for Approval**.

Division Level Approval

If the **Division Level Approval Required** field is set to **Yes** in the deal type, the system creates a To Do for the approver at the first level in the division approval hierarchy. The approver can either approve the division-specific pricing and financial summary or request the submitter to resubmit the deal for approval after making the required changes. If the approver at the first level in the division approval hierarchy approves the division-specific pricing and financial summary, or if the approver at the first level in the division approval hierarchy cannot approve the division-specific pricing and financial summary, the system creates a To Do for the approver at the next level in the division approval hierarchy. This process continues until the approval is received from all the levels in the division approval hierarchy.

Deal Level Approval

Once the approval is received from all the levels in the division approval hierarchy, the system creates a To Do for the approver at the first level in the deal approval hierarchy. The approver can either approve the deal or request the submitter to resubmit the deal for approval after making the required changes. If the approver at the first level in the deal approval hierarchy approves the deal and if the highest level approval is not required, the system changes the status of the deal to **Approved**. However, if the approver at the first level in the deal approval hierarchy cannot approve the deal, the system creates a To Do for the approver at the next level in the deal approval hierarchy. This process continues until the deal is approved by any level in the deal approval hierarchy. However, if the highest level approval is required for the deal, this process continues until the deal is approved by the highest level in the deal approval hierarchy.

Deal Finalization

Once a deal is approved, you can finalize the deal. On clicking the **Finalize** button, the status of the deal is changed to **Finalized**.

Customer Acceptance or Rejection

The system enables you to either accept or reject the finalized deal based on the customer feedback. On clicking the **Accept** button, the status of the deal is changed to **Customer Accepted**. However, on clicking the **Reject** button, the status of the deal is changed to **Rejected**.

Apply Back or Orchestration

Once the deal is accepted for an existing customer or account, you can click the **Apply Back** button. On clicking the **Apply Back** button, the system does the following:

- Copies a new proposed price list assignment and assigns the price list to the respective customer or account in the **Active** status.
- Ends the price assignment of the respective customer or account when it is overridden or edited for the prospect customer or account.
- Creates a new price assignment for respective customer or account when it is overridden or edited for the prospect customer or account.
- Copies a new proposed product enrollment and enrolls the respective account for the product in the **Active** status.

The customer acceptance date is used as the start date while adding the new price list assignments, price assignments, and product enrollments.

Once the above changes are made, the system changes the status of the deal to **Fully Orchestrated**. The system enables you to onboard a prospect person or account through the **File Upload Request** utility. Once the person or account is created, the system checks whether there is any deal with the specified deal identifier in the **Customer Accepted** status. If so, the system checks whether the primary person or account identifier matches with the primary prospect person or account identifier, respectively. If so, the system adds the person or account ID corresponding to the prospect person or account. Then, the system changes the status of the deal to **Partially Orchestrated**. Once the system creates persons and accounts for the entire prospect hierarchy, the status of the deal is changed to **Fully Orchestrated**.

Deal Monitoring

Oracle Revenue Management and Billing enables the relationship manager to assess the deal at regular intervals using the **Deal Monitoring** feature. The system sends the To Do reminders to the relationship manager at predefined intervals to review the deal. On assessing a deal, the relationship manager can accordingly add the review comments for the deal.

To send the To Do reminders for deal review, you need to set the following fields in the required deal types:

- **To Do Reminder Days** – Used to indicate the number of days using which the system calculates the To Do reminder date.
- **To Do High Priority Days** – Used to indicate the number of days using which the system calculates the date when the To Do reminder of highest priority should be sent.
- **Deal Monitor To Do Type** – Used to indicate the To Do type using which the To Do should be created for the deal review.

The **Deal Monitoring (C1_DLMTR)** batch is used to monitor or check whether there is any deal in the **Fully Orchestrated** status. If there is a deal in the **Fully Orchestrated** status, the system considers its deal version which is in the **Fully Orchestrated** status. It then does the following:

- Calculates the review date and To Do reminder date for the deal
- Create a To Do for deal review and changes the status of the deal to **Pending For Review** when the To Do reminder date is equal to the system date

If the deal is not yet reviewed even once, the batch calculates the first review date using the deal effective start date and deal review frequency. For example, if there is a deal which is effective from 07-01-2020 to 12-31-2021 and where the deal review frequency is set to **Biannually**, the system sets the first review date to 01-01-2021 (i.e. 07-01-2020 + 6 months). However, if the deal is already reviewed in the past, the batch calculates the subsequent review date using the last review date and deal review frequency. For example, if there is a deal which is effective from 07-01-2020 to 12-31-2021 and where the last review date is set to 01-01-2021 and the deal review frequency is set to **Biannually**, the system sets the subsequent review date to 07-01-2021 (i.e. 01-01-2021 + 6 months). Note that if the calculated review date is later than the deal effective end date, then the batch sets the review date to the deal effective end date. For example, if there is a deal which is effective from 07-01-2020 to 12-31-2021 and where the last review date is set to 07-01-2021 and the deal review frequency is set to **Biannually**, the system sets the subsequent review date to 12-31-2021. This is because the calculated review date (i.e. 01-01-2022) is later than the deal effective end date (i.e. 12-31-2021).

In addition, the batch calculates the To Do reminder date which is review date minus the To Do reminder days. For example, if the review date is 12-31-2021 and To Do reminder days is 60, the system sets the To Do reminder date to 11-01-2021. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*. After executing the **Deal Monitoring (C1_DLMTR)** batch, you need to execute the **Recalculate To Do Priority (F1-TDCLP)** batch. The **Recalculate To Do Priority (F1-TDCLP)** batch recalculates and changes the priority of the To Do reminder using the following formula:

$(\text{To Do Reminder Days} - \text{To Do High Priority Days}) / \text{Number of Priority}$

For example,

To Do Reminder Days	90
To Do High Priority Days	30
To Do Reminder Date	01-April-20
Deal Review Date	30-June-20
Number of Priority	8

In this case, the system changes the priority of the To Do reminder after every 8 days (i.e. $(90-30)/8=7.5$) as mentioned in the below table:

System Date	Priority
1-April-2020	Lowest - Priority 9
9-April-2020	Priority 8
17-April-2020	Priority 7
25-April-2020	Priority 6
02-May-2020	Priority 5
10-May-2020	Priority 4
18-May-2020	Priority 3
26-May-2020	Priority 2
01-June-2020	Highest Priority 1

The system changes the To Do priority from Priority 9 to Priority 1 where 9 is the lowest and 1 is the highest. The system always ensures that the priority of the To Do reminder to highest is set 10 days before the deal review date. However, if the output of the above formula is zero, the system changes the priority of the To Do reminder every day.

If a deal is in the **Pending For Review** status, the **Review Deal** icon appears corresponding to the deal in the **Search Deal** zone of the **Deal Dashboard** screen. On clicking the **Review Deal** icon, the **Deal Review** window appears. Here, the relationship manager can add the review comments for the deal after assessing its performance. On adding the review comments, the status of the deal is changed from **Pending For Review** to **Fully Orchestrated**.

Product Level Approval for Deals

Until now, the relationship manager could send one best version of the deal for the division and deal level approvals. Now, in addition, the relationship manager can send one best version of the deal for the product level approval when the following conditions are met:

- Customers or accounts in the deal have enrolled for the products
- **Product Level Approval Required** field is set to **Yes** in the respective deal type
- Deal approval profile is specified for the division and product combination in the respective deal type

The system enables you to design a deal approval profile for the product approval hierarchy. The deal approval profile of a product and division combination helps the system to determine:

- Different levels in the product approval hierarchy which can approve the price item pricing and financial summary of the product in the deal. Note that the product level approver can only approve the pricing of those price items which are included in the product.
- Whether the product level approver can recommend a new pricing for a price item while approving the deal.
- Whether the product level approver can request the respective price item manager to approve the pricing for the price item.
- Whether the product level approver can approve the deal.
- Whether the product level approver should only view those price items for approval for which floor and ceil limits are within his approval range.
- The minimum and maximum profitability, profit, profit variation, and revenue which the product level approver can approve in the deal.

In a deal type, you can now specify the approval profile for a division and product combination using the approval type as **Product**. If a product is associated to multiple divisions, you can specify the approval profile for each division and product combination. If a deal is created for a customer or prospect whose accounts belong to different divisions, but have enrolled for the same product, the system then creates a product approval hierarchy for each division and product combination. For example, if the SAVINGS product is associated to two divisions named CA and US and an approval profile is specified for both the combinations (i.e. SAVINGS and CA; SAVINGS and US) in the deal type, the system will create two product approval hierarchies when two accounts belonging to different divisions (i.e. CA and US) have enrolled for the SAVINGS product in a deal. One product approval hierarchy would be for the SAVINGS and US combination and another product approval hierarchy would be for the SAVINGS and CA combination. However, if the SAVINGS product is associated to two divisions named CA and US and an approval profile is specified only for the SAVINGS and CA combination in the deal type, the system will create one product approval hierarchy for the SAVINGS and CA combination. The system will not create product approval hierarchy for the SAVINGS and US combination because there is no approval profile configured for this combination in the deal type.

Note: You cannot specify the same approval profile for the same or different product and different division combination. However, you can specify the same approval profile for the different product and same division combination.

The system enables you to configure parallel approval at any level in the product approval hierarchy. If the **Product Level Approval Required** field is set to **Yes** and the **Division Level Approval Required** field is set to **Yes**, the system first sends the deal to the product approval hierarchy, then to the division approval hierarchy and finally to the deal approval hierarchy for approval. However, if the **Product Level Approval Required** field is set to **Yes** and the **Division Level Approval Required** field is set to **No**, the system first sends the deal to the product approval hierarchy and then to the deal approval hierarchy for approval.

If the **Product Level Approval Required** field is set to **Yes** in the deal type, the system creates a To Do for the approver at the first level in the product approval hierarchy. The approver can either approve the product-specific price item pricing and product financial summary or request the submitter to resubmit the deal for approval after making the required changes. If the approver at the first level in the product approval hierarchy approves the product-specific price item pricing and product financial summary, or if the approver at the first level in the product approval hierarchy cannot approve the product-specific price item pricing and product financial summary, the system creates a To Do for the approver at the next level in the product approval hierarchy. This process continues until the approval is received from all the levels in the product approval hierarchy.

Note that a product level approver can recommend a price for a price item which is included in the product when the **Propose Pricing** field is set to **Yes** for the approval level in the deal type. After recommending a new price (i.e. rate), the product level approver needs to request the submitter to resubmit the deal for approval after considering the recommended price.

If the **Product Level Approval Required** field is set to **Yes** and if customers or accounts in the deal have enrolled for the products, the **Product Financial Summary** section appears in the **Simulation Details** zone when you simulate the deal. It indicates the revenue, cost, profit, and profitability for each product and division combination. In addition, the **Product Financial Summary** section appears in the **Pricing and Commitments** screen. It indicates the revenue and cost of each product to which existing customer's or prospect's account is enrolled. The system calculates the revenue and cost based on the original, proposed, and recommended prices, and accordingly shows the variation between original, proposed and recommended revenue.

Recommended Pricing

Oracle Revenue Management and Billing enables the approver at any level in the product approval hierarchy, division approval hierarchy, and deal approval hierarchy to recommend a price for a price item. An approver can recommend a price for a price item when the **Propose Pricing** field is set to **Yes** for the respective level in the approval hierarchy.

Note: The **Propose Pricing** field is non-editable for the Level 0 in the deal approval hierarchy. By default, it is set to **No**.

The recommended pricing related columns (such as **Pricing Information**, **Average Price**, and **Revenue**) are visible to the approver in the **Pricing and Commitments** section of the **Pricing and Commitments** screen. The **Recommend Price** link appears in the **Pricing Information** column corresponding to each price item. On clicking the **Recommend**

Price link, the **Deal Pricing** screen appears. The **Rate** field corresponding to each price component is editable in the **Projected Pricing** section of the **Deal Pricing** screen. The approver can recommend a new price for the price item. However, note that the recommended price for the price item should be within the negotiability floor and ceil limits of the approver.

On simulating the deal, the system calculates the average price, revenue, cost, profit, and profitability based on the recommended price. It checks whether the average price of the price item is within the average price floor and ceil limits of the approver and accordingly changes the status of the price item to **Approved**, **Pending for Approval**, or **Error**. After analyzing the profitability of the deal, the approver can click the **Return to Submitter** button and thereby request the submitter to consider the recommended price for the price item. On clicking the **Return to Submitter** button, the status of the price item is changed to **Approver Recommended**. In addition, a To Do is generated for the relationship manager of the deal. If required, the approver who has recommended the price can edit or delete the recommended price before clicking on the **Return to Submitter** button.

If the approver has sent the price item to the price item manager for approval, the approver cannot recommend the price for the price item. And, if the approver has recommended the price for a price item, the approver cannot send the price item to the price item manager for approval. In such case, the approver can send the price item to the price item manager for approval only after deleting the recommended price for the price item.

In case of parallel approval, if one approver has recommended the price for a price item, the other approver can view the recommended price for the price item. But, the other approver cannot edit or delete the recommended price for the price item. Also, in case of parallel approval, if one approver has sent the price item to the price item manager for approval, then other approver cannot recommended price for the price item. And, vice-versa, if one approver has recommended price for the price item, then other approver cannot send the price item to the price item manager for approval.

On viewing the recommended price for the price item, the relationship manager may or may not edit the price of the price item based on the approver recommendation. If the relationship manager edits the price of the price item based on the approver recommendation, the system checks whether the proposed price is within the negotiability floor and ceil limits of the relationship manager. Then, on simulating the deal, the system calculates the average price, revenue, cost, profit, and profitability based on the new proposed price. It checks whether the average price of the price item is within the average price floor and ceil limits of the relationship manager. Here, the system derives a new floor and ceil range for the relationship manager dynamically using the approver recommended price and accordingly changes the status of the price item to **Approved**, **Pending for Approval**, or **Error**.

Deal Currency Conversion

Oracle Revenue Management and Billing enables you to view the division financial summary (i.e. revenue, cost, profit, and profitability of the division) in the deal currency or in the respective division currency. A toggle switch appears above the **Division Financial Summary** section. By default, the division financial summary is shown in the deal currency. On clicking the toggle switch, you can view the division financial summary in the division's base currency.

In addition, the system enables you to:

- View the original and proposed revenue and cost of a customer (in the customer hierarchy) in the deal currency or in the respective customer's division currency
- View the original and proposed revenue and cost of an account (in the customer hierarchy) in the deal currency or in the respective account's invoice currency
- View the original and proposed revenue and cost of a price item assigned to a customer in the deal currency or in the respective customer's division currency
- View the original and proposed revenue and cost of a price item assigned to an account in the deal currency or in the respective account's invoice currency
- View the average price of a price item assigned to a customer in the pricing currency or in the respective customer's division currency
- View the average price of a price item assigned to an account in the pricing currency or in the respective account's invoice currency

A toggle switch appears above the respective section. By default, the original and proposed revenue and cost are shown in the deal currency and the average price of the price item is shown in the pricing currency. On clicking the toggle switch, you can view the original and proposed revenue and cost and average price of the price item in the customer's division currency or account's invoice currency.

During currency conversion, the system uses the currency conversion algorithm attached to the **Currency Conversion For Bill Segments** system event of the division. Note that the currency conversion happens when the **Allow Multi-Currency Accounts** option type of the **C1_MLTCURACC** feature configuration is set to **Y**.

Reference Selection Based on Questionnaire

Oracle Revenue Management and Billing enables you to derive reference customers and deals during a deal creation using a questionnaire. Note that the reference deals are those deals which belong to the reference customers which are derived using the questionnaire. The system displays the questions from the questionnaire template which is specified in the respective deal type. Note that the system considers the questionnaire template specified in the deal type when it is effective on the deal start date. You can also skip the questionnaire using the **Skip Questionnaire** option. If a questionnaire template is not specified in the respective deal type or if the questionnaire template is not effective on the deal start date or if the **Skip Questionnaire** option is selected during the deal creation, the system derives the reference customers for the deal using the division, customer segment, and customer tier combination. Note that reference deals are not derived when the **Skip Questionnaire** option is selected during the deal creation.

While defining a questionnaire template, you can specify the following:

- The date range when the questionnaire template is effective
- Whether to display the questions from the questionnaire template in a particular sequence or when a rule of a particular rule type is satisfied
- A set of questions that you want the customer to answer
- Whether the answer for the question should be:
 - Date
 - Decimal Value
 - From Multi Selection Drop Down List
 - From Multi Selection Check Box List
 - Numeric Value
 - Percentage
 - From Radio Button List
 - From Single Selection Drop Down List
 - Text
- Whether the answer value set for the following answer types should be derived from the reference data or from a predefined list:
 - Multi Selection Drop Down List
 - Multi Selection Check Box List
 - Radio Button List
 - Single Selection Drop Down List
- The reference table, column, and criteria when the answer value set is set to **Reference Data**. Note that you can only use the Equal To and IN operators while defining the reference criteria.
- The default answer for the question
- Whether the question is mandatory or optional in the questionnaire

- The parameter which helps to derive the reference customers when the question is answered in the questionnaire. Note that you can only specify a parameter where the source entity is set to **Person** or **Account** and the source type is set to **Characteristic** or **Field**.
- The rule type which helps to determine the rules that should be executed to display the next question in the questionnaire
- Whether the response from the question should be used to derive the reference customer list
- The predefined values when the answer value set is set to **Predefined List**

A new screen named **Questionnaire Template** is introduced in this release. You can define, edit, delete, copy, and preview a questionnaire template through this screen. On previewing a sequence based or rule based questionnaire template, the questions appear in the specified sequence. When a rule based questionnaire template is used during a deal creation, the system displays the next question based on the output of the previous question.

A new page named **Questionnaire** is added to the **Deal Information** screen which helps to answer the questionnaire. The number of questions that appear in the **Questionnaire** page depends on the value specified in the **Questionnaire UI Pagination Limit** option type of the **C1-DEAL** feature configuration.

Rate Negotiability for Price Item in Deal

Oracle Revenue Management and Billing enables you to indicate whether the rate is negotiable for a price item in a deal. A new field named **Negotiability Switch** is introduced while defining or editing a price item. The system enables you to set the negotiability option for a price item at the division level. Therefore, you can set different the negotiability option for the divisions to which the price item is associated. By default, the **Negotiability Switch** field is set to **No**.

If you set the **Negotiability Switch** field to **No** for a division of a price item, you cannot edit or override the rate of the price item in a deal when the customer or account to which the price item is assigned belongs to the division. However, if you set the **Negotiability Switch** field to **Yes** for a division of a price item, you can edit or override the rate of the price item in a deal when the customer or account to which the price item is assigned belongs to the division. Along with the **Negotiability Switch** field, you can also set the **Only Within Range** field which indicates that the system should validate whether the negotiated rate is within the negotiability floor and ceil limits. The **Only Within Range** field is enabled only when the **Negotiability Switch** field is set to **Yes**. By default, the **Only Within Range** field is set to **No**.

If the **Only Within Range** field is set to **No**, the system does not validate whether the negotiated rate is within the negotiability floor and ceil limits. However, if the **Only Within Range** field is set to **Yes**, the system validates whether the negotiated rate is within the negotiability floor and ceil limits. You can define the negotiability floor and ceil limits for a division of a price item at the price item level or at the price assignment level.

On clicking the link in the **Pricing Information** column corresponding to a price item in the **Pricing and Commitments** screen, the system enables you to edit or override the original pricing when the **Negotiability Switch** field is set to **Yes** for the price item and thereby create a proposed pricing. If the **Only Within Range** field is set to **Yes**, the system first validates whether the negotiated rate is within the negotiability floor and ceil limits specified in the original pricing (in case of override) or proposed pricing (in case of edit). To validate the rate, the system considers the pricing where the price item, pricing currency, and division (for which pricing is defined on the customer or account) is same. If the negotiated rate is within the negotiability floor and ceil limits specified in the original or proposed pricing, the system enables you to edit or override the rate. However, if the negotiated rate is not within the negotiability floor and ceil limits specified in the original or proposed pricing, an error occurs indicating that the specified rate is not within the negotiability floor and ceil limits.

If the negotiability floor and ceil limits are not specified for the division in the original or proposed pricing, the system checks whether the negotiated rate is within the negotiability floor and ceil limits specified at the price item level. The system considers the negotiability range of the pricing currency. If the negotiated rate is within the negotiability floor and ceil limits specified at the price item level, the system enables you to edit or override the rate. However, if the negotiated rate is not within the negotiability floor and ceil limits specified at the price item level, an error occurs indicating that the specified rate is not within the negotiability floor and ceil limits. If the negotiability range is not defined for the pricing currency, the system does not validate whether the negotiated rate is within the negotiability floor and ceil limits of the price item.

If the rate negotiability feature is configured for a price item, the system enables:

- The relationship manager to propose a negotiated rate for the price item
- The product level approver, division level approver, and deal level approver to recommend a rate for the price item.

Price Item Selection during Deal Creation

Oracle Revenue Management and Billing enables you to select the price items which you want to offer in a deal. If you create a deal for an existing customer, the system, by default, considers the following price items:

- Whose pricing is directly assigned to the customer
- Whose pricing is inherited by the customer

The system does not consider the price items assigned to the customer's accounts and the price items assigned to the child customers and their accounts. However, if you create a deal for an account, the system, by default, considers the following price items:

- Whose pricing is directly assigned to the account
- Whose pricing is inherited by the account

If required, you can deselect a price item by clicking the **Edit** icon in the **Price Item Group Selection** column corresponding to the customer or account in the **Customer Hierarchy** section. Only the selected price items are considered in the deal for simulation.

A new screen named **Select Price Item Group** is introduced in this release. You can access the **Select Price Item Group** screen in either of the following ways:

- By clicking the **Edit** icon in the **Price Item Group Selection** column corresponding to the customer or account in the **Simulation Details** zone of the **Deal Information** screen
- By clicking the **Select Price Item Group** button in the **Pricing and Commitments** screen
- By clicking the **Save and Select Price Item Group** button in the **Price List Assignment** screen

Earlier, on assigning a new price list to an entity in the customer hierarchy, all price assignments from the price list were by default inherited by the entity in the deal. Now, on assigning a price list to an entity in the customer hierarchy, you need to select the price items whose pricing you want to inherit from the price list. Only the selected price items from the price list will be considered in the deal for simulation. If you remove a price list which is newly assigned to an entity in the deal, the price item pricing inherited from the price list is removed from the **Pricing and Commitments** screen.

However, if you override a price list pricing and create a customer or account agreed pricing for the entity, the system does not delete the customer or account agreed pricing when the assigned price list is removed from the deal.

The system enables you to select or deselect all price items within a root level or non-root level hierarchy entity by selecting the check box corresponding to the root level or non-root level hierarchy entity. On clicking the check box corresponding to the root level hierarchy entity, all the subsequent non-root level hierarchy entities and their price items are selected.

Seasonal Pricing for Price Items in a Deal

Oracle Revenue Management and Billing enables the relationship manager to create a seasonal pricing for a price item. This feature enables the relationship manager to offer different rates for a price item for different periods. You can create a seasonal pricing for a price item by overriding the proposed pricing of the price item which is effective from the deal start date. While creating a seasonal pricing, you need to ensure the following:

- Start and end dates are specified in the seasonal pricing
- Start date is later than the deal start date

- End date is not later than the date which is calculated using the start date and number of months specified in the **Validity Period for Deal in Months** option type of the **C1-Deal** feature configuration
- Price assignment type of the seasonal pricing should be same as the proposed pricing which is overridden

If the proposed pricing which you are overriding to create the seasonal pricing is open-ended (i.e. the end date is not specified in the proposed pricing), the system automatically ends the proposed pricing of the price item. The end date of the proposed pricing is set to Seasonal Pricing Start Date - 1.

You can define more than one seasonal pricing for a price item which is effective during a different date range. However, note that you cannot define more than 10 seasonal pricing for a customer or an account. Along with the proposed pricing, the system sends the seasonal pricing of a price item for product, division, and deal level approval. An approver can only approve the seasonal pricing, but cannot recommend a change in the seasonal pricing. An approver can approve the seasonal pricing when the average price falls within the floor and ceil limits of the approver. The relationship manager or approver can send the seasonal pricing of a price item to the price item manager for approval. In such case, the price item manager can view both proposed and seasonal pricing for the price item. But, the price item manager can only approve the seasonal pricing of the price item.

You cannot specify the commitments for the seasonal pricing in the deal. By default, the system considers the commitments of the proposed pricing while calculating the revenue from the seasonal pricing. Also, the system does not consider the seasonal pricing of a price item while calculating the product, division, and deal level financial summary. The system only considers the proposed pricing of a price item while calculating the product, division, and deal level financial summary. You can view the revenue generated for a price item from the seasonal pricing in the **Pricing and Commitments** screen.

If the seasonal pricing is created for a price item with the assignment level other than **Customer Agreed** or **Account Agreed**, the system will automatically consider the proposed pricing of the price item after the seasonal pricing's effective end date. However, if the seasonal pricing is created for a price item with the assignment level as **Customer Agreed** or **Account Agreed**, the relationship manager will have to create a new seasonal pricing for the price item for the remaining deal period. Let us understand this with the help of the following scenarios:

Scenario	Assignment Level	Proposed Pricing		Seasonal Pricing	
		Start Date	End Date	Start Date	End Date
Scenario 1	Customer Price List or Account Price List	01-01-2021	31-12-2021	01-03-2021	30-06-2021
Scenario 2	Customer Agreed or Account Agreed	01-01-2021	31-12-2021	01-02-2021	31-05-2021

In scenario 1, the system considers the proposed pricing of the price item after the seasonal pricing of the price item is expired. However, in scenario 2, the relationship manager will have to create a new seasonal pricing for the price item which is effective from 01-06-2021 to 31-12-2021.

Include Customer Hierarchy in a Deal

Earlier, while creating a deal for an existing customer, the system, by default, considered all child and grandchild persons and their accounts in the customer hierarchy. Now, the system facilitates you to indicate whether you want to consider all child and grandchild persons and their accounts in the customer hierarchy while creating a deal.

A new option named **Include Hierarchy** is introduced in this release. It appears when the entity type is set to **Customer** and simulation type is set to **Customer** while creating a deal. If you select the **Include Hierarchy** option while creating a deal, the system considers all child and grandchild persons and their accounts in the customer hierarchy. Note that if you select a reference customer while creating a deal for an existing customer, the system considers all child and grandchild

persons and their accounts in the referenced customer's hierarchy irrespective of whether the **Include Hierarchy** option is selected or not.

Contracted Deal

At present, the relationship manager of a deal can offer a customer or account agreed pricing for a price item or can inherit the pricing for a price item from a price list. If you inherit the pricing for a price item from a price list in a deal and if you change the price item pricing in the price list after orchestrating the deal, the price list is updated in the system. As a result, the pricing offered for a price item to an entity in the deal is overridden. Oracle Revenue Management and Billing enables you to handle this issue by creating a contracted deal.

A new option named **Contracted Deal** is introduced in this release. If you select the **Contracted Deal** option while creating a deal for an existing customer, account, or prospect, any change in the price item pricing of the price list (after orchestration) will not affect the price item pricing offered in the deal.

The **Contracted Deal** option works in conjunction with a new option named **Variable Price** which is available while defining a price item. If the **Variable Price** option is selected for a price item, the system will inherit the pricing for the price item from the price list. In such case, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.

However, if the **Variable Price** option is not selected for a price item, the system will create a customer or account agreed pricing for the price item, whose pricing is inherited from the price list, whenever the relationship manager orchestrates the deal. In such case, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe. Note that the system creates a customer or account agreed pricing for the price item whose pricing is inherited from the price list only when the commitments are specified for the price item in the deal. If the commitments are not specified for the price item in the deal, the system does not create customer or account agreed pricing for the price item, whose pricing is inherited from the price list. In such case, the system ignores the price items without commitments. It neither creates an error message nor creates a To Do to indicate the error that occurred while creating the price assignments during orchestration.

While accepting a contracted deal, you need to specify the customer acceptance end date. The system then uses the customer acceptance end date as the effective end date while creating the customer or account agreed price assignments during orchestration.

Note: You cannot define seasonal pricing for a price item in a contracted deal.

Average Price Validation Using Floor and Ceil Limits

Until now, the system ensured that the relationship manager, division level or deal level approver, and price item manager could approve the average price of a price item in a deal when it is within the absolute floor and ceil limits of the respective To Do role. Now, in addition, the system provides the following features:

- Validate Average Price Using Spread Amount or Spread Percentage
- Validate Average Price Against Eligible Price List Pricing

On simulating the deal, the system checks whether the **Price Item Approval Required** field is set to **Yes** in the respective deal type. If the **Price Item Approval Required** field is set to **Yes**, the system derives the eligible price lists for the customer using the division, customer segment, and customer tier attributes. If one or more eligible price lists exist for the customer, the system checks whether a price assignment for the price item exists in any of the eligible price list. If the price assignment exists for the price item in an eligible price list, the system checks whether the **Average Price Floor and Ceil Limits** field in the price assignment is set to **Absolute Value Range**, **Spread Amount**, or **Spread Percentage**. The system does the following depending on the value specified in the **Average Price Floor and Ceil Limits** field:

- **Absolute Value Range** – If the **Average Price Floor and Ceil Limits** field in the price assignment is set to **Absolute Value Range**, the system checks whether the average price of the price item in the deal is within the

floor and ceil limits of the relationship manager's To Do role. If the pricing currency is different from the floor and ceil currency, the system does the currency conversion. If the average price of the price item in the deal is within the absolute floor and ceil limits, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the absolute floor and ceil limits, the status of the price item remains as **Pending for Approval**.

- **Spread Amount** - If the **Average Price Floor and Ceil Limits** field in the price assignment is set to **Spread Amount**, the system calculates the average price of the price assignment. If a flat pricing is defined in the price assignment, the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

$$\text{Average Price} = \text{Price Item Revenue} / \text{Price Item Commitments}$$

The system then considers the spread amount specified for the relationship manager's To Do role in the price assignment. Using the spread amount and average price, the system calculates the average price floor and ceil values. The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

- **Spread Percentage** - If the **Average Price Floor and Ceil Limits** field in the price assignment is set to **Spread Percentage**, the system calculates the average price of the price assignment. If a flat pricing is defined in the price assignment, the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

$$\text{Average Price} = \text{Price Item Revenue} / \text{Price Item Commitments}$$

The system then considers the spread percentage specified for the relationship manager's To Do role in the price assignment. Using the spread percentage and average price, the system calculates the average price floor and ceil values. The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

If the absolute floor and ceil limits, spread amount, or spread percentage is not defined for the To Do role in the price assignment, the system checks whether the **Average Price Floor and Ceil Limits** field in the price item is set to **Absolute Value Range**, **Spread Amount**, or **Spread Percentage**. The system does the following depending on the value specified in the **Average Price Floor and Ceil Limits** field:

- **Absolute Value Range** - If the **Average Price Floor and Ceil Limits** field in the price item is set to **Absolute Value Range**, the system checks whether the average price of the price item in the deal is within the floor and ceil limits of the relationship manager's To Do role. If the pricing currency is different from the floor and ceil currency, the system does the currency conversion. If the average price of the price item in the deal is within the absolute floor and ceil limits, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the absolute floor and ceil limits, the status of the price item remains as **Pending for Approval**.
- **Spread Amount** - If the **Average Price Floor and Ceil Limits** field in the price item is set to **Spread Amount**, the system calculates the average price of the price assignment. If a flat pricing is defined in the price assignment, the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

$$\text{Average Price} = \text{Price Item Revenue} / \text{Price Item Commitments}$$

The system then considers the spread amount specified for the relationship manager's To Do role in the price item. Using the spread amount and average price, the system calculates the average price floor and ceil values. The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

- **Spread Percentage** - If the **Average Price Floor and Ceil Limits** field in the price item is set to **Spread Percentage**, the system calculates the average price of the price assignment. If a flat pricing is defined in the price assignment, the system sets the average price to the flat rate. However, if a tiered pricing is defined in the price assignment, the system calculates the average price using the following formula:

$$\text{Average Price} = \text{Price Item Revenue} / \text{Price Item Commitments}$$

The system then considers the spread percentage specified for the relationship manager's To Do role in the price item. Using the spread percentage and average price, the system calculates the average price floor and ceil values. The system then checks whether the average price of the price item in the deal is within the derived average price floor and ceil limits. If so, the system changes the status of the price item to **Approved**. However, if the average price of the price item in the deal is not within the derived average price floor and ceil limits, the status of the price item remains as **Pending for Approval**.

However, if the absolute floor and ceil limits, spread amount, or spread percentage is not defined for the To Do role in the price item, the system changes the status of the price item to **Error**. If the system could not derive a price assignment for the price item from any of the eligible price list, the system checks whether the **Average Price Floor and Ceil Limits** field in the price item is set to **Absolute Value Range**, **Spread Amount**, or **Spread Percentage**. If the **Average Price Floor and Ceil Limits** field in the price item is set to **Absolute Value Range**, the system validates the average price of the price item in the deal using the absolute floor and ceil values of the respective To Do role. But, if the **Average Price Floor and Ceil Limits** field in the price item is set to **Spread Amount** or **Spread Percentage**, the system changes the status of the price item to **Error**.

Similarly, the system validates the average price of a price item when the product level approver, division level approver, deal level approver, or price item manager approves the price item in a deal.

Considering Pass Through Charges While Calculating Original Revenue

The system considers the recurring and non-recurring pass through charges of an account while calculating the original revenue of the account and customer in a deal. It also considers the recurring and non-recurring pass through charges which are generated through the **Transaction Aggregation** process (in the **Transaction Feed Management (TFM)** module). The system does the following while deriving the recurring and non-recurring pass through charges of an account:

1. Derives the usage period (i.e. usage start date and usage end date) using the price selection date specified in the deal
2. Considers those billable charges with the pass through amount where the usage start or end date falls within the billable charge start and end dates
3. Calculates the pass through charges for the usage period in the deal frequency
4. Converts the pass through charges in the account's invoice currency and deal currency when the pass through charges are in the different currency

You can view the pass through charges of a price item which are billed to the account in the **Pass Through Charge Information** section of the **Pricing and Commitments** screen. The system enables you to derive the pass through charges of an account in either of the following mode:

- **Online Mode** - If you set the **Refer Volume Aggregation** option type of the **C1-DEAL** feature configuration to **N**, the system derives the recurring and non-recurring pass through charges of an account in the online mode. The online mode means that the pass through charges of an account are derived for the usage period in the deal frequency at the runtime when you view the pricing and commitment details of the account.
- **Deferred Mode** - If you set the **Refer Volume Aggregation** option type of the **C1-DEAL** feature configuration to **Y**, the system derives the recurring and non-recurring pass through charges of an account in the deferred mode (i.e. in the background). The deferred mode means when you execute the following batches:
 - **Aggregate Account's Volume and Count (PREAGGR)** - The **Aggregate Account's Volume and Count (PREAGGR)** batch derives the recurring and non-recurring pass through charges of an account for all deal frequencies (i.e. Monthly, Quarterly, Half Annually, and Annually) and stores the information in the **C1_CHARGE_AGGR** table. If you want to derive the pass through charges of an account in the deferred

mode, you need to execute the **Aggregate Account's Volume and Count (PREAGGR)** batch before creating a deal for an existing account. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

- **Aggregate Customer's Volume and Count (CSTPREAG)** - The **Aggregate Customer's Volume and Count (CSTPREAG)** batch aggregates the pass through charges of all accounts of a customer for all deal frequencies (i.e. Monthly, Quarterly, Half Annually, and Annually) and stores the information in the **C1_CHARGE_AGGR** table. If you want to aggregate the pass through charges of all accounts of a customer in the deferred mode, you need to execute the **Aggregate Customer's Volume and Count (CSTPREAG)** batch after executing the **Aggregate Account's Volume and Count (PREAGGR)** batch. For more information about these batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

The system then extracts the pass through charges of an account from the **C1_CHARGE_AGGR** table while creating a deal. We recommend you to use this mode to experience a better system performance.

Recurring Pass Through Charge Calculation

Let us understand how the recurring pass through charges are calculated for a usage period in a deal frequency.

Example 1:

A deal is created for an account named A1 where the deal start date is set to 01-Jul-2020, deal end date is set to 31-Aug-2020, deal currency is set to USD, price selection date is set to 01-Aug-2020, usage period is set to Monthly, and deal frequency is set to Quarterly. Let us assume that the following recurring pass through charges exists for the A1 account where the invoice currency is set to INR:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Line 1	Line 1 Amount	Line 2	Line 2 Amount	Total Pass Through Charges	Price Item
1-Jul-20	31-Aug-20	Bill Period	Monthly	10	100 INR	20	200 INR	100 + 200 = 300 INR	PI1
15-Jul-20	20-Aug-20	Bill Period	Monthly	10	150 INR	20	350 INR	150 + 350 = 500 INR	PI2
1-Jan-20	31-Mar-20	Bill Period	Monthly	10	125 INR	20	325 INR	125 + 325 = 450 INR	PI2
1-Apr-20	31-May-20	Bill Period	Monthly	10	100 INR	20	450 INR	100 + 450 = 550 INR	PI1

Now, while calculating the original revenue, the system derives the recurring pass through charges for the usage period in the deal frequency. To derive the recurring pass through charges for the usage period in the deal frequency, the system does the following:

1. Derives the usage period (i.e. usage start date and usage end date) using the price selection date and usage frequency in the following manner:

```
Price Selection Date = 01-Aug-2020
Usage End Date = Price Selection Date = 01-Aug-2020
Usage Start Date = Usage End Date - Usage Frequency = 01-Aug-2020 - 1
Month (i.e. 30 days) = 02-Jul-2020
Usage Period = 02-Jul-2020 to 01-Aug-2020
```

2. Considers those recurring billable charges with the pass through amount where the usage start or end date falls within the billable charge start and end dates. For example, the system considers the following recurring billable charges of the A1 account:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Line 1	Line 1 Amount	Line 2	Line 2 Amount	Total Pass Through Charges	Price Item
1-Jul-20	31-Aug-20	Bill Period	Monthly	10	100 INR	20	200 INR	100 + 200 = 300 INR	PI1
15-Jul-20	20-Aug-20	Bill Period	Monthly	10	150 INR	20	350 INR	150 + 350 = 500 INR	PI2

3. Derives the final start and end dates for the selected billable charges in the following manner:

```
Final Start Date = Billable Charge Start Date or Usage Period Start Date
whichever is later
Final End Date = Billable Charge End Date or Usage Period End Date
whichever is earlier
```

The following table indicates the final start and end dates for the selected billable charges:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Total Pass Through Charges	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation
1-Jul-20	31-Aug-20	Bill Period	Monthly	100 + 200 = 300 INR	PI1	2-Jul-20	1-Aug-20
15-Jul-20	20-Aug-20	Bill Period	Monthly	150 + 350 = 500 INR	PI2	15-Jul-20	1-Aug-20

4. Derives the factor using the final start and end dates and recurring method in the following manner:

Let us assume that the **Monthly** bill period contains the following schedules:

Bill Date	Bill Segment End Date
1-Jan-20	31-Jan-20
1-Feb-20	29-Feb-20
1-Mar-20	31-Mar-20
1-Apr-20	30-Apr-20
1-May-20	31-May-20
1-Jun-20	30-Jun-20
1-Jul-20	31-Jul-20
1-Aug-20	31-Aug-20

In such case, the system will derive the factor using the bill period in the following manner:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Total Pass Through Charges	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation	Factor (Number of Bill Period Schedules between which Final Start and End Dates Fall)
1-Jul-20	31-Aug-20	Bill Period	Monthly	100 + 200 = 300 INR	PI1	2-Jul-20	1-Aug-20	2
15-Jul-20	20-Aug-20	Bill Period	Monthly	150 + 350 = 500 INR	PI2	15-Jul-20	1-Aug-20	2

5. Multiplies the total pass through charges with the factor, and thereby derives the final pass through charges in the following manner:

Total Recurring Pass Through Charges of PI1 = $(300 * 2) = 600$ INR
 Total Recurring Pass Through Charges of PI2 = $(500 * 2) = 1000$ INR

6. Calculates the pass through charges for the usage period in the deal frequency in the following manner:

Recurring Pass Through Charges of PI1 for the Usage Period in the Deal Frequency = $(\text{Total Recurring Pass Through Charges of PI1} * \text{Deal Frequency}) / \text{Usage Period} = (600 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 1800$ INR
 Recurring Pass Through Charges of PI2 for the Usage Period in the Deal Frequency = $(\text{Total Recurring Pass Through Charges of PI2} * \text{Deal Frequency}) / \text{Usage Period} = (1000 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 3000$ INR

7. Converts the pass through charges in the deal currency (i.e. USD) using the available exchange rate (for example, 0.013):

Recurring Pass Through Charges of PI1 in USD = $1800 * 0.013 = 23.4$ USD
 Recurring Pass Through Charges of PI2 in USD = $3000 * 0.013 = 39$ USD

In this way, the system calculates and derives the recurring pass through charges for the A1 account in the D1 deal.

Example 2:

A deal is created for an account named A2 where the deal start date is set to 01-Jan-2020, deal end date is set to 28-Feb-2020, deal currency is set to USD, price selection date is set to 20-Jan-2020, usage period is set to Annually, and deal frequency is set to Quarterly. Let us assume that the following recurring pass through charges exists for the A2 account where the invoice currency is set to EURO:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Line 1	Line 1 Amount	Line 2	Line 2 Amount	Total Pass Through Charges	Price Item
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	10	150 INR	20	350 INR	150 + 350 = 500 INR	PI2
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	10	125 INR	20	325 INR	125 + 325 = 450 INR	PI2
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	10	100 INR	20	450 INR	100 + 450 = 550 INR	PI1

Now, while calculating the original revenue, the system derives the recurring pass through charges for the usage period in the deal frequency. To derive the recurring pass through charges for the usage period in the deal frequency, the system does the following:

- Derives the usage period (i.e. usage start date and usage end date) using the price selection date and usage frequency in the following manner:

```
Price Selection Date = 20-Jan-2020
Usage End Date = Price Selection Date = 20-Jan-2020
Usage Start Date = Usage End Date - Usage Frequency = 20-Jan-2020 - 1 Year
(i.e. Annually) = 21-Jan-2019
Usage Period = 21-Jan-2019 to 20-Jan-2020
```

- Considers those recurring billable charges with the pass through amount where the usage start or end date falls within the billable charge start and end dates. For example, the system considers the following recurring billable charges of the A2 account:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Line 1	Line 1 Amount	Line 2	Line 2 Amount	Total Pass Through Charges	Price Item
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	10	150 INR	20	350 INR	150 + 350 = 500 INR	PI2
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	10	125 INR	20	325 INR	125 + 325 = 450 INR	PI2
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	10	100 INR	20	450 INR	100 + 450 = 550 INR	PI1

- Derives the final start and end dates for the selected billable charges in the following manner:

```
Final Start Date = Billable Charge Start Date or Usage Period Start Date
whichever is later
Final End Date = Billable Charge End Date or Usage Period End Date
whichever is earlier
```

The following table indicates the final start and end dates for the selected billable charges:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Total Pass Through Charges	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	150 + 350 = 500 INR	PI2	21-Jan-19	31-Dec-19
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	125 + 325 = 450 INR	PI2	1-Jun-19	20-Jan-20
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	100 + 450 = 550 INR	PI1	1-Jan-20	20-Jan-20

- Derives the factor using the final start and end dates and recurring method in the following manner:

Let us assume that the **Quarterly** invoice frequency contains the following periodic intervals:

Start Date	End Date
1-Jan-19	31-Mar-19
1-Apr-19	30-Jun-19
1-Jul-19	30-Sep-19
1-Oct-19	31-Dec-19
1-Jan-20	31-Mar-20
1-Apr-20	30-Jun-20
1-Jul-20	30-Sep-20
1-Oct-20	31-Dec-20

In such case, the system will derive the factor using the invoice frequency in the following manner:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	Total Pass Through Charges	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation	Factor (Number of Periodic Intervals between which Final Start and End Dates Fall)
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	150 + 350 = 500 INR	PI2	21-Jan-19	31-Dec-19	4
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	125 + 325 = 450 INR	PI2	1-Jun-19	20-Jan-20	4
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	100 + 450 = 550 INR	PI1	1-Jan-20	20-Jan-20	1

5. Multiplies the total pass through charges with the factor, and thereby derives the final pass through charges in the following manner:

Total Recurring Pass Through Charges of PI1 = $(550 * 1) = 550$ INR
 Total Recurring Pass Through Charges of PI2 = $(500 * 4) + (450 * 4) = 2000 + 1800 = 3800$ INR

6. Calculates the pass through charges for the usage period in the deal frequency in the following manner:

Recurring Pass Through Charges of PI1 for the Usage Period in the Deal Frequency = $(\text{Total Recurring Pass Through Charges of PI1} * \text{Deal Frequency}) / \text{Usage Period} = (550 * 3 \text{ (i.e. Quarterly)}) / 12 \text{ (i.e. Annually)} = (1650 / 12) = 137.5$ INR
 Recurring Pass Through Charges of PI2 for the Usage Period in the Deal Frequency = $(\text{Total Recurring Pass Through Charges of PI2} * \text{Deal Frequency}) / \text{Usage Period} = (3800 * 3 \text{ (i.e. Quarterly)}) / 12 \text{ (i.e. Annually)} = (11400 / 12) = 950$ INR

7. Converts the pass through charges in the account's invoice currency (i.e. EURO) and deal currency (i.e. USD) using the available exchange rates:

For example, to convert the pass through charges in the account's invoice currency, the exchange rate from INR to USD is 0.013:

Recurring Pass Through Charges of PI1 in USD = $137.5 * 0.013 = 1.79$ USD
 Recurring Pass Through Charges of PI2 in USD = $950 * 0.013 = 12.35$ USD

For example, to convert the pass through charges in the deal currency, the exchange rate from INR to EURO is 0.012:

Recurring Pass Through Charges of PI1 in EURO = $137.5 * 0.012 = 1.65$ EURO
 Recurring Pass Through Charges of PI2 in EURO = $950 * 0.012 = 11.4$ EURO

In this way, the system calculates and derives the recurring pass through charges for the A2 account in the D1 deal.

Non-Recurring Pass Through Charge Calculation

Let us understand how the non-recurring pass through charges are calculated for a usage period in a deal frequency.

Example 3:

A deal is created for an account named A1 where the deal start date is set to 01-Jul-2020, deal end date is set to 31-Aug-2020, deal currency is set to USD, price selection date is set to 01-Aug-2020, usage period is set to Monthly, and deal frequency is set to Quarterly. Let us assume that the following non-recurring pass through charges exists for the A1 account where the invoice currency is set to INR:

Billable Charge Start Date	Billable Charge End Date	Line 1	Line 1 Amount	Line 2	Line 2 Amount	Total Pass Through Charges	Price Item
1-Jul-20	31-Aug-20	10	100 INR	20	200 INR	100 + 200 = 300 INR	PI1
15-Jul-20	20-Aug-20	10	150 INR	20	350 INR	150 + 350 = 500 INR	PI2
1-Jan-20	31-Mar-20	10	125 INR	20	325 INR	125 + 325 = 450 INR	PI2
1-Apr-20	31-May-20	10	100 INR	20	450 INR	100 + 450 = 550 INR	PI1

Now, while calculating the original revenue, the system derives the non-recurring pass through charges for the usage period in the deal frequency. To derive the non-recurring pass through charges for the usage period in the deal frequency, the system does the following:

1. Derives the usage period (i.e. usage start date and usage end date) using the price selection date and usage frequency in the following manner:

```
Price Selection Date = 01-Aug-2020
Usage End Date = Price Selection Date = 01-Aug-2020
Usage Start Date = Usage End Date - Usage Frequency = 01-Aug-2020 - 1
Month (i.e. 30 days) = 02-Jul-2020
Usage Period = 02-Jul-2020 to 01-Aug-2020
```

2. Considers those non-recurring billable charges with the pass through amount where the usage start or end date falls within the billable charge start and end dates. For example, the system considers the following non-recurring billable charges of the A1 account:

Billable Charge Start Date	Billable Charge End Date	Line 1	Line 1 Amount	Line 2	Line 2 Amount	Total Pass Through Charges	Price Item
1-Jul-20	31-Aug-20	10	100 INR	20	200 INR	100 + 200 = 300 INR	PI1
15-Jul-20	20-Aug-20	10	150 INR	20	350 INR	150 + 350 = 500 INR	PI2

3. Derives the former start date and latter end date of the billable charges in the following manner:

```
Former Start Date = Compare the Start Dates of All Billable Charges and
Reterive the Earliest Start Date
Latter End Date = Compare the End Dates of All Billable Charges and
Reterive the Latest End Date
```

In this case, the former start date is 01-Jul-2020 and latter end date is 31-Aug-2020.

4. Derives the number of months between the former start date and latter end date. In this case, the number of months between 01-Jul-2020 and 31-Aug-2020 is 2.
5. Derives the monthly non-recurring pass through charges in the following manner:

```
Monthly Non-Recurring Pass Through Charges of PI1 = Total Non-Recurring
Pass Through Charges of PI1/Number of Months between Former Start and
Latter End Dates = 300/2 = 150 INR
Monthly Non-Recurring Pass Through Charges of PI2 = Total Non-Recurring
Pass Through Charges of PI2/Number of Months between Former Start and
Latter End Dates = 500/2 = 250 INR
```

6. Calculates the non-recurring pass through charges for the usage period in the deal frequency in the following manner:

```
Non-Recurring Pass Through Charges of PI1 for the Usage Period in the
Deal Frequency = (Monthly Non-Recurring Pass Through Charges * Deal
Frequency)/Usage Frequency = (150 * 3 (i.e. Quarterly))/1(i.e. Monthly) =
(450/1) = 450 INR
Non-Recurring Pass Through Charges of PI2 for the Usage Period in the
Deal Frequency = (Monthly Non-Recurring Pass Through Charges * Deal
Frequency)/Usage Frequency = (250 * 3 (i.e. Quarterly))/1(i.e. Monthly) =
(750/1) = 750 INR
```

7. Converts the pass through charges in the deal currency (i.e. USD) using the available exchange rate (for example, 0.013):

```
Non-Recurring Pass Through Charges of PI1 in USD = 450*0.013 = 5.85 USD
Non-Recurring Pass Through Charges of PI2 in USD = 750*0.013 = 9.75 USD
```

In this way, the system calculates and derives the non-recurring pass through charges for the A1 account in the D1 deal.

Considering SQI Based Billable Charges While Calculating Commitments

The system considers the recurring and non-recurring SQI based billable charges of an account while calculating the original and proposed commitments of the account and customer in a deal. It also considers the recurring and non-recurring SQI based billable charges which are generated through the **Transaction Aggregation** process (in the **Transaction Feed Management** (TFM) module). The system does the following while deriving the service quantities from the recurring and non-recurring billable charges of an account:

1. Derives the usage period (i.e. usage start date and usage end date) using the price selection date specified in the deal
2. Considers those SQI based billable charges where the usage start or end date falls within the billable charge start and end dates
3. Calculates the service quantities for the usage period in the deal frequency

The system enables you to derive the service quantities from the recurring and non-recurring billable charges of an account in either of the following mode:

- **Online Mode** - If you set the **Refer Volume Aggregation** option type of the **C1-DEAL** feature configuration to **N**, the system derives the service quantities from the recurring and non-recurring billable charges of an account in the online mode. The online mode means that the service quantities from the recurring and non-recurring billable charges of an account are derived for the usage period in the deal frequency at the runtime when you view the pricing and commitment details of the account.
- **Deferred Mode** - If you set the **Refer Volume Aggregation** option type of the **C1-DEAL** feature configuration to **Y**, the system derives the service quantities from the recurring and non-recurring billable charges of an account in the deferred mode (i.e. in the background). The deferred mode means when you execute the following batches:
 - **Aggregate Account's Volume and Count (PREAGGR)** - The **Aggregate Account's Volume and Count (PREAGGR)** batch derives the service quantities from the recurring and non-recurring billable charges of an account for all deal frequencies (i.e. Monthly, Quarterly, Half Annually, and Annually) and stores the information in the **C1_VOLUME_AGGR** table. If you want to derive the service quantities from the recurring and non-recurring billable charges of an account in the deferred mode, you need to execute the **Aggregate Account's Volume and Count (PREAGGR)** batch before creating a deal for an existing account. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.
 - **Aggregate Customer's Volume and Count (CSTPREAG)** - The **Aggregate Customer's Volume and Count (CSTPREAG)** batch aggregates the billed service quantities of all accounts of a customer for all deal frequencies (i.e. Monthly, Quarterly, Half Annually, and Annually) and stores the information in the **C1_VOLUME_AGGR** table. If you want to aggregate the billed service quantities of all accounts of a customer in the deferred mode, you need to execute the **Aggregate Customer's Volume and Count (CSTPREAG)** batch after executing the **Aggregate Account's Volume and Count (PREAGGR)** batch. For more information about these batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

The system then extracts the billed service quantities of an account from the **C1_VOLUME_AGGR** table while creating a deal. We recommend you to use this mode to experience a better system performance.

Considering Recurring SQI Based Billable Charges for Commitment Calculation

Let us understand how the original and proposed commitments are calculated from the recurring SQI based billable charges for a usage period in a deal frequency.

Example 1:

A deal is created for an account named A1 where the deal start date is set to 01-Jul-2020, deal end date is set to 31-Aug-2020, deal currency is set to USD, price selection date is set to 01-Aug-2020, usage period is set to Monthly, and deal frequency is set to Quarterly. Let us assume that the following recurring SQI based billable charges exists for the A1 account where the invoice currency is set to INR:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item
1-Jul-20	31-Aug-20	Bill Period	Monthly	Number of Transactions	1000	PI1
				Transaction Volume	25000	
15-Jul-20	20-Aug-20	Bill Period	Monthly	Number of Transactions	1500	PI2
				Transaction Volume	50000	
1-Jan-20	31-Mar-20	Bill Period	Monthly	Number of Transactions	3500	PI2
				Transaction Volume	25000	
1-Apr-20	31-May-20	Bill Period	Monthly	Number of Transactions	4000	PI1
				Transaction Volume	25000	

Now, while calculating the original and proposed commitments, the system derives the service quantities from the recurring billable charges for the usage period in the deal frequency. To derive the service quantities from the recurring billable charges for the usage period in the deal frequency, the system does the following:

1. Derives the usage period (i.e. usage start date and usage end date) using the price selection date and usage frequency in the following manner:

```
Price Selection Date = 01-Aug-2020
Usage End Date = Price Selection Date = 01-Aug-2020
Usage Start Date = Usage End Date - Usage Frequency = 01-Aug-2020 - 1
Month (i.e. 30 days) = 02-Jul-2020
Usage Period = 02-Jul-2020 to 01-Aug-2020
```

2. Considers those recurring SQI based billable charges where the usage start or end date falls within the billable charge start and end dates. For example, the system considers the following recurring billable charges of the A1 account:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item
1-Jul-20	31-Aug-20	Bill Period	Monthly	Number of Transactions	1000	PI1
				Transaction Volume	25000	
15-Jul-20	20-Aug-20	Bill Period	Monthly	Number of Transactions	1500	PI2
				Transaction Volume	50000	

3. Derives the final start and end dates for the selected billable charges in the following manner:

```
Final Start Date = Billable Charge Start Date or Usage Period Start Date
whichever is later
Final End Date = Billable Charge End Date or Usage Period End Date
whichever is earlier
```

The following table indicates the final start and end dates for the selected billable charges:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation
1-Jul-20	31-Aug-20	Bill Period	Monthly	Number of Transactions	1000	PI1	2-Jul-20	1-Aug-20
				Transaction Volume	25000			
15-Jul-20	20-Aug-20	Bill Period	Monthly	Number of Transactions	1500	PI2	15-Jul-20	1-Aug-20
				Transaction Volume	50000			

4. Derives the factor using the final start and end dates and recurring method in the following manner:

Let us assume that the **Monthly** bill period contains the following schedules:

Bill Date	Bill Segment End Date
1-Jan-20	31-Jan-20
1-Feb-20	29-Feb-20
1-Mar-20	31-Mar-20
1-Apr-20	30-Apr-20
1-May-20	31-May-20
1-Jun-20	30-Jun-20
1-Jul-20	31-Jul-20
1-Aug-20	31-Aug-20

In such case, the system will derive the factor using the bill period in the following manner:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation	Factor (Number of Bill Period Schedules between which Final Start and End Dates Fall)
1-Jul-20	31-Aug-20	Bill Period	Monthly	Number of Transactions	1000	PI1	2-Jul-20	1-Aug-20	2
				Transaction Volume	25000				
15-Jul-20	20-Aug-20	Bill Period	Monthly	Number of Transactions	1500	PI2	15-Jul-20	1-Aug-20	2
				Transaction Volume	50000				

5. Multiplies the service quantities with the factor in the following manner:

Total Number of Transactions of PI1 = $(1000 * 2) = 2000$
 Total Transaction Volume of PI1 = $(25000 * 2) = 50000$

Total Number of Transactions of PI2 = $(1500 * 2) = 3000$
 Total Transaction Volume of PI2 = $(50000 * 2) = 100000$

6. Calculates the service quantities for the usage period in the deal frequency in the following manner:

Number of Transactions of PI1 for the Usage Period in the Deal Frequency =
 $(\text{Total Number of Transactions of PI1} * \text{Deal Frequency}) / \text{Usage Frequency} =$
 $(2000 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 6000$

Number of Transactions of PI2 for the Usage Period in the Deal Frequency =
 $(\text{Total Number of Transactions of PI2} * \text{Deal Frequency}) / \text{Usage Frequency} =$
 $(3000 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 9000$

Transaction Volume of PI1 for the Usage Period in the Deal Frequency =
 $(\text{Total Transaction Volume of PI1} * \text{Deal Frequency}) / \text{Usage Frequency} =$
 $(50000 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 150000$

Transaction Volume of PI2 for the Usage Period in the Deal Frequency =
 $(\text{Total Transaction Volume of PI2} * \text{Deal Frequency}) / \text{Usage Frequency} =$
 $(100000 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 300000$

In this way, the system derives the original and proposed commitments for the A1 account in the D1 deal.

Example 2:

A deal is created for an account named A2 where the deal start date is set to 01-Jan-2020, deal end date is set to 28-Feb-2020, deal currency is set to USD, price selection date is set to 20-Jan-2020, usage period is set to Annually, and deal frequency is set to Quarterly. Let us assume that the following recurring SQI based billable charges exists for the A2 account where the invoice currency is set to EURO:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	Number of Transactions	500	PI2
				Transaction Volume	2500	
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	Number of Transactions	750	PI2
				Transaction Volume	5000	
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	Number of Transactions	1000	PI1
				Transaction Volume	50000	

Now, while calculating the original and proposed commitments, the system derives the service quantities from the recurring billable charges for the usage period in the deal frequency. To derive the service quantities from the recurring billable charges for the usage period in the deal frequency, the system does the following:

- Derives the usage period (i.e. usage start date and usage end date) using the price selection date and usage frequency in the following manner:

Price Selection Date = 20-Jan-2020
 Usage End Date = Price Selection Date = 20-Jan-2020
 Usage Start Date = Usage End Date - Usage Frequency = 20-Jan-2020 - 1 Year
 (i.e. Annually) = 21-Jan-2019
 Usage Period = 21-Jan-2019 to 20-Jan-2020

- Considers those recurring SQI based billable charges where the usage start or end date falls within the billable charge start and end dates. For example, the system considers the following recurring billable charges of the A2 account:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	Number of Transactions	500	PI2
				Transaction Volume	2500	
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	Number of Transactions	750	PI2
				Transaction Volume	5000	
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	Number of Transactions	1000	PI1
				Transaction Volume	50000	

3. Derives the final start and end dates for the selected billable charges in the following manner:

Final Start Date = Billable Charge Start Date or Usage Period Start Date whichever is later

Final End Date = Billable Charge End Date or Usage Period End Date whichever is earlier

The following table indicates the final start and end dates for the selected billable charges:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	Number of Transactions	500	PI2	21-Jan-19	31-Dec-19
				Transaction Volume	2500			
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	Number of Transactions	750	PI2	1-Jun-19	20-Jan-20
				Transaction Volume	5000			
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	Number of Transactions	1000	PI1	1-Jan-20	20-Jan-20
				Transaction Volume	50000			

4. Derives the factor using the final start and end dates and recurring method in the following manner:

Let us assume that the **Quarterly** invoice frequency contains the following periodic intervals:

Start Date	End Date
1-Jan-19	31-Mar-19
1-Apr-19	30-Jun-19
1-Jul-19	30-Sep-19
1-Oct-19	31-Dec-19
1-Jan-20	31-Mar-20
1-Apr-20	30-Jun-20
1-Jul-20	30-Sep-20
1-Oct-20	31-Dec-20

In such case, the system will derive the factor using the invoice frequency in the following manner:

Billable Charge Start Date	Billable Charge End Date	Recurring Method	Bill Period	SQI	Service Quantity	Price Item	Final Start Date After Evaluation	Final End Date After Evaluation	Factor (Number of Periodic Intervals between which Final Start and End Dates Fall)
1-Jan-19	31-Dec-19	Invoice Frequency	Quarterly	Number of Transactions	500	PI2	21-Jan-19	31-Dec-19	4
				Transaction Volume	2500				
1-Jun-19	31-Mar-20	Invoice Frequency	Quarterly	Number of Transactions	750	PI2	1-Jun-19	20-Jan-20	4
				Transaction Volume	5000				
1-Jan-20	31-May-20	Invoice Frequency	Quarterly	Number of Transactions	1000	PI1	1-Jan-20	20-Jan-20	1
				Transaction Volume	50000				

5. Multiplies the service quantities with the factor in the following manner:

Total Number of Transactions of PI1 = (1000*1) = 1000

Total Transaction Volume of PI1 = (50000*1) = 50000

Total Number of Transactions of PI2 = (500*4)+(750*4) = 2000+3000 = 5000

Total Transaction Volume of PI2 = (2500*4)+(5000*4) = 10000+20000 = 30000

6. Calculates the service quantities for the usage period in the deal frequency in the following manner:

Number of Transactions of PI1 for the Usage Period in the Deal Frequency =
 (Total Number of Transactions of PI1 * Deal Frequency)/Usage Frequency =
 (1000 * 3 (i.e. Quarterly))/12(i.e. Annually) = (3000/12) = 250

Number of Transactions of PI2 for the Usage Period in the Deal Frequency =
 (Total Number of Transactions of PI2 * Deal Frequency)/Usage Frequency =
 (5000 * 3 (i.e. Quarterly))/12(i.e. Annually) = (15000/12) = 1250

Transaction Volume of PI1 for the Usage Period in the Deal Frequency =
 (Total Transaction Volume of PI1 * Deal Frequency)/Usage Frequency =
 (50000 * 3 (i.e. Quarterly))/12(i.e. Annually) = (150000/12) = 12500

Transaction Volume of PI2 for the Usage Period in the Deal Frequency =
 (Total Transaction Volume of PI2 * Deal Frequency)/Usage Frequency =
 (30000 * 3 (i.e. Quarterly))/12(i.e. Annually) = (90000/12) = 7500

In this way, the system derives the original and proposed commitments for the A2 account in the D1 deal.

Considering Non-Recurring SQI Based Billable Charges for Commitment Calculation

Let us understand how the original and proposed commitments are calculated from the non-recurring SQI based billable charges for a usage period in a deal frequency.

Example 3:

A deal is created for an account named A1 where the deal start date is set to 01-Jul-2020, deal end date is set to 31-Aug-2020, deal currency is set to USD, price selection date is set to 01-Aug-2020, usage period is set to Monthly, and deal frequency is set to Quarterly. Let us assume that the following non-recurring SQI based billable charges exists for the A1 account where the invoice currency is set to INR:

Billable Charge Start Date	Billable Charge End Date	SQI	Service Quantity	Price Item
1-Jul-20	31-Aug-20	Number of Transactions	100	PI1
		Transaction Volume	2500	
15-Jul-20	20-Aug-20	Number of Transactions	150	PI2
		Transaction Volume	5000	
1-Jan-20	31-Mar-20	Number of Transactions	350	PI2
		Transaction Volume	2500	
1-Apr-20	31-May-20	Number of Transactions	400	PI1
		Transaction Volume	2500	

Now, while calculating the original and proposed commitments, the system derives the service quantities from the non-recurring billable charges for the usage period in the deal frequency. To derive the service quantities from the non-recurring billable charges for the usage period in the deal frequency, the system does the following:

1. Derives the usage period (i.e. usage start date and usage end date) using the price selection date and usage frequency in the following manner:

Price Selection Date = 01-Aug-2020

Usage End Date = Price Selection Date = 01-Aug-2020

Usage Start Date = Usage End Date - Usage Frequency = 01-Aug-2020 - 1 Month (i.e. 30 days) = 02-Jul-2020

Usage Period = 02-Jul-2020 to 01-Aug-2020

2. Considers those non-recurring SQI based billable charges where the usage start or end date falls within the billable charge start and end dates. For example, the system considers the following non-recurring billable charges of the A1 account:

Billable Charge Start Date	Billable Charge End Date	SQL	Service Quantity	Price Item
1-Jul-20	31-Aug-20	Number of Transactions	100	P11
		Transaction Volume	2500	
15-Jul-20	20-Aug-20	Number of Transactions	150	P12
		Transaction Volume	5000	

3. Derives the former start date and latter end date of the billable charges in the following manner:

Former Start Date = Compare the Start Dates of All Billable Charges and Retain the Earliest Start Date

Latter End Date = Compare the End Dates of All Billable Charges and Retain the Latest End Date

In this case, the former start date is 01-Jul-2020 and latter end date is 31-Aug-2020.

4. Derives the number of months between the former start date and latter end date. In this case, the number of months between 01-Jul-2020 and 31-Aug-2020 is 2.
5. Derives the monthly commitments in the following manner:

Monthly Number of Transactions of P11 = Total Number of Transactions of P11/Number of Months between Former Start and Latter End Dates = $100/2 = 50$

Monthly Number of Transactions of P12 = Total Number of Transactions of P12/Number of Months between Former Start and Latter End Dates = $150/2 = 75$

Monthly Transaction Volume of P11 = Total Transaction Volume of P11/Number of Months between Former Start and Latter End Dates = $2500/2 = 1250$

Monthly Transaction Volume of P12 = Total Transaction Volume of P12/Number of Months between Former Start and Latter End Dates = $5000/2 = 2500$

6. Calculates the commitments for the usage period in the deal frequency in the following manner:

Number of Transactions of P11 for the Usage Period in the Deal Frequency = $(\text{Monthly Number of Transactions of P11} * \text{Deal Frequency}) / \text{Usage Frequency} = (50 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 150$

Number of Transactions of P12 for the Usage Period in the Deal Frequency = $(\text{Monthly Number of Transactions of P12} * \text{Deal Frequency}) / \text{Usage Frequency} = (75 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 225$

Transaction Volume of P11 for the Usage Period in the Deal Frequency = $(\text{Monthly Transaction Volume of P11} * \text{Deal Frequency}) / \text{Usage Frequency} = (1250 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 3750$

Transaction Volume of P12 for the Usage Period in the Deal Frequency = $(\text{Monthly Transaction Volume of P12} * \text{Deal Frequency}) / \text{Usage Frequency} = (2500 * 3 \text{ (i.e. Quarterly)}) / 1 \text{ (i.e. Monthly)} = 7500$

In this way, the system derives the original and proposed commitments for the A1 account in the D1 deal.

Stacking Commitments in Deal

Oracle Revenue Management and Billing enables you to stack commitments of a customer in a deal when a price assignment of its account is defined at the parent customer, grandparent customer, or at the sibling customer level in the customer hierarchy. Stacking means aggregating the service quantities of the customer, parent customers, grandparent customers, and sibling customers in the customer hierarchy. The system then derives the tiered pricing based on the stacked commitments of the customer instead of using the actual commitments of the account. To enable the stacking feature for a deal, you need to do the following:

- Ensure that the **Stacking Required (Y/N)** parameter is set to **Y** in the rate value algorithm of the required rate components

- Attach the **C1_STACKDEAL** algorithm to the **Hierarchy Creation Completion** system event in the respective deal type

When you create a deal for an existing customer without reference, the system stacks the commitments (if required) and uses it as the original and proposed commitments of the customer during the customer hierarchy creation. The system then calculates the original and proposed average price and revenue using the stacked commitments of the customer. However, when you create a deal for an existing customer with reference or when you create a deal for an existing account with or without reference, the system stacks the commitments (if required) and uses it as the original commitments of the customer during the customer hierarchy creation. The system then calculates the original average price and revenue using the stacked commitments of the customer.

Deal Approval Profile

The **Deal Approval Profile** screen allows you to define the approval hierarchy levels with the required limits and rights for approving a deal. This profile is then associated to the deal type to specify whether it will be used for product level, division level, or deal level approval. It also allows you to edit, copy, and delete a deal approval profile. It contains the following zones:

- [Deal Approval Profile List](#) on page 2610
- [Deal Approval Profile](#) on page 2611

Deal Approval Profile List

The **Deal Approval Profile List** zone lists the deal approval profiles that are already defined in the system. It contains the following columns:

Column Name	Column Description
Deal Approval Profile	Displays the deal approval profile.
Description	Displays the description of the deal approval profile.
Edit	On clicking the Edit (✎) icon, the Deal Approval Profile screen appears where you can edit the details of the deal approval profile.
Duplicate	On clicking the Duplicate (📄) icon, the Deal Approval Profile screen appears where you can define a new deal approval profile using an existing deal approval profile.
Delete	On clicking the Delete (🗑) icon, you can delete the deal approval profile.
	Note: You can delete a deal approval profile only when the deal approval profile is not yet used for creating a deal type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Deal Approval Profile**, **Status**, **Description**, **To Do Type**, **Approval Profile Currency**, and **To Do Role**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📢) icon corresponding to a deal approval profile, the **Deal Approval Profile** zone appears where you can view the details of the respective deal approval profile.

Deal Approval Profile

The **Deal Approval Profile** zone displays the details of the deal approval profile. It contains the following sections:

- **Main** - Displays basic information about the deal approval profile. It contains the following fields:

Field Name	Field Description
Deal Approval Profile	Indicates the deal approval profile.
Description	Displays the description of the deal approval profile.
Detailed Description	Displays additional information about the deal approval profile.
Approval Profile Currency	Indicates the currency in which the amounts are mentioned in the deal approval profile.
Status	Indicates the status of the deal approval profile. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Approval Hierarchy** - Displays the approval hierarchy levels with their required limits and rights defined for approving a deal. It contains the following columns:

Column Name	Column Description
Level	Indicates the approval level.
To Do Type	Indicates the To Do Type using which the To Do task is assigned to the approver/user group for approving the deal at the specified hierarchy level. Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do Type .
To Do Role	Indicates the approver/user group to whom the To Do task of the To Do Type is assigned for approving the deal at the specified hierarchy level. Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role .
Recommend Pricing	Indicates whether the approver/user (other than the relationship manager) at the specified hierarchy level is entitled to recommend a change in the proposed pricing of the price item. The valid values are: <ul style="list-style-type: none"> • Yes • No

Column Name	Column Description
Submit Price Item For Approval	Indicates whether the approver/user at the specified hierarchy level is entitled to submit one or more price items to the product manager for approval. The valid values are: <ul style="list-style-type: none"> • Yes • No
Approve Deal	Indicates whether the approver/user at the specified hierarchy level is entitled to approve the deal after all the discretion check is confirmed. The valid values are: <ul style="list-style-type: none"> • Yes • No
View Only Eligible Price Items	Indicates whether the approver/user at the specified hierarchy level can view only those price items which meet the pricing limits as set in the approval hierarchy. The valid values are: <ul style="list-style-type: none"> • Yes • No
Minimum Profitability (%)	Displays the minimum deal profitability percentage which is set for the approver/user at the specified hierarchy level for approving the deal.
Maximum Profitability (%)	Displays the maximum deal profitability percentage which is set for the approver/user at the specified hierarchy level for approving the deal.
Minimum Profit	Displays the minimum deal profitability amount which is set for the approver/user at the specified hierarchy level for approving the deal.
Maximum Profit	Displays the maximum deal profitability amount which is set for the approver/user at the specified hierarchy level for approving the deal.
Minimum Profit Variation (%)	Displays the minimum deal profitability variation percentage which is set for the approver/user at the specified hierarchy level for approving the deal.
Maximum Profit Variation (%)	Displays the maximum deal profitability variation percentage which is set for the approver/user at the specified hierarchy level for approving the deal.
Minimum Profit Variation	Displays the minimum deal profitability variation amount which is set for the approver/user at the specified hierarchy level for approving the deal.
Maximum Profit Variation	Displays the maximum deal profitability variation amount which is set for the approver/user at the specified hierarchy level for approving the deal.
Minimum Revenue	Displays the minimum deal revenue which can be approved by the approver/user at a specified hierarchy level.
Maximum Revenue	Displays the maximum deal revenue which can be approved by the approver/user at a specified hierarchy level.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the deal approval profile.

Button Name	Button Description
Delete	Used to delete the deal approval profile. Note: You can delete a deal approval profile only when the deal approval profile is not yet used for creating a deal type.
Duplicate	Used to create a new deal approval profile using an existing deal approval profile.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the deal approval profile is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Deal Approval Profile** zone does not appear in the **Deal Approval Profile** screen. It appears when you click the **Broadcast** () icon corresponding to a deal approval profile in the **Deal Approval Profile List** zone.

Defining a Deal Approval Profile

Prerequisites

To define a deal approval profile, you should have:

- Currencies defined in the application
- Approval hierarchy levels defined in the application
- To Do roles and To Do types defined in the application

Procedure

To define a deal approval profile:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deal Approval Profile**.
A sub-menu appears.
3. Click the **Add** option from the **Deal Approval Profile** sub-menu.

The **Deal Approval Profile** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal approval profile.
- **Approval Hierarchy** - Used to define the approval levels in the approval hierarchy with their required limits and rights for approving a deal.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Approval Profile	Used to specify the deal approval profile.	Yes
Description	Used to specify the description for the deal approval profile.	Yes
Detailed Description	Used to specify additional information about the deal approval profile.	Yes
Approval Profile Currency	Used to indicate the currency in which the amounts are mentioned in the deal approval profile.	Yes
	Note: The list includes only those currencies which are already defined in the system.	
Status	Used to indicate the status of the deal approval profile. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: Only the active deal approval profiles can be assigned to the deal type for approving the deal.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Deal Approval Profile** screen.

4. Enter the required details in the **Main** section.
5. Define approval levels in the approval hierarchy with the required limits and rights for approving the deal.
6. Click **Save**.

The deal approval profile is defined.

How to define an approval level in the approval hierarchy	Defining an Approval Level in the Approval Hierarchy on page 2614

Defining an Approval Level in the Approval Hierarchy

Prerequisites

To define an approval level in the approval hierarchy, you should have:

- Approval hierarchy levels defined in the application.
- To Do roles and To Do types defined in the application.

Procedure

To define an approval level in the approval hierarchy:

1. Ensure that the **Approval Hierarchy** section is expanded in the **Deal Approval Profile** screen when you are defining, editing, or copying a deal approval profile.

The **Approval Hierarchy** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Level	Used to indicate the approval level.	Yes
	<p>Note:</p> <p>The user who creates the deal i.e. the relationship manager (RM) should always belong to the first level (Level 0) in the deal approval hierarchy.</p> <p>There cannot be a parallel level for the first level (Level 0) in the approval hierarchy. In other words, there can be only one relationship manager (RM) in the entire deal approval hierarchy.</p>	
To Do Type	Used to specify the To Do task which is assigned to the approver/user group for approving the deal at the specified hierarchy level.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the value for a predefined To Do type, the description of the To Do type appears corresponding to the To Do Type field.</p>	
To Do Role	Used to indicate the approver/user group to whom the To Do task is assigned for approving the deal at the specified hierarchy level.	Yes
Propose Pricing	Used to indicate whether the approver/user (other than the relationship manager) at the specified hierarchy level is entitled to recommend a change in the proposed pricing of the price item. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> • Yes • No <p>Note: By default, this field is read only and the value is set to No for the first level (Level 0) approver/user i.e. the relationship manager (RM) in the approval hierarchy.</p>	
		<p>Note: This field is required while defining approval levels for the approving a deal.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submit Price Item for Approval	Used to indicate whether the approver/user at the specified hierarchy level is entitled to submit one or more price items to the respective product managers for approval. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
	Note: This field is required while defining approval levels for the approving a deal.	
	Note: The approver/user can submit the price items to the respective product managers for approval when the values for the Price Item Manager To Do Type and Price Item Manager To Do Role fields are defined in the respective Price Item screen.	
Approve Deal	Used to indicate whether the approver/user at the specified hierarchy level is entitled to approve the deal after all the discretion check is confirmed. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
	Note: This field is required while defining approval levels for the approving a deal.	
	Note: At least one approval hierarchy level must have the value of the Approve Deal field set to Yes . If the value of the Approve Deal field is set to Yes , then, the approver/user can change the status of the deal from Draft to Ready for Approval or Approved .	
View Only Eligible Price Items	Used to indicate whether the approver/user at the specified hierarchy level can approve only those price items which meet the pricing limits as set in the approval hierarchy. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
	Note: This field is required while defining approval levels for the approving a deal.	
	Note: By default, this field is read only and the value is set to No for the first level (Level 0) approver/user i.e. the relationship manager (RM) in the approval hierarchy.	
Minimum Profitability (%)	Used to specify the minimum deal profitability percentage for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: This field is required while defining approval levels for the approving a deal.	
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Profitability (%)	Used to specify the maximum deal profitability percentage for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	Note: This field is required while defining approval levels for the approving a deal.
Minimum Profitability Amount	Used to specify the minimum deal profitability amount for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	Note: This field is required while defining approval levels for the approving a deal.
Maximum Profitability Amount	Used to specify the maximum deal profitability amount for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	Note: This field is required while defining approval levels for the approving a deal.
Minimum Deviation (%)	Used to specify the minimum deal variation percentage for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	Note: This field is required while defining approval levels for the approving a deal.
Maximum Deviation (%)	Used to specify the maximum deal variation percentage for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	Note: This field is required while defining approval levels for the approving a deal.
Minimum Deviation Amount	Used to specify the minimum deal variation amount for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	Note: This field is required while defining approval levels for the approving a deal.

Field Name	Field Description	Mandatory (Yes or No)
Maximum Deviation Amount	Used to specify the maximum deal variation amount for the approver/user at the specified hierarchy level for approving the deal.	Yes (Conditional)
	Note: You can either specify the percentage or amount values for minimum and maximum limit.	Note: This field is required while defining approval levels for the approving a deal.
Minimum Revenue Amount	Used to specify the minimum deal revenue which can be approved by the approver/user at a specified hierarchy level.	Yes (Conditional)
		Note: This field is required while defining approval levels for the approving a deal.
Maximum Revenue Amount	Used to specify the maximum deal revenue which can be approved by the approver/user at a specified hierarchy level.	Yes (Conditional)
		Note: This field is required while defining approval levels for the approving a deal.

- Enter the required details in the **Approval Hierarchy** section.
- If you want to define more than one approval level in the approval hierarchy, click the **Add (+)** icon and then repeat step 2.

Note:

However, if you want to remove an approval level from the approval hierarchy, click the **Delete** (🗑️) icon corresponding to the approval hierarchy.

At present, you can add an approval level from 0 to 10. If required, you can add more approval levels in the system through the **C1_DEALHIERARCHYLEVEL** lookup field.

- Click **Save**.

The approval level is defined in the approval hierarchy.

How to delete a deal approval profile	Deleting a Deal Approval Profile on page 2621

Editing a Deal Approval Profile**Prerequisites**

To edit a deal approval profile, you should have:

- Currencies defined in the application
- Approval hierarchy levels defined in the application.
- To Do roles and To Do types defined in the application.

Procedure

To edit a deal approval profile:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **D** and then click **Deal Approval Profile**.

A sub-menu appears.

3. Click the **Search** option from the **Deal Approval Profile** sub-menu.

The **Deal Approval Profile** screen appears.

4. In the **Deal Approval Profile List** zone, click the **Edit**  icon in the **Edit** column corresponding to the deal approval profile whose details you want to edit.

The **Deal Approval Profile** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal approval profile.
- **Approval Hierarchy** - Used to define the approval levels in the approval hierarchy with the required limits and rights for approving a deal.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Approval Profile	Used to specify the deal approval profile.	Not applicable
Description	Used to specify the description for the deal approval profile.	Yes
Detailed Description	Used to specify additional information about the deal approval profile.	Yes
Approval Profile Currency	Used to indicate the currency in which the amounts are mentioned in the deal approval profile. Note: The list includes only those currencies which are already defined in the system.	Yes
Status	Used to indicate the status of the deal approval profile. The valid values are: <ul style="list-style-type: none"> • Active • Inactive Note: Only the active deal approval profiles can be assigned to the deal type for approving the deal.	Yes

Tip: Alternatively, you can edit the details of a deal approval profile by clicking the **Edit** button in the **Deal Approval Profile** zone.

5. Modify the required details in the **Main** section.
6. Add, edit, or remove approval levels in the approval hierarchy, if required.
7. Click **Save**.

The changes made to the deal approval profile are saved.

Copying a Deal Approval Profile

Instead of creating a deal approval profile from scratch, you can create a new deal approval profile using an existing deal approval profile. This is possible through copying a deal approval profile. On copying a deal approval profile, the details including the approval levels in the approval hierarchy are copied to the new deal approval profile. You can then edit the details, if required.

Prerequisites

To copy a deal approval profile, you should have:

- Deal approval profile (whose copy you want to create) defined in the application
- Currencies defined in the application
- Approval hierarchy levels defined in the application.
- To Do roles and To Do types defined in the application.

Procedure

To copy a deal approval profile:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deal Approval Profile**.
A sub-menu appears.
3. Click the **Search** option from the **Deal Approval Profile** sub-menu.
The **Deal Approval Profile** screen appears.
4. In the **Deal Approval Profile List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the deal approval profile whose copy you want to create.

The **Deal Approval Profile** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal approval profile.
- **Approval Hierarchy** - Used to define the approval levels in the approval hierarchy with the required limits and rights for approving a deal.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Approval Profile	Used to specify the deal approval profile.	Yes
Description	Used to specify the description for the deal approval profile.	Yes
Detailed Description	Used to specify additional information about the deal approval profile.	Yes
Approval Profile Currency	Used to indicate the currency in which the amounts are mentioned in the deal approval profile.	Yes
	Note: The list includes only those currencies which are already defined in the system.	
Status	Used to indicate the status of the deal approval profile. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: Only the active deal approval profiles can be assigned to the deal type for approving the deal.	

Tip: Alternatively, you can copy a deal approval profile by clicking the **Duplicate** button in the **Deal Approval Profile** zone.

- Enter the required details in the **Main** section.
- Add, edit, or remove approval levels in the approval hierarchy, if required.
- Click **Save**.

The new deal approval profile is defined.

Deleting a Deal Approval Profile

Procedure

To delete a deal approval:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **D** and then click **Deal Approval Profile**.

A sub-menu appears.

- Click the **Search** option from the **Deal Approval Profile** sub-menu.

The **Deal Approval Profile** screen appears.

- In the **Deal Approval Profile List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the deal approval profile that you want to delete.

A message appears confirming whether you want to delete the deal approval profile.

Note: You can delete a deal approval profile only when the deal approval profile is not yet used for creating a deal type.

Tip: Alternatively, you can delete a deal approval profile by clicking the **Delete** button in the **Deal Approval Profile** zone.

- Click **OK**.

The deal approval profile is deleted.

Viewing the Deal Approval Profile Details

Procedure

To view the details of a deal approval profile:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **D** and then click **Deal Approval Profile**.

A sub-menu appears.

- Click the **Search** option from the **Deal Approval Profile** sub-menu.

The **Deal Approval Profile** screen appears.

- In the **Deal Approval Profile List** zone, click the

Broadcast (📡) icon corresponding to the deal approval profile whose details you want to view.

The **Deal Approval Profile** zone appears.

- View the details of the deal approval profile in the **Deal Approval Profile** zone.

Deal Type

A deal type helps the system to determine:

- Whether the pricing for each price item should be approved in the deal
- Whether the deal should be assigned to users for approval as per the limits defined in the deal approval profile
- Whether the pricing and financial summary should be approved at the product level
- Whether the pricing and financial summary should be approved at the division level
- Whether the highest level approval in the approval hierarchy is required for the deal
- Whether the existing pricing should be pre-approved in the deal
- The questionnaire template using which you want to find references for creating a deal
- The deal approval profile that should be used for a product level approval
- The deal approval profile that should be used for a division level approval
- The deal approval profile that should be used for the deal level approval based on the division, customer segment, and customer tier combination

The **Deal Type** screen allows you to define, view, edit, copy, and delete a deal type. It contains the following zones:

- [Deal Type List](#) on page 2623
- [Deal Type](#) on page 2624

Deal Type List

The **Deal Type List** zone lists the deal types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Deal Type	Displays the deal type.
Description	Displays the description of the deal type.
Edit	On clicking the Edit (✎) icon corresponding to a deal type, the Deal Type screen appears where you can edit the details of the deal type.
Duplicate	On clicking the Duplicate (📄) icon corresponding to a deal type, the Deal Type screen appears where you can define a new deal type using an existing deal type.
Delete	On clicking the Delete (🗑️) icon corresponding to a deal type, you can delete the deal type. Note: You can delete a deal type only when the deal type is not yet used for creating a deal.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Deal Type**, **Description**, **Division**, **Customer Segment**, **Effective Date**, **Customer Tier**, **Status**, **Approval Type**, and **Deal Approval Profile**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to a deal type, the **Deal Type** zone appears where you can view the details of the respective deal type.

Deal Type

The **Deal Type** zone displays the details of the deal type. It contains the following sections:

- **Main** - Displays basic information about the deal type. It contains the following fields:

Field Name	Field Description
Deal Type	Displays the deal type.
Description	Displays the description of the deal type.
Detailed Description	Displays additional information about the deal type.
Deal Commitment Frequency	Indicates the periodic analysis of deal usage as per the commitments made by the customer for calculating the deal financial summary. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly
Price Item Approval Required	Indicates whether discretion check of the individual price item is required by the approver/user for approving the deal. The valid values are: <ul style="list-style-type: none"> • Yes • No
Assign Only If In Range	Indicates whether the deal is assigned to the approver/user as per the limits set in the Approval Hierarchy section of the Deal Approval Profile screen. The valid values are: <ul style="list-style-type: none"> • Yes • No
Product Level Approval Required	Indicates whether discretion check of the price items at the product level is required for approving a deal. The valid values are: <ul style="list-style-type: none"> • Yes • No

Field Name	Field Description
Division Level Approval Required	Indicates whether discretion check of the price items at the division level is required for approving a deal. The valid values are: <ul style="list-style-type: none"> • Yes • No
Highest Level Approval Required	Indicates whether hierarchical approval of the deal is required for approving a deal. The valid values are: <ul style="list-style-type: none"> • Yes • No
Status	Indicates the status of the deal type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Pre-Approve Existing Pricing	Indicates whether the existing price items pricing and commitments are approved for confirming the financial summary before approving a deal. The valid values are: <ul style="list-style-type: none"> • Yes • No
To Do Reminder Days	Displays the number of days that you want to set for notifying the relationship manager to review the deal before the effective end date.
To Do High Priority Days	Displays the number of priorities you want to set for the To Do reminder days for notifying the relationship manager to review the deal before the effective end date.
Deal Monitor To Do Type	Indicates the To Do task that you want to send as a notification to the user for the priority days set for reviewing the deal.
Questionnaire Template	Indicates the questionnaire template that you want to associate with the deal type.

- **Deal Approval Profiles** - Lists the deal level, division level, or product level approval profiles associated with the deal type using which the deal is approved in the system. It contains the following columns:

Column Name	Column Description
Effective Start Date	Indicates the date from when the deal approval profile is effective for the deal type.
	Note: The effective start date cannot be later than the effective end date.
Effective End Date	Indicates the date till when the deal approval profile is effective for the deal type.
	Note: The effective end date cannot be earlier than the effective start date.

Column Name	Column Description
Approval Type	Indicates whether the deal type is used for approving a deal in the product level approval workflow, deal level approval workflow, or division level approval workflow. The valid values are: <ul style="list-style-type: none"> Deal Division Product
Division	Indicates the division for which the deal level approval or division level approval is required. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.
Customer Segment	Indicates the customer segment to which the deal type is associated.
Customer Tier	Indicates the customer tier to which the deal type is associated.
Product	Indicates the product for which the product level approval is required. Note: It has a link. On clicking the link, the Product screen appears where you can view the details of the respective product.
Deal Approval Profile	Indicates the approval profile used for approving the deal. Note: It has a link. On clicking the link, the Deal Approval Profile screen appears where you can view the details of the respective deal approval profile.

- **Algorithms** - Lists the algorithms associated with the deal type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event when the algorithm is executed. The valid values are: <ul style="list-style-type: none"> Hierarchy Creation Completion Price Item Approval Profitability Calculation Simulation Completion
Sequence	Displays the order in which the algorithms with the same system event should be executed.
Algorithm	Indicates the algorithm attached to the system event. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics defined for the deal type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deal type.
Characteristic Type	Indicates the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the deal type.
Delete	Used to delete the deal type. Note: You can delete a deal type only when the deal type is not yet used for creating a deal.
Duplicate	Used to create a new deal type using an existing deal type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the deal type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Deal Type** zone does not appear in the **Deal Type** screen. It appears when you click the **Broadcast** () icon corresponding to a deal type in the **Deal Type List** zone.

Defining a Deal Type

Prerequisites

To define a deal type you should have:

- Business object defined for the deal type
- Values defined for the **FREQUENCY_FLG** lookup field.
- Deal approval profiles defined in the application
- Algorithms defined in the system
- Algorithms associated with the system events
- Characteristic types defined in the application (where the characteristic entity is set to **Deal Type**).
- Deal monitor To Do types defined in the application

- Questionnaire templates defined in the application

Procedure

To define a deal type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deal Type**.
A sub-menu appears.
3. Click the **Add** option from the **Deal Type** sub-menu.

The **Deal Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal type.
- **Deal Approval Profiles** - Used to associate deal level, division level, or product level approval profiles with the deal type for approving the deal.
- **Algorithms** - Used to associate algorithms with the system events defined for the deal type
- **Characteristics** - Used to define the characteristics for the deal type

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Type	Used to specify the deal type.	Yes
Description	Used to specify the description for the deal type.	Yes
Detailed Description	Used to specify additional information about the deal type.	No
Deal Commitment Frequency	Used to indicate the duration for the periodic analysis of deal usage as per the commitments made by the customer for calculating the deal financial summary. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Yes
	Note: The list includes only those values which are present in the FREQUENCY_FLG lookup field.	
Price Item Approval Required	Used to indicate whether the discretion check of an individual price item is required by the approver/user for approving the deal. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Assign Only If In Range	<p>Used to indicate whether the deal is assigned to the approver/user as per the limits set in the Approval Hierarchy section of the Deal Approval Profile screen.</p> <p>For example, if the deal profitability % range of the approver/user is set as follows:</p> <ul style="list-style-type: none"> • RM (0% - 5%) • PM (6% - 15%) • SPM (16% - 50%) <p>Then,</p> <ul style="list-style-type: none"> • If the calculated deal profitability % is 4 %, then the deal will be assigned to the relationship manager (RM). • If the calculated deal profitability % is 11 %, then the deal will be assigned to the pricing manager (PM). • If the calculated deal profitability % is 25 %, then the deal will be assigned to the senior pricing manager (SPM). <p>The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
	<p>Note: This field is required for assigning the deal when the deal financial summary falls within the specified limits defined for the approver/user.</p>	
	<p>Note: This field is valid only for deal level approval profiles.</p>	
Product Level Approval Required	<p>Used to indicate whether the discretion check of the price items at the product level is required for approving a deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
<p>Note: This field is required for approving deal at product level.</p>		
Division Level Approval Required	<p>Used to indicate whether the discretion check of the price items at the division level is required for approving a deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
<p>Note: This field is required for approving deal at division level.</p>		

Field Name	Field Description	Mandatory (Yes or No)
Highest Level Approval Required	<p>Used to indicate whether the hierarchical approval of the deal is required for approving a deal.</p> <p>For example, if the approval hierarchy has three levels L0 (RM), L1 (PM), and L2 (SPM), then the deal will pass through all the three levels for approval respectively. L0 (RM) will not be able to finalize the deal without the approval of L2 (SPM).</p> <p>The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for approving a deal by each level in the approval hierarchy.</p>
Status	<p>Used to indicate the status of the deal type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
	<p>Note: Only an Active deal type can be used for creating a deal.</p>	
Pre-Approve Existing Pricing	<p>Used to indicate whether the existing price items pricing and commitments should be pre-approved to confirm the financial summary of the deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for approving the existing price item pricing and commitments of the entity.</p>
To Do Reminder Days	Used to specify the number of days that you want to set for notifying the relationship manager to review the deal before the effective end date.	Yes
To Do High Priority Days	Used to specify the number of priorities you want to set for the To Do reminder days for notifying the relationship manager to review the deal before the effective end date	Yes
	<p>Note: You can set a maximum of 9 priority days for the To Do reminder days.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Deal Monitor To Do Type	Used to indicate the To Do task that you want to send as a notification to the relationship manager for each priority day set for reviewing the deal.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Deal Monitor To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the value for a To Do type, the description of the To Do type appears corresponding to the To Do Type field.</p>	
Questionnaire Template	Used to indicate the questionnaire template that you want to associate with the deal type using which the system searches for a list of deals which can be used as references while creating a deal.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Questionnaire Template field. On clicking the Search icon, the Search Questionnaire Template window appears.</p> <p>On specifying the value for a questionnaire template, the description of the questionnaire template appears corresponding to the Questionnaire Template field.</p>	

4. Enter the required details in the **Main** section.
5. Associate deal approval profiles with the deal type in the **Deal Approval Profiles** section.
6. Associate algorithms with the deal type in the **Algorithms** section, if required.
7. Define characteristics for the deal type in the **Characteristics** section, if required.
8. Click **Save**.

The deal type is defined.

Associating a Deal Approval Profile with a Deal Type

Prerequisites

To associate a deal approval profile with a deal type, you should have:

- Approval types defined in the application
- Divisions defined in the application
- Customer segments and customer tiers defined in the application
- Products defined in the application
- Deal approval profiles defined in the application

Procedure

To associate a deal approval profile with a deal type:

1. Ensure that the **Deal Approval Profiles** section is expanded in the **Deal Type** screen when you are defining, editing, or copying a deal type.

The **Deal Approval Profiles** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to indicate the date from when the deal approval profile is effective for the deal type.	Yes
	Note: The effective start date cannot be later than the effective end date.	
Effective End Date	Used to indicate the date till when the deal approval profile is effective for the deal type.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Approval Type	Used to indicate whether the deal type is used for approving a deal in the product level approval workflow, deal level approval workflow, or division level approval workflow. The valid values are: <ul style="list-style-type: none"> • Deal • Division • Product 	Yes
Division	Used to indicate the division for which the deal level approval, division level approval, or product level approval is required.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Used to indicate the customer segment to which the deal type is associated.	Yes
	Note: This field is disabled when you select the Division or the Product option from the Approval Type field.	
Customer Tier	Used to indicate the customer tier to which the deal type is associated.	Yes
	Note: This field is disabled when you select the Division or the Product option from the Approval Type field.	
Product	Used to indicate the product for which the product level approval is required.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Product Search window appears.</p> <p>On specifying a product, the description of the product appears corresponding to the Product field.</p> <p>This field is enabled only when you select the Product option from the Approval Type field.</p>	Note: This field is required for approving a deal in the product level approval workflow.
Deal Approval Profile	Used to indicate the approval profile which you want to use for approving the deal.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Deal Approval Profile field. On clicking the Search icon, the Deal Approval Profile Search window appears.</p> <p>On specifying the value for a deal approval profile, the description of the deal approval profile appears corresponding to the Deal Approval Profile field.</p>	

- Enter the required details in the **Deal Approval Profiles** section.
- If you want to associate more than one deal approval profile with the deal type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate a deal approval profile from the deal type, click the **Delete** (🗑️) icon corresponding to the deal approval profile.

- Click **Save**.

The deal approval profile is associated with the deal type.

Associating an Algorithm with a Deal Type**Prerequisites**

To associate an algorithm with a deal type, you should have:

- System events defined in the application
- Algorithms defined for the system events

Procedure

To associate an algorithm with a deal type:

1. Ensure that the **Algorithms** section is expanded in the **Deal Type** screen when you are defining, editing, or copying a deal type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when the algorithm is executed. Note: The list includes only those values which are specified in the DEAL_TYPE_ALG_ENT_FLG lookup field.	Yes
Sequence	Used to specify the order in which the algorithms with the same system event should be executed.	Yes
Algorithm	Used to indicate the algorithm attached to the system event. Note: The Search (🔍) icon appears corresponding to the Algorithm field. On clicking the Search icon, the Algorithm Search window appears. On specifying the value for an algorithm, the description of the algorithm appears corresponding to the Algorithm field.	Yes

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the deal type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the deal type, click the **Delete** (🗑️) icon corresponding to the algorithm.

4. Click **Save**.

The algorithm is associated with the deal type.

Defining a Characteristic for a Deal Type

Prerequisites

To define a characteristic for a deal type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deal Type**)

Procedure

To define a characteristic for a deal type:

1. Ensure that the **Characteristics** section is expanded in the **Deal Type** screen when you are defining, editing, or copying a deal type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deal type.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the deal type.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Deal Type .	Yes (Conditional)
		Note: This field is required while defining a characteristic for the deal type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a characteristic for the deal type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deal type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deal type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the deal type.

Editing a Deal Type

Prerequisites

To edit a deal type you should have:

- Deal approval profiles defined in the application
- Values defined for the **FREQUENCY_FLG** lookup field.
- Deal approval profiles defined in the application
- Algorithms defined in the system
- Algorithms associated with the system events
- Characteristic types defined in the application (where the characteristic entity is set to **Deal Type**).
- Deal monitor To Do types defined in the application
- Questionnaire templates defined in the application

Procedure

To edit a deal type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deal Type**.
A sub-menu appears.
3. Click the **Search** option from the **Deal Type** sub-menu.
The **Deal Type** screen appears.
4. In the **Deal Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the deal type whose details you want to edit.

The **Deal Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal type.
- **Deal Approval Profiles** - Used to associate deal level, division level, or product level approval profiles with the deal type for approving the deal.
- **Algorithms** - Used to associate algorithms with the system events defined for the deal type
- **Characteristics** - Used to define the characteristics for the deal type

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Type	Used to specify the deal type.	Not Applicable
Description	Used to specify the description for the deal type.	Yes
Detailed Description	Used to specify additional information about the deal type.	No
Deal Commitment Frequency	Used to indicate the duration for the periodic analysis of deal usage as per the commitments made by the customer for calculating the deal financial summary. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Yes
	Note: The list includes only those values which are present in the FREQUENCY_FLG lookup field.	
Price Item Approval Required	Used to indicate whether the discretion check of an individual price item is required by the approver/user for approving the deal. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Assign Only If In Range	<p>Used to indicate whether the deal is assigned to the approver/user as per the limits set in the Approval Hierarchy section of the Deal Approval Profile screen.</p> <p>For example, if the deal profitability % range of the approver/user is set as follows:</p> <ul style="list-style-type: none"> • RM (0% - 5%) • PM (6% - 15%) • SPM (16% - 50%) <p>Then,</p> <ul style="list-style-type: none"> • If the calculated deal profitability % is 4 %, then the deal will be assigned to the relationship manager (RM). • If the calculated deal profitability % is 11 %, then the deal will be assigned to the pricing manager (PM). • If the calculated deal profitability % is 25 %, then the deal will be assigned to the senior pricing manager (SPM). <p>The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
	<p>Note: This field is required for assigning the deal when the deal financial summary falls within the specified limits defined for the approver/user.</p>	
	<p>Note: This field is valid only for deal level approval profiles.</p>	
Product Level Approval Required	<p>Used to indicate whether the discretion check of the price items at the product level is required for approving a deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
<p>Note: This field is required for approving deal at product level.</p>		
Division Level Approval Required	<p>Used to indicate whether the discretion check of the price items at the division level is required for approving a deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
<p>Note: This field is required for approving deal at division level.</p>		

Field Name	Field Description	Mandatory (Yes or No)
Highest Level Approval Required	<p>Used to indicate whether the hierarchical approval of the deal is required for approving a deal.</p> <p>For example, if the approval hierarchy has three levels L0 (RM), L1 (PM), and L2 (SPM), then the deal will pass through all the three levels for approval respectively. L0 (RM) will not be able to finalize the deal without the approval of L2 (SPM).</p> <p>The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for approving a deal by each level in the approval hierarchy.</p>
Status	<p>Used to indicate the status of the deal type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
	<p>Note: Only an Active deal type can be used for creating a deal.</p>	
Pre-Approve Existing Pricing	<p>Used to indicate whether the existing price items pricing and commitments should be pre-approved to confirm the financial summary of the deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for approving the existing price item pricing and commitments of the entity.</p>
To Do Reminder Days	<p>Used to specify the number of days that you want to set for notifying the relationship manager to review the deal before the effective end date.</p>	Yes
To Do High Priority Days	<p>Used to specify the number of priorities you want to set for the To Do reminder days for notifying the relationship manager to review the deal before the effective end date</p>	Yes
	<p>Note: You can set a maximum of 9 priority days for the To Do reminder days.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Deal Monitor To Do Type	Used to indicate the To Do task that you want to send as a notification to the relationship manager for each priority day set for reviewing the deal.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Deal Monitor To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the value for a To Do type, the description of the To Do type appears corresponding to the To Do Type field.</p>	
Questionnaire Template	Used to indicate the questionnaire template that you want to associate with the deal type using which the system searches for a list of deals which can be used as references while creating a deal.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Questionnaire Template field. On clicking the Search icon, the Search Questionnaire Template window appears.</p> <p>On specifying the value for a questionnaire template, the description of the questionnaire template appears corresponding to the Questionnaire Template field.</p>	

5. Modify the required details in the **Main** section.

Note: You cannot edit fields from the **Main** section when a deal is already created using the deal type.

6. Associate or disassociate deal approval profiles from the deal type, if required.
7. Associate or disassociate algorithms from the deal type, if required.
8. Define, edit, or remove characteristics of the deal type, if required.
9. Click **Save**.

The changes made to the deal type are saved.

Tip: Alternatively, you can edit the details of a deal type by clicking the **Edit** button in the **Deal Type** zone.

Copying a Deal Type

Instead of creating a deal type from scratch, you can create a new deal type using an existing deal type. This is possible through copying a deal type. On copying a deal type, the details including the deal approval profiles, algorithms, and characteristics are copied to the new deal type. You can then edit the details, if required.

Prerequisites

To copy a deal type you should have:

- Deal type (whose copy you want to create) defined in the application
- Values defined for the **FREQUENCY_FLG** lookup field.
- Deal approval profiles defined in the application
- Algorithms defined in the system
- Algorithms associated with the system events
- Characteristic types defined in the application (where the characteristic entity is set to **Deal Type**).
- Deal monitor To Do types defined in the application
- Questionnaire templates defined in the application

Procedure

To copy a deal type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deal Type**.
A sub-menu appears.
3. Click the **Search** option from the **Deal Type** sub-menu.
The **Deal Type** screen appears.
4. In the **Deal Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the deal type whose copy you want to create.

The **Deal Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal type.
- **Deal Approval Profiles** - Used to associate deal level, division level, or product level approval profiles with the deal type for approving the deal.
- **Algorithms** - Used to associate algorithms with the system events defined for the deal type
- **Characteristics** - Used to define the characteristics for the deal type

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Type	Used to specify the deal type.	Yes
Description	Used to specify the description for the deal type.	Yes
Detailed Description	Used to specify additional information about the deal type.	No
Deal Commitment Frequency	Used to indicate the duration for the periodic analysis of deal usage as per the commitments made by the customer for calculating the deal financial summary. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Yes
	Note: The list includes only those values which are present in the FREQUENCY_FLG lookup field.	
Price Item Approval Required	Used to indicate whether the discretion check of an individual price item is required by the approver/user for approving the deal. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Assign Only If In Range	<p>Used to indicate whether the deal is assigned to the approver/user as per the limits set in the Approval Hierarchy section of the Deal Approval Profile screen.</p> <p>For example, if the deal profitability % range of the approver/user is set as follows:</p> <ul style="list-style-type: none"> • RM (0% - 5%) • PM (6% - 15%) • SPM (16% - 50%) <p>Then,</p> <ul style="list-style-type: none"> • If the calculated deal profitability % is 4 %, then the deal will be assigned to the relationship manager (RM). • If the calculated deal profitability % is 11 %, then the deal will be assigned to the pricing manager (PM). • If the calculated deal profitability % is 25 %, then the deal will be assigned to the senior pricing manager (SPM). <p>The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for assigning the deal when the deal financial summary falls within the specified limits defined for the approver/user.</p>
	<p>Note: This field is valid only for deal level approval profiles.</p>	
Product Level Approval Required	<p>Used to indicate whether the discretion check of the price items at the product level is required for approving a deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for approving deal at product level.</p>
Division Level Approval Required	<p>Used to indicate whether the discretion check of the price items at the division level is required for approving a deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for approving deal at division level.</p>

	<p>Note: Only an Active deal type can be used for creating a deal.</p>	
Pre-Approve Existing Pricing	<p>Used to indicate whether the existing price items pricing and commitments should be pre-approved to confirm the financial summary of the deal. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 	Yes (Conditional)
		<p>Note: This field is required for approving the existing price item pricing and commitments of the entity.</p>
To Do Reminder Days	<p>Used to specify the number of days that you want to set for notifying the relationship manager to review the deal before the effective end date.</p>	Yes
To Do High Priority Days	<p>Used to specify the number of priorities you want to set for the To Do reminder days for notifying the relationship manager to review the deal before the effective end date</p>	Yes
	<p>Note: You can set a maximum of 9 priority days for the To Do reminder days.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Deal Monitor To Do Type	Used to indicate the To Do task that you want to send as a notification to the relationship manager for each priority day set for reviewing the deal.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Deal Monitor To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the value for a To Do type, the description of the To Do type appears corresponding to the To Do Type field.</p>	
Questionnaire Template	Used to indicate the questionnaire template that you want to associate with the deal type using which the system searches for a list of deals which can be used as references while creating a deal.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Questionnaire Template field. On clicking the Search icon, the Search Questionnaire Template window appears.</p> <p>On specifying the value for a questionnaire template, the description of the questionnaire template appears corresponding to the Questionnaire Template field.</p>	

5. Enter the required details in the **Main** section.
6. Associate or disassociate deal approval profiles from the deal type, if required.
7. Associate or disassociate algorithms from the deal type, if required.
8. Define, edit, or remove characteristics of the deal type, if required.
9. Click **Save**.

The new deal type is defined.

Tip: Alternatively, you can copy a deal type by clicking the **Duplicate** button in the **Deal Type** zone.

Deleting a Deal Type

Procedure

To delete a deal type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deal Type**.
A sub-menu appears.
3. Click the **Search** option from the **Deal Type** sub-menu.
The **Deal Type** screen appears.
4. In the **Deal Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the deal type that you want to delete.
A message appears confirming whether you want to delete the deal type.

Note: You can delete a deal type only when the deal type is not yet used for creating a deal.

Tip: Alternatively, you can delete a deal type by clicking the **Delete** button in the **Deal Type** zone.

5. Click **OK**.
The deal type is deleted.

Questionnaire Template (Used for Searching)

The **Questionnaire Template** screen allows you to search for a questionnaire template using various search criteria. It also allows you to define, edit, copy, delete, and preview a questionnaire template. It contains the following zone:

- [Search Questionnaire Template](#) on page 2647

Through this screen, you can navigate to the following screen:

- [Questionnaire Template \(Used for Viewing\)](#) on page 2666

Search Questionnaire Template

The **Search Questionnaire Template** zone allows you to search for a questionnaire template using various search criteria. It also allows you to edit, copy, delete, and preview an existing questionnaire template. It contains the following sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Questionnaire Template	Used to search a particular questionnaire template.	No
Description	Used to search questionnaire templates having a particular description.	No
Start Date	Used to search questionnaire templates which are effective from a particular date onwards.	No
End Date	Used to search questionnaire templates which are effective till a particular date.	No

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Questionnaire Template Information	Displays the concatenated string of information about the questionnaire template separated by a comma (.). Note: It has a link. On clicking the link, the Questionnaire Template screen appears where you can view the details of the respective questionnaire template.
Description	Displays the description of the questionnaire template.
Start Date	Displays the date from when the questionnaire template is effective.
End Date	Displays the date till when the questionnaire template is effective.
Edit	On clicking the Edit (✎) icon, the Questionnaire Template screen appears where you can edit the questionnaire template details.
Duplicate	On clicking the Duplicate (📄) icon, the Questionnaire Template screen appears where you can define a questionnaire template using an existing questionnaire template.
Delete	On clicking the Delete (🗑) icon, you can delete the questionnaire template.
Preview	On clicking the Preview (🔍) icon, Preview Questionnaire Template screen appears where you can preview the questions of a questionnaire template.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Defining a Questionnaire Template

Prerequisites

To define a questionnaire template you should have:

- Questions defined in the application.
- Reference tables and reference columns defined in the application.
- Validation algorithms defined in the application.
- Reference parameter defined in the application.
- Rule types defined in the application.
- Values defined for the **DEAL_QUE_DISP_FLG**, **ANS_DISPLAY_FLG** and **APPLICABLE_FOR_FLG** lookup fields.

Procedure

To define a questionnaire template:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **Q** and then click **Questionnaire Template**.

A sub-menu appears.

- Click the **Add** option from the **Questionnaire Template** sub-menu.

The **Questionnaire Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the questionnaire template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Questionnaire Template	Used to specify the questionnaire template.	Yes
Description	Used to specify the description for the questionnaire template.	Yes
Start Date	Used to specify the date from when the questionnaire template is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the questionnaire template is effective.	No
Question Display Order	Used to indicate the order in which the questions of the questionnaire template should appear in the Questionnaire Template screen. The valid values are: <ul style="list-style-type: none"> • Rule based • Sequence based 	Yes

- **Questions** - Used to associate the rule based or sequence based questions with the questionnaire template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Question	Used to specify the question that you want to associate with the questionnaire template. <div style="border: 1px solid black; padding: 5px;"> Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Question Search window appears where you can search for a question. </div>	Yes
Question Text	Used to specify the question statement.	Yes
Sequence	Used to specify the sequence number of the question.	Yes
Answer Type	Used to indicate the type in which you want to select the answer for the question. The valid values are: <ul style="list-style-type: none"> • Date • Decimal Value • Multi Selection Check Box List • Multi Selection from Drop Down List • Numeric Value • Percentage • Radio Button List • Single Selection Drop Down List • Text 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Answer Value Set	<p>Indicates the references from where you want to search for the answer of the question. The valid values are:</p> <ul style="list-style-type: none"> Reference Data <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a specific reference table given in the system. <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p> <ul style="list-style-type: none"> Predefined List <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a predefined list defined in the system. <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching answers from a given reference.</p>
Reference Table	<p>Used to indicate a specific table that you want to set as a source for searching the answer of the question.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Table Search window appears.</p> <p>On specifying the table, the description of the table appears corresponding to the Reference Table field.</p> <p>This field is enabled only when the Reference Data option radio button is selected from the Answer Value Set field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the answer from a reference table.</p>

Field Name	Field Description	Mandatory (Yes or No)
Reference Column	Used to indicate the column in the reference table from where you want to search for the answer of the question.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Column Search window appears.</p> <p>On specifying the column, the description of the column appears corresponding to the Reference Column field.</p> <p>This field is enabled only when the Reference Data option radio button is selected from the Answer Value Set field.</p>	<p>Note: This field is required for searching the answer from a reference table.</p>
Reference Criteria	Used to specify the criteria based on which you want to search for the answer from the given reference.	No
Validation Algorithm	Used to indicate the algorithm that you want to use for validating the answer of the question.	Yes
	<p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears where you can search for an algorithm.</p>	
Default Answer	Used to specify the answer that you want to set as default for the question.	No
Mandatory	Used to indicate whether the question is mandatory or not.	No
	<p>Note: On selecting the check box of the Mandatory field, the question appears with an asterisk (*) sign in the questionnaire template.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Reference Parameter	<p>Used to indicate the parameter which is used to check the eligibility while recommending the reference customers / products / packages.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the Reference Parameter field.</p>	No
Rule Type	<p>Used to indicate the rule type using which the next question appears in the Questionnaire Template screen.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rule Type Search window appears.</p> <p>On specifying the rule type, the description of the rule type appears corresponding to the Rule Type field.</p> <p>This field is used when the Question Display Order is selected as Rule Based.</p>	<p>Yes (Conditional)</p> <p>Note: This field is used for displaying the next question based on the answer provided for the previous question in the questionnaire template.</p>
Question Applicability	<p>Used to indicate the question applicability based on which the references are derived. The valid values are:</p> <ul style="list-style-type: none"> • Customer and Deal References • Package and Product References • Others 	Yes
Predefined Value	<p>Used to specify the predefined list from where you want the system to search the answer for a question.</p> <p>Note: This field is enabled when the Predefined List option radio button is selected from the Answer Value Set field.</p>	<p>Yes (Conditional).</p> <p>Note: This field is required for searching the answer from a predefined list.</p>

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description of the predefined list.	Yes (Conditional)
		Note: This field is required for searching the answer from a predefined list.

4. Enter the required details in the **Main** section.
5. Define questions for the questionnaire template in the **Questions** section.
6. If you want to define more than one question for the questionnaire template, click the **Add (+)** icon in the **Questions** section.

Note: However, if you want to remove a question from the questionnaire template, click the **Delete (🗑)** icon in the **Questions** section.

7. Click **Save**.

The questionnaire template is defined.

Editing a Questionnaire Template

Prerequisites

To edit a questionnaire template you should have:

- Questions defined in the application.
- Reference tables and reference columns defined in the application.
- Validation algorithms defined in the application.
- Reference parameter defined in the application.
- Rule types defined in the application.
- Values defined for the **DEAL_QUE_DISP_FLG**, **ANS_DISPLAY_FLG** and **APPLICABLE_FOR_FLG** lookup fields.

Procedure

To edit a questionnaire template:

1. Search for the questionnaire template in the **Questionnaire Template** screen.
2. In the **Search Results** section, click the **Edit (✎)** icon in the **Edit** column corresponding to the questionnaire template whose details you want to edit.

The **Questionnaire Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the questionnaire template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Questionnaire Template	Used to specify the questionnaire template.	Not applicable
Description	Used to specify the description for the questionnaire template.	No
Start Date	Used to specify the date from when the questionnaire template is effective.	Yes
End Date	Used to specify the date till when the questionnaire template is effective.	No
Question Display Order	Used to indicate the order in which the questions of the questionnaire template should appear in the Questionnaire Template screen. The valid values are: <ul style="list-style-type: none"> • Rule based • Sequence based 	Yes

- **Questions** - Used to associate the rule based or sequence based questions with the questionnaire template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Question	Used to specify the question that you want to associate with the questionnaire template.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Question Search window appears where you can search for a question.	
Question Text	Used to specify the question statement.	Yes
Sequence	Used to specify the sequence number of the question.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Answer Type	<p>Used to indicate the type in which you want to select the answer for the question. The valid values are:</p> <ul style="list-style-type: none"> • Date • Decimal Value • Multi Selection Check Box List • Multi Selection from Drop Down List • Numeric Value • Percentage • Radio Button List • Single Selection Drop Down List • Text 	Yes
Answer Value Set	<p>Indicates the references from where you want to search for the answer of the question. The valid values are:</p> <ul style="list-style-type: none"> • Reference Data <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a specific reference table given in the system. <div data-bbox="800 1098 1167 1272" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p> </div> • Predefined List <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a predefined list defined in the system. <div data-bbox="800 1486 1167 1661" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p> </div> 	<p>Yes (Conditional)</p> <div data-bbox="1177 846 1472 984" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required for searching answers from a given reference.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
Reference Table	<p>Used to indicate a specific table that you want to set as a source for searching the answer of the question.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Table Search window appears.</p> <p>On specifying the table, the description of the table appears corresponding to the Reference Table field.</p> <p>This field is enabled only when the Reference Data option radio button is selected from the Answer Value Set field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the answer from a reference table.</p>
Reference Column	<p>Used to indicate the column in the reference table from where you want to search for the answer of the question.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Column Search window appears.</p> <p>On specifying the column, the description of the column appears corresponding to the Reference Column field.</p> <p>This field is enabled only when the Reference Data option radio button is selected from the Answer Value Set field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the answer from a reference table.</p>
Reference Criteria	<p>Used to specify the criteria based on which you want to search for the answer from the given reference.</p>	No
Validation Algorithm	<p>Used to indicate the algorithm that you want to use for validating the answer of the question.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears where you can search for an algorithm.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Answer	Used to specify the answer that you want to set as default for the question.	No
Mandatory	Used to indicate whether the question is mandatory or not. Note: On selecting the check box of the Mandatory field, the question appears with an asterisk (*) sign in the questionnaire template.	No
Reference Parameter	Used to indicate the parameter which is used to check the eligibility while recommending the reference customers / products / packages. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears corresponding to the Reference Parameter field.	No
Rule Type	Used to indicate the rule type using which the next question appears in the Questionnaire Template screen. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rule Type Search window appears. On specifying the rule type, the description of the rule type appears corresponding to the Rule Type field. This field is used when the Question Display Order is selected as Rule Based .	Yes (Conditional) Note: This field is used for displaying the next question based on the answer provided for the previous question in the questionnaire template.

Field Name	Field Description	Mandatory (Yes or No)
Question Applicability	Used to indicate the question applicability based on which the references are derived. The valid values are: <ul style="list-style-type: none"> • Customer and Deal References • Package and Product References • Others 	Yes
Predefined Value	Used to specify the predefined list from where you want the system to search the answer for a question.	Yes (Conditional).
	Note: This field is enabled when the Predefined List option radio button is selected from the Answer Value Set field.	Note: This field is required for searching the answer from a predefined list.
Description	Used to specify the description of the predefined list.	Yes (Conditional)
		Note: This field is required for searching the answer from a predefined list.

3. Modify the required details in the **Main** section.
4. Add, edit, or remove questions from the questionnaire template, if required.

Note: Click the **Previous** (←) or **Next** (→) icons in the **Questions** section to navigate through the existing questions of the questionnaire template which you want to edit or delete.

5. Click **Save**.

The changes made to the questionnaire template are saved.

Tip: Alternatively, you can edit the details of a questionnaire template by clicking the **Edit** button in the **Questionnaire Template** zone of the **Questionnaire Template** screen.

Copying a Questionnaire Template

Instead of creating a questionnaire template from scratch, you can create a new questionnaire template using an existing questionnaire template. This is possible through copying a questionnaire template. On copying a

questionnaire template, the details including the questions are copied to the new questionnaire template. You can then edit the details, if required.

Prerequisites

To copy a questionnaire template you should have:

- Questions defined in the application.
- Reference tables and reference columns defined in the application.
- Validation algorithms defined in the application.
- Reference parameter defined in the application.
- Rule types defined in the application.
- Values defined for the **DEAL_QUE_DISP_FLG**, **ANS_DISPLAY_FLG** and **APPLICABLE_FOR_FLG** lookup fields.

Procedure

To copy a questionnaire template:

1. Search for the questionnaire template in the **Questionnaire Template** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the questionnaire template whose copy you want to create.

The **Questionnaire Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the questionnaire template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Questionnaire Template	Used to specify the questionnaire template.	Yes
Description	Used to specify the description for the questionnaire template.	Yes
Start Date	Used to specify the date from when the questionnaire template is effective.	Yes
End Date	Used to specify the date till when the questionnaire template is effective.	No
Question Display Order	Used to indicate the order in which the questions of the questionnaire template should appear in the Questionnaire Template screen. The valid values are: <ul style="list-style-type: none"> • Rule based • Sequence based 	Yes

- **Questions** - Used to associate the rule based or sequence based questions with the questionnaire template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Question	Used to specify the question that you want to associate with the questionnaire template.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Question Search window appears where you can search for a question.	
Question Text	Used to specify the question statement.	Yes
Sequence	Used to specify the sequence number of the question.	Yes
Answer Type	Used to indicate the type in which you want to select the answer for the question. The valid values are: <ul style="list-style-type: none"> • Date • Decimal Value • Multi Selection Check Box List • Multi Selection from Drop Down List • Numeric Value • Percentage • Radio Button List • Single Selection Drop Down List • Text 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Answer Value Set	<p>Indicates the references from where you want to search for the answer of the question. The valid values are:</p> <ul style="list-style-type: none"> Reference Data <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a specific reference table given in the system. <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p> <ul style="list-style-type: none"> Predefined List <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a predefined list defined in the system. <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching answers from a given reference.</p>
Reference Table	<p>Used to indicate a specific table that you want to set as a source for searching the answer of the question.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Table Search window appears.</p> <p>On specifying the table, the description of the table appears corresponding to the Reference Table field.</p> <p>This field is enabled only when the Reference Data option radio button is selected from the Answer Value Set field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the answer from a reference table.</p>

Field Name	Field Description	Mandatory (Yes or No)
Reference Column	Used to indicate the column in the reference table from where you want to search for the answer of the question.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Column Search window appears.</p> <p>On specifying the column, the description of the column appears corresponding to the Reference Column field.</p> <p>This field is enabled only when the Reference Data option radio button is selected from the Answer Value Set field.</p>	<p>Note: This field is required for searching the answer from a reference table.</p>
Reference Criteria	Used to specify the criteria based on which you want to search for the answer from the given reference.	No
Validation Algorithm	Used to indicate the algorithm that you want to use for validating the answer of the question.	Yes
	<p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears where you can search for an algorithm.</p>	
Default Answer	Used to specify the answer that you want to set as default for the question.	No
Mandatory	Used to indicate whether the question is mandatory or not.	No
	<p>Note: On selecting the check box of the Mandatory field, the question appears with an asterisk (*) sign in the questionnaire template.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Reference Parameter	<p>Used to indicate the parameter which is used to check the eligibility while recommending the reference customers / products / packages.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the Reference Parameter field.</p>	No
Rule Type	<p>Used to indicate the rule type using which the next question appears in the Questionnaire Template screen.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rule Type Search window appears.</p> <p>On specifying the rule type, the description of the rule type appears corresponding to the Rule Type field.</p> <p>This field is used when the Question Display Order is selected as Rule Based.</p>	<p>Yes (Conditional)</p> <p>Note: This field is used for displaying the next question based on the answer provided for the previous question in the questionnaire template.</p>
Question Applicability	<p>Used to indicate the question applicability based on which the references are derived. The valid values are:</p> <ul style="list-style-type: none"> • Customer and Deal References • Package and Product References • Others 	Yes
Predefined Value	<p>Used to specify the predefined list from where you want the system to search the answer for a question.</p> <p>Note: This field is enabled when the Predefined List option radio button is selected from the Answer Value Set field.</p>	<p>Yes (Conditional).</p> <p>Note: This field is required for searching the answer from a predefined list.</p>

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description of the predefined list.	Yes (Conditional)
		Note: This field is required for searching the answer from a predefined list.

- Enter the required details in the **Main** section.
- Add, edit, or remove questions from the questionnaire template, if required.

Note: Click the **Previous** (←) or **Next** (→) icons in the **Questions** section to navigate through the existing questions of the questionnaire template which you want to edit or delete.

- Click **Save**.

The new questionnaire template is defined.

Editing a Question

Prerequisites

To edit a question of a questionnaire template you should have:

- Questions defined in the application.
- Reference tables and reference columns defined in the application.
- Validation algorithms defined in the application.
- Reference parameter defined in the application.
- Rule types defined in the application.
- Values defined for the **DEAL_QUE_DISP_FLG**, **ANS_DISPLAY_FLG** and **APPLICABLE_FOR_FLG** lookup fields.

Procedure

To edit a question:

1. Search for the questionnaire template in the **Questionnaire Template** screen.
2. In the **Search Results** section, click the link in the **Questionnaire Template Information** column corresponding to the questionnaire template whose question you want to edit.

The **Questionnaire Template** screen appears.

3. Ensure that the **Questions** zone is expanded in the **Questionnaire Template** screen.
4. Click the **Edit**  icon in the **Edit** column corresponding to the question that you want to edit.

The **Question** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Question	Used to specify the question that you want to associate with the questionnaire template. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Question Search window appears where you can search for a question.	Yes
Question Text	Used to specify the question statement.	Yes
Sequence	Used to specify the sequence number of the question.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Answer Type	<p>Used to indicate the type in which you want to select the answer for the question. The valid values are:</p> <ul style="list-style-type: none"> • Date • Decimal Value • Multi Selection Check Box List • Multi Selection from Drop Down List • Numeric Value • Percentage • Radio Button List • Single Selection Drop Down List • Text 	Yes
Answer Value Set	<p>Indicates the references from where you want to search for the answer of the question. The valid values are:</p> <ul style="list-style-type: none"> • Reference Data <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a specific reference table given in the system. <div data-bbox="756 1098 1151 1272" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p> </div> • Predefined List <ul style="list-style-type: none"> - Used to indicate that you want to search for the answer from a predefined list defined in the system. <div data-bbox="756 1486 1151 1661" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is disabled when you select the Date, Decimal Value, Numeric Value, Percentage, or Text option from the Answer Type list.</p> </div> 	<p>Yes (Conditional)</p> <div data-bbox="1159 846 1468 953" style="border: 1px solid black; padding: 2px;"> <p>Note: This field is required for searching answers from a given reference.</p> </div>

Prospect

The **Prospect** screen allows you to search for a prospect using various search criteria. It also allows you to define and edit a prospect. It contains the following zone:

- [Prospect](#) on page 2673

Prospect

The **Prospect** zone allows you to search for a prospect using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search prospects which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Prospect Person Name	Used to search for a particular prospect person.	No

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Used to search prospects which are associated to a particular business component.	No
	Note: This field appears when you click the Advanced Search link in the top right corner of this zone.	
Prospect Person ID	Used to search for a particular prospect.	No
Prospect Person Identifier Type	Used to indicate the identifier type based on which you want to search for a prospect.	Yes (Conditional)
		Note: If you specify the prospect person identifier as a search criteria, you have to select the prospect person identifier type.
Prospect Person Identifier	Used to specify the identifier based on which you want to search for a prospect person.	Yes (Conditional)
		Note: If you indicate the prospect person identifier type as a search criteria, you have to enter the prospect person identifier.

Note: You must specify at least one search criterion while searching for a prospect.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Prospect Person Information	Displays the concatenated string of information about the prospect separated by a comma (,).
	Note: It has a link. On clicking the link, the Prospect Person screen appears where you can view or edit the details of the respective prospect.
Prospect Person Identifier Type	Indicates the identifier type of the prospect.
Prospect Person Identifier	Displays the value of the prospect person identifier type.
Division	Displays the division to which the prospect belongs.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Searching for a Prospect

Prerequisites

To search for a prospect, you should have:

- Divisions defined in the application
- Prospects associated with the division
- Customer segments defined in the application
- Prospects associated with the respective customer segment
- Prospect customer identifier types defined in the application

Procedure

To search for a prospect:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Modelling and Simulation** and then click **Prospect**.
A sub-menu appears.
3. Click the **Search** option from the **Prospect** sub-menu.
The **Prospect** screen appears.
4. Enter the search criteria in the **Prospect** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of prospects that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Editing a Prospect Person

Prerequisites

To edit a prospect person, you should have:

- Prospect (which you want to edit) defined in the application
- Customer segments and customer tiers defined in the application
- Access groups defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)
- Person identifier types defined in the application
- Relationship types defined in the application

Procedure

To edit a prospect person:

1. Search for the prospect person in the **Prospect** screen.
2. In the **Search Results** section, click the link in the **Prospect Person Information** column corresponding to the prospect whose details you want to edit.

The **Prospect Person** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the prospect person.
- **Prospect Person Address** - Used to define or edit the address of the prospect person.
- **Prospect Person Characteristics** - Used to define, edit, or remove characteristics of the prospect person.
- **Prospect Person Identifiers** - Used to associate or disassociate identifiers from the prospect person.
- **Prospect Person Relationships** - Used to associate or disassociate child persons with the prospect person.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Prospect Person ID	Indicates the prospect person ID for which you want to edit the prospect person details.	Not applicable
	Note: By default, the Prospect Person ID field is in the read-only mode.	
Prospect Person Name	Used to specify the name for the prospect person.	No
Division	Used to indicate the division to which the prospect person is associated.	No
	Note: This field cannot be edited when an account is defined for the prospect person. You can only view those divisions to which you have access in the Division list.	

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Used to indicate the business component to which you want to associate the prospect person.	No
	Note: The list includes only those values which are present in the CUST_SEG_FLG lookup field.	
Customer Tier	Used to indicate the customer tier.	No
	Note: The list includes only those values which are present in the CUST_TIER_FLG lookup field.	
Access Group	Used to indicate the users who can view and edit the details of the prospect person.	Yes
Email Address	Used to specify the email address of the prospect person.	No
Date Of Birth	Used to specify the date of birth of the prospect person.	No

3. Modify the required details in the **Main** section.
4. Define or edit address of the prospect person, if required.
5. Define, edit, or remove characteristics of the prospect person, if required.
6. Associate or disassociate identifiers from the prospect person, if required.
7. Associate or disassociate child persons from the prospect person, if required.
8. Click **Save**.

The changes made to the prospect person are saved.

Editing a Prospect Account

Prerequisites

To edit a prospect account, you should have:

- Prospect (whose account details you want to edit) defined in the application

- Customer class defined in the application
- Currencies defined in the application
- Bill Cycles defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Account identifier types defined in the application

Procedure

To edit a prospect account:

1. Search for the prospect person whose account details you want to edit in the **Prospect** screen.
2. Modify the required details in the **Prospect Person** screen, if required.
3. Click **Save**.

The changes made to the prospect person are saved.

4. Click **Next**.

The **Prospect Account** screen appears. It contains the following sections:

- **Prospect Account List** - Lists the accounts which are associated with the prospect person.

Note: By default, the **Prospect Account List** section does not appear. It appears only when an account is defined for a prospect person.

- **Main** - Used to specify basic details about the prospect account.
- **Prospect Account Characteristics** - Used to define, edit, or remove characteristics of the prospect account.
- **Prospect Account Identifiers** - Used to add, edit, or remove identifiers from the prospect account.

The **Prospect Account List** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Prospect Person ID	Displays the prospect person to which the account is associated.	Not applicable
Prospect Account Information	Displays information about the prospect account.	Yes
	Note: It has a link. On clicking the link, the details of the prospect account is accessible for editing in the Main , Prospect Account Characteristics , and Prospect Account Identifiers sections.	
Division	Indicates the division to which the prospect account is associated.	Not applicable
Set Up Date	Displays the date from when the prospect account is available for calculating the financial summary of the deal.	Not applicable

5. Click the link in the **Prospect Account Information** column corresponding to the account whose details you want to edit.

The details of the account is accessible for editing in the **Main**, **Prospect Account Characteristics** , and **Prospect Account Identifiers** sections.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Prospect Person ID	Displays the prospect person to which the account is associated.	Not applicable
	Note: By default, the Prospect Person ID field is in the read-only mode.	
Prospect Account ID	Displays the account associated with the prospect person.	Not applicable
	Note: By default, the Prospect Account ID field is in the read-only mode.	
Customer Class	Used to indicate the customer class to which the prospect account belongs.	Yes
Division	Indicates the division to which the prospect account is associated.	Not applicable
	Note: By default, the Division field is in the read-only mode.	
Set Up Date	Used to specify the date from when the prospect account is available for calculating the financial summary of the deal.	Yes
Invoice Currency	Used to indicate the currency in which you want the financial summary of the prospect account to be calculated for the deal.	Yes
Bill Cycle	Used to indicate the time interval in which you want to create the financial summary of the account for the deal.	No
Access Group	Indicates the users who can view or edit the details of the account.	Not applicable
	Note: By default, the Access Group field is in the read-only mode.	

6. Modify the required details in the **Main** section.
7. Define, edit, or remove characteristics of the **Prospect Account Characteristics** section, if required.
8. Add, edit, or remove identifier details from the **Prospect Account Identifiers** section, if required.
9. Click **Save**.

The changes made to the prospect account are saved.

Defining an Account for a Prospect Person

Prerequisites

To define an account for a prospect person, you should have:

- Customer classes defined in the application
- Bill cycles defined in the application
- Currencies defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Account identifier types defined in the application

Procedure

To define an account for a prospect person:

1. Ensure that the **Prospect Account** screen is open when you are defining or editing a prospect person.

The **Prospect Account** screen contains the following sections:

- **Prospect Account List** - Lists the accounts which are defined for the prospect person.

Note: By default, the **Prospect Account List** section does not appear. It appears when you define an account for a prospect person.

- **Main** - Used to specify basic details about the prospect account.
- **Prospect Account Characteristics** - Used to define a list of characteristics for the prospect account.
- **Prospect Account Identifiers** - Used to associate identifiers with the prospect account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Prospect Person ID	Indicates the prospect person for whom you want to define the account.	Not applicable
Prospect Account ID	Indicates the account identification value that is generated for the prospect person.	Not applicable
	Note: By default, the Prospect Account ID field is in the read-only mode. The account identification value is created automatically when you click the Save button on the Prospect Account screen.	
Customer Class	Used to indicate the customer class to which the account is associated.	Yes (Conditional)
		Note: This field is required when you are defining an account for a prospect person.

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division to which the prospect person is associated for whom you want to define the account.	Not applicable
Set Up Date	Used to specify the date from when the prospect account is available for calculating the financial summary of the deal.	Yes (Conditional) Note: This field is required when you are defining an account for a prospect person.
Invoice Currency	Used to indicate the currency in which you want the financial summary of the prospect account to be calculated for the deal.	Yes (Conditional) Note: This field is required when you are defining an account for a prospect person.
Bill Cycle	Used to indicate the time interval in which you want to create the financial summary of the account for the deal.	Yes (Conditional) Note: This field is required when you are defining an account for a prospect person.
Access Group	Indicates the users who can view and edit the details of the prospect account. Note: By default, the Access Group field is in the read-only mode.	Not applicable

2. Enter the required details in the **Main** section.
3. Define characteristics for the prospect account, if required.
4. Associate identifiers with the prospect account, if required.
5. Click **Save**.

The account is defined for the prospect person.

Deal Metrics

The **Deal Metrics** zone enables you to view the following information through a tiles chart:

- Number of deals created by the user
- Number of deals in the **Pending for Approval** status
- Number of deals yet to be finalized
- Number of deals yet to be accepted by the customer
- Number of deals accepted by the customer
- Number of deals rejected by the customer

In addition, you can view the above information through a bar and line chart by toggling the **Tiles/Chart** switch available in the **Deal Metrics** zone.

The bar chart indicates the number of deals in different statuses for an existing customer, existing account, and prospect. Whereas, the line chart indicates the deal revenue from an existing customer, existing account, and prospect.

Note: By default, the above information is shown for the period which is specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration. You can change the period if required.

You can filter the information using various criteria (such as, **Period From**, **Period To**, **Division**, **Customer Tier**, and **Customer Segment**) available in the **Deal Metrics** zone.

Searching for a Deal

Prerequisites

To search for a deal, you should have:

- Divisions defined in the application
- Deals or deal versions defined in the application
- Deals or deal versions associated with the division to which the user belongs

- Deal types defined in the application
- Deal entities defined in the application
- Customer segments and customer tiers defined in the application
- Person identifier types and person identifiers defined in the application
- Account identifier types and account identifiers defined in the application

Procedure

To search for a deal:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Modelling and Simulation** and then click **Deal Dashboard**.
The **Deal Dashboard** screen appears.
3. Enter the search criteria in the **Search Deal** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of deals that meet the search criteria appears in the **Search Results** section.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Search Results** section lists all the deals which are created by the user for the period as specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration.

You must specify at least one search criterion while searching for a deal. One more search criterion is required when you are searching for a deal using the deal entity or customer tier.

You must specify one more search criterion when you are searching for a deal using the division with the **Deal Details** option selected from the **Search By** list.

Viewing the Profitability Details of a Deal Version

Procedure

To view the profitability details of a deal version:

1. Search for the deal in the **Search Deal** zone of the **Deal Dashboard** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the deal whose deal versions profitability details you want to view.

The **Deal Versions** zone appears.

3. In the **Deal Versions** zone, click the **Profitability Details** () icon from the **Profitability Details** column corresponding to the deal version whose profitability details you want to view.

The **Deal Profitability** screen appears.

Note: The **Profitability Details** () icon for deals which do not have multiple versions appears in the **Profitability Details** column corresponding to the deal in the **Search Results** section of the **Search Deal** zone as well as in the **Deal Versions** zone. Whereas, the **Profitability Details** () icon for deals which have multiple versions appears in the **Profitability Details** column corresponding to the deal version in the **Deal Versions** zone.

4. View the profitability details of the deal version in the **Deal Profitability** screen.

Note: You can view the profitability details of a deal or a deal version when it is in the **Simulated** status.

Comparing Two Deal Versions

Procedure

To compare two deal versions:

1. Search for the deal in the **Search Deal** zone of the **Deal Dashboard** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the deal whose deal version you want to compare.

The **Deal Versions** zone appears.

3. Select the check box corresponding to the deal version that you want to compare.

Note: Select the check box corresponding to the deal in the **Search Results** section of the **Search Deal** zone if only one deal version is created for the deal.

4. Click the **Add to Compare** link available in the **Deal Versions** zone.

The **Deal Comparison** zone appears enlisting the selected deal version.

Note: Click the **Add to Compare** link available in the **Search Deal** zone if you are selecting a deal from the **Search Results** section of the **Search Deal** zone for comparison.

5. Repeat steps 1 to 4 for selecting the other deal version which you want to use for comparison.

6. Click the **Compare** link available in the **Deal Comparison** zone.

The **Deal Compare** screen appears.

7. View the comparison report of the selected deals or deal versions in the **Deal Compare** screen.

Note: You can compare two deals or deal versions when they are in the **Simulated** status and are defined using the same currency.

Defining a Deal

Prerequisites

To define a deal, you should have:

- Entities (i.e. customers, accounts, and prospects) defined in the application
- Deal identifiers defined in the application
- Deal types defined in the application
- Currencies defined in the application
- Values defined for **Review Frequency**, **Deal Frequency**, and **Usage Period** in the **REVIEW_FREQUENCY_FLG**, **FREQUENCY_FLG**, and **USAGE_PRIOD_FLG** lookup fields respectively
- Terms and conditions defined in the application
- Products defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Deal**)

Procedure

To define a deal:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Deal Modelling and Simulation** and then click **Deal Dashboard**.

The **Deal Dashboard** screen appears.

3. In the **Deal Dashboard** screen, click the **Create Deal** button.

The **Deal Information - Deal** page appears. It contains the following zones:

- [Search Entity](#) on page 2746
- [Deal](#) on page 2752

Note: By default, the **Deal** zone does not appear in the **Deal Information - Deal** page. It appears when you click the **Broadcast** () icon corresponding to an entity (i.e. customer, account, or prospect) in the **Search Results** section of the **Search Entity** zone.

4. Search for the entity (i.e. customer, account, or prospect person) in the **Search Entity** zone for which you want to define a deal.
5. Click the **Broadcast** () icon corresponding to the entity (i.e. customer, account, or prospect) in the **Search Results** section for which you want to define a deal.

The **Deal** zone appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal.
- **Terms and Conditions** - Used to associate terms and conditions with the deal.
- **Product** - Used to associate reference products which you want the accounts of the deal entity to be enrolled.
- **Characteristics** - Used to define the characteristics for the deal.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Entity Information	Displays information about the entity (i.e. the customer, account, or prospect person) for which you want to define a deal.	Not applicable
Deal ID	Displays the deal ID. Note: The deal ID is generated automatically when you click the Save button in the Deal zone.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Deal Entity	<p>Indicates the entity (i.e. the customer, account, or prospect person) for which you want to create a deal. The valid values are:</p> <ul style="list-style-type: none"> • Account • Customer • Prospect 	Not applicable
	<p>Note:</p> <p>This field cannot be edited.</p> <p>The list includes only those values which are present in the DEAL_ENTITY_TYPE_FLG lookup field.</p>	
Status	Indicates the current status of the deal.	Not applicable
	<p>Note:</p> <p>This field cannot be edited.</p> <p>The value of this field is automatically populated when you click the Save button in the Deal zone.</p> <p>The list includes only those values which are present in the DEAL_STATUS lookup field.</p>	
Customer Segment	Indicates the business component to which the entity (i.e. the customer, account, or prospect person) belongs.	Not applicable
	<p>Note:</p> <p>This field cannot be edited.</p> <p>The value of this field is set to the value that is specified in the Person screen.</p> <p>The list includes only those values which are present in the CUST_SEG_FLG lookup field.</p>	
Customer Tier	Indicates the customer tier to which the entity (i.e. the customer, account, or prospect person) belongs.	Not applicable
	<p>Note:</p> <p>This field cannot be edited.</p> <p>The value of this field is set to the value that is specified in the Person screen.</p> <p>The list includes only those values which are present in the CUST_TIER_FLG lookup field.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Indicates the user group that can view and edit the details of the entity (i.e. the customer, account, or prospect person).	Not applicable
	Note: The value of this field is set to the value that is specified in the Person screen.	
Division	Indicates the division to which the entity (i.e. the customer, account, or prospect person) is associated.	Not applicable
	Note: This field cannot be edited. The value of this field is set to the value that is specified in the Person screen.	
Deal Identifier	Used to specify the primary identifier using which you want to create a deal in the system.	Yes
	Note: You should ensure that every deal has a unique deal identifier. An error message appears when you save a deal with a deal identifier which is already used while creating a deal.	
Deal Type	Used to indicate the deal type using which you want to create a deal in the system.	Yes
	Note: The Search (🔍) icon appears corresponding to the Deal Type field. On clicking the Search icon, the Deal Type Search window appears. On specifying the deal type, the description of the deal type appears corresponding to the Deal Type field. The Deal Type Search window lists only those deal types having the Division , Customer Segment , and Customer Tier combination which best fits with the Division , Customer Segment , and Customer Tier combination as specified in the Person screen of the entity (i.e. the customer, account, or prospect person).	

Field Name	Field Description	Mandatory (Yes or No)
Deal Currency	Used to specify the currency in which you want to calculate the deal or division specific financial summary and profitability of the deal.	Yes
	Note: The list includes only those currencies which are already defined in the system.	
Simulation Type	Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • Account • Customer • Deal 	Yes
Start Date	Used to specify the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person).	Yes
	Note: This date is also used as the Effective Start Date for the proposed price list assignment and Start Date for proposed product enrollment.	
Price Selection Date	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
End Date	Used to specify the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person).	No
Review Frequency	Used to indicate the timely monitoring of the deal usage as per the commitments made by the customer.	No
	Note: The list includes only those values which are present in the REVIEW_FREQUENCY_FLG lookup field.	

Field Name	Field Description	Mandatory (Yes or No)
Deal Frequency	Used to indicate the duration in which you want to simulate the deal for calculating the financial summary and profitability of the deal. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Yes
	Note: The list includes only those values which are present in the FREQUENCY_FLG lookup field.	
Usage Period	Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Yes
	Note: The list includes only those values which are present in the USAGE_PERIOD_FLG lookup field.	
Deal Description	Used to specify the description for the deal.	No
Deal Version Description	Used to specify the description for the deal version.	No
Skip Reference	Used to indicate whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments in the deal or not.	No
	Note: If you select the check box corresponding to the Skip Reference field, the system will direct you to the Pricing/Commitments page to define the price lists, price assignments, and product enrollments for the deal.	
Template Deal	Use to indicate whether you want the deal to be used as a template while searching references for other deals.	No
	Note: You can view the deal templates by clicking the Templates button on the Deal Information - References page.	

Field Name	Field Description	Mandatory (Yes or No)
Skip Questionnaire	Used to indicate whether you want to derive references for the deal using the questions of the questionnaire template associated with the deal type which is used for creating the deal.	No
	Note: The system considers the questionnaire template specified in the deal type only when it is effective on the deal start date.	

6. Enter the required details in the **Main** section.
7. Associate terms and conditions with the deal, if required.
8. Associate reference products for the accounts of the deal entity, if required.
9. Define characteristics for the deal, if required.
10. Click the **Save** button.

The deal is defined.

Creating a Deal using a Deal Template

Prerequisites

To create a deal using a deal template, you should have:

- Deal templates defined in the application
- Deal identifiers defined in the application
- Deal types defined in the application
- Currencies defined in the application
- Values defined for **Review Frequency**, **Deal Frequency**, and **Usage Period** in the **REVIEW_FREQUENCY_FLG**, **FREQUENCY_FLG**, and **USAGE_PRIOD_FLG** lookup fields respectively
- Terms and conditions defined in the application
- Products defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Deal**)

Procedure

To create a deal from a deal template:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Deal Management** and then click **Deal Dashboard**.

The **Deal Dashboard** screen appears.

- In the **Deal Dashboard** screen, click the **Create Deal** button.

The **Deal Information - Deal** page appears. It contains the following zones:

- [Search Entity](#) on page 2746
- [Deal](#) on page 2752

Note: By default, the **Deal** zone does not appear in the **Deal Information - Deal** page. It appears when you click the **Broadcast** () icon corresponding to an entity (i.e. customer, account, or prospect) in the **Search Results** section of the **Search Entity** zone.

- Search for the entity (i.e. customer, account, or prospect person) in the **Search Entity** zone for which you want to define a deal.
- Click the **Broadcast** () icon corresponding to the entity (i.e. customer, account, or prospect) in the **Search Results** section for which you want to define a deal.

The **Deal** zone appears. It contains the following sections:

- **Main** - Used to specify basic details about the deal.
- **Terms and Conditions** - Used to associate terms and conditions with the deal.
- **Product** - Used to associate reference products which you want the accounts of the deal entity to be enrolled.
- **Characteristics** - Used to define the characteristics for the deal.

Note: For more information about the fields available in the **Main** section, refer the [Defining a Deal](#) on page 2719 topic.

- Click the **Search** () icon corresponding to the **Copy Template** field.

The **Copy From** window appears which contains a list of deal templates that you can use for creating the deal. The **Copy From** window contains the following columns:

Column Name	Column Description
Basic Details	Used to indicate that you want to copy only the basic details of the deal template for creating the deal.
Pricing	Used to indicate that you want to copy only the price item pricing details of the deal template for creating the deal.
Usage	Used to indicate that you want to copy only the SQI details of the price items from the deal template for creating the deal.
Deal Information	Displays the concatenated string of information about the deal template separated by a comma (,).

- Select the required option and/or options from the **Copy From** window.
- Click **OK**.

The deal template data corresponding to the selected option and/or options from the **Copy From** window is copied to the new deal.

- Modify the details in the **Main** section, if required.
- Associate terms and conditions with the deal, if required.

11. Recommend products to which the accounts in the customer hierarchy can be enrolled, if required.
12. Define characteristics for the deal, if required.
13. Click the **Save** button.

The deal is created using the deal template.

Deal Compare

The **Deal Compare** screen enables you to compare two deals or two deal versions. It also enables you to extract the summary and detailed report in the excel format. It contains the following sections:

- **Main** - Used to specify basic information based on which you want to generate the comparison report for the selected deals or deal versions. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Highlight Differences	Used to indicate whether you want to highlight the differences in the comparison report of two deals or deal versions. Note: By default the Highlight Differences check box is selected.	No

Field Name	Field Description	Mandatory (Yes or No)
Deal Compare Type	<p>Used to indicate the comparison type using which you want to generate the comparison report of two deals or deal versions. The valid values are:</p> <ul style="list-style-type: none"> • Detailed - Used to display the following: <ol style="list-style-type: none"> 1. Overall cost, proposed revenue, and profitability of two deals or deal versions 2. Proposed revenue for each division 3. Proposed revenue for each price item, root level hierarchy entity, non-root level hierarchy entity, and product. 4. Average price for each price item. • Summary - Used to display the following: <ol style="list-style-type: none"> 1. Overall cost, proposed revenue, and profitability of two deals or deal versions 2. Proposed revenue for each division <p>Note: By default, the Summary option is selected from the Deal Compare Type field.</p>	No
Show Only Differences	<p>Used to indicate whether you want to view only the difference for the revenue and average price of each price item in the customer hierarchy of the selected deals or deal versions while comparison.</p> <p>Note: This field is enabled when the Highlight Differences option check box is selected.</p>	No
Deal Compare Based On	<p>Used to compare the revenue and average price of each price item in the customer hierarchy of the selected deals or deal versions. The valid values are:</p> <ul style="list-style-type: none"> • Average Price • Revenue <p>Note:</p> <p>By default, the Deal Compare Based On field is disabled with the Revenue option selected.</p> <p>The Deal Compare Based On field is enabled when you select the Detailed option from the Deal Compare Type list.</p>	No

- **Summary Report** - Used to display the following:
 1. Overall cost, proposed revenue, and profitability of two deals or deal versions.

2. Proposed revenue for each division.

The **Summary Report** section contains the following rows:

Row name	Row Description
Deal Information	Displays the concatenated string of information about the deal which you want to compare separated by a comma (,).
Model ID	Displays the deal version ID for which you want to generate the comparison report.
Deal Identifier	Indicates the identifier using which the deal is created in the system.
Review Frequency	Indicates the period for which the deal usage is monitored as per the commitments made by the customer.
Summary Level	
Overall Proposed Revenue	Displays the total revenue generated through the proposed price item pricing and commitments.
Overall Profitability %	Displays the total profit in percentage that is generated from the proposed price item pricing and commitments.
Overall Cost	Displays the total cost of the price items based on the proposed usage.
Deal Status	Indicates the current status of the deal.
Start Date	Displays the date from when the deal is effective.
End Date	Displays the date till when the deal is effective.
Currency Code	Indicates the currency using which the deal is defined in the system.
Division Level Summary (Revenue)	
Displays the proposed revenue for each division.	

- **Detailed Report** - Used to display the following:
 1. Overall cost, proposed revenue, and profitability of two deals or deal versions.
 2. Proposed revenue for each division.
 3. Proposed revenue for each price item, root level hierarchy entity, non-root level hierarchy entity, and product if the deal comparison is based on revenue.
 4. Average price for each price item if the deal comparison is based on average price.

The **Detailed Report** screen contains the following fields based on which you can view the detailed comparison of the revenue and average price of the price items in the customer hierarchy and the division of the selected deals or deal versions:

Field Name	Field Description	Mandatory (Yes or No)
Filter Type	Used to indicate the assignment level for which you want to compare the revenue or the average price of the price items in the customer hierarchy and the division. The valid values are: <ul style="list-style-type: none"> • Non-Root Level Hierarchy Entity • Price Item • Root Level Hierarchy Entity • Product 	No
Division	Used to indicate the division for which you want to compare the revenue or the average price of the product for which the accounts are enrolled. Note: This field appears when you select the Product option from the Filter Type list.	No
Product	Used to specify the product whose revenue or the average price you want to compare. Note: This field appears when you select the Product option from the Filter Type list.	No
Price Item	Used to specify the price item whose revenue or the average price you want to compare.	No

Comparing Cost, Revenue, and Profitability of Two Deal Versions

Procedure

To compare cost, revenue, and profitability of two deal versions:

1. Search for the deal in the **Search Deal** zone of the **Deal Dashboard** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the deal whose deal version you want to compare. The **Deal Versions** zone appears.
3. Select the check box corresponding to the deal version that you want to compare.

Note: Select the check box corresponding to the deal in the **Search Results** section of the **Search Deal** zone if only one deal version is created for the deal.

4. Click the **Add to Compare** link available in the **Deal Versions** zone. The **Deal Comparison** zone appears enlisting the selected deal version.

Note: Click the **Add to Compare** link available in the **Search Deal** zone if you are selecting a deal from the **Search Results** section of the **Search Deal** zone for comparison.

5. Repeat steps 1 to 4 for selecting the other deal version which you want to use for comparison.
6. Click the **Compare** link available in the **Deal Comparison** zone. The **Deal Compare** screen appears.

- View the cost, revenue, and profitability comparison of two deals or deal versions in the **Summary Report** section.

Note: You can compare two deals or deal versions when they are in the **Simulated** status and are defined using the same currency.

Deal Profitability Report

Oracle Revenue Management and Billing enables you to view the profitability report of a deal which is in the **Simulated** status. If a deal has one deal version, you can click the icon in the **Profitability Details** column corresponding to the deal in the **Deal Dashboard** screen. However, if a deal has two or more deal versions, you can click the icon in the **Profitability Details** column corresponding to the deal version in the **Deal Dashboard** screen. This is because the profitability details are shown for a particular deal version and not for all versions of a deal.

A new screen named **Deal Profitability** is introduced in this release. It appears when you click the icon in the **Profitability Details** column. This screen enables you to view the following:

- **Deal Level Profitability Report** – Displays the profitability details (such as, proposed revenue, proposed cost, profit, original revenue, and revenue deviation) of each person in the customer hierarchy.
- **Division Level Profitability Report** – Displays the profitability details (such as, proposed revenue, proposed cost, profit, original revenue, and revenue deviation) of each division. If required, you can filter the profitability details of a particular division.
- **Price Item Level Profitability Report** – Displays the profitability details (such as, proposed commitment, proposed revenue, proposed cost, profit, original revenue, original commitment, and revenue deviation) of each price item. Here, you can also view the profitability details at the hierarchy entity level.
- **All** – Displays all the profitability details in the respective zones at once.

Deal Profitability

The **Deal Profitability** screen allows you to view the deal level, division level, and price item level profitability report of a simulated deal. It contains the following zones:

- [Search Profitability Report](#) on page 2733
- [Division Level Profitability](#) on page 2738
- [Price Item Level Profitability](#) on page 2739

Search Profitability Report

The **Search Profitability Report** zone allows you to search for the deal level, division level, or price item level the profitability report of the deal version. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to view deal level, division level, or price item level profitability report of the deal version. The valid values are:</p> <ul style="list-style-type: none"> • All - Used to indicate whether you want to view all the profitability report of the deal version at once. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: On selecting this option from the Search By list, the Division Level Profitability and Price Item Level Profitability zones appear with the respective information in the Deal Profitability screen. Whereas, the Deal Level Profitability report appears in the Search Results section.</p> </div> <ul style="list-style-type: none"> • Deal Level Profitability Report - Used to indicate whether you want view the deal level profitability report. • Division Level Profitability Report - Used to indicate whether you want view the division level profitability report. • Price Item Level Profitability Report - Used to indicate whether you want view the profitability report at the price item level or hierarchy entity level. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: By default, the All option is selected.</p> </div>	Yes
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).	Not Applicable
Deal Version Information	Displays the concatenated string of information about the deal version whose profitability report you want to view separated by a comma (,).	Not Applicable
Division	<p>Used to indicate the division for which you want to view the profitability report of the deal version.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field appears when you select the Division Level Profitability Report option from the Search By list.</p> </div>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required for viewing the profitability report of a particular division.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
Report Format	Used to indicate the format in which you want to view the price item profitability report. The valid values are: <ul style="list-style-type: none"> • Detailed Report - Used to indicate whether you want to view the profitability report at the price item level in the hierarchy. • Summary Report - Used to indicate whether you want to view the profitability report at the hierarchy entity level. 	Yes (Conditional)
	<p>Note:</p> <p>By default, the Detailed Report option is selected.</p> <p>This field appears when you select the Price Item Level Profitability Report option from the Search By list.</p>	<p>Note: This field is required for viewing the profitability report of a price item.</p>
Price Item	Used to search a particular price item whose profitability report you want to view for the deal version.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears where you can search for the respective price item.</p> <p>This field appears when you select the Price Item Level Profitability Report option from the Search By list.</p>	<p>Note: This field is required for viewing the profitability report of a particular price item.</p>

- **Search Results** - On clicking the **Search** button, the profitability report appears based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays the concatenated string of information about the customer for whom the deal is created in the system separated by a comma (,).
	<p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>This column appears when you select the All or Deal Level Profitability Report option from the Search By list.</p>

Column Name	Column Description
Primary Identifier	Indicates the primary identifier using which the customer is defined in the system.
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.
Division	Indicates the division for which you want to view the profitability report.
	Note: This column appears when you select the Division Level Profitability Report option from the Search By list.
Root Level Hierarchy Entity	Indicates the root level hierarchy entity of the price item for which you want to view the profitability report.
	Note: This column appears when you select the Price Item Level Profitability Report option from the Search By list.
Non-Root Level Hierarchy Entity	Indicates the non-root level hierarchy entity of the price item for which you want to view the profitability report.
	Note: This column appears when you select the Price Item Level Profitability Report option from the Search By list.
Price Item Information	Displays the concatenated string of information about the price item for which you want to view the profitability report separated by a comma (,).
	Note: This column appears when you select the Price Item Level Profitability Report option from the Search By list.
Proposed Commitment	Displays the proposed usage of the price item.
	Note: This column appears when you select the Price Item Level Profitability Report option from the Search By list.
Proposed Revenue	Displays the revenue generated from the proposed price item pricing and commitments.
Proposed Cost	Displays the overall cost of the proposed price item based on the usage.
Profit	Displays the overall profit generated from the proposed price assignments of price items. It is represented by the following formula: Proposed Profit = Proposed Revenue – Proposed Cost
Profitability (%)	Displays the overall profit in percentage generated by the proposed price assignments of price items.
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.
Original Revenue	Displays the revenue generated through the original price item pricing and commitments.

Column Name	Column Description
Original Commitment	Displays the original usage of the price item.
	Note: This column appears when you select the Price Item Level Profitability Report option from the Search By list.
Profit Variation (%)	Displays the difference between the original profit and proposed profit in percentage.
	<p>Note:</p> <p>This column appears when you select the Deal Level Profitability Report or Division Level Profitability Report option from the Search By list.</p> <p>On selecting the All option from the Search By list in the Search Profitability Report zone, the Search Results displays the Deal Level Profitability Report by default.</p>
Status	Indicates the current status of the deal.
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.
Created By	Indicates the user who has created the deal.
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.
Start Date	Displays the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person).
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.
End Date	Displays the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person).
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.
Next Review Date	Displays the date which is scheduled to review the deal usage as per the commitments made by the customer.
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.
Deal Currency	Displays the currency using which the deal is defined in the system.
	Note: This column appears when you select the All or Deal Level Profitability Report option from the Search By list.

Column Name	Column Description
Revenue Variation (%)	<p>Displays the average revenue generated from the price item pricing and commitments. It is represented by the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}$
	<p>Note: This column appears when you select the Price Item Level Profitability Report option from the Search By list.</p>

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

4. Select the **Price Item Level Profitability Report** option from the **Search By** list in the **Search Profitability Report** zone.
5. Ensure that the **Filter** area is visible.
6. Select the **Summary Report** option from the **Report Format** list.
7. Click **Search**.

The search results appear in the **Search Results** section of the **Search Profitability Report** zone.

8. View the hierarchy entity level profitability report of the deal version in the **Search Results** section of the **Search Profitability Report** zone.

Note:

You can view the profitability report of a deal or a deal version when it is in the **Simulated** status.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Deal Approval Workflow

The **Deal Approval Workflow** screen enables you to view the price item approval hierarchy and the product approval hierarchy details. It also enables you to view the approval history of the deal. It contains the following sections:

- **Main** - Displays basic information about the deal. It contains the following fields:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
Deal Version Information	Displays the concatenated string of information about the deal version separated by a comma (,).
Deal Type	Indicates the deal type using which the deal is created in the system.
Status	Indicates the current status of the deal.
Division	Indicates the division of the entity for which the deal is created in the system.

- **Approval Workflow Tracker** - Displays the price item approval hierarchy and the product level approval hierarchy of the deal. It also enables you to track the current approval status of the deal. It contains the following legends:

Legend	Legend Description
 Awaiting Action	Indicates the approver in the approval hierarchy has received the deal for approval and is yet to perform his/her actions.
 Acted On	Indicates the approver in the approval hierarchy has already performed his/her actions on the deal.
 Unassigned	Indicates the deal is not assigned to the approver in the approval hierarchy to perform his/her actions on the deal.
	Note: This indicates that the deal is already approved by the previous approver in the approval hierarchy.

Legend	Legend Description
 Returned	Indicates the approver has returned the deal to the submitter for approval.
 Awaiting Product Manager Approval	Indicates the approver needs the product manager's approval to perform his/her actions on the deal.
 Owner Action	Indicates the deal is not yet assigned to the approver in the approval hierarchy to perform his/her actions on the deal.
 Division Approval	Indicates the division level approval hierarchy.
 Product Approval	Indicates the product level approval hierarchy.

- **Approval History** - Displays the complete trail of actions performed on the deal. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence in which the action is performed on the deal.
Process	Indicates the action that is performed on the deal.
Approval Type	Indicates the approval type using which the action is performed on the deal.
Division	Indicates the division for which the action is performed on the deal.
Product	Displays the product for which the action is performed on the deal.
Approval Level	Indicates the level in the approval hierarchy where the action is performed on the deal.
To Do Role	Indicates the To Do Role using which the To Do task is assigned for performing the action on the deal.
User Name	Displays the user who has performed the action on the deal.
Action Taken	Displays the action performed by the user on the deal with respect to the process.
Create Date Time	Displays the date and time when the action is performed by the user.
Update Date Time	Displays the date and time when the status of the deal is updated in the system due to the action performed.

Note: The deal approval workflow does not appear for deals which are in the **Draft, Pending Simulation, Simulation Deferred, Simulated, Hierarchy Creation Deferred, and Discarded** status.

For more information on how the approval workflow appears, refer [Deal Approval Scenarios](#) on page 2568

Deal Information

The **Deal Information** screen enables you to define a deal for the existing customers, accounts, or prospect persons. It also allows you to define a prospect person. It contains the following pages:

- [Deal Information - Deal](#) on page 2746

- [Deal Information - Questionnaire](#) on page 2763
- [Deal Information - Reference](#) on page 2765
- [Deal Information - Pricing and Commitments](#) on page 2775
- [Deal Information - Simulation](#) on page 2806
- [Deal Information - Approvals](#) on page 2817
- [Deal Information - Acceptance/Rejection](#) on page 2828
- [Deal Information - Orchestration](#) on page 2840
- [Deal Information - Discarded](#) on page 2851

Deal Information - Deal

The **Deal Information - Deal** page enables you to define a deal for the entities (i.e. customers, accounts, and prospect persons) which are already available in the system. It also enables you create a new prospect for which you want to define a deal. It contains the following zones:

- [Search Entity](#) on page 2746
- [Deal](#) on page 2752

Note: By default, the **Deal** zone does not appear in the **Deal Information - Deal** page. It appears when you click the **Broadcast** () icon corresponding to an entity (i.e. customer, account, or prospect person) in the **Search Results** section of the **Search Entity** zone.

Search Entity

The **Search Entity** zone allows you to search for an existing customer, account, or prospect person for whom you want to define a deal. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an existing customer, account, or prospect person for whom you want to define a deal. The valid values are: <ul style="list-style-type: none"> • Customer Details • Account Details • Prospect Details 	Yes
	Note: By default, the Customer Details option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search for customers, accounts, or prospect persons associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Person Name	Used to search for customers or accounts which belong to persons with a particular name.	Yes (Conditional)
	Note: This field appears when the Customer Details , and Account Details option is selected from the Search By list.	
Customer Segment	Used to search for customers or prospect persons which belong to a particular segment.	Yes (Conditional)
	Note: The list includes only those values which are present in the CUST_SEG_FLG lookup field. This field appears when the Customer Details or Prospect Details option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of the Search Criteria section.	
City	Used to search for customers from a particular city.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of the Search Criteria section.	
Address	Used to search for a customer residing at a particular address.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of the Search Criteria section.	
Phone Number	Used to search for a customer having a specific phone number.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of the Search Criteria section.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for a particular customer.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list.	Note: This field is required while searching for an existing customer for whom you want to define a deal.
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a customer or account.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list. This field also appears when the Account Details option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of the Search Criteria section.	Note: This field is required while searching for an existing customer or account for which you want to define a deal.
Person Identifier	Used to specify the value for the person identifier type based on which you want to search for a customer or account.	Yes (Conditional)
	Note: This field appears when you select a person identifier type from the Person Identifier Type list.	Note: This field is required while searching for an existing customer or account for which you want to define a deal. If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Customer Class	Used to search for accounts which belong to a particular customer class.	Yes (Conditional)
	Note: This field appears when the Account Details option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of the Search Criteria section.	Note: This field is required while searching for an existing account for which you want to define a deal.
Account ID	Used to search for a particular account.	Yes (Conditional)
	Note: This field appears when the Account Details option is selected from the Search By list.	Note: This field is required while searching for an existing account for which you want to define a deal.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to indicate the identifier type based on which you want to search for the accounts.	Yes (Conditional)
	Note: This field appears when the Account Details option is selected from the Search By list.	Note: This field is required while searching for an existing account for which you want to define a deal.
Account Identifier	Used to specify the value for the account identifier type based on which you want to search for the accounts.	Yes (Conditional)
	Note: This field appears when you select an account identifier type from the Account Identifier Type list.	Note: This field is required while searching for an existing account for which you want to define a deal. If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Account Category	Used to search accounts which are associated with a particular category. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account 	Yes (Conditional)
	Note: The list includes only those values which are present in the ACCT_USAGE_FLG lookup field. This field appears when the Account Details option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of the Search Criteria section.	Note: This field is required while searching for an existing account for which you want to define a deal.
Prospect Person Name	Used to search prospect persons with a particular name.	Yes (Conditional)
	Note: This field appears when the Prospect Details option is selected from the Search By list.	Note: This field is required while searching for an existing prospect person for whom you want to define a deal.

Field Name	Field Description	Mandatory (Yes or No)
Prospect Person ID	Used to search for a particular prospect person.	Yes (Conditional)
	Note: This field appears when the Prospect Details option is selected from the Search By list.	Note: This field is required while searching for an existing prospect person for whom you want to define a deal.
Prospect Person Identifier Type	Used to indicate the identifier type based on which you want to search for the prospect persons.	Yes (Conditional)
	Note: This field appears when the Prospect Details option is selected from the Search By list.	Note: This field is required while searching for an existing prospect person for whom you want to define a deal.
Prospect Person Identifier	Used to specify the value for the prospect identifier type based on which you want to search for the prospect persons.	Yes (Conditional)
	Note: This field appears when you select a prospect identifier type from the Prospect Identifier Type list.	Note: This field is required while searching for an existing prospect person for whom you want to define a deal. If you specify the prospect person identifier type as a search criteria, you have to specify the prospect person identifier.

- **Search Results** - On clicking the **Search** button, a list of entities appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays the concatenated string of customer information separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective customer. This column appears when the Customer Details option is selected from the Search By list in the Search Criteria section.
Person Name	Displays the name of the customer.
	Note: This column appears when the Customer Details option is selected from the Search By list in the Search Criteria section.

Column Name	Column Description
Primary Person Identifier Type	Indicates the identifier type using which the customer is defined in the system.
	Note: This column appears when the Customer Details option is selected from the Search By list in the Search Criteria section.
Primary Person Identifier	Displays the value for the primary person identifier type using which the customer is defined in the system.
	Note: This column appears when the Customer Details option is selected from the Search By list in the Search Criteria section.
Division	Indicates the division to which the customer, account, or prospect person belongs.
Account Information	Displays the concatenated string of account information separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This column appears when the Account Details option is selected from the Search By list in the Search Criteria section.
Main Customer	Displays the name of the main customer to whom the account belongs.
	Note: This column appears when the Account Details option is selected from the Search By list in the Search Criteria section.
Primary Account Identifier Type	Indicates the identifier type using which the account is defined in the system.
	Note: This column appears when the Account Details option is selected from the Search By list in the Search Criteria section.
Primary Account Identifier	Displays the value for the primary account identifier type using which the account is defined in the system.
	Note: This column appears when the Account Details option is selected from the Search By list in the Search Criteria section.
Customer Class	Indicates the customer class to which the account belongs.
	Note: This column appears when the Account Details option is selected from the Search By list in the Search Criteria section.

Column Name	Column Description
Prospect Person Information	Displays the concatenated string of prospect person information separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Prospect Person screen appears where you can view the details of the respective prospect person.</p> <p>This column appears when the Prospect Details option is selected from the Search By list in the Search Criteria section.</p>
Prospect Person Identifier Type	Indicates the identifier type using which the prospect person is defined in the system.
	<p>Note: This column appears when the Prospect Details option is selected from the Search By list in the Search Criteria section.</p>
Prospect Person Identifier	Displays the value for the prospect person identifier type using which the prospect person is defined in the system.
	<p>Note: This column appears when the Prospect Details option is selected from the Search By list in the Search Criteria section.</p>

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to an entity, the **Deal** zone appears where you can define a deal for the respective entity.

Deal

The **Deal** zone allows you to define a deal for the entity (i.e. the customer, account, or prospect person) which is already available in the system. It contains the following sections:

- **Main** - Used to specify basic details about the deal. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Entity Information	Displays information about the entity (i.e. the customer, account, or prospect person) for which you want to define a deal.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Deal ID	Displays the deal ID.	Not applicable
	Note: The value of this field is automatically populated when you enter all the details for creating a deal and press the Save button.	
Contracted Deal	Used to indicate that the change in the price item pricing from the price list does not affect the price item pricing offered in the deal created for an existing customer, account, or prospect.	No
Copy Template	Used to indicate the deal template which you want to use for creating the deal.	No
	Note: The Search (🔍) icon appears corresponding to the Copy Template field. On clicking the Search icon, the Copy From window appears where you can select the respective details from the template.	
Deal Entity	Indicates the entity (i.e. the customer, account, or prospect person) for which you want to create a deal. The valid values are: <ul style="list-style-type: none"> • Account • Customer • Prospect 	Not applicable
	Note: This field cannot be edited. The list includes only those values which are present in the DEAL_ENTITY_TYPE_FLG lookup field.	
Status	Indicates the current status of the deal.	Not applicable
	Note: This field cannot be edited. The value of this field is automatically populated when you enter all the details for creating a deal and press the Save button. The list includes only those values which are present in the DEAL_STATUS lookup field.	

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Indicates the business component to which the entity (i.e. the customer, account, or prospect person) belongs.	Not applicable
	<p>Note:</p> <p>This field cannot be edited.</p> <p>The value of this field is set to the value that is specified in the Person screen.</p> <p>The list includes only those values which are present in the CUST_SEG_FLG lookup field.</p>	
Customer Tier	Indicates the customer tier of the customer segment to which the entity (i.e. the customer, account, or prospect person) belongs.	Not applicable
	<p>Note:</p> <p>This field cannot be edited.</p> <p>The value of this field is set to the value that is specified in the Person screen.</p> <p>The list includes only those values which are present in the CUST_TIER_FLG lookup field.</p>	
Access Group	Indicates the user group who can view and edit the details of the entity (i.e. the customer, account, or prospect person).	Not applicable
	<p>Note: The value of this field is set to the value that is specified in the Person screen.</p>	
Division	Indicates the division with which the entity (i.e. the customer, account, or prospect person) is associated.	Not applicable
	<p>Note:</p> <p>This field cannot be edited.</p> <p>The value of this field is set to the value that is specified in the Person screen.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Deal Identifier	<p>Used to specify the primary identifier using which you want to create a deal for the entity in the system.</p> <p>Note: You should ensure that every deal has a unique deal identifier. An error message appears when you save a deal with a deal identifier which is already used for creating a deal.</p>	Yes
Deal Type	<p>Used to indicate the deal type using which you want to create a deal in the system.</p> <p>Note: The Search (🔍) icon appears corresponding to the Deal Type field. On clicking the Search icon, the Deal Type Search window appears. On specifying the deal type, the description of the deal type appears corresponding to the Deal Type field. The Deal Type Search window lists only those deal types having the Division, Customer Segment, and Customer Tier combination which best fits with the Division, Customer Segment, and Customer Tier combination as specified in the Person screen of the entity (i.e. the customer, account, or prospect person).</p>	Yes
Deal Currency	<p>Used to specify the currency in which you want to calculate the deal level, division level, and the product level financial summary and profitability of the deal.</p> <p>Note: The list includes only those currencies which are already defined in the system.</p>	Yes
Simulation Type	<p>Used to indicate the simulation type using which you want to analyze the cost, revenue, and profitability of the deal. The valid values are:</p> <ul style="list-style-type: none"> • Account • Customer • Deal 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Include Hierarchy	Used to indicate whether you want to include the child persons, grandchild persons, and their accounts in the customer hierarchy while creating a deal.	No
	<p>Note:</p> <p>This option appears only when the Deal Entity is set to Customer and the Simulation Type is set to Customer.</p> <p>By default, the Include Hierarchy check box is selected when you are defining a deal.</p>	
Start Date	Used to specify the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person).	Yes
	<p>Note: This date is also used as the Effective Start Date for the proposed price list assignment, price assignment and Start Date for proposed product enrollment.</p>	
Price Selection Date	Used to specify the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Yes
End Date	Used to specify the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person).	No
Review Frequency	Used to indicate the timely monitoring of the deal usage as per the commitments made by the customer.	No
	<p>Note: The list includes only those values which are present in the REVIEW_FREQUENCY_FLG lookup field.</p>	
Deal Frequency	Used to indicate the duration for which you want to simulate the deal for calculating the financial summary and profitability of the deal.	Yes
	<p>Note: The list includes only those values which are present in the FREQUENCY_FLG lookup field.</p>	
Usage Period	Used to indicate the period for which you want to aggregate the deal data to determine the scope of the deal.	Yes
	<p>Note: The list includes only those values which are present in the USAGE_PERIOD_FLG lookup field.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Deal Description	Used to specify the description for the deal.	Yes
Deal Version Description	Used to specify the description for the deal version.	Yes (conditional)
		Note: This field is required while creating a deal version.
Skip Reference	Used to indicate whether you want to use a deal which is already created in the system as a reference for copying the pricing and commitments while creating a deal for the existing customer, account, or prospect person..	No
	<p>Note:</p> <p>If you select the check box corresponding to the Skip Reference field and click Save, the system will direct you to the Deal Information - Pricing/Commitments page in the Pending Simulation status to define the price list assignments, price assignments, and product enrollments for the deal.</p> <p>If you do not select the check box corresponding to the Skip Reference field and click Save, the system will direct you to the Deal Information - Reference page in the Draft status to select reference whose price item pricing, price list assignments, and product enrollments you want to use for the deal</p>	
Template Deal	Use to indicate whether you want the deal to be used as a template while using references for other deals.	No
	Note: You can view the deal templates by clicking the Templates button on the Deal Information - References page.	
Skip Questionnaire	Used to indicate whether you want to derive reference customers and deals during a deal creation using a questionnaire.	No
	Note: If a questionnaire template is not specified in the respective deal type or if the questionnaire template is not effective on the deal start date or if the Skip Questionnaire option is selected during the deal creation, the system derives the reference customers for the deal using the division, customer segment, and customer tier combination.	

- **Terms and Conditions** - Used to associate terms and conditions with the deal. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	Used to indicate the terms and conditions which you want to associate with the deal.	Yes (conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search window appears.</p> <p>On specifying the term and condition, the description of the term and condition appears corresponding to the Terms and Conditions field.</p>	<p>Note: This field is required while associating terms and conditions with a deal.</p>

- **Product** - Used to recommend a list of products to which the accounts in the customer hierarchy can be enrolled. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to indicate the product that you want to recommend for the deal.	Yes (conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Product Search window appears.</p> <p>On specifying the product, the description of the product appears corresponding to the Product field.</p> <p>Product Search window lists only those products which are effective on the deal start date.</p>	<p>Note: This field is required while recommending a product for a deal.</p>

Characteristics - Used to define a list of characteristics for the deal. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		<p>Note: This field is required while defining a characteristic for the deal.</p>
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<p>Note: The list includes only those characteristic types where the characteristic entity is set to Deal.</p>	<p>Note: This field is required while defining a characteristic for the deal.</p>

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a characteristic for the deal.</p>

Searching for an Entity

Prerequisites

To search for an entity, you should have:

- Entities (i.e. customers, accounts, and prospect persons) defined in the application

Procedure

To search for an entity:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Modelling & Simulation** and then click **Deal Dashboard**.
The **Deal Dashboard** screen appears.
3. Click the **Create New Deal** button in the page title area of the **Deal Dashboard** screen.
The **Deal Information - Deal** page appears.
4. Enter the search criteria in the **Search Entity** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of entities (i.e. customers, accounts, or prospect persons) that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Associating the Terms and Conditions with a Deal

Prerequisites

To associate terms and conditions with a deal you should have:

- Terms and conditions defined in the application

Procedure

To associate terms and conditions with a deal:

1. Ensure that the **Terms and Conditions** section is expanded in the **Deal** zone when you are defining a *deal*.

The **Terms and Conditions** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	Used to indicate the terms and conditions which you want to associate with the deal.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search window appears.</p> <p>On indicating the term and condition, the description of the term and condition appears corresponding to the Terms and Conditions field.</p>	<p>Note: This field is required for associating terms and conditions with a deal.</p>

2. Enter the required details in the **Terms and Conditions** section.
3. If you want to associate more than one term and condition with the deal, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a term and condition from the deal, click the **Delete**  icon corresponding to the term and condition.

4. Click **Save**.

The terms and conditions are associated with the deal.

Deal zone	Deal on page 2752

Recommending a Product for a Deal**Prerequisites**

To recommend a product for a deal you should have:

- Products defined in the application

Procedure

To recommend a product for a deal:

1. Ensure that the **Product** section is expanded in the **Deal** zone when you are defining a *deal*.

The **Product** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to indicate the product that you want to recommend for the deal. Note: The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Product Search window appears. On specifying the product, the description of the product appears corresponding to the Product field.	No

2. Enter the required details in the **Product** section.
3. If you want to recommend more than one product for the deal, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a recommended product from the deal, click the **Delete** (🗑️) icon corresponding to the product.

4. Click **Save**.

The products is recommended for the deal.

Defining a Characteristic for a Deal**Prerequisites**

To define a characteristic for a deal, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deal**)

Procedure

To define a characteristic for a deal:

1. Ensure that the **Characteristics** section is expanded in the **Deal** zone when you are defining a deal.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deal.	Yes (Conditional)
		Note: This field is required while defining a characteristic for the deal.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Deal .	Note: This field is required while defining a characteristic for the deal.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required while defining a characteristic for the deal.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the deal, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the deal, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for the deal.

Deal Information - Questionnaire

The **Deal Information - Questionnaire** page enables you to derive reference customers and deals during deal creation using a questionnaire.

Note:

The reference deals are those deals which belong to the reference customers which are derived using the questionnaire. The system displays the questions from the questionnaire template which is specified in the respective deal type. The system considers the questionnaire template specified in the deal type when it is effective on the deal start date.

Deal Information - Questionnaire page contains the following zone:

- [Questionnaire](#) on page 2763

Note: By default, the **Deal Information - Questionnaire** page does not appear while creating a deal. It appears when the **Skip Questionnaire** check box is unchecked in the **Deal** zone of **Deal Information - Deal** page and the **Questionnaire Template** is associated with the **Deal Type** using which the deal is created.

Questionnaire

The **Questionnaire** zone allows you to answer the questions of the questionnaire template associated with the deal type using which the deal is created in the system.

The system enables you to derive reference customers and deals based on the answer provided in the **Questionnaire** zone.

The display order of the questions in the **Questionnaire** zone depends on the value set for the **Question Display Order** field in the **Questionnaire Template** screen associated with the deal type.

If the question display order is rule based, then the questions appear in the **Questionnaire** zone based on the answer provided for the previous question.

Note: Click the **Previous** () or **Next** () icons to navigate through the questions of a rule based questionnaire.

If the question display order is sequence based, then a list of questions appear in the **Questionnaire** zone.

Note: Click the **Previous** () or **Next** () icons to navigate through the questions set of a sequence based questionnaire.

The mandatory questions in both rule based and sequence based question display orders are indicated by an asterisk (*) sign.

On clicking the **Skip Questionnaire** button on the top right corner of this zone, you can skip the questionnaire for deriving reference customers or deals based on the answers provided in the questionnaire.

Select Reference

The **Select Reference** zone allows you to search for a customer or a deal whose price item pricing, price list assignments, and product enrollments you want to use as a reference for creating a deal.

Note:

By default, the **Select Reference** zone lists the reference customers for the deal based on the division, customer segment, and customer tier combination.

If a questionnaire template is specified in the respective deal type and if the questionnaire template is effective on the deal start date and if the **Skip Questionnaire** option is not selected during the deal creation, the **Select Reference** zone lists the reference customers based on the answers provided in the **Questionnaire** zone of the **Deal Information - Questionnaire** page.

The **Select Reference** zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to search for reference customer or deals whose price item pricing, price list assignments, and product enrollments you want to use as a reference to create a deal. The valid values are:</p> <ul style="list-style-type: none"> • Reference Customers <ul style="list-style-type: none"> - Lists the reference customers based on the division, customer segment, and customer tier combination or the answers provided in the Questionnaire zone of the Deal Information - Questionnaire page. • Customer <ul style="list-style-type: none"> - Used to specify whether you want to search for a reference customer whose price item pricing, price list assignments, and product enrollments you want to use as a reference to create a deal. • Deal <ul style="list-style-type: none"> - Used to specify whether you want to search for a reference deal whose price item pricing, price list assignments, and product enrollments you want to use as a reference to create a deal. • Reference Deals - Lists the reference deals based on the answers provided in the Questionnaire zone of the Deal Information - Questionnaire page. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The reference deals are not derived when the Skip Questionnaire option is selected during the deal creation or a questionnaire template is not specified in the respective deal type or if the questionnaire template is not effective on the deal start date.</p> </div>	Yes
Division	<p>Used to search for reference customers or deals which belongs to a particular division.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field appears when you select the Customer or Deal option from the Search By list. You can view only those divisions to which you have access in the Division list.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search for reference customers or deals whose primary person has a particular name.	No
	Note: This field appears when you select the Customer or Deal option from the Search By list.	
Customer Segment	Used to search for reference customers or deals which belong to a particular business component.	No
	<p>Note:</p> <p>This field appears when the Customer option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of this zone.</p> <p>This field also appears when the Deal option is selected from the Search By list .</p> <p>The list includes only those values which are specified in the CUST_SEG_FLG lookup field.</p>	
City	Used to search for reference customers from a particular city.	No
	Note: This field appears when the Customer option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of this zone.	
Address	Used to search for reference customer residing at a particular address.	No
	Note: This field appears when the Customer option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of this zone.	
Phone Number	Used to search for reference customer having a particular phone number.	No
	Note: This field appears when the Customer option is selected from the Search By list and the Advanced Search link is clicked in the top right corner of this zone.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for a particular person whose price item pricing, price list assignments, and product enrollments you want to use as a reference.	No
	Note: This field appears when you select the Customer option from the Search By list.	
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for reference customers or deals.	No
	Note: This field appears when the Customer or Deal option is selected from the Search By list.	
Person Identifier	Used to specify the value for the person identifier type based on which you want to search for search for reference customers or deals.	Yes (Conditional)
	Note: This field appears when you select a person identifier type from the Person Identifier Type list.	Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Prospect Person	Used to indicate whether you want to search for reference deals created for a prospect person. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears when the Deal option is selected from the Search By list.	
Deal ID	Used to search for a particular deal whose price item pricing, price list assignments, and product enrollments you want to use as a reference.	No
	Note: This field appears when the Deal option is selected from the Search By list.	
Template Deal	Used to indicate whether you want to search for template deals whose price item pricing, price list assignments, and product enrollments you want to use as a reference. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears when the Deal option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Deal Status	Used to search for reference deals with a particular status.	No
	<p>Note:</p> <p>This field appears when the Deal option is selected from the Search By list.</p> <p>The list includes only those values which are specified in the DEAL_STATUS lookup field.</p>	
Deal Type	Used to search for reference deals to which a particular deal type is associated.	No
	<p>Note: This field appears when the Deal option is selected from the Search By list.</p>	

Note: You must specify at least one search criterion while searching for reference customer or deal. One more search criterion is required when you are searching for reference customers using the division.

- **Search Results** - On clicking the **Search** button, a list of reference customers or deals appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays the concatenated string of person information separated by a comma (.). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>This column appears when you select the Reference Customers or Customer option from the Search By list.</p>
Person Name	Displays the name of the primary customer.
	<p>Note: This column appears when you select the Customer option from the Search By list in the Search Criteria section.</p>
Primary Person Identifier Type	Indicates the primary identifier type using which the customer or deal is defined in the system.
Primary Person Identifier	Indicates the value for the primary identifier type using which the customer or deal is defined in the system.
Division	Indicates the division to which the customer or deal is associated.
Customer Segment	Indicates the business component using which the customer or deal is defined in the system.
Customer Tier	Indicates the customer tier of the customer segment to which the customer or the deal belongs.

Column Name	Column Description
Deal Information	Displays the concatenated string of deal information separated by a comma (,).
	<p>Note:</p> <p>It has a link. On clicking the link, the Deal Information screen appears where you can view the details of the respective deal.</p> <p>This column appears when you select the Deal or Reference Deals option from the Search By list in the Search Criteria section.</p>
Deal Status	Indicates the current status of the deal.
	<p>Note: This column appears when you select the Deal or Reference Deals option from the Search By list in the Search Criteria section.</p>
Deal Version Information	Displays the concatenated string of deal version information separated by a comma (,).
	<p>Note:</p> <p>It has a link. On clicking the link, the Deal Information screen appears where you can view the details of the respective deal version.</p> <p>This column appears when you select the Deal or Reference Deals option from the Search By list in the Search Criteria section.</p>
Deal Version Status	Indicates the current status of the deal version.
	<p>Note: This column appears when you select the Deal or Reference Deals option from the Search By list in the Search Criteria section.</p>
Prospect Person Information	Displays the concatenated string of prospect person information for whom the deal is created in the system separated by a comma (,).
	<p>Note:</p> <p>It has a link. On clicking the link, the Prospect Person screen appears where you can view the details of the respective prospect person.</p> <p>This column appears when you select the Deal or Reference Deals option from the Search By list in the Search Criteria section.</p>
Deal ID	Indicates the identification value of the deal.
	<p>Note: This column appears when you select the Deal or Reference Deals option from the Search By list in the Search Criteria section.</p>

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to a customer or deal the **Reference Details** zone appears where you can select the references for the deal.

Searching for a Reference

Prerequisites

To search for a reference, you should have:

- Reference customers and reference deals defined in the application
- Pricing and commitments defined for the references

Procedure

To search for a reference:

1. Ensure that the **Deal Information - Reference** page is open when you are searching a reference for a deal.

Note: The **Deal Information - Reference** page appears when you do not select the check box corresponding to the **Skip Reference** option in the **Deal** zone of the **Deal Information - Deal** page while creating a deal.

2. Enter the search criteria in the **Select Reference** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

3. Click **Search**.

A list of reference customers or reference deals that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Selecting a Reference for a Deal

Prerequisites

To select a reference for a deal, you should have:

- Reference customers and reference deals defined in the application
- Pricing and commitments defined for the references

Procedure

To select a reference for a deal:

1. Search for the reference in the **Select Reference** zone of the **Deal Information - Reference** page.
2. Click the **Broadcast** () icon corresponding to the deal in the **Search Results** section of the **Select Reference** zone whose pricing and commitments you want to use as a reference for defining the deal.

The **Reference Details** zone appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the name of the primary person for whom the customer or deal is defined in the system whose pricing or commitments you want to use as a reference for defining the deal.	Not applicable
Reference Deal	Displays the concatenated string of deal information separated by a comma (,) whose pricing or commitments you want to use as a reference for defining the deal. Note: This field appears when you select a deal as a reference.	Not applicable
Reference Deal Version	Displays the concatenated string of deal version information separated by a comma (,) whose pricing or commitments you want to use as a reference for defining the deal. Note: This field appears when you are copying reference from a deal which is created for a prospect person.	Not applicable
Division	Indicates the division to which the reference customer or deal belongs.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Segment	Indicates the business component using which the reference customer or deal is defined in the system.	Not applicable
Customer Tier	Indicates the customer tier of the customer segment using which the reference customer or deal is defined in the system.	Not applicable
Refer Usage	Used to indicate whether you want to copy commitments from the SQI-based billable charges of the reference customer or deal.	Yes
Usage Period	Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly 	Not applicable
Refer Pricing	Used to indicate whether you want to copy the price list assignments and price assignments of the reference customer or deal.	Yes
Price Selection Date	Displays the date from when the price lists, pricing assignments, and product enrollments are effective for simulation.	Not applicable

3. Enter the required details in the **Reference Details** zone.
4. Click **Save**.

The reference is selected for the deal.

Skipping Reference for a Deal

Procedure

To skip reference for a deal:

1. Ensure that the **Select Reference** zone is expanded in the **Deal Information - Reference** page.
2. Click the **Skip Reference** button in the top right corner of the **Select Reference** zone.

A message appears confirming whether you want to skip the reference.

3. Click **OK**.

The reference is skipped.

Tip: Alternatively, you can skip reference by clicking the check box corresponding to the **Skip Reference** field in the **Deal** zone of the **Deal Information - Deal** page while defining a deal.

Deal Information

The **Deal Information** zone allows you to view the details of the deal. It also allows you to view and add log entries for the deal or deal version and add adhoc revenue charges for the deal or deal version. It contains the following fields:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
Division	Indicates the division with which the deal is associated.
Deal Type	Indicates the deal type using which the deal is created in the system.
Review Date	Displays the date which is scheduled for calculating the deal usage as per the commitments made by the customer. Note: This field is populated when the deal has reached the Full Orchestrated status.
Deal Version Information	Displays the concatenated string of information about the deal version separated by a comma (,).
Access Group	Indicates the group of users who can view and edit the details of the entity (i.e. the customer, account, or prospect person) for which the deal is created.
Review Frequency	Indicates the duration for which the deal is monitored to calculate the usage of the deal as per the commitments made by the customer.
Effective Start Date	Displays the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person). Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Description	Displays the description of the deal.
Customer Segment	Displays the business component to which the entity (i.e. the customer, account, or prospect person) belongs.
Creation Date	Displays the date when the deal is created in the system.
Effective End Date	Displays the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person). Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Status	Indicates the current status of the deal.
Customer Tier	Indicates the customer tier of the customer segment to which the entity (i.e. the customer, account, or prospect person) belongs.
Start Date	Displays the date from when the price list, price assignment, and price item pricing is available for the deal.

Field Name	Field Description
Acceptance Date	<p>Displays the date when the customer has reviewed and accepted the deal.</p> <p>Note: This field is populated when the deal has reached the Customer Accepted status.</p> <p>If the Deal Status is Rejected then the Acceptance Date specifies the date when the deal is rejected by the customer.</p>
Deal Version Status	Indicates the status of the deal version.
Deal Currency	Indicates the currency in which the financial summary and profitability is calculated for the deal.
End Date	Displays the date till when the price list and price assignment is available for the deal.
Finalized Date	<p>Displays the date when the deal is finalized in the system.</p> <p>Note: This field is populated when the deal has reached the Customer Accepted status.</p>
Simulation Type	<p>Indicates the simulation type using which the financial summary and profitability is calculated for the deal. The valid values are:</p> <ul style="list-style-type: none"> • Account • Customer • Deal
Usage Period	<p>Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly
Deal Frequency	<p>Indicates the duration in which you want to simulate the deal for calculating the financial summary and deal profitability. The valid values are:</p> <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly

In addition, the **Deal Information** zone contains the following links:

Link Name	Link Description
Deal Log	Used to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal.
Deal Version Log	Used to view the complete trail of actions performed on the deal version. It also allows you to manually add a log entry for the deal version.

Link Name	Link Description
Adhoc Revenue and Cost	Used to add, edit, or view additional charges that are applicable for the deal while deal creation.

Simulation Details

The **Simulation Details** zone allows you to do the following:

- View the deal financial summary
- View the division financial summary
- View the product financial summary
- View the customer hierarchy
- View the assigned price lists of a person or account
- View the proposed price list assignments of a person or account
- View the enrolled products for an account
- View the proposed product enrollments for an account
- View the pricing and commitment details of a person or account
- View the division financial summary in the division currency
- View the product financial summary in the division currency
- View the revenue and cost in the division or account currency

The **Simulation Details** zone contains the following sections:

- **Symbol Legends** - Indicates the symbols used to identify the current status of the deal level, division level, and product level financial summary. It also differentiates the existing, proposed and recommended pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is within the limits defined for the user for approval.
 NOT IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is not within the limits defined for the user for approval.
 PROJECTED	Indicates the revenue, cost, and profit generated from the proposed price item pricing and price assignments.
 RECOMMENDED	Indicates the revenue, cost, and profit generated from the recommended price item pricing and price assignments.

Symbol Name	Symbol Description
 ORIGINAL	Indicates the revenue, cost, and profit generated from the existing price item pricing and price assignments.
 APPROVED	Indicates whether the deal level, division level, or product level financial summary is approved or not.
 PENDING FOR APPROVAL	Indicates that the approval for deal level, division level, or product level financial summary is pending.

- **Deal Financial Summary** - Displays the financial summary at the deal level. It contains the following columns:

Column Name	Column Description
Approval Status	Indicates the current approval status of the financial summary at the deal level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the deal level. Note: If division level approval is required, then the revenue includes the sum of revenues calculated at each division level.
Cost	Displays the proposed, recommended, and original cost calculated at the deal level. Note: The cost includes the total price item cost and the adhoc cost. If division level approval is required, then the cost includes the sum of costs calculated at each division level.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost Note: If division level approval is required, then the profit includes the sum of profits calculated at each division level.
Profitability (%)	Displays the proposed, recommended, and original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the deal level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note: The data in the **Deal Financial Summary** sections appears when the deal has reached the **Simulated** status.

- **Division Financial Summary** - Displays the financial summary at the division level. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the financial summary is displayed.
Approval Status	Indicates the current approval status of the financial summary at the division level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the division level.
Cost	Displays the proposed, recommended, and original cost calculated at the division level.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the division level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Division Financial Summary** sections appears in the **Simulation Details** zone when the **Division Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Division Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the division financial summary is displayed in the deal currency. You can view the division financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Product Financial Summary** - Displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.
Revenue	Displays the proposed, recommended, and original revenue generated from the product.

Column Name	Column Description
Cost	Displays the proposed, recommended, and original cost calculated for the product.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage from the price item pricing and price assignments at the product level . It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the product level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Product Financial Summary** sections appears in the **Simulation Details** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Customer Hierarchy** - Indicates the main customer and its associated accounts as well as the child persons and its accounts that are associated with the main customer. It also enables you to do the following:
 - View and edit the pricing and commitments at the person and account level
 - View the revenue variation from the proposed and original pricing and commitments
 - View the proposed price lists of a person or account
 - Assign proposed price list to a person or account
 - View the enrolled products of an account
 - Enroll accounts for a product
 - View the original price list of a person or account
 - View the original enrolled products for an account
 - View the proposed or the original revenue and cost generated at the person an account level.

The **Customer Hierarchy** section contains the following columns:

Column Name	Column Description
Person Name	Indicates the main customer and its related persons and accounts.

Column Name	Column Description
Division	Indicates the division to which the main customer and its related persons and accounts are associated.
Pricing and Commitments	<p>On clicking the Edit (✎) icon in the Pricing and Commitments column corresponding to a person or account in the hierarchy, the Pricing and Commitments screen appears where you can view and edit the pricing and commitments of the price items for the respective person or account.</p> <p>Note: You cannot edit the pricing or commitments of the price items if the deal has reached the Finalized status.</p>
Status	Indicates the approval status of the price item pricing and price assignments for the respective person or account.
Revenue Variation (%)	<p>Displays the average revenue generated from a customer or account in percentage. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}.$
Price List Assignment	<p>On clicking the Edit (✎) icon in the Price List Assignment column corresponding to a person or account in the hierarchy, the Price List Assignment screen appears where you can view and assign proposed price list to the respective person or account.</p> <p>Note: You cannot assign proposed price list to the person or account if the deal has reached the Finalized status.</p>
Product Enrollment	<p>On clicking the Edit (✎) icon in the Product Enrollment column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view or enroll the respective account or accounts of the customer for a product. You can also view a list of recommended products for which you want to enroll the account or accounts of the customer. The recommended products appear in the Product Enrollment screen when you add products in the Recommended Products section while defining a deal.</p> <p>Note: You cannot enroll an account for a product if the deal has reached the Finalized status.</p>
Price Item Group Selection	On clicking the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person in the hierarchy, the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities based on which you want to simulate the deal.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the proposed price item pricing and commitments.
Cost	<p>Indicates the sum of the proposed costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the proposed costs of all the child customers is considered.</p>

Column Name	Column Description
Pricelist	On clicking the View (📄) icon in the Price List column corresponding to the person or account in the hierarchy, the Price List Assignment screen appears where you can view the original price list assigned to the respective person or account.
Product	On clicking the Edit (✎) icon in the Product column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view the products to which the account is already enrolled.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the original price item pricing and commitments.
Cost	Indicates the sum of the original costs from all accounts under the customer. Note: If the person is a parent customer, then the sum of the original costs of all the child customers is considered.

In addition, the **Simulation Details** zone contains the following buttons:

Button Name	Button Description
Deal Pricing and Commitments	Used to define the consolidated pricing and commitments for the customers or accounts in a deal.
Simulate Deal	Used to perform different types of simulation based on the pricing and commitments of the price item to determine the best price that can be offered to the clients as per their requirements.
Check Limits	Used to execute the price item ceil and floor validation for an approver as per the limits set on the price item screen. Note: The Check Limits is run only for the price items which are in the Pending for Approval or Error status after the Pricing Simulation is executed. The Check Limits button is activated when the Price Item Approval Required option is set to Yes in the Deal Type using which the deal is created.
Send Deal for Approval	Used to move the deal from the current role to the next role of the next level in the approval hierarchy for approval. Note: On clicking the Send Deal for Approval button, a To Do notification is created for the users of the next level to indicate that approval of the deal is required. A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed. This button is activated after Pricing Simulation is completed for the deal and if the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile .

Button Name	Button Description
Approve Deal	<p>Used to approve the deal. To approve a deal the following conditions should be met:</p> <ul style="list-style-type: none"> • All the price items should be in the Approved status if the Price Item Approval Required option is set to Yes in the Deal Type used for creating the deal. • All the division level approvals must be completed if the Division Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • All the product level approvals must be completed if the Product Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • The deal should be in the Ready for Approval status for the approver to initiate the deal approval process. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Approve Deal button is activated only when the deal is in the Ready for Approval status and the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p> </div>
Return to Submitter	<p>Used to move the deal from the current role to the previous role of the previous level in the approval hierarchy for approval. It is also used to send the deal to the relationship manager for approval if you have recommended a new pricing for the price item.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>On clicking the Return to Submitter button, a To Do notification is created for the users of the previous level to indicate that the deal is returned for approval.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p> </div>
Finalize Deal	<p>Used to finalize the deal so that it is ready to be presented to the customer for approval.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This button is activated when the deal is in the Approved status.</p> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Tip: You can also finalize a deal by clicking the Finalize () icon in the Finalize Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p> </div>
Accept Deal	<p>Used to accept the deal in the system after receiving confirmation of acceptance from the customer.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This button is activated only when the deal is in the Finalized status.</p> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Tip: You can also accept a deal by clicking the Accept () icon in the Accept Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p> </div>

Button Name	Button Description
Reject Deal	Used to reject the deal in the system after receiving confirmation of rejection from the customer.
	Note: This button is activated only when the deal is in the Finalized status.
	Tip: You can also reject a deal by clicking the Reject (✖) icon in the Reject Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.
Create Deal Version	Used to create a deal version for the existing deal to optimize the deal pricing process and to make better pricing decisions.
	Note: This button is deactivated once the deal has reached the Approved status.
Discard Deal	Used to discard the deal.
	Note: You cannot discard a deal if it has reached the Finalized status.
Print Deal	Used to extract relevant information about the deal in the pdf or excel format which is published either to the customer for receiving approvals or for internal reviews and validations.
Apply Back	Used to activate the proposed pricelist assignments, overridden pricing, and product enrollments for the existing customer or account in the system.
Previous	Used to view information about the previous status of the deal.

Defining a Deal Version

Prerequisites

To define a deal version, you should have:

- Deal for which you want to define a deal version defined in the application

Procedure

To define a deal version:

- Search for the deal for which you want to define a deal version in the **Deal Dashboard** screen.
- In the **Search Results** section, click the link in the **Deal Information** column corresponding to the deal for which you want to define a deal version.

The **Deal Information** screen appears.

- In the **Simulation Details** zone, click the **Create Deal Version** button.

The **Deal Version** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deal Information	Displays a concatenated string of information about the deal separated by a comma (,) for which you want to define a deal version.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Deal Version Description	Used to specify the description for the deal version	Yes.

- Enter the required details in the **Deal Version** screen.
- Click **Save**.

The deal version is created and the **Deal Information** screen appears with the details of the deal version updated in the **Deal Information** zone.

Note: You cannot create a deal version for a deal if it has reached the **Approved** status.

Deal Information

The **Deal Information** zone allows you to view the details of the deal. It also allows you to view and add log entries for the deal or deal version and add adhoc revenue charges for the deal or deal version. It contains the following fields:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
Division	Indicates the division with which the deal is associated.
Deal Type	Indicates the deal type using which the deal is created in the system.
Review Date	Displays the date which is scheduled for calculating the deal usage as per the commitments made by the customer. Note: This field is populated when the deal has reached the Full Orchestrated status.
Deal Version Information	Displays the concatenated string of information about the deal version separated by a comma (,).
Access Group	Indicates the group of users who can view and edit the details of the entity (i.e. the customer, account, or prospect person) for which the deal is created.
Review Frequency	Indicates the duration for which the deal is monitored to calculate the usage of the deal as per the commitments made by the customer.
Effective Start Date	Displays the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person). Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Description	Displays the description of the deal.
Customer Segment	Displays the business component to which the entity (i.e. the customer, account, or prospect person) belongs.
Creation Date	Displays the date when the deal is created in the system.
Effective End Date	Displays the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person). Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Status	Indicates the current status of the deal.
Customer Tier	Indicates the customer tier of the customer segment to which the entity (i.e. the customer, account, or prospect person) belongs.
Start Date	Displays the date from when the price list, price assignment, and price item pricing is available for the deal.

Field Name	Field Description
Acceptance Date	<p>Displays the date when the customer has reviewed and accepted the deal.</p> <p>Note: This field is populated when the deal has reached the Customer Accepted status.</p> <p>If the Deal Status is Rejected then the Acceptance Date specifies the date when the deal is rejected by the customer.</p>
Deal Version Status	Indicates the status of the deal version.
Deal Currency	Indicates the currency in which the financial summary and profitability is calculated for the deal.
End Date	Displays the date till when the price list and price assignment is available for the deal.
Finalized Date	<p>Displays the date when the deal is finalized in the system.</p> <p>Note: This field is populated when the deal has reached the Customer Accepted status.</p>
Simulation Type	<p>Indicates the simulation type using which the financial summary and profitability is calculated for the deal. The valid values are:</p> <ul style="list-style-type: none"> • Account • Customer • Deal
Usage Period	<p>Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are:</p> <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly
Deal Frequency	<p>Indicates the duration in which you want to simulate the deal for calculating the financial summary and deal profitability. The valid values are:</p> <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly

In addition, the **Deal Information** zone contains the following links:

Link Name	Link Description
Deal Log	Used to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal.
Deal Version Log	Used to view the complete trail of actions performed on the deal version. It also allows you to manually add a log entry for the deal version.

Link Name	Link Description
Adhoc Revenue and Cost	Used to add, edit, or view additional charges that are applicable for the deal while deal creation.

Simulation Details

The **Simulation Details** zone allows you to do the following:

- View the deal financial summary
- View the division financial summary
- View the product financial summary
- View the customer hierarchy
- View the assigned price lists of a person or account
- View the proposed price list assignments of a person or account
- View the enrolled products for an account
- View the proposed product enrollments for an account
- View the pricing and commitment details of a person or account
- View the division financial summary in the division currency
- View the product financial summary in the division currency
- View the revenue and cost in the division or account currency

The **Simulation Details** zone contains the following sections:

- **Symbol Legends** - Indicates the symbols used to identify the current status of the deal level, division level, and product level financial summary. It also differentiates the existing, proposed and recommended pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is within the limits defined for the user for approval.
 NOT IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is not within the limits defined for the user for approval.
 PROJECTED	Indicates the revenue, cost, and profit generated from the proposed price item pricing and price assignments.
 RECOMMENDED	Indicates the revenue, cost, and profit generated from the recommended price item pricing and price assignments.

Symbol Name	Symbol Description
 ORIGINAL	Indicates the revenue, cost, and profit generated from the existing price item pricing and price assignments.
 APPROVED	Indicates whether the deal level, division level, or product level financial summary is approved or not.
 PENDING FOR APPROVAL	Indicates that the approval for deal level, division level, or product level financial summary is pending.

- **Deal Financial Summary** - Displays the financial summary at the deal level. It contains the following columns:

Column Name	Column Description
Approval Status	Indicates the current approval status of the financial summary at the deal level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the deal level. Note: If division level approval is required, then the revenue includes the sum of revenues calculated at each division level.
Cost	Displays the proposed, recommended, and original cost calculated at the deal level. Note: The cost includes the total price item cost and the adhoc cost. If division level approval is required, then the cost includes the sum of costs calculated at each division level.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: $\text{Profit} = \text{Revenue} - \text{Cost}$ Note: If division level approval is required, then the profit includes the sum of profits calculated at each division level.
Profitability (%)	Displays the proposed, recommended, and original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: $\text{Profitability \%} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the deal level. It is calculated using the following formula: $\text{Profit Variation (\%)} = (\text{Proposed Profit} - \text{Original Profit}) * 100 / \text{Original Profit}$

Note: The data in the **Deal Financial Summary** sections appears when the deal has reached the **Simulated** status.

- **Division Financial Summary** - Displays the financial summary at the division level. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the financial summary is displayed.
Approval Status	Indicates the current approval status of the financial summary at the division level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the division level.
Cost	Displays the proposed, recommended, and original cost calculated at the division level.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the division level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Division Financial Summary** sections appears in the **Simulation Details** zone when the **Division Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Division Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the division financial summary is displayed in the deal currency. You can view the division financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Product Financial Summary** - Displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.
Revenue	Displays the proposed, recommended, and original revenue generated from the product.

Column Name	Column Description
Cost	Displays the proposed, recommended, and original cost calculated for the product.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage from the price item pricing and price assignments at the product level . It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the product level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Product Financial Summary** sections appears in the **Simulation Details** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Customer Hierarchy** - Indicates the main customer and its associated accounts as well as the child persons and its accounts that are associated with the main customer. It also enables you to do the following:
 - View and edit the pricing and commitments at the person and account level
 - View the revenue variation from the proposed and original pricing and commitments
 - View the proposed price lists of a person or account
 - Assign proposed price list to a person or account
 - View the enrolled products of an account
 - Enroll accounts for a product
 - View the original price list of a person or account
 - View the original enrolled products for an account
 - View the proposed or the original revenue and cost generated at the person an account level.

The **Customer Hierarchy** section contains the following columns:

Column Name	Column Description
Person Name	Indicates the main customer and its related persons and accounts.

Column Name	Column Description
Division	Indicates the division to which the main customer and it related persons and accounts are associated.
Pricing and Commitments	On clicking the Edit (✎) icon in the Pricing and Commitments column corresponding to a person or account in the hierarchy, the Pricing and Commitments screen appears where you can view and edit the pricing and commitments of the price items for the respective person or account.
	Note: You cannot edit the pricing or commitments of the price items if the deal has reached the Finalized status.
Status	Indicates the approval status of the price item pricing and price assignments for the respective person or account.
Revenue Variation (%)	Displays the average revenue generated from a customer or account in percentage. It is calculated using the following formula: Revenue Variation (%) = (Proposed Revenue – Original Revenue)*100/Original Revenue.
Price List Assignment	On clicking the Edit (✎) icon in the Price List Assignment column corresponding to a person or account in the hierarchy, the Price List Assignment screen appears where you can view and assign proposed price list to the respective person or account.
	Note: You cannot assign proposed price list to the person or account if the deal has reached the Finalized status.
Product Enrollment	On clicking the Edit (✎) icon in the Product Enrollment column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view or enroll the respective account or accounts of the customer for a product. You can also view a list of recommended products for which you want to enroll the account or accounts of the customer. The recommended products appear in the Product Enrollment screen when you add products in the Recommended Products section while defining a deal.
	Note: You cannot enroll an account for a product if the deal has reached the Finalized status.
Price Item Group Selection	On clicking the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person in the hierarchy, the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities based on which you want to simulate the deal.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the proposed price item pricing and commitments.
Cost	Indicates the sum of the proposed costs from all accounts under the customer.
	Note: If the person is a parent customer, then the sum of the proposed costs of all the child customers is considered.

Column Name	Column Description
Pricelist	On clicking the View () icon in the Price List column corresponding to the person or account in the hierarchy, the Price List Assignment screen appears where you can view the original price list assigned to the respective person or account.
Product	On clicking the Edit () icon in the Product column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view the products to which the account is already enrolled.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the original price item pricing and commitments.
Cost	Indicates the sum of the original costs from all accounts under the customer. Note: If the person is a parent customer, then the sum of the original costs of all the child customers is considered.

In addition, the **Simulation Details** zone contains the following buttons:

Button Name	Button Description
Deal Pricing and Commitments	Used to define the consolidated pricing and commitments for the customers or accounts in a deal.
Simulate Deal	Used to perform different types of simulation based on the pricing and commitments of the price item to determine the best price that can be offered to the clients as per their requirements.
Check Limits	Used to execute the price item ceil and floor validation for an approver as per the limits set on the price item screen. Note: The Check Limits is run only for the price items which are in the Pending for Approval or Error status after the Pricing Simulation is executed. The Check Limits button is activated when the Price Item Approval Required option is set to Yes in the Deal Type using which the deal is created.
Send Deal for Approval	Used to move the deal from the current role to the next role of the next level in the approval hierarchy for approval. Note: On clicking the Send Deal for Approval button, a To Do notification is created for the users of the next level to indicate that approval of the deal is required. A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed. This button is activated after Pricing Simulation is completed for the deal and if the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile .

Button Name	Button Description
Approve Deal	<p>Used to approve the deal. To approve a deal the following conditions should be met:</p> <ul style="list-style-type: none"> • All the price items should be in the Approved status if the Price Item Approval Required option is set to Yes in the Deal Type used for creating the deal. • All the division level approvals must be completed if the Division Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • All the product level approvals must be completed if the Product Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • The deal should be in the Ready for Approval status for the approver to initiate the deal approval process. <p>Note:</p> <p>The Approve Deal button is activated only when the deal is in the Ready for Approval status and the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>
Return to Submitter	<p>Used to move the deal from the current role to the previous role of the previous level in the approval hierarchy for approval. It is also used to send the deal to the relationship manager for approval if you have recommended a new pricing for the price item.</p> <p>Note:</p> <p>On clicking the Return to Submitter button, a To Do notification is created for the users of the previous level to indicate that the deal is returned for approval.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p>
Finalize Deal	<p>Used to finalize the deal so that it is ready to be presented to the customer for approval.</p> <p>Note: This button is activated when the deal is in the Approved status.</p> <p>Tip: You can also finalize a deal by clicking the Finalize () icon in the Finalize Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Accept Deal	<p>Used to accept the deal in the system after receiving confirmation of acceptance from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also accept a deal by clicking the Accept () icon in the Accept Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>

Button Name	Button Description
Reject Deal	Used to reject the deal in the system after receiving confirmation of rejection from the customer.
	Note: This button is activated only when the deal is in the Finalized status.
	Tip: You can also reject a deal by clicking the Reject (✖) icon in the Reject Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.
Create Deal Version	Used to create a deal version for the existing deal to optimize the deal pricing process and to make better pricing decisions.
	Note: This button is deactivated once the deal has reached the Approved status.
Discard Deal	Used to discard the deal.
	Note: You cannot discard a deal if it has reached the Finalized status.
Print Deal	Used to extract relevant information about the deal in the pdf or excel format which is published either to the customer for receiving approvals or for internal reviews and validations.
Apply Back	Used to activate the proposed pricelist assignments, overridden pricing, and product enrollments for the existing customer or account in the system.
Previous	Used to view information about the previous status of the deal.

Deal Information

The **Deal Information** zone allows you to view the details of the deal. It also allows you to view and add log entries for the deal or deal version and add adhoc revenue charges for the deal or deal version. It contains the following fields:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
Division	Indicates the division with which the deal is associated.
Deal Type	Indicates the deal type using which the deal is created in the system.
Review Date	Displays the date which is scheduled for calculating the deal usage as per the commitments made by the customer. Note: This field is populated when the deal has reached the Full Orchestrated status.
Deal Version Information	Displays the concatenated string of information about the deal version separated by a comma (,).
Access Group	Indicates the group of users who can view and edit the details of the entity (i.e. the customer, account, or prospect person) for which the deal is created.
Review Frequency	Indicates the duration for which the deal is monitored to calculate the usage of the deal as per the commitments made by the customer.
Effective Start Date	Displays the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person). Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Description	Displays the description of the deal.
Customer Segment	Displays the business component to which the entity (i.e. the customer, account, or prospect person) belongs.
Creation Date	Displays the date when the deal is created in the system.
Effective End Date	Displays the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person). Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Status	Indicates the current status of the deal.

Field Name	Field Description
Customer Tier	Indicates the customer tier of the customer segment to which the entity (i.e. the customer, account, or prospect person) belongs.
Start Date	Displays the date from when the price list, price assignment, and price item pricing is available for the deal.
Acceptance Date	Displays the date when the customer has reviewed and accepted the deal. Note: This field is populated when the deal has reached the Customer Accepted status. If the Deal Status is Rejected then the Acceptance Date specifies the date when the deal is rejected by the customer.
Deal Version Status	Indicates the status of the deal version.
Deal Currency	Indicates the currency in which the financial summary and profitability is calculated for the deal.
End Date	Displays the date till when the price list and price assignment is available for the deal.
Finalized Date	Displays the date when the deal is finalized in the system. Note: This field is populated when the deal has reached the Customer Accepted status.
Simulation Type	Indicates the simulation type using which the financial summary and profitability is calculated for the deal. The valid values are: <ul style="list-style-type: none"> • Account • Customer • Deal
Usage Period	Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly
Deal Frequency	Indicates the duration in which you want to simulate the deal for calculating the financial summary and deal profitability. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly

In addition, the **Deal Information** zone contains the following links:

Link Name	Link Description
Deal Log	Used to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal.
Deal Version Log	Used to view the complete trail of actions performed on the deal version. It also allows you to manually add a log entry for the deal version.
Adhoc Revenue and Cost	Used to add, edit, or view additional charges that are applicable for the deal while deal creation.

Simulation Details

The **Simulation Details** zone allows you to do the following:

- View the deal financial summary
- View the division financial summary
- View the product financial summary
- View the customer hierarchy
- View the assigned price lists of a person or account
- View the proposed price list assignments of a person or account
- View the enrolled products for an account
- View the proposed product enrollments for an account
- View the pricing and commitment details of a person or account
- View the division financial summary in the division currency
- View the product financial summary in the division currency
- View the revenue and cost in the division or account currency

The **Simulation Details** zone contains the following sections:

- **Symbol Legends** - Indicates the symbols used to identify the current status of the deal level, division level, and product level financial summary. It also differentiates the existing, proposed and recommended pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is within the limits defined for the user for approval.
 NOT IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is not within the limits defined for the user for approval.

Symbol Name	Symbol Description
 PROJECTED	Indicates the revenue, cost, and profit generated from the proposed price item pricing and price assignments.
 RECOMMENDED	Indicates the revenue, cost, and profit generated from the recommended price item pricing and price assignments.
 ORIGINAL	Indicates the revenue, cost, and profit generated from the existing price item pricing and price assignments.
 APPROVED	Indicates whether the deal level, division level, or product level financial summary is approved or not.
 PENDING FOR APPROVAL	Indicates that the approval for deal level, division level, or product level financial summary is pending.

- **Deal Financial Summary** - Displays the financial summary at the deal level. It contains the following columns:

Column Name	Column Description
Approval Status	Indicates the current approval status of the financial summary at the deal level.
Revenue	<p>Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the deal level.</p> <p>Note: If division level approval is required, then the revenue includes the sum of revenues calculated at each division level.</p>
Cost	<p>Displays the proposed, recommended, and original cost calculated at the deal level.</p> <p>Note: The cost includes the total price item cost and the adhoc cost. If division level approval is required, then the cost includes the sum of costs calculated at each division level.</p>
Profit	<p>Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:</p> <p>Profit = Revenue – Cost</p> <p>Note: If division level approval is required, then the profit includes the sum of profits calculated at each division level.</p>
Profitability (%)	<p>Displays the proposed, recommended, and original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:</p> <p>Profitability % = (Revenue – Cost)*100/ Revenue</p>
Profit Variation (%)	<p>Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the deal level. It is calculated using the following formula:</p> <p>Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit</p>

Note: The data in the **Deal Financial Summary** sections appears when the deal has reached the **Simulated** status.

- **Division Financial Summary** - Displays the financial summary at the division level. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the financial summary is displayed.
Approval Status	Indicates the current approval status of the financial summary at the division level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the division level.
Cost	Displays the proposed, recommended, and original cost calculated at the division level. Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the division level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Division Financial Summary** sections appears in the **Simulation Details** zone when the **Division Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Division Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the division financial summary is displayed in the deal currency. You can view the division financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Product Financial Summary** - Displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.

Column Name	Column Description
Revenue	Displays the proposed, recommended, and original revenue generated from the product.
Cost	Displays the proposed, recommended, and original cost calculated for the product.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage from the price item pricing and price assignments at the product level . It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the product level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Product Financial Summary** sections appears in the **Simulation Details** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Customer Hierarchy** - Indicates the main customer and its associated accounts as well as the child persons and its accounts that are associated with the main customer. It also enables you to do the following:
 - View and edit the pricing and commitments at the person and account level
 - View the revenue variation from the proposed and original pricing and commitments
 - View the proposed price lists of a person or account
 - Assign proposed price list to a person or account
 - View the enrolled products of an account
 - Enroll accounts for a product
 - View the original price list of a person or account
 - View the original enrolled products for an account
 - View the proposed or the original revenue and cost generated at the person an account level.

The **Customer Hierarchy** section contains the following columns:

Column Name	Column Description
Person Name	Indicates the main customer and its related persons and accounts.
Division	Indicates the division to which the main customer and it related persons and accounts are associated.
Pricing and Commitments	<p>On clicking the Edit (✎) icon in the Pricing and Commitments column corresponding to a person or account in the hierarchy, the Pricing and Commitments screen appears where you can view and edit the pricing and commitments of the price items for the respective person or account.</p> <p>Note: You cannot edit the pricing or commitments of the price items if the deal has reached the Finalized status.</p>
Status	Indicates the approval status of the price item pricing and price assignments for the respective person or account.
Revenue Variation (%)	<p>Displays the average revenue generated from a customer or account in percentage. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}.$
Price List Assignment	<p>On clicking the Edit (✎) icon in the Price List Assignment column corresponding to a person or account in the hierarchy, the Price List Assignment screen appears where you can view and assign proposed price list to the respective person or account.</p> <p>Note: You cannot assign proposed price list to the person or account if the deal has reached the Finalized status.</p>
Product Enrollment	<p>On clicking the Edit (✎) icon in the Product Enrollment column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view or enroll the respective account or accounts of the customer for a product. You can also view a list of recommended products for which you want to enroll the account or accounts of the customer. The recommended products appear in the Product Enrollment screen when you add products in the Recommended Products section while defining a deal.</p> <p>Note: You cannot enroll an account for a product if the deal has reached the Finalized status.</p>
Price Item Group Selection	On clicking the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person in the hierarchy, the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities based on which you want to simulate the deal.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the proposed price item pricing and commitments.
Cost	<p>Indicates the sum of the proposed costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the proposed costs of all the child customers is considered.</p>

Column Name	Column Description
Pricelist	On clicking the View (📄) icon in the Price List column corresponding to the person or account in the hierarchy, the Price List Assignment screen appears where you can view the original price list assigned to the respective person or account.
Product	On clicking the Edit (✎) icon in the Product column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view the products to which the account is already enrolled.
Revenue	Indicates the revenue generated by the corresponding person or account in the hierarchy through the original price item pricing and commitments.
Cost	Indicates the sum of the original costs from all accounts under the customer. Note: If the person is a parent customer, then the sum of the original costs of all the child customers is considered.

In addition, the **Simulation Details** zone contains the following buttons:

Button Name	Button Description
Deal Pricing and Commitments	Used to define the consolidated pricing and commitments for the customers or accounts in a deal.
Simulate Deal	Used to perform different types of simulation based on the pricing and commitments of the price item to determine the best price that can be offered to the clients as per their requirements.
Check Limits	Used to execute the price item ceil and floor validation for an approver as per the limits set on the price item screen. Note: The Check Limits is run only for the price items which are in the Pending for Approval or Error status after the Pricing Simulation is executed. The Check Limits button is activated when the Price Item Approval Required option is set to Yes in the Deal Type using which the deal is created.
Send Deal for Approval	Used to move the deal from the current role to the next role of the next level in the approval hierarchy for approval. Note: On clicking the Send Deal for Approval button, a To Do notification is created for the users of the next level to indicate that approval of the deal is required. A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed. This button is activated after Pricing Simulation is completed for the deal and if the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile .

Button Name	Button Description
Approve Deal	<p>Used to approve the deal. To approve a deal the following conditions should be met:</p> <ul style="list-style-type: none"> • All the price items should be in the Approved status if the Price Item Approval Required option is set to Yes in the Deal Type used for creating the deal. • All the division level approvals must be completed if the Division Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • All the product level approvals must be completed if the Product Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • The deal should be in the Ready for Approval status for the approver to initiate the deal approval process. <p>Note:</p> <p>The Approve Deal button is activated only when the deal is in the Ready for Approval status and the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>
Return to Submitter	<p>Used to move the deal from the current role to the previous role of the previous level in the approval hierarchy for approval. It is also used to send the deal to the relationship manager for approval if you have recommended a new pricing for the price item.</p> <p>Note:</p> <p>On clicking the Return to Submitter button, a To Do notification is created for the users of the previous level to indicate that the deal is returned for approval.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p>
Finalize Deal	<p>Used to finalize the deal so that it is ready to be presented to the customer for approval.</p> <p>Note: This button is activated when the deal is in the Approved status.</p> <p>Tip: You can also finalize a deal by clicking the Finalize () icon in the Finalize Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Accept Deal	<p>Used to accept the deal in the system after receiving confirmation of acceptance from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also accept a deal by clicking the Accept () icon in the Accept Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>

Button Name	Button Description
Reject Deal	Used to reject the deal in the system after receiving confirmation of rejection from the customer.
	Note: This button is activated only when the deal is in the Finalized status.
	Tip: You can also reject a deal by clicking the Reject (✖) icon in the Reject Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.
Create Deal Version	Used to create a deal version for the existing deal to optimize the deal pricing process and to make better pricing decisions.
	Note: This button is deactivated once the deal has reached the Approved status.
Discard Deal	Used to discard the deal.
	Note: You cannot discard a deal if it has reached the Finalized status.
Print Deal	Used to extract relevant information about the deal in the pdf or excel format which is published either to the customer for receiving approvals or for internal reviews and validations.
Apply Back	Used to activate the proposed pricelist assignments, overridden pricing, and product enrollments for the existing customer or account in the system.
Previous	Used to view information about the previous status of the deal.

Deal Information - Acceptance/Rejection

The **Deal Information - Acceptance/Rejection** page enables you to either accept or reject a finalized deal based on the customer feedback. It also enables you to fully orchestrate the customer accepted deal. You can also extract the deal information in the pdf or excel format. It contains the following zones:

- [Deal Information](#) on page 2776

The following fields in the **Deal Information** zone are updated when the deal or deal version has been accepted or rejected by the customer:

Field Name	Field Description
Effective Start Date	<p>Displays the date from when the deal is effective for the customer or prospect.</p> <p>Note:</p> <p>The effective date specified for the proposed price list pricing and price assignment is considered as the Effective Start Date for the deal.</p> <p>Also, the end date for the existing price list pricing and price assignment is calculated by the below formula:</p> <p>End Date = Effective Start Date of the deal - 1 day.</p>
Effective End Date	Displays the date till when the deal is effective for the customer or prospect.

Field Name	Field Description
Acceptance Date	Displays the date when the customer or prospect has accepted the deal.
	Note: If the Deal Status is Rejected then the Acceptance Date specifies the date when the deal is rejected by the customer.
Finalized Date	Displays the date when the deal has been finalized in the system.

- [Simulation Details](#) on page 2778

Note: You can access the **Deal Information - Acceptance/Rejection** page when the deal is in the **Finalized** or **Customer Accepted** status.

Deal Information

The **Deal Information** zone allows you to view the details of the deal. It also allows you to view and add log entries for the deal or deal version and add adhoc revenue charges for the deal or deal version. It contains the following fields:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
Division	Indicates the division with which the deal is associated.
Deal Type	Indicates the deal type using which the deal is created in the system.
Review Date	Displays the date which is scheduled for calculating the deal usage as per the commitments made by the customer.
	Note: This field is populated when the deal has reached the Full Orchestrated status.
Deal Version Information	Displays the concatenated string of information about the deal version separated by a comma (,).
Access Group	Indicates the group of users who can view and edit the details of the entity (i.e. the customer, account, or prospect person) for which the deal is created.
Review Frequency	Indicates the duration for which the deal is monitored to calculate the usage of the deal as per the commitments made by the customer.

Field Name	Field Description
Effective Start Date	Displays the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person).
	Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Description	Displays the description of the deal.
Customer Segment	Displays the business component to which the entity (i.e. the customer, account, or prospect person) belongs.
Creation Date	Displays the date when the deal is created in the system.
Effective End Date	Displays the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person).
	Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Status	Indicates the current status of the deal.
Customer Tier	Indicates the customer tier of the customer segment to which the entity (i.e. the customer, account, or prospect person) belongs.
Start Date	Displays the date from when the price list, price assignment, and price item pricing is available for the deal.
Acceptance Date	Displays the date when the customer has reviewed and accepted the deal.
	Note: This field is populated when the deal has reached the Customer Accepted status. If the Deal Status is Rejected then the Acceptance Date specifies the date when the deal is rejected by the customer.
Deal Version Status	Indicates the status of the deal version.
Deal Currency	Indicates the currency in which the financial summary and profitability is calculated for the deal.
End Date	Displays the date till when the price list and price assignment is available for the deal.
Finalized Date	Displays the date when the deal is finalized in the system.
	Note: This field is populated when the deal has reached the Customer Accepted status.
Simulation Type	Indicates the simulation type using which the financial summary and profitability is calculated for the deal. The valid values are: <ul style="list-style-type: none"> • Account • Customer • Deal

Field Name	Field Description
Usage Period	Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly
Deal Frequency	Indicates the duration in which you want to simulate the deal for calculating the financial summary and deal profitability. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly

In addition, the **Deal Information** zone contains the following links:

Link Name	Link Description
Deal Log	Used to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal.
Deal Version Log	Used to view the complete trail of actions performed on the deal version. It also allows you to manually add a log entry for the deal version.
Adhoc Revenue and Cost	Used to add, edit, or view additional charges that are applicable for the deal while deal creation.

Simulation Details

The **Simulation Details** zone allows you to do the following:

- View the deal financial summary
- View the division financial summary
- View the product financial summary
- View the customer hierarchy
- View the assigned price lists of a person or account
- View the proposed price list assignments of a person or account

- View the enrolled products for an account
- View the proposed product enrollments for an account
- View the pricing and commitment details of a person or account
- View the division financial summary in the division currency
- View the product financial summary in the division currency
- View the revenue and cost in the division or account currency

The **Simulation Details** zone contains the following sections:

- **Symbol Legends** - Indicates the symbols used to identify the current status of the deal level, division level, and product level financial summary. It also differentiates the existing, proposed and recommended pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is within the limits defined for the user for approval.
 NOT IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is not within the limits defined for the user for approval.
 PROJECTED	Indicates the revenue, cost, and profit generated from the proposed price item pricing and price assignments.
 RECOMMENDED	Indicates the revenue, cost, and profit generated from the recommended price item pricing and price assignments.
 ORIGINAL	Indicates the revenue, cost, and profit generated from the existing price item pricing and price assignments.
 APPROVED	Indicates whether the deal level, division level, or product level financial summary is approved or not.
 PENDING FOR APPROVAL	Indicates that the approval for deal level, division level, or product level financial summary is pending.

- **Deal Financial Summary** - Displays the financial summary at the deal level. It contains the following columns:

Column Name	Column Description
Approval Status	Indicates the current approval status of the financial summary at the deal level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the deal level. Note: If division level approval is required, then the revenue includes the sum of revenues calculated at each division level.
Cost	Displays the proposed, recommended, and original cost calculated at the deal level. Note: The cost includes the total price item cost and the adhoc cost. If division level approval is required, then the cost includes the sum of costs calculated at each division level.

Column Name	Column Description
Profit	<p>Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:</p> $\text{Profit} = \text{Revenue} - \text{Cost}$ <p>Note: If division level approval is required, then the profit includes the sum of profits calculated at each division level.</p>
Profitability (%)	<p>Displays the proposed, recommended, and original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:</p> $\text{Profitability \%} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$
Profit Variation (%)	<p>Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the deal level. It is calculated using the following formula:</p> $\text{Profit Variation (\%)} = (\text{Proposed Profit} - \text{Original Profit}) * 100 / \text{Original Profit}$

Note: The data in the **Deal Financial Summary** sections appears when the deal has reached the **Simulated** status.

- **Division Financial Summary** - Displays the financial summary at the division level. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the financial summary is displayed.
Approval Status	Indicates the current approval status of the financial summary at the division level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the division level.
Cost	<p>Displays the proposed, recommended, and original cost calculated at the division level.</p> <p>Note: The cost includes the total price item cost and the adhoc cost.</p>
Profit	<p>Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula:</p> $\text{Profit} = \text{Revenue} - \text{Cost}$
Profitability (%)	<p>Displays the proposed, recommended, and original profit generated in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula:</p> $\text{Profitability \%} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$

Column Name	Column Description
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the division level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Division Financial Summary** sections appears in the **Simulation Details** zone when the **Division Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Division Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the division financial summary is displayed in the deal currency. You can view the division financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Product Financial Summary** - Displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.
Revenue	Displays the proposed, recommended, and original revenue generated from the product.
Cost	Displays the proposed, recommended, and original cost calculated for the product. Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage from the price item pricing and price assignments at the product level . It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the product level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Product Financial Summary** sections appears in the **Simulation Details** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Customer Hierarchy** - Indicates the main customer and its associated accounts as well as the child persons and its accounts that are associated with the main customer. It also enables you to do the following:
 - View and edit the pricing and commitments at the person and account level
 - View the revenue variation from the proposed and original pricing and commitments
 - View the proposed price lists of a person or account
 - Assign proposed price list to a person or account
 - View the enrolled products of an account
 - Enroll accounts for a product
 - View the original price list of a person or account
 - View the original enrolled products for an account
 - View the proposed or the original revenue and cost generated at the person an account level.

The **Customer Hierarchy** section contains the following columns:

Column Name	Column Description
Person Name	Indicates the main customer and its related persons and accounts.
Division	Indicates the division to which the main customer and it related persons and accounts are associated.
Pricing and Commitments	<p>On clicking the Edit  icon in the Pricing and Commitments column corresponding to a person or account in the hierarchy, the Pricing and Commitments screen appears where you can view and edit the pricing and commitments of the price items for the respective person or account.</p> <p>Note: You cannot edit the pricing or commitments of the price items if the deal has reached the Finalized status.</p>
Status	Indicates the approval status of the price item pricing and price assignments for the respective person or account.
Revenue Variation (%)	<p>Displays the average revenue generated from a customer or account in percentage. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}.$

Column Name	Column Description
Price List Assignment	<p>On clicking the Edit (✎) icon in the Price List Assignment column corresponding to a person or account in the hierarchy, the Price List Assignment screen appears where you can view and assign proposed price list to the respective person or account.</p> <p>Note: You cannot assign proposed price list to the person or account if the deal has reached the Finalized status.</p>
Product Enrollment	<p>On clicking the Edit (✎) icon in the Product Enrollment column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view or enroll the respective account or accounts of the customer for a product. You can also view a list of recommended products for which you want to enroll the account or accounts of the customer. The recommended products appear in the Product Enrollment screen when you add products in the Recommended Products section while defining a deal.</p> <p>Note: You cannot enroll an account for a product if the deal has reached the Finalized status.</p>
Price Item Group Selection	<p>On clicking the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person in the hierarchy, the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities based on which you want to simulate the deal.</p>
Revenue	<p>Indicates the revenue generated by the corresponding person or account in the hierarchy through the proposed price item pricing and commitments.</p>
Cost	<p>Indicates the sum of the proposed costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the proposed costs of all the child customers is considered.</p>
Pricelist	<p>On clicking the View (📄) icon in the Price List column corresponding to the person or account in the hierarchy, the Price List Assignment screen appears where you can view the original price list assigned to the respective person or account.</p>
Product	<p>On clicking the Edit (✎) icon in the Product column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view the products to which the account is already enrolled.</p>
Revenue	<p>Indicates the revenue generated by the corresponding person or account in the hierarchy through the original price item pricing and commitments.</p>
Cost	<p>Indicates the sum of the original costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the original costs of all the child customers is considered.</p>

In addition, the **Simulation Details** zone contains the following buttons:

Button Name	Button Description
Deal Pricing and Commitments	Used to define the consolidated pricing and commitments for the customers or accounts in a deal.
Simulate Deal	Used to perform different types of simulation based on the pricing and commitments of the price item to determine the best price that can be offered to the clients as per their requirements.
Check Limits	<p>Used to execute the price item ceil and floor validation for an approver as per the limits set on the price item screen.</p> <p>Note:</p> <p>The Check Limits is run only for the price items which are in the Pending for Approval or Error status after the Pricing Simulation is executed.</p> <p>The Check Limits button is activated when the Price Item Approval Required option is set to Yes in the Deal Type using which the deal is created.</p>
Send Deal for Approval	<p>Used to move the deal from the current role to the next role of the next level in the approval hierarchy for approval.</p> <p>Note:</p> <p>On clicking the Send Deal for Approval button, a To Do notification is created for the users of the next level to indicate that approval of the deal is required.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p> <p>This button is activated after Pricing Simulation is completed for the deal and if the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>
Approve Deal	<p>Used to approve the deal. To approve a deal the following conditions should be met:</p> <ul style="list-style-type: none"> • All the price items should be in the Approved status if the Price Item Approval Required option is set to Yes in the Deal Type used for creating the deal. • All the division level approvals must be completed if the Division Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • All the product level approvals must be completed if the Product Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • The deal should be in the Ready for Approval status for the approver to initiate the deal approval process. <p>Note:</p> <p>The Approve Deal button is activated only when the deal is in the Ready for Approval status and the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>

Button Name	Button Description
Return to Submitter	<p>Used to move the deal from the current role to the previous role of the previous level in the approval hierarchy for approval. It is also used to send the deal to the relationship manager for approval if you have recommended a new pricing for the price item.</p> <p>Note:</p> <p>On clicking the Return to Submitter button, a To Do notification is created for the users of the previous level to indicate that the deal is returned for approval.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p>
Finalize Deal	<p>Used to finalize the deal so that it is ready to be presented to the customer for approval.</p> <p>Note: This button is activated when the deal is in the Approved status.</p> <p>Tip: You can also finalize a deal by clicking the Finalize () icon in the Finalize Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Accept Deal	<p>Used to accept the deal in the system after receiving confirmation of acceptance from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also accept a deal by clicking the Accept () icon in the Accept Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Reject Deal	<p>Used to reject the deal in the system after receiving confirmation of rejection from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also reject a deal by clicking the Reject () icon in the Reject Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Create Deal Version	<p>Used to create a deal version for the existing deal to optimize the deal pricing process and to make better pricing decisions.</p> <p>Note: This button is deactivated once the deal has reached the Approved status.</p>
Discard Deal	<p>Used to discard the deal.</p> <p>Note: You cannot discard a deal if it has reached the Finalized status.</p>
Print Deal	<p>Used to extract relevant information about the deal in the pdf or excel format which is published either to the customer for receiving approvals or for internal reviews and validations.</p>

Button Name	Button Description
Apply Back	Used to activate the proposed pricelist assignments, overridden pricing, and product enrollments for the existing customer or account in the system.
Previous	Used to view information about the previous status of the deal.

Deal Information

The **Deal Information** zone allows you to view the details of the deal. It also allows you to view and add log entries for the deal or deal version and add adhoc revenue charges for the deal or deal version. It contains the following fields:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
Division	Indicates the division with which the deal is associated.
Deal Type	Indicates the deal type using which the deal is created in the system.
Review Date	Displays the date which is scheduled for calculating the deal usage as per the commitments made by the customer. Note: This field is populated when the deal has reached the Full Orchestrated status.
Deal Version Information	Displays the concatenated string of information about the deal version separated by a comma (,).
Access Group	Indicates the group of users who can view and edit the details of the entity (i.e. the customer, account, or prospect person) for which the deal is created.
Review Frequency	Indicates the duration for which the deal is monitored to calculate the usage of the deal as per the commitments made by the customer.
Effective Start Date	Displays the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person). Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Description	Displays the description of the deal.
Customer Segment	Displays the business component to which the entity (i.e. the customer, account, or prospect person) belongs.

Field Name	Field Description
Creation Date	Displays the date when the deal is created in the system.
Effective End Date	Displays the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person).
	Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Status	Indicates the current status of the deal.
Customer Tier	Indicates the customer tier of the customer segment to which the entity (i.e. the customer, account, or prospect person) belongs.
Start Date	Displays the date from when the price list, price assignment, and price item pricing is available for the deal.
Acceptance Date	Displays the date when the customer has reviewed and accepted the deal.
	Note: This field is populated when the deal has reached the Customer Accepted status. If the Deal Status is Rejected then the Acceptance Date specifies the date when the deal is rejected by the customer.
Deal Version Status	Indicates the status of the deal version.
Deal Currency	Indicates the currency in which the financial summary and profitability is calculated for the deal.
End Date	Displays the date till when the price list and price assignment is available for the deal.
Finalized Date	Displays the date when the deal is finalized in the system.
	Note: This field is populated when the deal has reached the Customer Accepted status.
Simulation Type	Indicates the simulation type using which the financial summary and profitability is calculated for the deal. The valid values are: <ul style="list-style-type: none"> • Account • Customer • Deal
Usage Period	Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly

Field Name	Field Description
Deal Frequency	Indicates the duration in which you want to simulate the deal for calculating the financial summary and deal profitability. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly

In addition, the **Deal Information** zone contains the following links:

Link Name	Link Description
Deal Log	Used to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal.
Deal Version Log	Used to view the complete trail of actions performed on the deal version. It also allows you to manually add a log entry for the deal version.
Adhoc Revenue and Cost	Used to add, edit, or view additional charges that are applicable for the deal while deal creation.

Simulation Details

The **Simulation Details** zone allows you to do the following:

- View the deal financial summary
- View the division financial summary
- View the product financial summary
- View the customer hierarchy
- View the assigned price lists of a person or account
- View the proposed price list assignments of a person or account
- View the enrolled products for an account
- View the proposed product enrollments for an account
- View the pricing and commitment details of a person or account
- View the division financial summary in the division currency
- View the product financial summary in the division currency
- View the revenue and cost in the division or account currency

The **Simulation Details** zone contains the following sections:

- **Symbol Legends** - Indicates the symbols used to identify the current status of the deal level, division level, and product level financial summary. It also differentiates the existing, proposed and recommended pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is within the limits defined for the user for approval.
 NOT IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is not within the limits defined for the user for approval.
 PROJECTED	Indicates the revenue, cost, and profit generated from the proposed price item pricing and price assignments.
 RECOMMENDED	Indicates the revenue, cost, and profit generated from the recommended price item pricing and price assignments.
 ORIGINAL	Indicates the revenue, cost, and profit generated from the existing price item pricing and price assignments.
 APPROVED	Indicates whether the deal level, division level, or product level financial summary is approved or not.
 PENDING FOR APPROVAL	Indicates that the approval for deal level, division level, or product level financial summary is pending.

- **Deal Financial Summary** - Displays the financial summary at the deal level. It contains the following columns:

Column Name	Column Description
Approval Status	Indicates the current approval status of the financial summary at the deal level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the deal level. Note: If division level approval is required, then the revenue includes the sum of revenues calculated at each division level.
Cost	Displays the proposed, recommended, and original cost calculated at the deal level. Note: The cost includes the total price item cost and the adhoc cost. If division level approval is required, then the cost includes the sum of costs calculated at each division level.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula: Profit = Revenue – Cost Note: If division level approval is required, then the profit includes the sum of profits calculated at each division level.

Column Name	Column Description
Profitability (%)	Displays the proposed, recommended, and original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the deal level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note: The data in the **Deal Financial Summary** sections appears when the deal has reached the **Simulated** status.

- **Division Financial Summary** - Displays the financial summary at the division level. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the financial summary is displayed.
Approval Status	Indicates the current approval status of the financial summary at the division level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the division level.
Cost	Displays the proposed, recommended, and original cost calculated at the division level. Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the division level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Division Financial Summary** sections appears in the **Simulation Details** zone when the **Division Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Division Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the division financial summary is displayed in the deal currency. You can view the division financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Product Financial Summary** - Displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.
Revenue	Displays the proposed, recommended, and original revenue generated from the product.
Cost	Displays the proposed, recommended, and original cost calculated for the product.
	Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage from the price item pricing and price assignments at the product level . It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the product level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Product Financial Summary** sections appears in the **Simulation Details** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Customer Hierarchy** - Indicates the main customer and its associated accounts as well as the child persons and its accounts that are associated with the main customer. It also enables you to do the following:
 - View and edit the pricing and commitments at the person and account level
 - View the revenue variation from the proposed and original pricing and commitments
 - View the proposed price lists of a person or account
 - Assign proposed price list to a person or account
 - View the enrolled products of an account
 - Enroll accounts for a product
 - View the original price list of a person or account
 - View the original enrolled products for an account
 - View the proposed or the original revenue and cost generated at the person an account level.

The **Customer Hierarchy** section contains the following columns:

Column Name	Column Description
Person Name	Indicates the main customer and its related persons and accounts.
Division	Indicates the division to which the main customer and it related persons and accounts are associated.
Pricing and Commitments	<p>On clicking the Edit (✎) icon in the Pricing and Commitments column corresponding to a person or account in the hierarchy, the Pricing and Commitments screen appears where you can view and edit the pricing and commitments of the price items for the respective person or account.</p> <p>Note: You cannot edit the pricing or commitments of the price items if the deal has reached the Finalized status.</p>
Status	Indicates the approval status of the price item pricing and price assignments for the respective person or account.
Revenue Variation (%)	<p>Displays the average revenue generated from a customer or account in percentage. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}.$
Price List Assignment	<p>On clicking the Edit (✎) icon in the Price List Assignment column corresponding to a person or account in the hierarchy, the Price List Assignment screen appears where you can view and assign proposed price list to the respective person or account.</p> <p>Note: You cannot assign proposed price list to the person or account if the deal has reached the Finalized status.</p>

Column Name	Column Description
Product Enrollment	<p>On clicking the Edit (✎) icon in the Product Enrollment column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view or enroll the respective account or accounts of the customer for a product. You can also view a list of recommended products for which you want to enroll the account or accounts of the customer. The recommended products appear in the Product Enrollment screen when you add products in the Recommended Products section while defining a deal.</p> <p>Note: You cannot enroll an account for a product if the deal has reached the Finalized status.</p>
Price Item Group Selection	<p>On clicking the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person in the hierarchy, the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities based on which you want to simulate the deal.</p>
Revenue	<p>Indicates the revenue generated by the corresponding person or account in the hierarchy through the proposed price item pricing and commitments.</p>
Cost	<p>Indicates the sum of the proposed costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the proposed costs of all the child customers is considered.</p>
Pricelist	<p>On clicking the View (📄) icon in the Price List column corresponding to the person or account in the hierarchy, the Price List Assignment screen appears where you can view the original price list assigned to the respective person or account.</p>
Product	<p>On clicking the Edit (✎) icon in the Product column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view the products to which the account is already enrolled.</p>
Revenue	<p>Indicates the revenue generated by the corresponding person or account in the hierarchy through the original price item pricing and commitments.</p>
Cost	<p>Indicates the sum of the original costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the original costs of all the child customers is considered.</p>

In addition, the **Simulation Details** zone contains the following buttons:

Button Name	Button Description
Deal Pricing and Commitments	Used to define the consolidated pricing and commitments for the customers or accounts in a deal.
Simulate Deal	Used to perform different types of simulation based on the pricing and commitments of the price item to determine the best price that can be offered to the clients as per their requirements.

Button Name	Button Description
Check Limits	<p>Used to execute the price item ceil and floor validation for an approver as per the limits set on the price item screen.</p> <p>Note:</p> <p>The Check Limits is run only for the price items which are in the Pending for Approval or Error status after the Pricing Simulation is executed.</p> <p>The Check Limits button is activated when the Price Item Approval Required option is set to Yes in the Deal Type using which the deal is created.</p>
Send Deal for Approval	<p>Used to move the deal from the current role to the next role of the next level in the approval hierarchy for approval.</p> <p>Note:</p> <p>On clicking the Send Deal for Approval button, a To Do notification is created for the users of the next level to indicate that approval of the deal is required.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p> <p>This button is activated after Pricing Simulation is completed for the deal and if the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>
Approve Deal	<p>Used to approve the deal. To approve a deal the following conditions should be met:</p> <ul style="list-style-type: none"> • All the price items should be in the Approved status if the Price Item Approval Required option is set to Yes in the Deal Type used for creating the deal. • All the division level approvals must be completed if the Division Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • All the product level approvals must be completed if the Product Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • The deal should be in the Ready for Approval status for the approver to initiate the deal approval process. <p>Note:</p> <p>The Approve Deal button is activated only when the deal is in the Ready for Approval status and the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>

Button Name	Button Description
Return to Submitter	<p>Used to move the deal from the current role to the previous role of the previous level in the approval hierarchy for approval. It is also used to send the deal to the relationship manager for approval if you have recommended a new pricing for the price item.</p> <p>Note:</p> <p>On clicking the Return to Submitter button, a To Do notification is created for the users of the previous level to indicate that the deal is returned for approval.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p>
Finalize Deal	<p>Used to finalize the deal so that it is ready to be presented to the customer for approval.</p> <p>Note: This button is activated when the deal is in the Approved status.</p> <p>Tip: You can also finalize a deal by clicking the Finalize () icon in the Finalize Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Accept Deal	<p>Used to accept the deal in the system after receiving confirmation of acceptance from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also accept a deal by clicking the Accept () icon in the Accept Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Reject Deal	<p>Used to reject the deal in the system after receiving confirmation of rejection from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also reject a deal by clicking the Reject () icon in the Reject Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Create Deal Version	<p>Used to create a deal version for the existing deal to optimize the deal pricing process and to make better pricing decisions.</p> <p>Note: This button is deactivated once the deal has reached the Approved status.</p>
Discard Deal	<p>Used to discard the deal.</p> <p>Note: You cannot discard a deal if it has reached the Finalized status.</p>
Print Deal	<p>Used to extract relevant information about the deal in the pdf or excel format which is published either to the customer for receiving approvals or for internal reviews and validations.</p>

Button Name	Button Description
Apply Back	Used to activate the proposed pricelist assignments, overridden pricing, and product enrollments for the existing customer or account in the system.
Previous	Used to view information about the previous status of the deal.

Deal Information

The **Deal Information** zone allows you to view the details of the deal. It also allows you to view and add log entries for the deal or deal version and add adhoc revenue charges for the deal or deal version. It contains the following fields:

Field Name	Field Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
Division	Indicates the division with which the deal is associated.
Deal Type	Indicates the deal type using which the deal is created in the system.
Review Date	Displays the date which is scheduled for calculating the deal usage as per the commitments made by the customer. Note: This field is populated when the deal has reached the Full Orchestrated status.
Deal Version Information	Displays the concatenated string of information about the deal version separated by a comma (,).
Access Group	Indicates the group of users who can view and edit the details of the entity (i.e. the customer, account, or prospect person) for which the deal is created.
Review Frequency	Indicates the duration for which the deal is monitored to calculate the usage of the deal as per the commitments made by the customer.

Field Name	Field Description
Effective Start Date	Displays the date from when the deal is effective for the entity (i.e. the customer, account, or prospect person).
	Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Description	Displays the description of the deal.
Customer Segment	Displays the business component to which the entity (i.e. the customer, account, or prospect person) belongs.
Creation Date	Displays the date when the deal is created in the system.
Effective End Date	Displays the date till when the deal is effective for the entity (i.e. the customer, account, or prospect person).
	Note: This field is populated when the deal has reached the Customer Accepted status.
Deal Status	Indicates the current status of the deal.
Customer Tier	Indicates the customer tier of the customer segment to which the entity (i.e. the customer, account, or prospect person) belongs.
Start Date	Displays the date from when the price list, price assignment, and price item pricing is available for the deal.
Acceptance Date	Displays the date when the customer has reviewed and accepted the deal.
	Note: This field is populated when the deal has reached the Customer Accepted status. If the Deal Status is Rejected then the Acceptance Date specifies the date when the deal is rejected by the customer.
Deal Version Status	Indicates the status of the deal version.
Deal Currency	Indicates the currency in which the financial summary and profitability is calculated for the deal.
End Date	Displays the date till when the price list and price assignment is available for the deal.
Finalized Date	Displays the date when the deal is finalized in the system.
	Note: This field is populated when the deal has reached the Customer Accepted status.
Simulation Type	Indicates the simulation type using which the financial summary and profitability is calculated for the deal. The valid values are: <ul style="list-style-type: none"> • Account • Customer • Deal

Field Name	Field Description
Usage Period	Indicates the period for which you want to aggregate the deal data to determine the scope of the deal. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly
Deal Frequency	Indicates the duration in which you want to simulate the deal for calculating the financial summary and deal profitability. The valid values are: <ul style="list-style-type: none"> • Biannually • Monthly • Quarterly • Yearly

In addition, the **Deal Information** zone contains the following links:

Link Name	Link Description
Deal Log	Used to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal.
Deal Version Log	Used to view the complete trail of actions performed on the deal version. It also allows you to manually add a log entry for the deal version.
Adhoc Revenue and Cost	Used to add, edit, or view additional charges that are applicable for the deal while deal creation.

Simulation Details

The **Simulation Details** zone allows you to do the following:

- View the deal financial summary
- View the division financial summary
- View the product financial summary
- View the customer hierarchy
- View the assigned price lists of a person or account
- View the proposed price list assignments of a person or account

- View the enrolled products for an account
- View the proposed product enrollments for an account
- View the pricing and commitment details of a person or account
- View the division financial summary in the division currency
- View the product financial summary in the division currency
- View the revenue and cost in the division or account currency

The **Simulation Details** zone contains the following sections:

- **Symbol Legends** - Indicates the symbols used to identify the current status of the deal level, division level, and product level financial summary. It also differentiates the existing, proposed and recommended pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is within the limits defined for the user for approval.
 NOT IN APPROVER RANGE	Indicates that the deal level, division level, or product level financial summary is not within the limits defined for the user for approval.
 PROJECTED	Indicates the revenue, cost, and profit generated from the proposed price item pricing and price assignments.
 RECOMMENDED	Indicates the revenue, cost, and profit generated from the recommended price item pricing and price assignments.
 ORIGINAL	Indicates the revenue, cost, and profit generated from the existing price item pricing and price assignments.
 APPROVED	Indicates whether the deal level, division level, or product level financial summary is approved or not.
 PENDING FOR APPROVAL	Indicates that the approval for deal level, division level, or product level financial summary is pending.

- **Deal Financial Summary** - Displays the financial summary at the deal level. It contains the following columns:

Column Name	Column Description
Approval Status	Indicates the current approval status of the financial summary at the deal level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the deal level. Note: If division level approval is required, then the revenue includes the sum of revenues calculated at each division level.
Cost	Displays the proposed, recommended, and original cost calculated at the deal level. Note: The cost includes the total price item cost and the adhoc cost. If division level approval is required, then the cost includes the sum of costs calculated at each division level.

Column Name	Column Description
Profit	<p>Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the deal level. It is calculated using the following formula:</p> $\text{Profit} = \text{Revenue} - \text{Cost}$ <p>Note: If division level approval is required, then the profit includes the sum of profits calculated at each division level.</p>
Profitability (%)	<p>Displays the proposed, recommended, and original profit created in percentage at the deal level from the price item pricing and price assignments. It is calculated using the following formula:</p> $\text{Profitability \%} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$
Profit Variation (%)	<p>Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the deal level. It is calculated using the following formula:</p> $\text{Profit Variation (\%)} = (\text{Proposed Profit} - \text{Original Profit}) * 100 / \text{Original Profit}$

Note: The data in the **Deal Financial Summary** sections appears when the deal has reached the **Simulated** status.

- **Division Financial Summary** - Displays the financial summary at the division level. It contains the following columns:

Column Name	Column Description
Division	Indicates the division for which the financial summary is displayed.
Approval Status	Indicates the current approval status of the financial summary at the division level.
Revenue	Displays the proposed, recommended, and original revenue generated from the price item pricing and price assignments at the division level.
Cost	<p>Displays the proposed, recommended, and original cost calculated at the division level.</p> <p>Note: The cost includes the total price item cost and the adhoc cost.</p>
Profit	<p>Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the division level. It is calculated using the following formula:</p> $\text{Profit} = \text{Revenue} - \text{Cost}$
Profitability (%)	<p>Displays the proposed, recommended, and original profit generated in percentage at the division level from the price item pricing and price assignments. It is calculated using the following formula:</p> $\text{Profitability \%} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$

Column Name	Column Description
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the division level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Division Financial Summary** sections appears in the **Simulation Details** zone when the **Division Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Division Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the division financial summary is displayed in the deal currency. You can view the division financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Product Financial Summary** - Displays the financial summary at the product level. It contains the following columns:

Column Name	Column Description
Product	Indicates the product whose financial summary is displayed.
Division	Indicates the division to which the product belongs.
Approval Status	Indicates the current approval status of the financial summary at the product level.
Revenue	Displays the proposed, recommended, and original revenue generated from the product.
Cost	Displays the proposed, recommended, and original cost calculated for the product. Note: The cost includes the total price item cost and the adhoc cost.
Profit	Displays the proposed, recommended, and original profit in deal currency generated from the price item pricing and price assignments at the product level. It is calculated using the following formula: Profit = Revenue – Cost
Profitability (%)	Displays the proposed, recommended, and original profit generated in percentage from the price item pricing and price assignments at the product level . It is calculated using the following formula: Profitability % = (Revenue – Cost)*100/ Revenue
Profit Variation (%)	Displays the difference of profit in percentage generated from the original and the proposed price item pricing and commitments at the product level. It is calculated using the following formula: Profit Variation (%) = (Proposed Profit – Original Profit)*100/ Original Profit

Note:

The **Product Financial Summary** sections appears in the **Simulation Details** zone when the **Product Level Approval Required** field is set to **Yes** in the **Deal Type** used for defining the deal.

The data in the **Product Financial Summary** sections appears when the deal has reached the **Simulated** status.

By default, the product financial summary is displayed in the deal currency. You can view the product financial summary in the division currency by clicking the toggle switch towards **Division Currency** available above the financial summary table.

- **Customer Hierarchy** - Indicates the main customer and its associated accounts as well as the child persons and its accounts that are associated with the main customer. It also enables you to do the following:
 - View and edit the pricing and commitments at the person and account level
 - View the revenue variation from the proposed and original pricing and commitments
 - View the proposed price lists of a person or account
 - Assign proposed price list to a person or account
 - View the enrolled products of an account
 - Enroll accounts for a product
 - View the original price list of a person or account
 - View the original enrolled products for an account
 - View the proposed or the original revenue and cost generated at the person an account level.

The **Customer Hierarchy** section contains the following columns:

Column Name	Column Description
Person Name	Indicates the main customer and its related persons and accounts.
Division	Indicates the division to which the main customer and it related persons and accounts are associated.
Pricing and Commitments	<p>On clicking the Edit  icon in the Pricing and Commitments column corresponding to a person or account in the hierarchy, the Pricing and Commitments screen appears where you can view and edit the pricing and commitments of the price items for the respective person or account.</p> <p>Note: You cannot edit the pricing or commitments of the price items if the deal has reached the Finalized status.</p>
Status	Indicates the approval status of the price item pricing and price assignments for the respective person or account.
Revenue Variation (%)	<p>Displays the average revenue generated from a customer or account in percentage. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}.$

Column Name	Column Description
Price List Assignment	<p>On clicking the Edit (✎) icon in the Price List Assignment column corresponding to a person or account in the hierarchy, the Price List Assignment screen appears where you can view and assign proposed price list to the respective person or account.</p> <p>Note: You cannot assign proposed price list to the person or account if the deal has reached the Finalized status.</p>
Product Enrollment	<p>On clicking the Edit (✎) icon in the Product Enrollment column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view or enroll the respective account or accounts of the customer for a product. You can also view a list of recommended products for which you want to enroll the account or accounts of the customer. The recommended products appear in the Product Enrollment screen when you add products in the Recommended Products section while defining a deal.</p> <p>Note: You cannot enroll an account for a product if the deal has reached the Finalized status.</p>
Price Item Group Selection	<p>On clicking the Edit (✎) icon in the Price Item Group Selection column corresponding to the main person in the hierarchy, the Select Price Item Group screen appears where you can select and/or deselect the price items and/or hierarchy entities based on which you want to simulate the deal.</p>
Revenue	<p>Indicates the revenue generated by the corresponding person or account in the hierarchy through the proposed price item pricing and commitments.</p>
Cost	<p>Indicates the sum of the proposed costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the proposed costs of all the child customers is considered.</p>
Pricelist	<p>On clicking the View (📄) icon in the Price List column corresponding to the person or account in the hierarchy, the Price List Assignment screen appears where you can view the original price list assigned to the respective person or account.</p>
Product	<p>On clicking the Edit (✎) icon in the Product column corresponding to the person or account in the hierarchy, the Product Enrollment screen appears where you can view the products to which the account is already enrolled.</p>
Revenue	<p>Indicates the revenue generated by the corresponding person or account in the hierarchy through the original price item pricing and commitments.</p>
Cost	<p>Indicates the sum of the original costs from all accounts under the customer.</p> <p>Note: If the person is a parent customer, then the sum of the original costs of all the child customers is considered.</p>

In addition, the **Simulation Details** zone contains the following buttons:

Button Name	Button Description
Deal Pricing and Commitments	Used to define the consolidated pricing and commitments for the customers or accounts in a deal.
Simulate Deal	Used to perform different types of simulation based on the pricing and commitments of the price item to determine the best price that can be offered to the clients as per their requirements.
Check Limits	<p>Used to execute the price item ceil and floor validation for an approver as per the limits set on the price item screen.</p> <p>Note:</p> <p>The Check Limits is run only for the price items which are in the Pending for Approval or Error status after the Pricing Simulation is executed.</p> <p>The Check Limits button is activated when the Price Item Approval Required option is set to Yes in the Deal Type using which the deal is created.</p>
Send Deal for Approval	<p>Used to move the deal from the current role to the next role of the next level in the approval hierarchy for approval.</p> <p>Note:</p> <p>On clicking the Send Deal for Approval button, a To Do notification is created for the users of the next level to indicate that approval of the deal is required.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p> <p>This button is activated after Pricing Simulation is completed for the deal and if the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>
Approve Deal	<p>Used to approve the deal. To approve a deal the following conditions should be met:</p> <ul style="list-style-type: none"> • All the price items should be in the Approved status if the Price Item Approval Required option is set to Yes in the Deal Type used for creating the deal. • All the division level approvals must be completed if the Division Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • All the product level approvals must be completed if the Product Level Approval Required field is set to Yes in the Deal Type used for creating the deal. • The deal should be in the Ready for Approval status for the approver to initiate the deal approval process. <p>Note:</p> <p>The Approve Deal button is activated only when the deal is in the Ready for Approval status and the Approve Deal option is set to Yes for the approver in the Approval Hierarchy of the Deal Approval Profile.</p>

Button Name	Button Description
Return to Submitter	<p>Used to move the deal from the current role to the previous role of the previous level in the approval hierarchy for approval. It is also used to send the deal to the relationship manager for approval if you have recommended a new pricing for the price item.</p> <p>Note:</p> <p>On clicking the Return to Submitter button, a To Do notification is created for the users of the previous level to indicate that the deal is returned for approval.</p> <p>A To Do is also created for the creator (i.e. the Relationship Manager) of the deal to indicate that the ownership of the deal has changed.</p>
Finalize Deal	<p>Used to finalize the deal so that it is ready to be presented to the customer for approval.</p> <p>Note: This button is activated when the deal is in the Approved status.</p> <p>Tip: You can also finalize a deal by clicking the Finalize () icon in the Finalize Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Accept Deal	<p>Used to accept the deal in the system after receiving confirmation of acceptance from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also accept a deal by clicking the Accept () icon in the Accept Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>
Reject Deal	<p>Used to reject the deal in the system after receiving confirmation of rejection from the customer.</p> <p>Note: This button is activated only when the deal is in the Finalized status.</p> <p>Tip: You can also reject a deal by clicking the Reject () icon in the Reject Deal column corresponding to the deal in the Search Deal zone of the Deal Dashboard screen.</p>

Pricing and Commitments

The **Pricing and Commitments** section allows you to do the following:

- View the original and proposed commitments of a price item
- View the original and proposed pricing of a price item
- Viewing the original pricing and commitments of a person or an account
- View the pricing and commitments of a person in the division currency
- View the pricing and commitments of an account in the account's invoice currency
- Approve pricing of a price item
- Submit a price item for approval
- Recommend a new pricing for a price item
- Edit deal-specific terms and conditions associated with the hierarchy entity

The **Pricing and Commitments** section contains the following sub-sections:

- **Symbol Legends** - Used to differentiate between the original, proposed, recommended, and changed pricing and commitments of the price item. It contains the following color codes:

Symbol Name	Symbol Description
 PROJECTED	Indicates the proposed price item pricing and commitments.
 RECOMMENDED	Indicates the recommended price item pricing and commitments.
 ORIGINAL	Indicates the original price item pricing and commitments.
 CHANGED	Indicates the changed price item pricing and commitments.

- **Price Item Hierarchy** - Lists the price items and its pricing and commitments information along with the price item hierarchy associated with the person or account. It contains the following columns:

Column Name	Column Description
Price Item Hierarchy	Displays the price item, non-root level hierarchy entity, and root level hierarchy entity associated with the person or account.
Parameters	Indicates the parameters using which the pricing of the price item is defined.
Start Date	Displays the date from when the price item pricing is effective.
	Note: This field appears only when you define a seasonal pricing for the price item.
End Date	Displays the date till when the price item pricing is effective.
	Note: This field appears only when you define a seasonal pricing for the price item.

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string of information about the proposed, original, recommended, and changed price item pricing separated by a comma (,).</p> <p>Note:</p> <p>It has a link. On clicking the link, the Pricing and Commitments screen appears where you can view the details of the original and proposed price item pricing.</p> <p>You can also edit or override the proposed pricing of the price item through this screen.</p> <p>You can directly change the rate of a price item from this screen when there is only one price component in the pricing and the pricing is negotiable for the price item.</p>
Average Price	<p>Displays the average proposed, original, and recommended cost of the price item as per the proposed, original, and recommended commitments respectively. It is calculated using the following formula:</p> <p>Avg. Price = Proposed Revenue/Proposed Usage</p> <p>Avg. Price = Original Revenue/Original Usage</p> <p>Avg. Price = Recommended Revenue/Recommended Usage</p>
Volume	<p>On clicking the Edit  icon corresponding to a price item, the Pricing and Commitments screen appears where you can view the original and proposed commitments of the price item. Whereas, on clicking the View icon  corresponding to a hierarchy entity, the Pricing and Commitments screen appears where you can view the original and proposed commitments of the price item at the hierarchy entity level.</p> <p>Note: You can directly change the proposed commitment of a price item when there is only one SQI used in the SQI-based billable charges.</p>
Revenue	<p>Displays the proposed, original, and recommended revenue generated from the proposed, original, and recommended price item pricing and commitments respectively.</p>
Revenue Variation (%)	<p>Displays the variation between the original, proposed, and recommended revenue in percentage generated from the original, proposed, and recommended pricing of the price item. It is calculated using the following formula:</p> <p>Revenue Variation (%) = (Proposed Revenue – Original Revenue)*100/Original Revenue.</p>
Cost	<p>Displays the proposed, original, and recommended cost of the price item based on the proposed, original, and recommended usage.</p>
Price List Information	<p>Indicates the price list from where the proposed and original pricing of the price item is derived for the person or account in the customer hierarchy.</p>

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the proposed and original pricing of the price item is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Account Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the account. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Indicates whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates whether the price item pricing defined in the price list is available in the global price list. • Parent Customer Agreed - Indicates whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Indicates whether the price item pricing is defined in the price list. • Product Pricing - Indicates whether the price item pricing defined in the price list is available for the product pricing.
Status	Indicates the current approval status of the price item pricing and commitments.
Approver	Indicates the user who has approved the price item pricing and commitments.
Terms and Conditions	On clicking the Edit  icon, the Mapping Terms and Conditions screen appears where you can view or delete the deal-specific terms and conditions associated with the price item.

Note:

In addition, a check box appears corresponding to the price item which is assigned to the user for approval.

By default, you can view the proposed and recommended pricing details of the price item in the price item hierarchy table. To view/hide the original pricing details of the price item, click the toggle switch available in the **Pricing and Commitments** section corresponding to the **Original Data** field respectively.

Also, you can view the price item pricing details in the division currency by clicking the toggle switch available in the **Pricing and Commitments** section.

In addition, the **Pricing and Commitments** section contains the following buttons:

Button Name	Button Description
Send Price Items for Approval	<p>On clicking the Send Price Items for Approval button, the status of the price item is changed to Assigned to Price Item Manager.</p> <p>Note: An approver can send a price item for approval when the following conditions are met:</p> <ul style="list-style-type: none"> • The price item is assigned to the approver for approval • The Propose Pricing option is set to Yes in the Deal Approval Profile for the approver • The Submit Price Item for Approval option is set to Yes in the Deal Approval Profile for the approver
Check Limits	<p>On clicking the Check Limits button the system verifies whether the average price of the price item falls within the floor and ceil values defined for the approver in the price item screen.</p> <p>Note:</p> <p>If the average price falls within the floor and ceil values defined for the approver, then the status of the price item is changed to Approved.</p> <p>If the average price does not fall within the floor and ceil values defined for the approver, then the status of the price item is changed to Pending For Approval.</p>

Selecting a Price Item or Hierarchy Entity

Procedure

To select a price item or hierarchy entity:

1. Do either of the following:

If you want to...	Then...
<p>Select a price item or hierarchy entity from the Deal Information screen</p>	<ol style="list-style-type: none"> 1. Search for the deal in the Search Deal zone of the Deal Dashboard screen. 2. In the Search Results section, click the Broadcast () icon corresponding to the deal for which you want to select the price item or hierarchy entity. The Deal Versions zone appears. 3. In the Deal Versions zone, click the deal version in the Deal Version Information column for which you want to select the price item or hierarchy entity. The Deal Information screen appears. 4. Ensure that the customer hierarchy is expanded in the Simulation Details zone. 5. Click the Edit () icon in the Price Item Group Selection column corresponding to the main person of the customer hierarchy. The Select Price Item Group screen appears.
<p>Select a price item or hierarchy entity from the Pricing and Commitments screen</p>	<ol style="list-style-type: none"> 1. Ensure that the customer hierarchy is expanded in the Simulation Details zone. 2. Click the Edit () icon in the Pricing and Commitments column corresponding to the person or account for which you want to select the price item or hierarchy entity. The Pricing and Commitments screen appears. 3. Click the Select Price Item Group button available in the header area of the Pricing and Commitments screen. The Select Price Item Group screen appears.
<p>Select a price item or hierarchy entity from the Price List Assignment screen</p>	<ol style="list-style-type: none"> 1. Ensure that the customer hierarchy is expanded in the Simulation Details zone. 2. Click the Edit () icon in the Price List Assignment column corresponding to the person or account for whose price list you want to select the price item or hierarchy entity. The Price List Assignment screen appears. 3. In the Proposed Price Lists zone, click the link in the Price List Information column

If you want to...	Then...
	<p>corresponding to price list whose price item or hierarchy entity you want to select.</p> <div data-bbox="878 285 1399 459" style="border: 1px solid black; padding: 5px;"> <p>Note: You can also search for a price list that you want to assign to the person or account in the Assign Price List zone of the Price List Assignment screen and then select the required price item or hierarchy entity.</p> </div> <p>4. Click the Save and Select Price Item Group button.</p> <p>The Select Price Item Group screen appears.</p>

2. Ensure that the price item hierarchy is expanded in the **Price Item Group** zone.
3. Click the check box corresponding to the price item or the hierarchy entity that you want to select for simulating the deal.

Note: If you select a hierarchy entity, then all its corresponding non-root level hierarchy entities and price items are selected for the deal simulation.

4. Click **Save**.

The price item or hierarchy entity is selected.

Recommending a New Pricing for a Price Item

Procedure

To recommend a new pricing for a price item:

1. Ensure that the price item hierarchy is expanded in the **Pricing and Commitments** section of the **Pricing and Commitments** screen when you are recommending a new pricing for a price item of a person or account in a deal.
2. Click the **Recommend** link in the **Pricing Information** column corresponding to the price item for which you want to recommend a new pricing.

The **Pricing and Commitments** screen appears.

Note: The **Recommend** link appears in the **Pricing Information** column only when the **Propose Pricing** option is set to **Yes** for the user in the **Deal Approval Profile** associated with the **Deal Type** using which the deal is created in the system.

3. Ensure that the **Recommend Pricing** zone is expanded in the **Pricing and Commitments** screen.

The **Recommend Pricing** zone contains the following sections:

- **Main** - Used to specify basic details about the recommended price item pricing. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment ID	Displays the price assignment ID.	Not Applicable
	Note: It is a read-only field and cannot be edited. A new price assignment ID is created automatically by the system when you recommend a new pricing for a price item.	
Price Item	Displays the price item whose pricing you want to edit.	Not Applicable
	Note: It is a read-only field and cannot be edited.	
Start Date	Displays the date from when the pricing of the price item is effective for the deal.	Not Applicable

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="740 737 1192 978" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="740 1234 1192 1350" style="border: 1px solid black; padding: 5px;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="740 1606 1192 1722" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>	No
End Date	Displays the date till when the pricing of the price item is effective for the deal.	Not Applicable
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to define the pricing eligibility criteria for the price item pricing.	No
	Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	No
	Note: Rate schedules control how the bills for the price item will be calculated. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.	

- **TFM Information** - Used to map the transaction details with the price item. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions 	No
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	No

Field Name	Field Description	Mandatory (Yes or No)
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing. 	No
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

- **Parameters** - Used to associate the parameters based on which you want to recommend the pricing of the price item. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing. <div style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>The parameter search results displays only those parameters where the Price Item check box is selected.</p> </div>	No
Parameter Value	Used to specify the value of the parameter.	No

- **Characteristics** - Used to define a list of characteristics for the recommended price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for price item pricing.	No

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	No
	Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .	
Characteristic Value	Used to specify the value for the characteristic type.	No
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the recommended price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Rate Component	Displays the concatenated string of information about the rate component separated by comma (,).	Not applicable
	Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.	
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.	No
Description	Used to specify the description of the price component.	No
Show Price Component	Used to indicate whether you want to display the price component in the bill.	No
Rate	Used to specify the rate defined for the price component.	Yes
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.	No

Column Name	Column Description	Mandatory (Yes or No)										
Tier Details	<p>On clicking the Add  icon, you can view and edit the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1" data-bbox="686 403 1185 877"> <thead> <tr> <th data-bbox="686 403 906 451">Column Name</th> <th data-bbox="906 403 1185 451">Column Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="686 451 906 569">Display Sequence</td> <td data-bbox="906 451 1185 569">Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td data-bbox="686 569 906 653">Tiering Criterion</td> <td data-bbox="906 569 1185 653">Used to indicate the tiering criteria.</td> </tr> <tr> <td data-bbox="686 653 906 770">Lower Limit</td> <td data-bbox="906 653 1185 770">Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td data-bbox="686 770 906 877">Upper Limit</td> <td data-bbox="906 770 1185 877">Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can edit the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.	No
Column Name	Column Description											
Display Sequence	Used to specify the sequence of the tiering criteria.											
Tiering Criterion	Used to indicate the tiering criteria.											
Lower Limit	Used to specify the lower limit of the tiering range.											
Upper Limit	Used to specify the upper limit of the tiering range.											

Column Name	Column Description	Mandatory (Yes or No)												
Eligibility Details	<p>On clicking the Add  icon, you can view and edit the eligibility criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1" data-bbox="688 405 1183 2039"> <thead> <tr> <th data-bbox="688 405 906 453">Column Name</th> <th data-bbox="906 405 1183 453">Column Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="688 453 906 632">Display Sequence</td> <td data-bbox="906 453 1183 632">Used to specify the order in which the eligibility criteria should be executed in the rule.</td> </tr> <tr> <td data-bbox="688 632 906 1146">Parameter</td> <td data-bbox="906 632 1183 1146"> Used to indicate the left hand side parameter which you want to use along with the price item for price determination. <div data-bbox="911 848 1179 1129" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The Search  icon appears corresponding to the Parameter field. Deal Pricing and Commitments

The **Deal Pricing and Commitments** screen allows you to view the original and proposed price item pricing and commitments along with the price item hierarchy and the hierarchy entity. It also allows you to edit the proposed pricing and commitments of the price items. It contains the following sections:

- **Deal Information** - Displays information about the deal version. It contains the following field:

Field Name	Field Description
Deal Version Information	Displays the concatenated string consisting of deal ID, deal version ID and deal description separated by a comma (,).

- **Search Pricing and Commitments** - Used to search pricing and commitments of a price item using various criteria. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate the criteria using which you want to search for the pricing and commitments of a price item. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to indicate whether you want to search for the pricing and commitments of price items which belong to a particular account. • All - Used to indicate whether you want to view the pricing and commitments of all the price items in the deal. • Customer - Used to indicate whether you want to search for the pricing and commitments of price items which belong to a particular person. • Price Item - Used to indicate whether you want to search for the pricing and commitments of a particular price item. • Root Level Hierarchy Entity - Used to indicate whether you want to search for the pricing and commitments of price items which belong to a particular hierarchy entity. 	Yes
Account ID	<p>Used to search for the pricing and commitments of a price item which belongs to a particular account in the customer hierarchy.</p> <p>Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Prospect Account Search window appears where you can search for the respective account.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the price item pricing and commitments of a particular account.</p>
Price Item	<p>Used to search for the price item pricing and commitments of a particular person, account, or hierarchy entity.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears where you can search for the respective price item.</p> <p>You can specify a list of price items whose pricing and commitments you want to view when you select the Price Item option from the Search By list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for searching the pricing and commitments of a particular price item.</p>

Field Name	Field Description	Mandatory (Yes or No)
Price Item Approval Status	Used to search for the pricing and commitments of price items which are in a particular approval status. The valid values are: <ul style="list-style-type: none">• Approved• Approved-Existing• Approver-Recommended• Error• Unapproved .	No

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search for the pricing and commitments of price items which are defined at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed - Indicates whether the price item pricing is agreed for the account. • Account Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Account Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the account. • Customer Agreed - Indicates whether the price item pricing is agreed for the customer in the customer hierarchy. • Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the customer. • Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the customer. • Default Price List - Indicates whether the price item pricing defined in the price list is available in the default price list. • Global Price List - Indicates whether the price item pricing defined in the price list is available in the global price list. • Parent Customer Agreed - Indicates whether the price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Inherited Price List - Indicates whether the price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Parent Customer Price List - Indicates whether the price item pricing is defined in the price list which is assigned to the parent customer. • Price List - Indicates whether the price item pricing is defined in the price list. • Product Pricing - Indicates whether the price item pricing defined in the price list is available for the product pricing. 	No

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for the pricing and commitments of a price item which belongs to a particular person in the customer hierarchy.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Account ID field. On clicking the Search icon, the Prospect Account Search window appears where you can search for the respective account.	Note: This field is required for searching the price item pricing and commitments of a particular person.
Root Level Hierarchy Entity	Used to search for the pricing and commitments of price items which belongs to a particular hierarchy entity.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Root Level Hierarchy Entity field. On clicking the Search icon, the Root Level Hierarchy Entity Search window appears where you can search for the respective hierarchy entity.	Note: This field is required for searching the price item pricing and commitments of a particular hierarchy entity.

In addition, the **Search Pricing and Commitments** section contains the following buttons:

Button Name	Button Description
Show All Pricing	Used to display all the price item pricing and commitments available for the specified search criteria.
Show Customer or Account Level Pricing	Used to show only the customer agreed and account agreed price item pricing and commitments available for the specified search criteria.

- **Symbol Legends** - Used to indicate the current status of the price item pricing and commitments. It also differentiates between the proposed and the original price item pricing statistics. It contains the following symbols:

Symbol Name	Symbol Description
 PROJECTED	Indicates the proposed price item pricing statistics.
 ORIGINAL	Indicates the existing price item pricing statistics.
 APPROVED	Indicates whether the pricing of the price item is approved.
 PENDING FOR APPROVAL	Indicates whether the pricing of the price item is pending for approval.
 Pre-Approved	Indicates whether the original pricing of the price item is approved for the deal.
 APPROVER-RECOMMENDED	Indicates whether a new pricing for the price item is recommended by the approver.

Symbol Name	Symbol Description
 Error	<p>Indicates whether an error occurred while validating the price item pricing during pricing simulation.</p> <p>Note:</p> <p>If the approver clicks the Check Limits button in the Pricing And Commitment Details screen and if the price item floor and ceil value falls within the approvers limit, then the status of the price item is changed to Approved.</p> <p>If the approver clicks the Check Limits button in the Pricing And Commitment Details screen and if the price item floor and ceil value does not fall within the approvers limit, then the status of the price item is changed to Pending For Approval.</p> <p>If the approver clicks the Send Price Items for Approval button in the Pricing And Commitment Details screen, the status of the price item is changed to Assigned to Price Item Manager.</p>
 Assigned to Price Item Manager	Indicates whether the price item pricing is sent to the price item manager for approval.

- **Pricing and Commitments** - Lists the price items as specified in the search criteria whose proposed and original pricing and commitment details you want to view. It contains the following columns:

Column Name	Column Description
Entity Information	Displays the concatenated string of information about the person or account in the customer hierarchy whose price item pricing and commitment details you want to view separated by a comma (,).
Price Item	Displays the price item whose pricing and commitment details you want to view.
Price Item Hierarchy	Displays the concatenated string consisting of the root level and non-root level hierarchy entity of the price item separated by a comma (,).
Pricing Parameters	Indicates the parameters using which the pricing of the price item is defined.
Revenue Variation (%)	<p>Displays the variation between the original, proposed, and recommended revenue in percentage generated from the original, proposed, and recommended pricing of the price item. It is calculated using the following formula:</p> $\text{Revenue Variation (\%)} = (\text{Proposed Revenue} - \text{Original Revenue}) * 100 / \text{Original Revenue}.$
Status	Indicates the current approval status of the price item pricing and commitments.
Approver	Indicates the user who has approved the price item pricing and commitments.

Column Name	Column Description
Pricing Information	<p data-bbox="703 212 1463 275">Displays the concatenated string of information about the proposed and original price item pricing separated by a comma (,).</p> <p data-bbox="703 300 1463 426">Note: It has a link. On clicking the link, the Deal Pricing screen appears where you can view the details of the original and proposed price item pricing. You can also edit or override the proposed pricing of the price item through this screen.</p>
Price List Information	<p data-bbox="703 466 1463 558">Indicates the price list from where the proposed and original pricing of the price item is derived for the person or account in the customer hierarchy.</p>
Assignment Level	<p data-bbox="703 581 1463 644">Indicates the level at which the proposed and original pricing of the price item is defined in the customer hierarchy. Product Enrollment

The **Product Enrollment** screen enables you to view the existing and proposed products to which the account is enrolled. It also enables you to edit or enroll an account or accounts of a person for a product. It contains the following sections:

- **Deal** - Displays basic information about the deal. It contains the following fields:

Field Name	Field Description
Deal Version Information	Displays the deal version to which the person or account belongs.
Person ID	Displays the person whose accounts you want to enroll for a product. Note: This field appears when you want to enroll all the accounts of the person for a product.
Person Information	Displays the concatenated string of information about the person separated by a comma (.). Note: This field appears when you want to enroll all the accounts of the person for a product.
Account ID	Displays the account whose product enrollment details you want to view. Note: This field appears in the following scenarios: <ul style="list-style-type: none"> • If you are viewing the existing products enrolled for an account. • If you are editing the existing products enrolled for an account. • If you are enrolling an account for a product.
Account Information	Displays the concatenated string of information about the account separated by a comma (.). Note: This field appears when you are viewing, editing, or enrolling an account for a product.

- **Enrolled Products** - Lists the products to which the account is enrolled. It contains the following columns:

Column Name	Column Description
Enrollment ID	Displays the enrollment ID of the enrolled product.
Product Code	Displays the code of the enrolled product. Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Product Description	Displays the description of the enrolled product. Note: It has a link. On clicking the link while viewing the existing product to which the account is enrolled, the Product screen appears where you can view the details of the respective product.
Version Description	Displays the version of the enrolled product. Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Product Type	Displays the type of product which is enrolled for the account. Note: Whereas, if you click the link while editing the proposed products to which the account is enrolled, the details of the product and its services appears in the Products and Services section of the Product Enrollment screen where you can edit the respective product. You cannot edit an enrolled product if the deal version has reached the Finalized status.
Product Category	Indicates the category to which the product belongs. Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Priority	Displays the priority in which the enrolled product is considered for the account. Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Start Date	Displays the date from when the enrolled product is effective for the account. Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account. Note: The End Date cannot be earlier than the Start Date .

- **Proposed Products** - Lists the products that are proposed for the account for enrollment. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
Product Description	Displays the description of the enrolled product.
Version Description	Displays the version of the enrolled product.
Product Type	Displays the type of product which is enrolled for the account.
Product Category	Indicates the category to which the product belongs.
Priority	Displays the priority in which the enrolled product is considered for the account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

Note:

On clicking the **Broadcast** () icon corresponding to a proposed enrolled product, the details of the product appears in the **Enroll Product** and **Product and Services** sections for editing.

Note: You cannot edit an enrolled product if the deal or deal version has reached the **Finalized** status.

You can delete the proposed product to which the account is enrolled by clicking the **Delete** () icon corresponding to a proposed enrolled product.

- **System Recommended Products & Packages** - Lists the products that you have recommended for enrollment while creating the deal. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the recommended product.
Product Description	Displays the description of the recommended product.
Version Description	Displays the version of the recommended product.
Product Type	Displays the type of product which is recommended for the account.
Product Category	Indicates the category to which the recommended product belongs.
Start Date	Displays the date from when the recommended product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.

Column Name	Column Description
End Date	Displays the date till when the recommended product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Enroll Product** - The **Enroll Product** section contains the following fields:

Field Name	Field Description
Enrollment ID	Used to specify the enrollment ID once the product is defined for an enrollment.
	Note: Enrollment ID is displayed when the product is added for enrollment.
Start Date	Displays the date from when the product enrollment is effective.
	Note: By default, this date is set to the deal start date and cannot be changed.
End Date	Displays the date till when the product enrollment is effective.

Note:

The **Enroll Product** section appears in the **Product Enrollment** screen only when you are enrolling an account or accounts of a person for a product.

- **Products and Services** - Used to define products and services for a product. It contains the following fields in a grid:

Field Name	Field Description
Product	Used to indicate the product to which you want to enroll an account or accounts of a person.
	Note: The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Fetch Eligible Products window appears. On indicating the product, the description of the product appears in the Product field. Also, when you select a product, the Standard Product , Product Services , and the Add-On Product Services that are eligible for the product appears corresponding to the product.
Start Date	Used to specify the date from when the product is effective for the account or accounts of a person.
	Note: By default this field is set to the deal start date and cannot be changed.

Field Name	Field Description
End Date	Used to specify the date till when the product is effective for the account or accounts of a person.
	Note: The End Date cannot be earlier than the Start Date .
Priority	Used to specify the priority in which you want the product to be considered while calculating the financial summary of the deal.
Inclusion	Used to indicate whether you want to include the services of the product for the account.
	Note: By default, all the check boxes of the services provided by the product are selected. You can exclude a service by deselecting the check box corresponding to the respective service.
Standard Product	Displays the standard product which is included within the main product.
Start Date	Used to specify the date from when the standard product is effective.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the standard product is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the standard product is used for enrollment.
Product Services	Displays the service that is a part of the standard product.
Start Date	Used to specify the date from when the service is effective.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the service is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the service is used for enrollment.
Add on Services	Displays the add-on service which is a part of the packaged product.
Start Date	Used to specify the date from when the add-on service is effective.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the add-on service is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the add-on service is used for enrollment.

Person Information	Displays the concatenated string of information about the person separated by a comma (,). Note: This field appears when you want to enroll all the accounts of the person for a product.

- **Enrolled Products** - Lists the products to which the accounts of the person are enrolled. It contains the following columns:

Column Name	Column Description
Enrollment ID	Displays the enrollment ID of the enrolled product.

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Product Description	Displays the description of the enrolled product.
	Note: It has a link. On clicking the link while viewing the existing product to which the account is enrolled, the Product screen appears where you can view the details of the respective product.
Version Description	Displays the version of the enrolled product.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Product Type	Displays the type of product which is enrolled for the account.
	Note: Whereas, if you click the link while editing the proposed products to which the account is enrolled, the details of the product and its services appears in the Products and Services section of the Product Enrollment screen where you can edit the respective product. You cannot edit an enrolled product if the deal version has reached the Finalized status.
Product Category	Indicates the category to which the product belongs.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Priority	Displays the priority in which the enrolled product is considered for the account.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Proposed Products** - Lists the products that are proposed for the accounts of the person for enrollment. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
Product Description	Displays the description of the enrolled product.
Version Description	Displays the version of the enrolled product.
Product Type	Displays the type of product which is enrolled for the account.
Product Category	Indicates the category to which the product belongs.
Priority	Displays the priority in which the enrolled product is considered for the account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

Note:

On clicking the **Broadcast** () icon corresponding to a proposed enrolled product, the details of the product appears in the **Enroll Product** and **Product and Services** sections for editing.

Note: You cannot edit an enrolled product if the deal or deal version has reached the **Finalized** status.

You can delete the proposed product to which the account is enrolled by clicking the **Delete** () icon corresponding to a proposed enrolled product.

- **System Recommended Products & Packages** - Lists the products that you have recommended for enrollment while creating the deal. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the recommended product.
Product Description	Displays the description of the recommended product.
Version Description	Displays the version of the recommended product.
Product Type	Displays the type of product which is recommended for the account.
Product Category	Indicates the category to which the recommended product belongs.
Start Date	Displays the date from when the recommended product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.

Column Name	Column Description
End Date	Displays the date till when the recommended product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Enroll Product** - The **Enroll Product** section contains the following fields:

Field Name	Field Description
Enrollment ID	Displays the enrollment ID once the product is defined for an enrollment.
	Note: This field is auto-populated when a product is added for enrollment.
Start Date	Displays the date from when the product enrollment is effective.
	Note: By default, this date is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the product enrollment is effective for the accounts of the person.

Note:

The **Enroll Product** section appears in the **Product Enrollment** screen only when you are enrolling an account or accounts of a person for a product.

Product Category	Indicates the category to which the product belongs.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Priority	Displays the priority in which the enrolled product is considered for the account.
	Note: This column appears only when you are viewing the proposed product enrollment details of an account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.

Column Name	Column Description
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Proposed Products** - Lists the products that are proposed for the account for enrollment. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the enrolled product.
Product Description	Displays the description of the enrolled product.
Version Description	Displays the version of the enrolled product.
Product Type	Displays the type of product which is enrolled for the account.
Product Category	Indicates the category to which the product belongs.
Priority	Displays the priority in which the enrolled product is considered for the account.
Start Date	Displays the date from when the enrolled product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the enrolled product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

Note:

On clicking the **Broadcast** () icon corresponding to a proposed enrolled product, the details of the product appears in the **Enroll Product** and **Product and Services** sections for editing.

Note: You cannot edit an enrolled product if the deal or deal version has reached the **Finalized** status.

You can delete the proposed product to which the account is enrolled by clicking the **Delete** () icon corresponding to a proposed enrolled product.

- **System Recommended Products & Packages** - Lists the products that you have recommended for enrollment while creating the deal. It contains the following columns:

Column Name	Column Description
Product Code	Displays the code of the recommended product.
Product Description	Displays the description of the recommended product.
Version Description	Displays the version of the recommended product.
Product Type	Displays the type of product which is recommended for the account.
Product Category	Indicates the category to which the recommended product belongs.

Column Name	Column Description
Start Date	Displays the date from when the recommended product is effective for the account.
	Note: By default, this date is set to the deal start date and cannot be edited.
End Date	Displays the date till when the recommended product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .

- **Enroll Product** - The **Enroll Product** section contains the following fields:

Field Name	Field Description
Enrollment ID	Displays the enrollment ID once the product is defined for an enrollment.
	Note: This field is auto-populated when a product is added for enrollment.
Start Date	Displays the date from when the product enrollment is effective.
	Note: By default, this date is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the product enrollment is effective for the accounts of the person.

Note:

The **Enroll Product** section appears in the **Product Enrollment** screen only when you are enrolling an account or accounts of a person for a product.

- **Products and Services** - Used to define the product and its services for enrollment. It contains the following fields in a grid:

Field Name	Field Description
Product	Used to indicate the product to which you want to enroll the account.
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Fetch Eligible Products window appears.</p> <p>On indicating the product, the description of the product appears in the Product field.</p> <p>Also, when you select a product, the Standard Product, Product Services, and the Add-On Product Services that are eligible for the product appears corresponding to the product.</p>

Field Name	Field Description
Start Date	Used to specify the date from when the product is effective for the account.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the product is effective for the account.
	Note: The End Date cannot be earlier than the Start Date .
Priority	Used to specify the priority in which you want the product to be considered while calculating the financial summary of the deal.
Inclusion	Used to indicate whether you want to include the services of the product for the account.
	Note: By default, all the check boxes of the services provided by the product are selected. You can exclude a service by deselecting the check box corresponding to the respective service.
Standard Product	Displays the standard product which is included within the main product.
Start Date	Used to specify the date from when the standard product is effective.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the standard product is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the standard product is used for enrollment.
Product Services	Displays the service that is a part of the standard product.
Start Date	Used to specify the date from when the service is effective.
	Note: By default this field is set to the deal start date and cannot be changed.
End Date	Used to specify the date till when the service is effective.
	Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the service is used for enrollment.
Add on Services	Displays the add-on service which is a part of the packaged product.
Start Date	Used to specify the date from when the add-on service is effective.
	Note: By default this field is set to the deal start date and cannot be changed.

Field Name	Field Description
End Date	Used to specify the date till when the add-on service is effective. Note: The End Date cannot be earlier than the Start Date .
Inclusion	Used to indicate whether the add-on service is used for enrollment.

- Enter the required details in the **Products and Services** section.
- Click **Save**.

The account is enrolled for a product.

Pricing and Commitments

The **Pricing and Commitments** screen allows you to do the following:

- View the original and proposed pricing of the price item
- Edit the proposed pricing of the price item
- Override the proposed pricing of the price item
- View the original and proposed commitments of the price item
- Edit the proposed commitments of the price item

The **Pricing and Commitments** screen contains the following sections:

- **Pricing** - Used to view the original and proposed pricing of the price item. It also allows you to edit or override the proposed pricing of the price item. It contains the following zones:
 - *Projected Pricing* on page 2920
 - *Original Pricing* on page 2926
- **Commitments** - Used to view the original and proposed commitments of the price item. It also allows you to edit the proposed commitments of the price item. It contains the following zones:
 - *Proposed Commitments* on page 2930
 - *Original Volume* on page 2930

Projected Pricing

The **Projected Pricing** zone allows to view, edit, or override the proposed pricing of the price item. It contains the following field:

Field Name	Field Description
Override	Used to indicate whether you want to override the price item pricing.

In addition, the **Projected Pricing** zone contains the following sections:

- **Main** - Displays basic information about the price item pricing. It contains the following fields:

Field Name	Field Description
Price Assignment ID	Displays the price assignment ID. Note: It is a read-only field and cannot be edited. A new Price Assignment ID is generated if you override the proposed pricing of the price item.
Price Item	Displays the price item for which the proposed pricing is defined. Note: It is a read-only field and cannot be edited.
Start Date	Use to specify the date from when the pricing of the price item is effective for the deal. Note: By default the deal start date appears in this field. You can define a seasonal pricing for the price item by overriding the price item pricing with a price assignment start date greater than the deal start date.

Field Name	Field Description
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>
End Date	Used to specify the date till when the pricing of the price item is effective for the deal.
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.
Pricing Eligibility	<p>Used to select the pricing eligibility criteria for the price item pricing.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.</p> </div>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No

Field Name	Field Description
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.
	<p>Note:</p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.</p>

- **TFM Information** - Displays the transaction information mapped with the price item. It contains the following fields:

Field Name	Field Description
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing.
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No

- **Pricing Parameters** - Displays the parameters based on which the price item pricing is defined. It contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected.
Parameter Value	Displays the value of the parameter.

- **Characteristics** - Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the price item pricing. It contains the following columns:

Column Name	Column Description
Rate Component	Displays the concatenated string of information about the rate component separated by comma (.). Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.
Description	Used to specify the description of the price component.

Column Name	Column Description										
Show Price Component	Used to indicate whether you want to display the price component in the bill.										
Rate	Used to specify the rate defined for the price component.										
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.										
Tier Details	<p>On clicking the Add  icon, you can define the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Used to indicate the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can define the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.
Column Name	Column Description										
Display Sequence	Used to specify the sequence of the tiering criteria.										
Tiering Criterion	Used to indicate the tiering criteria.										
Lower Limit	Used to specify the lower limit of the tiering range.										
Upper Limit	Used to specify the upper limit of the tiering range.

Pricing and Commitments screen	Pricing and Commitments on page 2919

Original Pricing

The **Original Pricing** zone allows you to view the details of the existing pricing of the price item. It contains the following sections:

- **Main** - Displays basic information about the price item pricing. It contains the following fields:

Field Name	Field Description
Price Assignment ID	Displays the price assignment ID.
Price Item	Displays the price item for which the original pricing is defined.
Start Date	Displays the date from when the pricing of the price item is effective for the deal.
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Indicates that the pricing is used to generate regular bill segment. • Post Processing - Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Indicates that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p>
End Date	Displays the date till when the pricing of the price item is effective for the deal.

Field Name	Field Description
Pricing Currency	Indicates the currency in which you want to define the pricing of the price item.
Pricing Eligibility	Indicates whether the pricing eligibility criteria is defined for the price item pricing in the Price Component section.
Print Zero	Indicates whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No
Rate Schedule	Displays the rate schedule that you want to use while defining price item pricing.
	Note: Rate schedules control how the bills for the price item is calculated.

- **TFM Information** - Displays the transaction information mapped with the price item. It contains the following fields:

Field Name	Field Description
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions
Do Not Aggregate Switch	Indicates whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Indicates aggregation is not required while rating the transactions before billing. • No - Indicates aggregation is required while rating the transactions before billing.
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly

- **Pricing Parameters** - Displays the parameters based on which the price item pricing is defined. It contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the value of the parameter.

- **Characteristics** - Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Price Component** - Lists the price components of the rate component that is mapped with the price item pricing. It contains the following columns:

Column Name	Column Description										
Rate Component	Displays the concatenated string of information about the rate component separated by comma (,).										
Display Sequence	Displays the sequence of price component whose rate is used for calculating the pricing of the price item.										
Description	Displays the description of the price component.										
Show Price Component	Indicates whether you want to display the price component in the bill.										
Rate	Displays the rate defined for the price component.										
Eligibility and Tier Details	Displays the tiering criteria and eligibility criteria for the price item pricing.										
Tier Details	Displays information about the tiering criteria of the price component for the price item pricing. It contains the following columns: <table border="1" data-bbox="695 1331 1463 1682"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Displays the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Indicates the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Displays the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Displays the upper limit of the tiering range.</td> </tr> </tbody> </table>	Column Name	Column Description	Display Sequence	Displays the sequence of the tiering criteria.	Tiering Criterion	Indicates the tiering criteria.	Lower Limit	Displays the lower limit of the tiering range.	Upper Limit	Displays the upper limit of the tiering range.
Column Name	Column Description										
Display Sequence	Displays the sequence of the tiering criteria.										
Tiering Criterion	Indicates the tiering criteria.										
Lower Limit	Displays the lower limit of the tiering range.										
Upper Limit	Displays the upper limit of the tiering range.										
	Note: You can define the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD .										

Column Name	Column Description												
Eligibility Details	<p>Displays information about the eligibility criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1" data-bbox="695 296 1464 1144"> <thead> <tr> <th data-bbox="695 296 1027 344">Column Name</th> <th data-bbox="1027 296 1464 344">Column Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="695 344 1027 459">Display Sequence</td> <td data-bbox="1027 344 1464 459">Displays the order in which the eligibility criteria is executed in the rule.</td> </tr> <tr> <td data-bbox="695 459 1027 575">Parameter</td> <td data-bbox="1027 459 1464 575">Indicates the left hand side parameter which is used along with the price item for price determination.</td> </tr> <tr> <td data-bbox="695 575 1027 716">Operator</td> <td data-bbox="1027 575 1464 716">Indicates the relational operator that is used to define the relation between the left hand side and the right hand side parameters.</td> </tr> <tr> <td data-bbox="695 716 1027 968">Parameter Value Type</td> <td data-bbox="1027 716 1464 968"> Indicates the type of pricing eligibility. Proposed Commitments

The **Proposed Commitments** zone allows to view or edit the proposed commitments of the price item for a person or account based on which the revenue is calculated for the deal. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item.
Pricing Parameters	Indicates the parameter based on which the pricing is defined for the price item.
SQI	Indicates the service quantity identifier that is associated with the price item.
Service Quantity	Used to specify the proposed SQI value using which the rates engine calculates the price item pricing.

Editing a Proposed Price Item Pricing**Prerequisites**

To edit a proposed price item pricing, you should have:

- Values defined for the **Price Assignment Type** in the **PA_TYPE_FLAG** lookup field
- Currencies defined in the application
- Rate schedules, rate versions, and rate components defined in the application

- Values defined for **Transaction Rating Criteria** in the **TXN_RATING_CRITERIA** lookup field
- Values defined for **Pricing Rule Type** in the **PRC_RULE_TYPE_FLG** lookup field
- Aggregation schedules defined in the application
- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Pricing**)
- Transactions mapped to the price item defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application

Procedure

To edit a proposed price item pricing:

1. Ensure that the **Projected Pricing** zone is expanded in the **Pricing and Commitments** screen when you are editing the *proposed* pricing of a price item.

The **Projected Pricing** zone contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Override	Used to indicate whether you want to override the price item pricing.	No
		Note: This field is required only while overriding the price item pricing.

In addition, the **Projected Pricing** zone contains the following sections:

- **Main** - Used to specify basic details about the price item pricing. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment ID	Displays the price assignment ID.	Not Applicable
	Note: It is a read-only field and cannot be edited.	
Price Item	Displays the price item whose pricing you want to edit.	Not Applicable
	Note: It is a read-only field and cannot be edited.	
Start Date	Use to specify the date from when the pricing of the price item is effective for the deal.	Yes
	Note: By default the deal start date appears in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="740 737 1192 978" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="740 1234 1192 1350" style="border: 1px solid black; padding: 5px;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="740 1606 1192 1722" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>	Yes
End Date	Used to specify the date till when the pricing of the price item is effective for the deal.	No
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to define the pricing eligibility criteria for the price item pricing.	No
	Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	Note: Rate schedules control how the bills for the price item will be calculated. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.	

- **TFM Information** - Used to map the transaction details with the price item. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions 	Yes
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing. 	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

- **Parameters** - Used to associate the parameters based on which you want to define the pricing of the price item. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>The parameter search results displays only those parameters where the Price Item check box is selected.</p>	<p>Note: This field is required while associating parameters with the price item pricing.</p>
Parameter Value	Used to specify the value of the parameter.	Yes (Conditional)
		<p>Note: This field is required while associating parameters with the price item pricing.</p>

- **Characteristics** - Used to define a list of characteristics for the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for price item pricing.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Rate Component	Displays the concatenated string of information about the rate component separated by comma (.). Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.	Not applicable
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.	Yes
Description	Used to specify the description of the price component.	Yes

Column Name	Column Description	Mandatory (Yes or No)										
Show Price Component	Used to indicate whether you want to display the price component in the bill.	Yes (Conditional)										
		Note: This field is required for displaying the price component in the bill.										
Rate	Used to specify the rate defined for the price component.	Yes										
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.	Yes (Conditional)										
		Note: This field is required for specifying the tiering criteria and eligibility criteria of the price component for the price item pricing.										
Tier Details	<p>On clicking the Add  icon, you can view and edit the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Used to indicate the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can edit the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.	Yes (Conditional)
		Column Name	Column Description									
		Display Sequence	Used to specify the sequence of the tiering criteria.									
		Tiering Criterion	Used to indicate the tiering criteria.									
		Lower Limit	Used to specify the lower limit of the tiering range.									
		Upper Limit	Used to specify the upper limit of the tiering range.									
		Note: This field is required for specifying the tiering criteria of the price component for the price item pricing.										

Column Name	Column Description	Mandatory (Yes or No)		
Eligibility Details	On clicking the Add  icon, you can view and edit the eligibility criteria of the price component for the price item pricing. It contains the following columns:	Yes (Conditional)		
	<table border="1"> <thead> <tr> <th data-bbox="688 407 906 449">Column Name</th> <th data-bbox="906 407 1182 449">Column Description</th> </tr> </thead> </table>	Column Name	Column Description	<p>Note: This field is required for specifying the eligibility criteria of the price component for the price item pricing.</p>
	Column Name	Column Description		
	Display Sequence	Used to specify the order in which the eligibility criteria should be executed in the rule.		
	Parameter	Used to indicate the left hand side parameter which you want to use along with the price item for price determination.		
		<p>Note: The Search  icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p>		
	Operator	Used to specify the relational operator to define the relation between the left hand side and right hand side parameters.		
Parameter Value Type	Used to indicate the type of pricing eligibility. The valid values are: <ul style="list-style-type: none"> • Parameter - Used to indicate the type of parameter. • Value - Used to indicate the type of value. 			
Parameter	Used to specify the value for the Parameter Value Type as the right hand side parameter which you want to use along with the price item for price determination.			

2. Modify the required details in the **Projected Pricing** zone.
3. Click **Save**

The changes made to the proposed price item pricing are saved.

Overriding a Proposed Price Item Pricing

Prerequisites

To override a proposed price item pricing, you should have:

- Values defined for the **Price Assignment Type** in the **PA_TYPE_FLAG** lookup field
- Currencies defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Values defined for **Transaction Rating Criteria** in the **TXN_RATING_CRITERIA** lookup field
- Values defined for **Pricing Rule Type** in the **PRC_RULE_TYPE_FLG** lookup field
- Aggregation schedules defined in the application
- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)
- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Pricing**)
- Transactions mapped to the price item defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application

Procedure

To override a proposed price item pricing:

1. Ensure that the **Projected Pricing** zone is expanded in the **Pricing and Commitments** screen when you are overriding the *proposed* pricing of a price item.

The **Projected Pricing** zone contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Override	Used to indicate whether you want to override the price item pricing.	Yes

Note:

A new price assignment ID is created when you override a proposed price item pricing.

While overriding a price item pricing, you can define a seasonal pricing for a price item by changing the pricing effective date to a date greater than the deal start date.

In addition, the **Projected Pricing** zone contains the following sections:

- **Main** - Used to specify basic details about the price item pricing. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment ID	Displays the price assignment ID.	Not Applicable
	Note: It is a read-only field and cannot be edited.	
Price Item	Displays the price item whose pricing you want to edit.	Not Applicable
	Note: It is a read-only field and cannot be edited.	
Start Date	Use to specify the date from when the pricing of the price item is effective for the deal.	Yes
	Note: By default the deal start date appears in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing is used to generate regular bill segment. • Post Processing - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="740 737 1192 978" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="740 1234 1192 1350" style="border: 1px solid black; padding: 5px;"> <p>Note: This is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based - Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="740 1606 1192 1722" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is not applicable for price items whose Price Item Usage field is set to Pricing.</p> </div>	Yes
End Date	Used to specify the date till when the pricing of the price item is effective for the deal.	No
Pricing Currency	Used to indicate the currency in which you want to define the pricing of the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Eligibility	Used to define the pricing eligibility criteria for the price item pricing.	No
	Note: If you select the check box you can define the pricing eligibility of the price item in the Price Component section of this zone.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	Note: Rate schedules control how the bills for the price item will be calculated. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears where you can search for the respective rate schedule.	

- **TFM Information** - Used to map the transaction details with the price item. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction • Rate Transactions 	Yes
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Do Not Aggregate Switch	Used to Indicate whether aggregation is required while rating the transactions before billing. The valid values are: <ul style="list-style-type: none"> • Yes - Used to Indicate aggregation is not required while rating the transactions before billing. • No - Used to Indicate aggregation is required while rating the transactions before billing. 	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

- **Parameters** - Used to associate the parameters based on which you want to define the pricing of the price item. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears.</p> <p>The parameter search results displays only those parameters where the Price Item check box is selected.</p>	<p>Note: This field is required while associating parameters with the price item pricing.</p>
Parameter Value	Used to specify the value of the parameter.	Yes (Conditional)
		<p>Note: This field is required while associating parameters with the price item pricing.</p>

- **Characteristics** - Used to define a list of characteristics for the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for price item pricing.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Projected Pricing .	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required while defining characteristics for the price item pricing

- **Price Component** - Used to define a list of price components of the rate component that you want to map with the price item pricing. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Rate Component	Displays the concatenated string of information about the rate component separated by comma (,). Note: It is a read-only field and cannot be edited. This ID is generated automatically when you define the tiering setup of the rate component.	Not applicable
Display Sequence	Used to specify the sequence of price component whose rate is used for calculating the pricing of the price item.	Yes
Description	Used to specify the description of the price component.	Yes

Column Name	Column Description	Mandatory (Yes or No)										
Show Price Component	Used to indicate whether you want to display the price component in the bill.	Yes (Conditional)										
		Note: This field is required for displaying the price component in the bill.										
Rate	Used to specify the rate defined for the price component.	Yes										
Eligibility and Tier Details	Used to specify the tiering criteria and eligibility criteria of the price component for the price item pricing.	Yes (Conditional)										
		Note: This field is required for specifying the tiering criteria and eligibility criteria of the price component for the price item pricing.										
Tier Details	<p>On clicking the Add  icon, you can view and edit the Tiering Criteria of the price component for the price item pricing. It contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Display Sequence</td> <td>Used to specify the sequence of the tiering criteria.</td> </tr> <tr> <td>Tiering Criterion</td> <td>Used to indicate the tiering criteria.</td> </tr> <tr> <td>Lower Limit</td> <td>Used to specify the lower limit of the tiering range.</td> </tr> <tr> <td>Upper Limit</td> <td>Used to specify the upper limit of the tiering range.</td> </tr> </tbody> </table> <p>Note: You can edit the tiering criteria of a price component only when the Tiering Type of its rate component is STEP or THRESHOLD.</p>	Column Name	Column Description	Display Sequence	Used to specify the sequence of the tiering criteria.	Tiering Criterion	Used to indicate the tiering criteria.	Lower Limit	Used to specify the lower limit of the tiering range.	Upper Limit	Used to specify the upper limit of the tiering range.	Yes (Conditional)
		Column Name	Column Description									
		Display Sequence	Used to specify the sequence of the tiering criteria.									
		Tiering Criterion	Used to indicate the tiering criteria.									
		Lower Limit	Used to specify the lower limit of the tiering range.									
		Upper Limit	Used to specify the upper limit of the tiering range.									
		Note: This field is required for specifying the tiering criteria of the price component for the price item pricing.										

Column Name	Column Description	Mandatory (Yes or No)		
Eligibility Details	On clicking the Add  icon, you can view and edit the eligibility criteria of the price component for the price item pricing. It contains the following columns:	Yes (Conditional)		
	<table border="1"> <thead> <tr> <th data-bbox="690 407 906 449">Column Name</th> <th data-bbox="906 407 1182 449">Column Description</th> </tr> </thead> </table>	Column Name	Column Description	<p>Note: This field is required for specifying the eligibility criteria of the price component for the price item pricing.</p>
	Column Name	Column Description		
	Display Sequence	Used to specify the order in which the eligibility criteria should be executed in the rule.		
	Parameter	Used to indicate the left hand side parameter which you want to use along with the price item for price determination.		
		<p>Note: The Search  icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p>		
	Operator	Used to specify the relational operator to define the relation between the left hand side and right hand side parameters.		
Parameter Value Type	Used to indicate the type of pricing eligibility. The valid values are: <ul style="list-style-type: none"> • Parameter - Used to indicate the type of parameter. • Value - Used to indicate the type of value. 			
Parameter	Used to specify the value for the Parameter Value Type as the right hand side parameter which you want to use along with the price item for price determination.			

2. Enter the required details in the **Projected Pricing** zone.
3. Click **Override**.

The proposed price item pricing is overridden.

Editing a Proposed Commitment

Prerequisites

To edit a proposed commitment you should have:

- Proposed commitments defined for a price item

Procedure

To edit a proposed commitment:

1. Ensure that price item hierarchy is expanded in the **Pricing and Commitments** section of the **Pricing and Commitments** screen.
2. In the **Pricing and Commitments** section, click the **Edit** (✎) icon in the **Volume and Commitments** column corresponding to the price item whose proposed commitment you want to edit.

The **Pricing and Commitments** screen appears. It contains the following sections:

- **Proposed Commitments** - Used to view or edit the proposed commitments of the price item for a customer or an account in a deal.
- **Original Volume** - Displays information about the existing commitments of the price item.

The **Proposed Commitments** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Price Item	Displays the price item.	Not applicable
Pricing Parameters	Indicates the price item parameters which are used along with the price item for determining the price item pricing.	Not applicable
SQI	Indicates the service quantity identifier.	Not applicable
Service Quantity	Used to specify the SQI value using which the rates engine calculates the price item pricing.	Yes

3. Modify the required details in the **Proposed Commitments** section.

Note: You cannot edit a proposed commitment of a price item if the deal or deal version is in the **Finalized** status.

4. Click **Save**.

The changes made to the proposed commitment is saved.

Mapping Terms and Conditions

The **Mapping Terms and Conditions** screen enables you to associate deal-specific terms and conditions with a price item or hierarchy entity of a person or account from the customer hierarchy in a deal. It contains the following sections:

- **Main** - The **Main** section indicates the price item or hierarchy entity with which you want to associate deal-specific terms and conditions. It contains the following fields:

Field Name	Field Description
Price Item	Indicates the price item of the person or account from the customer hierarchy in a deal with which you want to associate deal-specific terms and conditions. Note: This field appears when you are associating deal-specific terms and conditions with a price item.
Hierarchy Entity	Indicates the hierarchy entity of the person or account from the customer hierarchy in a deal with which you want to associate deal-specific terms and conditions. Note: This field appears when you are associating deal-specific terms and conditions with a hierarchy entity.

- **Deal-Specific Terms and Conditions** - The **Deal-Specific Terms and Conditions** section allows you to associate or disassociate deal-specific terms and conditions from the price item or hierarchy entity of a person or account from the customer hierarchy in a deal. It contains the following columns:

Column Name	Column Description
Terms and Conditions	Used to indicate a deal-specific term and condition which you want to associate with the price item or the hierarchy entity of the person or account.
Default	Used to indicate whether the term and condition is default or not.

Editing Deal-Specific Terms and Conditions

Prerequisites

To edit deal-specific terms and conditions you should have:

- Terms and conditions associated with the deal

Procedure

To edit deal-specific terms and conditions:

1. Search for the deal in the **Deal Dashboard** screen.
2. In the **Search Results** section, click the link in the **Deal Information** column corresponding to the deal whose terms and conditions you want to edit.
The **Deal Information** screen appears.
3. Ensure that the customer hierarchy is expanded in the **Simulation Details** zone.
4. Click the **Edit** (✎) icon in the **Pricing and Commitments** column corresponding to the person or account whose terms and conditions you want to edit.
The **Pricing and Commitments** screen appears.
5. Ensure that the **Price Item Hierarchy** sub-section is expanded in the **Pricing and Commitments** section when you are editing the deal-specific terms and conditions.
6. Click the **Edit** (✎) icon in the **Terms and Conditions** column corresponding to the price item, root level hierarchy entity, or non-level hierarchy entity whose

The **Mapping Terms and Conditions** screen appears. It contains the following sections:

- **Main** - The **Main** section displays the hierarchy entity to which the deal-specific terms and conditions are associated. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item whose deal-specific terms and conditions you want to edit.	Not applicable
	Note: This field appears when you are editing the deal-specific terms and conditions of a price item.	
Root Level Hierarchy Entity	Indicates the root level hierarchy entity whose deal-specific terms and conditions you want to edit.	Not applicable
	Note: This field appears only when you are editing the deal-specific terms and conditions of a root level hierarchy entity.	

Field Name	Field Description	Mandatory (Yes or No)
Non-Root Level Hierarchy Entity	Indicates the non-root level hierarchy entity whose deal-specific terms and conditions you want to edit.	Not applicable
	Note: This field appears only when you are editing the deal-specific terms and conditions of a non-root level hierarchy entity.	

- **Deal-Specific Terms and Conditions** - The **Deal-Specific Terms and Conditions** section lists the deal-specific terms and conditions associated with the hierarchy entity. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Terms and Conditions	Indicates the deal-specific terms and conditions associated with the price item, root level hierarchy entity, or non-root level hierarchy entity.	Not applicable
Default	Indicates whether the term and condition is default or not.	Not applicable

7. Edit the required term and condition in the **Deal-Specific Terms and Conditions** section.

Note: You can only disassociate a deal-specific term and condition from the **Deal-Specific Terms and Conditions** section.

8. Click the **Delete** (🗑️) icon corresponding to the term and condition that you want to disassociate from the deal.

Note: You cannot delete a term and condition which is set as default for the hierarchy entity.

9. Click **Save**.

The changes are made to the deal-specific terms and conditions.

Deal Log and Comments

The **Deal Log and Comments** screen allows you to view the complete trail of actions performed on the deal. It also allows you to manually add a log entry for the deal. It contains the following sections:

- **Log** - The **Log** section contains the following fields:

Field Name	Field Description
Deal ID	Displays the deal ID.
Deal Information	Displays the concatenated string of deal information separated by a comma (,).

In addition, the **Log** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the deal due to which the log is created in the system.
Details	Displays the details of the actions performed on the deal.
User	Indicates the user who has performed the action on the deal.
Log Type	Indicates the type of log using which the action is performed on the deal.
Related Object	Indicates the object or entity which is created when the action is performed on the deal. Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the action is performed on the deal.

- **Comments** - The **Comments** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the log entry is created for the deal in the system.
User	Indicates the user who has created the log entry for the deal in the system.
Comments	Displays the reason why the log entry is created for the deal.

In addition, the **Comments** section contains the following field:

Field Name	Field Description
Comment	Used to specify the reason for creating a new log entry for the deal.

How to add an adhoc revenue or cost for a deal	Adding Adhoc Revenue and Cost for a Deal on page 2956

Adding Adhoc Revenue and Cost for a Deal**Prerequisites**

To add an adhoc revenue and cost for a deal, you should have:

- Currencies defined in the application
- Values defined for the **Revenue/Cost Type** and **Revenue Type** in the **REVENUE_COST_GRP_FLG** and **REV_TYPE_FLG** lookup fields respectively.

Procedure

To add an adhoc revenue and cost for a deal:

1. Search for the deal or deal version in the **Search Deal** zone of the **Deal Dashboard** screen for which you want to add an adhoc revenue and cost.
2. Click the **Adhoc Revenue and Cost** link at the top right corner of the **Deal Information** zone.

The **Adhoc Revenue And Cost** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number of the adhoc revenue or cost for the deal.	Yes
Currency	Used to indicate the currency in which you want to specify the adhoc charge for the deal. Note: The list includes only those currencies which are defined in the system.	Yes
Amount	Used to specify the amount for the adhoc revenue or cost. Note: You can also specify negative value in this field.	Yes
Division	Used to indicate the division for which the adhoc charge is applicable. Note: You can view only those divisions to which you have access in the Division list.	Yes
Price Item	Used to indicate the price item for which you want to add the adhoc charge. Note: By default, this field is inactive. This field appears when the Price Item Level option is selected from the Revenue/Cost Type list. The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears. On indicating the price item, the description of the price item appears corresponding to the Price Item field.	Yes (Conditional) Note: This field is required while adding adhoc revenue and cost for price items.

Field Name	Field Description	Mandatory (Yes or No)
Revenue/Cost Type	Used to indicate the group to which the adhoc charge belongs. The valid values are: <ul style="list-style-type: none"> • Adhoc Revenue • Courier Cost • Deal Commission • Price Item Level • Travel Cost 	Yes
	Note: The list includes only those values which are present in the REVENU_COST_GRP_FLG lookup field.	
Amount Type	Used to indicate the type of revenue using which you want to add an adhoc charge for the deal. The valid values are: <ul style="list-style-type: none"> • Cost • Revenue 	Yes
	Note: The list includes only those values which are present in the REV_TYPE_FLG lookup field.	

- Enter the required details in the **Adhoc Revenue And Cost** screen.
- If you want to associate more than one adhoc revenue and cost for the deal, click the **Add (+)** icon corresponding to the adhoc revenue and cost and then repeat step 3.

Note: However, if you want to remove an adhoc revenue and cost from the deal, click the **Delete (🗑)** icon corresponding to the adhoc revenue and cost.

- Click **Save**.

The adhoc revenue and cost is added for the deal.

Note: You cannot add or edit an adhoc revenue and cost if the deal has reached the **Finalized** status.

Terms and Conditions Mapping List

The **Terms and Conditions Mapping List** zone lists the terms and conditions that are already mapped to a price item, root-level hierarchy entity, or a non-root level hierarchy entity in the system. It contains the following columns:

Column Name	Column Description
Mapping Information	<p>Displays the concatenated string of information about the mapped terms and conditions.</p> <p>Note: It has a link. On clicking the link, the Terms and Conditions Mapping Details zone appears where you can view the mapping details of the respective terms and conditions.</p>
Mapping Entity Type	<p>Indicates the type of entity using which the terms and conditions are mapped in the system. The valid values are:</p> <ul style="list-style-type: none"> • Price Item • Non-Root Level Hierarchy Entity • Root Level Hierarchy Entity
Mapping Entity	Displays the entity to which the terms and conditions are mapped.

You can filter the list using various search criteria (such as, **Mapping ID**, **Terms and Conditions**, and **Mapping Entity Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

On clicking the **Broadcast** () icon corresponding to the terms and conditions mapping information, the **Terms and Conditions Mapping Details** zone appears with the mapping details of the respective terms and conditions.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Terms and Conditions Mapping Details

The **Terms and Conditions Mapping Details** zone displays the mapping details of the terms and conditions. It contains the following sections:

- **Main** - Displays the basic mapping information about the terms and conditions. It contains the following fields:

Field Name	Field Description
Mapping ID	Displays the mapping ID of the terms and conditions.
Mapping Entity Type	Indicates the type of entity using which the terms and conditions are mapped in the system. The valid values are: <ul style="list-style-type: none"> • Price Item • Non-Root Level Hierarchy Entity • Root Level Hierarchy Entity
Mapping Entity	Indicates the entity to which the terms and conditions are mapped.
Price Item	Indicates the price item to which the terms and conditions are mapped. <p>Note: This field appears when the terms and conditions are mapped using the Mapping Entity Type as Price Item.</p>
Non-Root Level Hierarchy Entity	Indicates the non-root level hierarchy entity to which the terms and conditions are mapped. <p>Note: This field appears when the terms and conditions are mapped using the Mapping Entity Type as Non-Root Level Hierarchy Entity.</p>
Root Level Hierarchy Entity	Indicates the root level hierarchy entity to which the terms and conditions are mapped. <p>Note: This field appears when the terms and conditions are mapped using the Mapping Entity Type as Root Level Hierarchy Entity.</p>

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Edit	Used to edit the mapping details of the terms and conditions.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the terms and conditions are mapped to the entity. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Terms and Conditions** - Lists the terms and conditions which are mapped to the entity. It contains the following columns:

Column Name	Column Description
Terms and Conditions	Displays the terms and conditions which are mapped to the entity.
	Note: It has a link. On clicking the link, the Terms and Conditions screen appears where you can view the details of the respective terms and conditions.
Start Date	Displays the date from when the terms and conditions are effective for the entity.
	Note: The start date cannot be later than the end date.
End Date	Displays the date till when the terms and conditions are effective for the entity.
	Note: The end date cannot be earlier than the start date.
Default	Indicates whether the mapped term and condition is default or not.

By default, the **Terms and Conditions Mapping Details** zone does not appear in the **Terms and Conditions Mapping** screen. It appears when you click the **Broadcast** (📢) icon corresponding to the terms and conditions mapping information in the **Terms and Conditions Mapping List** zone.

Associating the Terms and Conditions with a Price Item

Prerequisites

To associate the terms and conditions with a price item, you should have:

- Price item with which you want to associate the terms and conditions defined in the application
- Terms and conditions defined in the application

Procedure

To associate the terms and conditions with a price item:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Modelling and Simulation** and then click **Terms and Conditions Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Terms and Conditions Mapping** sub-menu.

The **Terms and Conditions Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity) with which you want to associate the terms and conditions. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity Type	Used to indicate the type of entity using which you want to associate the terms and conditions. The valid values are: <ul style="list-style-type: none"> • Price Item - Used to indicate that you want to associate the terms and conditions with a price item. • Non-Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a non-root level hierarchy entity. • Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a root level hierarchy entity. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity	<p>Used to indicate the entity with which you want to associate the terms and conditions.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Mapping Entity field. On clicking the Search icon, the Price Item Terms and Conditions Mapping Search, Non-Root Level Hierarchy Entity Terms and Conditions Mapping Search, or Root Level Hierarchy Entity Terms and Conditions Mapping Search window appears depending upon whether you select the Price Item, Non-Root Level Hierarchy Entity, or Root-Level Hierarchy Entity option from the Mapping Entity Type field respectively.</p> <p>On indicating the mapping entity, the description of the mapping entity appears corresponding to the Mapping Entity field.</p> <p>This field appears when you select the mapping entity type from the Mapping Entity Type field.</p>	Yes

- **Terms and Conditions** - Used to associate the terms and conditions with the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	<p>Used to indicate the terms and conditions that you want to associate with the entity.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search window appears.</p> <p>On indicating the terms and conditions, the description of the terms and conditions appear corresponding to the Terms and Conditions field.</p> <p>You can search for only those terms and conditions whose Terms and Conditions Usage is set to Deal or Invoice and Deal.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the terms and conditions are associated with the entity.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the terms and conditions are associated with the entity.	No
	Note: The end date cannot be earlier than the start date.	
Default	Used to indicate whether the terms and conditions should be defaulted for the entity.	No
	Note: You must specify atleast one default terms and conditions for an entity.	

4. Select the **Price Item** option from the **Mapping Entity Type** field in the **Main** section.

The **Mapping Entity** field appears.

5. Search for the price item with which you want to associate the terms and conditions in the **Mapping Entity** field.
6. Associate terms and conditions with the price item in the **Terms and Conditions** section.

Note: The valid file extensions for associating terms and conditions are doc, xls, pdf, jpg, txt, avi, bmp, mp3 and rtf.

7. If you want to associate more than one terms and conditions with the price item, click the **Add (+)** icon.

Note: However, if you want to disassociate the terms and conditions from the price item, click the **Delete (🗑)** icon corresponding to the respective terms and conditions.

8. Click **Save**.

The terms and conditions are associated with the price item.

Associating the Terms and Conditions with a Root Level Hierarchy Entity

Prerequisites

To associate the terms and conditions with a root level hierarchy entity, you should have:

- Hierarchy entity with which you want to associate the terms and conditions defined in the application
- Terms and conditions defined in the application

Procedure

To associate the terms and conditions with a root level hierarchy entity:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Deal Modelling and Simulation** and then click **Terms and Conditions Mapping**.

A sub-menu appears.

3. Click the **Add** option from the **Terms and Conditions Mapping** sub-menu.

The **Terms and Conditions Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity) with which you want to associate the terms and conditions. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity Type	Used to indicate the type of entity using which you want to associate the terms and conditions. The valid values are: <ul style="list-style-type: none"> • Price Item - Used to indicate that you want to associate the terms and conditions with a price item. • Non-Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a non-root level hierarchy entity. • Root Level Hierarchy Entity - Used to indicate that you want to associate the terms and conditions with a root level hierarchy entity. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Mapping Entity	<p>Used to indicate the entity with which you want to associate the terms and conditions.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Mapping Entity field. On clicking the Search icon, the Price Item Terms and Conditions Mapping Search, Non-Root Level Hierarchy Entity Terms and Conditions Mapping Search, or Root Level Hierarchy Entity Terms and Conditions Mapping Search window appears depending upon whether you select the Price Item, Non-Root Level Hierarchy Entity, or Root-Level Hierarchy Entity option from the Mapping Entity Type field respectively.</p> <p>On indicating the mapping entity, the description of the mapping entity appears corresponding to the Mapping Entity field.</p> <p>This field appears when you select the mapping entity type from the Mapping Entity Type field.</p>	Yes

- **Terms and Conditions** - Used to associate the terms and conditions with the entity (i.e. price item, non-root level hierarchy entity, or root level hierarchy entity). It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	<p>Used to indicate the terms and conditions that you want to associate with the entity.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Terms and Conditions field. On clicking the Search icon, the Terms and Conditions Search window appears.</p> <p>On indicating the terms and conditions, the description of the terms and conditions appear corresponding to the Terms and Conditions field.</p> <p>You can search for only those terms and conditions whose Terms and Conditions Usage is set to Deal or Invoice and Deal.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the terms and conditions are associated with the entity.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the terms and conditions are associated with the entity.	No
	Note: The end date cannot be earlier than the start date.	
Default	Used to indicate whether the terms and conditions should be defaulted for the entity.	No
	Note: You must specify atleast one default terms and conditions for an entity.	

- Select the **Root Level Hierarchy Entity** option from the **Mapping Entity Type** field in the **Main** section.
The **Mapping Entity** field appears.
- Search for the root level hierarchy entity with which you want to associate the terms and conditions in the **Mapping Entity** field.
- Associate terms and conditions with the root level hierarchy entity in the **Terms and Conditions** section.

Note: The valid file extensions for associating terms and conditions are doc, xls, pdf, jpg, txt, avi, bmp, mp3 and rtf.

- If you want to associate more than one terms and conditions with the root level hierarchy entity, click the **Add (+)** icon.

Note: However, if you want to disassociate the terms and conditions from the root level hierarchy entity, click the **Delete (🗑)** icon corresponding to the respective terms and conditions.

- Click **Save**.

The terms and conditions are associated with the root level hierarchy entity.

Deal Approver Dashboard

The **Deal Approver Dashboard** screen allows you to view the To Do tasks assigned to the user that belongs to the access group as defined in the approval hierarchy of the **Deal Approval Profile** screen. It also allows you to search for deals which are assigned to the user for approval. It contains the following zones:

- [Deal Metrics](#) on page 2977
- [Deal To Do](#) on page 2977
- [Search Deal](#) on page 2978

Deal Metrics

The **Deal Metrics** zone enables you to view the following information through a tiles chart for deals which are assigned to the user for approval:

- Number of deals created by the user
- Number of deals in the **Pending for Approval** status
- Number of deals yet to be finalized
- Number of deals yet to be accepted by the customer
- Number of deals accepted by the customer
- Number of deals rejected by the customer

In addition, you can view the above information through a bar and line chart by toggling the **Tiles/Chart** switch available in the **Deal Metrics** zone.

The bar chart indicates the number of deals in different statuses for an existing customer, existing account, and prospect. Whereas, the line chart indicates the deal revenue from an existing customer, existing account, and prospect.

Note: By default, the above information is shown for the period which is specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration. You can change the period if required.

You can filter the information using various criteria (such as, **Period From, Period To, Division, Customer Tier, and Customer Segment**) available in the **Deal Metrics** zone.

Deal To Do

The **Deal To Do** zone lists the deal approval To Do's assigned to the user that belongs to the access group as defined in the approval hierarchy of the **Deal Approval Profile** screen. It also lists the deal information for which the deal approval To Do is generated. It contains the following columns:

Column name	Column Description
To Do	On clicking the To Do icon (📌), the To Do Entry screen appears where you can view the details of the respective To Do assigned to the user.
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,) for which the To Do is created.
	Note: It has a link. On clicking the link, the Deal Information screen appears where you can perform the required action.

Note: By default, the system lists the To Do's for the user that are created in the period which is specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration. You can change the period if required.

You can filter the list using various criteria (such as, **To Do Type**, **Priority**, **Start Date**, and **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Search Deal

The **Search Deal** zone allows you to search deals for which the next required action has to be performed by the user as per the deal approval workflow. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deal using the deal, customer, or account details. The valid values are: <ul style="list-style-type: none"> • Deal Details • Customer Details • Account Details 	Yes
	Note: By default, the Deal Details option is selected.	
Division	Used to search deals which are associated with a particular division to which the user belongs.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Deal ID	Used to search for a particular deal.	No
	Note: This field appears when the Deal Details option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to search deals which are effective from a particular date onwards.	No
	<p>Note:</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p> <p>The start date cannot be later than the end date.</p>	
End Date	Used to search deals which are effective till a particular date.	No
	<p>Note:</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p> <p>The end date cannot be earlier than the start date.</p>	
Status	Used to search deals with a particular status.	No
	<p>Note: This field appears when the Deal Details option is selected from the Search By list.</p>	
Created By	Used to search deals which are created by a particular user.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the User Search window appears.</p> <p>On specifying the creator, the description of the creator appears corresponding to the Created By field.</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p>	
Customer Segment	Used to search deals which are created for customers associated to a particular business component.	No
	<p>Note: This field appears when the Customer Details option is selected from the Search By list.</p>	
Person ID	Used to search deals which are created for a particular customer.	No
	<p>Note: This field appears when the Customer Details option is selected from the Search By list.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search deals which are created for persons or accounts with a particular name.	No
	Note: This field appears when the Customer Details or Account Details option is selected from the Search By list.	
Person Identifier Type	Used to search deals which are created for persons using a particular identifier type.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list.	Note: If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type for searching deals created for the persons.	Yes (Conditional)
	Note: This field appears when the Customer Details option is selected from the Search By list.	Note: If you enter person identifier type as a search criteria, you have to specify the person identifier.
Account ID	Used to search deal which is created for a particular account.	No
	Note: This field appears when the Account Details option is selected from the Search By list.	
Account Identifier Type	Used to search deals which are created for accounts using a particular identifier type.	Yes (Conditional)
	Note: This field appears when the Account Details option is selected from the Search By list.	Note: If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type for searching deals created for accounts.	Yes (Conditional)
	Note: This field appears when the Account Details option is selected from the Search By list.	Note: If you enter account identifier type as a search criteria, you have to select the primary account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Deal Entity	<p>Used to search deals which are created for a particular entity. The valid values are:</p> <ul style="list-style-type: none"> • Account - Used to search deals which are created for the existing accounts in the system. 	Yes (Conditional)
	<p>Note: This value appears when you select the Deal Details or Account Details option from the Search By list.</p>	<p>Note: This field is required while searching for deals created for the respective entities.</p>
	<ul style="list-style-type: none"> • Customer - Used to search deals which are created for the existing customers in the system. 	
	<p>Note: This value appears when you select the Deal Details or Customer Details option from the Search By list.</p> <ul style="list-style-type: none"> • Prospect - Used to search deals which are created for the existing prospects in the system. <p>Note: This value appears when you select the Deal Details or Customer Details option from the Search By list.</p>	
Deal Type	<p>Used to search deals which are created using a particular deal type.</p>	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Deal Type Search window appears.</p> <p>On specifying the deal type, the description of the deal type appears corresponding to the Deal Type field.</p> <p>This field appears when the Deal Details option is selected from the Search By list.</p>	<p>Note: This field is required while searching deals using the Deal Details.</p>
Deal Creation From Date	<p>Used to search deals which are created from a particular date onwards.</p> <p>Note: By default, the system displays the date which is specified in the Deal Limits in Months option type of the C1-DEAL feature configuration. You can change the date if required.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Deal Creation To Date	Used to search deals which are created till a particular date.	No
	Note: By default, the system displays the date which is specified in the Deal Limits in Months option type of the C1-DEAL feature configuration. You can change the date if required.	
Deal Identifier	Used to search deals which are created using a particular deal identifier.	No
	Note: This field appears when the Deal Details option is selected from the Search By list.	
Assigned To My Role	Used to search only those deals to which the user has access for approval.	Yes (Conditional)
	Note: On clicking the check box you can search for deals as per the access group defined in the Approval Hierarchy of the Deal Approval Profile to which the user belongs.	

- **Search Results** - On clicking the **Search** button, a list of deals appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deal Information	Displays the concatenated string of information about the deal separated by a comma (,).
	Note: It has a link. On clicking the link, the Deal Information screen appears where you can view the details of the respective deal.
Person Information	Displays the concatenated string of information about the main person for whom the deal is created in the system.
	<p>Note:</p> <p>It has a link. On clicking the link, the Customer 360° Information or the Prospect Person screen appears where you can view the details of the respective person.</p> <p>The Customer 360° Information screen appears when you select the Account or Customer option from the Deal Entity list in the Search Criteria while searching for a deal. Whereas, the Prospect Person screen appears when you select the Prospect option from the Deal Entity list in the Search Criteria while searching for a deal.</p>

Column Name	Column Description
Deal Entity	Indicates the entity for which the deal is created in the system. The valid values are: <ul style="list-style-type: none"> • Account • Customer • Prospect
Start Date	Displays the date from when the deal is effective for the deal entity.
End Date	Displays the date till when the deal is effective for the deal entity.
Status	Indicates the current status of the deal.
Created By	Displays the user who has created the deal in the system.
View Approval Workflow	On clicking the View Approval Workflow () icon, the Deal Approval Workflow screen appears where you can view the details of the approval workflow of the respective deal.
Print Deal	On clicking the Print () icon, the Deal Extraction screen appears where you can filter the options as per your requirement and extract the deal information in the PDF or Excel format.

Note:

By default, the **Search Results** section lists all the deals which are assigned to the user for the period as specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Searching for a Deal

Prerequisites

To search for a deal, you should have:

- Divisions defined in the application
- Deals or deal versions associated with the division to which the user belongs
- Deal types defined in the application
- Deal entities defined in the application

Procedure

To search for a deal:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deal Modelling and Simulation** and then click **Deal Approver Dashboard**.
The **Deal Approver Dashboard** screen appears.
3. Enter the search criteria in the **Search Deal** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of deals that meet the search criteria appears in the **Search Results** section.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Search Results** section lists all the deals which are assigned to user and are in the **Pending for Approval** status for the period as specified in the **Deal Limits in Months** option type of the **C1-DEAL** feature configuration.

You must specify at least one search criterion while searching for a deal. One more search criterion is required when you are searching for a deal using the deal entity.

You must specify one more search criterion when you are searching for a deal using the division with the **Deal Details** option selected from the **Search By** list.

Extracting a Deal in the PDF or Excel Format

Procedure

To extract a deal in the pdf or excel format:

1. Do either of the following:

If you want to...	Then...
Extract a deal in the PDF or Excel format from the Deal Dashboard screen	<ol style="list-style-type: none"> 1. Search for the deal in the Search Deal zone of the Deal Dashboard screen. 2. In the Search Results section, click the Print () icon in the Print Deal column corresponding to the deal which you want to extract in the pdf or excel format. <p>Note: If the deal has multiple versions, click the Print () icon in the Print Deal column corresponding to the deal version in the Deal Versions zone.</p>
Extract a deal in the PDF or Excel format from the Deal Information screen	<ol style="list-style-type: none"> 1. Search for the deal in the Search Deal zone of the Deal Dashboard screen. 2. In the Search Results section, click the link in the Deal Information column corresponding to the deal which you want to extract in the pdf or excel format. <p>Note: If you want to extract the deal version in the pdf of excel format, click the link in the Deal Version Information column corresponding to the deal version from the Deal Versions zone.</p> <p>The Deal Information screen appears.</p> <ol style="list-style-type: none"> 3. In the Simulation Details zone, click the Print Deal button.
Extract a deal in the PDF or Excel format from the Deal Approver Dashboard screen	<ol style="list-style-type: none"> 1. Search for the deal in the Search Deal zone of the Deal Approver Dashboard screen. 2. In the Search Results section, click the Print () icon in the Print Deal column corresponding to the deal which you want to extract in the pdf or excel format.

The **Deal Extraction** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Extract Format	<p>Used to specify the format in which you want to extract the deal information. The valid values are:</p> <ul style="list-style-type: none"> • Excel • PDF 	<p>Yes (Conditional)</p> <p>Note: This field is required while extracting a deal in the pdf or excel format.</p>
Extract Type	<p>Used to indicate the type of deal information that you want to extract for publishing. The valid values are:</p> <ul style="list-style-type: none"> • External - Used to extract deal information which is published to the customer for approval. It contains the following details: <ol style="list-style-type: none"> 1. Extraction information i.e. the extraction date-time and the user who has done the extraction. 2. Details of the filters selected for extraction. 3. Deal details such as the deal creator user ID, deal creation date and time, deal ID, deal type, prospect/customer, currency, deal status etc. 4. Customer hierarchy, accounts and price item details as per the filter option selected in the Deal Extraction screen. 5. Price item details such as the original price with assignment level, commitments, negotiated price with assignment level, approval status, etc. 6. Terms and conditions. <p>Note:</p> <p>The External extract type controls the extraction of certain data which may or may not be published to the customer.</p> <p>You can select the External option from the Extract Type list when the deal is in the Finalized, Customer Accepted, Rejected, Fully Orchestrated, Pending for Review, or Closed status.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while extracting a deal in the pdf or excel format.</p>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Internal - Used to extract deal information which is published for internal reviews and validations. It contains the following details: <ol style="list-style-type: none"> 1. Deal summary details and Division summary details with the applicable cost, profitability, revenue and other calculations. 2. Price item details such as the cost and revenue details etc. 3. Adhoc revenue and cost entries. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>By default, the Internal option is selected from the Extract Type list for deals which are not in the Finalized, Customer Accepted, Rejected, Fully Orchestrated, Pending for Review, or Closed status.</p> <p>The list includes only those values which are present in the DEAL_EXTRACT_TYPE_FLG lookup field.</p> </div>	
Extract Filter	<p>Used to indicate the price item information that you want to extract in the pdf or excel format. The valid values are:</p> <ul style="list-style-type: none"> • Account • Additional Filter Criteria • All • Customer • Division • Only Hierarchy • Price Assignment Level • Price Item • Price Item Group <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: The list includes only those values which are present in the DEAL_EXTRACT_FILTER_FLG lookup field.</p> </div>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required while extracting a deal in the pdf or excel format.</p> </div>

In addition, the **Deal Extraction** screen contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	<p>Used to specify the persons or prospects account for which you want to extract the price item pricing details.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Prospect Account Search window appears where you can search for the respective account.</p> <p>This field appears when you select the Account option from the Extract Filter list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while extracting the proposed price item pricing details of an account.</p>
Price Item	<p>Used to specify the price item for which you want to extract the pricing details.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears where you can search for the respective price item.</p> <p>This field appears when you select the Account, Customer, and Price Item options from the Extract Filter list.</p>	No
Price Item Group Code	<p>Used to specify the root level hierarchy entity for which you want to extract the price item pricing details.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Hierarchy Entity Search window appears where you can search for the respective root level hierarchy entity.</p> <p>This field appears when you select the Account, Customer, and Price Item Group options from the Extract Filter list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Proposed Price Assignment Level	Used to extract the proposed price item pricing details for a particular assignment level.	No
	<p>Note:</p> <p>The list includes only those values which are present in the PA_LVL_FLG lookup field.</p> <p>This field appears when you select the Account, Customer, Price Assignment Level, Price Item, and Price Item Group options from the Extract Filter list.</p> <p>This field is disabled when you select the Show Price Assignment for Child Entities field check box.</p>	
Show Price Assignment for Child Entities	Used to indicate whether you want to extract the proposed price item price assignment details of the non-root level hierarchy entity.	No
	<p>Note: This field appears when you select the Account, Customer, Price Assignment Level, Price Item, and Price Item Group options from the Extract Filter list.</p>	
Current Approval User ID	Used to extract the details of the proposed price item pricing which is approved by a particular user.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the User Search window appears where you can search for the respective root user.</p> <p>This field appears when you select the Additional Filter Criteria option from the Extract Filter list.</p> <p>This field is disabled when you specify the Price Item Manager To Do Role or Price Approval Status.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Manager To Do Role	<p>Used to extract the details of the proposed price item pricing which is assigned using a particular price item manager To Do role.</p> <p>Note: This field appears when you select the Additional Filter Criteria option from the Extract Filter list.</p> <p>This field is disabled when you specify the Current Approval User ID or Price Approval Status.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while extracting the proposed price item pricing details assigned to a particular price item manager To Do role.</p>
Price Approval Status	<p>Used to extract the details of the proposed price item pricing which are in a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Approved • Approved-Existing • Approved-Recommended • Error • Initial • Unapproved <p>Note: This field appears when you select the Additional Filter Criteria option from the Extract Filter list.</p> <p>This field is disabled when you specify the Current Approval User ID or Price Item Manager To Do Role.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while extracting the details of the proposed price item pricing in a particular status.</p>
Person ID	<p>Used to extract the details of the proposed price items pricing of a particular person.</p> <p>Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Prospect Person Search window appears where you can search for the respective person.</p> <p>This field appears when you select the Additional Filter Criteria option from the Extract Filter list.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while extracting the details of the proposed price item pricing of a particular person.</p>

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to extract the details of the proposed price items pricing from a particular division.	Yes (Conditional)
	Note: This field appears when you select the Customer option from the Extract Filter list.	Note: This field is required while extracting the details of the proposed price item pricing from a particular division.

2. Enter the required details in the **Deal Extraction** screen.
3. Click **Extract**.

The deal is extracted in the pdf or excel format.

Note: You cannot extract a deal which is in the **Discarded** status.

Chapter 43

Relationship Manager Workbench

The **Relationship Manager Workbench** screen is designed for a relationship manager wherein the relationship manager can obtain a holistic view of all its customers. It is designed to provide the following statistics to a relationship manager:

- Revenue Metrics
- Customer Metrics
- Customer Hierarchy
- Deal Metrics
- Top 10 Customers by Revenue
- Top 10 Products by Revenue
- Top 10 Price Items by Revenue
- Top 10 Customers by Revenue Variations

In addition, a relationship manager can also view all the assigned To Dos from the **Relationship Manager Workbench** screen.

Chapter 44

FOP Reports

Oracle Revenue Management and Billing enables you to extract data using the following FOP reports:

- **User Access Report** - Enables you to view the permissions granted to a particular user for accessing the data.
- **Payment Summary Report** - Enables you to view the total payment made via a tender type for each customer in a division.
- **Payment Detail Report** - Enables you to view the individual payment details of each account and customer in a division.
- **Invoice Ageing Report** - Enables you to view the invoices which are due for payment in different aging buckets.

These FOP reports are not shipped with the product. Oracle Revenue Management and Billing provides the UserAccessReport, PaymentSummaryReport, PaymentDetailReport, and AgingReport XSL files using which you can create the respective report. Once the FOP report is created, you can extract the data from the system in the PDF format using the FOP report. For more information about these FOP reports, refer to *Oracle Revenue Management and Billing FOP Reports Guide*.

Chapter 45

Garbling Customer Information

Oracle Revenue Management and Billing enables you to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on. On receiving the data erasure request from a customer, the data controller will garble the personal information of the customer by masking the data with random characters and then cease the access to the customer records.

To garble the information of one or more persons, you need to do the following:

1. Define the **Garble Data (C1-GRBL)** characteristic for each person whose data needs to be garbled and set its value to **Y**.
2. Execute the **Garble Person Information (C1-GRBPI)** batch. For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

On executing the **Garble Person Information (C1-GRBPI)** batch, the system identifies the persons where the **Garble Data (C1-GRBL)** characteristic is set to **Y** and the **Garbling Completed (C1-GBCM)** characteristic is either not defined or set to **N**. Note that the system considers the **Garble Data (C1-GRBL)** characteristic value which is effective on the batch business date.

Once the persons are identified, the data in the following fields is masked with random characters across all records in the system:

- ACCOUNT_NBR
- ACCT_NBR
- ADDRESS1
- ADDRESS1_UPR
- ADDRESS2
- ADDRESS3
- ADDRESS4
- BIRTH_DT
- BROKER_NAME
- CITY
- COUNTRY
- COUNTY
- CUSTOMER_NAME
- EMAILID

- ENTITY_NAME
- ENTITY_NAME1
- ENTITY_NAME2
- ENTITY_NAME3
- GEO_CODE
- HOUSE_TYPE
- IN_CITY_LIMIT
- NAME1
- OVRD_MAIL_NAME1
- OVRD_MAIL_NAME2
- OVRD_MAIL_NAME3
- PER_ID_NBR
- PHONE
- POSTAL
- POSTAL_UPR
- STATE

In other words, the personal and account related information of a customer is garbled across the system. In addition, this batch allows you to garble the required characteristics and identifiers of a person and account.

Note: An account may have one or more persons linked to it. The information of an account is garbled when the data erasure request is received for the main customer of the account.

Once the personal and account related information of a customer is garbled, the access group of the person is changed to **C1GB** (which does not have any data access role). This ensures that the data of the person and his or her accounts cannot be accessed from any screens in the system. If an approval transaction contains personal and account related information of a customer, you cannot even view the approval transaction in the system.

Note: The access is forbidden for performing any transaction for the person and account only from the user interface and web services and not through the background process.

You can also garble the data of a person using the **C1-GRBPI** inbound web service. However, you can garble the data of only one person at a time using this inbound web service.

Appendix

A

Most Commonly Used Tasks

Topics:

- [Changing the Layout](#)

This section lists some of the common tasks that are performed while using various functionality in the application.

Changing the Layout

You can change the layout of the zone by:

- [Removing a Column from the Zone](#) on page 3000
- [Adding a Column to the Zone](#) on page 3000
- [Rearranging Columns in the Zone](#) on page 3000

Adding a Column to the Zone

Once you have removed the columns from the zone, you can add them back to the zone. To add a column to the zone:

1. Click the **Column Configuration** () icon in the upper right corner of the zone.

A panel appears at the bottom of the zone with a list of column names.

Note: The column names with the white background in the panel are currently not displayed in the zone.

2. Drag and drop the column name from the panel to the location where you want to add the column in the zone.
The white background of the column name in the panel changes to the grey background indicating that the column is currently displayed in the zone.
3. If you want to add another column name from the panel to the zone, repeat the second step. Click the **Refresh** button, data will be displayed to the columns added in the zone.

Related Topics

For more information on...	See...
How to change the layout of the zone	Changing the Layout on page 3000

Rearranging Columns in the Zone

You can change the order in which the columns are displayed in the zone. To change the position of a column in the zone:

1. Click the column name whose position you want to change in the zone.
2. Drag and drop the column name between the columns where you want to place the selected column.

The position of the column changes in the zone.

Related Topics

For more information on...	See...
How to change the layout of the zone	Changing the Layout on page 3000

Removing a Column from the Zone

To remove a column from the zone:

Click the **Delete** () icon corresponding to the column name that you want to remove from the zone.

The column is removed from the zone and is currently displayed with white background in the panel.

Note: Alternatively you can remove the column from the zone by clicking the Delete (🗑️) icon corresponding to the column name in the panel.

Related Topics

For more information on...	See...
How to change the layout of the zone	Changing the Layout on page 3000

Appendix

B

Administration

Topics:

- [UI Maps](#)
- [Feature Configurations](#)

This section lists some of the administrative tasks.

UI Maps

This section explains how to create the UI maps for viewing and modifying data of the business objects within the approval workflow group.

Creating Display UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group.

Procedure

To create a Display UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Display UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Display naming convention while automatically generating a Display UI map. Therefore, do not use this naming convention while creating a Display UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create a Display UI map for account, you must use the following schema:

```
<schema>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

8. Click the **Save** link in the **Actions/Navigation** area.
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Display Only** button.
The HTML code is generated in the **HTML Editor** zone.
10. Click the **Save** link in the **Actions/Navigation** area.
The changes are saved.

Creating Input UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group.

Procedure

To create an Input UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Input UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Input naming convention while automatically generating an Input UI map. Therefore, do not use this naming convention while creating an Input UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create an Input UI map for account, you must use the following schema:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

The <approvalTransactionId/> tag is used in the schema to retrieve the approval transaction ID of the respective business object. The <action/> tag is used in the schema to retrieve the action performed by the submitter.

- Click the **Save** link in the **Actions/Navigation** area.

The **Display Only** and **Input Map** buttons are enabled on the dashboard.

- Click the **Input Map** button.

The HTML code is generated in the **HTML Editor** zone.

- Add the following tag in the head tag:

```
<script language="javascript" type="text/javascript" src="code/
approvalWorkflow.js"></script>
```

- Add the text highlighted in bold within the tag as shown below:

```
<td>
<input onClick="performAction('<Approval Workflow Group Code>');"
oraMdLabel="SAVE_BTN_LBL" class="oraButton" type="button">
<input onClick="oraSubmitMap('CANCEL', false);" oraMdLabel="CANCEL_LBL"
class="oraButton" type="button">
</td>
```

In the above HTML code, you must replace <Approval Workflow Group Code> with the code of the approval workflow group for which you are creating a UI map.

- Click the **Save** link in the **Actions/Navigation** area.

The changes are saved.

Feature Configurations

This section explains how to set various feature configurations which are required for implementing various features in Oracle Revenue Management and Billing.

Setting the C1_ACCTINFO Feature Configuration

Prerequisites

To set the **C1_ACCTINFO** feature configuration, you should have:

- Account Type characteristic type defined in the application (where the characteristic entity is set to Account)
- Invoice Group Account characteristic type defined in the application (where the characteristic entity is set to Account)

Procedure

To set the **C1_ACCTINFO** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_ACCTINFO** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Type	Used to specify the characteristic type. This characteristic type is used to define the type of account in the Account screen.	Yes
	Note: By default, the C1_F_ATY characteristic type is specified. If you want to use account types other than the ones defined in the C1_F_ATY characteristic type, you need to create a new predefined characteristic type and add the required account types as its characteristic values. Then, specify the newly created characteristic type as the value for this option type.	
Invoice Group Account	Used to specify the characteristic type. This characteristic type is used to indicate whether the account is a master or member account in the Account screen.	Yes
	Note: By default, the C1_F_IGA characteristic type is specified. If you want to use any other characteristic type other than C1_F_IGA , you need to create a new predefined characteristic type and add two characteristic values — Y and N. Then, specify the newly created characteristic type as the value for this option type.	

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Invoicing Group	Invoicing Group on page 239

Setting the C1_AXENTITY Feature Configuration

The **C1_AXENTITY** feature configuration enables you to configure various settings related to the **Approval Workflow** feature.

Prerequisites

To set the **C1_AXENTITY** feature configuration, you should have:

- An algorithm defined using the **C1-APPTXN** algorithm type in the application
- To Do types defined in the application
- Fields defined in the application
- XSL files that you want to use for the Input and Display UI maps

Procedure

To set the **C1_AXENTITY** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_AXENTITY** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Compare New or Missing Entry Color	Used to indicate the color in which you want to highlight the new record or new additions made to the existing record. This helps in comparing the existing and new data while reviewing an approval transaction. Note: You must specify a hexadecimal value for this option type.	Yes
Approval Transaction Compare Value Changed Color	Used to indicate the color in which you want to highlight the modifications made to the existing data. This helps in comparing the existing and new data while reviewing an approval transaction. Note: You must specify a hexadecimal value for this option type.	Yes

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Entity Access Algorithms	<p>Used to specify the algorithm which controls access to the maintenance objects based on the access group and division.</p> <p>Note: By default, the value is set to C1-APPTXN. If you create new maintenance objects and want to control the access of these new maintenance objects based on the access group and division, you have to create a custom algorithm and then attach it to this option type. In such case, you will have to define this option type twice — one with the default algorithm (that is, C1-APPTXN) and another with the custom algorithm.</p>	Yes
Approval Transaction Resolve To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when an approver at any level in the hierarchy rejects an approval transaction.</p> <p>Note: You must specify a To Do type which is already defined in the system.</p>	Yes
Approval Transaction screen timeout	<p>Used to indicate the time (in minutes) in which the screen timeout message should appear in the Comparison: New versus Existing screen when the system takes longer time to display an approval transaction.</p>	Yes
Disable Approval Transaction Fields in Input UI Maps	<p>Used to indicate the fields that you want to disable whenever the input UI maps are regenerated.</p> <p>Note: You must specify a field which is already defined in the application.</p>	Yes
Display Existing Panel on Left Side (Y/N)	<p>Used to indicate whether you want to view the existing or new data in the left panel while reviewing an approval transaction. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want the existing data to appear in the left panel of the Comparison: New versus Existing screen. • N - Used when you want the new data to appear in the left panel of the Comparison: New versus Existing screen. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No

Option Type	Description	Mandatory (Yes or No)
Display Information String	Used to indicate whether the approval transaction information string should appear in the Comparison: New versus Existing screen when you are reviewing an approval transaction of a construct. The valid values are: <ul style="list-style-type: none"> true false 	Yes
Display UI XSL	Used to indicate the XSL file that you want to use while regenerating the Display UI maps.	Yes
Display only Differences of fields on UI	Used to indicate whether you want to view only those fields of a record where the data is added or updated or all fields of a record while reviewing an approval transaction. The valid values are: <ul style="list-style-type: none"> Yes - Used when you want to view only those fields of a record where the data is added or updated in the Comparison: New versus Existing screen. No - Used when you want to view all fields of a record in the Comparison: New versus Existing screen. 	Yes
Input UI XSL	Used to indicate the XSL file that you want to use while regenerating the Input UI maps.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_DIVFUNCT Feature Configuration

Procedure

To set the **C1_DIVFUNCT** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1_DIVFUNCT** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Enforce division-specific validations	Used to indicate whether the division-specific validations must be triggered on the Person , Account and Contract screens. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-Deal Feature Configuration

The **C1-Deal** feature configuration enables you to configure various settings related to the **Deal Management** feature.

Prerequisites

To set the **C1-Deal** feature configuration, you should have:

- Required FOP based reports defined in the application

Procedure

To set the **C1-Deal** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-Deal** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.
The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Limit for Online Hierarchy Creation	<p>Used to determine whether the customer hierarchy for a deal should be created in the online or deferred mode. If the number of accounts in the customer hierarchy does not exceed the account limit, the system creates the corresponding prospect persons and accounts for the deal immediately and then changes the status of the deal to Pending Simulation. However, if the number of accounts in the customer hierarchy exceeds the account limit, the status of the deal is changed to Hierarchy Creation Deferred.</p> <p>Note:</p> <p>This option type is considered when a deal is created for an existing customer or prospect with the simulation type set to Customer.</p> <p>You must specify a value greater than or equal to zero.</p> <p>On executing the C1_HRC batch, the system checks whether there are any deals in the Hierarchy Creation Deferred status. If so, the system creates the corresponding prospect persons and accounts for the deal and then changes the status of the deal to Pending Simulation. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	Yes
Footnote Character for Terms & Conditions in Deal Extract	Used to specify a special character which you want to use while inserting terms and conditions of a price item or hierarchy entity as footnotes in the deal extract report. For example, *, \$, &, #, etc.	Yes
Deal Comparison Report	<p>Used to specify the FOP based report using which you want to extract the deal comparison report in the Excel format.</p> <p>Note: You can set the value of this option type to DCMR or to any custom FOP based report which is designed to show the deal comparison report in the Excel format.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Default Period in Deal Dashboard and Deal Approver Dashboard	<p>Used to specify the duration in months. The system calculates the default period considering the specified duration and system date, and accordingly shows the details for the default period in:</p> <ul style="list-style-type: none"> • Deal Metrics, Deal Statistics, Deal To Dos, and Search Deal zones of the Deal Dashboard screen • Deal Metrics, Deal To Dos and Search Deal zones of the Deal Approver Dashboard screen <p>For example, if the system date is 07-11-2021 and the value for this option type is set to 12, then the system displays the following information in the respective zone of the Deal Dashboard screen on 07-11-2021:</p> <ul style="list-style-type: none"> • Deal Metrics - Indicates number of deals which are created, pending for approval, ready for finalization, pending for client acceptance, won, and rejected between Aug 2020 to July 2021. • Deal Statistics - Graphically represents the number of deals of an existing customer, existing account, and prospect in a particular status. • Deal To Dos - Lists the To Dos which are created between Aug 2020 to July 2021. • Search Deals - Lists deals where start date fall between Aug 2020 to July 2021. 	Yes
Price Item Status Characteristic Type	<p>Used to indicate the characteristic type where the status of a price item is stored. This characteristic type is defined for a price item. The system uses this characteristic type while deriving active price items in the price item hierarchy of an existing customer or account in a deal. Here, you must specify a characteristic type where the characteristic entity is set to Price Item.</p> <p>Note: The C1-DLPIS characteristic type is shipped with the product.</p>	Yes
Deal Profitability Report	<p>Used to specify the FOP based report using which you want to extract the deal profitability report in the Excel format.</p> <p>Note: You can set the value of this option type to DLPRTEXLR or to any custom FOP based report which is designed to show the deal profitability report in the Excel format.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Deal External Report in Excel	Used to specify the FOP based report using which you want to extract the deal information in the Excel format for the customer review and acceptance.	Yes
	Note: You can set the value of this option type to DEEEXCEL or to any custom FOP based report which is designed to show the deal information to the customer in the Excel format.	
Deal External Report in PDF	Used to specify the FOP based report using which you want to extract the deal information in the PDF format for the customer review and acceptance.	Yes
	Note: You can set the value of this option type to DEEPDF or to any custom FOP based report which is designed to show the deal information to the customer in the PDF format.	
Deal Internal Report in Excel	Used to specify the FOP based report using which you want to extract the deal information in the Excel format for the internal review.	Yes
	Note: You can set the value of this option type to DEIEXCEL or to any custom FOP based report which is designed to show the deal information to the internal user in the Excel format.	
Deal Internal Report in PDF	Used to specify the FOP based report using which you want to extract the deal information in the PDF format for the internal review.	Yes
	Note: You can set the value of this option type to DEIPDF or to any custom FOP based report which is designed to show the deal information to the internal user in the PDF format.	
Validate Average Price Against Proposed Price List Pricing	Used to indicate whether the average price of a price item in a deal should be validated against the proposed price list pricing. The valid values are: <ul style="list-style-type: none"> • Y - Indicates that the average price of a price item in a deal should be validated against the proposed price list pricing. • N - Indicates that the average price of a price item in a deal should be validated against the eligible price list pricing. 	Yes
	Note: This option type is considered when the Price Item Approval Required field is set to Yes in the respective deal type.	

Option Type	Description	Mandatory (Yes or No)
Deal Pricing and Commitments - Pagination Limit	<p>Used to specify the maximum number of records that can be displayed on filtering the data in each page of the Deal Pricing and Commitments screen.</p> <p>Note: You must specify a numeric value greater than zero.</p>	Yes
Deal Questionnaire - Pagination Limit	<p>Used to specify the number of questions that should appear in the Questionnaire page of the Deal Information screen.</p> <p>Note: You must specify a numeric value greater than zero.</p>	Yes
Refer Volume Aggregation	<p>Used to indicate whether you want to derive the following for an account in a deal from the charge and volume aggregation tables:</p> <ul style="list-style-type: none"> • Recurring and non-recurring pass through charges • Commitments from recurring and non-recurring SQI based billable charges <p>The valid values are:</p> <ul style="list-style-type: none"> • Y - Indicates that you want to extract the charges and commitments of an account from the C1_CHARGE_AGGR and C1_VOLUME_AGGR tables, respectively, while viewing the pricing and commitment details of the account. <p>Note: If you want to refer the data from the C1_CHARGE_AGGR and C1_VOLUME_AGGR tables, you need to execute the PREAGGR and CSTPREAG batches before creating a deal for an existing customer or account. For more information about these batches, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <ul style="list-style-type: none"> • N - Indicates that you want to derive the charges and commitments of an account for the deal frequency, at the runtime, while viewing the pricing and commitment details of the account. 	Yes
Thread Count for Price Item Hierarchy	<p>Used to specify the number of threads you want to spawn in parallel. It is used while deriving the price item hierarchy for an existing customer or account in a deal.</p> <p>Note: You must specify a numeric value greater than zero.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Valid Period for Seasonal Pricing in Months	Used to specify the maximum duration in months for which you can offer a seasonal pricing for a price item in a deal. The system then validates the end date of a seasonal pricing using the specified duration. For example, if the value for this option type is set to 6 and the seasonal pricing start date is 02-01-2021, then the system checks whether the end date of the seasonal pricing is not beyond 07-31-2021.	Yes
Volume and Commitment Limit Online Simulation	<p>Used to determine whether the cost, revenue, and profitability for a deal version should be calculated in the online or deferred mode. If the proposed commitments do not exceed the specified limit, the system calculates the cost, revenue, and profitability for the deal version immediately and then changes the status of the deal and its version to Simulated. However, if the proposed commitments exceed the specified limit, the status of the deal is changed to Simulation Deferred.</p> <p>Note:</p> <p>You must specify a value greater than or equal to zero.</p> <p>On executing the C1_SMLD batch, the system checks whether there are any deals in the Simulation Deferred status. If so, the system calculates the cost, revenue, and profitability for the deal version and then changes the status of the deal and its version to Simulated. For more information about the batch, see <i>Oracle Revenue Management and Billing Batch Guide</i>.</p>	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-EHRCONFIG Feature Configuration

The **C1-EHRCONFIG** feature configuration enables the system to determine the maximum number of levels that can be included in an entity hierarchy relationship. Accordingly, the system enables you to create hierarchy entities for upto one level less than the level specified in the **Maximum Hierarchy Level** option type of the **C1-EHRCONFIG** feature configuration. For example, if you set the **Maximum Hierarchy Level** option type to 5, the system allows you to create hierarchy entities for upto four levels (i.e. Level 1, Level 2, Level 3, and Level 4). The last level (i.e. Level 5) is reserved for a price item that you want to include in an entity hierarchy relationship. Therefore, you need to accordingly set the value as per the business requirements.

Procedure

To set the **C1-EHRCONFIG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1-EHRCONFIG** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Maximum Hierarchy Level	Used to indicate the maximum number of levels that you want to include in an entity hierarchy relationship. Note: At present, the system supports maximum 10 levels in an entity hierarchy relationship. Therefore, you can define hierarchy entities for upto 9 levels. The last level (i.e. Level 10) is reserved for a price item that you want to include in an entity hierarchy relationship. By default, the value is set to 10. If you do not require 10 levels in an entity hierarchy relationship, you can set a lower maximum limit in this option type.	Yes

- Enter the value for the required option type in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXCHRATE Feature Configuration

Procedure

To set the **C1_EXCHRATE** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

4. Enter **C1_EXCHRATE** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
End Date Required for Division Override	Used to indicate whether the end date is mandatory for a division-specific exchange rate. The valid values are: <ul style="list-style-type: none"> • Y • N By default, the value of this option type is set to N .	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXP_OVRD Feature Configuration

Procedure

To set the **C1_EXP_OVRD** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_EXP_OVRD** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Expire Override Switch	Used to indicate whether you want to automatically expire an agreed pricing when the agreed pricing of a person or an account without end date is overridden. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FINTRANOP Feature Configuration

The **C1_FINTRANOP** feature configuration enables the system to determine various options which should be considered while creating billable charges, determining a price item pricing, generating bill segments, and while creating an actual bill using a trial bill.

Procedure

To set the **C1_FINTRANOP** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_FINTRANOP** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Caching Of Rule Based Autopay List	Used to indicate whether you want to cache the rule based auto pay instructions of an account when the C1-APRULEEVL algorithm is invoked. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: If you do not specify the value for this option type, by default, it is set to N .	

Option Type	Description	Mandatory (Yes or No)
Avoid Pricing Crawling if Rate Schedule present at Contract	<p>Used to indicate that the system should not determine the price item pricing using the price assignment search algorithm (which is attached on the account's division) when the effective rate schedule is present on the contract. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Bill Segment Regeneration on Freeze	<p>Used to indicate whether you want to regenerate the bill segments before freezing them. The valid value is:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you do not specify the value for this option type, by default, it is set to N.</p> <p>If the Freeze and Complete option is selected for the respective window period in the bill cycle and the Bill Segment Regeneration on Freeze option type is set to Y, then the bill segments are regenerated and the status of the bill segments is set to Frozen. However, if the Freeze and Complete option is not selected for the respective window period in the bill cycle, then the bill segments are always regenerated irrespective of whether the Bill Segment Regeneration on Freeze option type is set to Y or N.</p>	No

Option Type	Description	Mandatory (Yes or No)
Billable Charges Date	<p>Used to indicate whether you want to consider the non-recurring billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> • S - Used when you want to consider the non-recurring billable charges whose start date is earlier than or equal to the cut-off date. • E - Used when you want to consider the non-recurring billable charges whose end date is earlier than or equal to the cut-off date. <p>Note:</p> <p>If you do not specify the value for this option type, by default, it is set to S.</p> <p>The system always considers the recurring billable charges whose start date is earlier than the cut-off date and end date is later than the cut-off date irrespective of whether the Billable Charges Date option type is set to S or E.</p>	No
Skip Priceitem Contract Type Validation	<p>Used to indicate whether you want to skip the price item's and billable charge's contract's contract type validation. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you to create a billable charge for a price item on the contract which is created using a contract type to which the price item is not associated. • N - Used when you to create a billable charge for a price item on the contract which is created using a contract type to which the price item is associated. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No

Option Type	Description	Mandatory (Yes or No)
Rate Component Step Optimization	<p>Used to indicate whether you want to determine the rate for all tiering ranges of a step tiered rate component or for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. The valid values are:</p> <ul style="list-style-type: none"> • Y - Used when you want to determine the rate for only those tiering ranges of a step tiered rate component till when the quantity is exhausted. It helps to improve the performance of the billing batches. If you set this option type to Y, always ensure that you define the price components with the tiering ranges in the ascending order. • N - Used when you want to determine the rate for all tiering ranges of a step tiered rate component. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No
Trial Bill Characteristics Conversion	<p>Used to indicate whether you want to copy the trial bill's characteristics when an actual bill is created using a trial bill. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	No

6. Enter the values for the required option types in the **Feature Configuration** screen.

7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FM Feature Configuration

Procedure

To set the **C1_FM** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_FM** in the **Feature Name** field.

5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
First Batch in Transaction Aggregation Cycle	Used to specify the first mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNIP for this option type.	
Last Batch in Transaction Aggregation Cycle	Used to specify the last mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNCU for this option type.	
Disaggregation - Price Assignment	Used to indicate whether the disaggregation request should be automatically created for a person or account when a price item is assigned to the person or account or the existing price item pricing assigned to the person or account is modified. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: You can use this feature when an algorithm which is created using the TXNDISAGGPRA algorithm type is attached to the Post-Processing system event of the C1_PRASGN_BO business object.	
Allow Duplicate Summary ID	Used to indicate whether the transaction legs can have duplicate summary ID while creating an aggregated billable charge using the Service Quantity Calculation (C1-TXNSQ) batch. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: If you set this option type to false , the system does not create the aggregated billable charge when one or more transaction legs have the same summary ID. If you do not specify the value for this option type, by default, the value is set to false .	

Option Type	Description	Mandatory (Yes or No)
Parallel Query Degree	<p>Used to specify the degree of parallelism that you want to use while creating chunks (i.e. work units) in various Transaction Feed Management (TFM) batches. The valid values are:</p> <ul style="list-style-type: none"> • 1 • 2 • 3 • 4 • 5 • 6 • 7 <p>Note:</p> <p>With the parallel query feature, multiple threads on the database can work together simultaneously to process a single SQL statement which is used to create chunks. This helps to improve the batch performance.</p> <p>The system calculates the number of threads on the database that can be used to execute the SQL statement by setting 2 to the power of the specified parallel query degree. For example, if you set the parallel query degree to 4, the system uses 16 (i.e. 2⁴) threads on the database to create work units.</p> <p>You must set the parallel query degree depending on the infrastructure available on the site. If you do not specify the value for this option type, by default, the parallel query degree is set to 2.</p>	No
Price Item Determination Batch Description	Used to specify the description for the batch which is used for validating the transaction and deriving the price item in the transaction aggregation cycle. For example, Validate Transaction and Derive Price Item . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes

Option Type	Description	Mandatory (Yes or No)
Remove Duplicates from Accumulated Rule Output	<p>Used to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Rule Output Accumulation	<p>Used to indicate whether the system should accumulate the output parameters of all rules where the criteria returns Rule Is True irrespective of whether the rule true action is set to Next Dependent, Next Rule by Priority, or Success and then create transaction legs using the accumulated output parameters. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Show Default Values in Price Item Pricing	<p>Used to indicate whether the default values must appear in the Ignore Transaction, Aggregate Transaction, and Aggregation Schedule fields while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
Use Materialized Views	<p>Used to indicate whether the price item pricing information must be cached in the CI_PRC_AGRD, CI_PRC_PL, and CI_PRC_INH_PL tables. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes
Maximum Price Item Parameters Cache Size	<p>Used to indicate the maximum number of price items whose parameter information can be cached in the memory.</p>	Yes
Maximum Price Item Parameter Groups Cache Size	<p>Used to indicate the maximum number of price item parameter groups whose information can be cached in the memory.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
SQ Recalculation Required	<p>Used to indicate whether the SQIs in an aggregated billable charge must be recalculated while executing the C1-TXNCU batch. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type or if you set the value to N, the system will not recalculate the SQIs in an aggregated billable charge.</p>	No
Transaction Detail Account Validation	<p>Used to indicate whether the account must be validated during the transaction validation process. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you set this option type to N, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.</p> <p>If you do not specify the value for this option type, the system will validate the account during the transaction validation process.</p>	No
Populate Summary Table Batch Description	<p>Used to specify the description for the batch which is used for adding a summary record in the CI_TXN_DTL_PRITM_SUMMARY table. For example, Populate CI_TXN_DTL_PRITM_SUMMARY Table. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when the Use C1-TXNPS During Transaction Aggregation option type is set to true.</p>
Find Price Item Pricing Batch Description	<p>Used to specify the description for the batch which is used for finding the price item pricing for transactions in the transaction aggregation cycle. For example, Price Item Pricing Verification. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Update Transaction Status Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions (for which the error has occurred) in the transaction aggregation cycle. For example, Update Status . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Service Quantity Calculation Batch Description	Used to specify the description for the batch which is used for creating the billable charges for transactions in the transaction aggregation cycle. For example, Service Quantity Calculation . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Transaction Completion Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions in the transaction aggregation cycle. For example, Mark Completion . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Cleanup Unwanted Data Batch Description	Used to specify the description for the batch which is used for updating or deleting billable charges created for transactions in the transaction aggregation cycle. For example, Clean Up . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes

Option Type	Description	Mandatory (Yes or No)
Use C1-TXNPS During Transaction Aggregation	<p>Used to indicate whether you want to use an alternative transaction aggregation process when the aggregation ratio is low. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you set this option type to true, you need to execute the following batches in the specified order in the transaction aggregation cycle:</p> <ol style="list-style-type: none"> 1. Flush All Caches (F1-FLUSH) 2. Refresh Pricing (C1-TXNRP) 3. Header Validation (C1-TXNHV) 4. Validate Transaction and Derive Price Item (C1-TXNIP) 5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS) 6. Price Item Pricing Verification (C1-TXNVP) 7. Update Status (C1-TXNEX) 8. Service Quantity Calculation (C1-TXNSQ) 9. Mark Completion (C1-TXNCM) 10. Clean Up (C1-TXNCU) with the Request Type parameter set to EROR 	No

6. Enter the values for the required option types in the **Feature Configuration** screen.

7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-INCT Feature Configuration

The **C1-INCT** feature configuration enables you to configure various settings related to the **Construct Based Billing and Settlement** feature.

Prerequisites

To set the **C1-INCT** feature configuration, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Contract Type**)

Procedure

To set the **C1-INCT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-INCT** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Settlement Currency Validation Required	Used to indicate whether you want to enable or disable the linked accounts' and settlement account's currency validation. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want to validate whether the linked accounts' currency matches the settlement account's currency. • N - Used when you do not want to validate whether the linked accounts' currency matches the settlement account's currency. 	No
Note: If you do not specify the value for this option type, by default, it is set to N .		
Target Contract Characteristic Type	Used to indicate the characteristic type which stores the contract type using which the contract should be created for the new invoice account when the construct is activated. This characteristic type must be defined on the usage accounts' contract's contract type.	Yes
Note: You must specify a characteristic type where the characteristic entity is set to Contract Type .		

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_MASPRI Feature Configuration

Procedure

To set the **C1_MASPRI** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_MASPRI** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Thread Count	Used to specify the number of threads you want to spawn in parallel. It is used while creating a batch job for a mass pricing update request using the C1-GENRQ batch control.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch. It is used while creating a batch job for a mass pricing update request using the C1-GENRQ batch control.	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_MLTCURACC Feature Configuration

The **C1_MLTCURACC** feature configuration enables you to configure various settings related to the **Multi-Currency Accounts** feature.

Prerequisites

To set the **C1_MLTCURACC** feature configuration, you should have:

- Adjustment types and adjustment cancel reasons defined in the application

Procedure

To set the **C1_MLTCURACC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_MLTCURACC** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)												
Allow Multi-Currency Accounts	<p>Used to indicate whether you want to enable the Multi-Currency Accounts feature. The valid values are:</p> <ul style="list-style-type: none"> Y - If the Allow Multi-Currency Accounts option type is set to Y, the following fields are enabled in the respective screen: <table border="1" data-bbox="657 648 1166 1016"> <thead> <tr> <th data-bbox="657 648 912 695">Screen Name</th> <th data-bbox="912 648 1166 695">Field Name</th> </tr> </thead> <tbody> <tr> <td data-bbox="657 695 912 747">Account</td> <td data-bbox="912 695 1166 747">Invoice Currency</td> </tr> <tr> <td data-bbox="657 747 912 833">Billable Charge</td> <td data-bbox="912 747 1166 833">Currency Code (for Bill Line)</td> </tr> <tr> <td data-bbox="657 833 912 886">Adjustment</td> <td data-bbox="912 833 1166 886">Currency</td> </tr> <tr> <td data-bbox="657 886 912 938">Payment Event Add</td> <td data-bbox="912 886 1166 938">Payment Currency</td> </tr> <tr> <td data-bbox="657 938 912 1016">Rate Component</td> <td data-bbox="912 938 1166 1016">Allow Currency Conversion</td> </tr> </tbody> </table> N - If the Allow Multi-Currency Accounts option type is set to N, the Invoice Currency field is disabled in the Account screen. By default, the base currency of the account's division appears in the Invoice Currency field. If the base currency is not defined for the account's division, the currency code specified in the Installation Options - Framework screen appears in the Invoice Currency field. <p>Note: If you do not specify the value for this option type, by default, it is set to N.</p>	Screen Name	Field Name	Account	Invoice Currency	Billable Charge	Currency Code (for Bill Line)	Adjustment	Currency	Payment Event Add	Payment Currency	Rate Component	Allow Currency Conversion	No
Screen Name	Field Name													
Account	Invoice Currency													
Billable Charge	Currency Code (for Bill Line)													
Adjustment	Currency													
Payment Event Add	Payment Currency													
Rate Component	Allow Currency Conversion													
Transfer Adjustment Type	<p>Used to specify the adjustment type using which you want to create a transfer adjustment when an amount is converted from one currency to another.</p> <p>Note: You must specify an adjustment type which is already defined in the system.</p>	Yes (Conditional) Note: This data is required when the Allow Multi-Currency Accounts option type is set to Y .												
Reason Code for Cancelling Original Adjustment	<p>Used to specify the reason code that you want to use while cancelling the original currency conversion adjustment.</p> <p>Note: You must specify an adjustment cancel reason which is already defined in the system.</p>	Yes (Conditional) Note: This data is required when the Allow Multi-Currency Accounts option type is set to Y .												

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-ODBFC Feature Configuration

Procedure

To set the **C1-ODBFC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-ODBFC** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Average Record Size	Used to specify the average size of a usage record in bytes. By default, the value is set to 500. You can change the value, if required.	Yes
Billable Charge Chunk Size	Used to specify the number of billable charges you want to create in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes
File Size Limit	Used to specify the size of a usage data file in bytes. By default, the value is set to 100000. You can change the value, if required.	Yes
Online Bill Creation Limit	Used to determine whether adhoc bills must be generated for a usage data file online or through the background process. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, adhoc bills are generated for the usage data file through a batch process. By default, the value is set to 500. You can change the value, if required.	Yes

Option Type	Description	Mandatory (Yes or No)
Staging XML Size	Used to specify the number of usage records you want to parse and map in each XML file. By default, the value is set to 500. You can change the value, if required.	Yes
Thread Count	Used to specify the number of threads you want to spawn in parallel.	No
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No
Transaction Limit	Used to determine whether billable charges for a usage data file must be created online or through the background process. If the total number of valid or approved records in a usage data file exceeds the transaction limit, billable charges are created for the valid or approved records through a batch process.	No
Validation Chunk Size	Used to specify the number of usage records you want to validate or revalidate in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes

- Enter the value for the option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-OFFSETREQ Feature Configuration

The **C1-OFFSETREQ** feature configuration enables the system to determine whether the completed debit or credit bills of the effective child persons of the main customer (whose bill is added as the primary bill in the offset request) should be listed when you search for a bill in the offset request.

Procedure

To set the **C1-OFFSETREQ** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

3. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

4. Enter **C1-OFFSETREQ** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Allow Offsetting Across Persons	Used to indicate whether you want to offset bills across main customer's hierarchy. The valid values are: <ul style="list-style-type: none"> • Y - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer or against one or more bills of the accounts of its effective child persons. • N - Used when you want to offset one or more bills of the main customer against one or more bills of the same or other accounts of the main customer. 	Yes

6. Enter the value for the required option type in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PAYPORTAL Feature Configuration

Procedure

To set the **C1-PAYPORTAL** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-PAYPORTAL** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Overpayment	Used to indicate whether you want to allow overpayment against an entity while editing the payment amount. The valid values are: <ul style="list-style-type: none"> true false 	Yes
FK Reference for Bill	Used to indicate the foreign key reference which generates the information string for a bill in the Edit Payment Amount screen. Note: The C1-BLACT foreign key reference for bill is shipped with the product. You can also create a custom foreign key reference, if required.	Yes
FK Reference for Bill Segment	Used to indicate the foreign key reference which generates the information string for a bill segment in the Edit Payment Amount screen. Note: The C1-BSEG foreign key reference for bill segment is shipped with the product. You can also create a custom foreign key reference, if required.	Yes
FK Reference for Contract	Used to indicate the foreign key reference which generates the information string for a contract in the Edit Payment Amount screen. Note: The C1_F_SA foreign key reference for contract is shipped with the product. You can also create a custom foreign key reference, if required.	Yes
FK Reference for Settlement	Used to indicate the foreign key reference which generates the information string for a settlement ID in the Edit Payment Amount screen. Note: At present, no foreign key reference for settlement ID is shipped with the product. Only the settlement ID appears in the information string. You can create a foreign key reference for settlement ID and specify it in this field.	No

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PER_REL Feature Configuration

You can define person to person relationship type sequence in the **C1_PER_REL** feature configuration. This sequence is used while searching for effective price item pricing at the parent customer level.

Procedure

To set the **C1_PER_REL** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_PER_REL** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Person to Person Relationship Type	Used to indicate the person to person relationship type.	Yes
	Note: If you want to define more than one relationship type in the feature configuration, you need to specify the sequence in which the relationship type should be considered while searching effective price item pricing at the parent customer level.	

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the C1-PLSM Feature Configuration

The **C1-PLSM** feature configuration enables you to extract the details and summary of a price list simulation in the Excel format. Two FOP based reports are shipped with the product — **PLSM_DETEXL** and **PLSM_SMRYEXL**. You can use these FOP based reports or create the custom FOP based reports to extract the data in the Excel format.

Prerequisites

To set the **C1-PLSM** feature configuration, you should have:

- Required FOP based reports defined in the application

Procedure

To set the **C1-PLSM** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-PLSM** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Detail Report Code Excel	Used to specify the FOP based report using which you want to extract the detailed report of a price list simulation in the Excel format.	Yes
	Note: You can set the value of this option type to PLSM_DETEXL or to any custom FOP based report which is designed to show the detailed report of a price list simulation in the Excel format.	
Summary Report Code Excel	Used to specify the FOP based report using which you want to extract the summarized report of a price list simulation in the Excel format.	Yes
	Note: You can set the value of this option type to PLSM_SMRYEXL or to any custom FOP based report which is designed to show the summarized report of a price list simulation in the Excel format.	

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.
The changes made to the feature configuration are saved.

Setting the C1_PPARM_FLG Feature Configuration

The **C1_PPARM_FLG** feature configuration enables the system to determine whether the multi parameter based pricing or variance parameter based pricing feature is enabled. For more information on how to define pricing for a price item or price item bundle based on multiple parameters, see [Multi Parameter Based Pricing](#) on page 261. For more information on how to define pricing for a price item or price item bundle based on variance parameter, see [Variance Parameter Based Pricing](#) on page 261.

Procedure

To set the **C1_PPARM_FLG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_PPARM_FLG** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Multi Price Parameter	Used to indicate whether you want to enable the multi parameter or variance parameter based pricing feature. The valid values are: <ul style="list-style-type: none"> True - Used when you want to enable the multi parameter based pricing feature. False - Used when you want to enable the variance parameter based pricing feature. 	Yes

Setting the C1_PRICING Feature Configuration

The **C1_PRICING** feature configuration enables the system to determine the following:

- The contract type that should be associated with a price item or price item bundle which is available for pricing.
- The priority that should be defaulted while assigning a price list to a person or an account from the user interface or through a business service.
- Whether the logs should be maintained when the **C1-GetAllAssignedPriceLists**, **C1-AssignPriceList**, **C1-GetEffectivePricing**, **C1-GetAccountRate**, **C1_PRICEASSIGN_SERVICE**, **C1-PriceAccount**, and **C1-GetPricing** business services are invoked.

Prerequisites

To set the **C1_PRICING** feature configuration, you should have:

- Contract types defined in the application

Procedure

To set the **C1_PRICING** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

4. Enter **C1_PRICING** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Default Contract Type	Used to indicate the contract type that you want to associate with a price item or price item bundle which is available for pricing.	Yes
	Note: You must specify a contract type which is already defined in the system. You must ensure that the specified contract type is defined for all divisions in the system.	
Default Price List Priority	Used to indicate the default priority that should appear in the Price List Assignment screen when you assign a price list to a person or an account. You can then edit the priority, if required. It is also used when both the priority and priority indicator are not passed to the C1-AssignPriceList business service.	No
	Note: The value for this option type must be a positive integer.	
Enable Service Logging	Used to indicate whether you want to maintain logs when the C1-GetAllAssignedPriceLists , C1-AssignPriceList , C1-GetEffectivePricing , C1-GetAccountRate , C1_PRICEASSIGN_SERVICE , C1-PriceAccount , and C1-GetPricing business services are invoked. The valid values are: <ul style="list-style-type: none"> • True • False 	No

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PRASNORDR Feature Configuration

The **C1_PRASNORDR** feature configuration enables the system to determine the manner in which price assignments should be searched for a global customer. For more information on how effective price item pricing is derived, see [Price Assignment Search Mechanism](#) on page 266.

Prerequisites

To set the **C1_PRASNORDR** feature configuration, you should have:

- An algorithm defined using the **C1_PRASN_PP** algorithm type in the application

Procedure

To set the **C1_PRASNORDR** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1_PRASNORDR** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option type:

Option Type	Description	Mandatory (Yes or No)
Price Assignment Algorithm	Used to specify the algorithm using which the price assignment should be searched for a global customer. Note: You must specify an algorithm which is already defined in the system.	Yes

- Enter the value for the required option type in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PYREQSRT Feature Configuration

Procedure

To set the **C1-PYREQSRT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-PYREQSRT** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Bill	Used to sort columns by the selected option type. The table fields in CI_BILL table are used to set the values for the option type Bill . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> • Ascending • Descending 	No
Bill Segment	Used to sort columns by the selected option type. The table fields in CI_BSEG table are used to set the values for the option type Bill Segment . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> • Ascending • Descending 	No
Contract	Used to sort columns by the selected option type. The table fields in CI_SA table are used to set the values for the option type Contract . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> • Ascending • Descending 	No

Note: Above options types are configured for the **Sort By** field for sorting columns on the **Edit Payment Amount** screen.

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_RLENG Feature Configuration

Procedure

To set the **C1_RLENG** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_RLENG** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Logging Rules for Transaction Feed	Used to indicate whether a log should be generated when you execute the Transaction Validation and Initial Product Determination (C1-TXNIP) batch. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes
	Note: This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.	
Maximum Number of Rules in Cache	Used to indicate the maximum number of rules whose entry should be created in the log file.	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.
