	<p><b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears with the details of the respective algorithm. The <b>Algorithm</b> column is displayed for <b>Adjustment Upload Request Business Object</b>.</p>

- **Characteristics** – This section lists the characteristics of the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type.
	<p><b>Note:</b> You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.</p>
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

## Defining an Upload Request Type

### Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval

- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

### **Procedure**

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

**Note:** The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	<b>Note:</b> This field appears when <b>Adjustment Upload Request Type</b> business object is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p><b>Note:</b></p> <p>Deferred mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. When the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked, the system checks whether there are any upload requests in the <b>Deferred</b> status. If there is an upload request in the <b>Deferred</b> status, the system creates the entities (for example, adjustments).</p> <p>This field appears when <b>Adjustment Upload Request Type</b> business object is selected.</p> <p>In <b>Upload Request Type</b>, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from <b>Validated</b> to <b>Deferred Processing</b> else the status is changed to <b>Processed</b>.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)																						
Entity Business Object	<p>Used to indicate for creating Business Object of the entity using the upload request type.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.</p> <p>This field appears when <b>Upload Request Type</b> business object is selected.</p>	No																						
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No																						
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>The following table lists the To Do type using which the To Do must be generated for the different upload requests:</p> <table border="1"> <thead> <tr> <th>Upload Request</th> <th>To Do Type</th> </tr> </thead> <tbody> <tr> <td>Adjustment</td> <td>C1-ADJUP</td> </tr> <tr> <td>Bill Cycle Update</td> <td>C1-BCUUR</td> </tr> <tr> <td>Billable Charge</td> <td>C1-BCUR</td> </tr> <tr> <td>Contract Rider Update</td> <td>C1-CRUUR</td> </tr> <tr> <td>Hold Request</td> <td>C1-HLDUR</td> </tr> <tr> <td>Refund Request</td> <td>C1-REFUR</td> </tr> <tr> <td>Write Off Request</td> <td>C1-WOUR</td> </tr> <tr> <td>Policy Reinstatement</td> <td>C1-RPUR</td> </tr> <tr> <td>Bill Group Sorting</td> <td>C1-BGSRT</td> </tr> <tr> <td>Bill Group Derivation and Pricing Parameters</td> <td>C1-BGDVP</td> </tr> </tbody> </table>	Upload Request	To Do Type	Adjustment	C1-ADJUP	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters	C1-BGDVP	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>
Upload Request	To Do Type																							
Adjustment	C1-ADJUP																							
Bill Cycle Update	C1-BCUUR																							
Billable Charge	C1-BCUR																							
Contract Rider Update	C1-CRUUR																							
Hold Request	C1-HLDUR																							
Refund Request	C1-REFUR																							
Write Off Request	C1-WOUR																							
Policy Reinstatement	C1-RPUR																							
Bill Group Sorting	C1-BGSRT																							
Bill Group Derivation and Pricing Parameters	C1-BGDVP																							

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears. This field appears when <b>Upload Request Type</b> business object is selected.	No

In addition, this section contains the following fields in the grid:

**Note:** This field appears when **Adjustment Upload Request Type** business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> <li>Contract</li> <li>Contract Type</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you select the <b>Adjustment Upload Request</b> option from the <b>Upload Request Business Object</b> list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	Yes (Conditional) <b>Note:</b> This field is required when you select the match type from the respective field.

6. Enter the required details.

**Note:**

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

<b>Upload Request Type List</b> zone	<a href="#">Upload Request Type List</a> on page 1310
How to define a characteristic for an upload request type	<a href="#">Defining a Characteristic for an Upload Request Type</a> on page 1320

**Defining a Characteristic for an Upload Request Type****Prerequisites**

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

**Procedure**

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	<b>Note:</b> This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to copy an upload request type	<a href="#">Copying an Upload Request Type</a> on page 1324

**Editing an Upload Request Type****Prerequisites**

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

**Procedure**

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	<b>Note:</b> This field appears when the business object is <b>Adjustment Upload Request Type</b> .	
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.	Yes
	<p><b>Note:</b></p> <p>Deferred mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. When the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked, the system checks whether there are any upload requests in the <b>Deferred</b> status. If there is an upload request in the <b>Deferred</b> status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is <b>Adjustment Upload Request Type</b>.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate for creating Business Object of the entity using the upload request type.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.	
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears. This field appears when the business object is <b>Upload Request Type</b> .	

In addition, this section contains the following fields in the grid:

**Note:** The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> <li>• Contract</li> <li>• Contract Type</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you select the <b>Adjustment Upload Request</b> option from the <b>Upload Request Business Object</b> list.

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		<b>Note:</b> This field is required when you select the match type from the respective field.

**Tip:** Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

#### 4. Modify the required details.

**Note:**

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

#### 5. Define, edit, or remove characteristics of the upload request type, if required.

#### 6. Click **Save**.

The changes made to the upload request type are saved.

## Deleting an Upload Request Type

### **Procedure**

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

**Note:** You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

4. Click **OK**.

The upload request type is deleted.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
<b>Upload Request Type</b> screen	<a href="#">Upload Request Type</a> on page 1309

## **Copying an Upload Request Type**

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

### **Prerequisites**

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEV** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

### **Procedure**

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	<b>Note:</b> This field appears when the business object is <b>Adjustment Upload Request Type</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p><b>Note:</b> Deferred mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. When the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked, the system checks whether there are any upload requests in the <b>Deferred</b> status. If there is an upload request in the <b>Deferred</b> status, the system creates the entities (for example, adjustments). This field appears when the business object is <b>Adjustment Upload Request Type</b>.</p>	Yes
Entity Business Object	<p>Used to indicate to create the copy of Business Object of the entity using the upload request type.</p> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears. This field appears when the business object is <b>Upload Request Type</b>.</p>	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
		<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears.  This field appears when the business object is <b>Upload Request Type</b> .	

In addition, this section contains the following fields in the grid:

**Note:** The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> <li>• Contract</li> <li>• Contract Type</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you select the <b>Adjustment Upload Request</b> option from the <b>Upload Request Business Object</b> list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)
		<b>Note:</b> This field is required when you select the match type from the respective field.

**Tip:** Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

**Note:**

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑️) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.
6. Click **Save**.

The new upload request type is defined.

**Mapping an Upload Request Type****Prerequisites**

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

**Note:** Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

**Procedure**

To map an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping** (🔗) icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

**Note:** The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional) <b>Note:</b> This column is required when you search the <b>Data Records</b> zone in the <b>Upload Request</b> screen.
Use for Searching	Used to indicate whether the defined <b>CSV Column Header</b> is searchable or not. <b>Note:</b> Upto 10 rows can be selected as searchable rows.	Yes (Conditional) <b>Note:</b> This column is required to be selected to be shown in the <b>Data Records</b> zone in the <b>Upload Request</b> screen
Sequence Number	Used to specify the sequence of the searchable fields. <b>Note:</b> Searchable rows should have sequence less than or equal to 10.	Yes (Conditional) <b>Note:</b> This column is required to be selected to be shown sequentially in the <b>Data Records</b> zone in the <b>Upload Request</b> screen

- Enter the required details.

**Note:** If you want to add more than one column names mapped to the upload request type, click the **Add (+)** icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete (🗑)** icon corresponding to the column header.

- Click **Save**.

The columns are mapped to the CSV files for upload request type.

## **Viewing the Upload Request Type Details**

### **Procedure**

To view the details of an upload request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **U** and then click **Upload Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Upload Request Type** sub-menu.

The **Upload Request Type** screen appears.

- In the **Upload Request Type List** zone, click the

**Broadcast** (  ) icon corresponding to the upload request type whose details you want to view.

The **Upload Request Type** zone appears.

- View the details of the upload request type in the **Upload Request Type** zone.

### **Related Topics**

## **Upload Request (Used for Searching)**

The **Upload Request** screen allows you to upload, validate and process the transaction data. Through this screen, you can navigate to the following screen:

- [Upload Request \(Used for Viewing\)](#) on page 1862

This screen consists of the following zone:

- [Search Upload Request](#) on page 1855

### **Search Upload Request**

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. This zone contains the following two sections:

- Search Criteria** – The **Search Criteria** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Search By	Used to indicate whether you want to search for an upload request using <b>Request Details</b> .	Yes
Upload Date From	Used to search upload requests which are created from a particular date.	No
To	Used to search upload requests which are created till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Approval In Progress</li> <li>Canceled</li> <li>Deferred Processing</li> <li>Draft</li> <li>Processed</li> <li>Rejected</li> <li>Validated</li> </ul>	No
Upload Request Type	Used to search upload requests which are created using a particular upload request type.	No
User ID	Used to search upload requests which are created by a particular user.	No
Upload Request ID	Used to search a particular upload request.	No
File Name	Used to search a particular file name.	No

**Note:** You must specify at least one search criterion while searching for an upload request.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Payment Request Information	Displays information about the upload request. <b>Note:</b> It has a link. On clicking the link, the <b>Upload Request</b> screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the upload request. The valid values are: <ul style="list-style-type: none"> <li>Approval In Progress</li> <li>Canceled</li> <li>Deferred Processing</li> <li>Draft</li> <li>Processed</li> <li>Rejected</li> <li>Validated</li> </ul>
Upload Request Type	Displays the upload request type using which the upload request is created.
Entity Business Object	Displays the business object code of the entity.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.

Column Name	Column Description
Created By	Indicates the user who has created the upload request.

## Searching for an Upload Request

### Prerequisites

To search for an upload request, you should have:

- Upload request types defined in the application

### Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.  
The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of upload requests that meet the search criteria appears in the **Search Results** section.

## Viewing the Upload Request Details

### Procedure

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
    - **Upload Request** – Displays the details of the upload request.
    - **Data Records** – Lists the details of data records uploaded in the csv file.
  - **Log** – This tab lists the complete trail of actions performed on the upload request.
3. View the details of the upload request in the **Upload Request** zone.
  4. View the data records in the csv file of the upload request in the **Data Records** zone.

## Creating an Upload Request

### Prerequisites

To create an upload request, you should have:

- Upload request types defined in the application

### Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.  
A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request.  <b>Note:</b> The following upload request types are shipped with the product: <ul style="list-style-type: none"> <li>• ADJ_UPL_REQ_TYPE_APVL</li> <li>• ADJ_UPL_REQ_TYPE_WO_APVL</li> <li>• BC_UPL_REQ_TYPE</li> <li>• BILL_CYCLE_UPD_UPL_REQ_TYPE</li> <li>• BILL_LVL_UPL_REQ_TYPE</li> <li>• BILL_SRT_UPL_REQ_TYPE</li> <li>• HOLD_UPL_REQ_TYPE</li> <li>• REFUND_UPL_REQ_TYPE</li> <li>• REIN_UPL_REQ_TYPE</li> <li>• SA_RIDER_UPD_UPL_REQ_TYPE</li> <li>• WO_UPL_REQ_TYPE</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

**Note:** The **Select Upload Request Type** screen appears when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the **{XXX} Upload Request** screen appears.

4. Select the required upload request type from the respective field.
5. Click **OK**.

The **{XXX} Upload Request** screen appears. Here, **{XXX}** changes depending on the upload request type that you have selected. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define the characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request.	Yes
	<p><b>Note:</b></p> <p>This field appears when you are creating an upload request using an upload request type where the upload request business object is set to <b>C1-BillGrpSortUploadRequest</b> or <b>C1-BillLevelUploadRequest</b>.</p> <p>The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to <b>Parent Customer</b>.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.</p>	
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	<p><b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the file is available in the system.</p>	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.
- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
- Define characteristics for the upload request, if required.
- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID) is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

<b>Upload Request</b> screen	<a href="#">Upload Request (Used for Searching)</a> on page 1855
How to define a characteristic for an upload request	<a href="#">Defining a Characteristic for an Upload Request</a> on page 1861

**Defining a Characteristic for an Upload Request****Prerequisites**

To define a characteristic for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

**Procedure**

To define a characteristic for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Upload Request</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the upload request, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request
- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request
- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
  - **Upload Request** – Displays the details of the upload request.
  - **Data Records** – Lists the data records of the upload request.
- **Log** – This tab lists the complete trail of actions performed on the upload request.

### Upload Request - Main

The **Main** tab contains the following zones:

- [Upload Request](#) on page 1862
- [Data Records](#) on page 1864

### Upload Request

The **Upload Request** zone displays the details of the upload request. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.

Field Name	Field Description
Upload Request Type	Indicates the upload request type using which the upload request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Upload Request Type</b> screen appears where you can view the details of the upload request type.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Approved</li> <li>• Cancelled</li> <li>• Deferred Processing</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> <li>• Submitted</li> <li>• Validated</li> </ul>
File Name	Displays name of the uploaded file.

- **Statistics** – This section lists the statistics of records in the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Valid Records	Displays the count of valid data records.
Error Records	Displays the count of data records in error status.
Pending Records	Displays the count of data records pending after successful derivation.
Invalid Records	Displays the count of data records after unsuccessful derivation.
Processed Records	Displays the count of data records after processing.

- **Characteristics** – This section lists the characteristics of the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the upload request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request.
	<b>Note:</b> The <b>Edit</b> button appears when the upload request is in the <b>Draft</b> or <b>Validated</b> status.

Column Name	Column Description
Delete	Used to delete the upload request.
	<b>Note:</b> The <b>Delete</b> button appears when the upload request is in the <b>Draft</b> status.
Validate	Used to validate the upload request.
	<b>Note:</b> The <b>Validate</b> button appears when the upload request is in the <b>Draft</b> status.
Cancel	Used to cancel the upload request.
	<b>Note:</b> The <b>Cancel</b> button appears when the upload request is in the <b>Validated</b> status.
Submit	Used to submit the upload request for approval.
	<b>Note:</b> The <b>Submit</b> button appears when: <ul style="list-style-type: none"> <li>The upload request is in the <b>Validated</b> status.</li> <li>The <b>Approval Required</b> check box is selected in the upload request type using which the upload request is created.</li> </ul>
Approve	Used to approve the upload request.
	<b>Note:</b> The <b>Approve</b> button appears when: <ul style="list-style-type: none"> <li>The upload request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the upload request.</li> </ul>
Reject	Used to reject the upload request.
	<b>Note:</b> The <b>Reject</b> button appears when: <ul style="list-style-type: none"> <li>The upload request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the upload request.</li> </ul>

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the upload request status is updated
Create Date/Time	Displays the date and time when the upload request is created.

### Data Records

The **Data Records** zone lists the data records of the upload request. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2, .....,Search Criteria 10	Used to search for data from the CSV file with respect to the field.	No
<b>Note:</b> We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.		
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: <ul style="list-style-type: none"> <li>• Error</li> <li>• Invalid</li> <li>• Pending</li> <li>• Processed</li> <li>• Valid</li> </ul>	No

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the <b>View</b> (  ) icon, the <b>Data Record Details</b> window appears where you can view the details of the data records.
Search Result 1, Search Result 2, ....., Search Result 10	Displays data from the CSV file.
<b>Note:</b> We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	
Record Status	Indicates the status of the data record. The valid values are: <ul style="list-style-type: none"> <li>• Error</li> <li>• Invalid</li> <li>• Pending</li> <li>• Processed</li> <li>• Valid</li> </ul>
Message(s)	Displays message for the data record respective to it's status.

Column Name	Column Description
Entity ID	Displays entity ID of the upload request. <b>Note:</b> The entity ID is displayed only for data records with <b>Processed</b> status.
Entity Information	Displays entity information for the <b>FK Reference</b> selected in <b>Upload Request Type</b> screen. <b>Note:</b> The entity information is displayed only for data records with <b>Processed</b> status.

**Note:** By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

## Upload Request - Log

The **Log** tab contains the following zone:

- [Upload Request Log](#) on page 1866

### Upload Request Log

The **Upload Request Log** zone on the **Upload Request** screen lists the complete trail of actions performed on the upload request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Displays the status reason of action performed on the upload request.

**Note:** You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. Enter **Log Details** and click **Save**. The upload request log is added.

## Editing an Upload Request

### Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to edit.

The **Upload Request** screen appears.

3. Click the **Edit** button in the **Upload Request** zone.

**Note:** The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.

The entity **Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to indicate the comments for upload request.	No

- **Characteristics** – Used to define the characteristics for the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Upload Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the Upload request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the Upload request.

4. Modify the details of the upload request, if required.

5. Define, edit, or remove characteristics of the upload request, if required.
6. Click **Save**.

The changes made to the upload request are saved.

## Deleting an Upload Request

### Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to delete.

The **Upload Request** screen appears.

3. Click the **Delete** button in the **Upload Request** zone.

A message appears confirming whether you want to delete the upload request.

**Note:** The **Delete** button appears when the upload request is in the **Draft** status.

4. Click **OK**.

The upload request is deleted.

## Validating an Upload Request

### Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

### Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to validate.

The **Upload Request** screen appears.

3. Click the **Validate** button in the **Upload Request** zone.

**Note:** The **Validate** button appears when the upload request is in the **Draft** status.

For more information about the **Upload Request Periodic Monitor (C1-UPLRQ)** batch, refer to Oracle Revenue Management and Billing Batch Guide.

The status of the upload request is changed to **Validated**.

## Canceling an Upload Request

### Prerequisites

To cancel an upload request, you should have:

- Cancellation reasons defined in the application

**Note:** While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

### Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.

The **Upload Request** screen appears.

3. Click the **Cancel** button in the **Upload Request** zone.

The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request.	Yes
Comments	Used to specify additional information while cancelling the upload request.	No

**Note:** The **Cancel** button appears when the upload request is in the **Validated** status.

4. Select the cancellation reason from the **Cancel Reason** list.
5. Click **Save**.

The status of the upload request is changed to **Canceled**.

## **Submitting an Upload Request**

### **Procedure**

To submit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to submit.

The **Upload Request** screen appears.

3. Click the **Submit** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...																				
<p>The <b>Approval Required</b> check box is selected in the upload request type using which the upload request is created</p>	<p>A To Do of the specified To Do type is created and sent to the approver for approval. The following table lists the To Do type using which the To Do is created for the different upload requests:</p> <table border="1" data-bbox="873 359 1463 894"> <thead> <tr> <th data-bbox="881 363 1166 411">Upload Request</th> <th data-bbox="1174 363 1463 411">To Do Type</th> </tr> </thead> <tbody> <tr> <td data-bbox="881 415 1166 464">Bill Cycle Update</td> <td data-bbox="1174 415 1463 464">C1-BCUUR</td> </tr> <tr> <td data-bbox="881 468 1166 516">Billable Charge</td> <td data-bbox="1174 468 1463 516">C1-BCUR</td> </tr> <tr> <td data-bbox="881 520 1166 569">Contract Rider Update</td> <td data-bbox="1174 520 1463 569">C1-CRUUR</td> </tr> <tr> <td data-bbox="881 573 1166 621">Hold Request</td> <td data-bbox="1174 573 1463 621">C1-HLDUR</td> </tr> <tr> <td data-bbox="881 625 1166 674">Refund Request</td> <td data-bbox="1174 625 1463 674">C1-REFUR</td> </tr> <tr> <td data-bbox="881 678 1166 726">Write Off Request</td> <td data-bbox="1174 678 1463 726">C1-WOUR</td> </tr> <tr> <td data-bbox="881 730 1166 779">Policy Reinstatement</td> <td data-bbox="1174 730 1463 779">C1-RPUR</td> </tr> <tr> <td data-bbox="881 783 1166 831">Bill Group Sorting</td> <td data-bbox="1174 783 1463 831">C1-BGSRT</td> </tr> <tr> <td data-bbox="881 835 1166 884">Bill Group Derivation and Pricing Parameters</td> <td data-bbox="1174 835 1463 884">C1-BGDVP</td> </tr> </tbody> </table> <p>In addition, the status of the upload request is changed to <b>Approval In Progress</b>.</p>	Upload Request	To Do Type	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters	C1-BGDVP

## Approving an Upload Request

You can view the number of upload requests which are pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

**Note:** The system will not allow you to approve or reject an upload request submitted by you.

### Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve a upload request through the <b>Upload Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the upload request in the <b>Upload Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Upload Request Information</b> column corresponding to the upload request which you want to review.</li> </ol>
Approve a upload request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter the required To Do type in the respective field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the upload request that you want to review.</li> </ol>

The **Upload Request** screen appears.

2. Review the upload request details.
3. Click the **Approve** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...																				
<p>The number of valid records in the upload request does not exceed the online record process limit defined in the <b>C1-DEFERUPLD</b> algorithm</p>	<p>The following table lists the behavior for the different upload requests:</p> <table border="1" data-bbox="889 348 1463 1455"> <thead> <tr> <th data-bbox="889 348 1133 396">Upload Request</th> <th data-bbox="1133 348 1463 396">Behavior</th> </tr> </thead> <tbody> <tr> <td data-bbox="889 396 1133 480">Bill Cycle Update</td> <td data-bbox="1133 396 1463 480">The bill cycle information is updated for the accounts.</td> </tr> <tr> <td data-bbox="889 480 1133 564">Billable Charge</td> <td data-bbox="1133 480 1463 564">The billable charges are created.</td> </tr> <tr> <td data-bbox="889 564 1133 678">Contract Rider Update</td> <td data-bbox="1133 564 1463 678">The contract rider information is updated for the contracts.</td> </tr> <tr> <td data-bbox="889 678 1133 762">Hold Request</td> <td data-bbox="1133 678 1463 762">The hold requests are created.</td> </tr> <tr> <td data-bbox="889 762 1133 846">Refund Request</td> <td data-bbox="1133 762 1463 846">The refund requests are created.</td> </tr> <tr> <td data-bbox="889 846 1133 930">Write Off Request</td> <td data-bbox="1133 846 1463 930">The write off requests are created.</td> </tr> <tr> <td data-bbox="889 930 1133 1224">Policy Reinstatement</td> <td data-bbox="1133 930 1463 1224">The policies are reinstated and the status of the policies is changed to the one defined in the <b>Policy Status after Processing Reinstatement Upload Request</b> parameter of the <b>C1-REN-VALID</b> algorithm.</td> </tr> <tr> <td data-bbox="889 1224 1133 1308">Bill Group Sorting</td> <td data-bbox="1133 1224 1463 1308">The sort ID is defined for the respective bill group.</td> </tr> <tr> <td data-bbox="889 1308 1133 1455">Bill Group Derivation and Pricing Parameters</td> <td data-bbox="1133 1308 1463 1455">The derivation and pricing parameters are defined for the respective bill group and sort ID combination.</td> </tr> </tbody> </table> <p>In addition, the status of the upload request is changed to <b>Processed</b>.</p>	Upload Request	Behavior	Bill Cycle Update	The bill cycle information is updated for the accounts. ## Rejecting an Upload Request

### Prerequisites

To reject an upload request, you should have:

- Rejection reasons defined in the application

### **Note:**

While rejecting an upload request, you need to specify the reason why you want to reject the upload request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an upload request submitted by you.

### Procedure

To reject an upload request:

1. Do either of the following:

If you want to	Then
Reject an upload request through the <b>Upload Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the upload request in the <b>Upload Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Upload Request Information</b> column corresponding to the upload request which you want to review.</li> </ol>
Reject an upload request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter the required To Do type in the respective field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> </ol>

If you want to	Then
	6. Click the link in the <b>Message</b> column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

2. Review the upload request details.
3. Click the **Reject** button in the **Upload Request** zone.

The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes
Comments	Used to specify additional information while rejecting the upload request.	No

**Note:** The **Reject** button appears when:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the upload request is changed to **Rejected**.

## **Viewing the Data Record Details**

### **Procedure**

To view the details of a data record:

1. Search for the data record in the **Data Records** zone in the **Upload Request** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the data record whose details you want to view.

The **Data Record Details** window appears. It contains the following fields:

Field Name	Field Description
Sr. No.	Displays the sequential number of data.
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

- View the details of the data record in the **Data Record Details** window.

## Viewing the Log of an Upload Request

### **Procedure**

To view the log of an upload request:

- Search for the upload request in the **Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- Main** – Displays information about the upload request. It contains the following zones:
  - Upload Request** – Displays the details of the upload request.
  - Data Records** – Lists the data records of the upload request.
- Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
  - Upload Request Log** – Displays the trail of actions performed on the particular upload request.

- Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Indicates the reason why the upload request was rejected.

**Note:** You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

**Related Topics**

For more information on...	See...
How to search for an Upload request	<a href="#">Searching for an Upload Request</a> on page 1857
How to add a log entry for an Upload request	<a href="#">Adding a Log Entry for an Upload Request</a> on page 1880

**Adding a Log Entry for an Upload Request****Procedure**

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to edit.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the upload request. It contains the following zones:
  - **Upload Request** – Displays the details of the upload request.
  - **Data Records** – Lists the data records of the upload request.
- **Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
  - **Upload Request Log** – Displays the trail of actions performed on the particular upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments for the upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

# Chapter 27

---

## General Ledger (GL) Accounting Template

---

### Topics:

- [GL Accounting Template \(Without Approval\) Status Transition](#)
- [GL Accounting Template \(With Approval\) Status Transition](#)
- [Algorithms Used in C1- GLAT](#)
- [Prerequisites](#)
- [GL Accounting Template \(Used for Searching\)](#)
- [GL Accounting Template \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, ..., and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, ..., Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do

for the approver to review the GL Accounting template. Once the approver approves a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	BS	AD	PS
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	Process	Sub Process 1	Sub Process 2	Sub Process 3
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	Use GL Accounting Template (Y or N)	Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)	Algorithm Behaviour
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

<b>If the bill segment is...</b>	<b>Then, the system...</b>
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> <li>• FT GL for the bill segment calculation line using the distribution code on the respective rate component</li> <li>• FT GL for the pass through line using the distribution code on the respective pass through line</li> <li>• Balancing FT GL using the distribution code on contract type</li> </ul>
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

<b>If the bill segment is...</b>	<b>Then, the system...</b>
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.

If the bill segment is...	Then, the system...
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> <li>• FT GL for bill segment calculation line using the lines in the GL Accounting template.</li> <li>• FT GL for the pass through line using the distribution code on the respective pass through line.</li> <li>• Balancing FT GL using the line in the GL Accounting template.</li> </ul>
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

## GL Accounting Template (Without Approval) Status Transition

---

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is off:

## GL Accounting Template (With Approval) Status Transition

---

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is on:

## Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> <li>GLAT Description</li> <li>GLAT Status Description</li> <li>GLAT ID</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> <li>If soft parameter value is set to Y then approval workflow will be triggered.</li> </ul>
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the <b>C1-GLATAAPEN</b> Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> <li>If soft parameter value is set to Y then approval workflow will be triggered.</li> </ul>
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the <b>C1-GLATAAPEN</b> Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

## Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

## GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- [GL Accounting Template \(Used for Viewing\)](#) on page 1895

This screen consists of the following zones:

- [Search GL Accounting Template](#) on page 1890
- [GL Accounting Template Lines](#) on page 1891

## Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Approval In Progress</li> <li>• Deactivation Approval In Progress</li> <li>• Active</li> <li>• Inactive</li> <li>• Rejected</li> </ul>	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

**Note:** You must specify at least one search criterion while searching for a template.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template. <p><b>Note:</b> It has a link. On clicking the link, the <b>GL Accounting Template</b> screen appears where you can view the details of the respective template.</p>
Description	Displays the description of process.

Column Name	Column Description
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

How to create a GL Accounting Template	<a href="#">Creating a GL Accounting Template</a> on page 1892
GL Accounting Template Lines zone	<a href="#">GL Accounting Template Lines</a> on page 1891

## GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

**Note:** By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears when you click the **Broadcast** (📢) icon corresponding to the template in the **Search Results** section.

## Searching for a GL Accounting Template

### Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.  
The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of templates that meet the search criteria appears in the **Search Results** section.

### Related Topics

For more information on...	See...
GL Accounting Template screen	<a href="#">GL Accounting Template (Used for Searching)</a> on page 1889
Search GL Accounting Template zone	<a href="#">Search GL Accounting Template</a> on page 1890

## Creating a GL Accounting Template

### Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

### Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.  
The **GL Accounting Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments.</b>
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** —Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

#### 4. Enter the required details

**Note:**

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.

Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.

6. Click **Save**.

The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

**Related Topics**

For more information on...	See...

How to edit a GL Accounting Template	<a href="#">Editing a GL Accounting Template</a> on page 1898

**Viewing the GL Accounting Template Details****Procedure**

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. View the details of the template in the **GL Accounting Template** zone.

## Viewing the GL Accounting Template Lines Details

### **Procedure**

To view the details of a GL Accounting Template Lines:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the **Broadcast** (  ) icon corresponding to the template in the **Search Results** section.

The **GL Accounting Template Lines** zone appears in the **GL Accounting Template** screen.

3. View the details of the template lines in the **GL Accounting Template Lines** zone.

### **Related Topics**

## GL Accounting Template (Used for Viewing)

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** — Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

### **GL Accounting Template - Main**

The **Main** tab on the **GL Accounting Template** contains the following zone:

[GL Accounting Template](#) on page 1895

#### **GL Accounting Template**

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- **Main** — This section provides basic information about the GL Accounting template. It contains the following fields:

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** — Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	<b>Note:</b> The <b>Edit</b> button appears when the template is in the <b>Draft</b> or <b>Rejected</b> status.
Delete	Used to delete the template.
	<b>Note:</b> The <b>Delete</b> button appears when the template is in the <b>Draft</b> or <b>Rejected</b> status.
Submit	Used to activate the template.
	<b>Note:</b> The <b>Submit</b> button appears when the template is in the <b>Draft</b> or <b>Rejected</b> status.

Button Name	Button Description
Approve	Used to approve the template.
	<b>Note:</b> the <b>Approve</b> button appears when the template is in the <b>Approval In Progress</b> or <b>Deactivation Approval In Progress</b> status.
Reject	Used to reject the template.
	<b>Note:</b> the <b>Reject</b> button appears when the template is in the <b>Approval In Progress</b> or <b>Deactivation Approval In Progress</b> status.
Deactivate	Used to deactivate the active template.
	<b>Note:</b> The <b>Deactivate</b> button appears when the template is in the <b>Active</b> status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

[GL Accounting Template Log](#) on page 1897

### GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

**Note:** You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

How to view the log of a GL Accounting Template	<a href="#">Viewing the Log of a GL Accounting Template</a> on page 1905

**Editing a GL Accounting Template****Procedure**

To edit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to edit.

The **GL Accounting Template** screen for editing appears.

3. Click the **Edit** button in the **GL Accounting Template** zone.

**Note:** The **Edit** button appears when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional)
		<b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional)
		<b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional)
		<b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments.</b>
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** — Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

**Note:**

If you want to specify more than one template lines, click the **Add (+)** icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete (🗑)** icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search (🔍)** icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.

The changes made to the GL Accounting template are saved.

## Deleting a GL Accounting Template

**Procedure**

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to delete.

The **GL Accounting Template** screen appears.

3. Click the **Delete** button in the **GL Accounting Template** zone.

A message appears confirming whether you want to delete the template.

**Note:** The **Delete** button appears when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.

The GL Accounting template is deleted.

**Note:**

You can delete a template when its status is **Draft**.

## **Submitting a GL Accounting Template**

### **Prerequisites**

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

### **Procedure**

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to submit.

The **GL Accounting Template** screen appears.

3. Click the **Submit** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the <b>C1-GLATSUB</b> algorithm.	A To Do of the <b>C1-GLAT</b> To Do type is created and sent to the approver and the status of the template is changed to <b>Approval In Progress</b> .
Approval Required Flag is set to No in the <b>C1-GLATSUB</b> algorithm.	The template is created using the specified process and the status of the template is changed to <b>Active</b> .

**Note:**

The **Submit** button appears when the template is in the **Draft** or **Rejected** status.

**Approving a GL Accounting Template**

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

**Note:** The system will not allow you to approve or reject a template submitted by you.

**Procedure**

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the <b>GL Accounting template</b> screen	<ol style="list-style-type: none"> <li>1. Search for the template in the <b>GL Accounting template</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>GL Accounting Template Information</b> column corresponding to the template which you want to review.</li> </ol>
Approve a GL Accounting Template from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-GLAT</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> </ol>

If you want to...	Then...
	<ol style="list-style-type: none"> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the GL Accounting template that you want to review.</li> </ol>

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to <b>Active</b> as specified in the GL Accounting template.

**Note:** The **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

### **Related Topics**

## **Rejecting a GL Accounting Template**

### **Prerequisites**

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

### **Note:**

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

### **Procedure**

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the <b>GL Accounting Template</b> screen	<ol style="list-style-type: none"> <li>1. Search for the template in the <b>GL Accounting Template</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>GL Accounting Template Information</b> column corresponding to the template which you want to review.</li> </ol>
Reject a GL Accounting template from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-GLAT</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the template that you want to review.</li> </ol>

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes
Comments	Used to specify additional information while rejecting the template.	No

**Note:** The **Reject** button appears when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the template is changed to **Rejected**.

## Deactivating a GL Accounting Template

### Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

### **Note:**

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

### Procedure

To deactivate a GL Accounting template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to deactivate.

The **GL Accounting Template** screen appears.

3. Click the **Deactivate** button in the **GL Accounting Template** zone.

**Note:** The **Deactivate** button appears when the template is in the **Active** status.

The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments for the deactivation of template.	No

4. Click **OK**.

The GL Accounting template status is changed to **Deactivation Approval In Progress**.

## Viewing the Log of a GL Accounting Template

### Procedure

To view the log of a GL Accounting template:

1. Search for the template in the **GL Accounting template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.

The **GL Accounting Template Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Indicates the reason why the template was rejected or voided.

**Note:** You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

## Adding a Log Entry for a GL Accounting Template

### Procedure

To add a log entry for a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to edit.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
GL Accounting Template Information	Displays information about the template.	Not applicable
Log Details	Used to specify additional comments for the template.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **GL Accounting Template Log** zone.

# Chapter 28

---

## Payment Agreement Request

---

### Topics:

- [Payment Agreement Request \(Without Approval\) Status Transition](#)
- [Payment Agreement Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-PaymentAgreementRequest](#)
- [Payment Agreement Request Type](#)
- [Payment Agreement Request \(Used for Searching\)](#)
- [Payment Agreement Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount – 100\$, Unpaid Amount - 75\$)
- B2 (Bill Amount – 250\$, Unpaid Amount – 125\$)
- B3 (Bill Amount – 150\$, Unpaid Amount – 150\$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exist in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exist in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see [Payment Agreement Request \(Without Approval\) Status Transition](#) on page 1910 and [Payment Agreement Request \(With Approval\) Status Transition](#) on page 1910. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

**Note:** The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see [Prerequisites](#) on page 1911.

## Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

## Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

## Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**

- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**
- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

## Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to <a href="#">C1-PA-INFO</a>
Pre-Processing	C1-PA-PRE	C1-PA-PRE	<a href="#">C1-PA-PRE</a>
Validation	C1-PA-VAL	C1-PA-VAL	<a href="#">C1-PA-VAL</a>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	<a href="#">C1-PA-SUBMIT</a>
Approval In Progress	Enter	C1-PA-APPENT	C1-PA-APPENT	<a href="#">C1-PA-APPENT</a>
Approval In Progress	Exit	C1-PA-APPEXT	C1-PA-APPEXT	<a href="#">C1-PA-APPEXT</a>
Return to Submitter	Enter	C1-PA-RESUB	C1-PA-RESUB	<a href="#">C1-PA-RESUB</a>
Active	Monitor	C1-PA-MONTR	C1-PA-MONTR	<a href="#">C1-MONTR</a>
Active	Enter	C1-PA-ACTENT	C1-PA-ACTENT	<a href="#">C1-ACTENT</a>

## Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- [Payment Agreement Request Type List](#) on page 1913
- [Payment Agreement Request Type](#) on page 1913

## Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Payment Agreement Request Type</b> screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Payment Agreement Request Type</b> screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the payment agreement request type.
	<b>Note:</b> You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

## Payment Agreement Request Type

The **Payment Agreement Request Type** zone displays the details of the payment agreement request type. This zone contains the following sections:

- **Main** – This section provides basic information about the payment agreement request type. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Payment Agreement Request Business Object	Indicates the business object that will be used to create the payment agreement request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the payment agreement request type.
Status	Indicates the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Status Change Notification Type	Indicates the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Alert</li> <li>• To Do</li> <li>• Both</li> </ul>
Approval Required	Indicates whether approval is required while creating payment agreement request using the payment agreement request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when you submit the payment agreement request for approval.
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.
Approval To Do Role	Indicates that users with the specified To Do role can only approve or reject the payment agreement request submitted for approval.
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Role</b> screen appears with the details of the respective To Do role.

Field Name	Field Description
Submitter To Do Type	<p>Indicates the To Do type for the submitter when the payment agreement request type is resubmitted by the approver.</p> <p><b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p>
Submitter To Do Role	<p>Indicates the To Do role of the submitter when the payment agreement request type is resubmitted by the approver.</p> <p><b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Role</b> screen appears with the details of the respective To Do role.</p>

- **Characteristics** – This section lists the characteristics of the payment agreement request type. It contains the following columns:

Column Name	Column Description	Mandatory (Yes Or No)
Characteristic Type	Indicates the characteristic type.	No
Characteristic Value	Displays the value of the characteristic type.	No

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment agreement request type.
Delete	<p>Used to delete the payment agreement request type.</p> <p><b>Note:</b> You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.</p>
Duplicate	Used to create a new payment agreement request type using an existing payment agreement request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment agreement request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Payment Agreement Request Type** zone does not appear in the **Payment Agreement Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a payment agreement request type in the **Payment Agreement Request Type List** zone.

## Defining a Payment Agreement Request Type

### Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

### Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.  
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

**Note:** The **Select Business Object** screen appears when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Alert</li> <li>• To Do</li> <li>• Both</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required for creating payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the <b>Approval To Do Type</b> field.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the <b>Submitter To Do Type</b> field.

6. Enter the required details.
7. Define characteristics for the payment agreement request type, if required.
8. Click **Save**.

The payment agreement request type is defined.

## Defining a Characteristic for a Payment Agreement Request Type

### Prerequisites

To define a characteristic for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

### Procedure

To define a characteristic for a payment agreement request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request type.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment agreement request type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the payment agreement request type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing a Payment Agreement Request Type

### Prerequisites

To edit a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

### Procedure

To edit a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.  
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the payment agreement request type whose details you want to edit.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Displays the payment agreement request type.	Not applicable
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Upload Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>Alert</li> <li>To Do</li> <li>Both</li> </ul>	No
Approval Required	Used to indicate whether approval is required for editing payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.  <b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.  <b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.  <b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

**Tip:** Alternatively, you can click the **Edit** button in the **Payment Agreement Request Type** zone to edit the details of the payment agreement request type.

5. Modify the required details.

**Note:** You can search for a **Approval To Do Type** and **Submitter To Do Type** by clicking the **Search** (🔍) icon corresponding to the respective field.

6. Define, edit, or remove characteristics of the payment agreement request type, if required.
7. Click **Save**.

The changes made to the payment agreement request type are saved.

## Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

### Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

### Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.  
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Alert</li> <li>• To Do</li> <li>• Both</li> </ul>	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval. <p><b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p>	Yes (Conditional)
		<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
	The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

**Tip:** Alternatively, you can click the **Duplicate** button in the **Payment Agreement Request Type** zone to create a copy of the payment agreement request type.

5. Enter the required details.
6. Define, edit, or remove characteristics of the payment agreement request type, if required.
7. Click **Save**.

The new payment agreement request type is defined.

The **Payment Agreement Request** screen allows you to search for a payment agreements for unpaid bills by searching through Bill ID or through Payment Agreement Request ID. Through this screen, you can navigate to the following screens:

- [Payment Agreement Request \(Used for Viewing\)](#) on page 1934

This screen consists of the following zones:

- [Search Payment Agreement Request](#) on page 1926
- [Bill Details](#) on page 1929

### Search Payment Agreement Request

The **Search Payment Agreement Request** zone allows you to search for a payment agreement request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using request or bill details. The valid values are: <ul style="list-style-type: none"> <li>• Request Details</li> <li>• Bill Details</li> </ul> <p><b>Note:</b> By default, the <b>Request Details</b> option is selected.</p>	Yes
Payment Agreement Request ID	Used to search a particular payment agreement request. <p><b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.</p>	No
Created From	Used to search payment agreement requests which are created from a particular date onwards. <p><b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.</p>	No
To	Used to search payment agreement requests which are created till a particular date. <p><b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to search payment agreement requests which are created using a particular payment agreement request type.	No
	<b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Status	Used to search payment agreement requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Approval In Progress</li> <li>• Broken Promise</li> <li>• Draft</li> <li>• Kept Promise</li> <li>• Rejected</li> <li>• Return to Submitter</li> </ul>	No
	<b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Account ID	Used to search for unpaid bills of a particular account.	No
	<b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list. You can search for a account ID by clicking the <b>Search</b> (🔍) icon corresponding to the field.	
Person ID	Used to search the person ID based on which you want to search for bills of a person.	No
	<b>Note:</b> This field appears when you select the <b>Request Details</b> option from the <b>Search By</b> list. You can search for a person ID by clicking the <b>Search</b> (🔍) icon corresponding to the field.	
Bill ID	Used to search a particular bill.	No
	<b>Note:</b> This field appears when you select the <b>Bill Details</b> option from the <b>Search By</b> list. You can search for a bill by clicking the <b>Search</b> (🔍) icon corresponding to the field.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Date From	Used to search bills which are created from a particular date onwards.	No
	<b>Note:</b> This field appears when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
To	Used to search bills which are created till a particular date.	No
	<b>Note:</b> This field appears when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
	<b>Note:</b> This field appears when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a payment agreement request.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the payment agreement request was created in the system.
Payment Agreement Request Information	Displays information about the payment agreement request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Agreement Request</b> screen appears where you can view the details of the respective payment agreement request.
Schedule Amount	Displays the amount that the customer has agreed to pay on the scheduled date.
Status	Indicates the status of the payment agreement request. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Approval In Progress</li> <li>• Broken Promise</li> <li>• Draft</li> <li>• Kept Promise</li> <li>• Rejected</li> <li>• Return to Submitter</li> </ul>
Last Updated Date/Time	Displays the most recent updated date and time of the payment agreement request.
Total Unpaid Amount	Displays the total unpaid amount for debit bills.
	<b>Note:</b> <b>Total Unpaid Amount</b> should be equal to total <b>Schedule Amount</b> .

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### Related Topics

### Bill Details

The **Bill Details** zone lists unpaid debt bill details. You will not find any records in this zone if the payment agreement request list does not have any unpaid bills assigned to it. This zone contains the following columns:

Column Name	Column Description
Bill Information	Indicates the bill against which the payment agreement request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Current Bill Balance	Displays the outstanding amount.
Due Date	Displays the due date of the bill.

By default, the **Bill Details** zone does not appear in the **Payment Agreement Request** screen. It appears when you click the **Broadcast** (📢) icon corresponding to the payment agreement request in the **Search Payment Agreement Request** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 3208.

## Searching for a Payment Agreement Request

### Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

### Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Credit & Collection** and then click **Payment Agreement Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.  
The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

## Defining a Characteristic for a Payment Agreement Request

### Prerequisites

To define a characteristic for a payment agreement request:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Agreement Request**)

### Procedure

To define a characteristic for a Payment Agreement Request:

1. Ensure that the **Characteristics** section is expanded when you are editing, submitting, approving, rejecting or resubmitting a payment agreement.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the payment agreement request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request.	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request.

- Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment agreement request, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the payment agreement request, click the **Delete** (🗑️) icon corresponding to the characteristic.

To reject a payment agreement request, you should have:

- Rejection reasons defined in the application

### Note:

While rejecting a payment agreement request, you need to specify the reason why you want to reject the payment agreement request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentAgreementRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment agreement request submitted by you.

### Procedure

To reject a payment agreement request:

1. Do either of the following:

If you want to	Then
Reject a payment agreement request through the <b>Payment Agreement Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the payment agreement request in the <b>Payment Agreement Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Payment Agreement Request Information</b> column corresponding to the payment request which you want to review.</li> </ol>
Reject a payment agreement request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter the to do type <b>C1-PAREQ</b> in the <b>To Do Type</b> field for the entity payment agreement request.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> </ol>

If you want to	Then
	6. Click the link in the <b>Message</b> column corresponding to the To Do of the payment agreement request that you want to review.

The **Payment Agreement Request** screen appears.

- Review the payment agreement request details.
- Click the **Reject** button in the **Payment Agreement Request** zone.

The **Reject Payment Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment agreement request.	Yes
Comments	Used to specify additional information while rejecting the payment agreement request.	No

**Note:** The **Reject** button appears when:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the payment agreement request is changed to **Rejected**.

## Resubmitting a Payment Agreement Request

### Prerequisites

To resubmit a payment agreement request, you should have:

- Entities added in the payment agreement request which is submitted for approval.

### Procedure

To resubmit a payment agreement request:

- Search for the payment agreement request in the **Payment Agreement Request** screen.
- In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to resubmit.

The **Payment Agreement Request** screen appears.

- Click the **Resubmit** button in the **Payment Agreement Request** zone.

The **Resubmit Payment Agreement Request** screen appears.

**Note:** The **Resubmit** button appears when the payment agreement request is in the **Approval In Progress** status.

A To Do of the **C1-PAREQ** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the payment agreement request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

**Note:** While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the payment agreement request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

## Filtering Overdue Bills of an Account

The **Search Bills** zone lists bills that are overdue for an account. You will not find any records in this zone if the payment agreement request does not have overdue bills in the account. This zone contains the following fields as search criteria:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using bill details.	Yes
	<b>Note:</b> By default, the <b>Bill Details</b> option is selected.	
Bill ID	Used to search for a particular bill.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

By default, the **Search Bills** zone appears in the **Bills** tab of **Payment Agreement Request** screen. By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🔼) icon in the upper right corner of this zone.

By default, the search results section displays the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Unpaid Amount	Displays the amount which is eligible for payment agreement request against the bill.
Overdue Process Information	Displays the overdue process information for the bill.

How to add an overdue bill in a payment agreement request	<a href="#">Adding an Overdue Bill in a Payment Agreement Request</a> on page 1950

## **Adding an Overdue Bill in a Payment Agreement Request**

### **Prerequisites**

To add an overdue bill in a payment agreement request, you should have:

- Overdue bills should be available for accounts to add in payment agreement request

### **Procedure**

To add an overdue bill in a payment agreement request:

**Note:** A bill with outstanding amount greater than zero which is not part of an overdue process will be allowed to be added in a payment agreement request. While a bill with negative outstanding amount will not be allowed to be added in a payment agreement request.

1. Search for the payment agreement request in the **Payment Agreement Request** screen which is in **Draft** or **Active** status.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.  
The **Payment Agreement Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. Enter the search criteria in the **Search Bills** zone.  
In the **Search Results** section, list of bills meeting the search criteria are displayed.
5. Select the check box corresponding to the bill which you want to add to the payment agreement request from the **Search Results** section.  
You can add more than one bill to the payment agreement request at the same time.
6. Click **Add**.  
A message appears indicating that selected bills have been successfully added to the payment agreement request.
7. Click **OK**.

Note that the bill is added in the **Bill Details** zone in the **Main** tab.

## Viewing the Log of a Payment Agreement Request

### Procedure

To view the log of a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to view.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
  - **Payment Agreement Request** – Displays the details of the payment agreement request.
  - **Bill Details** – Lists the bill details of the payment agreement request.
  - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

**Note:** This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Payment Agreement Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Indicates the reason why the payment agreement request was rejected.
Old Payment Schedule	Displays the details of old payment schedule.

**Note:** You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

How to add a log entry for a payment agreement request	<a href="#">Adding a Log Entry for a Payment Agreement Request</a> on page 1952

## Adding a Log Entry for a Payment Agreement Request

### Procedure

To add a log entry for a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to edit.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
  - **Payment Agreement Request** – Displays the details of the payment agreement request.
  - **Bill Details** – Lists the bill details of the payment agreement request.
  - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

**Note:** This tab will be displayed when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

The **Add Payment Agreement Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Log Details	Used to specify additional comments for the payment agreement request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Payment Agreement Request Log** zone.

# Chapter 29

---

## Inbound Message

---

### Topics:

- [Customer Inbound Message](#)
- [Membership Inbound Message](#)
- [ASO Customer Inbound Message](#)
- [Health Care Inbound Message](#)
- [Inbound Message Type](#)
- [Inbound Message \(Used for Searching\)](#)
- [Inbound Message \(Used for Viewing\)](#)
- [Statement Construct Preference](#)

Oracle Revenue Management and Billing enables you to create the following inbound messages through the respective inbound web services:

Inbound Message	Inbound Web Service
<a href="#">Customer Inbound Message</a> on page 1956	<a href="#">CI-CustomerStructureInboundMessage</a> on page 2212
<a href="#">Membership Inbound Message</a> on page 1994	<a href="#">CI-MembershipInboundMessage</a> on page 2213
<a href="#">ASO Customer Inbound Message</a> on page 2024	<a href="#">CI-ASOCustomerInboundMessage</a> on page 2213
<a href="#">Health Care Inbound Message</a> on page 2062	<a href="#">CI-HCInboundMessage</a> on page 2214

Once an inbound message is created, you can submit the inbound message for validation and processing from the user interface or through a batch process. The following table lists the batches which validate and process the respective inbound message at regular intervals:

Inbound Message	Batch Control Name
Customer Inbound Message	Customer Inbound Message Periodic Monitor (C1-CUSIN)
Membership Inbound Message	Membership Inbound Message Periodic Monitor (C1-MEMIN)
ASO Customer Inbound Message	Customer Inbound Message Periodic Monitor (C1-CUSIN)
Health Care Inbound Message	Health Care Inbound Message Periodic Monitor (C1-HCINB)

For more information about the batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Customer Inbound Message

---

On calling the **C1-CustomerStructureInboundMessage** web service, a customer inbound message is created in the **Pending** status. When the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is invoked, the system checks whether there are any customer inbound messages in the **Pending** status. If there is a customer inbound message in the **Pending** status, the system validates the customer inbound message. If a customer inbound message is successfully validated, it is processed further and the following entities are created or updated in the system based on the available information:

- Person
- Account
- Contract
- Policy
- Policy Plan
- Packaged Savings
- Billable Charges (for packaged savings and/or non-eligibility based fees)

In addition, the system enables you to submit the customer inbound messages for validation and processing from the user interface. On submitting a customer inbound message, the system validates the customer inbound message. If a customer inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the customer inbound message is changed to **Processed**. If any error occurs while validating or processing a customer inbound message, the status of the customer inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected customer inbound message. The system can reprocess a customer inbound message when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the customer inbound message from **Rejected** to **Pending**. The **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch will then reconsider the customer inbound message for validation and processing.

You can also configure the system such that the batch can automatically retry to process the rejected customer inbound messages. However, it will attempt to retry when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a customer inbound message depends on the value defined in the **Maximum Retry** parameter.

### Prerequisites

To use the customer inbound message feature, you need to do the following:

- Define the required customer inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define values for the required parameters in the **C1-CINMSGVAL**, **C1-CINMSGPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the **Policy Plan BO (C1PPLNBO)** characteristics for the policy type which is specified in the **C1-CINMSGPRC** algorithm.
- Define predefined values for the **C1PRBASE**, **C1PRSRSN**, **C1INVHLD**, **C1STISSE**, **C1PRTNRL**, **C1PRDCAT**, **C1RATCOV**, and **C1PSNINT** characteristic types.
- Define values for the **C1-SourceSystemLookup** extendable lookup.

- Define values for the **PER\_OR\_BUS\_FLG**, **ADDRESS\_TYPE\_FLG**, **EXT\_TYPE\_FLG**, **BILL\_ADDR\_SRCE\_FLG**, and **RATE\_COVRG\_CNTRACT\_TYPE** lookup fields.
- Define the required person identifier types, account identifier types, characteristic types, person relationship types, phone types, customer classes, bill cycles, divisions, bill route types, hold request types, service quantity identifiers, contract types, and policy person roles in the application.
- Define values for the **C1BC\_OPT\_TYP\_FLG** lookup field.

**Note:** You can then set the value for the option type (defined in the **C1BC\_OPT\_TYP\_FLG** lookup field) in the **C1-BILLCYCLE** feature configuration.

- Define values for the option types in the **C1-BILLCYCLE** feature configuration.
- Define values for the **C1\_INVOICE\_DAY\_BILL\_PERIOD\_FLG** lookup field.

**Note:** Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

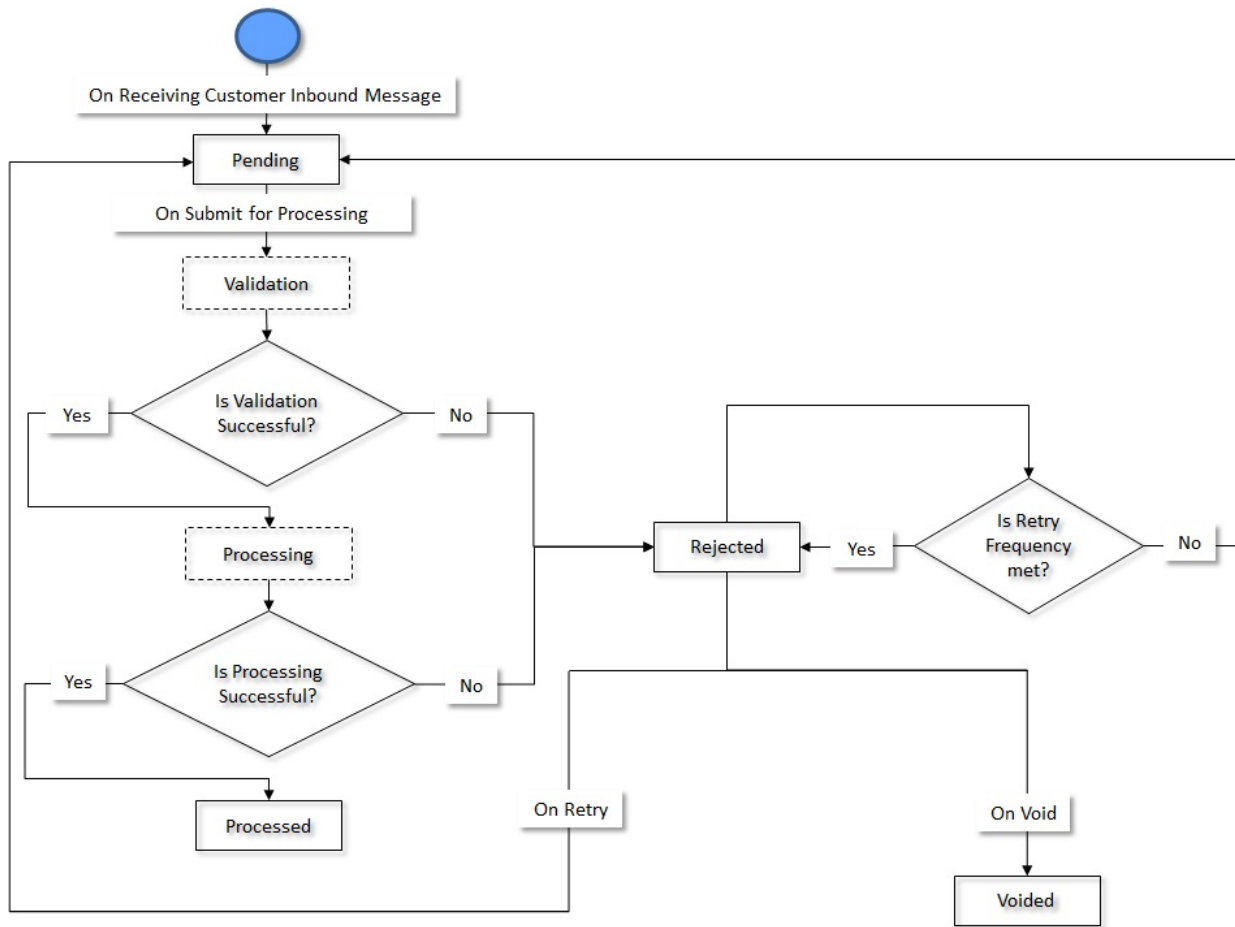

- Define predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination and map each status reason to a prime source reason (which is a predefined value in the **C1PRSRSN** characteristic type).
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement and map each status reason to a prime source reason (which is a predefined value in the **C1PRSRSN** characteristic type).
- Define bill cancel reasons which you want to use on packaged savings and premium bill segment cancelation during the policy or membership termination.

## **Customer Inbound Message Status Transition through User Interface**

The following figure graphically indicates how a customer inbound message moves from one status to another when it is validated and processed through the user interface:

### Customer Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how a customer inbound message moves from one status to another when it is validated and processed through the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch:

## Algorithms Used in C1-CustomerInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-CustomerInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to <a href="#">C1-AT-RQJ</a> on page 1960.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455.
	Enter	C1-CINMSGVAL	C1-CINMSGVAL	Refer to <a href="#">C1-CINMSGVAL</a> on page 1960.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455.
	Enter	C1-CINMSGPRC	C1-CINMSGPRC	Refer to <a href="#">C1-CINMSGPRC</a> on page 1961.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to <a href="#">C1-TODORETRY</a> on page 1970.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to <a href="#">C1-TDCRINMSG</a> on page 1970.
Processed	-	-	-	-
Voided	-	-	-	-

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-CINMSGVAL

This algorithm is invoked when the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is executed and when you click the **Submit for Processing** button. It validates the customer inbound message which is in the **Pending** status. It checks the following:

- Whether the primary identifier is specified for the person.
- Whether the bill group information exist when the policy information is specified in the customer inbound message.
- Whether the bill cycle is specified in the bill group information.
- Whether the **Invoice Day** characteristic type (as mentioned in the **Invoice Day Characteristic Type** parameter) exists in the bill group information and a valid value is specified for this characteristic type.

If any of the above validation fails, the status of the customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Invoice Day Characteristic Type	Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system then fetches the bill period mapped to the invoice day in the <b>C1_INVOICE_DAY_BILL_PERIOD_FLG</b> lookup field.  <b>Note:</b> By default, the parameter value is set to <b>C1OFFRST</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b> .	Yes

### C1-CINMSGPRC

This algorithm is invoked once a customer inbound message is successfully validated. It processes the customer inbound message and accordingly creates or updates a person, account, contract, policy, policy plan, packaged savings, and billable charges for packaged savings. If requested, it also terminates, reinstates, or renews a fully-insured group policy.

If the processing fails due to any reason, the status of the customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.  <b>Note:</b> By default, the parameter value is set to <b>F1OK</b> .	No
Hold Reason Characteristic Type	Used to specify the characteristic type which you want to use to store the reason why the account must be kept on hold. This type of characteristic is defined on the account.  <b>Note:</b> By default, the parameter value is set to <b>C1INVHLD</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b> .	Yes

Parameter	Description	Mandatory (Yes or No)
Franchise Person Relationship Type	Used to specify the person relationship type. If the parent person's relationship type in the customer inbound message matches to this parameter value, the system will add the person's account and contract details in the parent person's statement construct.	No
	<b>Note:</b> By default, the parameter value is set to <b>BILLING</b> . You can change the parameter value, if required. However, you must specify a person relationship type which is already defined in the system.	
Packaged Savings Contract Type	Used to specify the contract type using which you want to create the packaged savings contract for accounts. This contract is then used to create packaged savings billable charges.	No
	<b>Note:</b> By default, the parameter value is set to <b>PACKSAV</b> . You can change the parameter value, if required. However, you must specify a contract type which is already defined in the system.	
Policy Characteristic Type	Used to specify the characteristic type which you want to use to store the policy ID. This type of characteristic is defined on the billable charge. The system then uses this characteristic to derive the packaged savings billable charge which you want to update.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1POLICY</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b> .	
Policy Plan Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan ID. This type of characteristic is defined on the contract. The system then uses this characteristic to derive the contract which you want to update.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1POLPLN</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Contract</b> .	

Parameter	Description	Mandatory (Yes or No)
Plan Code Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system then uses this characteristic to derive the price item which you want to update.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1HPLNID</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b>.</p>	Yes
Coverage Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the coverage type. This type of characteristic is defined on the price item.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PRDCAT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b>.</p>	Yes
Rate Coverage Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system then uses this characteristic to derive the price item which you want to update.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1RATCOV</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b>.</p>	Yes
Policy Person Role	<p>Used to specify the policy person role which you want to use while adding main customer in a policy.</p> <p><b>Note:</b> By default, the parameter value is set to <b>DEP</b>. You can change the parameter value, if required. However, you must specify a policy person role which is already defined in the system.</p>	No
Description on Bill	<p>Used to specify the description that you want to display on the packaged savings billable charge.</p> <p><b>Note:</b> By default, the parameter value is set to <b>Package Savings BC</b>.</p>	No

Parameter	Description	Mandatory (Yes or No)
Policy Start Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the date from when the policy is effective. This type of characteristic is defined on the policy.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PPSTDT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b>.</p>	Yes
Policy End Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the date till when the policy is effective. This type of characteristic is defined on the policy. The system uses this characteristic while reinstating the policy.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PPENDT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b>.</p>	Yes
Base Policy Indicator Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the policy is a base policy. This type of characteristic is defined on the policy.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PRBASE</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b>.</p>	Yes
Invoice Day Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system fetches the bill period mapped to the invoice day in the <b>C1_INVOICE_DAY_BILL_PERIOD_FLG</b> lookup field while creating packaged savings billable charges for accounts.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1OFFRST</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
State of Issue Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the members are eligible for the state assessment fee. This type of characteristic is defined on the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1STISSE</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b> .	
Days to Calculate Hold Request End Date	Used to specify the number of days. It is used to calculate the hold request end date (which is hold request start date + specified number of days).	No
	<b>Note:</b> By default, the parameter value is set to <b>5</b> .	
Proration Rule Characteristic Type	Used to specify the characteristic type which you want to use to indicate how premium must be prorated. This type of characteristic is defined on the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRTNRL</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b> .	
Policy Plan Business Object Characteristic Type	Used to specify the characteristic type which you want to use to store the business object using which the policy plan must be created. This type of characteristic is defined on the policy type.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PPLNBO</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Type</b> .	
External Source System Status Reason Characteristic Type	Used to specify the characteristic type which you want to use to store the external source system status reason. Each status reason configured for a policy status is mapped to an external source system status reason. The system uses this characteristic to derive the status reason configured in ORMB while reinstating or terminating the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRSRSN</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Status Reason</b> .	

Parameter	Description	Mandatory (Yes or No)
Plan Effective Date Characteristic Type	Used to specify the characteristic type which you want to use to store the date from when the policy plan is effective. This type of characteristic is defined on the policy plan.  <b>Note:</b> By default, the parameter value is set to <b>C1PLEFDT</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Plan</b> .	Yes
Policy Type	Used to indicate the policy type. The system derives the policy business object (using which the policy must be created) from the policy type.  <b>Note:</b> By default, the parameter value is set to <b>INDIVIDUAL</b> . You can change the parameter value, if required. However, you must specify a policy type which is already defined in the system.	No
Account Identifier Type	Used to indicate the account identifier type against which you want to store the account number.  <b>Note:</b> By default, the parameter value is set to <b>C1_F_ANO</b> . You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.	No
Membership Characteristic Type	Used to specify the characteristic type which you want to use to store the membership ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive the packaged savings billable charges whose corresponding bill segments must be canceled on the policy termination.  <b>Note:</b> By default, the parameter value is set to <b>C1MMBRSH</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b> .	Yes
Add Days to Billable Charge End Date	Used to specify the number of days. It is used to calculate the billable charge end date (which is billable charge existing end date + specified number of days).	No

Parameter	Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	<p>Used to indicate the cancel reason which you want to use during packaged savings bill segment cancelation on the policy termination.</p> <p><b>Note:</b> By default, the parameter value is set to <b>MASS</b>. You can change the parameter value, if required. However, you must specify a bill cancel reason which is already defined in the system.</p>	No
Member Count Service Quantity Identifier	<p>Used to indicate the service quantity identifier (SQI) against which you want to store the number of members in the policy plan. The system uses this SQI while creating the premium billable charges.</p> <p><b>Note:</b> By default, the parameter value is set to <b>MEMCOUNT</b>. You can change the parameter value, if required. However, you must specify a service quantity identifier which is already defined in the system.</p>	No
Non-Eligibility Based Contract Type	<p>Used to specify the contract type using which you want to create the non-eligibility based contract. The system then uses this contract to create non-eligibility based billable charges.</p> <p><b>Note:</b> By default, the parameter value is set to <b>NEBFEEES</b>. You can change the parameter value, if required. However, you must specify a contract type which is already defined in the system.</p>	No
Franchise Indicator Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the parent person is a franchise. This type of characteristic is defined on the person.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1FRANCD</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Product Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the product to which the price item is mapped. This type of characteristic is defined on the price item.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PRODUC</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b>.</p>	Yes
Plan Activity Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the plan activity date. This type of characteristic is defined on the policy plan.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PLACDT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Plan</b>.</p>	Yes
Non Integrated Packaged Savings Indicator Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the packaged savings is non-integrated. This type of characteristic is defined on the billable charge.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PSNINT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p>	Yes
Override Collection Class Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the collection class. This type of characteristic is defined on the person. The system then uses this characteristic to override the collection class of all accounts where the person is the main customer.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1OVCOLL</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Override Postpone Credit Review Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the postpone credit review date. This type of characteristic is defined on the person. The system then uses this characteristic to override the postpone credit review date of all accounts where the person is the main customer.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CIOVRWDT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes
Lock Box Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the person ID. This type of characteristic is defined on the account.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CILCKBX</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p>	Yes
Auto Pay Route Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the auto pay route type. This type of characteristic is defined on the person. The system then uses this characteristic of a person to update auto pay route type for all accounts where the person is linked to the accounts through the <b>CILCKBX</b> characteristic.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CIAPAYRT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes
Hold Request Type	<p>Used to specify the hold request type using which you want to create the hold request for an account.</p> <p><b>Note:</b> By default, the parameter value is set to <b>DIASTER</b>. You can change the parameter value, if required. However, you must specify a hold request type which is already defined in the system.</p>	No

Parameter	Description	Mandatory (Yes or No)
Price Item Business Object	Used to specify the business object using which you want to create a price item.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1_PRICEITEM_BO</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	
Address Business Object	Used to specify the business object using which you want to create an address.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1-Address</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## Customer Inbound Message XML Format

**Note:** We recommend you to refer the Customer Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-CustomerStructureInboundMessage** inbound web service, you need to ensure that the customer inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)												
schema	Used to specify the tags of a customer inbound message.	Yes												
characteristics	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the characteristics tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Used to specify a list of characteristics for the customer inbound message.</td> </tr> <tr> <td>customerData</td> <td>Used to specify a list of characteristics for the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify a list of characteristics for the bill group (i.e. account).</td> </tr> <tr> <td>policyData</td> <td>Used to specify a list of characteristics for the policy.</td> </tr> <tr> <td>plan</td> <td>Used to specify a list of characteristics for the policy plan.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the characteristics tag is...	schema	Used to specify a list of characteristics for the customer inbound message.	customerData	Used to specify a list of characteristics for the person.	billGroup	Used to specify a list of characteristics for the bill group (i.e. account).	policyData	Used to specify a list of characteristics for the policy.	plan	Used to specify a list of characteristics for the policy plan.	No
If this tag is used within...	Then the purpose of the characteristics tag is...													
schema	Used to specify a list of characteristics for the customer inbound message.													
customerData	Used to specify a list of characteristics for the person.													
billGroup	Used to specify a list of characteristics for the bill group (i.e. account).													
policyData	Used to specify a list of characteristics for the policy.													
plan	Used to specify a list of characteristics for the policy plan.													
inboundMessageCharacteristic	Used to specify a characteristic for the customer inbound message.	No												
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional)												
		<p><b>Note:</b> This data is required while defining or editing an adhoc characteristic of the customer inbound message.</p>												

Tag Name	Tag Description	Mandatory (Yes or No)						
characteristicType	You can use this tag within the following tags:	Yes (Conditional)

If this tag is used within...	Then the purpose of the bo tag is...									
schema	<p>Indicates the business object using which the customer inbound message is created in the system.</p> <div data-bbox="834 1528 1151 1644" style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</p> </div>									
headerData	<p>Used to indicate the business object using which the customer inbound message should be created in the system. The valid value is:</p> <ul style="list-style-type: none"> <li>• C1- CustomerInboundMessage</li> </ul>									

Tag Name	Tag Description	Mandatory (Yes or No)
transactionType	Used to indicate the type of the transaction. The valid values are: <ul style="list-style-type: none"> <li>• <b>CHNG</b> - Used when you want to update the details of a person, account, contract, fully-insured group policy, policy plan, packaged savings, and billable charge.</li> <li>• <b>NEW</b> - Used when you want to create a person, account, contract, fully-insured group policy, policy plan, packaged savings, and billable charge.</li> <li>• <b>REIN</b> - Used when you want to reinstate a fully-insured group policy.</li> <li>• <b>TERM</b> - Used when you want to terminate a fully-insured group policy.</li> </ul>	Yes
externalTransactionType	Used to specify the corresponding transaction type used in the external source system.	No
customerStructureData	Used to specify the customer information, such as details of the person, bill group (i.e. account), fully-insured group policy, and policy plan.	Yes
customerData	Used to specify the details of the person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a person.
customerName	Used to specify the name of the person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a person.
customerType	Used to indicate the type of the person.	Yes (Conditional)
		<b>Note:</b> You must specify a value which is already defined in the <b>PER_OR_BUS_FLG</b> lookup field. It must be in the <b>Active</b> status.
		<b>Note:</b> This data is required while defining a person.

Tag Name	Tag Description	Mandatory (Yes or No)						
Id	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the Id tag is...</th> </tr> </thead> <tbody> <tr> <td>customerData</td> <td>Used to specify the identification details of the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify the identification details of the bill group (i.e. account).</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the Id tag is...	customerData	Used to specify the identification details of the person.	billGroup	Used to specify the identification details of the bill group (i.e. account).	<b>Note:</b> This data is required while defining or editing the respective information.
	If this tag is used within...	Then the purpose of the Id tag is...						
	customerData	Used to specify the identification details of the person.						
billGroup	Used to specify the identification details of the bill group (i.e. account).							
<b>Note:</b> You must specify one primary identifier for a person and account.								
IDType	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the IDType tag is...</th> </tr> </thead> <tbody> <tr> <td>Id</td> <td>Used to specify the person or account identifier type.</td> </tr> <tr> <td>parentSection</td> <td>Used to specify the person identifier type.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the IDType tag is...	Id	Used to specify the person or account identifier type.	parentSection	Used to specify the person identifier type.	<b>Note:</b> This data is required in the following scenarios: <ul style="list-style-type: none"> <li>• While defining or editing the identification details of a person and account.</li> <li>• While defining or editing a person to person relationship.</li> </ul>
	If this tag is used within...	Then the purpose of the IDType tag is...						
	Id	Used to specify the person or account identifier type.						
parentSection	Used to specify the person identifier type.							
<b>Note:</b> You must specify a person or account identifier type which is already defined in the system.								
IDValue	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the IDValue tag is...</th> </tr> </thead> <tbody> <tr> <td>Id</td> <td>Used to specify the person or account identifier.</td> </tr> <tr> <td>parentSection</td> <td>Used to indicate the person with whom you want to establish the person to person relationship.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the IDValue tag is...	Id	Used to specify the person or account identifier.	parentSection	Used to indicate the person with whom you want to establish the person to person relationship.	<b>Note:</b> This data is required in the following scenarios: <ul style="list-style-type: none"> <li>• While defining or editing the identification details of a person and account.</li> <li>• While defining or editing a person to person relationship.</li> </ul>
	If this tag is used within...	Then the purpose of the IDValue tag is...						
	Id	Used to specify the person or account identifier.						
parentSection	Used to indicate the person with whom you want to establish the person to person relationship.							

Tag Name	Tag Description	Mandatory (Yes or No)
isPrimary	Used to indicate whether the person or account identifier is a primary identifier. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> If you do not specify the value, by default, it is set to N.	
parentSection	Used to specify the details of the parent person with whom you want to establish the person's relationship.	No
relationshipType	Used to indicate how the parent person is related to the person.	Yes (Conditional)Yes (Conditional)
	<b>Note:</b> You must specify a person relationship type which is already defined in the system.	<b>Note:</b> This data is required while defining or editing a person to person relationship.
isFranchiseBillingIndicator	Used to indicate whether the parent person is the franchise. The valid values are: <ul style="list-style-type: none"> <li>• Y - If you specify the value as Y, the system will create the parent-child relationship and add the person's account or contract details in the parent person's existing statement construct.</li> <li>• N - If you specify the value as N, the system will end the parent-child relationship and the person's account or contract details in the parent person's existing statement construct.</li> </ul>	No
characteristicsList	Used to specify a characteristic for the respective entity (such as person, bill group (i.e. account), policy, or policy plan).	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.
address	You can use this tag within the following tags:	
	<b>If this tag is used within...</b>	<b>Then the purpose of the address tag is...</b>
	customerData	Used to specify the address of the person.
	billGroup	Used to specify the address of the account.
		<b>Note:</b> This data is required while defining or editing the address of the respective entity.

Tag Name	Tag Description	Mandatory (Yes or No)
addressEffDate	Used to specify the date from when the address is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the customer inbound message.</p>	<p><b>Note:</b> This data is required while editing the address of the respective entity.</p>
addressType	Used to indicate the type of address. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• <b>MAIN</b> - Indicates that the address is the person's mailing address. You can use this address type while specifying the address for the person and account.</li> <li>• <b>SEAS</b> - Indicates that the address is the person's seasonal address. You can use this address type while specifying the address for the person.</li> <li>• <b>OVRD</b> - Indicates that the address is the account's override address. You can use this address type while specifying the address for the account.</li> </ul> <p><b>Note:</b></p> <p>If you do not specify the address type, by default, it is set to <b>MAIN</b>.</p> <p>You must specify an address type which is already defined in the <b>ADDRESS_TYPE_FLG</b> lookup field. It must be in the <b>Active</b> status.</p>	<p><b>Note:</b> This data is required while editing the address of the respective entity.</p>
MailingName	Used to specify the name using which the person should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional)
		<p><b>Note:</b> This data is required while defining or editing the address of the respective entity.</p>
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
zip	Used to specify the zip code of the address.	No						
country	Used to indicate the country where the person or account is located.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the address of the respective entity.						
attentionName	Used to specify the fourth line of the address. It may contain the landmark details.	No						
email	You can use this tag within the following tags: <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the email tag is...</th> </tr> </thead> <tbody> <tr> <td>customerData</td> <td>Used to specify the email ID of the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify the email ID of the account's main customer.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the email tag is...	customerData	Used to specify the email ID of the person.	billGroup	Used to specify the email ID of the account's main customer.	No
If this tag is used within...	Then the purpose of the email tag is...							
customerData	Used to specify the email ID of the person.							
billGroup	Used to specify the email ID of the account's main customer.							
phones	You can use this tag within the following tags: <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the phones tag is...</th> </tr> </thead> <tbody> <tr> <td>customerData</td> <td>Used to specify the phone details of the person.</td> </tr> <tr> <td>billGroup</td> <td>Used to specify the phone details of the account's main customer.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the phones tag is...	customerData	Used to specify the phone details of the person.	billGroup	Used to specify the phone details of the account's main customer.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the phone details of the respective entity.
If this tag is used within...	Then the purpose of the phones tag is...							
customerData	Used to specify the phone details of the person.							
billGroup	Used to specify the phone details of the account's main customer.							
phoneType	Used to indicate the type of phone. <b>Note:</b> You must specify a phone type which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the phone details of the respective entity.						
phoneValue	Used to specify the phone number of the person or account's main customer.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the phone details of the respective entity.						

Tag Name	Tag Description	Mandatory (Yes or No)
billGroup	Used to specify the account details of a person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a bill group (i.e. account).
customerClass	Used to indicate the customer class to which the account belongs. <b>Note:</b> You must specify a customer class which is already defined in the system.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a bill group (i.e. account).
billCycle	Used to indicate the bill cycle for the account. <b>Note:</b> You must specify a bill cycle which is already defined in the system and added in the <b>C1-BILLCYCLE</b> feature configuration.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a bill group (i.e. account).
division	Used to indicate the division to which the account belongs. <b>Note:</b> You must specify a division which is already defined in the system.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a bill group (i.e. account).
billRouteType	Used to indicate how the account's bill must be sent to the main customer. <b>Note:</b> You must specify a bill route type which is already defined in the system.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a bill group (i.e. account).
billGroupID	Used to specify the account number. It is stored as the primary account identifier in the system. <b>Note:</b> The system stores the value against the account identifier type which is specified in the <b>Account Identifier Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a bill group (i.e. account).
bankNumber	Used to indicate the bank account number through which the automatic payment must be done.	No
depositoryFinancialInstitution	Used to indicate the depository financial institution.	No
accountType	Used to indicate the type of the account. <b>Note:</b> You must specify an account type which is already defined in the <b>EXT_TYPE_FLG</b> lookup field. It must be in the <b>Active</b> status.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
billAddressSource	<p>Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are:</p> <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul> <p><b>Note:</b> You must specify a value which is already defined in the <b>BILL_ADDR_SRCE_FLG</b> lookup field. It must be in the <b>Active</b> status.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining a bill group (i.e. account).</p>						
billToName	Used to specify the name using which you want to override the main customer's mailing name.	No						
policyData	Used to specify the details of the fully-insured group policy.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing a fully-insured group policy.</p>						
policyNumber	Used to specify the policy number.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing a fully-insured group policy.</p>						
endDate	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="574 1178 1157 1587"> <thead> <tr> <th data-bbox="574 1178 846 1262">If this tag is used within...</th> <th data-bbox="846 1178 1157 1262">Then the purpose of the endDate tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="574 1262 846 1377">policyData</td> <td data-bbox="846 1262 1157 1377">Used to specify the date till when the policy is effective.</td> </tr> <tr> <td data-bbox="574 1377 846 1587">packageSavings</td> <td data-bbox="846 1377 1157 1587">Used to specify the date till when the packaged savings is effective on the policy. This date is then used as the end date of the billable charge.</td> </tr> </tbody> </table> <p><b>Note:</b> The end date cannot be earlier than the start date. You must specify the date in the YYYY-MM-DD format.</p>	If this tag is used within...	Then the purpose of the endDate tag is...	policyData	Used to specify the date till when the policy is effective.	packageSavings	Used to specify the date till when the packaged savings is effective on the policy. This date is then used as the end date of the billable charge.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining a fully-insured group policy.</p>
If this tag is used within...	Then the purpose of the endDate tag is...							
policyData	Used to specify the date till when the policy is effective.							
packageSavings	Used to specify the date till when the packaged savings is effective on the policy. This date is then used as the end date of the billable charge.							

Tag Name	Tag Description	Mandatory (Yes or No)
renewalDate	Used to specify the date when you want to renew the fully-insured group policy.	Yes (Conditional)
	<b>Note:</b> On renewing a fully-insured group policy, the status of the policy is changed to the status which is specified in the <b>Status on Policy Renewal</b> field of the respective inbound message type.	<b>Note:</b> This data is required while renewing a fully-insured group policy.
policyName	Used to specify the description for the fully-insured group policy.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a fully-insured group policy.
terminateDate	Used to specify the date when you want to terminate the fully-insured group policy.	Yes (Conditional)
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. The termination date cannot be earlier than the policy start date.  On terminating a fully-insured group policy, the status of the policy is changed to the status which is specified in the <b>Status on Policy Termination</b> field of the respective inbound message type.	<b>Note:</b> This data is required while terminating a fully-insured group policy.
statusReason	Used to indicate the reason why you want to terminate or reinstate the fully-insured group policy.	Yes (Conditional)
	<b>Note:</b> You must specify a reason which is defined for the respective status specified in the inbound message type.	<b>Note:</b> This data is required while terminating or reinstating a fully-insured group policy.
policyEffectiveDate	Used to specify the date from when the policy is effective.	Yes (Conditional)
	<b>Note:</b> The policy start date cannot be later than the policy end date.	<b>Note:</b> This data is required while defining a fully-insured group policy.
packageSavings	Used to specify a list of packaged savings offered on the policy.	No

Tag Name	Tag Description	Mandatory (Yes or No)
packageSavings	Used to specify the packaged savings offered on the policy.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The packaged savings is configured as a price item in the system. You must specify a price item which is already defined in the system.</p> <p>On processing the customer inbound message, one billable charge is created for each packaged savings offered on the policy. The policy ID is stored as a characteristic on such billable charge.</p>	<p><b>Note:</b> This data is required while defining or editing the packaged savings offered on the fully-insured group policy.</p>
startDate	Used to specify the date from when the packaged savings is offered on the policy. This date is then used as the start date of the billable charge.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The start date cannot be later than the end date.</p> <p>You must specify the date in the YYYY-MM-DD format.</p>	<p><b>Note:</b> This data is required while defining or editing the packaged savings offered on the fully-insured group policy.</p>
nonintegratedInd	Used to indicate whether the packaged savings is non-integrated. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b></p> <p>The value is stored as a characteristic on the billable charge. The system stores the value against the characteristic type which is specified in the <b>Non Integrated Packaged Savings Indicator Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p> <p>If you do not specify the value, by default, it is set to N.</p>	<p><b>Note:</b> This data is required while editing the packaged savings offered on the fully-insured group policy.</p>
plan	Used to specify the details of the policy plan.	Yes (Conditional)
		<p><b>Note:</b> This data is required while defining or editing a policy plan.</p>
planCode	Used to specify the plan number.	Yes (Conditional)
	<p><b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Plan Code Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p>	<p><b>Note:</b> This data is required while defining or editing a policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
coverageType	<p>Used to specify the coverage type.</p> <p><b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Coverage Type Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p>	No
productCode	<p>Used to indicate the product to which the price item is mapped.</p> <p><b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Product Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p>	No
rateCoverageType	<p>Used to specify the contract type using which the contract should be created for the policy plan. The system checks whether a price item already exists where the specified rate coverage type, coverage type, and plan code are defined on the price item as characteristics. If a price item exists with these characteristics, the system maps the price item to the policy plan. However, if a price item does not exist with these characteristics, the system create a new price item, concatenates the rate coverage type and plan code to generate the price item code, and then maps the price item to the policy plan.</p> <p><b>Note:</b></p> <p>You must specify a value which is already defined in the <b>RATE_COVRG_CNTRACT_TYPE</b> lookup field. It must be in the <b>Active</b> status.</p> <p>The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Rate Coverage Type Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p> <p>A new price item is created using the business object which is specified in the <b>Price Item Business Object</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing a policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
planEffectiveDate	Used to specify the date from when the policy plan is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The value is also stored as a characteristic on the policy plan. The system stores the value against the characteristic type which is specified in the <b>Plan Effective Date Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p> <p>The policy plan start date cannot be later than the policy plan end date.</p> <p>The policy plan start date cannot be earlier than the policy start date or later than the policy end date.</p>	<p><b>Note:</b> This data is required while defining a policy plan.</p>
planEndDate	Used to specify the date till when the policy plan is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The policy plan end date cannot be earlier than the policy plan start date.</p> <p>The policy plan end date cannot be earlier than the policy start date or later than the policy end date.</p>	<p><b>Note:</b> This data is required while defining a policy plan.</p>
planActivityDate	Used to specify the date when the activity is scheduled for the policy plan.	No
	<p><b>Note:</b> The value is stored as a characteristic on the policy plan. The system stores the value against the characteristic type which is specified in the <b>Plan Activity Date Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p>	

The following table lists and describes the tags which are available in the customer inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the customer inbound message.
statusReason	Indicates the reason why the status of the customer inbound message is changed.
c1ExternalTransactionId	Indicates the transaction in the external source system which resulted in the customer inbound message.
c1ExternalBatchId	Indicates the external batch job or batch run number through which the customer inbound message is created.
c1ExternalSourceId	Displays the external source system ID.
person	At present, this tag is not supported in a customer inbound message.

Tag Name	Tag Description						
statusDateTime	Displays the date and time when the status of the customer inbound message is changed in the system.						
creationDateTime	Displays the date and time when the customer inbound message is created in the system.						
version	<p>This tag appears within the following parent tags:</p> <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the customer inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the customer inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the customer inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the customer inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the customer inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the customer inbound message.						
searchCharacteristicValue	At present, this tag is not supported in a customer inbound message.						
messageID	Displays the inbound message ID.						
status	Displays the status of the customer inbound message.						
createDateTime	Displays the date and time when the customer inbound message is created in the system.						
ORMBcreateDateTime	Displays the date and time when the customer inbound message is created in the system.						
policyStatus	<p>Indicates the status of the policy. The valid values are:</p> <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Pending Cancellation</li> <li>• Canceled</li> <li>• Pending Reinstatement</li> <li>• Reinstated</li> <li>• Pending Termination</li> <li>• Terminated</li> </ul>						
toDoRetry	<p>Displays the information about the retry option used for the customer inbound message.</p> <p><b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the customer inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the customer inbound message from <b>Rejected</b> to <b>Pending</b> .						
numberOfRetries	Indicates the number of times the retry option is used for the customer inbound message.						

Tag Name	Tag Description
currentErrorState	Indicates the status to which the customer inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> <li>REJECTED</li> </ul>
isRetried	Indicates whether the retry option is used to change the status of the customer inbound message. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## Sample Customer Inbound Message

Using the below example, you can do the following:

- Create the customer and bill groups (i.e. accounts) for a fully-insured group health insurance business
- Create a fully-insured group policy along with package savings and policy plan

Customer	Bill Group (i.e. Account)	Policy	Policy Plan
Williams, Tom	126535	WT1256678	HCBILLING1

```

## Membership Inbound Message

On calling the **C1-MembershipInboundMessage** web service, a membership inbound message is created in the **Pending** status. When the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch is invoked, the system checks whether there are any membership inbound messages in the **Pending** status. If there is a membership inbound message in the **Pending** status, the system validates the membership inbound message. If a membership inbound message is successfully validated, it is processed further and the following entities are created or updated in the system based on the available information in the membership inbound message:

- Membership
- Main Subscriber
- Dependent Person
- Billable Charge (for membership premium)

In addition, the system enables you to submit the membership inbound messages for validation and processing from the user interface. On submitting a membership inbound message, the system validates the membership inbound message.

If a membership inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the membership inbound message is changed to **Processed**. If any error occurs while validating or processing a membership inbound message, the status of the membership inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected membership inbound message. The system can reprocess a membership inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the membership inbound message from **Rejected** to **Pending**. The **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch will then reconsider the membership inbound message for validation and processing.

You can also configure the system such that the batch can automatically retry to process the rejected membership inbound messages. However, it will attempt to retry when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a membership inbound message depends on the value defined in the **Maximum Retry** parameter.

## Prerequisites

To use the membership inbound message feature, you need to do the following:

- Define the required membership inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define values for the required parameters in the **C1-INMEMEVAL**, **C1-INMEMEPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the **Membership BO (C1MEMBRO)** characteristic for the policy type which is specified in the **C1-CINMSGPRC** algorithm.
- Define predefined values for the **C1RATCOV**, **C1TRNCAT**, **C1INAPPC**, **C1CVTIER**, and **C1PRODTY** characteristic types.
- Define values for the **C1-SourceSystemLookup** extendable lookup.
- Define values for the **PER\_OR\_BUS\_FLG**, **ADDRESS\_TYPE\_FLG**, and **RATE\_COVRG\_CNTRACT\_TYPE** lookup fields.
- Define the required person identifier types, account identifier types, characteristic types, phone types, service quantity identifiers, and contract relationship types in the application.
- Define values for the **C1\_INVOICE\_DAY\_BILL\_PERIOD\_FLG** lookup field.

**Note:** Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

- Define predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

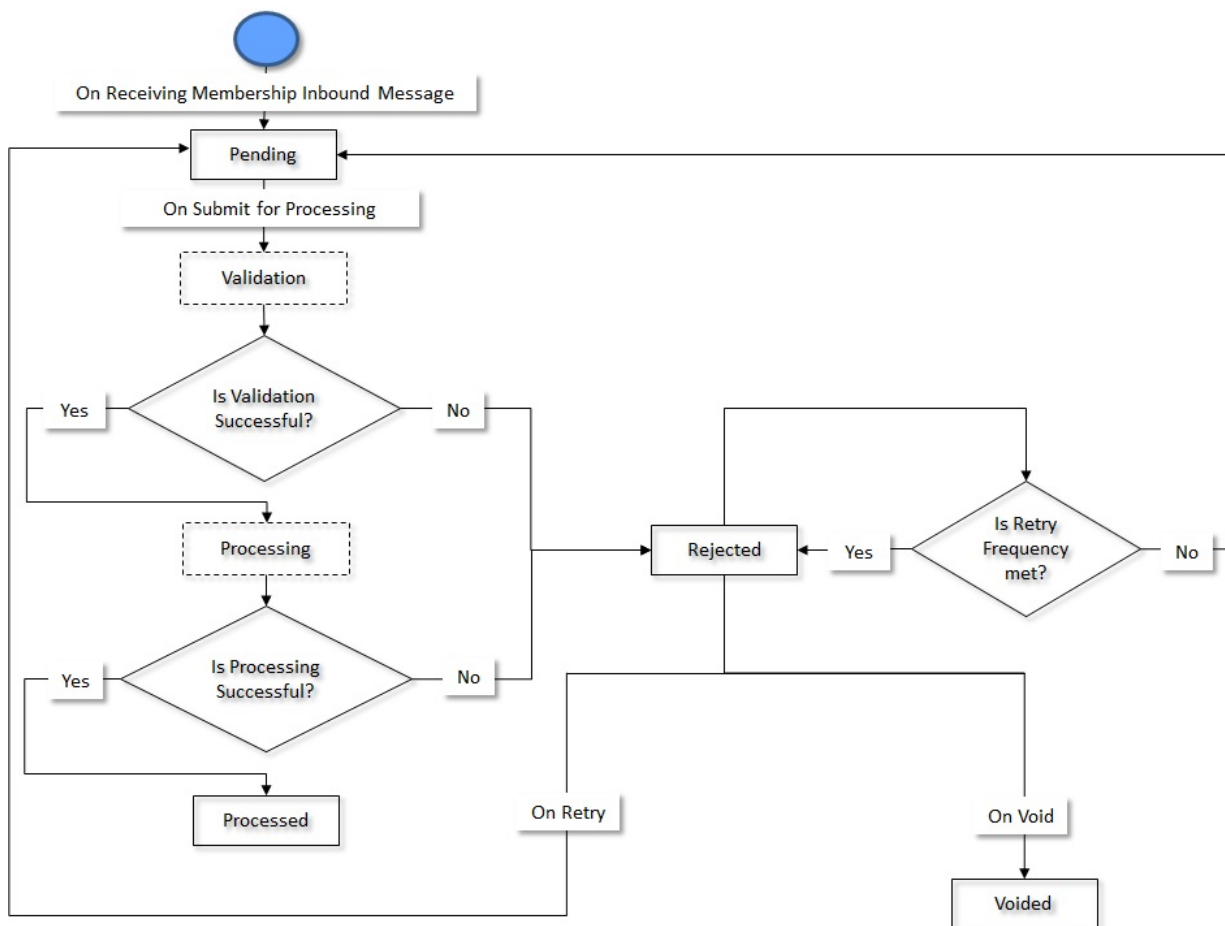

- Define bill cancel reasons which you want to use on premium bill segment cancelation during the membership termination.

**Membership Inbound Message Status Transition through User Interface**

The following figure graphically indicates how a membership inbound message moves from one status to another when it is validated and processed through the user interface:

**Membership Inbound Message Status Transition through a Batch Process**

The following figure graphically indicates how a membership inbound message moves from one status to another when it is validated and processed through the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch:

## Algorithms Used in C1-MemberInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-MemberInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to <a href="#">C1-AT-RQJ</a> on page 1960.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455.
	Enter	C1-INMEMEVAL	C1-INMEMEVAL	Refer to <a href="#">C1-INMEMEVAL</a> on page 1998.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455.
	Enter	C1-INMEMEPRC	C1-INMEMEPRC	Refer to <a href="#">C1-INMEMEPRC</a> on page 1999.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to <a href="#">C1-TODORETRY</a> on page 1970.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to <a href="#">C1-TDCRINMSG</a> on page 1970.
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1454.
Processed	-	-	-	-
Voided	-	-	-	-

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-INMEMEVAL

This algorithm is invoked when the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch is executed and when you click the **Submit for Processing** button. It validates the membership inbound message which is in the **Pending** status. It checks the following:

- Whether the primary identifier is specified for the person.
- Whether the policy with the specified policy number and source system combination exists in the system.
- Whether the policy plan exists in the policy.
- Whether the bill group ID (i.e. account identifier) is specified in the member plan coverage information.
- Whether the **Plan Code** characteristic type (as mentioned in the **Plan Code Characteristic Type** parameter) exists in the member plan coverage information.
- Whether the **Rate Coverage Type** characteristic type (as mentioned in the **Rate Coverage Type Characteristic Type** parameter) exists in the member plan coverage information and a valid value is specified for this characteristic type.

If any of the above validation fails, the status of the membership inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Plan Code Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.  <b>Note:</b> By default, the parameter value is set to <b>C1HPLNID</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	Yes
Rate Coverage Type Characteristic Type	Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.  <b>Note:</b> By default, the parameter value is set to <b>C1RATCOV</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	Yes
Account Identifier Type	Used to indicate the account identifier type. The system derives the account using the account identifier type and account identifier combination.  <b>Note:</b> By default, the parameter value is set to <b>C1_F_ANO</b> . You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.	No

### C1-INMEMEPRC

This algorithm is invoked once a membership inbound message is successfully validated. It processes the membership inbound message and accordingly does the following:

- Adds or updates a membership in a policy plan
- Adds a dependent in a membership
- Updates the details of the main subscriber or dependent person
- Creates main subscriber or dependent person

- Associates a contract with a membership
- Creates a membership premium billable charge for a coverage period

If the processing fails due to any reason, the status of the membership inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Subscriber Member Business Object	Used to specify the business object using which you want to create the main subscriber or dependent person in the system.  <b>Note:</b> By default, the parameter value is set to <b>C1-HCCustomer</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	No
Description on Bill	Used to specify the description that you want to display on the premium billable charge.  <b>Note:</b> By default, the parameter value is set to <b>Premium</b> .	No
Premium Amount Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) against which you want to store the premium amount. The system uses this SQI while creating the premium billable charges.  <b>Note:</b> By default, the parameter value is set to <b>PREMAMT</b> . You can change the parameter value, if required. However, you must specify a service quantity identifier which is already defined in the system.	No
Recurring Flag	Used to indicate that you want to create recurring bill segments at the intervals defined in the bill period.  <b>Note:</b> By default, the parameter value is set to <b>BP</b> .	No

Parameter	Description	Mandatory (Yes or No)
Plan Code Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1HPLNID</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b>.</p>	Yes
Rate Coverage Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1RATCOV</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b>.</p>	Yes
Policy Plan Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy plan ID. This type of characteristic is defined on the contract. The system uses this characteristic to derive the active contract associated with the memberships of the policy plan.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1POLPLN</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Contract</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Main Subscriber Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the person is the main subscriber in a membership. This type of characteristic is defined on the person. The system checks whether the value for this characteristic (specified in the membership inbound message) matches the value specified in the <b>Main Subscriber Characteristic Value</b> parameter. If so, it considers the person as the main subscriber. Otherwise, the person is considered as a dependent person.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1DEPCD</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes
Main Subscriber Characteristic Value	<p>Used to specify the value for the characteristic type which is specified in the <b>Main Subscriber Characteristic Type</b> parameter.</p> <p><b>Note:</b> By default, the parameter value is set to <b>MEM</b>.</p>	No
Account Identifier Type	<p>Used to indicate the account identifier type. The system derives the account using the account identifier type and account identifier combination.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1_F_ANO</b>. You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.</p>	No
Bill Segment Cancel Reason	<p>Used to indicate the cancel reason which you want to use during premium bill segment cancelation on the membership termination.</p> <p><b>Note:</b> By default, the parameter value is set to <b>MASS</b>. You can change the parameter value, if required. However, you must specify a bill cancel reason which is already defined in the system.</p>	No

Parameter	Description	Mandatory (Yes or No)
Invoice Day Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system fetches the bill period mapped to the invoice day in the <b>C1_INVOICE_DAY_BILL_PERIOD_FLG</b> lookup field while creating premium billable charges for accounts.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1OFFRST</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p>	Yes
Membership Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the membership ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive premium billable charges whose corresponding bill segments must be canceled due to change in membership coverage period.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CIMMBRSH</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p>	Yes
Membership Business Object Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the business object using which the membership must be created. This type of characteristic is defined on the policy type.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CIMEMBRO</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Type</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Transaction Type Category Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the type of the transaction (i.e. whether the transaction is related to premium, fee, and so on). This type of characteristic is defined on the billable charge. The system uses this characteristic to derive premium billable charges.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1TRNCAT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p>	Yes
Transaction Type Category Characteristic Value	<p>Used to specify the value for the characteristic type which is specified in the <b>Transaction Type Category Characteristic Type</b> parameter.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CMPREM</b>.</p>	No
Inactive Policy Plan Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the policy plan is inactive. This type of characteristic is defined on the contract. The system uses this characteristic to derive contracts associated with the memberships of policy plan .</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1INAPPC</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Contract</b>.</p>	Yes
Coverage Tier Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the coverage tier to which the membership belongs. This type of characteristic is defined on the membership.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1CVTIER</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Membership</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Membership Termination Status	<p>Used to indicate the status to which you want to transition the membership when the membership is terminated.</p> <p><b>Note:</b> By default, the parameter value is set to <b>TERMINATE</b>. You can change the parameter value, if required. However, you must specify a status which is already defined in the lifecycle of the <b>C1-Membership</b> business object.</p>	No
Medical Rate Coverage Type	<p>Used to specify a medical contract type. The system evaluates whether the rate coverage type specified in the membership inbound message is a medical contract type using this parameter value.</p> <p><b>Note:</b> By default, the parameter value is set to <b>M</b>. You can change the parameter value, if required. However, you must specify a value which is already defined in the <b>RATE_COVRG_CNTRACT_TYPE</b> lookup field.</p>	No
Policy Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the policy ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive the packaged savings billable charge when the membership coverage period is changed.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1POLICY</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p>	Yes
Product Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the type of the product. This type of characteristic is defined on the price item. The system uses this characteristic to derive packaged savings billable charges whose corresponding bill segments must be canceled due to change in membership coverage period.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PRODTY</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Product Type Characteristic Value	Used to specify the value for the characteristic type which is specified in the <b>Product Type Characteristic Type</b> parameter.	No
	<b>Note:</b> By default, the parameter value is set to <b>PACKSAV</b> .	
Policy Status	Used to specify the status of the policy. If the parameter value is specified and if the parameter value matches the policy status, the system validates whether the membership start and end dates fall within the policy plan start and end dates.	No
	<b>Note:</b> You must specify a status which is already defined in the lifecycle of the <b>C1-Policy</b> business object.	
Address Business Object	Used to specify the business object using which you want to create an address.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1-Address</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

### F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## Membership Inbound Message XML Format

### Note:

We recommend you to refer the Membership Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

If a characteristic is defined for a person using the characteristic type specified in the **Main Subscriber Characteristic Type** parameter of the **C1-INMEMEPRC** algorithm and its value is set to the one specified in the **Main Subscriber Characteristic Value** parameter of the **C1-INMEMEPRC** algorithm, then the person is added as the main subscriber in the membership. Otherwise, the person is added as a dependent person in the membership.

Before calling the **C1-MembershipInboundMessage** inbound web service, you need to ensure that the membership inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)								
schema	Used to specify the tags of a membership inbound message.	Yes								
characteristics	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the characteristics tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Used to specify a list of characteristics for the membership inbound message.</td> </tr> <tr> <td>memberData</td> <td>Used to specify a list of characteristics for the person.</td> </tr> <tr> <td>memberPlanCoverages</td> <td>Used to specify a list of characteristics for the membership.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the characteristics tag is...	schema	Used to specify a list of characteristics for the membership inbound message.	memberData	Used to specify a list of characteristics for the person.	memberPlanCoverages	Used to specify a list of characteristics for the membership.	No
If this tag is used within...	Then the purpose of the characteristics tag is...									
schema	Used to specify a list of characteristics for the membership inbound message.									
memberData	Used to specify a list of characteristics for the person.									
memberPlanCoverages	Used to specify a list of characteristics for the membership.									
inboundMessageCharacteristic	Used to specify a characteristic for the membership inbound message.	No								

Tag Name	Tag Description	Mandatory (Yes or No)						
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing an adhoc characteristic of the membership inbound message.						
characteristicType	You can use this tag within the following tags: <table border="1" data-bbox="594 590 1203 1703"> <thead> <tr> <th data-bbox="594 590 938 737">If this tag is used within...</th> <th data-bbox="938 590 1203 737">Then the purpose of the characteristicType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="594 737 938 1041">inboundMessageCharacteristic</td> <td data-bbox="938 737 1203 1041">Used to specify the characteristic type. Id	Used to specify the person identifier.									
newPrimaryID	Used to specify the primary person identifier.									
mainSubscriber	Used to indicate the main subscriber who is related to the dependent person.									
isPrimary	<p>Used to indicate whether the person identifier is a primary identifier. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to N.</p>	No								
newPrimaryID	Used when you want to change the primary identifier of the main subscriber or dependent person.	No								
mainSubscriber	Used to specify the primary identifier of the main subscriber.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when you are adding dependent person in a membership.</p>								

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicsList	Used to specify a characteristic for the respective entity (i.e. person or membership)	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.
address	Used to specify the address details of the main subscriber or dependent person.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the address of a main subscriber or dependent person.
addressEffDate	Used to specify the date from when the address is effective for the main subscriber or dependent person. <b>Note:</b> You must specify the date in the YYYY-MM-DD format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the membership inbound message.	Yes (Conditional) <b>Note:</b> This data is required while editing the address of a main subscriber or dependent person.
addressType	Used to indicate whether the address is the person's mailing or seasonal address. The valid values are: <ul style="list-style-type: none"> <li><b>MAIN</b> - Indicates that the address is the person's mailing address.</li> <li><b>SEAS</b> - Indicates that the address is the person's seasonal address.</li> </ul> <b>Note:</b> If you do not specify the address type, by default, it is set to <b>MAIN</b> . You must specify an address type which is already defined in the <b>ADDRESS_TYPE_FLG</b> lookup field. It must be in the <b>Active</b> status.	Yes (Conditional) <b>Note:</b> This data is required while editing the address of a main subscriber or dependent person.
MailingName	Used to specify the override mailing name for the main subscriber or dependent person.	No

Tag Name	Tag Description	Mandatory (Yes or No)
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the address of a main subscriber or dependent person.
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
country	Used to indicate the country where the main subscriber or dependent person is located.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the address of a main subscriber or dependent person.
attentionName	Used to specify the fourth line of the address. It may contain the landmark details.	No
phones	Used to specify the phone details of the main subscriber or dependent person.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the phone details of a main subscriber or dependent person.
phoneType	Used to indicate the type of the phone. <b>Note:</b> You must specify a phone type which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the phone details of a main subscriber or dependent person.

Tag Name	Tag Description	Mandatory (Yes or No)
phoneValue	Used to specify the phone number of the main subscriber or dependent person.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing the phone details of a main subscriber or dependent person.
policyData	Used to specify information about the policy and its plan for which you want to define or edit the membership.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a membership.
policyNumber	Used to specify the policy number.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a membership.
memberPlanCoverages	Used to specify the details of the membership.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a membership.
billGroup	Used to indicate the account on which you want to create the membership premium billable charges.	No
planCode	Used to specify the plan number. <b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Plan Code Characteristic Type</b> parameter of the <b>C1-INMEMEPRC</b> algorithm.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a membership.
coverageType	Used to specify the coverage type.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
rateCoverageType	<p>Used to specify the contract type. The system finds the contract of the specified contract type on the account and associates it with the membership.</p> <p><b>Note:</b> You must specify a contract type which is already defined in the <b>RATE_COVRG_CNTRACT_TYPE</b> lookup field. It must be in the <b>Active</b> status.</p> <p>The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Rate Coverage Type Characteristic Type</b> parameter of the <b>C1-INMEMEPRC</b> algorithm.</p> <p>The system derives the price item where the specified rate coverage type and plan code are defined as characteristics. The system then derives the policy plan using the derived policy ID and price item. It also checks whether the start date of the policy plan is earlier than or equal to the membership start date and the policy plan end date is later than or equal to the membership end date.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing a membership.</p>						
startDate	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="594 1035 1198 1864"> <thead> <tr> <th data-bbox="594 1035 857 1119">If this tag is used within...</th> <th data-bbox="857 1035 1198 1119">Then the purpose of the startDate tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="594 1119 857 1577">memberPlanCoverages</td> <td data-bbox="857 1119 1198 1577"> <p>Used to specify the date from when the membership is effective.</p> <p><b>Note:</b> The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.</p> </td> </tr> <tr> <td data-bbox="594 1577 857 1864">premiumRateList</td> <td data-bbox="857 1577 1198 1864"> <p>Used to specify the start date of the coverage period.</p> <p><b>Note:</b> The coverage period start date cannot be earlier than the membership start date and later than the coverage period end date.</p> </td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the startDate tag is...	memberPlanCoverages	<p>Used to specify the date from when the membership is effective.</p> <p><b>Note:</b> The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.</p>	premiumRateList	<p>Used to specify the start date of the coverage period.</p> <p><b>Note:</b> The coverage period start date cannot be earlier than the membership start date and later than the coverage period end date.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required in the following scenarios:</p> <ul style="list-style-type: none"> <li>• While defining or editing a membership</li> <li>• While creating or editing a membership premium billable charge</li> </ul>
If this tag is used within...	Then the purpose of the startDate tag is...							
memberPlanCoverages	<p>Used to specify the date from when the membership is effective.</p> <p><b>Note:</b> The membership start date cannot be later than the membership end date. If this tag is used within...	Then the purpose of the endDate tag is...							
memberPlanCoverages	<p>Used to specify the date till when the membership is effective.</p> <p><b>Note:</b> The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.</p>							
premiumRateList	<p>Used to specify the end date of the coverage period.</p> <p><b>Note:</b> The coverage period end date cannot be later than the membership end date and earlier than the coverage period start date.</p>							
productCode	Used to indicate the product to which the price item is mapped.	No						
premiumRates	Used to specify the premium details of the membership.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating or editing a membership premium billable charge.</p>						
premiumRateList	Used to specify the premium for a coverage period.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while creating or editing a membership premium billable charge.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
premiumAmount	Used to specify the premium amount for the coverage period.	Yes (Conditional)
		<b>Note:</b> This data is required while creating or editing a membership premium billable charge.

The following table lists and describes the tags which are available in the membership inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
c1InboundMessage	Displays the inbound message ID.						
c1InboundMessageType	Indicates the inbound message type using which the membership inbound message is created in the system.						
boStatus	Displays the status of the membership inbound message.						
statusReason	Indicates the reason why the status of the membership inbound message is changed.						
c1SourceSystem	Indicates the external system from where the membership inbound message is received.						
c1ExternalTransactionId	Indicates the transaction in the external source system which resulted in the membership inbound message.						
c1ExternalBatchId	Indicates the external batch job or batch run number through which the membership inbound message is created.						
c1ExternalSourceId	Displays the external source system ID.						
person	At present, this tag is not supported in a membership inbound message.						
statusDateTime	Displays the date and time when the status of the membership inbound message is changed in the system.						
creationDateTime	Displays the date and time when the membership inbound message is created in the system.						
version	This tag appears within the following parent tags: <table border="1" data-bbox="683 1488 1463 1833"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the membership inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the membership inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the membership inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the membership inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the membership inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the membership inbound message.						
searchCharacteristicValue	At present, this tag is not supported in the membership inbound message.						

Tag Name	Tag Description
messageID	Displays the inbound message ID.
status	Displays the status of the membership inbound message.
createDateTime	Displays the date and time when the membership inbound message is created in the system.
ORMBcreateDateTime	Displays the date and time when the membership inbound message is created in the system.
toDoRetry	Displays the information about the retry option used for the membership inbound message.  <b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the membership inbound message is validated and processed either through the user interface or batch process.
retryDateTime	Displays the date and time when the retry option is used to change the status of the membership inbound message from <b>Rejected</b> to <b>Pending</b> .
numberOfRetries	Indicates the number of times the retry option is used for the membership inbound message.
currentErrorState	Indicates the status to which the membership inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> <li>REJECTED</li> </ul>
isRetried	Indicates whether the retry option is used to change the status of the membership inbound message. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## ASO Customer Inbound Message

---

On calling the **C1-ASOCustomerInboundMessage** web service, you can create an ASO customer inbound message using an ASO customer inbound message type. You can create an ASO customer inbound message type using the **ASO Customer Inbound Message Type (C1-ASOCustomerInboundMsgType)** business object. The ASO customer inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the ASO customer inbound message should be created in the system. You must specify the **ASO Customer Inbound Message (C1-ASOCustomerInboundMessage)** business object in the ASO customer inbound message type.
- **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Health Care Customer (C1-HCCustomer)** business object in the ASO customer inbound message type.
- **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Health Care Account (C1-HCAccount)** business object in the ASO customer inbound message type.
- **Policy Type** - The policy type indicates the policy business object using which the policy should be created in the system. You must specify the **ASO Policy (C1-ASOPolicy)** business object in the policy type.
- **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the ASO customer inbound message type.

The **C1-ASOCustomerInboundMessage** web service enables you to do the following:

- Create or edit a parent customer
- Create or edit the bill groups of the parent customer
- Create or edit the accounts of a bill group
- Create or edit auto pay instructions of an account
- Create or edit the self-funded policies of a bill group
- Create or edit the plans of a self-funded policy

The following table describes how the system behaves when the respective entity information is given in an ASO customer inbound message:

Entity	System Behavior
Parent Customer	The system creates the person whose person type is set to <b>PG</b> .
Bill Group	The system creates the person whose person type is set to <b>BG</b> . The bill group is related to the parent customer using the person relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.
Account	While creating an account, the system defines the <b>Invoice Type</b> characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.
Policy	If the policy information is given for a bill group, the system creates the self-funded policy using the policy type which is specified in the ASO customer inbound message type. In addition, it does the following: <ul style="list-style-type: none"> <li>• Associates the bill group with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLLNG</b> feature configuration</li> <li>• Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLLNG</b> feature configuration</li> </ul>
Policy Plan	The system creates the plan for the self-funded policy.

On calling the **C1-ASOCustomerInboundMessage** web service, an ASO customer inbound message is created in the **Pending** status. When the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is executed, the system checks whether there are any ASO customer inbound messages in the **Pending** status. If there is an ASO customer inbound message in the **Pending** status, the system validates the ASO customer inbound message. If an ASO customer inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the ASO customer inbound messages for validation and processing from the user interface. On submitting an ASO customer inbound message, the system validates the ASO customer inbound message. If an ASO customer inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the ASO customer inbound message is changed to **Processed**. If any error occurs while validating or processing an ASO customer inbound message, the status of the ASO customer inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected ASO customer inbound message. The system can reprocess an ASO customer inbound message when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the ASO customer inbound message from **Rejected** to **Pending**. The **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch will then reconsider and reprocess the ASO customer inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected ASO customer inbound messages. However, it will attempt to retry when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess an ASO customer inbound message depends on the value defined in the **Maximum Retry** parameter.

How to setup the <b>C1-ASOBLLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLLNG Feature Configuration</a> on page 3215

## Prerequisites

To use the ASO customer inbound message feature, you need to do the following:

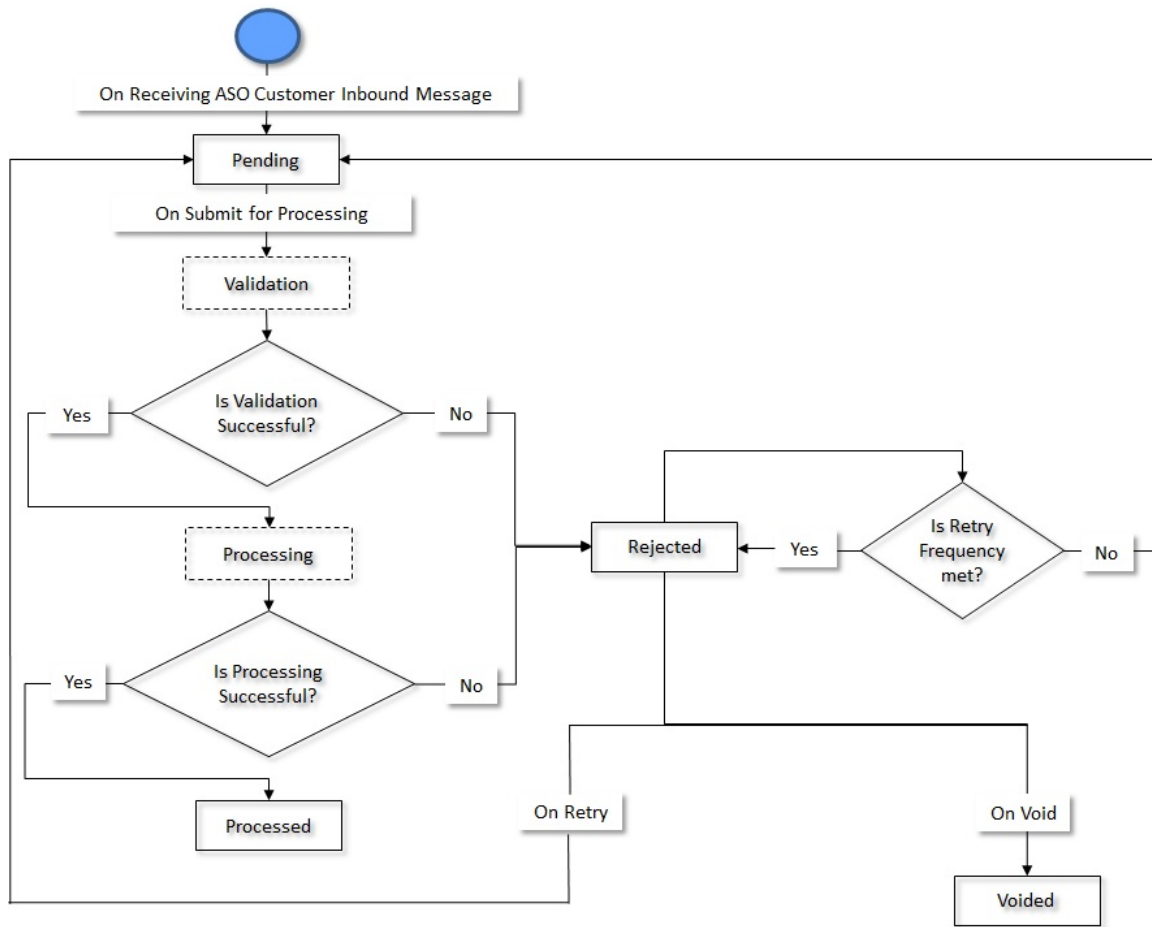

- Define the required ASO customer inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-ASOCINVAL**, **C1-ASOCINPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the values for the **ADDRESS\_TYPE\_FLG** and **RUNOUT\_ADM\_OPT\_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Parent Customer Policy Person Role
  - Invoice Type Characteristic Type
- Define the required divisions, person identifier types, account identifier types, phone types, person relationship types, customer classes, bill cycles, bill route types, auto pay route types, auto pay sources, policy person roles, price items, and characteristic types in the application.
- Set the batch control type of the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## ASO Customer Inbound Message Status Transition through User Interface

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the user interface:

### ASO Customer Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch:

### Algorithms Used in C1-ASOCustomerInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-ASOCustomerInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to <a href="#">C1-AT-RQJ</a> on page 1960.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455.
	Enter	C1-ASOCINVAL	C1-ASOCINVAL	Refer to <a href="#">C1-ASOCINVAL</a> on page 2029.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455.
	Enter	C1-ASOCINPRC	C1-ASOCINPRC	Refer to <a href="#">C1-ASOCINPRC</a> on page 2030.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to <a href="#">C1-TODORETRY</a> on page 1970.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to <i>CI-TDCRINMSG</i> on page 1970.
Processed	-	-	-	-
Voided	-	-	-	-

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-ASOCINVAL

This algorithm is invoked when you execute the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the ASO customer inbound message which is in the **Pending** status. It checks the following:

- Whether the parent customer information exists in the ASO customer inbound message.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.

- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-ASOCINPRC

This algorithm is invoked once an ASO customer inbound message is successfully validated. It processes the ASO customer inbound message and accordingly creates or updates a person (parent customer and bill group), account (including automatic payment options), policy and policy plan.

If the processing fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## ASO Customer Inbound Message XML Format

**Note:** We recommend you to refer the ASO Customer Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the ASO customer inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)						
schema	Used to specify the tags of an ASO customer inbound message.	Yes						
bo	Used to indicate the business object using which the ASO customer inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> <li>C1-ASOCustomerInboundMessage</li> </ul>	Yes						
messageType	<p>You can use this tag within the following tags:</p> <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system.  <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</td> </tr> <tr> <td>headerData</td> <td>Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.</td> </tr> </tbody> </table> <p><b>Note:</b> You must specify a valid ASO customer inbound message type which is in the <b>Active</b> status.</p>	If this tag is used within...	Then the purpose of the messageType tag is...	schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system.  <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.	headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.	Yes
If this tag is used within...	Then the purpose of the messageType tag is...							
schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system.  <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.							
headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.							

Tag Name	Tag Description	Mandatory (Yes or No)								
sourceSystem	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="607 302 1224 898"> <thead> <tr> <th data-bbox="607 302 873 386">If this tag is used within...</th> <th data-bbox="873 302 1224 386">Then the purpose of the sourceSystem tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="607 386 873 638">schema</td> <td data-bbox="873 386 1224 638">           Indicates the external system from where the ASO customer inbound message is received.   <b>Note:</b> The system refers the value from within the <b>headerData</b> tag.         </td> </tr> <tr> <td data-bbox="607 638 873 785">headerData</td> <td data-bbox="873 638 1224 785">Used to indicate the external system from where the ASO customer inbound message is received.</td> </tr> <tr> <td data-bbox="607 785 873 898">policyData</td> <td data-bbox="873 785 1224 898">Used to indicate the source system from where the policy is originated.</td> </tr> </tbody> </table> <p><b>Note:</b> You must specify a source system which is already defined in the <b>C1-SourceSystemLookup</b> extendable lookup. It must be in the <b>Active</b> status.</p>	If this tag is used within... Account Relationship Type	Main Customer															
Receive Copy of Bill	Y															
Bill Format	Detailed															
Receives Notification	Y															
Number of Bill Copies	1															
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account.	Yes (Conditional)														
	<b>Note:</b> The value is stored in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASO BLLNG</b> feature configuration. You must specify a value which is already defined in the predefined characteristic type.	<b>Note:</b> This data is required while defining or editing an account.														
customerClass	Used to indicate the customer class to which the account belongs.	Yes (Conditional)														
	<b>Note:</b> You must specify a customer class which is already defined in the system.	<b>Note:</b> This data is required while defining an account.														
billCycle	Used to indicate the bill cycle for the account.	No														
	<b>Note:</b> You must specify a bill cycle which is already defined in the system.															

Tag Name	Tag Description	Mandatory (Yes or No)
billRouteType	Used to indicate how the account's bill must be sent to the main customer.	Yes (Conditional)
	<b>Note:</b> You must specify a bill route type which is already defined in the system.	<b>Note:</b> This data is required while defining the bill routing information for the main customer.
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while defining the bill routing information for the main customer.
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date.	Yes (Conditional)
	<b>Note:</b> The priority cannot be less than or equal to zero.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> <li>• <b>CIDD</b> - Indicates that you want to directly debit the main customer's bank account.</li> <li>• <b>CIPA</b> - Indicates that you want to send a payment advice to the main customer.</li> </ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	<b>Note:</b> You must specify an auto pay route type which is already defined in the system.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<b>Note:</b> You must specify an auto pay source which is already defined in the system.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire.	Yes (Conditional)
	<b>Note:</b> You must specify the month in the MM format.	<b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.
expiryYear	Used to specify the year when the tender type of the auto pay source will expire.	Yes (Conditional)
	<b>Note:</b> You must specify the year in the YYYY format.	<b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.
name	Used to specify the name of the person as it appears in the financial institution's system.	No

Tag Name	Tag Description	Mandatory (Yes or No)
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.	No
	<b>Note:</b> The maximum withdrawal amount cannot be less than zero.	
comments	Used to specify additional information about the auto pay instruction.	No
policyData	Used to specify the details of the self-funded policy.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a self-funded policy.
policyNumber	Used to specify the policy number.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a self-funded policy.
policyDescription	Used to specify the description for the self-funded policy	Yes (Conditional)
		<b>Note:</b> This data is required while defining a self-funded policy.
runOutEndDate	Used to specify the date when the runout period of the self-funded policy ends.	No
	<b>Note:</b> The runout end date cannot be earlier than the policy end date. You must specify the date in the YYYY-MM-DD format.	

Tag Name	Tag Description	Mandatory (Yes or No)
runOutAdminOption	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> <li>• NROA</li> <li>• PERC</li> </ul> <p><b>Note:</b> At present, this data is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. You must specify a value which is already defined in the <b>RUNOUT_ADM_OPT_FLG</b> lookup field. It must be in the <b>Active</b> status.</p>	No
policyPersons	Used to associate a person with the policy.	Yes (Conditional)
		<b>Note:</b> This data is required while associating a person with the policy.
policyPerRole	Used to indicate the role of the person in the policy.	Yes (Conditional)
	<b>Note:</b> You must specify a policy person role which is already defined in the system.	<b>Note:</b> This data is required while associating a person with the policy.
planData	Used to specify the details of the policy plan.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a policy plan.
planNumber	Used to specify the plan number.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a policy plan.
planCode	Used to specify the price item which you want to associate with the policy plan.	Yes (Conditional)
	<b>Note:</b> You must specify a price item which is already defined in the system.	<b>Note:</b> This data is required while defining or editing a policy plan.

The following table lists and describes the tags which are available in the ASO customer inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
InboundMessage	Displays the inbound message ID.						
boStatus	Displays the status of the ASO customer inbound message.						
statusReason	Indicates the reason why the status of the ASO customer inbound message is changed.						
person	At present, this tag is not supported in an ASO customer inbound message.						
statusDateTime	Displays the date and time when the status of the ASO customer inbound message is changed in the system.						
creationDateTime	Displays the date and time when the ASO customer inbound message is created in the system.						
searchCharacteristicValue	At present, this tag is not supported in an ASO customer inbound message.						
version	<p>This tag appears within the following parent tags:</p> <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the ASO customer inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the ASO customer inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the ASO customer inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the ASO customer inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.						
toDoRetry	<p>Displays the information about the retry option used for the ASO customer inbound message.</p> <p><b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the ASO customer inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the ASO customer inbound message from <b>Rejected</b> to <b>Pending</b> .						
numberOfRetries	Indicates the number of times the retry option is used for the ASO customer inbound message.						
currentErrorState	<p>Indicates the status to which the ASO customer inbound message is transitioned when its validation or processing fails. The valid value is:</p> <ul style="list-style-type: none"> <li>REJECTED</li> </ul>						
isRetried	<p>Indicates whether the retry option is used to change the status of the ASO customer inbound message. The valid values are:</p> <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## Sample ASO Customer Inbound Message

Using the below example, you can do the following:

- Create the parent customer and bill groups for the self-funded health insurance business
- Create the accounts for the bill groups
- Create the self-funded policies for the bill groups

Parent Customer	Bill Group	Account	Policy
UK OIL AND GAS CORP	UK OIL AND GAS ACRE	Standard	Active Employee Health Insurance Policy
		Retention	Retiree Employee Health Insurance Policy
	UK OIL AND GAS COBRA	Standard	Active COBRA Employee Health Insurance Policy
		Retention	Retiree COBRA Employee Health Insurance Policy

```

## Health Care Inbound Message

On calling the **C1-HCInboundMessage** web service, you can create a health care inbound message using a health care inbound message type. You can create a health care inbound message type using the **Health Care Inbound Message Type (C1-HCInboundMsgType)** business object. The health care inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. You must specify the **Health Care Inbound Message (C1-HCInboundMessage)** business object in the health care inbound message type.
- **Customer Registration Type** - The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. The customer registration type helps the system to determine:
  - **Customer Registration Business Object** - The business object using which the customer registration object should be created in the system. You must specify the **Customer Registration - Health Care (C1-CustomerRegistrationHC)** business object in the customer registration type.
  - **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Person BO (C1\_PERSON\_BO)** business object in the customer registration type.
  - **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Account BO (C1-AccountBO)** business object in the customer registration type.

- **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the customer registration type.
- **Membership Business Object** - The business object using which the membership should be created in the system. You must specify the **Membership (C1-Membership)** business object in the customer registration type.
- **Address Business Object** - The business object using which the effective dated address should be created in the system. You must specify the **Address (C1-Address)** business object in the customer registration type.

While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

The **C1-HCInboundMessage** web service enables you to do the following depending on the person type and the category to which the policy type belongs:

Person Type	Policy Category	Enables you to:
Parent Customer	Self-Funded	<ul style="list-style-type: none"> <li>• Create or edit a parent customer</li> <li>• Create or edit a bill group of the parent customer</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of a bill group</li> <li>• Create or edit the policies of a bill group</li> </ul>
	Fully-Insured Group	<ul style="list-style-type: none"> <li>• Create or edit a parent customer</li> <li>• Create or edit a bill group of the parent customer</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of the parent customer and bill group</li> <li>• Create or edit the policies of the parent customer and bill group</li> <li>• Create or edit the plans of the policies</li> <li>• Associate one or more pricing rule types with a policy plan</li> <li>• Create or edit the pricing rules of the policy plans</li> <li>• Terminate, reinstate, or renew policies of the parent customer and bill group</li> </ul>

Person Type	Policy Category	Enables you to:
Bill Group	Self-Funded	<ul style="list-style-type: none"> <li>• Create or edit a bill group</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of the bill group</li> <li>• Create or edit the policies of the bill group</li> </ul>
	Fully-Insured Group	<ul style="list-style-type: none"> <li>• Create or edit a bill group</li> <li>• Create the derivation and pricing parameters for the bill group</li> <li>• Create or edit the accounts of the bill group</li> <li>• Create or edit the policies of the bill group</li> <li>• Create or edit the plans of the policies</li> <li>• Associate one or more pricing rule types with a policy plan</li> <li>• Create or edit the pricing rules of the policy plans</li> <li>• Terminate, reinstate, or renew policies of the bill group</li> </ul>
Any Other Person Type	-	<ul style="list-style-type: none"> <li>• Create or edit a person</li> <li>• Credit or edit the accounts of the person</li> <li>• Create or edit the memberships of the policy plans</li> <li>• Add or remove members from a membership</li> <li>• Create or edit the one-time or recurring pass-through billable charges for a membership</li> </ul>

The following table describes how the system behaves when the respective entity information is given in a health care inbound message:

Entity	System Behavior
Person	<p>The system uses the <b>C1-PERSTYPE</b> feature configuration to decide whether the person type specified in the health care inbound message represents <b>Parent Customer</b> or <b>Bill Group</b>. If the person type specified in the health care inbound message matches the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type of the <b>C1-PERSTYPE</b> feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the related person information is given for a bill group and the person type of the related person is <b>Parent Customer</b>, then the bill group is related to the parent customer using the person relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p> <p><b>Note:</b> The system supports the <b>Add</b> and <b>Update</b> operations for all entities except the derivation and pricing parameters for the bill group. Through the health care inbound message, each time, the system creates a new derivation and pricing parameters record for the bill group and does not update the existing derivation and pricing parameters record of the bill group.</p>
Account	<p>While creating an account, the system defines the <b>Invoice Type</b> characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p>

Entity	System Behavior
Policy	<p>If the fully-insured group policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> <li>• Associates the bill group with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> <li>• Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> </ul> <p>However, if the fully-insured group policy information is given for a parent customer, the system does the following:</p> <ul style="list-style-type: none"> <li>• Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> </ul> <p>If the self-funded policy information is given for a bill group, the system does the following:</p> <ul style="list-style-type: none"> <li>• Associates the bill group with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> <li>• Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLNG</b> feature configuration</li> </ul> <p>On renewing a fully-insured group policy, the system removes the end date from the policy and stamps the renewal date against the policy.</p>
	<p><b>Note:</b> You can renew a policy where the policy category is set to <b>Self-Funded</b> from the user interface and not through a health care inbound message. However, you can renew a policy where the policy category is set to <b>Fully-Insured Group</b> through a health care inbound message and not from the user interface.</p>
	<p>On terminating a fully-insured group policy, the system updates the end date of the following entities with the termination date:</p> <ul style="list-style-type: none"> <li>• Policy</li> <li>• Policy Person</li> <li>• Policy Plan</li> <li>• Membership</li> <li>• Membership Person</li> <li>• Pricing Rule</li> </ul> <p>However, before updating the end dates, the system stores the original end date in the <b>ORG_END_DT</b> column of the respective table for all the above entities. The status of the policy is changed to the status which is specified in the <b>Policy Termination Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p> <p>On reinstating a fully-insured group policy, the system updates the end date of the above entities with the original end date. In addition, the status of the policy is changed to the status which is specified in the <b>Policy Reinstatement Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p>

Entity	System Behavior
Policy Plan	While creating a policy plan, the system requires either the price item or at least one pricing rule type. The system allows you to associate only those pricing rule types where the category is set to <b>Age Based</b> , <b>Tier Based</b> , or <b>Pass-Through Billable Charge</b> .
Pricing Rule Type	The system does not allow you to create or update a pricing rule type through a health care inbound message.
Pricing Rule	<p>The system allows you to define and edit the age-based and tier-based pricing rules of the policy plan. Note that the system supports the <b>Replace</b> operation and not the <b>Update</b> operation when you are editing these pricing rules through a health care inbound message.</p> <p><b>Note:</b></p> <p>You can define and edit the age-based and tier-based pricing rules through a health care inbound message and not from the user interface.</p> <p>You can create the following pricing rules from the user interface and not through a health care inbound message:</p> <ul style="list-style-type: none"> <li>• Claim</li> <li>• Specific Stop-Loss</li> <li>• Aggregate Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• One-Time Flat Fees</li> <li>• Recurring Flat Fees</li> <li>• Ancillary</li> <li>• Discount Arrangement</li> <li>• Level Funded</li> </ul>
Pass-Through Billable Charge	If the price item, account identifier type, and account identifier are given in the billable charge information, the system directly creates an SQI based billable charge when you process the health care inbound message. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to <b>Pass-Through Billable Charge</b> . If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). If so, the system creates an SQI based billable charge using the respective pass-through billable charge pricing rule type.

**Note:**

We recommend you to create or update the following through separate health care inbound messages:

- Entities, such as parent customer, bill group, accounts, policies, and policy plans
- Pricing rules
- Membership, member persons, and pass-through billable charges

On calling the **C1-HCInboundMessage** web service, a health care inbound message is created in the **Pending** status. When the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch is executed, the system checks whether there are any health care inbound messages in the **Pending** status. If there is a health care inbound message in the **Pending** status, the system validates the inbound message. If the health care inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the health care inbound messages for validation and processing from the user interface. On submitting a health care inbound message, the system validates the health care inbound message. If a health care inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

If the person type is **Parent Customer**, the customer registration object is created in the **Complete** status. However, if the person type is **Bill Group**, the customer registration object is created in the **Bill Group Approved** status. The policies are created in the **In Force/Active** status and the pricing rules are created in the **Active** status. Finally, the status of the health care inbound message is changed to **Processed**.

**Note:** The above status transition is mentioned for a customer registration object based on the assumption that the data sent through the health care inbound message will be pre-approved and does not require any approval in the system.

If any error occurs while validating or processing a health care inbound message, the status of the health care inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected health care inbound message. The system can reprocess a health care inbound message when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the health care inbound message from **Rejected** to **Pending**. The **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch will then reconsider and reprocess the health care inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected health care inbound messages. However, it will attempt to retry when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a health care inbound message depends on the value defined in the **Maximum Retry** parameter.

At present, if a customer registration object is created through a health care inbound message, you cannot edit the customer registration object from the user interface. You can only edit such customer registration objects through a health care inbound message.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to setup the <b>C1-ASOBLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLNG Feature Configuration</a> on page 3215
How to setup the <b>C1-PERSTYPE</b> feature configuration	<a href="#">Setting the C1_PERSTYPE Feature Configuration</a> on page 3256

### **Prerequisites**

To use the health care inbound message feature, you need to do the following:

- Define the required customer registration types in the system.

**Note:** The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

- Define the required health care inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-HCINVAL**, **C1-HCINPROC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** and **C1-ExtLookRetTypeRateOpt** extendable lookups.
- Define the values for the **HOUSE\_TYPE**, **PER\_OR\_BUS\_FLG**, **NAME\_TYPE\_FLG**, **ADDRESS\_TYPE\_FLG**, **BILL\_ADDR\_SRCE\_FLG**, **BILL\_FORMAT\_FLG**, and **RUNOUT\_ADM\_OPT\_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Parent Customer Policy Person Role
  - Invoice Type Characteristic Type
  - Policy Termination Status
  - Policy Reinstatement Status
  - Default Rate Option – Flat
  - Default Rate Option – Percentage
  - Age Based Parameter
  - Membership Inactive Status
  - Member Person Inactive Status
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
  - Bill Group Person Type
  - Parent Person Type
- Define the required person identifier types, account identifier types, person relationship types, characteristic types, phone types, customer classes, bill cycles, collection classes, divisions, bill route types, charge types, currencies, bill periods, invoice frequencies, distribution codes, auto pay route types, auto pay sources, account relationship types, policy types, policy person roles and contract relationship types in the application.
- Define the values for the **C1\_INVOICE\_DAY\_BILL\_PERIOD\_FLG** lookup field.

**Note:** Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

- Define the required predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language

- Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination.
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement.
- Define the bill cancel reasons which you want to use when the premium bill segment is canceled during the policy or membership termination.
- Define the required exchange rates in the system.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to <a href="#">C1-TDCRINMSG</a> on page 1970.
Processed	-	-	-	-
Voided	-	-	-	-

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-HCINVAL

Health Care Inbound Message - Validation

This algorithm is invoked when you execute the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the health care inbound message which is in the **Pending** status. It checks the following:

- Whether the details of the parent customer are given in the bill group information.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-HCINPROC

This algorithm is invoked once a health care inbound message is successfully validated. It processes the health care inbound message and creates or updates the parent customers, bill groups (including derivation and pricing parameters for the bill group), accounts, self-funded or fully-insured group policies, policy plans, memberships, member persons, pass-through billable charges, and pricing rules. In addition, it allows you to terminate, reinstate, and renew a fully-insured group policy.

If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. The memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.

If the processing fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## Health Care Inbound Message XML Format

**Note:** We recommend you to refer the Health Care Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the health care inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health care inbound message.	Yes
bo	Used to indicate the business object using which the health care inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"> <li>• C1-HCInboundMessage</li> </ul>	Yes

Tag Name	Tag Description	Mandatory (Yes or No)												
messageType	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 268 1174 756"> <thead> <tr> <th data-bbox="505 268 721 352">If this tag is used within...</th> <th data-bbox="721 268 1174 352">Then the purpose of the messageType tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 352 721 604">schema</td> <td data-bbox="721 352 1174 604"> <p>Indicates the health care inbound message type using which the health care inbound message is created in the system.</p> <div data-bbox="727 506 1167 590" style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</p> </div> </td> </tr> <tr> <td data-bbox="505 604 721 756">headerData</td> <td data-bbox="721 604 1174 756"> <p>Used to specify the health care inbound message type using which the health care inbound message should be created in the system.</p> </td> </tr> </tbody> </table> <div data-bbox="500 779 1179 856" style="border: 1px solid black; padding: 2px;"> <p><b>Note:</b> You must specify a valid health care inbound message type which is in the <b>Active</b> status.</p> </div>	If this tag is used within... 		<b>Note:</b> This data is required while defining or editing the respective information.
membershipPersonCharacteristics	Used to specify a list of characteristics for the member person.	No
benefitData	Used to specify information about the Medicare benefit.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a benefit.
benefitDataList	Used to indicate the order in which the benefit charge should be created for the membership.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a benefit.
benefitStatus	Used to indicate the status of the Medicare benefit. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Discarded</li> <li>• Inactive</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a benefit.
benefitSourceFlag	Used to indicate the source from where the Medicare benefit is received. The valid values are: <ul style="list-style-type: none"> <li>• Centers for Medicare and Medicaid Services</li> <li>• State</li> </ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
benefitSubTypeFlag	Used to indicate the type of Medicare benefit. The valid values are: <ul style="list-style-type: none"> <li>Late Enrollment Penalty</li> <li>Low Income Subsidy</li> <li>Part A-Inpatient Hospital Coverage</li> <li>Part B-Outpatient Hospital Coverage</li> <li>Part D-Medicare Prescription Drug Coverage</li> </ul>	No
	<b>Note:</b> The list includes only those benefit sub types which are defined in the <b>BENEFIT_SUB_TYPE_FLG</b> lookup field.	
planBenefitPackageId	Used to indicate the medicare plan benefit package (i.e. 800 series plan) which is applicable for Medicare Part A, Part B, or Part D benefit.	Yes (Conditional)
	<b>Note:</b> You must specify a plan benefit package Id when the benefit sub type is set to <b>Part A-Inpatient Hospital Coverage</b> , <b>Part B-Outpatient Medical Coverage</b> , or <b>Part D-Medicare Prescription Drug Coverage</b> .	
benefitAmount	Used to specify the low income subsidy or late enrollment penalty amount for Medicare Part D.	No
	<b>Note:</b> You must specify a benefit amount when the benefit sub type is set to <b>Late Enrollment Penalty</b> or <b>Low Income Subsidy</b> .	
billableChargeData	Used to specify the details for a billable charge. Ideally, this piece of information should be specified in the main subscriber details and not in the member person details.	Yes (Conditional)
	<b>Note:</b> This data is required while defining or editing a billable charge of a membership.	
accountIdType	Used to specify the account identifier type.	Yes (Conditional)
	<b>Note:</b> You must specify an account identifier type which is already defined in the system.	
		<b>Note:</b> This data is required when the <b>accountIdValue</b> tag contains the account identifier.

Tag Name	Tag Description	Mandatory (Yes or No)						
accountIdValue	Used to indicate the account for which you want to create the billable charge.	Yes (Conditional)  <b>Note:</b> This data is required when the <b>accountIdType</b> tag contains the account identifier type.						
chargeType	Used to indicate the type of billable charge that you want to create.  <b>Note:</b> You must specify a charge type which is already defined in the system.	No						
priceItemCode	You can use this tag within the following tags:  <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the priceItemCode tag is...</th> </tr> </thead> <tbody> <tr> <td>billableChargeData</td> <td>Used to indicate the price item for which you want to create the billable charge.</td> </tr> <tr> <td>planData</td> <td>Used to indicate the price item which you want to associate with the policy plan.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the priceItemCode tag is...	billableChargeData	Used to indicate the price item for which you want to create the billable charge.	planData	Used to indicate the price item which you want to associate with the policy plan.	Yes (Conditional)  <b>Note:</b> This data is required while defining or editing a billable charge of a membership.
If this tag is used within...	Then the purpose of the priceItemCode tag is...							
billableChargeData	Used to indicate the price item for which you want to create the billable charge.							
planData	Used to indicate the price item which you want to associate with the policy plan.							
description	You can use this tag within the following tags:  <table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the description tag is...</th> </tr> </thead> <tbody> <tr> <td>billableChargeData</td> <td>Used to specify the description for the billable charge.</td> </tr> <tr> <td>policyData</td> <td>Used to specify the description for the policy.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the description tag is...	billableChargeData	Used to specify the description for the billable charge.	policyData	Used to specify the description for the policy.	Yes (Conditional)  <b>Note:</b> This data is required while defining the respective information.
If this tag is used within...	Then the purpose of the description tag is...							
billableChargeData	Used to specify the description for the billable charge.							
policyData	Used to specify the description for the policy.							
recurringMethod	Used to indicate whether recurring bill segments must be created for the billable charge at the specified intervals. The valid values are: <ul style="list-style-type: none"> <li>• <b>BP</b> - Used when you want to create recurring bill segments at the intervals defined in the bill period.</li> <li>• <b>FR</b> - Used when you want to create recurring bill segments at the set invoice frequency.</li> </ul>	No						
billPeriod	Used to indicate the bill period using which you want to determine the intervals at which the recurring bill segments must be created.  <b>Note:</b> You must specify a bill period which is already defined in the system.	Yes (Conditional)  <b>Note:</b> This data is required when the <b>recurringMethod</b> tag contains <b>BP</b> .						

Tag Name	Tag Description	Mandatory (Yes or No)
frequency	Used to indicate the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional)  <b>Note:</b> This data is required when the <b>recurringMethod</b> tag contains <b>FR</b> .
	<b>Note:</b> You must specify an invoice frequency which is already defined in the system.	
billAfterDt	Used to specify the date after which the bill must be generated for the billable charge.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
billableChargeLines	Used to specify the details for a pass through line in the billable charge.	Yes
descriptionOnBill	Used to specify the information about the pass through line that should appear on the bill.	Yes
currencyCode	Used to indicate the currency in which you want to charge the amount.	Yes
	<b>Note:</b> You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	
chargeAmount	Used to specify the charge amount.	Yes
showOnBillSw	Used to indicate whether the charge should appear on the person's printed bill. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	No
	<b>Note:</b> If you do not specify the value, by default, it is set to <b>true</b> .	
appearInSummarySw	Used to indicate whether the charge should be included in the summary line. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>	No
	<b>Note:</b> If you do not specify the value, by default, it is set to <b>false</b> .	
distributionCode	Used to specify the distribution code which indicates the GL account associated with the charge.	No
	<b>Note:</b> You must specify a distribution code which is already defined in the system.	

Tag Name	Tag Description	Mandatory (Yes or No)
accountData	Used to specify the account details of a person.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing an account.
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account. <b>Note:</b> The value is stored in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration. You must specify a value which is already defined in the predefined characteristic type.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing an account.
customerClass	Used to indicate the customer class to which the account belongs. <b>Note:</b> You must specify a customer class which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining an account.
billCycle	Used to indicate the bill cycle for the account. <b>Note:</b> You must specify a bill cycle which is already defined in the system.	No
billLeadDays	Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0). <b>Note:</b> If you do not specify the value, by default, it is set to zero(0).	No
currency	Used to indicate the currency in which you want to bill the account. <b>Note:</b> You must specify a currency which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining an account.
setUpDate	Used to specify the date when the account was first created. This is purely informational. <b>Note:</b> You must specify the date in the YYYY-MM-DD format. If you do not specify the value, by default, it is set to the current date.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
acctUsageFlg	<p>Used to indicate the category to which the account belongs. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>INVC</b> - Indicates that the account will be used to bill charges of the usage accounts.</li> <li>• <b>SETL</b> - Indicates that the account will be used only for settlement purposes.</li> <li>• <b>USAG</b> - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually.</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>USAG</b>.</p>	No						
comments	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 793 1170 1041"> <thead> <tr> <th data-bbox="505 793 719 877">If this tag is used within...</th> <th data-bbox="719 793 1170 877">Then the purpose of the comments tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 877 719 961">accountData</td> <td data-bbox="719 877 1170 961">Used to specify additional information about the account.</td> </tr> <tr> <td data-bbox="505 961 719 1041">autoPayDetails</td> <td data-bbox="719 961 1170 1041">Used to specify additional information about the auto pay instruction.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the comments tag is...	accountData	Used to specify additional information about the account.	autoPayDetails	Used to specify additional information about the auto pay instruction.	No
If this tag is used within...	Then the purpose of the comments tag is...							
accountData	Used to specify additional information about the account.							
autoPayDetails	Used to specify additional information about the auto pay instruction.							
deferAutoPayDt	Used to specify the date till when you want to hold the automatic payment process for the account.	No						
collectionClass	<p>Used to specify the collection class using which you want to control the account's debt.</p> <p><b>Note:</b></p> <p>If you do not specify the value, by default, it is set to the collection class which is specified in the customer class of the account.</p> <p>You must specify a collection class which is already defined in the system.</p>	No						

Tag Name	Tag Description	Mandatory (Yes or No)						
billRouteType	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the billRouteType tag is...</th> </tr> </thead> <tbody> <tr> <td>accountData</td> <td>Used to indicate how the account's bill must be sent to the main customer.</td> </tr> <tr> <td>accountPersonRouting</td> <td>Used to indicate how the account's bill must be sent to the linked person.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the billRouteType tag is...	accountData	Used to indicate how the account's bill must be sent to the main customer.	accountPersonRouting	Used to indicate how the account's bill must be sent to the linked person.	<b>Note:</b> This data is required while defining or editing the respective information.
	If this tag is used within...	Then the purpose of the billRouteType tag is...						
	accountData	Used to indicate how the account's bill must be sent to the main customer.						
accountPersonRouting	Used to indicate how the account's bill must be sent to the linked person.							
<b>Note:</b> You must specify a bill route type which is already defined in the system.								
billAddressSource	You can use this tag within the following tags:	Yes (Conditional)						
	<table border="1"> <thead> <tr> <th>If this tag is used within...</th> <th>Then the purpose of the billAddressSource tag is...</th> </tr> </thead> <tbody> <tr> <td>accountData</td> <td>Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are:                             <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul> </td> </tr> <tr> <td>accountPersonRouting</td> <td>Used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. The valid values are:                             <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul> </td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the billAddressSource tag is...	accountData	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>	accountPersonRouting	Used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>	<b>Note:</b> This data is required while defining the respective information.
	If this tag is used within...	Then the purpose of the billAddressSource tag is...						
	accountData	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>						
accountPersonRouting	Used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>							
<b>Note:</b> You must specify a value which is already defined in the <b>BILL_ADDR_SRCE_FLG</b> lookup field. It must be in the <b>Active</b> status.								
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional)						
		<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.						

Tag Name	Tag Description	Mandatory (Yes or No)
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date.	Yes (Conditional)
	<b>Note:</b> The priority cannot be less than or equal to zero.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> <li>• <b>C1DD</b> - Indicates that you want to directly debit the main customer's bank account.</li> <li>• <b>C1PA</b> - Indicates that you want to send a payment advice to the main customer.</li> </ul>	No
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	<b>Note:</b> You must specify an auto pay route type which is already defined in the system.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<b>Note:</b> You must specify an auto pay source which is already defined in the system.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire.	Yes (Conditional)
	<b>Note:</b> You must specify the month in the MM format.	<b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.

Tag Name	Tag Description	Mandatory (Yes or No)												
expiryYear	Used to specify the year when the tender type of the auto pay source will expire.	Yes (Conditional)  <b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.												
	<b>Note:</b> You must specify the year in the YYYY format.													
name	Used to specify the name of the person as it appears in the financial institution's system.	No												
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.	No												
	<b>Note:</b> The maximum withdrawal amount cannot be less than zero.													
accountPerson	Used to specify information about the person (other than main customer) to whom you want to link the account.	Yes (Conditional)  <b>Note:</b> This data is required while linking a person to an account.												
	<p><b>Note:</b></p> <p>The system, by default, adds the person (for whom the account information is given in the health care inbound message) as the main customer of the account. While linking the person as main customer of the account, the system sets the following attributes:</p> <table border="1"> <thead> <tr> <th>Attribute Name</th> <th>Attribute Value</th> </tr> </thead> <tbody> <tr> <td>Financially Responsible</td> <td>Y</td> </tr> <tr> <td>Account Relationship Type</td> <td>Main Customer</td> </tr> <tr> <td>Receive Copy of Bill</td> <td>Y</td> </tr> <tr> <td>Bill Format</td> <td>Detailed</td> </tr> <tr> <td>Receives Notification</td> <td>Y</td> </tr> <tr> <td>Number of Bill Copies</td> <td>1</td> </tr> </tbody> </table>		Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y
Attribute Name	Attribute Value													
Financially Responsible	Y													
Account Relationship Type	Main Customer													
Receive Copy of Bill	Y													
Bill Format	Detailed													
Receives Notification	Y													
Number of Bill Copies	1													
accountRelationshipType	Used to indicate how the person is related to the account.	Yes (Conditional)  <b>Note:</b> This data is required while linking a person to an account.												
	<b>Note:</b> You must specify an account relationship type which is already defined in the system.													

Tag Name	Tag Description	Mandatory (Yes or No)
isFinanciallyResponsible	<p>Used to indicate whether the person is financially responsible for the account. The valid values are:</p> <ul style="list-style-type: none"> <li>• True</li> <li>• False</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>False</b>.</p>	No
personAddressOverride	Used to specify the account override address for the linked person.	No
postal	Used to specify the postal code of the address.	No
accountPersonRouting	Used to specify the bill routing information for the linked person.	Yes (Conditional) <p><b>Note:</b> This data is required while defining or editing the bill routing information of a linked person.</p>
shouldReceiveCopyOfBill	<p>Used to indicate whether the linked person should receive a copy of the account's bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>N</b>.</p>	No
billFormat	<p>Used to indicate whether the linked person should receive the detailed or summary bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• D</li> <li>• S</li> </ul> <p><b>Note:</b></p> <p>You must specify a value which is already defined in the <b>BILL_FORMAT_FLG</b> lookup field. It must be in the <b>Active</b> status.</p> <p>If you do not specify the value, by default, it is set to <b>D</b> when the linked person should receive a copy of the account's bill.</p> <p>This information is ignored when the <b>shouldReceiveCopyOfBill</b> tag contains <b>N</b>.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
numberOfBillCopies	<p>Used to indicate the number of copies of the bill which the linked person must receive.</p> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>1</b> when the linked person should receive a copy of the account's bill. This information is ignored when the <b>shouldReceiveCopyOfBill</b> tag contains <b>N</b>.</p>	No
receivesNotification	<p>Used to indicate whether the linked person should receive letters (i.e. notifications) initiated by collection, write-off, and overdue events. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to <b>N</b>. This information is ignored when the <b>shouldReceiveCopyOfBill</b> tag contains <b>N</b>.</p>	No
policyData	Used to specify the details of the policy.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing a policy.</p>
policyType	<p>Used to indicate the policy type using which you are defining the policy.</p> <p><b>Note:</b> You must specify a policy type which is already defined in the system. If you want to create a fully-insured group policy, you must specify a policy type where the policy category is set to <b>Fully-Insured Group</b>. However, if you want to create a self-funded policy, you must specify a policy type where the policy category is set to <b>Self-Funded</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing a policy.</p>
runOutEndDate	<p>Used to specify the date when the runout period of the self-funded policy ends.</p> <p><b>Note:</b> The runout end date cannot be earlier than or equal to the policy end date. This data is required when you are defining a policy using a policy type where the policy category is set to <b>Self-Funded</b>.</p>	No

Tag Name	Tag Description	Mandatory (Yes or No)
runOutAdminOption	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Percentage of Claim</li> </ul> <p><b>Note:</b> At present, this data is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This data is required when you are defining a policy using a policy type where the policy category is set to <b>Self-Funded</b>.</p>	No
renewalDate	<p>Used to specify the date when you want to renew the fully-insured group policy.</p> <p><b>Note:</b> You can renew a self-funded policy only from the user interface. You must specify the date in the YYYY-MM-DD format.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while renewing a fully-insured group policy.</p>
policyPersons	<p>Used to indicate the person that you want to associate with the policy.</p>	Yes
policyPerRole	<p>Used to indicate the role of the person in the policy.</p> <p><b>Note:</b> You must specify a policy person role which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while associating a person with the policy.</p>
terminationInformation	<p>Used to specify the termination details of the fully-insured group policy.</p> <p><b>Note:</b> At present, you cannot terminate a self-funded policy either from the user interface or through a health care inbound message.</p>	No
terminateDate	<p>Used to specify the date when you want to terminate the fully-insured group policy.</p> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format. The termination date cannot be earlier than the policy start date. On terminating a policy, the status of the policy is changed to the status which is specified in the <b>Policy Termination Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while terminating a fully-insured group policy.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
terminationReason	Used to indicate the reason why you want to terminate the fully-insured group policy.	Yes (Conditional)
	<b>Note:</b> You must specify the status reason which is already defined for the status specified in the <b>Policy Termination Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.	<b>Note:</b> This data is required while terminating a fully-insured group policy.
reinstateInformation	Used to specify the reinstatement details of the fully-insured group policy.	No
	<b>Note:</b> At present, you cannot reinstate a self-funded policy either from the user interface or through a health care inbound message.	
reinstatementDate	Used to specify the date when you want to reinstate the fully-insured group policy.	Yes (Conditional)
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. The reinstatement date cannot be earlier than the policy start date. On reinstating a policy, the status of the policy is changed to the status which is specified in the <b>Policy Reinstatement Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.	<b>Note:</b> This data is required while reinstating a fully-insured group policy.
reinstateReason	Used to indicate the reason why you want to reinstate the fully-insured group policy.	Yes (Conditional)
	<b>Note:</b> You must specify the status reason which is already defined for the status specified in the <b>Policy Reinstatement Status</b> option type of the <b>C1-ASOBLNG</b> feature configuration.	<b>Note:</b> This data is required while reinstating a fully-insured group policy.
planData	Used to specify the details of the policy plan.	Yes (Conditional)
	<b>Note:</b> At present, you can only define a policy plan in a fully-insured group policy. Therefore, the system will ignore this information when given for a self-funded policy.	<b>Note:</b> This data is required while defining or editing a policy plan.
planName	Used to specify the description of the policy plan.	No
pricingRuleTypeList	Used to associate a pricing rule type with the policy plan.	Yes (Conditional)
		<b>Note:</b> This data is required while associating a pricing rule type with the policy plan.

Tag Name	Tag Description	Mandatory (Yes or No)
pricingRuleType	Used to specify the pricing rule type.	Yes (Conditional)
	<b>Note:</b> At present, you can only associate those pricing rule types where the category is set to <b>Age Based, Tier Based, or Pass-Through Billable Charge</b> . Therefore, the system will ignore the pricing rule types where the category is set to <b>Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Flat Fees, Ancillary, Discount Arrangement, or Level Funded</b> .	<b>Note:</b> This data is required when a price item is not associated with the policy plan.
primaryPlanSw	Used to indicate whether the plan is a primary plan in the policy. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> If you do not specify the value, by default, it is set to N.	
benefitTypeFlag	Used to indicate the type of benefit. The valid value is: <ul style="list-style-type: none"> <li>• Medicare Affiliated</li> </ul>	Yes
	<b>Note:</b> The list includes only those benefit types which are defined in the <b>BENEFIT_TYPE_FLG</b> lookup field.	
policyPlanProrationRuleList	Used to specify the proration rules defined for the policy plan.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the proration rules for the policy plan.
prorationEventType	Used to indicate the event when you want to prorate the membership premium. The valid values are: <ul style="list-style-type: none"> <li>• <b>Enrollment</b> – Used when you want to prorate the membership premium on enrolling a member person.</li> <li>• <b>Termination</b> - Used when you want to prorate the membership premium on terminating a member person.</li> <li>• <b>New Born</b> - Used when you want to prorate the membership premium on enrolling a new born.</li> <li>• <b>Same Month Enrollment and Termination</b> - Used when you want to prorate the membership premium on enrolling and terminating a member person in the same month.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the proration rules for the policy plan.

Tag Name	Tag Description	Mandatory (Yes or No)
prorationType	<p>Used to indicate how you want to prorate the membership premium. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Daily</b> – Used when you want to prorate the membership premium from the day the proration event has occurred.</li> <li>• <b>Mid-Month</b> – Used when you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula:  <math display="block">\text{Bill Period Start Date} + \text{Specified Number of Days}</math> <p>For example, if the bill period start date is 1<sup>st</sup> of every month and number of days is 15, then the proration date would be 15<sup>th</sup> of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person.</p> </li> <li>• <b>Full Month</b> – Used when the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person.</li> <li>• <b>Waiver</b> – Used when the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership.</li> <li>• <b>Coverage Days</b> – Used when you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person.</li> </ul> <p><b>Note:</b> You can use this proration type when the proration event is set to <b>Same Month Enrollment and Termination</b>.</p> <ul style="list-style-type: none"> <li>• <b>Enrollment</b> – Used when you want to prorate the premium for a member person using the proration type of the enrollment event.</li> </ul> <p><b>Note:</b> You can use this proration type when the proration event is set to <b>Same Month Enrollment and Termination</b>.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining or editing the proration rules for the policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
numberOfDays	Used to specify the number of days to determine the cutoff date.	Yes (Conditional) <b>Note:</b> This data is required when the proration type is set to <b>Mid-Month</b> or <b>Coverage Days</b> .
pricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a pricing rule.
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	Used to specify the entity type. The valid values are: <ul style="list-style-type: none"> <li>• <b>PLAN</b> - Used when you want to specify the plan number.</li> <li>• <b>PLCY</b> - Used when you want to specify the policy number.</li> <li>• <b>SSYS</b> - Used when you want to specify the source system</li> </ul>	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a pricing rule.
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a pricing rule.
status	Used to indicate the status of the pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• ACTV</li> <li>• INAC</li> </ul> <b>Note:</b> If you do not specify the value, by default, it is set to <b>Active</b> .	No
pricingRuleType	Used to indicate the pricing rule type using which you want to define the pricing rule. <b>Note:</b> You must specify a pricing rule type where the category is set to <b>Age Based</b> or <b>Tier Based</b> .	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a pricing rule.
priceItemCd	Used to indicate the price item for which you want to define the pricing rule. <b>Note:</b> You must specify a price item which is already associated with the respective pricing rule type.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a pricing rule.

Tag Name	Tag Description	Mandatory (Yes or No)
rateOption	<p>Used to indicate the rate option using which you want to create price assignment for the pricing rule.</p> <p><b>Note:</b></p> <p>You must specify a rate option which is already defined in the <b>C1-ExtLookRetTypeRateOpt</b> extendable lookup. It must be in the <b>Active</b> status.</p> <p>If the rate option is not given for an age-based pricing rule, by default, it is set to:</p> <ul style="list-style-type: none"> <li>• The value specified in the <b>Default Rate Option – Flat</b> option type of the <b>C1-ASOBLNG</b> feature configuration when the modifier method is set to <b>FLAT</b></li> <li>• The value specified in the <b>Default Rate Option – Percentage</b> option type of the <b>C1-ASOBLNG</b> feature configuration when the modifier method is set to <b>EXPT</b> or <b>INPT</b></li> </ul> <p>However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the <b>Default Rate Option – Flat</b> option type of the <b>C1-ASOBLNG</b> feature configuration when the modifier method is set to <b>FLAT</b> or <b>NULL</b>.</p>	No
modifierApplicability	<p>Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify the value, by default, it is set to N.</p>	No
modifierMethod	<p>Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>FLAT</b> - Indicates that the system should consider the modifier rate as a flat amount.</li> <li>• <b>INPT</b> - Indicates that the system should consider the modifier rate as inclusive percentage.</li> <li>• <b>EXPT</b> - Indicates that the system should consider the modifier rate as exclusive percentage.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required when the <b>modifierApplicability</b> tag contains Y.</p>
baseRate	<p>Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes.</p> <p><b>Note:</b> While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while defining a pricing rule.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
baseFee	Used to specify the base fees for the eligible members.	Yes (Conditional) <b>Note:</b> This data is required while defining a pricing rule.
lowerAgeLimit	Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component. <b>Note:</b> The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the <b>Age Based Parameter</b> option type of the <b>C1-ASOBLLNG</b> feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) <b>Note:</b> This data is required while defining an age-based pricing rule.
upperAgeLimit	Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component. <b>Note:</b> The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the <b>Age Based Parameter</b> option type of the <b>C1-ASOBLLNG</b> feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) <b>Note:</b> This data is required while defining an age-based pricing rule.
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional) <b>Note:</b> This data is required while defining a tier-based pricing rule.

Tag Name	Tag Description	Mandatory (Yes or No)						
parameterCode	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 268 1174 709"> <thead> <tr> <th data-bbox="505 268 719 352">If this tag is used within...</th> <th data-bbox="719 268 1174 352">Then the purpose of the parameterCode tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 352 719 531">pricingParameter</td> <td data-bbox="719 352 1174 531">Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> <tr> <td data-bbox="505 531 719 709">modifierInformation</td> <td data-bbox="719 531 1174 709">Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.</td> </tr> </tbody> </table> <p><b>Note:</b> You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to <b>Pricing Eligibility Criteria</b>. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information.</p> <p>You cannot specify any special character except underscore (_) in the parameter name.</p>	If this tag is used within...	Then the purpose of the parameterCode tag is...	pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.	modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the respective information.</p>
If this tag is used within...	Then the purpose of the parameterCode tag is...							
pricingParameter	Used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria.							
modifierInformation	Used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria.							
parameterValue	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="505 1138 1174 1388"> <thead> <tr> <th data-bbox="505 1138 719 1222">If this tag is used within...</th> <th data-bbox="719 1138 1174 1222">Then the purpose of the parameterValue tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="505 1222 719 1306">pricingParameter</td> <td data-bbox="719 1222 1174 1306">Used to specify the value for the parameter (i.e. employee attribute).</td> </tr> <tr> <td data-bbox="505 1306 719 1388">modifierInformation</td> <td data-bbox="719 1306 1174 1388">Used to specify the value for the parameter (i.e. modifier).</td> </tr> </tbody> </table> <p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;); in the parameter value.</p>	If this tag is used within...	Then the purpose of the parameterValue tag is...	pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).	modifierInformation	Used to specify the value for the parameter (i.e. modifier).	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the respective information.</p>
If this tag is used within...	Then the purpose of the parameterValue tag is...							
pricingParameter	Used to specify the value for the parameter (i.e. employee attribute).							
modifierInformation	Used to specify the value for the parameter (i.e. modifier).							
modifierInformation	<p>Used to specify the modifier based on which you want to increase or decrease the base fees.</p> <p><b>Note:</b> While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This data is required while specifying the modifier information.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional) <b>Note:</b> This data is required while specifying the modifier information.
statementConstructDetails	Used to specify the statement construct details.	Yes (Conditional) <b>Note:</b> This data is required while specifying the statement construct information.
serviceAgreement	Used to specify the statement construct contract.	Yes
accountNumber	Used to specify the value for the account identifier type of the payee. <b>Note:</b> You must specify the account number which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while specifying the statement construct information.
accountNumberTypeCd	Used to specify the account identifier type of the payee.	Yes (Conditional) <b>Note:</b> This data is required while specifying the statement construct information.
statementPrintDescription	Used to specify the description of the construct detail associated with the contract.	Yes (Conditional) <b>Note:</b> This data is required while specifying the statement construct information.
printOrder	Used to specify the financial transactions associated with the account / contract to appear on the printed statement.	Yes (Conditional) <b>Note:</b> This data is required while specifying the statement construct information.

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the health care inbound message.
statusReason	Indicates the reason why the status of the health care inbound message is changed.
person	At present, this tag is not supported in a health care inbound message.

Tag Name	Tag Description						
statusDateTime	Displays the date and time when the status of the health care inbound message is changed in the system.						
creationDateTime	Displays the date and time when the health care inbound message is created in the system.						
searchCharacteristicValue	At present, this tag is not supported in a health care inbound message.						
version	This tag appears within the following parent tags: <table border="1"> <thead> <tr> <th>Parent Tag</th> <th>Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td>schema</td> <td>Displays the version of the health care inbound message.</td> </tr> <tr> <td>inboundMessageCharacteristic</td> <td>Displays the version of the characteristic defined for the health care inbound message.</td> </tr> </tbody> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the health care inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the health care inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the health care inbound message.						
paidThroughDate	Indicates the term end date of the last fully or partially paid term. For more information about the paid through date, refer to <a href="#">Policy</a> on page 282.						
toDoRetry	Displays the information about the retry option used for the health care inbound message. <p><b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the health care inbound message is validated and processed either through the user interface or batch process.</p>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the health care inbound message from <b>Rejected</b> to <b>Pending</b> .						
numberOfRetries	Indicates the number of times the retry option is used for the health care inbound message.						
currentErrorState	Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> <li>REJECTED</li> </ul>						
isRetried	Indicates whether the retry option is used to change the status of the health care inbound message. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>

## Sample Health Care Inbound Message for Fully-Insured Group Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group health insurance business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
				HMO Medical Silver 70 RE	AGE_BASED
				PPO Medical Bronze 60 RE	AGE_BASED
				PPO Medical Silver 70 RE	AGE_BASED
				DD BASIC RE	TIER_BASED
Antartica Petroleum ACTIVE	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum COBRA	Bill Group	CMS	-	-	-
		CMR			
Antartica Petroleum RETIREE	Bill Group	CMS	Employee Medicare Policy	APE Medicare Bronze RE MALE	AGE_BASED
		CMR		APE Medicare Silver RE MALE	AGE_BASED
				APE Medicare Gold RE MALE	AGE_BASED
				APE Medicare Bronze RE FEMALE	AGE_BASED
				APE Medicare Silver RE FEMALE	AGE_BASED
				APE Medicare Gold RE FEMALE	AGE_BASED
				APE Medicare Gold RE FEMALE	AGE_BASED

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Antartica Petroleum ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	HMO
	SMALLPRIME	ACTIVE	SEATTLE	DENTAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	HMO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	ACTIVE	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	ACTIVE	LOS ANGELES	DENTAL	PPO
Antartica Petroleum COBRA	SMALLPRIME	COBRA	SEATTLE	MEDICAL	HMO
	SMALLPRIME	COBRA	SEATTLE	MEDICAL	PPO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	HMO
	SMALLPRIME	COBRA	SEATTLE	DENTAL	PPO
	SMALLPRIME	COBRA	SAN FRANCISCO	MEDICAL	HMO
	SMALLPRIME	COBRA	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	COBRA	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	COBRA	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	COBRA	LOS ANGELES	MEDICAL	HMO

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	COBRA	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	COBRA	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	COBRA	LOS ANGELES	DENTAL	PPO
Antartica Petroleum RETIREE	SMALLPRIME	RETIRED	SEATTLE	MEDICAL	HMO
	SMALLPRIME	RETIRED	SEATTLE	MEDICAL	PPO
	SMALLPRIME	RETIRED	SEATTLE	DENTAL	HMO
	SMALLPRIME	RETIRED	SEATTLE	DENTAL	PPO
	SMALLPRIME	RETIRED	SAN FRANCISCO	MEDICAL	HMO
	SMALLPRIME	RETIRED	SAN FRANCISCO	MEDICAL	PPO
	SMALLPRIME	RETIRED	SAN FRANCISCO	DENTAL	HMO
	SMALLPRIME	RETIRED	SAN FRANCISCO	DENTAL	PPO
	SMALLPRIME	RETIRED	LOS ANGELES	MEDICAL	HMO
	SMALLPRIME	RETIRED	LOS ANGELES	MEDICAL	PPO
	SMALLPRIME	RETIRED	LOS ANGELES	DENTAL	HMO
	SMALLPRIME	RETIRED	LOS ANGELES	DENTAL	PPO

## Sample Health Care Inbound Message for Self-Funded Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a self-funded health insurance business
- Create the accounts for the bill groups
- Create the policies for the bill groups where the policy category is set to **Self-Funded**

Person Name	Person Type	Policy	Account
US Energy Corp	Parent Customer	-	-
US Energy ACTIVE	Bill Group	Active Employee Health Insurance Policy	Standard
			Retention
US Energy COBRA	Bill Group	Active COBRA Employee Health Insurance Policy	Standard
			Retention
US Energy RETIREE	Bill Group	Retiree Employee Health Insurance Policy	Standard
			Retention

In addition, using the below example, you can create the following derivation and pricing parameters for the above three bill groups:

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
US Energy ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	-	-
	SMALLPRIME	ACTIVE	LOS ANGELES	-	-
	SMALLPRIME	ACTIVE	DALLAS	-	-
	SMALLPRIME	ACTIVE	SAN JOSE	-	-
	SMALLPRIME	ACTIVE	SAN FRANCISCO	-	-
	SMALLPRIME	ACTIVE	CHARLOTTE	-	-
	SMALLPRIME	ACTIVE	DETROIT	-	-

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	ACTIVE	CLEVELAND	-	-
	SMALLPRIME	ACTIVE	ORLANDO	-	-
	SMALLPRIME	ACTIVE	JERSEY CITY	-	-
	SMALLPRIME	ACTIVE	FONTANA	-	-
	SMALLPRIME	ACTIVE	OXNARD	-	-
US Energy COBRA	SMALLPRIME	COBRA	SEATTLE	-	-
	SMALLPRIME	COBRA	LOS ANGELES	-	-
	SMALLPRIME	COBRA	DALLAS	-	-
	SMALLPRIME	COBRA	SAN JOSE	-	-
	SMALLPRIME	COBRA	SAN FRANCISCO	-	-
	SMALLPRIME	COBRA	CHARLOTTE	-	-
	SMALLPRIME	COBRA	DETROIT	-	-
	SMALLPRIME	COBRA	CLEVELAND	-	-
	SMALLPRIME	COBRA	ORLANDO	-	-
	SMALLPRIME	COBRA	JERSEY CITY	-	-
	SMALLPRIME	COBRA	FONTANA	-	-
	SMALLPRIME	COBRA	OXNARD	-	-
	US Energy RETIREE	SMALLPRIME	RETIRED	SEATTLE	-
SMALLPRIME		RETIRED	LOS ANGELES	-	-
SMALLPRIME		RETIRED	DALLAS	-	-
SMALLPRIME		RETIRED	SAN JOSE	-	-
SMALLPRIME		RETIRED	SAN FRANCISCO	-	-
SMALLPRIME		RETIRED	CHARLOTTE	-	-
SMALLPRIME		RETIRED	DETROIT	-	-

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
	SMALLPRIME	RETIRED	CLEVELAND	-	-
	SMALLPRIME	RETIRED	ORLANDO	-	-
	SMALLPRIME	RETIRED	JERSEY CITY	-	-
	SMALLPRIME	RETIRED	FONTANA	-	-
	SMALLPRIME	RETIRED	OXNARD	-	-

```

## Sample Health Care Inbound Message for Pricing Rules

Using the below example, you can create the following:

- Tier-based pricing rule for the **DD\_BASIC** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Parameter	Parameter Value
DD_BASIC	TIER_BASED	30	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	MALE
		40	EMPBAND	IC1
			SUBSCRIPTIONTIER	ES
			GENDER	MALE
		60	EMPBAND	IC1
			SUBSCRIPTIONTIER	F
			GENDER	MALE
		25	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	FEMALE
		35	EMPBAND	IC1
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
50	EMPBAND	IC1		
	SUBSCRIPTIONTIER	F		
	GENDER	FEMALE		

- Age-based pricing rule for the **PPO\_MED\_BRONZE\_RETIRED** policy plan

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
PPO_MED_ BRONZE_ RETIRED	AGE_BASED	150	0	15	GENDER	FEMALE	TOBUSAGE	Y	10
		150	0	15	GENDER	MALE	TOBUSAGE	Y	20
		170	16	18	GENDER	FEMALE	TOBUSAGE	Y	20
		170	16	18	GENDER	MALE	TOBUSAGE	Y	30
		200	19	20	GENDER	FEMALE	TOBUSAGE	Y	30
		200	19	20	GENDER	MALE	TOBUSAGE	Y	40
		240	21	40	GENDER	FEMALE	TOBUSAGE	Y	40
		240	21	40	GENDER	MALE	TOBUSAGE	Y	50
		270	41	60	GENDER	FEMALE	TOBUSAGE	Y	50
		270	41	60	GENDER	MALE	TOBUSAGE	Y	60
		300	61	65	GENDER	FEMALE	TOBUSAGE	Y	60
		300	61	65	GENDER	MALE	TOBUSAGE	Y	70
		350	66	199	GENDER	FEMALE	TOBUSAGE	Y	70
		350	66	199	GENDER	MALE	TOBUSAGE	Y	80

## Sample Health Care Inbound Message for Membership

Using the below example, you can do the following:

- Create the persons who are neither parent customer nor bill group
- Create a membership where the person is the main subscriber
- Add persons in a membership

Person Name	Person Type	Policy	Policy Plan	Main Subscriber	Member Relationship Type
G, ALLEN	Person	AP234389	HMO_MED_SILVER_RETIRE	Yes	SELF
G, JOHNSON	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SPOUSE
G, CLARK	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, NELSON	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, PARKER	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, RUSSEL	Person	AP234389	HMO_MED_SILVER_RETIRE	No	SON
G, LINDA	Person	AP234389	HMO_MED_SILVER_RETIRE	No	DAUGHTER

```

## Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Person Business Object</b> - The business object using which a person should be created when the customer inbound message is processed.</li> <li>• <b>Account Business Object</b> - The business object using which an account should be created when the customer inbound message is processed.</li> <li>• <b>Hold Request Business Object</b> - The business object using which the hold request should be created when the <b>Invoice Hold Reason</b> characteristic is defined for an account in the customer inbound message.</li> <li>• <b>Status on Policy Termination</b> - The status to which the policy should be transitioned when the policy termination request is processed through the customer inbound message.</li> <li>• <b>Status on Policy Reinstatement</b> - The status to which the policy should be transitioned when the policy reinstatement request is processed through the customer inbound message.</li> <li>• <b>Status on Policy Renewal</b> - The status to which the policy should be transitioned when the policy renewal request is processed through the customer inbound message.</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Person Business Object</b> - The business object using which a person should be created when the ASO customer inbound message is processed.</li> <li>• <b>Account Business Object</b> - The business object using which an account should be created when the ASO customer inbound message is processed.</li> <li>• <b>Policy Type</b> - The policy type using which a policy should be created when the ASO customer inbound message is processed.</li> <li>• <b>Policy Plan Business Object</b> - The business object using which a policy plan should be created when the ASO customer inbound message is processed.</li> </ul>
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Customer Registration Type</b> - The customer registration type using which the customer registration object should be created through a health care inbound message.</li> </ul>

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- [Inbound Message Type List](#) on page 2189
- [Inbound Message Type](#) on page 2189

## Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Inbound Message Type</b> screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Inbound Message Type</b> screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the inbound message type.  <b>Note:</b> You can delete an inbound message type when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** (📡) icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

## Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** – Displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.

Field Name	Field Description
Customer Registration Type	<p data-bbox="602 212 1464 275">Indicates the customer registration type using which the customer registration object is created through a health care inbound message.</p> <p data-bbox="602 302 1464 485"><b>Note:</b> It has a link. On clicking the link, the <b>Customer Registration Type</b> screen appears where you can view the details of the respective customer registration type. This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-HCInboundMsgType</b> business object.</p>
Person Business Object	<p data-bbox="602 543 1464 669">Indicates the business object using which a person is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p data-bbox="602 697 1464 921"><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Account Business Object	<p data-bbox="602 972 1464 1098">Indicates the business object using which an account is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p data-bbox="602 1125 1464 1350"><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Policy Type	<p data-bbox="602 1400 1464 1463">Indicates the policy type using which a policy is created when the ASO customer inbound message is processed.</p> <p data-bbox="602 1491 1464 1694"><b>Note:</b> It has a link. On clicking the link, the <b>Policy Type</b> screen appears where you can view the details of the respective policy type. This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>

Field Name	Field Description
Policy Plan Business Object	<p>Indicates the business object using which a policy plan is created when the ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Hold Request Business Object	<p>Indicates the business object using which a hold request is created for an account when the customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Termination	<p>Indicates the status to which the policy is transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Reinstatement	<p>Indicates the status to which the policy is transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Renewal	<p>Indicates the status to which the policy is transitioned when the policy renewal request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Inbound Message Business Object	<p>Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Description	Displays the description of the inbound message type.

Field Name	Field Description
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Detailed Description	Displays additional information about the inbound message type.

- **Characteristics** – Lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type.  <b>Note:</b> You can delete an inbound message type when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears when you click the **Broadcast** (  ) icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

**Defining an Inbound Message Type****Prerequisites**

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message type business objects defined in the application</li> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message type business objects defined in the application</li> <li>• Membership inbound message business objects defined in the application</li> </ul>

If you want to define a..	Then, you should have...
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message type business objects defined in the application</li> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• Health care inbound message type business objects defined in the application</li> <li>• Health care inbound message business objects defined in the application</li> <li>• Customer registration types defined in the application</li> </ul>

### **Procedure**

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)										
Inbound Message Type Business Object	<p>Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type:</p> <table border="1" data-bbox="565 1377 1250 1759"> <thead> <tr> <th data-bbox="571 1377 870 1430">Inbound Message Type</th> <th data-bbox="870 1377 1243 1430">Business Object</th> </tr> </thead> <tbody> <tr> <td data-bbox="571 1430 870 1514">Customer Inbound Message Type</td> <td data-bbox="870 1430 1243 1514">C1-CustomerInboundMessageType</td> </tr> <tr> <td data-bbox="571 1514 870 1598">Membership Inbound Message Type</td> <td data-bbox="870 1514 1243 1598">C1-MemberInboundMessageType</td> </tr> <tr> <td data-bbox="571 1598 870 1682">ASO Customer Inbound Message Type</td> <td data-bbox="870 1598 1243 1682">C1-ASOCustomerInboundMsgType</td> </tr> <tr> <td data-bbox="571 1682 870 1759">Health Care Inbound Message Type</td> <td data-bbox="870 1682 1243 1759">C1-HCInboundMsgType</td> </tr> </tbody> </table>	Inbound Message Type	Business Object	Customer Inbound Message Type	C1-CustomerInboundMessageType	Membership Inbound Message Type	C1-MemberInboundMessageType	ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType	Health Care Inbound Message Type	C1-HCInboundMsgType	Yes
Inbound Message Type	Business Object											
Customer Inbound Message Type	C1-CustomerInboundMessageType											
Membership Inbound Message Type	C1-MemberInboundMessageType											
ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType											
Health Care Inbound Message Type	C1-HCInboundMsgType											

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Inbound Message Type** screen.

4. Select the **ASO Customer Inbound Message Type**, **Customer Inbound Message Type**, **Health Care Inbound Message Type**, or **Membership Inbound Message Type** business object to create the respective inbound message type.
5. Click **OK**.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define the characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-HCInboundMsgType</b> business object.  While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the <b>Approval Required</b> , <b>Final Approval Required</b> , and <b>Manual Billing Hierarchy and Pricing</b> options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the <b>Final Approval Required</b> and <b>Manual Billing Hierarchy and Pricing</b> options are selected, but the <b>Approval Required</b> option is not selected.	Yes
Person Business Object	Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Business Object	Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes
Policy Type	Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes
Policy Plan Business Object	Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.	Yes
Status on Policy Termination	Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Reinstatement	Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

6. Enter the required details in the **Main** section.
7. Define characteristics for the inbound message type, if required.
8. Click **Save**.

The inbound message type is defined.

<b>Inbound Message Type</b> screen	<a href="#">Inbound Message Type</a> on page 2188
How to define a characteristic for an inbound message type	<a href="#">Defining a Characteristic for an Inbound Message Type</a> on page 2198

## Defining a Characteristic for an Inbound Message Type

### Prerequisites

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

### Procedure

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound message type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Inbound Message Type</b> .	<b>Note:</b> This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the inbound message type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing an Inbound Message Type

### Prerequisites

The following table lists the prerequisites for editing various inbound message types:

<b>If you want to define a..</b>	<b>Then, you should have...</b>
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• Health care inbound message business objects defined in the application</li> <li>• Customer registration types defined in the application</li> </ul>

### Procedure

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the Inbound message type whose details you want to edit.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.

- **Characteristics** – Used to define the characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-HCInboundMsgType</b> business object.</p> <p>While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the <b>Approval Required, Final Approval Required, and Manual Billing Hierarchy and Pricing</b> options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the <b>Final Approval Required and Manual Billing Hierarchy and Pricing</b> options are selected, but the <b>Approval Required</b> option is not selected.</p>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p>	Yes
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Reinstatement	Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

**Tip:** Alternatively, you can edit the details of an inbound message type by clicking the **Edit** button in the **Inbound Message Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the inbound message type, if required.
7. Click **Save**.

The changes made to the inbound message type are saved.

<b>Inbound Message Type</b> zone	<a href="#">Inbound Message Type</a> on page 2189
How to define a characteristic for an inbound message type	<a href="#">Defining a Characteristic for an Inbound Message Type</a> on page 2198

**Copying an Inbound Message Type**

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

**Prerequisites**

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message type (whose copy you want to create) defined in the application</li> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message type (whose copy you want to create) defined in the application</li> <li>• Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message type (whose copy you want to create) defined in the application</li> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	<ul style="list-style-type: none"> <li>• Health care inbound message type (whose copy you want to create) defined in the application</li> <li>• Health care inbound message business objects defined in the application</li> <li>• Customer registration types defined in the application</li> </ul>

### **Procedure**

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the inbound message type whose copy you want to create.  
The **Inbound Message Type** screen appears. It contains the following sections:
  - **Main** – Used to specify basic details about the inbound message type.
  - **Characteristics** – Used to define the characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	<p>Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message.</p> <p><b>Note:</b></p> <p>This field appears when you are defining an inbound message type using the <b>C1-HCInboundMsgType</b> business object.</p> <p>While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the <b>Approval Required</b>, <b>Final Approval Required</b>, and <b>Manual Billing Hierarchy and Pricing</b> options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the <b>Final Approval Required</b> and <b>Manual Billing Hierarchy and Pricing</b> options are selected, but the <b>Approval Required</b> option is not selected.</p>	Yes
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p>	Yes
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object. You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object. You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Renewal	Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.  <b>Note:</b> This field appears when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

**Tip:** Alternatively, you can copy an inbound message type by clicking the **Duplicate** button in the **Inbound Message Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the inbound message type, if required.
7. Click **Save**.

The new inbound message type is defined.

## Deleting an Inbound Message Type

### Procedure

To delete an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the Inbound message type that you want to delete.  
A message appears confirming whether you want to delete the inbound message type.

**Note:** You can delete an inbound message type when an inbound message is not created using the inbound message type.

**Tip:** Alternatively, you can delete an inbound message type by clicking the **Delete** button in the **Inbound Message Type** zone.

5. Click **OK**.  
The inbound message type is deleted.

## **Inbound Message (Used for Searching)**

The **Inbound Message** screen allows you to search for an inbound message using various search criteria. It contains the following zone:

- [Search Inbound Message](#) on page 2208

Through this screen, you can navigate to the following screen:

- [Inbound Message \(Used for Viewing\)](#) on page 2214

### **Search Inbound Message**

The **Search Inbound Message** zone allows you to search for an inbound message using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an inbound message using the inbound message or person details. The valid values are: <ul style="list-style-type: none"> <li>• Message Details</li> <li>• Person Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Message Details</b> option is selected.	
Inbound Message ID	Used to search a particular inbound message.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
Person ID	Used to search inbound messages through which a particular person and its related entities are created or updated in the system.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Person ID</b> field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears. This field appears when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	
Status	Used to search inbound messages with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul>	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
Source System	Used to search inbound messages which are received from a particular external system.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
Created From	Used to search inbound messages which are created from a particular date onwards.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
External Source ID	Used to search inbound messages which are received from a particular external source system.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
Created To	Used to search inbound messages which are created till a particular date.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
External Transaction ID	Used to search the inbound message which was a result of a particular transaction in the external source system.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
User ID	Used to search inbound messages which are created by a particular user.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
External Batch ID	Used to search inbound messages which are created through a particular batch job.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type.	No
	<b>Note:</b> This field appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Inbound Message Information	Displays information about the inbound message.
	<b>Note:</b> It has a link. On clicking the link, the <b>Inbound Message</b> screen appears where you can view the details of the respective inbound message.

Column Name	Column Description
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul>
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>This column appears when the <b>Person Details</b> option is selected from the <b>Search By</b> list.</p> </div>
Created By	Indicates the user who has created the inbound message. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This column appears when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p> </div>
Creation Date	Displays the date when the inbound message is created in the system.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### **Related Topics**

For more information on...	See...
How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 2211
How to view the details of an inbound message	<a href="#">Viewing the Inbound Message Details</a> on page 2214

## **Searching for an Inbound Message**

### **Prerequisites**

To search for an inbound message, you should have:

- Inbound message types defined in the application

- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

### **Procedure**

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.  
The **Inbound Message** screen appears.
3. Enter the search criteria in the **Search Inbound Message** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of inbound messages that meet the search criteria appears in the **Search Results** section.

### **Related Topics**

## **Creating an Inbound Message**

Oracle Revenue Management and Billing allows you to create the following inbound messages by calling the respective inbound web service:

<b>Inbound Message</b>	<b>Inbound Web Service</b>
<a href="#">Customer Inbound Message</a> on page 1956	<a href="#">CI-CustomerStructureInboundMessage</a> on page 2212
<a href="#">Membership Inbound Message</a> on page 1994	<a href="#">CI-MembershipInboundMessage</a> on page 2213
<a href="#">ASO Customer Inbound Message</a> on page 2024	<a href="#">CI-ASOCustomerInboundMessage</a> on page 2213
<a href="#">Health Care Inbound Message</a> on page 2062	<a href="#">CI-HCInboundMessage</a> on page 2214

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

### **C1-CustomerStructureInboundMessage**

The **C1-CustomerStructureInboundMessage** inbound web service enables you to create or update a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. It also allows you to terminate, reinstate, or renew a policy. In addition, it allows you to hold an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message.

On calling the **C1-CustomerStructureInboundMessage** inbound web service, a customer inbound message is created in the **Pending** status. A customer inbound message goes through various statuses in its lifecycle. You can search for a customer inbound message through the **Inbound Message** screen.

Before calling the **C1-CustomerStructureInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1956.

#### **C1-ASOCustomerInboundMessage**

The **C1-ASOCustomerInboundMessage** inbound web service enables you to create or update a parent customer and its bill groups. In addition, it allows you to create or update an account and self-funded policy for a bill group.

On calling the **C1-ASOCustomerInboundMessage** inbound web service, an ASO customer inbound message is created in the **Pending** status. An ASO customer inbound message goes through various statuses in its lifecycle. You can search for an ASO customer inbound message through the **Inbound Message** screen.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 2026

## C1-HCInboundMessage

The **C1-HCInboundMessage** inbound web service enables you to create or update a person, account and self-funded or fully-insured group policy. It also allows you to create or update a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, it allows you to terminate, reinstate, or renew a fully-insured group policy.

On calling the **C1-HCInboundMessage** inbound web service, a health care inbound message is created in the **Pending** status. A health care inbound message goes through various statuses in its lifecycle. You can search for a health care inbound message through the **Inbound Message** screen.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 2068.

## Viewing the Inbound Message Details

### Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the inbound message in the **Inbound Message** zone.

### Related Topics

<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 2214
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 2215

## Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing

- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- [Inbound Message - Main](#) on page 2215
- [Inbound Message - Message](#) on page 2217
- [Inbound Message - Log](#) on page 2217

## Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- [Inbound Message](#) on page 2215

### Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** – Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul>
Inbound Message Type	Indicates the inbound message type using which the inbound message is created. <p><b>Note:</b> It has a link. On clicking the link, the <b>Inbound Message Type</b> screen appears where you can view the details of the respective inbound message type.</p>
Source System	Indicates the external source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** – Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics of the inbound message.
	<b>Note:</b> The <b>Edit</b> button appears when the inbound message is in the <b>Pending</b> or <b>Rejected</b> status.
Delete	Used to delete the inbound message.
	<b>Note:</b> The <b>Delete</b> button appears when the inbound message is in the <b>Pending</b> status.
Submit for Processing	Used to submit the inbound message for validation and processing.
	<b>Note:</b> The <b>Submit for Processing</b> button appears only when the inbound message is in the <b>Pending</b> status.
Retry	Used when you want to change the status of the inbound message from <b>Rejected</b> to <b>Pending</b> so that the inbound message can be considered once again for validation and processing.
	<b>Note:</b> The <b>Retry</b> button appears when the inbound message is in the <b>Rejected</b> status.
Void	Used to cancel the inbound message.
	<b>Note:</b> The <b>Void</b> button appears when the inbound message is in the <b>Rejected</b> status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

How to view the inbound message details	<a href="#">Viewing the Inbound Message Details</a> on page 2214

## Inbound Message - Message

The **Message** tab displays the content of the inbound message in the XML format. It contains the following zone:

- [Inbound Message Content](#) on page 2217

### Inbound Message Content

The **Inbound Message Content** zone displays the content of the inbound message in the XML format. By default, each tag in the inbound message is expanded. You can collapse the tag whenever required.

For more information about the tags, refer to the respective XML format section:

Inbound Message	XML Format
Customer Inbound Message	<a href="#">Customer Inbound Message XML Format</a> on page 1971
Membership Inbound Message	<a href="#">Membership Inbound Message XML Format</a> on page 2007
ASO Customer Inbound Message	<a href="#">ASO Customer Inbound Message XML Format</a> on page 2031
Health Care Inbound Message	<a href="#">Health Care Inbound Message XML Format</a> on page 2075

Once the inbound message is validated and processed either from the user interface or through a batch process, the following tags appear at the bottom of the inbound message in the **Inbound Message Content** zone:

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the inbound message.
retryDateTime	Displays the date and time when the retry option is used to change the status of the inbound message from <b>Rejected</b> to <b>Pending</b> .
numberOfRetries	Indicates the number of times the retry option is used for the inbound message.
currentErrorState	Indicates the status to which the inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> <li>• REJECTED</li> </ul>
isRetried	Indicates whether the retry option is used to change the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>

### Related Topics

How to view the content of an inbound message	<a href="#">Viewing the Content of an Inbound Message</a> on page 2224

## Inbound Message - Log

The **Log** tab contains the following zone:

- [Inbound Message Log](#) on page 2217

### Inbound Message Log

The **Inbound Message Log** zone lists the complete trail of actions performed on the inbound message. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the inbound message.
Details	Displays the details about the action performed on the inbound message.
User	Indicates the user who has performed the action on the inbound message.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the inbound message.
Status Reason	Indicates the reason why the status of the inbound message is changed.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the inbound message by clicking the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

## Editing an Inbound Message

### Procedure

To edit an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to edit.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Inbound Message** zone.

The **Inbound Message** screen appears. It contains the following sections:

- **Main** - Displays the basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.

Field Name	Field Description
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** - Used to define, edit, or remove characteristics of the inbound message.

**Note:** The **Edit** button appears when the inbound message is in the **Pending** or **Rejected** status.

5. Define, edit, or remove characteristics of the inbound message, if required.
6. Click **Save**.

The changes made to the inbound message are saved.

How to define a characteristic for an inbound message	<a href="#">Defining a Characteristic for an Inbound Message</a> on page 2219

## **Defining a Characteristic for an Inbound Message**

### **Prerequisites**

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

### **Procedure**

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Inbound Message</b> .
		<b>Note:</b> This field is required when you are defining a characteristic for the inbound message.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for the inbound message.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the inbound message, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the inbound message, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the inbound message.

## **Deleting an Inbound Message**

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message when the inbound message is in the **Pending** status.

#### **Procedure**

To delete an inbound message:

- Search for the inbound message in the **Inbound Message** screen.
- In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to delete.

The **Inbound Message** screen appears.

- Ensure that the **Main** tab is selected.
- Click the **Delete** button in the **Inbound Message** zone.

A message appears confirming whether you want to delete the inbound message.

**Note:** The **Delete** button appears when the inbound message is in the **Pending** status.

- Click **OK**.

The inbound message is deleted.

**Related Topics**

For more information on...	See...
How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 2211
<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 2214
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 2215

**Processing an Inbound Message****Prerequisites**

The following table lists the prerequisites which you should setup before processing the respective inbound message:

Inbound Message	Refer to...
Customer Inbound Message	<a href="#">Prerequisites</a> on page 1956
Membership Inbound Message	<a href="#">Prerequisites</a> on page 1995
ASO Customer Inbound Message	<a href="#">Prerequisites</a> on page 2026
Health Care Inbound Message	<a href="#">Prerequisites</a> on page 2068

**Procedure**

To process an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to submit for validation and processing.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Processing** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Customer inbound message	<p>Creates or updates a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. If requested, it terminates, reinstates, or renews a policy. In addition, if requested, it holds an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message. Finally, status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a person and account using the person and account business objects, respectively, as specified in the inbound message type. It creates a policy using the policy type specified in the <b>C1-CINMSGPRC</b> algorithm. It creates a policy plan using the <b>Policy Plan BO (C1PPLNBO)</b> characteristic defined on the policy type.</p>

If the inbound message is a...	Then...
Membership inbound message	<p>Creates or updates a membership in a policy plan, adds or removes dependents from a membership, creates or updates the main subscriber or dependent person, associates a contract with a membership, adds membership premium for a coverage period, or creates billable charges for membership premium. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a membership using the <b>Membership BO (C1MEMBRO)</b> characteristic defined on the policy type. If the person who is the main subscriber or dependent in a membership does not exist, the system creates main subscriber or dependent person using the person business object specified in the inbound message type.</p>
ASO Customer Inbound Message	<p>Creates or updates a parent customer and its bill groups. In addition, it creates or updates an account and self-funded policy of a bill group. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a parent customer and bill group using the person business object specified in the inbound message type. It creates an account using the account business object specified in the inbound message type. It creates a self-funded policy using the policy type specified in the inbound message type.</p>
Health Care Inbound Message	<p>Creates or updates a person, account and fully-insured group or self-funded policy. It creates or updates a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, if requested, it terminates, reinstates, or renews a fully-insured group policy. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>The system uses the <b>C1-PERSTYPE</b> feature configuration to decide whether the person type specified in the health care inbound message represents <b>Parent Customer</b> or <b>Bill Group</b>. If the person type specified in the health care inbound message matches the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type of the <b>C1-PERSTYPE</b> feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the <b>Bill Group Person Type</b> or <b>Parent Person Type</b> option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.</p> <p>If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.</p>

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is

created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

**Note:** The **Submit for Processing** button appears when the inbound message is in the **Pending** status.

## Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

### Procedure

To use the retry option for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to use the retry option.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
5. Click the **Retry** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Pending**.

**Note:** The **Retry** button appears when the inbound message is in the **Rejected** status.

## Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message when the inbound message is in the **Rejected** status.

### Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.

2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to void.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Voided**.

**Note:** The **Void** button appears when the inbound message is in the **Rejected** status.

## Adding a Log Entry for an Inbound Message

### Procedure

To add a log entry for an inbound message:

- Search for the inbound message in the **Inbound Message** screen.
- In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to add a log entry.

The **Inbound Message** screen appears.

- Click the **Log** tab.

The **Log** tab appears.

- Click the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

The **Add Inbound Message Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Information	Displays information about the inbound message.	Not applicable
Log Details	Used to specify additional comments for the inbound message.	Yes

- Enter the comments in the **Log Details** field.
- Click **Save**.

The log entry is added in the **Inbound Message Log** zone.

## Statement Construct Preference

Oracle Revenue Management and Billing enables you to create and edit the statement construct of a person through a health care inbound message. However, note that you can create and edit the statement construct of only those persons through a health care inbound message whose record is created via a customer registration object. While creating or editing a statement construct, the system uses the statement construct business object of the customer registration type which is specified in the respective inbound message type.

If the data is not available in the following tags of a health care inbound message while creating a statement construct for a person, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
statementAddressSource	Default Statement Address Source
effectiveStatus	Default Statement Status
statementCycle	Default Statement Cycle
statementFormat	Default Statement Format
statementRouteType	Default Statement Route Type
numberOfCopies	Default Statement Number of Copies

In addition, if the data is not available in the following tag of a health care inbound message while adding an account or contract in a statement construct, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
printOrder	Default Statement Print Order

The system considers the statement construct preference which is specified in the **Field Mapping** parameter of the **C1-HCINPROC** algorithm. You can define, edit, delete, and copy a statement construct preference through the **Field Mapping** screen.

### Related Topics

For more information on...	See...
C1-HCINPROC algorithm	<a href="#">C1-HCINPROC</a> on page 2074

## Searching for a Statement Construct Preference

### Prerequisites

To search for a statement construct preference, you should have:

- Values defined in the **FIELD\_CAT\_FLG** lookup field

### Procedure

To search for a statement construct preference:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.

A sub-menu appears.

3. Click the **Search** option from the **Field Mapping** sub-menu.

The **Field Mapping** screen appears.

4. Select the **Statement Construct Preferences** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of statement construct preferences that meet the search criteria appears in the **Search Results** section.

## Viewing the Statement Construct Preference Details

### Procedure

To view the details of a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (  ) icon corresponding to the statement construct preference whose details you want to view.  
The **Field Mapping** zone appears.
3. View the details of the statement construct preference in the **Field Mapping** zone.

### Related Topics

For more information on...	See...
How to search for a statement construct preference	<a href="#">Searching for a Statement Construct Preference</a> on page 2226

## Defining a Statement Construct Preference

### Prerequisites

To define a statement construct preference, you should have:

- Values defined in the **STM\_ADDR\_SRC\_FLG**, **STM\_FORMAT\_FLG**, and **MAP\_ENTITY\_FLG** lookup fields
- Statement cycles and statement route types defined in the application

### Procedure

To define a statement construct preference:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.  
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the statement construct preference. The valid values are: <ul style="list-style-type: none"> <li>Field Mapping</li> <li>Medicare Plan Benefit Package</li> </ul>	Yes

**Note:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

- Select the **Field Mapping** option from the **Field Mapping Business Object** list.
- Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

- Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> <li>Billing Preferences</li> <li>Geographic Rating Area Preferences</li> <li>Medicare Plan Benefit Preferences</li> <li>Member Reconciliation Preferences</li> <li>Member Relationship and Subscription Tier Preferences</li> <li>Statement Construct Preferences</li> </ul>	Yes

- Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the statement construct preference. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Default Statement Address Source</b> - Used when the address source is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Status</b> - Used when the status is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Cycle</b> - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Format</b> - Used when the statement format is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Route Type</b> - Used when the statement route type is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Number of Copies</b> - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Print Order</b> - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while setting an attribute in the statement construct preference.</p>

Field Name	Field Description	Mandatory (Yes or No)		
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference:	Yes (Conditional)		
	<table border="1"> <thead> <tr> <th data-bbox="597 327 808 403">If the attribute is set to...</th> <th data-bbox="808 327 1175 403">Then, this field is...</th> </tr> </thead> </table>	If the attribute is set to...	Then, this field is...	<b>Note:</b> This field is required while setting an attribute in the statement construct preference.
	If the attribute is set to...	Then, this field is...		
	Default Statement Address Source	Used to indicate the source whose address should be used for sending the statements to the person. The valid value is: <ul style="list-style-type: none"> <li>• Person</li> </ul> <div data-bbox="818 611 1175 785" style="border: 1px solid black; padding: 2px;"> <b>Note:</b> The list includes only those values which are defined in the <b>STM_ADDR_SRC_FLG</b> lookup field.           </div>		
	Default Statement Status	Used to indicate the status of the statement construct. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>		
Default Statement Cycle	Used to indicate when statements should be generated for the statement construct. <div data-bbox="818 1146 1175 1289" style="border: 1px solid black; padding: 2px;"> <b>Note:</b> The list includes only those statement cycles which are already defined in the system.           </div>			

Field Name	Field Description	Mandatory (Yes or No)				
	<table border="1"> <tr> <td data-bbox="592 226 808 604">Default Statement Format</td> <td data-bbox="808 226 1170 604">           Used to indicate the format in which the statements should be printed. Default Statement Print Order	Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement. <p><b>Note:</b> You must specify a positive integer for this attribute.</p>					
Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account</li> <li>• Billable Charge</li> </ul> <p><b>Note:</b> At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the <b>MAP_ENTITY_FLG</b> lookup field.</p>	No				

**Note:** While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

6. Select the **Statement Construct Preferences** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the statement construct preference, click the **Add (+)** icon and then repeat step 8.

**Note:** However, if you want to remove an attribute from the statement construct preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click **Save**.

The statement construct preference is defined.

## Editing a Statement Construct Preference

### Prerequisites

To edit a statement construct preference, you should have:

- Values defined in the **STM\_ADDR\_SRC\_FLG**, **STM\_FORMAT\_FLG**, and **MAP\_ENTITY\_FLG** lookup fields
- Statement cycles and statement route types defined in the application

### Procedure

To edit a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the statement construct preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the statement construct preference.	Not applicable
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> <li>Statement Construct Preferences</li> </ul>	Not applicable

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the statement construct preference. The valid values are: <ul style="list-style-type: none"> <li>• <b>Default Statement Address Source</b> - Used when the address source is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Status</b> - Used when the status is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Cycle</b> - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Format</b> - Used when the statement format is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Route Type</b> - Used when the statement route type is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Number of Copies</b> - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Print Order</b> - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message.</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required while setting an attribute in the statement construct preference.

Field Name	Field Description	Mandatory (Yes or No)								
Value	<p>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference:</p> <table border="1" data-bbox="643 359 1203 1373"> <thead> <tr> <th data-bbox="643 359 859 443">If the attribute is set to...</th> <th data-bbox="859 359 1203 443">Then, this field is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="643 443 859 835">Default Statement Address Source</td> <td data-bbox="859 443 1203 835"> <p>Used to indicate the source whose address should be used for sending the statements to the person. The valid value is:</p> <ul style="list-style-type: none"> <li>• Person</li> </ul> <p><b>Note:</b> The list includes only those values which are defined in the <b>STM_ADDR_SRC_FLG</b> lookup field.</p> </td> </tr> <tr> <td data-bbox="643 835 859 1052">Default Statement Status</td> <td data-bbox="859 835 1203 1052"> <p>Used to indicate the status of the statement construct. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> </td> </tr> <tr> <td data-bbox="643 1052 859 1373">Default Statement Cycle</td> <td data-bbox="859 1052 1203 1373"> <p>Used to indicate when statements should be generated for the statement construct.</p> <p><b>Note:</b> The list includes only those statement cycles which are already defined in the system.</p> </td> </tr> </tbody> </table>	If the attribute is set to...	Then, this field is...	Default Statement Address Source	<p>Used to indicate the source whose address should be used for sending the statements to the person. ## **Copying a Statement Construct Preference**

Instead of creating a statement construct preference from scratch, you can create a new statement construct preference using an existing statement construct preference. This is possible through copying a statement construct preference. On copying a statement construct preference, the details including the attributes are copied to the new statement construct preference. You can then edit the details, if required.

### **Prerequisites**

To copy a statement construct preference, you should have:

- Statement construct preference (whose copy you want to create) defined in the application
- Values defined in the **STM\_ADDR\_SRC\_FLG**, **STM\_FORMAT\_FLG**, and **MAP\_ENTITY\_FLG** lookup fields
- Statement cycles and statement route types defined in the application

### **Procedure**

To copy a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the statement construct preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> <li>• Statement Construct Preferences</li> </ul>	Not applicable

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the statement construct preference. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Default Statement Address Source</b> - Used when the address source is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Status</b> - Used when the status is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Cycle</b> - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Format</b> - Used when the statement format is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Route Type</b> - Used when the statement route type is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Number of Copies</b> - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message.</li> <li>• <b>Default Statement Print Order</b> - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message.</li> </ul>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is required while setting an attribute in the statement construct preference.</p> </div>

The valid values are:</p> <ul style="list-style-type: none"> <li>• Account</li> <li>• Billable Charge</li> </ul> <p><b>Note:</b> At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the <b>MAP_ENTITY_FLG</b> lookup field.</p>	No				

**Note:** While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

**Tip:** Alternatively, you can copy a statement construct preference by clicking the **Duplicate** button in the **Field Mapping** zone.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the statement construct preference, if required.
5. Click **Save**.

The new statement construct preference is defined.

## Upload Lockbox Payment and Remittance Advices Overview

---

### Topics:

- [Prerequisites](#)
- [EDI 820 Flat File Description](#)
- [Sample EDI 820 Flat File](#)
- [Upload EDI 820 Files in ORMB](#)

Oracle Revenue Management and Billing enables you to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. Under this feature, the payments made by customers are directed to a special post office box instead of going to the company directly. The bank goes to this post office box, retrieves the payments, processes them and deposits the funds directly into the company's bank account.

An EDI 820 payment order or remittance advice is an electronic document that can be used to initiate payments and send remittance information. EDI 820 sends information to vendor furnishing details of payment for his supplies. A remittance advice is a note sent from a customer to their supplier, informing the supplier that they have paid their invoice. The advice may contain elements such as a text note, the invoice number and the invoice amount, among others. Remittance advice is not required, but they are seen as a courtesy since they make it easier for the supplier to match invoices with payments.

To enable this feature, lockbox payment files are required to be uploaded on ORMB and these files has to be allocated to the appropriate accounts. To support multiple lines of business, the lockbox upload needs to:

- Consider the primary identifier when looking for a source customer number match. For customers having multiple source system identifiers, the lockbox process only matches against the one identified as primary customer.
- Incorporate the payment allocation logic in the system on the basis of which the lockbox uploads the payments for the identified customer.

To support remittances which can split a tender across multiple customers:

- Allow source customer number or tax id to be provided as remittance (RMR) values. In case of multiple source customer number or tax id, remittance values are provided for a single tender, the account associated with the first remittance value is set as the payor account. If there is at least one remittance value where a single customer account cannot be determined, the entire tender is placed into general suspense.
- A new payment upload batch **C1-PUPSG** is developed to read lockbox payment files from the bank and load the payment details into the ORMB payment upload staging tables for processing.
- Once the text file is uploaded, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders,

payments, and payment segments using payment records in the staging area.

**Note:** For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

## Prerequisites

---

To setup the upload lockbox payment process, you need to do the following:

- Define the values in the parameters of the **C1-CCPYTSADS** and **C1-MATSATYP** algorithms.
- Lockbox tender types defined in the **C1\_LBX\_TENDER\_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1\_LBX\_820\_RECORD\_TYPE**, **C1\_LBX\_REF\_IDQ\_LKP**, and **C1\_LBX\_RMR\_ID\_TYPE** lookup fields respectively.

## EDI 820 Flat File Description

---

Following is the description of the key field segments in the EDI 820 flat file format:

Field Name	Description
External Source ID	Uniquely identifies the lockbox.
External Transmission ID	Uniquely identifies the transmission. To ensure this transmission, the date component (such as, 20150813) should match the deposit date and there should only be one file per deposit date.
External Batch ID	Uniquely identifies the batch of payments in a transmission. To ensure these payments, if there are multiple ST records in a file, the transaction set control number (such as, 0101, 0202, ..) should be unique.

Field Name	Description																										
Payment Transaction	<p>The following table describes the fields that are included in the payment transaction:</p> <table border="1" data-bbox="548 262 1463 2011"> <thead> <tr> <th data-bbox="548 262 898 312">Field</th> <th data-bbox="898 262 1463 312">Description</th> </tr> </thead> <tbody> <tr> <td data-bbox="548 312 898 594">Attributes</td> <td data-bbox="898 312 1463 594"> <p>Following are the attributes of payment transaction:</p> <ul style="list-style-type: none"> <li>• Payment Amount</li> <li>• Payment Method</li> <li>• Payment Date</li> <li>• Payor Name</li> </ul> </td> </tr> <tr> <td data-bbox="548 594 898 1648">Reference Records</td> <td data-bbox="898 594 1463 1648"> <p>Uniquely identifies the transaction. ## Upload EDI 820 Files in ORMB

A new batch named **Lockbox Payment Upload - Small Group (C1-PUPSG)** is introduced in this release. This batch is used to read the EDI 820 lockbox file received from the bank containing payment details for accounts and uploads the payment details into the ORMB payment upload staging tables. The batch uses the reference ID available in the payment and remittance record (in the specified order) to identify the account in the system:

- Source System Customer Number
- Invoice ID (if the source system customer number is not available)
- MICR (if the source system customer number and invoice ID are not available)

If all three reference IDs are available in the payment and remittance record, the system uses the source system customer number to identify the customer in ORMB. If the customer is found in ORMB, the system then checks whether the identified customer has an account. If the identified customer has one account, the system checks the following:

- If the **Check Binder Payment** parameter in the **Pay Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether the payment is the first payment for

the account and the tender used for the payment is not automatic payment. If so, the payment is applied to the **Binder Payment** contract.

- If the **Check Promise To Pay** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active promise to pay for the account. If so, the payment is applied to the **On Account** contract.
- If the **Check Payment Agreement** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active payment agreement request for the account. If so, the payment is applied to the **On Account** contract.

However, if the **Check Binder Payment**, **Check Promise To Pay**, and **Check Payment Agreement** parameters are set to **N**, the payment is applied to the account's open bills in the order of the due date (i.e. oldest bill first). If the payment amount is greater than the account's billed balance plus overpayment threshold amount (defined in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm), the entire amount is applied on the On Account contract. However, if the payment amount is greater than the account's billed balance, but less than account's billed balance plus overpayment threshold amount, the overpayment amount is applied on the On Account contract.

Let us understand this with the help of an example:

Payment Amount	Bill 1 (Due Date 01-Feb-2017)	Bill 2 (Due Date 01-April-2016)	Overpayment Threshold Amount	System Behavior
100	50	50	50	One payment (50\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
150	50	100	120	One payment (100\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
175	60	75	50	One payment (75\$) is created for Bill 2 (oldest due date); One payment (60\$) is created for Bill 1; The remaining amount (40\$) is applied on the On Account contract.
200	50	50	50	The entire amount (200\$) is applied on the On Account contract. This is because the payment amount is greater than the account's billed balance plus overpayment threshold amount.

If the identified customer has multiple accounts, then the payment is applied to the On Account contract. If there are no accounts for the identified customer, or account could not be found in ORMB, or the customer could not be found in ORMB, the payment is applied to the suspense contract defined on the tender source associated with the external source (lockbox) ID.

If the source system customer number is not available, but the invoice ID and MICR are available in the payment and remittance record, then batch uses the invoice ID to find the account for which the invoice is created. Once the account is identified, the system behaves in the similar manner (listed above) when the identified customer has one account.

If the source system customer number and invoice ID are not available, but the MICR is available in the payment and remittance record, then system finds the payment where the same MICR is stamped as a characteristic and then finds the account for which the respective payment is created. In this way, the system derives the account for which the payment must be applied. However, the MICR is used to derive the account only when the **Search Customer Using MICR (Y/**

**N**) parameter in the batch is set to **Y**. Once the account is derived, the system behaves in the similar manner (listed above) when the identified customer has one account.

You can upload payment and remittance advice in the TXT format. You need to ensure that the text file is in the required format; otherwise the file will not be uploaded.

Once the text file is uploaded through the **Lockbox Payment Upload - Small Group (C1-PUPSG)** batch, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

**Note:** For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

## Deferred Revenue Recognition

---

### Topics:

- [Prerequisites](#)
- [Deferred Revenue Recognition Status Transition](#)
- [Algorithms Used in Deferred Revenue Recognition](#)
- [Deferred Revenue Recognition Template \(Used for Searching\)](#)
- [Deferred Revenue Recognition Template \(Used for Viewing\)](#)
- [Deferred Revenue Recognition \(Used for Searching\)](#)
- [Deferred Revenue Recognition \(Used for Viewing\)](#)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is \$1200. When this new business is booked, the revenue of \$1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, \$200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information

about the deferred revenue recognition statuses, see [Deferred Revenue Recognition Status Transition](#) on page 2255.

**Note:** The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see [Prerequisites](#) on page 2255.

## Prerequisites

---

To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
  - Use Calendar or Business Days (C or B)
  - Override Default Recognition Date (Y or N)
  - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
  - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## Deferred Revenue Recognition Status Transition

---

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

## Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	<p>This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• Use Contract Expiration Date (Y or N) – Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECITM	C1-REVRECITM	<p>This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon (which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters:</p> <ul style="list-style-type: none"> <li>• <b>Use Calendar or Business Days (C or B)</b> - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory.</li> <li>• <b>Override Default Recognition Date (Y or N)</b> – Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory.</li> <li>• <b>Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)</b> – Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day.</li> <li>• <b>Override Default Monthly Recognition Date (1-31)</b> - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, ..., 31. This parameter is required when you want to override the default monthly recognition date.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.
		C1-REVITMREC	C1-REVITMREC	If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter: <ul style="list-style-type: none"> <li>• <b>Create Adjustments (Y or N)</b> – Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.</li> </ul>
		C1-DRRTM-INF	C1-DRRTM-INF	This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order: <ol style="list-style-type: none"> <li>1. Deferred Revenue Recognition Template</li> <li>2. Description</li> </ol>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	<p>This algorithm validates the deferred revenue recognition template. It checks the following:</p> <ul style="list-style-type: none"> <li>• Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule.</li> <li>• Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events.</li> <li>• Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination.</li> <li>• Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field.</li> <li>• Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.&gt;&gt; Whether the low proration limit is between 0 to 31 and is less than the high proration limit.</li> </ul> <p>In addition, it does not allow you to:</p> <ul style="list-style-type: none"> <li>• Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition.</li> <li>• Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status.</li> <li>• Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status.</li> </ul> <p>You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRSC-INF	C1-DRRSC-INF	<p>This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> <li>1. Deferred Revenue Recognition Template</li> <li>2. Deferred Revenue Recognition Status</li> <li>3. Distribution Code</li> <li>4. Deferred Revenue Recognition ID</li> </ol>
		C1-REVMON	C1-REVMON	<p>This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.</p>
		C1-REVRECINP	C1-REVRECINP	<p>This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> <li>• Next Status</li> <li>• Next Transition Condition</li> </ul> <p>At a time, you can specify value for either the <b>Next Status</b> or <b>Next Transition Condition</b> parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.</p>

## Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition Template \(Used for Viewing\)](#) on page 2270

This screen consists of the following zone:

- [Search Deferred Revenue Recognition Template](#) on page 2262

## Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Monthly</li> <li>• Weekly</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition. <b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

### Related Topics

For more information on...	See...
How to view the details of a deferred revenue recognition template	<a href="#">Viewing the Deferred Revenue Recognition Template Details</a> on page 2269
How to search for a deferred revenue recognition template	<a href="#">Searching for a Deferred Revenue Recognition Template</a> on page 2263

## Searching for a Deferred Revenue Recognition Template

### Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

### Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.  
The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

## Defining a Deferred Revenue Recognition Template

### Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

### Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the deferred revenue recognition template.
- **Parameters** – Used to specify the various parameters for the deferred revenue recognition template.
- **Algorithms** – Used to associate algorithms with the deferred revenue recognition template.
- **Divisions** – Used to associate a deferred revenue recognition template with a division.
- **Characteristics** – Used to define the characteristics for the deferred revenue recognition template.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

The **Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition.	Yes
	<b>Note:</b> The <b>Search</b> (🔍 icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Distribution Code Search</b> window appears.	
Contract Type	Used to indicate a particular type of contract.	Yes
	<b>Note:</b> The <b>Search</b> (🔍 icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	<b>Note:</b> The <b>Search</b> (🔍 icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.	
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> <li>Automatic</li> <li>Manual</li> </ul>	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> <li>Daily</li> <li>Monthly</li> <li>Weekly</li> </ul>	Yes
Allow Proration	Used to allow proration.	Yes
	<b>Note:</b> The <b>Allow Proration</b> field appears when you select <b>Recognition Schedule</b> as <b>Monthly</b> .	

Field Name	Field Description	Mandatory (Yes or No)
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.	Yes (Conditional)
	<b>Note:</b> This field appears when you check the tick-box for <b>Allow Proration</b> .	<b>Note:</b> This field is required when the recognition schedule is selected as monthly and when the <b>Allow Proration</b> check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.	Yes (Conditional)
	<b>Note:</b> This field appears when you check the tick-box for <b>Allow Proration</b> .	<b>Note:</b> This field is required when the recognition schedule is selected as monthly and when the <b>Allow Proration</b> check box is selected.

- Enter the required details.
- Associate algorithms with the deferred revenue recognition template, if required.
- View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
- Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
- Click **Save**.

The deferred revenue recognition template is created.

### Related Topics

<b>Deferred Revenue Recognition Template</b> screen	<a href="#">Deferred Revenue Recognition Template (Used for Searching)</a> on page 2262
How to associate algorithms with the deferred revenue recognition template	<a href="#">Associating Algorithms with a Deferred Revenue Recognition Template</a> on page 2266

## Associating Algorithms with a Deferred Revenue Recognition Template

### Procedure

To associate algorithms with a deferred revenue recognition template:

- Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number.	Yes
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	

- Enter the required details in the **Algorithms** section.
- If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add** (+) icon, and then repeat 2.

**Note:** However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete** (🗑️) icon corresponding to the algorithm.

### Related Topics

How to define a deferred revenue recognition template	<a href="#">Defining a Deferred Revenue Recognition Template</a> on page 2264
How to edit a deferred revenue recognition template	<a href="#">Editing a Deferred Revenue Recognition Template</a> on page 2272

## Associating Deferred Revenue Recognition Template With A Division

### Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

### Procedure

To associate deferred revenue recognition template with a division:

- Ensure that the **Divisions** section is expanded when you are creating or editing a deferred revenue recognition template.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

- Select the required division from the list.
- If you want to associate the deferred revenue recognition template with more than one division, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑) icon corresponding to the division.

- Click **Save**.

The deferred revenue recognition template is associated with the divisions.

### Related Topics

## Defining a Characteristic for a Deferred Revenue Recognition Template

### Prerequisites

To define a characteristic for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

### Procedure

To define a characteristic for a deferred revenue recognition template:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition template.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Valued</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition template.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete (🗑)** icon corresponding to the characteristic.

### Related Topics

## Viewing the Deferred Revenue Recognition Template Details

### Procedure

To view the details of a deferred revenue recognition template:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.  
The **Deferred Revenue Recognition Template** screen appears.
- Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to view.  
The **Deferred Revenue Recognition Template** screen appears.
- View the details of the deferred revenue recognition template in the **Deferred Revenue Recognition Template** zone.

### Related Topics

<b>Deferred Revenue Recognition Template</b> zone	<a href="#">Deferred Revenue Recognition Template</a> on page 2270
How to search for a deferred revenue recognition template	<a href="#">Searching for a Deferred Revenue Recognition Template</a> on page 2263

## Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- [Deferred Revenue Recognition Template](#) on page 2270

### Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Parameters** – Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code.  <b>Note:</b> It has a link. On clicking the link, the <b>Distribution Code</b> screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the <b>Deferred Revenue Recognition Template</b> which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>Manual</li> <li>Automatic</li> </ul>
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: <ul style="list-style-type: none"> <li>Daily</li> <li>Monthly</li> <li>Weekly</li> </ul>
Allow Proration	Used to allow proration.  <b>Note:</b> The <b>Allow Proration</b> field appears when you select <b>Recognition Schedule</b> as <b>Monthly</b> .
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.  <b>Note:</b> This field appears when you check the tick-box for <b>Allow Proration</b> .
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.  <b>Note:</b> This field appears when you check the tick-box for <b>Allow Proration</b> .

- **Divisions** – Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** – Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Displays an algorithm that needs to be attached to the selected system event.	No
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.	

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template. <b>Note:</b> The <b>Edit</b> button appears when the deferred revenue recognition template is in the <b>Active</b> status.
Delete	Used to delete the deferred revenue recognition template.

- 
- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing a Deferred Revenue Recognition Template

### Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to edit.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.

The **Deferred Revenue Recognition Template** screen appears.

**Note:** The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.

4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics of the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition template are saved.

### **Related Topics**

How to associate algorithms with a deferred revenue recognition template	<a href="#">Associating Algorithms with a Deferred Revenue Recognition Template</a> on page 2266

## **Deleting a Deferred Revenue Recognition Template**

### **Procedure**

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template that you want to delete.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.

A message appears confirming whether you want to delete the deferred revenue recognition template.

4. Click **OK**.

The deferred revenue recognition template is deleted.

### **Related Topics**

## **Viewing the Deferred Revenue Recognition Template Details**

### **Procedure**

To view the details of a deferred revenue recognition template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.  
The **Deferred Revenue Recognition Template** screen appears.
3. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
4. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to view.  
The **Deferred Revenue Recognition Template** screen appears.
5. View the details of the deferred revenue recognition template in the **Deferred Revenue Recognition Template** zone.

## Deferred Revenue Recognition (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition \(Used for Viewing\)](#) on page 2280

This screen consists of the following zone:

- [Search Deferred Revenue Recognition](#) on page 2274

## Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: <ul style="list-style-type: none"> <li>• Account Details</li> <li>• Person Details</li> <li>• Deferred Revenue Recognition Details</li> <li>• Financial Transaction Details</li> <li>• Policy Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Account Details</b> option is selected.	
Person ID	Used to search deferred revenue recognition which are assigned to a particular person.	No
	<b>Note:</b> This field appears when you select the <b>Person Details</b> option from the <b>Search By</b> list.	
Account ID	Used to search the account ID.	No
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the value of the account identifier.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	<b>Note:</b> This field appears when you select the <b>Person Details</b> option from the <b>Search By</b> list.	
Status	Used to search deferred revenue recognition with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> <li>• Draft</li> </ul>	No
	<b>Note:</b> This field appears when you select the <b>Person Details</b> , <b>Account Details</b> , or <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition.	No
	<b>Note:</b> This field appears when you select the <b>Person Details</b> , <b>Account Details</b> , or <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid.	No
	<b>Note:</b> This field appears when you select the <b>Person Details</b> or <b>Account Details</b> option from the <b>Search By</b> list.	
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No
	<b>Note:</b> This field appears when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description of the deferred revenue recognition.	No
	<b>Note:</b> This field appears when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Monthly</li> <li>• Weekly</li> </ul>	No
	<b>Note:</b> This field appears when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction.	
	<b>Note:</b> This field appears only when you select the <b>Financial Transaction Details</b> option from the <b>Search By</b> list.	
Policy Type	Used to indicate the type of policy.	Yes
	<b>Note:</b> This field appears when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Policy Number	Used to indicate the policy number.	No
	<b>Note:</b> This field appears when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Plan Number	Used to indicate the plan number of the policy.	No
	<b>Note:</b> This field appears when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Source System	Used to indicate the name of the external system from where the policy originated.	No
	<b>Note:</b> This field appears when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Start Date	Used to indicate the date from when the policy is effective.	No
	<b>Note:</b> This field appears when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to indicate the date till when the policy is effective.	No
	<b>Note:</b> This field appears when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition</b> screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the respective financial transaction.

### Related Topics

For more information on...	See...
How to view the details of a deferred revenue recognition	<a href="#">Viewing the Deferred Revenue Recognition Details</a> on page 2279
How to search for a deferred revenue recognition	<a href="#">Searching for a Deferred Revenue Recognition</a> on page 2278

## Searching for a Deferred Revenue Recognition

### Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application
- Recognition Schedules defined in the application
- Source Systems defined in the application

**Procedure**

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Deferred Revenue Recognition**.  
A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.  
The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

**Viewing the Deferred Revenue Recognition Details****Procedure**

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2280
- [Deferred Revenue Recognition - Log](#) on page 2283

3. Ensure that the **Main** tab is selected.
4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

How to search for a deferred revenue recognition	<a href="#">Searching for a Deferred Revenue Recognition</a> on page 2278

## Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2280
- [Deferred Revenue Recognition - Log](#) on page 2283

### Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- [Deferred Revenue Recognition](#) on page 2280
- [Associated Deferred Revenue Recognitions](#) on page 2282
- [Recognition Schedule](#) on page 2282
- [Revenue Recognition Items](#) on page 2283

### Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template. <b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition. <b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction Information</b> screen appears where you can view the details of the financial transaction.

Field Name	Field Description
Total Revenue Deferred	Displays the total revenue deferred.
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> <li>• Draft</li> </ul>

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	<b>Note:</b> The <b>Edit</b> button appears when the deferred revenue recognition is in the <b>Active</b> status.
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	<b>Note:</b> The <b>Generate Schedule</b> button appears only when the deferred revenue recognition is in the <b>Draft</b> status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.

Field Name	Field Description
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

### Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition</b> screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	<b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> </ul>

### Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

**Note:** This zone appears when the deferred revenue recognition is in the **Active** status.

### Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. “
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the deferred revenue recognition.

### Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- [Deferred Revenue Recognition Log](#) on page 2283

### Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

### Related Topics

## Editing a Deferred Revenue Recognition

### Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.  
The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.  
The **Deferred Revenue Recognition** screen appears.

**Note:** The **Edit** button appears when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics of the deferred revenue recognition, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition are saved.

## Creating the Deferred Revenue Recognition Schedule

### Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

### Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.

The **Deferred Revenue Recognition** screen appears.

3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

**Note:** The **Generate Schedule** button appears when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

### Related Topics

## Defining a Characteristic for a Deferred Revenue Recognition

### Prerequisites

To define a characteristic for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

### Procedure

To define a characteristic for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Deferred Revenue Recognition</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

- If you want to define more than one characteristic for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete** (🗑️) icon corresponding to the characteristic.

### Related Topics

For more information on...	See...
How to edit a deferred revenue recognition	<a href="#">Editing a Deferred Revenue Recognition</a> on page 2284

## Adding Related Deferred Revenue Recognitions

### Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

### Procedure

To add related deferred revenue recognitions:

- Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Deferred Revenue Recognition Search</b> window appears.	
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Financial Transactions Search</b> window appears.	

- Enter the required details in the **Related Deferred Revenue Recognitions** section.
- If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑️) icon corresponding to the related deferred revenue recognition.

### Related Topics

How to edit a deferred revenue recognition	<a href="#">Editing a Deferred Revenue Recognition</a> on page 2284

## Editing the Deferred Revenue Recognition Schedule Details

### Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

### Procedure

To edit the details of the deferred revenue recognition schedule:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

The **Deferred Revenue Recognition** screen appears.

- Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.

The **Edit Recognition Schedule** screen appears.

**Note:** A recognition schedule from the deferred revenue recognition can be edited when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

- Modify the details of the recognition schedule.
- If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add (+)** icon and then repeat step 4.

**Note:** However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete (🗑)** icon corresponding to the recognition schedule.

- Click **Save**.

The changes made to the recognition schedule are saved.

### Related Topics

## Viewing the Log of a Deferred Revenue Recognition

### Procedure

To view the log of a deferred revenue recognition:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2280
- [Deferred Revenue Recognition - Log](#) on page 2283

- Click the **Log** tab.

The **Log** tab appears.

- View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.

Column Name	Column Description
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

### Related Topics

For more information on...	See...
<b>Deferred Revenue Recognition Log zone</b>	<a href="#">Deferred Revenue Recognition Log</a> on page 2283
How to search for a deferred revenue recognition	<a href="#">Searching for a Deferred Revenue Recognition</a> on page 2278
How to add a log entry for a deferred revenue recognition	<a href="#">Adding a Log Entry for a Deferred Revenue Recognition</a> on page 2289

## Adding a Log Entry for a Deferred Revenue Recognition

### Procedure

To add a log entry for a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to edit.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 2280
- [Deferred Revenue Recognition - Log](#) on page 2283

3. Click the **Log** tab.

The **Log** tab appears.

4. Click on the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log zone**.

The **Add Deferred Revenue Recognition Schedule Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes Or No)
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.	Not applicable
Log Details	Used to specify additional comments for the deferred revenue recognition.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Deferred Revenue Recognition Log zone**.

Oracle Revenue Management and Billing enables you to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. The system enables you to upload a pay instruction file in the following formats:

- **CSV File Format** – You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch.
- **EDI 820 File Format** – You can upload pay instruction files in the EDI 820 file format from the specified location on the server using the **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.

**Note:** The **BPR** tag in the EDI 820 file must be set to **I** to indicate that the file contains pay instructions for reconciliation.

While uploading pay instruction files, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Once a file is successfully validated, the reconciliation is created for the file in the **Draft** status. The reconciliation is immediately transitioned to the **Send Notification** status and the algorithms attached to the Send Notification status are executed. Once the To Do is created, the status of the reconciliation is changed to **Pending**. A pay instruction is created for each record in the file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

You need to then specify the payment ID against which you want to reconcile the billed items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the accounts for which you have received the pay instruction. The status of the reconciliation is changed to **Pending Reconciliation**.

On reconciling the pay instructions, the system finds the bill segment against which the pay instruction must be reconciled using the account identifier, policy

number, plan number, member identifier, and coverage period combination. Once the bill segment is identified, the transfer adjustment is created against the bill segment and offset adjustment is created against the respective reconciliation contract. If all pay instructions in the file are successfully reconciled, the status of the reconciliation is changed to **Completed**. However, if one or more pay instruction in the file could not be successfully reconciled, the status of the reconciliation is changed to **Open**. If a file contains a pay instruction for previous coverage period, then system checks whether there is any open pay instruction for that coverage period in the system and accordingly tries to reconcile the pay instruction. However, if an open pay instruction for that coverage period does not exist in the system, the system tries to reconcile the pay instruction against the billed item.

You may manually reconcile the pay instructions which are in the **Pending Reconciliation** status. Alternatively, you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** batch at regular interval to reconcile the pay instructions.

During reconciliation, a pay instruction also goes through various statuses in its lifecycle. You may configure the following two batches to execute at the regular intervals:

- **Pay Instruction Periodic Monitor (for Pending Status) (C1-PIPMO)** – It monitors whether there are any pay instructions in the **Pending** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.
- **Pay Instruction Periodic Monitor (for Open Status) (C1-PIMDF)** – It monitors whether there are any pay instructions in the **Open** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.

If you cancel the payment tender, the payment and reconciliation associated with the payment are automatically canceled. The status of the reconciliation is changed to **Pending Cancellation**. And, the status of all pay instructions in the reconciliation is changed to **Canceled**. If required, you can manually cancel a reconciliation. However, you can cancel a reconciliation when it is in the **Open** or **Completed** status. On canceling a reconciliation, the status of the reconciliation is changed to **Pending Cancellation** and the status of all pay instructions in the reconciliation is changed to **Canceled**.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. It monitors whether there are reconciliations in the **Pending Cancellation** status. If there is a reconciliation in the **Pending Cancellation** status, the status of the reconciliation is changed to **Canceled**.

The system enables you to create a copy of reconciliation when it is in the **Canceled** status. If the number of pay instructions in the reconciliation does not exceed the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a copy of the reconciliation and pay instructions is created in the real time (i.e. immediately). The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

However, if the number of pay instructions in the reconciliation exceeds the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a batch job is automatically created using the **Duplicate Reconciliation (C1-RECDDU)** batch. A message appears indicating the batch job ID. This batch job creates a copy of the reconciliation and pay instructions. The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

If the policy number, plan number, and member identifier are specified in a pay instruction, then the pay instruction is reconciled at the main subscriber level. If the policy number and plan number are specified in a pay instruction, then the pay instruction is reconciled at the plan level. However, if the policy number is only specified in a pay instruction, then the pay instruction is reconciled at the policy level.

On reconciling, some pay instructions are fully reconciled against the bill segments, some pay instructions are partially reconciled against the bill segments, and some pay instructions are not reconciled against any bill segments. The system enables you to capture such discrepancies for the reporting purposes. If required, you can generate the discrepancy report at the file or account level. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All billed items which were partially reconciled against pay instructions due to rate variance
- All billed items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. Once you review and finalize the discrepancy report, its status is changed to **Completed**. At a time, you can only have one discrepancy report for the file or account in the **Pending** status. Until, you finalize a discrepancy report, you cannot create another discrepancy report for the file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation is in the **Open** status.

The reconciliation process goes through various statuses in its entire lifecycle. For more information about the reconciliation statuses, see...

- [Reconciliation Status Transition](#) on page 2294
- [Pay Instruction Status Transition](#) on page 2295
- [Discrepancy Report Status Transition](#) on page 2297

## Pre-requisites

---

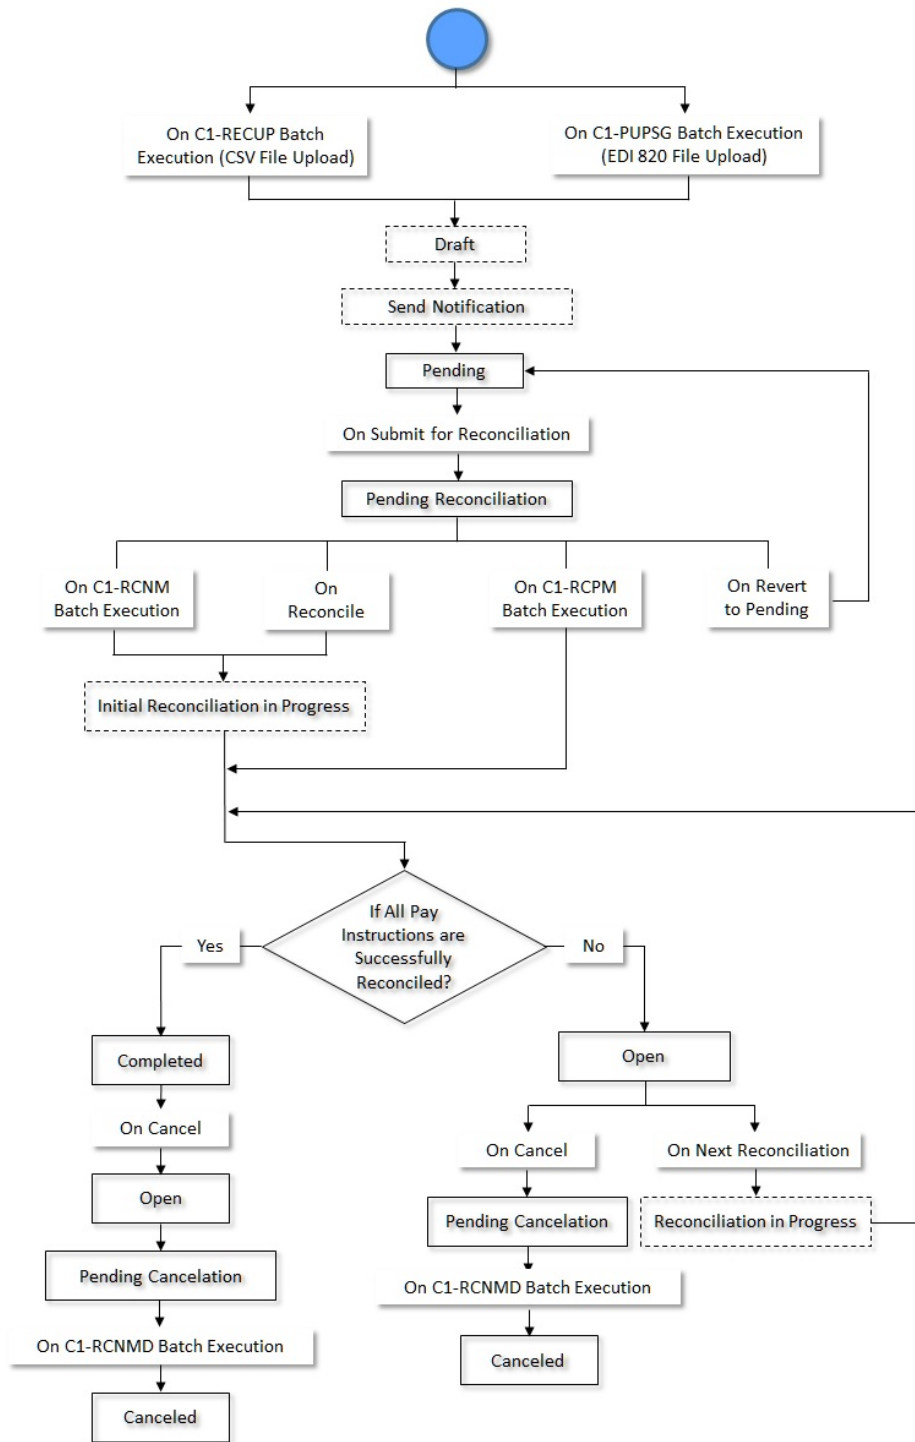

To setup the Member to Member Reconciliation feature, you need to do the following:

- **Configure the following Characteristics:**
  - Define an account eligible for reconciliation process from an **On-Account Contract** of a Universal Generic account.
  - Populate the Policy ID, or Plan ID, or Membership ID linked with the billable charges.
- Define the bills having the status as **Completed** for reconciliation.
- Define the **Contract Types** for reconciliation.
- Ensure that payment on **Suspense Contract** is available to match against the bills.
- Configure the **Customer Class** algorithm for a payer account.

## Reconciliation Status Transition

---

The following figure graphically indicates how a reconciliation goes through various statuses in its lifecycle:

## Pay Instruction Status Transition

The following figure graphically indicates how a pay instruction goes through various statuses in its lifecycle:

## Discrepancy Report Status Transition

The following figure graphically indicates how a Discrepancy Report goes through various statuses in its lifecycle:

## EDI 820 File Format For Reconciliation

Before uploading an EDI 820 file, you need to ensure that the EDI 820 file contains the following columns:

Tag	Attribute	Description	Mandatory (Yes or No)
Algo Param	Account Identifier Type	Used to specify the account identifier type. The valid values are: <ul style="list-style-type: none"> <li>• Account Name</li> <li>• Base Global Account ID</li> <li>• Bill Group Identifier</li> <li>• Demo Bank Account Number</li> <li>• External Account Identifier</li> <li>• Flexcube Account ID</li> <li>• International Bank Account Number</li> </ul>	Yes (Conditional)
			<b>Note:</b> This data is required when Account Identifier is provided.

Tag	Attribute	Description	Mandatory (Yes or No)
N1[3]	Account Identifier value	Used to specify the value of the account identifier type.	Yes (Conditional)
			<b>Note:</b> This data is required when Account Identifier Type is provided.
Batch Param	Member Identifier type	Used to specify the member identifier type.	Yes
RMR[2]	Policy Number	Used to specify the policy number of the member.	Yes
Algo Param	Plan Number	Used to specify the plan number of the member.	No
ENT[4]	Member Identifier Value	Used to specify the value of the member identifier type.	Yes
RMR[4]	Amount	Used to specify the amount that has to be paid to the member.	Yes
			<b>Note:</b> The data value of this column must be 0, if no amount is provided.
DTM[6]	Coverage Start Date	Used to specify the date of the policy from where the coverage starts.	Yes
		<b>Note:</b> The Coverage Start Date cannot be later than the coverage end date.	
DTM[6]	Coverage End Date	Used to specify the date of the policy till when the coverage ends.	Yes
		<b>Note:</b> The coverage end date cannot be earlier than the coverage start date.	
NM1[4] [5]	Member Name	Used to specify the name of the member.	Yes
REF[2]	Plan Number	Used to specify the plan number of the member.	Yes (Conditional)
			<b>Note:</b> This data is required when Algo Param tag does not have a value.
Batch Param	Reconciliation Type	Used to specify the type of reconciliation.	Yes
Batch Param	Reconciliation Cancel Status	Used to specify the Reconciliation Cancellation status.	Yes

## Sample EDI 820 File Format

 IEA\*1\*505043666~

Here the tags ISA and IEA resemble Bank Details, whereas LBTEST01 indicates Tender Source information.

Tags like GS and GE, ST and SE are known as Start and End Tags. All of the other tags are embedded inside these Start and End tags.

For more information about the EDI 820 file format, see topic [EDI 820 File Format For Reconciliation](#) on page 2297

## Algorithms Used in C1-MemberReconType

The following table lists the algorithms which are attached to the **C1-MemberReconType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-REOCNPEP	C1-REOCNPEP	Refer to <a href="#">C1-REOCNPEP</a> on page 2299

### C1-REOCNPEP

This algorithm validates a reconciliation type.

It checks the following:

- A duplicate algorithm is not added.
- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a reconciliation type when the corresponding reconciliation is in a status other than **Completed** or **Canceled**.

## Algorithms Used in C1-MemberReconciliation

The following table lists the algorithms which are attached to the **C1-MemberReconciliation** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-RECONINFO	C1-RECONINFO	Refer to <a href="#">C1-RECONINFO</a> on page 2301
Validation	C1-MRECONVAL	C1-MRECONVAL	Refer to <a href="#">C1-MRECONVAL</a> on page 2301

The following table lists the algorithms which are used in the lifecycle of the **C1-MemberReconciliation** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Send Notification	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455

## C1-RECONINFO

This algorithm generates the reconciliation information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Reconciliation Type Description
- Reconciliation Status
- Reconciliation ID

## C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## F1-TDCREATE

This algorithm is invoked when the status of the reconciliation is changed to **Send Notification**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is created for a pay instruction file.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is created for a pay instruction file.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## C1-VALPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Pending**. Once a pay instruction is created, this algorithm validates the following:

- The coverage end date is not earlier than the coverage start date.
- Either the account identifier type and account identifier or the account ID is available in the pay instruction record.
- The member identifier type is available when the member identifier is specified and vice versa.
- A person with the given member identifier type and member identifier combination exists in the system.
- An account with the specified account ID exists in the system.
- The account ID is derived using the account identifier type and account identifier combination when the account ID is not available in the pay instruction record.
- The account is eligible for reconciliation.

If the above mentioned validations are successful, the status of the pay instruction is set to **Pending**. However, if any of the above validation fails, the status of the pay instruction is set to **Error**.

This algorithm contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. This type of characteristic is defined on the account. You must specify a characteristic type where the characteristic entity is set to Account.
- **Maintenance Object for Generating Pay Instruction Logs** – Used to specify the maintenance object using which you want to generate logs for the pay instruction.
- **Pay Instruction Error Status** – Used to specify the status code to which you want to transition the pay instruction when the validation fails.
- **Pay Instruction Pending Status** – Used to specify the status code to which you want to transition the pay instruction when the validation is successful.

All these parameters are mandatory.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

## C1-MONPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Initial Reconciliation in Progress** or **Reconciliation in Progress**. It monitors or checks whether there are any pay instructions in the following statuses:

- Reconciliation Pending Processing
- Derivation Pending Processing
- Completed

If all pay instructions in the reconciliation are in the **Completed** status, then the status of the reconciliation is changed to **Completed**. However, if there are any pay instructions in the **Reconciliation Pending Processing** or **Derivation Pending Processing** status, then the status of reconciliation is changed to **Open**.

This algorithm contains the following parameters:

- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which the pending pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which the open pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when there is a pay instruction in the status which is specified in the **Pay Instruction Derivation Pending Processing Status** or **Pay Instruction Reconciliation Pending Processing Status** parameter.
- **Reconciliation Completed Status** - Used to specify the status code to which you want to transition the reconciliation when all its pay instructions are in the status which is specified in the **Pay Instruction Completed Status** parameter.

All these parameters are mandatory.

## C1-TRNPAYRCN

This algorithm transfers the payment amount from the payor account's contract to the reconciliation contract of the accounts for which you have received the pay instruction. In this process, the payment against the payor account's contract is canceled and the payment against the payee account's reconciliation contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment on the payor account's contract is canceled.
- **Reconciliation Contract Match Type** – Used to specify the match type using which you want to apply payment against the reconciliation contract.

Both these parameters are mandatory.

## C1-RCOPNPYIN

This algorithm checks whether the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter. If the status of the pay instruction is **Pending** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Derivation Pending Processing Status** parameter.

However, if the status of the pay instruction is **Open** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Reconciliation Pending Processing Status** parameter.

It contains the following parameters:

- **Pay Instruction Pending Status** – Used to specify the status code to which a pay instruction is transitioned when its validation is successful.
- **Pay Instruction Open Status** – Used to specify the status code to which a pay instruction is transitioned when it is not fully reconciled.
- **Pay Instruction Derivation Pending Processing Status** – Used to specify the status code to which you want to transition the pending pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Pay Instruction Reconciliation Pending Processing Status** – Used to specify the status code to which you want to transition the open pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Deferred Processing Threshold** – Used to specify the maximum number of pay instructions that can be reconciled in the real time (i.e. immediately). If the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit, the pay instruction is reconciled in the deferred mode.

All these parameters are mandatory.

## C1-RCNOPNMR

This algorithm initiates the reconciliation process for the past open reconciliation records of the account. It contains the following parameters:

- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.
- **Reconciliation In Progress Status** – Used to specify the status code to which you want to transition the past open reconciliation record when the current reconciliation record of the account is reconciled.

Both these parameters are mandatory.

## C1-RCMONPNCN

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It checks whether the reason is specified while canceling the reconciliation. If the cancel reason is specified, the status of the reconciliation is changed to **Canceled**. However, if the cancel reason is not specified, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch.

It contains the following parameters:

- **Reconciliation Cancel Status Reason -**

Used to specify the cancel reason. If you specify the value for this parameter, the system will validate whether the cancel reason specified while canceling the reconciliation matches the cancel reason specified in this parameter. If the cancel reason does not match, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch. You must specify a reason which is defined for the **Pending Cancellation** status of the **C1-MemberReconciliation** business object.

## C1-CANPAYINS

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It changes the status of all pay instructions in the reconciliation.

It contains the following parameter:

- **Pay Instruction Canceled Status** – Used to specify the status code to which you want to transition a pay instruction when the reconciliation is canceled. This parameter is mandatory.

## C1-CANRCNPAY

This algorithm transfers the payment amount from the payee account's reconciliation contract to the payor account's contract. In this process, the payment against the reconciliation contract is canceled and the payment against the payor account's contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment against the payee account's reconciliation contract is canceled.
- **On Account Match Type** – Used to specify the match type using which you want to apply the payment against the contract of the payor account.

Both these parameters are mandatory.

## C1-RCNCANLTD

This algorithm is invoked when the status of the reconciliation is changed to **Canceled**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is canceled.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is canceled.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## Algorithms Used in C1-PayInstruction

The following table lists the algorithms which are attached to the **C1-PayInstruction** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-MPAYININF	C1-MPAYININF	Refer to <a href="#">C1-MPAYININF</a> on page 2306

The following table lists the algorithms which are used in the lifecycle of the **C1-PayInstruction** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	-	-	-	-
Derivation In Progress	Enter	C1-PYINDRVAN	C1-PYINDRVAN	Refer to <a href="#">C1-PYINDRVAN</a> on page 2306
Reconciliation In Progress	Enter	C1-PIRECOCIL	C1-PIRECOCIL	Refer to <a href="#">C1-PIRECOCIL</a> on page 2307
Open	-	-	-	-
Complete	-	-	-	-
Cancelled	Enter	C1-PYICNADJ	C1-PYICNADJ	Refer to <a href="#">C1-PYICNADJ</a> on page 2308
Derivation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455
Reconciliation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455
Error	-	-	-	-

## C1-MPAYININF

This algorithm generates the pay instruction information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- “Period:” Start Date - End Date
- Pay Instruction Amount
- Pay Instruction Status
- Payor Name
- Pay Instruction ID

## C1-PYINDRVAN

This algorithm is invoked when the status of the pay instruction is changed to **Derivation in Progress**. It derives the following:

- Policy using the policy number
- Plan using the plan number
- Member using the member identifier type and member identifier
- Payee account using the account identifier type and account identifier

If the policy, plan, and member information is available, it validates whether the member is covered under the specified plan of the policy. However, if the policy and plan information is available, it validates whether the plan is included in the specified policy. If the derivation and validation process is successful, the related object information is derived for policy, plan, and/or member from the system.

However, if the derivation and validation process fails, the related object information is not derived for policy, plan, and/or member and the status of the pay instruction remains as **Pending**.

In addition, the system determines whether the pay instruction must be reconciled at the member, plan, or policy level depending on the information available in the pay instruction. If the policy, plan, and member information is available, the pay instruction is reconciled at the member level. If the policy and plan information is available, the pay instruction

is reconciled at the policy plan level. However, if the policy information is available, the pay instruction is reconciled at the policy level.

It contains the following parameters:

- **Unsuccessful Processing Status** – Used to specify the status code to which you want to transition the pay instruction when the derivation and validation process fails.
- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy level.

All these parameters are mandatory.

## C1-PIRECOCIL

This algorithm is invoked when the status of the pay instruction is changed to **Reconciliation in Progress**. It searches whether there is an open bill segment with the policy, plan, member, and coverage period combination for the payee account. If such bill segment exists in the system, this algorithm reconciles the pay instruction against the open bill segment. It creates two reconciliation adjustments – one against the payee account’s reconciliation contract and another against the bill segment’s contract.

If the amount on the pay instruction is fully reconciled, then the status of the pay instruction is changed to **Completed**. However, if the amount on the pay instruction is not fully reconciled, then the status of the pay instruction is changed to **Open**.

It contains the following parameters:

- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy level.
- **Adjustment Type for Bill Segment Contract** – Used to specify the adjustment type using which you want to create the adjustment on the bill segment’s contract when the pay instruction is reconciled.
- **Adjustment Type for Reconciliation Contract** – Used to specify the adjustment type using which you want to create the adjustment on the reconciliation contract when the pay instruction is reconciled.

- **Reconciliation Open Status** – Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**.
- **Pay Instruction Open Status** – Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled.
- **Pay Instruction Completed Status** – Used to specify the status code to which you want to transition the pay instruction when it is fully reconciled.
- **Reconciliation Characteristic Type** – Used to specify the characteristic type which you want to use to store the reconciliation ID. This type of characteristic is defined on the adjustments which are created on reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**.
- **Payment Event Characteristic Type** – Used to specify the characteristic type which you want to use to store the payment event ID. This type of characteristic is defined on the reconciliation adjustments to indicate the payment event whose payment is distributed against the bill segment.
- **Adjustment Type for Offsetting Debits against Billed Credits** – Used to specify the adjustment type using which you want to create the adjustments when offsetting billed debit verses billed credits.

All these parameters are mandatory.

## C1-PYICNADJ

This algorithm is invoked when the status of the pay instruction is changed to **Canceled**. It cancels the reconciliation adjustments which are created while reconciling the pay instruction. It cancels the reconciliation adjustment irrespective of whether the status of the pay instruction is **Open** or **Completed**.

It contains the following parameters:

- **Adjustment Cancel Reason** – Used to indicate the reason that you want to use when the reconciliation adjustments are canceled.
- **Pay Instruction Completed Status** – Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Pay Instruction Open Status** – Used to specify the status code to which the pay instruction is transitioned when it is not fully reconciled.
- **Reconciliation Completed Status** – Used to specify the status code to which the reconciliation is transitioned when all its pay instructions are fully reconciled.
- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.

All these parameters are mandatory.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## Algorithms Used in C1-MemberDiscReportType

---

The following table lists the algorithms which are attached to the **C1-MemberDiscReportType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-DISCPEP	C1-DISCPEP	Refer to <a href="#">C1-DISCPEP</a> on page 2309

## C1-DISCPEP

This algorithm validates a discrepancy report type. It checks the following:

- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a discrepancy report type when the corresponding discrepancy report is in a status other than **Completed**.

## Algorithms Used in C1-DiscrepancyReport

The following table lists the algorithms which are attached to the **C1-DiscrepancyReport** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DISRINFO	C1-DISRINFO	Refer to <a href="#">C1-DISRINFO</a> on page 2309

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1455
	Enter	C1-VALNEWDIS	C1-VALNEWDIS	Refer to <a href="#">C1-VALNEWDIS</a> on page 2310
Pending	Enter	C1-CRDSLNTM	C1-CRDSLNTM	Refer to <a href="#">C1-CRDSLNTM</a> on page 2310
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1454
Completed	Enter	C1-VALCMPDIS	C1-VALCMPDIS	Refer to <a href="#">C1-VALCMPDIS</a> on page 2310

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-DISRINFO

This algorithm generates the discrepancy report information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Discrepancy Report Type Description
- Discrepancy Report Status

- Discrepancy Report ID

## C1-VALNEWDIS

This algorithm allows you to create a discrepancy report when the following conditions are met:

- The account for which discrepancy report is created is eligible for reconciliation.
- A discrepancy report in the **Pending** status does not exist for the account or file.
- A reconciliation record in the **Open** status exists for the account or file.

It contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Account**.
- **Eligible for Reconciliation Characteristic Value** – Used to specify the value of the characteristic type specified in the **Eligible for Reconciliation Characteristic Type** parameter which indicates that the account is eligible for reconciliation.

Both these parameters are mandatory.

## C1-CRDSLNTM

This algorithm is invoked when the status of the discrepancy report is changed to **Pending**. If the discrepancy report is created at the account level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there is an open bill segment for the account and for which there are open and pending pay instructions in the open reconciliation.

However, if the discrepancy report is created at the file level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there are open and pending pay instructions in the open reconciliation. Note that the discrepancy line items are created for each account whose pay instructions are received in the pay instruction file.

It contains the following parameters:

- **Consumer Status Characteristic Type** – Used to specify the characteristic type which stores the consumer status of the member. The system retrieves the consumer status of the member and stores it against the respective discrepancy line item. Here, you must specify a characteristic type where the characteristic entity is set to **Person**. This parameter is mandatory.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-VALCMPDIS

This algorithm is invoked when you click the **Finalize** button. It changes the status of the discrepancy report to **Completed** when the discrepancy category is specified for each discrepancy line item in the report.

## Reconciliation Type

---

Oracle Revenue Management and Billing allows you to define a reconciliation type using which you can create the reconciliation. It is the reconciliation type which helps the system to determine:

- The business object using which the reconciliation should be created.

- The file format through which the pay instruction records can be uploaded in the system.

In addition, a reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

The **Reconciliation Type** screen allows you to define, edit, copy, and delete a reconciliation type. It contains the following zones:

- [Reconciliation Type List](#) on page 2311
- [Reconciliation Type](#) on page 2311

## Reconciliation Type List

The **Reconciliation Type List** zone lists the reconciliation types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Reconciliation Type	Displays the reconciliation type.
Description	Displays the description of the reconciliation type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Reconciliation Type</b> screen appears where you can edit the details of the reconciliation type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Reconciliation Type</b> screen appears where you can define a new reconciliation type using an existing reconciliation type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the reconciliation type.
	<b>Note:</b> You can delete a reconciliation type when you have not created a reconciliation using the reconciliation type.

On clicking the **Broadcast** (📡) icon corresponding to a reconciliation type, the **Reconciliation Type** zone appears with the details of the respective reconciliation type.

How to view the details of a reconciliation type	<a href="#">Viewing the Reconciliation Type Details</a> on page 2320

## Reconciliation Type

The **Reconciliation Type** zone displays the details of the reconciliation type. It contains the following sections:

- **Main** - Displays basic information about the reconciliation type. It contains the following fields:

Field Name	Field Description
Reconciliation Type	Displays the reconciliation type.
Reconciliation Business Object	Indicates the business object using which the reconciliation will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the reconciliation type.
Detailed Description	Indicates the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Status	Displays additional information about the reconciliation type.

- **Algorithms** - Lists the algorithms which are associated with the reconciliation type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithms with the same system event should be executed.
System Event	Indicates the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> <li>Upload Pay Instructions</li> </ul>
Algorithm	Indicates the algorithm attached to the system event.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics defined for the reconciliation type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.  <b>Note:</b> The data appears in this column when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b> .

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation type.

Button Name	Button Description
Delete	Used to delete the reconciliation type.
	<b>Note:</b> You can delete a reconciliation type when you have not created a reconciliation using the reconciliation type.
Duplicate	Used to create a new reconciliation type using an existing reconciliation type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Reconciliation Type** zone does not appear in the **Reconciliation Type** screen. It appears when you click the **Broadcast** (  ) icon corresponding to a reconciliation type in the **Reconciliation Type List** zone.

## Defining a Reconciliation Type

### Prerequisites

To define a reconciliation type, you should have:

- Reconciliation business objects defined in the application

### Procedure

To define a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Reconciliation Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type Business Object	Used to indicate the business object using which you want to create the reconciliation type.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Reconciliation Type** screen.

**Note:** The **Select Business Object** screen appears when there are multiple reconciliation type business objects defined in the application. If there is only one reconciliation type business object defined in the application, the **Reconciliation Type** screen appears.

4. Select the required reconciliation type business object from the respective field.
5. Click **OK**.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define the characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Associate algorithms with the reconciliation type, if required.
8. Define characteristics for the reconciliation type, if required.
9. Click **Save**.

The reconciliation type is defined.

### **Related Topics**

How to define a characteristic for a reconciliation type	<a href="#">Defining a Characteristic for a Reconciliation Type</a> on page 2315

## Defining a Characteristic for a Reconciliation Type

### Prerequisites

To define a characteristic for a reconciliation type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation Type**).

### Procedure

To define a characteristic for a reconciliation type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Reconciliation Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the reconciliation type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the reconciliation type.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the reconciliation type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the reconciliation type, click the **Delete** (🗑️) icon corresponding to the characteristic.

How to copy a reconciliation type	<a href="#">Copying a Reconciliation Type</a> on page 2319

## Associating an Algorithm with a Reconciliation Type

You can upload a pay instruction file in the CSV and EDI 820 file formats. While uploading a pay instruction file, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two

algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

### **Prerequisites**

To associate an algorithm with a reconciliation type, you should have:

- Algorithm defined using the **C1-PAYINSUPL** or **C1-RECONPROC** algorithm type depending on whether you want to use the reconciliation type while uploading a pay instruction file in the CSV or EDI 820 file format

### **Procedure**

To associate an algorithm with a reconciliation type:

1. Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithms with the same system event should be executed.	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.
System Event	Used to indicate the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> <li><b>Upload Pay Instructions</b> - Used when you want to execute the attached algorithm while uploading a pay instruction file using the <b>Pay Instruction CSV File Upload (C1-RECUP)</b> or <b>Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)</b> batch.</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.
Algorithm	Used to indicate the algorithm that you want to attach to the system event. <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the reconciliation type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the reconciliation type, click the **Delete (🗑)** icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the reconciliation type.

**Related Topics**

For more information on...	See...

How to edit a reconciliation type	<a href="#">Editing a Reconciliation Type</a> on page 2317
How to copy a reconciliation type	<a href="#">Copying a Reconciliation Type</a> on page 2319

**Editing a Reconciliation Type****Prerequisites**

To edit a reconciliation type, you should have:

- Reconciliation business objects defined in the application

**Procedure**

To edit a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the reconciliation type whose details you want to edit.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define the characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Displays the reconciliation type.	Not applicable
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a reconciliation type by clicking the **Edit** button in the **Reconciliation Type** zone.

- Modify the required details in the **Main** section.
- Associate or remove an algorithm from the reconciliation type, if required.
- Define, edit, or remove characteristics of the reconciliation type, if required.
- Click **Save**.

The changes made to the reconciliation type are saved.

## Deleting a Reconciliation Type

### Procedure

To delete a reconciliation type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
- Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.
- In the **Reconciliation Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the reconciliation type that you want to delete.  
A message appears confirming whether you want to delete the reconciliation type.

**Note:** You can delete a reconciliation type when you have not created a reconciliation using the reconciliation type.

**Tip:** Alternatively, you can delete a reconciliation type by clicking the **Delete** button in the **Reconciliation Type** zone.

5. Click **OK**.

The reconciliation type is deleted.

## **Copying a Reconciliation Type**

Instead of creating a reconciliation type from scratch, you can create a new reconciliation type using an existing reconciliation type. This is possible through copying a reconciliation type. On copying a reconciliation type, the details including the algorithms and characteristics are copied to the new reconciliation type. You can then edit the details, if required.

### **Prerequisites**

To copy a reconciliation type, you should have:

- Reconciliation type (whose copy you want to create) defined in the application
- Reconciliation business objects defined in the application

### **Procedure**

To copy a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the reconciliation type whose copy you want to create.  
The **Reconciliation Type** screen appears. It contains the following sections:
  - **Main** - Used to specify basic details about the reconciliation type.
  - **Algorithms** - Used to associate algorithms with the reconciliation type.
  - **Characteristics** - Used to define the characteristics for the reconciliation type.

The **Main** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can copy a reconciliation type by clicking the **Duplicate** button in the **Reconciliation Type** zone.

- Enter the required details in the **Main** section.
- Associate or remove an algorithm from the reconciliation type, if required.
- Define, edit, or remove characteristics of the reconciliation type, if required.
- Click **Save**.

The new reconciliation type is defined.

## Viewing the Reconciliation Type Details

### Procedure

To view the details of a reconciliation type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
- Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.

4. In the **Reconciliation Type List** zone, click the **Broadcast** (  ) icon corresponding to the reconciliation type whose details you want to view.  
The **Reconciliation Type** zone appears.
5. View the details of the reconciliation type in the **Reconciliation Type** zone.

## Reconciliation (Used for Searching)

The **Reconciliation** screen allows you to search for a reconciliation using various search criteria. It contains the following zone:

- [Search Reconciliation](#) on page 2321

Through this screen, you can navigate to the following screen:

- [Reconciliation \(Used for Viewing\)](#) on page 2325

## Search Reconciliation

The **Search Reconciliation** zone allows you to search for a reconciliation using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a reconciliation using the reconciliation, payee account, or payment tender details. The valid values are: <ul style="list-style-type: none"> <li>• Reconciliation Details</li> <li>• Account Details</li> <li>• Payment Tender Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Reconciliation Details</b> option is selected.	
Reconciliation ID	Used to search a particular reconciliation.	No
	<b>Note:</b> This field appears when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Reconciliation Type	Used to search reconciliations which are created using a particular reconciliation type.	No
	<b>Note:</b> This field appears when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Created From	Used to search reconciliations which are created from a particular date onwards.	No
	<b>Note:</b> This field appears when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Status	Used to search reconciliations with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul>	No
	<b>Note:</b> This field appears when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Created Until	Used to search reconciliations which are created till a particular date.	No
	<b>Note:</b> This field appears when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
File Name	Used to search a reconciliation which is created for a particular pay instruction file.	No
	<b>Note:</b> This field appears when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Person Name	Used to search reconciliations which contain a particular member's pay instructions.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to select the identifier type based on which you want to search reconciliations which contain pay instructions for a particular payee account.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
		<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search reconciliations which contain pay instructions for a particular payee account.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Account Identifier	Used to specify the value for the account identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Check Number	Used to search a reconciliation associated with a payment tender which is received through a particular check.	No
	<b>Note:</b> This field appears when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	
Payor Account ID	Used to search reconciliations which are associated with a particular payor account.	No
	<b>Note:</b> This field appears when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	
MICR ID	Used to search a reconciliation associated with a payment tender which contains a particular MICR code.	No
	<b>Note:</b> This field appears when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	
Tender Amount	Used to search reconciliations associated with payment tenders with a particular amount.	No
	<b>Note:</b> This field appears when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a reconciliation.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the reconciliation is created in the system.
Reconciliation Information	Displays information about the reconciliation.
	<b>Note:</b> It has a link. On clicking the link, the <b>Reconciliation</b> screen appears where you can view the details of the respective reconciliation.

Column Name	Column Description
Status	Indicates the status of the reconciliation. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancelation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul>
Payor Account ID	Indicates the payor account to which the reconciliation is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective payor account.
Payment ID	Indicates the payment to which the reconciliation is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Duplicate	Used to create a new reconciliation using an existing reconciliation.  <b>Note:</b> The <b>Duplicate</b> button appears when the reconciliation is in the <b>Canceled</b> status.

## Searching for a Reconciliation

### Prerequisite

To search for a reconciliation, you should have:

- Reconciliation types and account identifier types defined in the application.

### Procedure

To search for a reconciliation:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Reconciliation**.  
The **Reconciliation** screen appears.

- Enter the search criteria in the **Search Reconciliation** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of reconciliations that meet the search criteria appears in the **Search Results** section.

#### **Related Topics**

## **Viewing the Reconciliation Details**

### **Procedure**

To view the details of a reconciliation:

- Search for the reconciliation in the **Reconciliation** screen.
- In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.

The **Reconciliation** screen appears.

- Ensure that the **Main** tab is selected.
- View the details of the reconciliation in the **Reconciliation** zone.
- View the list of pay instructions uploaded through the file in the **Pay Instructions** zone.

#### **Related Topics**

## **Reconciliation (Used for Viewing)**

---

The **Reconciliation** screen allows you to:

- View the details and characteristics of the reconciliation
- Edit and delete the details of the reconciliation
- Submit the file for reconciliation
- View the pay instruction statistics for reconciliation
- Cancel the pending reconciliation

This screen contains the following tabs:

- [Reconciliation - Main](#) on page 2326
- [Reconciliation - Pay Instruction](#) on page 2328
- [Reconciliation - Log](#) on page 2330

For more information on...	See...

<b>Reconciliation - Main</b> zone	<a href="#">Reconciliation</a> on page 2326

## Reconciliation - Main

The **Main** tab displays information about the reconciliation. It contains the following zones:

- [Reconciliation](#) on page 2326

### Reconciliation

The **Reconciliation** zone displays the details of the reconciliation. It contains the following sections:

- **Main** - Displays basic information about the reconciliation. It contains the following fields:

Field Name	Field Description
Reconciliation Information	Displays information about the reconciliation.
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Reconciliation Type</b> screen appears where you can view the details of the reconciliation type.
Status	Indicates the status of the reconciliation. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul>
Status Reason	Indicates the reason why the status of the reconciliation is changed.  <b>Note:</b> This field appears when the reconciliation is in the <b>Pending Cancellation</b> or <b>Canceled</b> status.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.

Field Name	Field Description
Payment Information	<p>Indicates the payment to which the reconciliation is associated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.</p> <p>This field does not appear when the reconciliation is in the <b>Draft</b> or <b>Pending</b> status.</p>
Account Information	<p>Indicates the payor account to which the reconciliation is associated.</p> <p><b>Note:</b> This field does not appear when the reconciliation is in the <b>Draft</b> or <b>Pending</b> status.</p>

- **Characteristics** - Lists the characteristics defined for the reconciliation. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the reconciliation.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	<p>Displays the description of the characteristic value.</p> <p><b>Note:</b> The data appears in this column when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b>.</p>

- **Pay Instruction Statistics** - Lists the statistics of records in the reconciliation. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in the reconciliation file.
Total Records Processed	Displays the count of data records derived after processing.
Total Records Cancelled	Displays the count of data records derived after unsuccessful processing.
Total Records in Error	Displays the count of data records in error status.
Total Records Pending	Displays the count of data records pending after successful derivation.
Total Records in Open	Displays the count of data records in open status.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the reconciliation.</p> <p><b>Note:</b> The <b>Edit</b> button appears when the reconciliation is in the <b>Pending</b> or <b>Draft</b> status.</p>

Button Name	Button Description
Delete	Used to delete the reconciliation.
	<b>Note:</b> The <b>Delete</b> button appears when the reconciliation is in the <b>Pending</b> or <b>Draft</b> status.
Submit for Reconciliation	Used to submit the pay instructions for reconciliation.
	<b>Note:</b> The <b>Submit for Reconciliation</b> button appears when the reconciliation is in the <b>Pending</b> status.
Cancel	Used to cancel the reconciliation.
	<b>Note:</b> The <b>Cancel</b> button appears when the reconciliation is in the <b>Completed</b> or <b>Open</b> status.
Reconcile	Used to reconcile the pay instructions in the reconciliation.
	<b>Note:</b> The <b>Reconcile</b> button appears when the reconciliation is in the <b>Pending Reconciliation</b> status.
Revert to Pending	Used to revert the status of the reconciliation to <b>Pending</b> .
	<b>Note:</b> The <b>Revert to Pending</b> button appears when the reconciliation is in the <b>Pending Reconciliation</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the reconciliation status is updated.
Creation Date Time	Displays the date and time when the reconciliation is created.

## Reconciliation - Pay Instruction

The **Pay Instruction** tab allows you to search for a pay instruction using various search criteria. It contains the following zone:

- [Pay Instructions](#) on page 2328

### Pay Instructions

The **Pay Instructions** zone allows you to search for a pay instruction using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search pay instructions for a particular payee account.	No
	<b>Note:</b> The Search (🔍) icon appears corresponding to the <b>Account ID</b> field. On clicking the <b>Search</b> icon, the <b>Account Search</b> screen appears.	
Policy Number	Used to search pay instructions with a particular policy number.	No
Member Identifier Type	Used to search pay instructions with a particular member identifier type.	No
Member Identifier	Used to search pay instructions with a particular member identifier.	No
Coverage Start Date	Used to search pay instructions which are created from a particular date.	No
Coverage End Date	Used to search pay instructions which are created till a particular date.	No
Amount From	Used to search pay instructions with a particular minimum amount.	No
Amount To	Used to search pay instructions with a particular minimum amount.	No
Status	Used to search pay instructions with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Complete</li> <li>• Derivation Pending Processing</li> <li>• Error</li> <li>• Open</li> <li>• Pending</li> <li>• Reconciliation Pending Processing</li> </ul>	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the account identifier type of the member.
Account Identifier	Displays the value for the account identifier type.
Account ID	Displays the account ID of the member.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Policy Number	Displays the policy number of the member.

Column Name	Column Description
Plan Number	Displays the plan number of the member.
Member Identifier Type	Displays the member identifier type of the member.
Member Identifier	Displays the member identifier of the member.
Member Name	Displays the member name of the member.
Coverage Start Date	Displays the date of the policy from where the coverage starts.
Coverage End Date	Displays the coverage end date of the policy till where the coverage ends.
Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.
Status	Displays the status of the pay instruction. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Complete</li> <li>• Derivation Pending Processing</li> <li>• Error</li> <li>• Open</li> <li>• Pending</li> <li>• Reconciliation Pending Processing</li> </ul>
Pay Instruction ID	Displays the pay instruction ID.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **View** () icon corresponding to an **Account Identifier Type** column, the **Pay Instruction** screen appears with the details of the respective pay instruction record.

You can filter the list using various search criteria (such as, **Account ID**, **Policy Number**, **Member Identifier Type**, **Member Identifier**, **Coverage Start Date**, **Coverage End Date**, **Amount From**, **Amount To**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## **Reconciliation - Log**

The **Log** tab contains the following zone:

- [Reconciliation Log](#) on page 2331

## Reconciliation Log

The **Reconciliation Log** zone lists the complete trail of actions performed on the reconciliation. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the reconciliation.
Details	Displays the details about the action performed on the reconciliation.
User	Indicates the user who has performed the action on the reconciliation.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity that is created when the action is performed on the reconciliation.
Status Reason	Indicates the reason why the status of the reconciliation is changed.
	<b>Note:</b> The data appears in this column when the status of the reconciliation is changed to <b>Pending Cancellation</b> or <b>Canceled</b> .

**Note:** You can manually add a log entry for the reconciliation by clicking the **Add Log Entry** link in the upper right corner of the **Reconciliation Log** zone.

## Editing a Reconciliation

### Procedure

To edit a reconciliation:

1. Search for the reconciliation in **Reconciliation** screen.  
A list appears.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to edit.  
The **Reconciliation** screen appears.
3. Click the **Edit** button in the **Reconciliation** zone.  
The **Member Reconciliation** screen appears.

**Note:** The **Edit** button appears only when the reconciliation is in the **Pending** status.

4. Define, edit, or remove characteristics of the reconciliation, if required.
5. Click **Save**.  
The changes made to the reconciliation are saved.

### Related Topics

How to search for a reconciliation	<a href="#">Searching for a Reconciliation</a> on page 2324

## Defining a Characteristic for a Reconciliation

### Prerequisites

To define a characteristic for a reconciliation, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Reconciliation**)

### Procedure

To define a characteristic for a reconciliation:

1. Ensure that the **Characteristics** section is expanded when you are editing a reconciliation.

The **Characteristics** section contains the following fields:

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

The **Reconciliation** screen appears.

3. If you want to define more than one characteristic for the reconciliation, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the reconciliation, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Search**.

A list of reconciliation files that meet the search criteria appear in the **Search Results** section.

5. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the status column.

The **Reconciliation** screen appears.

6. Click **Edit** button from **Record Actions** section.

The **Member Reconciliation** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the reconciliation.
- **Characteristics** - Used to specify the characteristics for the reconciliation. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the reconciliation.	Yes
Characteristic Type	Used to indicate the characteristic type.	Yes
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Reconciliation</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.

How to edit an reconciliation	<a href="#">Editing a Reconciliation</a> on page 2331

## Deleting a Reconciliation

### Procedure

To delete a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to delete.

The **Reconciliation** screen appears.

3. Click the **Delete** button in the **Reconciliation** zone.

A message appears confirming whether you want to delete the reconciliation.

**Note:** The **Delete** button appears when the reconciliation is in the **Pending** or **Draft** status.

4. Click **OK**.

The reconciliation object is deleted.

## Submitting Pay Instructions for a Reconciliation

### Prerequisites

To submit pay instructions for reconciliation, you should have:

- Account ID defined in the application.
- Reconciliation BO status as Pending.

### Procedure

To submit pay instructions for a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.

- In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to submit.

The **Reconciliation** screen appears.

- Click the **Submit for Reconciliation** button in the **Reconciliation** zone.

The pay instruction is submitted for reconciliation and the reconciliation status gets changed to **Pending Reconciliation**.

**Note:**

The **Submit for Reconciliation** button appears when the reconciliation is in the **Pending** status.

### Related Topics

## Adding a Log Entry for a Reconciliation

### Procedure

To add a log entry for a reconciliation:

- Search for the reconciliation in the **Reconciliation** screen.
- In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose log you want to edit.

The **Reconciliation** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Reconciliation Log** zone.

The **Add Reconciliation Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Information	Displays information about the reconciliation.	Not applicable
Log Details	Used to specify additional comments for the reconciliation.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Reconciliation Log** zone.

## Viewing the Log of a Reconciliation

### **Procedure**

To view the log of a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose log you want to view.

The **Reconciliation** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the reconciliation in the **Reconciliation Log** zone.

## Canceling a Reconciliation

### Prerequisites

To cancel a reconciliation, you should have:

- Cancellation reasons defined in the application.

**Note:** While cancelling a reconciliation, you need to specify the reason why you want to cancel the reconciliation. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the **C1-MemberReconciliation** business object in the **Status Reason** screen.

### Procedure

To cancel a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to cancel.

The **Reconciliation** screen appears.

- [Reconciliation - Main](#) on page 2326
- [Pay Instructions](#) on page 2328
- [Reconciliation - Log](#) on page 2330

3. Click the **Cancel** button in the **Reconciliation** zone.

The **Status Reason** window appears. It contains following field:

:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the reconciliation.	Yes

**Note:** The **Cancel** button appears when the reconciliation is in the **Open** or **Completed** status.

4. Select the cancellation status reason from the **Status Reason** list.
5. Click **Save**.

The status of the reconciliation is changed to **Cancelled**.

## Searching for a Pay Instruction

### Prerequisite

To search for a pay instruction, you should have:

- Pay instruction statuses and member identifier types defined in the application.

### **Procedure**

To search for a pay instruction:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.

The **Reconciliation** screen appears.

3. Ensure that the **Pay Instruction** tab is selected.

The **Pay Instruction** screen appears.

4. Enter the search criteria in the **Pay Instruction** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of pay instruction that meet the search criteria appears in the **Search Results** section.

## **Viewing the Pay Instruction Details**

### **Procedure**

To view the details of a pay instruction:

1. Search for a reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose pay instruction details you want to view.

The **Reconciliation** screen appears.

3. The **Reconciliation** screen consists of the following tabs:

- [Reconciliation - Main](#) on page 2326
- [Pay Instructions](#) on page 2328
- [Reconciliation - Log](#) on page 2330

4. Click the **Pay Instruction** tab.

The **Pay Instruction** tab appears.

5. Enter the search criteria in the **Pay Instructions** zone.
6. Click **Search**.

A list of pay instruction that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **View** () icon corresponding to the **Account Identifier Type** column.

The **Pay Instruction** screen appears.

8. Ensure that the **Main** tab is selected.
9. View the details of the pay instruction in the **Pay Instruction** zone.

## Pay Instruction

The **Pay Instruction** screen displays detailed information of a pay instruction which is the part of reconciliation:

- View the details and characteristics of the pay instruction
- View the details of the reconciliation adjustments
- View the related objects

This screen contains of the following tabs:

- [Pay Instruction - Main](#) on page 2338
- [Pay Instruction - Log](#) on page 2341

### Pay Instruction - Main

The **Pay Instruction - Main** tab displays information about the pay instruction. It contains the following zones:

- [Pay Instruction](#) on page 2338
- [Reconciliation Adjustments](#) on page 2340
- [Related Objects](#) on page 2340

### Pay Instruction

The **Pay Instruction** zone lists payment related information that is specific to each member. It contains the following sections:

- **Main** - This section provides information about the pay instruction. It contains the following fields:

Field Name	Field Description
Pay Instruction Information	Displays the details of pay instruction in brief.
Reconciliation Information	Displays the details of the reconciliation.
Status	Displays the status of the pay instruction.

Field Name	Field Description
Coverage Start Date	Displays the date of the policy from where the coverage starts.
Coverage End Date	Displays the coverage end date of the policy till where the coverage ends.
Account Identifier Type	Displays the account identifier type of the member.
Account Identifier	Displays the value for the account identifier type.
Account ID	Displays the account ID of the member.
Policy Number	Displays the policy number of the member.
Plan Number	Displays the plan number of the member.
Member Identifier Type	Displays the member identifier type of the member.
Member Identifier	Displays the member identifier of the member.
Member Name	Displays the member name of the member.
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

- **Pay Instruction Amount** -This section provides information on the pay instruction amount. It contains the following fields:

Field Name	Field Description
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

- **Record Information** - This section provides information on the pay instruction business object. It contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the pay instructions are executed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the pay instruction object status is updated.
Creation Date Time	Displays the date and time when the pay instruction object is created.

- **Characteristics** - This section provides characteristic information for the pay instruction.

Field Name	Field Description
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of characteristic type.
Description	Displays the description of the characteristic type.

**Related Topics**

**Reconciliation Adjustments**

The **Reconciliation Adjustments** zone displays the adjustment information for each pay instruction. It contains the following fields:

Column Name	Column Description
Transfer Adjustment	Indicates the amount to be transferred from a reconciliation contract against a pay instruction.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the transferred adjustment.
Transfer Type	Displays the type of transfer transaction made against a pay instruction or an internal offsetting.
Transfer Financial Transaction ID	Displays the transfer financial transaction ID.
Offset Adjustment	Indicates a reciprocal adjustment that is associated with a transfer adjustment.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the offset adjustment details.
Related Object Type	Displays the related object type whether it is pay instruction / financial transaction.
Related Object ID	Indicates the ID of the related pay instruction / financial transaction created in reconciliation process..  <b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the financial transaction of reconciliation adjustments.

**Note:** Pagination is used to display limited number of records in the **Reconciliation Adjustments** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

You can filter the adjustments using **Show All Adjustments** available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of the **Reconciliation Adjustments** zone.

**Related Objects**

The **Related Objects** zone displays all those business objects based on which reconciliation process takes place. It contains the following fields:

Column Name	Column Description
Related Object Type	Displays the related object type that was used in pay instruction process.
Related Object Information	Displays the details of related object in brief.

**Note:** Pagination is used to display limited number of records in the **Related Topics** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

## Pay Instruction - Log

The **Pay Instruction - Log** tab contains the following zone:

- [Pay Instruction Log](#) on page 2341

### Pay Instruction Log

The **Pay Instruction Log** zone lists the complete trail of actions performed on the pay instructions. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the pay instruction.
Details	Displays the details about the action performed on the pay instruction.
User	Indicates the user who has performed the action on the pay instruction.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the pay instruction.
Status Reason	Displays the status reason of action performed on the pay instruction.

**Note:** You can manually add a log entry for the pay instruction by clicking the **Add Log Entry** link in the upper right corner of the **Pay Instruction Log** zone.

## Adding a Log Entry for a Pay Instruction

### Procedure

To add a log entry for a pay instruction:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose pay instruction log you want to edit.

The **Reconciliation** screen is displayed.

3. In the **Pay Instructions** zone of the **Main**, click the Go To icon () corresponding to the pay instruction whose log you want to edit.

The **Pay Instruction** screen appears. It consists of the following tabs:

- [Pay Instruction - Main](#) on page 2338
  - [Pay Instruction - Log](#) on page 2341
4. Click the **Log** tab.  
The **Pay Instruction** screen appears.
  5. Click the **Add Log Entry** link in the upper right corner of the **Pay Instruction Log** zone.  
The **Add Pay Instruction Log** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pay Instruction Information	Displays information about the pay instruction.	Not applicable
Log Details	Used to specify additional comments for the pay instruction.	Yes

6. Enter the comments in the **Log Details** field.
7. Click **Save**.  
The log entry is added in the **Pay Instruction Log** zone.

## Discrepancy Report Type

Oracle Revenue Management and Billing allows you to define a discrepancy report type using which you can create a discrepancy report. The Discrepancy Report Type uses the following business object.

- **C1-DiscrepancyReport**

The **Discrepancy Report Type** screen allows you to define, edit, copy, and delete a discrepancy report type. It consists of the following zones:

- [Discrepancy Report Type List](#) on page 2343
- [Discrepancy Report Type](#) on page 2344

For more information on...	See...
How to define a discrepancy report type	<a href="#">Defining a Discrepancy Report Type</a> on page 2345

## Discrepancy Report Type List

The **Discrepancy Report Type List** zone lists the various types of discrepancy report types. It contains the following columns:

Column Name	Column Description
Discrepancy Report Type	Displays the discrepancy report type.
Description	Displays the description of the discrepancy report type.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Discrepancy Report Type</b> screen appears where you can edit the details of the discrepancy report type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Discrepancy Report Type</b> screen appears where you can define a discrepancy report type using an existing discrepancy report type.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the discrepancy report type.
	<b>Note:</b> You can delete a discrepancy report type when you have not created a discrepancy report using the discrepancy report type.

On clicking the **Broadcast** (📡) icon corresponding to a discrepancy report type, the **Discrepancy Report Type** zone appears with the details of the respective discrepancy report type.

## Discrepancy Report Type

The **Discrepancy Report Type** zone displays the details of the discrepancy report type. It consists of the following sections:

- **Main** - This section provides basic information about the discrepancy report type. It contains the following fields:

Field Name	Field Description
Discrepancy Report Type	Displays the discrepancy report type.
Discrepancy Report Business Object	Indicates the business object using which the discrepancy report will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the discrepancy report type.
Detailed Description	Displays additional information about the discrepancy report type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Characteristics** - This section lists the characteristics of the discrepancy report type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Discrepancy Report Type.
Characteristic Value	Displays the value of the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.
Description	Displays detailed description of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the discrepancy report type.

Button Name	Button Description
Delete	Used to delete the discrepancy report type.
	<b>Note:</b> You can delete a discrepancy report type when you have not created a discrepancy report using the discrepancy report type.
Duplicate	Used to create a new discrepancy report type using an existing discrepancy report type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Discrepancy Report Type** zone does not appear in the **Discrepancy Report Type** screen. It appears when you click the **Broadcast** (  ) icon corresponding to a discrepancy report type in the **Discrepancy Report Type List** zone.

## Defining a Discrepancy Report Type

### Prerequisites

To define a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

### Procedure

To define a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D**, and then click **Discrepancy Report Type**.  
The sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report Type** .

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type Business Object	Indicates the discrepancy report type business object used to create a discrepancy report type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report Type** screen.

**Note:** The **Select Business Object** screen appears when there are multiple discrepancy report type business objects defined in the application. If there is only one discrepancy report type business object defined in the application, the **Discrepancy Report Type** screen appears.

4. Select the business object depending on whether you want to create a discrepancy report type.
5. Click **OK**.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Define characteristics for the discrepancy report type, if required.
8. Click **Save**.

The discrepancy report type is defined.

#### **Related Topics**

For more information on...	See...

## **Defining a Characteristic for a Discrepancy Report Type**

### **Prerequisites**

To define a characteristic for a discrepancy report type, you should have:

- Characteristic Types defined in the application (where the characteristic entity is set to **Discrepancy Report Type**).

### Procedure

To define a characteristic for a discrepancy report type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a discrepancy report type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Discrepancy Report Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the discrepancy report type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the discrepancy report type.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the discrepancy report type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the discrepancy report type, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Editing a Discrepancy Report Type

### Prerequisites

To edit a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

### Procedure

To edit a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discrepancy report type whose details you want to edit.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Displays the discrepancy report type.	Not applicable
Business Object	Indicates the discrepancy report type business object used while defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	No

**Tip:** Alternatively, you can click the **Edit** button in the **Discrepancy Report Type** zone to edit the details of the discrepancy report type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the discrepancy report type, if required.
7. Click **Save**.

The changes made to the discrepancy report type are saved.

## Deleting a Discrepancy Report Type

### Procedure

To delete a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
The sub-menu screen appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Delete** (🗑️) icon corresponding to the discrepancy report type that you want to delete.  
A message appears confirming whether you want to delete the discrepancy report type.

**Note:** You can delete a discrepancy report type when you have not created a discrepancy report using the discrepancy report type.

**Tip:** Alternatively, you can click the **Delete** button in the **Discrepancy Report Type** zone to delete the discrepancy report type

5. Click **OK** .  
The discrepancy report type is deleted.

### Related Topics

<b>Discrepancy Report Type List</b> zone	<a href="#">Discrepancy Report Type List</a> on page 2343

## Copying a Discrepancy Report Type

### Prerequisites

To copy a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

Instead of creating a discrepancy report type from scratch, you can create a new discrepancy report type using an existing discrepancy report type. This is possible through copying a discrepancy report type. On copying a discrepancy report type, the details including the characteristics are copied to the new discrepancy report type. You can then edit the details, if required.

### Procedure

To copy a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
The sub-menu appears.

- Click the **Search** option from the **Discrepancy Report Type** sub-menu.

The **Discrepancy Report Type** screen appears.

- In the **Discrepancy Report Type List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the discrepancy report type whose copy you want to create.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- Main** - The main section contains the following fields:
- Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type	Not applicable
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Indicates the status of discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can create a copy of the **Discrepancy Report Type** zone to create a copy of the discrepancy report type.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics of the discrepancy report type, if required.
- Click **Save**.

The new discrepancy report type is defined.

### **Related Topics**

## Discrepancy Report (Used for Searching)

The **Discrepancy Report** screen allows you to search for a discrepancy report using various search criteria. Through this screen, you can navigate to the following screen:

- [Discrepancy Report \(Used for Viewing\)](#) on page 2356
- [Search Discrepancy Report](#) on page 2351

## Search Discrepancy Report

The **Search Discrepancy Report** zone allows you to search for a discrepancy report using various search criteria. It contains the following two sections:

**Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a discrepancy report using the discrepancy or account details. The valid values are: <ul style="list-style-type: none"> <li>• Discrepancy Details</li> <li>• Account Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Discrepancy Details</b> option is selected	
Discrepancy Report ID	Used to search a particular discrepancy report..	No
	<b>Note:</b> This field appears when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to indicate the levels at which the discrepancy report is generated. It has following options: <ul style="list-style-type: none"> <li>Account Level</li> <li>File Level</li> </ul>	No
	<b>Note:</b> This field appears when <b>Discrepancy Details</b> is selected from the <b>Search By</b> list.	
Status	Used to search a particular discrepancy reports with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Completed</li> <li>Draft</li> <li>Pending</li> </ul>	No
	<b>Note:</b> This field appears when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.	
File Name	Used to specify the filename that is provided when a discrepancy report is created at file level.	No
	<b>Note:</b> This field appears when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.	
Created From	Used to search discrepancy reports which are created from a particular date onwards.	No
	<b>Note:</b> This field appears when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.	
Created To	Used to search for discrepancy report which is created till a particular date.	No
	<b>Note:</b> This field appears when you select the <b>Discrepancy Details</b> option from the <b>Search By</b> list.	
Person Name	Used to search discrepancy reports through which a particular person's record is created or updated in the system.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search discrepancy reports through which the account details are created or updated in the system. <ul style="list-style-type: none"> <li>Account Name</li> <li>Base Global Account ID</li> <li>Bill Group Identifier</li> <li>Demo Bank Account Number</li> <li>External Account Identifier</li> <li>Flexcube Account ID</li> <li>International Bank Account Number</li> </ul>	Yes (Conditional)  <b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Account Identifier	Used to specify the value for the account identifier type.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
	<b>Note:</b> This field appears when <b>Account Details</b> is selected from the <b>Search By</b> list.	
Account ID	Used to search discrepancy reports that are created by a particular user.	No
	<b>Note:</b> This field appears when you select the <b>Account Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a discrepancy report.

**Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays date and time when the discrepancy report was created.
Discrepancy Report Information	Displays information about the discrepancy report.
	<b>Note:</b> It has a link. On clicking the link, the <b>Discrepancy Report</b> screen appears where you can view the details of the respective discrepancy report.
Status	Indicates the status of the discrepancy report. The valid values are: <ul style="list-style-type: none"> <li>Pending</li> <li>Draft</li> <li>Completed</li> </ul>
Account ID	Displays the account ID of the person who created the discrepancy report.
File Name	Displays the filename given when discrepancy report is created at file level.

How to search for a discrepancy report	<a href="#">Searching for a Discrepancy Report</a> on page 2354
How to view the details of a discrepancy report	<a href="#">Viewing the Discrepancy Report Details</a> on page 2356

**Searching for a Discrepancy Report****Prerequisites**

To search for a discrepancy report, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Discrepancy Report Type defined for discrepancy report.
- Status defined for discrepancy report.

**Procedure**

To search for a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Menu** menu, select **Financial** and then click **Discrepancy Report**.  
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report** sub-menu.  
The **Discrepancy Report** screen appears.
4. Enter the search criteria in the **Search Discrepancy Report** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of discrepancy reports that meet the search criteria appear in the **Search Results** section.

**Creating a Discrepancy Report****Prerequisites**

To create a discrepancy report, you should have:

- Discrepancy Report Type defined in the application.
- Report Level defined in the application.

**Procedure**

To create a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Discrepancy Report**.  
A sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report** sub-menu.

The **Discrepancy Report** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to indicate the discrepancy report type that you want to use to create the discrepancy report. The valid values are: <ul style="list-style-type: none"> <li>• Discrepancy Report Type</li> <li>• File Discrepancy Report Type</li> </ul>	Yes
Report Level	Used to specify the level at which the discrepancy report is created. The valid values are: <ul style="list-style-type: none"> <li>• At Account Level</li> <li>• At File Level</li> </ul>	Yes
File Name	Used to specify a name for the file when report level is selected as <b>At File Level</b> .	Yes (Conditional)  <b>Note:</b> This field is required when the report level is selected as <b>At File Level</b> while creating a discrepancy report.
Account ID	Used to specify an account ID when report level is selected as <b>At Account Level</b> .	Yes (Conditional)  <b>Note:</b> This field is required when the report level is selected as <b>At Account Level</b> while creating a discrepancy report.

**Tip:** Alternatively, you can access the **Select Discrepancy Report Type** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report** screen.

4. Enter the required details.
5. Click **Save**.  
The **Discrepancy Report** is created.

<b>Discrepancy Line Item Related Objects</b> zone	<a href="#">Discrepancy Line Item Related Objects</a> on page 2359

## Discrepancy Report - Main

The **Discrepancy Report - Main** tab displays information about the discrepancy report. It contains the following zones:

- [Discrepancy Report](#) on page 2357
- [Discrepancy Line Items](#) on page 2358
- [Discrepancy Line Item Related Objects](#) on page 2359
- [Discrepancy Line Items Characteristics Zone](#) on page 2360

## Discrepancy Report

The **Discrepancy Report** zone displays the details of the discrepancy report. It contains the following sections:

- **Main** - Displays basic information about the discrepancy report. It contains the following fields:

Field Name	Field Description
Discrepancy Report Information	Displays information about the discrepancy report.
Discrepancy Report Type	Indicates the discrepancy report type using which the discrepancy report is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Discrepancy Report Type</b> screen appears where you can view the details of the discrepancy report type.
File Name	Displays the filename for which the discrepancy report is generated.
Account Information	Displays the details of the account for which discrepancy report is generated.
Status	Indicates the status of the discrepancy report. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Draft</li> <li>• Completed</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Delete	Used to delete the discrepancy report.
	<b>Note:</b> The <b>Delete</b> button appears when the discrepancy report is in the <b>Pending</b> status.
Finalize	Used to finalize all the changes and process the discrepancy report.
	<b>Note:</b> Finalize button appears when the discrepancy report is in the <b>Pending</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the status of the discrepancy report was defined.
Creation Date Time	Displays the date and time when the discrepancy report was created.

### Discrepancy Line Items

The **Discrepancy Line Items** zone displays the details of the discrepancy report It contains the following columns:

Column Name	Column Description
Account ID	Indicates the account for which the discrepancy line item is created.
	<b>Note:</b> This column appears when you select the discrepancy report information where the filename is provided.
Policy Number	Indicates the policy number.
Plan Number	Indicates the plan number of the policy.
Member Identifier Type	Displays the member identifier type.
Member Identifier	Displays the value of the member identifier type.
Member Name	Displays the name of the member to whom the discrepancy report belongs.
Coverage Start Date	Displays the date from when the coverage starts.
Coverage End Date	Displays the date till when the coverage ends.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill.
Discrepancy Amount	Displays the discrepancy amount.
Discrepancy Category	Displays the discrepancy category.

Column Name	Column Description
Consumer Status	Displays the status of the consumer for its existence in the application.
Comments	Displays the comments, added for the discrepancy line items.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Discrepancy Line Item</b> screen appears where you can edit the details of the discrepancy line item.  <b>Note:</b> The <b>Edit</b> icon appears when the discrepancy report is in <b>Pending</b> or <b>Draft</b> status.

**Note:**

On clicking the Broadcast (📡) icon corresponding to the discrepancy line item, the Discrepancy Line Item Related Objects and Discrepancy Line Item Characteristics zones appear.

You can filter the discrepancy line items using Discrepancy Category search criteria available in the Filter area. By default, the Filter area is hidden. You can view the Filter area by clicking the Filters (⌵) icon in the upper right corner of the Discrepancy Line Items zone.

Pagination is used to display limited number of records in the Search Results section. You can change the number of records displayed per page, if required. You can use the navigation links, such as Previous and Next to navigate between pages.

## Editing a Discrepancy Line Item

### Prerequisites

To edit a discrepancy line item, you should have:

- Discrepancy Line Item status as Pending or Draft.

### **Procedure**

To edit a discrepancy line item:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report, whose details you want to edit.

The **Discrepancy Report Information** screen appears.

3. In the **Discrepancy Line Items** zone, click the **Edit**  icon in the **Edit** corresponding to the discrepancy line item whose details you want to edit.

The **Discrepancy Line Item** screen appears.

<b>Note:</b> The <b>Edit</b> icon appears when the discrepancy line item is in the <b>Pending</b> or <b>Draft</b> status.
---

The **Discrepancy Line Item** screen contains the following fields:

<b>Field Name</b>	<b>Field Description</b>
Discrepancy Report ID	Displays the discrepancy report ID.
Account ID	Indicates the account for which the discrepancy line item is created.
Policy Number	Indicates the policy number.
Plan Number	Indicates the plan number of the policy.
Member Identifier Type	Displays the member identifier type.
Member Identifier	Displays the value of the member identifier.
Member Name	Displays the name of the member to whom the discrepancy report belongs.
Coverage Start Date	Displays the start date of the coverage cycle.
Coverage End Date	Displays the end date of the coverage cycle.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill amount.
Discrepancy Amount	Displays the amount that highlights the discrepancy value.
Discrepancy Category	Used to specify the discrepancy category. The valid values are: <ul style="list-style-type: none"> <li>• Billed Not Paid</li> <li>• Paid Not Billed</li> <li>• Rate Variance</li> </ul>
Comments	Used to specify additional details about the Discrepancy Line Item.

4. Modify the required details for the discrepancy line item.
5. Click **Save**.

The changes made to the discrepancy line item are saved.

## Member Reconciliation Preference

---

Oracle Revenue Management and Billing enables you to reconcile all pay instructions of a file at the member level through a batch named **C1-RCPM**. While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

A member reconciliation preference consists of the following attributes:

- Payment Event Characteristic Type
- Pay Instruction Completed Status
- Reconciliation Matching Level Characteristic Type
- Pay Instruction Open Status
- Reconciliation Open Status

For more information about these attributes, see [Defining a Member Reconciliation Preference](#) on page 2365. You can define, edit, delete, and copy a member reconciliation preference through the **Field Mapping** screen.

### Searching for a Member Reconciliation Preference

#### **Prerequisites**

To search for a member reconciliation preference, you should have:

- Values defined in the **FIELD\_CAT\_FLG** lookup field

#### **Procedure**

To search for a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.  
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.  
The **Field Mapping** screen appears.
4. Select the **Member Reconciliation Preferences** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of member reconciliation preferences that meet the search criteria appears in the **Search Results** section.

## Viewing the Member Reconciliation Preference Details

### Procedure

To view the details of a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (  ) icon corresponding to the member reconciliation preference whose details you want to view. The **Field Mapping** zone appears.
3. View the details of the member reconciliation preference in the **Field Mapping** zone.

### Related Topics

For more information on...	See...
How to search for a member reconciliation preference	<a href="#">Searching for a Member Reconciliation Preference</a> on page 2364

## Defining a Member Reconciliation Preference

### Prerequisites

To define a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP\_ENTITY\_FLG** lookup field

### Procedure

To define a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.  
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> <li>• Field Mapping</li> <li>• Medicare Plan Benefit Package</li> </ul>	Yes

**Note:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> <li>• Billing Preferences</li> <li>• Geographic Rating Area Preferences</li> <li>• Medicare Plan Benefit Preferences</li> <li>• Member Reconciliation Preferences</li> <li>• Member Relationship and Subscription Tier Preferences</li> <li>• Statement Construct Preferences</li> </ul>	Yes

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Attribute	<p>Used to indicate the attribute which you want to set in the member reconciliation preference. If required, you can add more entity types to the <b>MAP_ENTITY_FLG</b> lookup field.</p>	No				

**Note:** While defining a member reconciliation preference, you must set at least one attribute in the member reconciliation preference.

6. Select the **Member Reconciliation Preferences** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the member reconciliation preference, click the **Add (+)** icon and then repeat step 8.

**Note:** However, if you want to remove an attribute from the member reconciliation preference, click the **Delete** (🗑️) icon corresponding to the attribute.

**10. Click Save.**

The member reconciliation preference is defined.

## Editing a Member Reconciliation Preference

### Prerequisites

To edit a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP\_ENTITY\_FLG** lookup field

### Procedure

To edit a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the member reconciliation preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the member reconciliation preference.	Not applicable
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> <li>• Member Reconciliation Preferences</li> </ul>	Not applicable

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Attribute	<p>Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Payment Event Characteristic Type</b> - Used when a pay instruction is reconciled at the member level through the <b>C1-RCPM</b> batch.</li> <li>• <b>Pay Instruction Completed Status</b> - Used when a pay instruction is fully reconciled at the member level through the <b>C1-RCPM</b> batch.</li> <li>• <b>Reconciliation Matching Level Characteristic Type</b> - Used when reconciliation is created for a pay instruction file where all pay instructions have member data.</li> <li>• <b>Pay Instruction Open Status</b> - Used when a pay instruction is not fully reconciled at the member level through the <b>C1-RCPM</b> batch.</li> <li>• <b>Reconciliation Open Status</b> - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the <b>C1-RCPM</b> batch.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while setting an attribute in the member reconciliation preference.</p>

If required, you can add more entity types to the <b>MAP_ENTITY_FLG</b> lookup field.</p>	No				

**Tip:** Alternatively, you can edit the details of a member reconciliation preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member reconciliation preference, if required.

**Note:** You must set at least one attribute in a member reconciliation preference.

5. Click **Save**.

The changes made to the member reconciliation preference are saved.

## Copying a Member Reconciliation Preference

Instead of creating a member reconciliation preference from scratch, you can create a new member reconciliation preference using an existing member reconciliation preference. This is possible through copying a member reconciliation preference. On copying a member reconciliation preference, the details including the attributes are copied to the new member reconciliation preference. You can then edit the details, if required.

### Prerequisites

To copy a member reconciliation preference, you should have:

- Member reconciliation preference (whose copy you want to create) defined in the application
- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP\_ENTITY\_FLG** lookup field

### Procedure

To copy a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the member reconciliation preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> <li>• Member Reconciliation Preferences</li> </ul>	Not applicable

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Attribute	<p>Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Payment Event Characteristic Type</b> - Used when a pay instruction is reconciled at the member level through the <b>C1-RCPM</b> batch.</li> <li>• <b>Pay Instruction Completed Status</b> - Used when a pay instruction is fully reconciled at the member level through the <b>C1-RCPM</b> batch.</li> <li>• <b>Reconciliation Matching Level Characteristic Type</b> - Used when reconciliation is created for a pay instruction file where all pay instructions have member data.</li> <li>• <b>Pay Instruction Open Status</b> - Used when a pay instruction is not fully reconciled at the member level through the <b>C1-RCPM</b> batch.</li> <li>• <b>Reconciliation Open Status</b> - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the <b>C1-RCPM</b> batch.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while setting an attribute in the member reconciliation preference.</p>

## Deleting a Member Reconciliation Preference

### Procedure

To delete a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the member reconciliation preference that you want to delete.

A message appears confirming whether you want to delete the member reconciliation preference.

**Tip:** Alternatively, you can delete a member reconciliation preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The member reconciliation preference is deleted.

- [Retention Type Claim Based Pricing](#)
- [Retention Type Enrollment Based Pricing](#)
- [Flat Fee Pricing](#)
- [Ancillary Pricing](#)
- [Discount Pricing](#)
- [Level Funding Pricing](#)

Oracle Revenue Management and Billing introduces a new pricing model for the self-funded health insurance business. In this pricing model, you can define pricing rules using a pricing rule type. You can define the following pricing rule types in ORMB:

- Claim
- Aggregate Stop-Loss
- Specific Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment

- [\*Terminal Liability Reserve \(Run Out\) Level Funding Pricing\*](#)
- [\*Pricing Rule \(Used for Viewing\)\*](#)
- [\*Self-Funded Pricing Rule Versioning\*](#)

## Prerequisites

To setup the self-funded pricing feature, you need to do the following:

- Define values for claim template extendable lookup
- Define values for rate option extendable lookup
- Define values for line item extendable lookup

## Approval Workflow for the Self-Funded Pricing Rules

Oracle Revenue Management and Billing enables you to configure the approval workflow process for the claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, flat fees, ancillary, discount, or level funded pricing rules. The following approval workflow groups are shipped with the product:

Approval Workflow Group	Description
C1PRCRLCLM	Claim Pricing Rule
C1PRCSSL	Specific Stop-Loss Pricing Rule
C1PRCASL	Aggregate Stop-Loss Pricing Rule
C1PRETCLM	Retention Type Claim Based Pricing Rule
C1PRRETENR	Retention Type Enrollment Based Pricing Rule
C1PRFLTTEE	Flat Fees Pricing Rule
C1PRCANC	Ancillary Pricing Rule
C1PRCDA	Discount Arrangement Pricing Rule
C1PRCLVLFN	Level Funded Pricing Rule

To enable the approval workflow process for the pricing rules, you need to do the following:

1. Create the required approval workflow chains, approval workflow criterion types, approval workflow group chain linkages, and approval workflow reasons.

**Note:** The **Field Level Approval** feature is not supported for the self-funded pricing rules. Therefore, you should not define field approval rule criteria while creating the approval workflow group chain linkage for the above listed approval workflow groups.

2. Define the approval workflow settings for the respective approval workflow group and set the **Active** field to **Yes**.

3. Ensure that the following value is set in the respective option type of the **C1-ASOBLNG** feature configuration:

Option Type	Value
Approval Workflow Group for Claim	C1PRCRLCLM
Approval Workflow Group for SSL	C1PRCSSL
Approval Workflow Group for ASL	C1PRCASL
Approval Workflow Group for Retention Type Claim Based	C1PRETCLM
Approval Workflow Group for Retention Type Enrollment Based	C1PRRETENR
Approval Workflow Group for Flat Fees	C1PRFLTFFEE
Approval Workflow Group for Ancillary	C1PRCANC
Approval Workflow Group for Discount Arrangement	C1PRCDA
Approval Workflow Group for Level Funded	C1PRCLVLFN

Once the approval workflow process is enabled for the pricing rules of a particular category (for example, Claim), the system creates an approval transaction whenever you define, edit, or delete a pricing rule of the respective category (i.e. whenever you define, edit, or delete a claim pricing rule). You can view the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules in the **Pricing Rule Approval Transactions** zone of the **Customer 360° Information** screen. On clicking the link in the **Approval Transaction ID** column corresponding to an approval transaction, the **Comparison: New versus Existing** screen appears. It allows the approver to review the pricing rule and accordingly approve, reject, or cancel the approval transaction.

**Tip:** Alternatively, you can review the approval transaction and take appropriate action from the **Approval Transaction** screen.

## **Line Item Extendable Lookup**

Different charges, such as consumer-driven amount, traditional health insurance amount, network access fees, and so on are received as part of the claim transaction. These charges which contribute to the total claim amount are defined as the line items in the system. Each line item must be defined in the system using the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. A line item encapsulates the following information:

- Service Quantity Identifier (SQI) which indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the charge.
- Billable charge line type using which you want to create the calculation line for the charge.
- Whether the system should write off the charge when it is not eligible for billing.
- Billable charge line type using which you want to create the write off calculation line for the charge.
- Whether the charge should be considered while calculating the percentage based retention type claim based fee.
- The pricing rule type categories to which the charge is associated.

For example, you can create a line item for the following charges:

Charge	Line Item	Write Off, If Not Eligible for Billing	Pricing Rule Type Category
Consumer-Driven Amount	CDH	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
			Ancillary
Traditional Health Insurance Amount	THC	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
Preventive Care Charges	PCC	No	Ancillary

The CDH and THC line items can be included in a claim template. They can also be considered while calculating specific and aggregate stop-loss. The CDH and PCC line items can be considered while defining pricing arrangements in an ancillary pricing rule type. In addition, any charge received for the CDH and THC line items in a claim transaction will be written off when these line items are not eligible for billing.

The **C1-ExtLookPricingRuleLineItem** extendable lookup is redesigned to:

- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the fees separately for each applicable claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum amount for a line item

Once you derive the pricing information from a claim pricing rule in a specific stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for specific stop-loss. If so, it is considered for calculating specific stop-loss.

Once you derive the pricing information from a claim pricing rule in an aggregate stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for aggregate stop-loss. If so, it is considered for calculating aggregate stop-loss.

Once you derive the pricing information from a claim pricing rule in a level-funded pricing rule, you need to specify whether the additional fee (if any) should be settled through level funding. If so, it is considered while accumulating level funded charges.

Until now, when the **Include In Settlement** column was selected corresponding to a line item in a level funded pricing rule, the system settled the charge as well as its markup or markdown through level funding. However, now, the system provides two different options – one which helps to determine whether the charge should be settled through level funding and another which helps to determine whether the corresponding markup or markdown should be settled through level funding.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2383

## Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	<b>Note:</b> It has a link. On clicking the link, the <b>Extendable Lookup</b> screen appears where you can view the details of the respective extendable lookup.

## Searching for the Line Item Extendable Lookup

### Procedure

To search for the **Line Item** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookPricingRuleLineItem** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Line Item** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Line Item Extendable Lookup

### Procedure

To view the values of the **Line Item** extendable lookup:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view. The **Extendable Lookup** screen appears.
3. View the values of the **Line Item** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

How to search for the <b>Line Item</b> extendable lookup	<a href="#">Searching for the Line Item Extendable Lookup</a> on page 2384
<b>Extendable Lookup</b> screen	<a href="#">Extendable Lookup (Line Item)</a> on page 2385
<b>Extendable Lookup Value List</b> zone	<a href="#">Extendable Lookup Value List</a> on page 2385

## Extendable Lookup (Line Item)

The **Extendable Lookup** screen allows you to view the values of the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. It also allows you to define, edit, copy, and delete a line item. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2385
- [Extendable Lookup Value](#) on page 2386

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Line Item** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the line item.
Description	Displays the description of the line item.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> <li>• Base</li> <li>• Customer Modification</li> <li>• Framework</li> </ul>
Edit	On clicking the <b>Edit</b>  icon, the <b>Line Item</b> screen appears where you can edit the details of the line item.

Column Name	Column Description
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Line Item</b> screen appears where you can define a new line item using an existing line item.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the line item.
	<b>Note:</b> You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Detailed Description	Displays additional information about the line item.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a line item, the **Extendable Lookup Value** zone appears with the details of the respective line item.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

## **Extendable Lookup Value**

The **Extendable Lookup Value** zone displays the details of the line item. It contains the following sections:

- **Main** – Displays basic information about the line item. It contains the following fields:

Field Name	Field Description
Line Item	Indicates the charge for which the line item is created.
Description	Displays the description of the line item.
Override Description	Displays the overridden description of the line item.
Detailed Description	Displays additional information about the line item.
Status	Indicates the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Service Quantity Identifier	Indicates the service quantity identifier associated with the line item.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge (i.e. line item).

Field Name	Field Description
Write Off Billable Charge Line Type	Indicates the billable charge line type using which the write off calculation line is created for the charge (i.e. line item).
Write Off, if Not Eligible for Billing	Indicates whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Retention Claim Based Percentage Calculation	Indicates whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

- **Line Item Usage** – Indicates the pricing rule type categories to which the line item is associated. It contains the following column in a grid:

Column Name	Column Description
Pricing Rule Type Category	Indicates the pricing rule type category which is associated with the charge (i.e. line item). The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss</li> <li>• Ancillary</li> <li>• Claim</li> <li>• Retention Type Claim Based</li> <li>• Specific Stop-Loss</li> </ul>

- **Markup or Markdown Billing Information** – Indicates the markup or markdown billing information defined for the line items. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the minimum and maximum markup or markdown billing information defined using the rate type.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge.

- **Line Item Billing Information** – Indicates the rate type and billable charge line type to which the line item is associated. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the rate type defined for the line item.
Billable Charge Line Type	Indicates the billable charge line type billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum amount for a line item.

- **Claim Handling Fees Billing Information** – Indicates the claim handling fees billing information. It contains the following columns in a grid:

Column Name	Column Description						
Fee Type	Indicates the type of charge applicable on the line items.						
Fee	Indicates the fee defined for the line items.						
Rate	Indicates the rate and billable charge line type defined for the line items.						
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Indicates the rate type defined for a line item.</td> </tr> <tr> <td>Billable Charge Line Type</td> <td>Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.</td> </tr> </tbody> </table>	Column Name	Column Description	Rate Type	Indicates the rate type defined for a line item.	Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.
	Column Name	Column Description					
Rate Type	Indicates the rate type defined for a line item.						
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.						

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the line item.
Delete	Used to delete the line item.
	<b>Note:</b> You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Duplicate	Used to create a new line item using an existing line item.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the line item is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

## Defining a Line Item

### Prerequisites

To define a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

### Procedure

To define a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup or markdown billing information for the line items.
- **Line Item Billing Information** – Used to define line item billing information for the line items.
- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line items.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	No
	<b>Note:</b> By default, the value is set to <b>Active</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item).  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type Search</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	No
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Write Off Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Write Off Billable Charge Line Type</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b> .
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> <b>Note:</b> By default, the value is set to <b>No</b> .	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul> <b>Note:</b> By default, the value is set to <b>No</b> .	No

4. Enter the required details in the **Main** section.

5. Associate the line item with one or more pricing rule type categories.
6. Define the markup or markdown billing information for the line items.
7. Define line item billing information for the line items.
8. Define the claim handling fees billing information for the line items.
9. Click **Save**.

The line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

## **Associating a Line Item with a Pricing Rule Type Category**

### **Procedure**

To associate a line item with a pricing rule type category:

1. Ensure that the **Line Item Usage** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Usage** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)												
Pricing Rule Type Category	<p>Used to indicate the pricing rule type category which you want to associate with the charge (i.e. line item). The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Ancillary</li> <li>Claim</li> <li>Retention Type Claim Based</li> <li>Specific Stop-Loss</li> </ul> <p>The following table describes the significance of each category that can be associated with the line item:</p> <table border="1"> <thead> <tr> <th>Pricing Rule Type Category</th> <th>Significance</th> </tr> </thead> <tbody> <tr> <td>Claim</td> <td>Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.</td> </tr> <tr> <td>Specific Stop-Loss</td> <td>Whether the line item can be considered while calculating specific stop-loss.</td> </tr> <tr> <td>Aggregate Stop-Loss</td> <td>Whether the line item can be considered while calculating aggregate stop-loss.</td> </tr> <tr> <td>Retention Type Claim Based</td> <td>Whether the line item can be used while calculating the percentage based retention type claim based fee.</td> </tr> <tr> <td>Ancillary</td> <td>Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.</td> </tr> </tbody> </table> <p><b>Note:</b> At present, the line items are not used in the pricing rule types where the pricing rule type category is set to <b>Retention Type Enrollment Based</b> and <b>Flat Fees</b>.</p>	Pricing Rule Type Category	Significance	Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.	Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.	Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.	Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.	Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating the line item with a pricing rule type category.</p>
Pricing Rule Type Category	Significance													
Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.													
Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.													
Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.													
Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.													
Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.													

- Enter the required details in the **Line Item Usage** section.
- If you want to associate the line item with more than one pricing rule type category, click the **Add (+)** icon and then repeat step 3.

**Note:** However, if you want to remove a pricing rule type category from the line item, click the **Delete (🗑)** icon corresponding to the pricing rule type category.

- Click **Save**.

The line item is associated with the pricing rule type category.

**Defining the Markup or Markdown Billing Information for the Line Items****Procedure**

To define the markup or markdown billing information for the line items:

1. Ensure that the **Markup or Markdown Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Markup or Markdown Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to indicate the rate type.	Yes (Conditional) <b>Note:</b> This field is required when you select a billable charge line type from the <b>Billable Charge Line Type</b> field.
Billable Charge Line Type	Used to specify the billable charge line type. <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Billable Charge Line Type Search</b> window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you select an option from the <b>Rate Type</b> field.

2. Enter the required details in the **Markup or Markdown Billing Information** section.
3. If you want to add more than one markup or markdown billing information for the line item, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a markup or markdown billing information from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

4. Click **Save**.

The markup or markdown billing information is defined for the line items.

## Defining Line Item Billing Information for the Line Items

### Procedure

To define the line item billing information for the line items:

1. Ensure that the **Line Item Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to indicate the rate type.	Yes (Conditional) <b>Note:</b> This field is required when you select a billable charge line type from the <b>Billable Charge Line Type</b> field.
Billable Charge Line Type	Used to specify the billable charge line type. <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Billable Charge Line Type Search</b> window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you select an option from the <b>Rate Type</b> field.

2. Enter the required details in the **Line Item Billing Information** section.
3. If you want to add more than one line item billing information for the line item, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a line item billing information from the line item, click the **Delete** (🗑️) icon corresponding to the line item.

4. Click **Save**.

The line item billing information is defined for the line items.

## Defining the Claim Handling Fees Billing Information for the Line Items

### Procedure

To define the claim handling fees billing information for the line items:

1. Ensure that the **Claim Handling Fees Billing Information** section is expanded when you are defining, editing, or copying a line item.

The **Claim Handling Fees Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Fee Type	Used to indicate the type of charge applicable on the line items.	Yes (Conditional) <b>Note:</b> This field is required when fee is selected from the <b>Fee</b> field.
Fee	Used to indicate the fee defined for the line items.	Yes (Conditional) <b>Note:</b> This field is required when fee type is selected from the <b>Fee Type</b> field.

Field Name	Field Description	Mandatory (Yes or No)									
Rate	Used to indicate the rate and billable charge line type for the line items.	Yes									
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Used to indicate the rate type.</td> <td>Yes (Conditional)</td> </tr> <tr> <td>Billable Charge Line Type</td> <td>Used to specify the billable charge line type.</td> <td>Yes (Conditional)</td> </tr> </tbody> </table>	Field Name	Field Description	Mandatory (Yes or No)	Rate Type	Used to indicate the rate type.	Yes (Conditional)	Billable Charge Line Type	Used to specify the billable charge line type.	Yes (Conditional)	
	Field Name	Field Description	Mandatory (Yes or No)								
Rate Type	Used to indicate the rate type.	Yes (Conditional)									
Billable Charge Line Type	Used to specify the billable charge line type.	Yes (Conditional)									
<p><b>Note:</b> This field is required when you select a billable charge line type from the <b>Billable Charge Line Type</b> field.</p>	<p><b>Note:</b> This field is required when you select an option from the <b>Rate Type</b> field.</p>										

- Enter the required details in the **Claim Handling Fees Billing Information** section.
- If you want to add more than one claim handling fee billing information for the line item, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a claim handling fee billing information from the line item, click the **Delete (🗑)** icon corresponding to the line item.

- If you want to add more than one rate for the line item, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a rate from the line item, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The claim handling fees billing information is defined for the line items.

## Editing a Line Item

### Prerequisites

To edit a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

### Procedure

To edit a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit**  icon in the **Edit** column corresponding to the line item whose details you want to edit.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup and markdown billing information for the line item.
- **Line Item Billing Information** – Used to define the line item billing information for the line item.
- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line item.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Indicates the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Not applicable
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item).  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type Search</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Write Off Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Write Off Billable Charge Line Type</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b> .
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are:  <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are:  <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

**Tip:** Alternatively, you can edit the details of a line item by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.

The changes made to the line item are saved.

## Copying a Line Item

Instead of creating a line item from scratch, you can create a new line item using an existing line item. This is possible through copying a line item. On copying a line item, the details including the pricing rule type categories to which the line item is associated are copied to the new line item. You can then edit the details, if required.

### Prerequisites

To copy a line item, you should have:

- Line item (whose copy you want to create) defined in the application
- Service quantity identifiers and billable charge line types defined in the application

### Procedure

To copy a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the line item whose copy you want to create.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.
- **Markup or Markdown Billing Information** – Used to define the markup or markdown billing information for the line item.
- **Line Item Billing Information** – Used to define the line item billing information for the line item.

- **Claim Handling Fees Billing Information** – Used to define the claim handling fees billing information for the line item.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)	
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes	
Description	Used to specify the description for the line item.	Yes	
Override Description	Used when you want to override the description of the line item.	No	
Detailed Description	Used to specify additional information about the line item.	No	
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes	
Service Identifier	Quantity	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type Search</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.</p> </div>	Yes	

Field Name	Field Description	Mandatory (Yes or No)
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Write Off Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Write Off Billable Charge Line Type</b> field.</p>	<p><b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b>.</p>
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

**Tip:** Alternatively, you can copy a line item by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.

The new line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

## Deleting a Line Item

### Procedure

To delete a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the line item that you want to delete.

A message appears confirming whether you want to delete the line item.

**Note:** You can delete a line item when it is not yet used in the claim template or while defining the Administrative Services Only (ASO) pricing.

**Tip:** Alternatively, you can delete a line item by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The line item is deleted from the **C1-ExtLookPricingRuleLineItem** extendable lookup.

## Viewing the Line Item Details

### Procedure

To view the details of a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.

- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Broadcast** (  ) icon corresponding to the line item whose details you want to view.

The **Extendable Lookup Value** zone appears.

- View the details of the line item in the **Extendable Lookup Value** zone.

## **Claim Template Extendable Lookup**

The ASO service provider may bill different charges for a claim transaction to different employers. The system enables you to create different claim templates for different employers. A claim template contains a set of charges (i.e. line items) which can be billed to a parent customer or bill group. You can define multiple claim templates in the system. Each claim template must be defined in the system using the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. A claim template encapsulates the following information:

- Whether the claim template can be used while defining a claim pricing rule for a policy which is in the **In Force/Active, Post Runout, or Runout** status.
- Line items which can be billed to a parent customer or bill group.
- Whether you want to calculate the markup or markdown on the line items which are included in the claim template.
- Whether you want to specify a flat markup or markdown amount for the line items or the markup or markdown percentage for the line items which are eligible for percentage based markup or markdown
- Whether a line item is eligible for billing or not.
- Whether you want to define rule based billing eligibility for a line item.
- Whether you want to define billing eligibility for a line item while defining a claim pricing rule.
- Rule type which indicates the rules that should be executed to determine whether the line item is eligible for billing.
- Whether the line item is eligible for percentage based markup or markdown when the markup or markdown type is set to **Percentage**.

Once a claim template is defined in the extendable lookup, you can associate the claim template with a claim pricing rule type. You can associate multiple claim templates with a claim pricing rule type. Then, while defining a claim pricing rule for a parent customer, you can use any one of the claim template associated with the respective claim pricing rule type. The system then inherits the line items and the default markup and markdown values in the claim pricing rule from the claim template.

However, while defining a claim pricing rule for a policy of a bill group, you can only use the claim templates which are defined for the respective policy status and associated with the respective claim pricing rule type.

For example, you can create the claim templates with the following line items:

Claim Template	Policy Status	Line Item	Billing Eligibility	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount	Markdown or Markdown Percentage
CT1	In Force/ Active	CDH	Yes	Markup	Flat Amount	\$2	-
		THC	Yes				
		PCC	No				
CT2	Runout	CDH	Yes	Markdown	Percentage	-	2.00
		THC	Yes				
CT3	Post Runout	PCC	Yes	None	-	-	-
		NAF	No				

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2404

## Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	<b>Note:</b> It has a link. On clicking the link, the <b>Extendable Lookup</b> screen appears where you can view the details of the respective extendable lookup.

### Related Topics

## Searching for the Claim Template Extendable Lookup

### Procedure

To search for the **Claim Template** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookClaimTemplate** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Claim Template** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Claim Template Extendable Lookup

### Procedure

To view the values of the **Claim Template** extendable lookup:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Claim Template** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

For more information on...	See...
How to search for the <b>Claim Template</b> extendable lookup	<a href="#">Searching for the Claim Template Extendable Lookup</a> on page 2405

<b>Extendable Lookup Value List</b> zone	<a href="#">Extendable Lookup Value List</a> on page 2406

## Extendable Lookup (Claim Template)

The **Extendable Lookup** screen allows you to view the values of the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. It also allows you to define, edit, copy, and delete a claim template. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2406
- [Extendable Lookup Value](#) on page 2407

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Claim Template** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the claim template.
Description	Displays the description of the claim template.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Claim Template</b> screen appears where you can edit the details of the claim template.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Claim Template</b> screen appears where you can define a new claim template using an existing claim template.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the claim template.
	<b>Note:</b> You can delete a claim template when it is not yet used in a claim pricing rule type.
Detailed Description	Displays additional information about the claim template.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a claim template, the **Extendable Lookup Value** zone appears with the details of the respective claim template.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the claim template. It contains the following sections:

- **Main** – Displays basic information about the claim template. It contains the following fields:

Field Name	Field Description
Claim Template	Displays the claim template.
Description	Displays the description of the claim template.
Override Description	Displays the overridden description of the claim template.
Detailed Description	Displays additional information about the claim template.
Status	Indicates the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Claim Template Usage** – Indicates when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description
Policy Status	Indicates whether the claim template should be used while defining a claim pricing rule for a policy which is in the <b>In Force/Active, Post Runout, or Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>

- **Claim Handling Fees** – Indicates the claim handling fees which are applicable to one or more line items in the claim template. It contains the following columns:

Column Name	Column Description
Show Line Items in Pricing Rule	Indicates that claim line item appears when you are defining or editing a claim pricing rule.
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee defined for the line items.
Fee Significance	Indicates the purpose of the imposing the claim handling fees on the line items.
Fee Applicability	Indicates the fee applicability on which the claim handling fees are defined.

Column Name	Column Description								
Rating Information	Indicates the rate type and value that you want to use while defining the rating information for the line items.								
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items.</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items.</td> </tr> <tr> <td>Rate</td> <td>Displays the rate that you want to use while defining or editing the claim handling fees for the line items.</td> </tr> </tbody> </table>	Column Name	Column Description	Editable	Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items.	Rate Type	Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items.	Rate	Displays the rate that you want to use while defining or editing the claim handling fees for the line items.
Column Name	Column Description								
Editable	Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items.								
Rate Type	Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items.								
Rate	Displays the rate that you want to use while defining or editing the claim handling fees for the line items.								

- **Default Markup or Markdown Values** – Indicates the default markup or markdown values defined for the line items in the claim template. It contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates whether you want to markup or markdown the line items. The valid values are: <ul style="list-style-type: none"> <li>• Markup</li> <li>• Markdown</li> <li>• None</li> </ul>
Markup or Markdown Type	Indicates whether you want a flat or percentage based markup or markdown on the line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul> <p><b>Note:</b> This field appears when the <b>Markup</b> or <b>Markdown</b> option is selected from the <b>Pricing Strategy</b> list.</p>
Markup or Markdown Amount	Displays the default flat markup or markdown amount for the line items. <p><b>Note:</b> This field appears when the <b>Flat Amount</b> option is selected from the <b>Markup or Markdown Type</b> list.</p>
Markup or Markdown Percentage	Displays the default percentage of markup or markdown for all line items. <p><b>Note:</b> This field appears when the <b>Percentage</b> option is selected from the <b>Markup or Markdown Type</b> list.</p>
Editable	Indicates that rate type and rate value fields are editable while defining or editing the markup or markdown values for the line items.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the rate for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** – Lists the line items which are added in the claim template. It contains the following columns:

Column Name	Column Description								
Sequence	Indicates the order in which the calculation line should be generated for the line item.								
Line Item	Indicate the line item which is added in the claim template.								
Billing Eligibility	Indicates whether the line item is eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> <li>• Rule Based</li> <li>• Used Defined (Default No)</li> <li>• User Defined (Default Yes)</li> </ul>								
Rule Type	Indicates that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.  <b>Note:</b> The data appears in this column when the <b>Rule Based</b> option is selected from the <b>Billing Eligibility</b> list.								
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible for percentage based markup or markdown when the <b>Markup or Markdown Type</b> field is set to <b>Percentage</b> . The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>								
Post-Processing Required	Indicates that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.								
Rating Information	Displays the rate type and rate value that you want to use while defining the rate for the line items. <table border="1" data-bbox="613 1213 1461 1684"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the rate for the line items.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items.  <b>Note:</b> This field is editable when the <b>Editable</b> checkbox is selected in the <b>Rate</b> column of the <b>Additional Fees</b> section while defining or editing the <b>C1-ExtLookClaimTemplate</b> extendable lookup.</td> </tr> </tbody> </table>	Column Name	Column Description	Editable	Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.	Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Rate	Used to specify the rate that you want to use while defining the rate for the line items.  <b>Note:</b> This field is editable when the <b>Editable</b> checkbox is selected in the <b>Rate</b> column of the <b>Additional Fees</b> section while defining or editing the <b>C1-ExtLookClaimTemplate</b> extendable lookup.
Column Name	Column Description								
Editable	Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.								
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.								
Rate	Used to specify the rate that you want to use while defining the rate for the line items.  <b>Note:</b> This field is editable when the <b>Editable</b> checkbox is selected in the <b>Rate</b> column of the <b>Additional Fees</b> section while defining or editing the <b>C1-ExtLookClaimTemplate</b> extendable lookup.								

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the claim template.

Button Name	Button Description
Delete	Used to delete the claim template.
	<b>Note:</b> You can delete a claim template when it is not yet used in a claim pricing rule type.
Duplicate	Used to create a new claim template using an existing claim template.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the claim template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (  ) icon corresponding to the claim template in the **Extendable Lookup Value List** zone.

## Defining a Claim Template

### Procedure

To define a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>Active</b> .	

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Claim Handling Fees** – Used to define the claim handling fees for the claim lines items which are added in the claim template.
  - **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
  - **Line Items** – Used to add the claim line items in the claim template.
4. Enter the required details in the **Main** section.
  5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** dropdown list depending on whether you want to use the claim template while defining a claim pricing rule for a
  6. Define the claim handling fees for the line items in the claim template, if required.
  7. Define the default markup or markdown values for the line items in the claim template, if required.
  8. Add the required the line items in the claim template.
  9. Click **Save**.

The claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

## Defining the Claim Handling Fees for Line Items in the Claim Template

### Procedure

To define the claim handling fees for the line items in the claim template:

1. Ensure that the **Claim Handling Fees** section is expanded when you are defining, editing, or copying a claim template.

The **Claim Handling Fees** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)				
Show Line Items in Pricing Rule	Used to indicate whether the claim line item is visible while defining or editing the pricing rules.	Not applicable				
Fee Type	Used to indicate the charge type defined on the line items.	Yes				
Fee	Used to indicate the type of rate defined on the line items.	Yes				
Fee Significance	Used to indicate the purpose of the imposing the fees on the line items.	Yes				
Fee Applicability	Displays one or more applicable claim line item on which the claim handling fees are imposed. <table border="1" data-bbox="537 1308 1252 1472"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> </tr> </thead> <tbody> <tr> <td>Line Items</td> <td>Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.</td> </tr> </tbody> </table>	Field Name	Field Description	Line Items	Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.	Yes
Field Name	Field Description					
Line Items	Indicates the line item that you want to use while defining claim handling fees for the claim pricing rule.					

Field Name	Field Description	Mandatory (Yes or No)												
Rating Information	Used to indicate one or more rate options which are valid for a line item.	Yes												
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.</td> <td>No</td> </tr> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the rate for the line items.</td> <td>Yes</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items.   <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is editable when the <b>Editable</b> checkbox is selected in the <b>Rating Information</b> column of the <b>Claim Handling Fees</b> section while defining or editing the <b>C1-ExtLookClaimTemplate</b> extendable lookup.</p> </div> </td> <td>Yes</td> </tr> </tbody> </table>	Field Name	Field Description	Mandatory (Yes or No)	Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	No	Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Yes	Rate	Used to specify the rate that you want to use while defining the rate for the line items.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is editable when the <b>Editable</b> checkbox is selected in the <b>Rating Information</b> column of the <b>Claim Handling Fees</b> section while defining or editing the <b>C1-ExtLookClaimTemplate</b> extendable lookup.</p> </div>	Yes	
Field Name	Field Description	Mandatory (Yes or No)												
Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	No												
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Yes												
Rate	Used to specify the rate that you want to use while defining the rate for the line items.  <div style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field is editable when the <b>Editable</b> checkbox is selected in the <b>Rating Information</b> column of the <b>Claim Handling Fees</b> section while defining or editing the <b>C1-ExtLookClaimTemplate</b> extendable lookup.</p> </div>	Yes												

2. Enter the required details in the **Claim Handling Fees** section.
3. If you want to add more than one claim handling fee in the claim template, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a claim handling fee from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

4. If you want to add more than one fee applicability in the claim template, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a fee applicability from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

5. If you want to add more than one rating information in the claim template, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a rating information from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

6. Click **Save**.

The claim handling fees are defined for the line items in the claim template.

## Defining the Default Markup or Markdown Values for Line Items in a Claim Template

### Procedure

To define the markup or markdown values for line items in a claim pricing rule:

1. Ensure that the **Default Markup or Markdown Values** section is expanded when you are defining, editing, or copying a claim template.

The **Default Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	No
Markup or Markdown Type	Used to indicate the markup or markdown type for the claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.	No
Markup or Markdown Percentage	Used to specify the markup or markdown percentage.	No
Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	Not applicable
Rate Type	Indicates the minimum and maximum markup or markdown defined using the rate type.	Yes (Conditional) <b>Note:</b> This field is required when you define the rate from the respective field.
Rate	Used to specify the value for minimum and maximum markup or markdown using the rate type.	Yes (Conditional) <b>Note:</b> This field is required when you select the rate type from the respective field.

2. Enter the required details in the **Markup or Markdown Values** section.

- If you want to add more than one default markup or markdown value in the claim template, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a default markup or markdown value from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The markup or markdown values for line items are defined for the claim template.

## Adding a Line Item in a Claim Template

### Prerequisites

To add a line item in a claim template, you should have:

- The line item defined in the **C1-ExtLookPricingRuleLineItem** extendable lookup.
- Rule types defined in the application (where the rule type usage is set to **ASO Billing Line Item Eligibility**) when you want to define rule based billing eligibility for a line item.

### Procedure

To add a line item in a claim template:

- Ensure that the **Line Items** section is expanded when you are defining, editing, or copying a claim template.

The **Line Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the calculation line should be generated for the line item.	Yes (Conditional) <b>Note:</b> This field is required while adding a line item in the claim template.
Line Item	Used to indicate the line item that you want to include in the claim template. <b>Note:</b> The list includes only those line items which are associated to the <b>Claim</b> pricing rule type category.	Yes (Conditional) <b>Note:</b> This field is required while adding a line item in the claim template.

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility	<p>Used to indicate whether the line item is eligible for billing. If line item is not eligible for billing, the system does not create the calculation line for the line item. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Eligible</b> - Used when the line item is eligible for billing.</li> <li>• <b>Not Eligible</b> - Used when the line item is not eligible for billing.</li> <li>• <b>Rule Based</b> - Used when you want to determine whether the line item is eligible for billing using certain business rules while executing the <b>Update Status (C1-TXNEX)</b> batch.</li> <li>• <b>Used Defined (Default No)</b> - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the <b>User Defined Billing Option</b> option is not selected for the line item in the claim pricing rule.</li> <li>• <b>User Defined (Default Yes)</b> - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the <b>User Defined Billing Option</b> option is selected for the line item in the claim pricing rule.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while adding a line item in the claim template.</p>
Rule Type	<p>Used to indicate that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.</p> <p><b>Note:</b> The list includes only those rule types where the rule type usage is set to <b>ASO Billing Line Item Eligibility</b>. The values appear in this list when you select the <b>Rule Based</b> option from the <b>Billing Eligibility</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you select the <b>Rule Based</b> option from the <b>Billing Eligibility</b> list.</p>
Markup or Markdown Percentage Eligibility	<p>Used to indicate whether the line item is eligible for percentage based markup or markdown when the <b>Markup or Markdown Type</b> field is set to <b>Percentage</b>. The valid values are:</p> <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while adding a line item in the claim template.</p>
Post-Processing Required	<p>Used to indicate that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required while adding a line item in the claim template.</p>

Field Name	Field Description	Mandatory (Yes or No)												
Rating Information	Displays the rate type and rate value that you want to use while defining the rate for the line items.	Yes (Conditional)												
	<table border="1"> <thead> <tr> <th>Field Name</th> <th>Field Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Editable</td> <td>Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule.</td> <td>Not applicable</td> </tr> <tr> <td>Rate Type</td> <td>Used to indicate the rate type that you want to use while defining the rate for the line items.</td> <td>Yes (Conditional) <b>Note:</b> This field is required when you define the rate from the respective field.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items.</td> <td>Yes (Conditional) <b>Note:</b> This field is required when you select the rate type from the respective field.</td> </tr> </tbody> </table>	Field Name	Field Description	Mandatory (Yes or No)	Editable	Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule.	Not applicable	Rate Type	Used to indicate the rate type that you want to use while defining the rate for the line items.	Yes (Conditional) <b>Note:</b> This field is required when you define the rate from the respective field.	Rate	Used to specify the rate that you want to use while defining the rate for the line items.	Yes (Conditional) <b>Note:</b> This field is required when you select the rate type from the respective field.	<b>Note:</b> This field is required while adding a line item in the claim template.
	Field Name	Field Description	Mandatory (Yes or No)											
	Editable	Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule.	Not applicable											
Rate Type	Used to indicate the rate type that you want to use while defining the rate for the line items.	Yes (Conditional) <b>Note:</b> This field is required when you define the rate from the respective field.												
Rate	Used to specify the rate that you want to use while defining the rate for the line items.	Yes (Conditional) <b>Note:</b> This field is required when you select the rate type from the respective field.												

- Enter the required details in the **Line Items** section.
- If you want to add more than one line item in the claim template, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a line item from the claim template, click the **Delete (🗑)** icon corresponding to the line item.

- Click **Save**.

The line item is added in the claim template.

## Editing a Claim Template

### Procedure

To edit a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the claim template whose details you want to edit.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Displays the claim template.	Not applicable
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes

- **Claim Handling Fees** – Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
- **Line Items** – Used to indicate the line items in the claim template.

**Tip:** Alternatively, you can edit the details of a claim template by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Modify the policy status in the **Claim Template Usage** section, if required.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove line items from the claim template, if required.
9. Click **Save**.

The changes made to the claim template are saved.

## **Copying a Claim Template**

Instead of creating a claim template from scratch, you can create a new claim template using an existing claim template. This is possible through copying a claim template. On copying a claim template, the details including the line items and default markup or markdown values are copied to the new claim template. You can then edit the details, if required.

### **Prerequisites**

To copy a claim template, you should have:

- Claim template (whose copy you want to create) defined in the application

### **Procedure**

To copy a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the claim template whose copy you want to create.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Claim Handling Fees** – Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the line items which are added in the claim template.
- **Line Items** – Used to add the claim line items in the claim template.

**Tip:** Alternatively, you can copy a claim template by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove the line items from the claim template, if required.
9. Click **Save**.

The new claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

## Deleting a Claim Template

### Procedure

To delete a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim template that you want to delete.

A message appears confirming whether you want to delete the claim template.

**Note:** You can delete a claim template when it is not yet used in a claim pricing rule type.

**Tip:** Alternatively, you can delete a claim template by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The claim template is deleted from the **C1-ExtLookClaimTemplate** extendable lookup.

## Viewing the Claim Template Details

### Procedure

To view the details of a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (  ) icon corresponding to the claim template whose details you want to view.  
The **Extendable Lookup Value** zone appears.
4. View the details of the claim template in the **Extendable Lookup Value** zone.

## Rate Option Extendable Lookup

The basic pricing details (such as rate schedule, pricing currency) and the transaction aggregation details may vary from one bill group or parent customer to another and from one price item to another. The basic pricing and transaction aggregation details are defined in the rate option. Each rate option must be defined in the system using the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. A rate option encapsulates the following information:

- The rate schedule that you want to use while defining the price item pricing.
- Currency in which you want to define the price item pricing.
- Whether zero pricing should be displayed in the bill.
- Whether the transactions mapped to the price item should be ignored for billing.
- Whether the transactions mapped to the price item should be aggregated for billing.
- The aggregation schedule using which the transactions should be aggregated for billing.
- How and when you want to rate the transaction legs which are mapped to the price item.
- Whether you want the price item pricing to be applied to all customers or only to the new customers.

Once the rate options are defined in the extendable lookup, you can associate one or more rate options with a price item while adding the price item in a claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, or ancillary pricing rule type. You can then use the rate option while defining pricing rule for the respective price item using the respective pricing rule type. The rate option specified in a pricing rule is used while creating the price item pricing or price assignment for the pricing rule. For example,

Claim Pricing Rule Type	Price Item	Rate Option	Claim Pricing Rule	Price Item Pricing
CPRT1	P1	R1	CPR1 (Price Item: P1, Rate Option: R1)	PA1 is created for P1 using the details specified in R1.

Claim Pricing Rule Type	Price Item	Rate Option	Claim Pricing Rule	Price Item Pricing
		R2	-	-
		R3	CPR2 (Price Item: P1, Rate Option: R3)	PA2 is created for P1 using the details specified in R3.
	P2	R1	-	-
		R4	CPR3 (Price Item: P2, Rate Option: R4)	PA3 is created for P2 using the details specified in R4.
CPRT2	P1	R1	CPR4 (Price Item: P1, Rate Option: R1)	PA4 is created for P1 using the details specified in R1.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2423

## Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	<b>Note:</b> It has a link. On clicking the link, the <b>Extendable Lookup</b> screen appears where you can view the details of the respective extendable lookup.

## Searching for the Rate Option Extendable Lookup

### Procedure

To search for the **Rate Option** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRetTypeRateOpt** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Rate Option** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Rate Option Extendable Lookup

### Procedure

To view the values of the **Rate Option** extendable lookup:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Rate Option** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

<b>Extendable Lookup Value List</b> zone	<a href="#">Extendable Lookup Value List</a> on page 2425

## Extendable Lookup (Rate Option)

The **Extendable Lookup** screen allows you to view the values of the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. It also allows you to define, edit, copy, and delete a rate option. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2425
- [Extendable Lookup Value](#) on page 2426

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Option** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate option.
Description	Displays the description of the rate option.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Rate Option</b> screen appears where you can edit the details of the rate option.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Rate Option</b> screen appears where you can define a new rate option using an existing rate option.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rate option.
	<b>Note:</b> You can delete a rate option when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate option.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a rate option, the **Extendable Lookup Value** zone appears with the details of the respective rate option.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate option. It contains the following sections:

- **Main** – Displays basic information about the rate option. It contains the following fields:

Field Name	Field Description
Rate Option	Displays the rate option.
Description	Displays the description of the rate option.
Override Description	Displays the overridden description of the rate option.
Detailed Description	Displays additional information about the rate option.
Status	Indicates the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Rate Schedule	Indicates the rate schedule that will be used while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg.  <b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the respective rate schedule.
Pricing Currency	Indicates the currency in which the price item pricing will be defined.
Print Zero	Indicates whether zero pricing will be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Ignore Transaction	Indicates whether the transactions mapped to the price item will be ignored for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item will be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregation Schedule	Indicates the aggregation schedule using which the transactions will be aggregated for billing.

Field Name	Field Description
Transaction Rating Criteria	Indicates how and when the transaction legs which are mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Transactions and Then Rate SQs</li> <li>Do Not Rate Transactions</li> <li>Rate Transaction and Aggregate Calc Lines</li> <li>Rate Transactions</li> </ul>
Apply To	Indicates whether the price item pricing will be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate option.
Delete	Used to delete the rate option.
	<b>Note:</b> You can delete a rate option when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate option using an existing rate option.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate option is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (  ) icon corresponding to the rate option in the **Extendable Lookup Value List** zone.

## Defining a Rate Option

### Prerequisites

To define a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

### Procedure

To define a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <p><b>Note:</b> By default, the value is set to <b>Active</b>.</p>	Yes
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>Yes</b> .	
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>No</b> .	
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>No</b> . This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b> .	
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)
	<b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b> .	
<b>Note:</b> This field is required when the <b>Aggregate Transaction</b> field is set to <b>Yes</b> .		

Field Name	Field Description	Mandatory (Yes or No)
Transaction Rating Criteria	<p>Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Transactions and Then Rate SQs</li> </ul> <p><b>Note:</b> This value appears in the list when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> <ul style="list-style-type: none"> <li>Do Not Rate Transactions</li> <li>Rate Transaction and Aggregate Calc Lines</li> </ul> <p><b>Note:</b> This value appears in the list when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> <ul style="list-style-type: none"> <li>Rate Transactions</li> </ul> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to either <b>Yes</b> or <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>No</b>.</p> <p><b>Note:</b> By default, the value is set to <b>Do Not Rate Transactions</b>.</p>	Yes
Apply To	<p>Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul> <p><b>Note:</b> By default, the value is set to <b>All Customers</b>.</p>	Yes

4. Enter the required details in the **Main** section.

5. Click **Save**.

The rate option is added in the **C1-ExtLookRefTypeRateOpt** extendable lookup.

## **Editing a Rate Option**

### **Prerequisites**

To edit a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

## Procedure

To edit a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit**  icon in the **Edit** column corresponding to the rate option whose details you want to edit.

The **Rate Option** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Displays the rate option.	Not applicable
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>	Not applicable
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.</p> </div>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b> .	
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)
	<b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b> .	
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate SQs</li> </ul>	Yes
	<b>Note:</b> This value appears in the list when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b> .	
	<ul style="list-style-type: none"> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines</li> </ul>	
	<b>Note:</b> This value appears in the list when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b> .	
	<ul style="list-style-type: none"> <li>• Rate Transactions</li> </ul>	
	<b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to either <b>Yes</b> or <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>No</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a rate option by clicking the **Edit** button in the **Extendable Lookup Value** zone.

- Modify the required details in the **Main** section.
- Click **Save**.

The changes made to the rate option are saved.

## Copying a Rate Option

Instead of creating a rate option from scratch, you can create a new rate option using an existing rate option. This is possible through copying a rate option. On copying a rate option, the pricing and transaction aggregation details are copied to the new rate option. You can then edit the details, if required.

### Prerequisites

To copy a rate option, you should have:

- Rate option (whose copy you want to create) defined in the application
- Rate schedules, currencies, and aggregation schedules defined in the application

### Procedure

To copy a rate option:

- Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the rate option whose copy you want to create.

The **Rate Option** screen appears. It contains the following section:

- Main** – Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.</p> </div>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b>.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)
	<b>Note:</b> This field is disabled when the <b>Ignore Transaction</b> field is set to <b>Yes</b> .	<b>Note:</b> This field is required when the <b>Aggregate Transaction</b> field is set to <b>Yes</b> .
Transaction Rating Criteria	<p>Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Transactions and Then Rate SQs</li> </ul> <p><b>Note:</b> This value appears in the list when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> <ul style="list-style-type: none"> <li>Do Not Rate Transactions</li> <li>Rate Transaction and Aggregate Calc Lines</li> </ul> <p><b>Note:</b> This value appears in the list when the <b>Ignore Transaction</b> field is set to <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>Yes</b>.</p> <ul style="list-style-type: none"> <li>Rate Transactions</li> </ul> <p><b>Note:</b> This value appears in the list only when the <b>Ignore Transaction</b> field is set to either <b>Yes</b> or <b>No</b> and the <b>Aggregate Transaction</b> field is set to <b>No</b>.</p>	Yes
Apply To	<p>Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes

**Tip:** Alternatively, you can copy a rate option by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

- Enter the required details in the **Main** section.
- Click **Save**.

The new rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

### **Related Topics**

## Deleting a Rate Option

### Procedure

To delete a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rate option that you want to delete.

A message appears confirming whether you want to delete the rate option.

**Note:** You can delete a rate option when it is not yet used in a pricing rule type.

**Tip:** Alternatively, you can delete a rate option by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The rate option is deleted from the **C1-ExtLookRefTypeRateOpt** extendable lookup.

## Viewing the Rate Option Details

### Procedure

To view the details of a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the rate option whose details you want to view.

The **Extendable Lookup Value** zone appears.

4. View the details of the rate option in the **Extendable Lookup Value** zone.

**Rate Type Extendable Lookup**

A new extendable lookup for rate type named **C1-ExtLookRateType** is introduced in the system. A rate type extendable lookup enables you to specify the following:

- Whether the system should calculate fees on sum of all applicable claim charges or separately for each applicable claim charge.
- The billable charge line type using which the calculation line should be created when the fee is calculated on sum of all applicable claim charges
- Whether the system should calculate percentage based markup or markdown on sum of all eligible claim charges or separately for each eligible claim charge
- The billable charge line type using which the calculation line should be created when the minimum and maximum markup or markdown is calculated on sum of all eligible claim charges
- Whether the rate type can be used while adding fees, default markup or markdown, or claim line items

Following rate types are used in the system:

- Maximum Fee
- Minimum Fee
- Retained Percentage
- Minimum Markup or Markdown
- Maximum Markup or Markdown
- Minimum Amount
- Maximum Amount

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 2437

**Extendable Lookup Search**

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	<b>Note:</b> It has a link. On clicking the link, the <b>Extendable Lookup</b> screen appears where you can view the details of the respective extendable lookup.

## Searching for the Rate Type Extendable Lookup

### Procedure

To search for the **Rate Type** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRateType** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
The **Rate Type** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Rate Type Extendable Lookup

### Procedure

To view the values of the **Rate Type** extendable lookup:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. View the values of the **Rate Type** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

## Extendable Lookup (Rate Type)

The **Extendable Lookup** screen allows you to view the values of the **Rate Type (C1-ExtLookRateType)** extendable lookup. It also allows you to define, edit, copy, and delete a rate type. It contains the following zones:

- [Extendable Lookup Value List](#) on page 2425
- [Extendable Lookup Value](#) on page 2426

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Type** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate type.
Description	Displays the description of the rate type.
Owner	Indicates the user who has created the rate type. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Rate Type</b> screen appears where you can edit the details of the rate type.
Duplicate	On clicking the <b>Duplicate</b> (📄) icon, the <b>Rate Type</b> screen appears where you can define a rate type item using an existing rate type.

Column Name	Column Description
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the rate type.
	<b>Note:</b> You can delete a rate type when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate type.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate type, the **Extendable Lookup Value** zone appears with the details of the respective rate type.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate type. It contains the following sections:

- **Main** – Displays basic information about the rate type. It contains the following fields:

Field Name	Field Description
Rate Type	Displays the rate type.
Description	Displays the description for the rate type.
Override Description	Displays the overridden description of the rate type.
Detailed Description	Displays the additional information about the rate type.
Status	Indicates the status of the rate type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Line-Specific Calculation	Indicates whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge.

**Rate Type Usage** – Lists the various charges to which the rate type is associated. It contains the following column in a grid:

Column Name	Column Description
Applicable To	Indicates the claim handling fees that are associated with the rate type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate type.
Delete	Used to delete the rate type. <b>Note:</b> You can delete a rate type when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate type using an existing line item.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (  ) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

## **Defining a Rate Type**

### **Prerequisites**

To define a rate type, you should have:

- Billable charge line type and rate types defined in the application.

**Procedure**

To define a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	No
	<b>Note:</b> By default, the value is set to <b>Active</b> .	
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item).	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Claim Handling Fees</li> <li>• Claim Line Items</li> <li>• Markup or Markdown</li> </ul>	Yes

4. Enter the required details in the **Main** section.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add (+)** icon and then repeat step 5.

**Note:** However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑️) icon corresponding to the **Applicable To** field.

7. Click **Save**.

The rate type is added in the **C1-ExtLookRateType** extendable lookup.

## Editing a Rate Type

### Prerequisites

To edit a rate type, you should have:

- Billable charge line type and rate type usage defined in the application.

### Procedure

To edit a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the rate type whose details you want to edit.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Displays the rate type.	Not applicable
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.</p>	No

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: <ul style="list-style-type: none"> <li>Claim Handling Fees</li> <li>Claim Line Items</li> <li>Markup or Markdown</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a rate type by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section, if required.
5. Add, edit, or remove usage (for the rate type) from the **Usage** section, if required.
6. If you want to define more than one rate type usage for the rate type, click the **Add (+)** icon and then repeat step 5.

**Note:** However, if you want to remove a rate type usage from the rate type, click the **Delete (🗑)** icon corresponding to the **Applicable To** field.

7. Click **Save**.

The changes made to the rate type are saved.

## **Copying a Rate Type**

Instead of creating a rate type from scratch, you can create a new rate type using an existing rate type. This is possible through copying a rate type. On copying a rate type, the line specific calculation, billable charge type, and usage detailed are copied to the new rate type. You can then edit the details, if required.

### **Prerequisites**

To copy a rate type, you should have:

- Rate type (whose copy you want to create) defined in the application.
- Billable charge line type and rate type usage defined in the application.

### **Procedure**

To copy a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate (📄)** icon in the **Duplicate** column corresponding to the rate type whose copy you want to create.

The **Rate Type** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the rate type. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to the <b>Billable Charge Line Type</b> field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.</p>	No

- **Rate Type Usage** – Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items.	Yes

**Tip:** Alternatively, you can copy a rate type by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section, if required.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

**Note:** However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑️) icon corresponding to the **Applicable To** field.

7. Click **Save**.

The new rate type is added in the **C1-ExtLookRateType** extendable lookup.

## Deleting a Rate Type

### Procedure

To delete a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rate type that you want to delete.

A message appears confirming whether you want to delete the rate type.

**Note:** You can delete a rate type when it is not yet used in a pricing rule type.

**Tip:** Alternatively, you can delete a rate type by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The rate type is deleted from the **C1-ExtLookRateType** extendable lookup.

## **Pricing Group**

Oracle Revenue Management and Billing enables you to create pricing groups for a bill group. It consists of one or more rules. Each rule has a unique priority. A rule contains one or more criteria. Each criterion can contain the following:

- **Source System** - Indicates the external system from where the claim or enrollment transaction is received.
- **Parameter 1, Parameter 2, Parameter 3, and Parameter 4** - Indicates employee attributes based on which you want to define the pricing.

Note that the source system and parameter 1 are mandatory when you are defining a criterion in a rule. In the **Parameter 1** field, you can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone.

You can specify multiple parameter 2, parameter 3, and parameter 4 combinations in the criterion. You can also specify multiple source system, parameter 1, parameter 2, parameter 3, and parameter 4 combinations (i.e. multiple criteria) in a rule. Once a pricing group is defined for a bill group, you can then use the pricing group while defining a pricing rule for the bill group. This enables you to define various rates for employees with different set of attributes. For example, in a claim pricing rule, you can maintain different markup and markdown values for employees who belong to the Western, Eastern, and Central location of United States.

You can define, edit, copy, and delete a pricing group through the **Bill Group Pricing Groups** zone in the **Pricing** tab of the **Customer 360° Information** screen.

## **Viewing the Pricing Groups of a Bill Group**

### **Procedure**

To view the pricing groups of a bill group:

- Search for the bill group whose is associated with the self-funded policy in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (  ) icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

- In the **Bill Group Self-Funded Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose pricing groups you want to view.

The **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

- View the pricing groups which are defined for the bill group and are currently active in the **Bill Group Pricing Groups** zone.

## Defining a Pricing Group for a Bill Group

### Prerequisites

To define a pricing group for a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

### Procedure

To define a pricing group for a bill group:

- Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group for whom you want to define a pricing group.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

- Click the **Add** link in the upper right corner of the **Bill Group Pricing Groups** zone.

The **Pricing Group** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item.  <b>Note:</b> You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the <b>Add</b>  icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define the required rules in the **Pricing Group Rules** section.
8. Click the **Add**  icon in the **Criteria** field corresponding to the pricing group rule for which you want to define the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You can only specify the employee attribute which is defined for the bill group and source system combination in the <b>Bill Group Derivation and Pricing Parameters</b> zone. You must not specify the ampersand (&) character in this field.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter 1 List for Bill Group</b> window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	

9. Enter the source system and parameter 1 in the pricing group rule criteria.

**Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add (+)** icon corresponding to the **Parameter 2** field and then repeat step 10.

**Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete (🗑)** icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

**Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

**Note:** However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The pricing group is defined for the bill group.

## Editing a Pricing Group of a Bill Group

### Prerequisites

To edit a pricing group of a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

### Procedure

To edit a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to edit.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing group whose details you want to edit.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item.	Yes
	<b>Note:</b> You cannot define multiple rules in the pricing group with the same priority.	
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the <b>Add</b>  icon, you can define criteria for the pricing group rule.	Not applicable

**Note:** You cannot define, edit, or remove a rule when the pricing group is already used while defining a pricing rule for the bill group.

6. Modify the required details in the **Main** section.
7. Edit the required rules in the **Pricing Group Rules** section.
8. Click the **Add**  icon in the **Criteria** field corresponding to the pricing group rule for which you want to edit the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing.	Yes
	<p><b>Note:</b></p> <p>You can only specify the employee attribute which is defined for the bill group and source system combination in the <b>Bill Group Derivation and Pricing Parameters</b> zone.</p> <p>You must not specify the ampersand (&amp;) character in this field.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter 1 List for Bill Group</b> window appears.</p>	
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	

**Note:** You cannot define, edit, or remove the source system, parameter 1, parameter 2, parameter 3, and parameter 4 from a rule when the pricing group is already used while defining a pricing rule for the bill group.

9. If required, enter the source system and parameter 1 in the pricing group rule criteria.

**Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add (+)** icon corresponding to the **Parameter 2** field and then repeat step 10.

**Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete (🗑)** icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

**Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

**Note:** However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The changes made to the pricing group are saved.

## Deleting a Pricing Group of a Bill Group

### Procedure

To delete a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to delete.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Delete** () icon in the **Delete** column corresponding to the pricing group that you want to delete.

A message appears confirming whether you want to delete the pricing group.

**Note:** You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.

6. Click **OK**.

The pricing group is deleted.

## Copying a Pricing Group of a Bill Group

Instead of creating a pricing group from scratch, you can create a new pricing group using an existing pricing group. This is possible through copying a pricing group. On copying a pricing group, the details including the rules are copied to the new pricing group. You can then edit the details, if required.

### Prerequisites

To copy a pricing group of a bill group, you should have:

- Pricing group (whose copy you want to create) defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

### Procedure

To copy a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** () icon corresponding to a bill group whose pricing group you want to copy.

The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

5. In the **Bill Group Pricing Groups** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the pricing group whose copy you want to create.

The **Pricing Group** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** – Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. <b>Note:</b> You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the <b>Add</b> (  ) icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define, edit, or remove the required rules from the **Pricing Group Rules** section.

8. Click the **Add** (+) icon in the **Criteria** field corresponding to the pricing group rule for which you want to define or edit the criteria.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You can only specify the employee attribute which is defined for the bill group and source system combination in the <b>Bill Group Derivation and Pricing Parameters</b> zone. You must not specify the ampersand (&) character in this field.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter 1 List for Bill Group</b> window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing.  <b>Note:</b> You must not specify the ampersand (&) character in this field.	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

**Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.

11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

**Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑️) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add (+)** icon corresponding to the **Source System** field and then repeat step 9 and 10.

**Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete (🗑)** icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add (+)** icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

**Note:** However, if you want to remove a rule from the pricing group, click the **Delete (🗑)** icon corresponding to the pricing group rule.

14. Click **Save**.

The new pricing group is defined for the bill group.

## **Pricing Rule Type**

Pricing rules are created using pricing rule types. Following are the pricing rules:

- **Claim** – can be created using the claim pricing rule type.
- **Retention Type Claim Based** – can be created using the retention type claim base pricing rule type.
- **Retention Type Enrollment Based** – can be created using the retention type enrollment base pricing rule type.
- **Specific Stop-Loss** – can be created using the specific stop-loss pricing rule type.
- **Aggregated Stop-Loss** – can be created using the aggregated stop-loss or specific stop-loss pricing rule type.
- **One-Time Flat Fee** – can be created using the one-time flat fee pricing rule type.
- **Bill Period Based Recurring Flat Fee** – can be created using the bill period based recurring flat fee pricing rule type.
- **Frequency Based Recurring Flat Fee** – can be created using the frequency based recurring flat fee pricing rule type.

Pricing rule type has a parent business object, **C1-PricingRuleType** with all the common elements required for all pricing rule types. Elements that are specific to each pricing rule type are configured using the child business object. Following are the child business objects:

- **C1-PricingRuleTypeClaim** business object for Claim Pricing Rule Type.
- **C1-PrcRuleTypRetClaimBase** business object for Retention Claim Based Pricing Rule Type.

- **C1-PrcRuleTypeRetEnrollBased** business object for Retention Enrollment Based Pricing Rule Type.
- **C1-PricingRuleTypeASL** business object for Aggregate Stop-Loss Pricing Rule Type.
- **C1-PricingRuleTypeSSL** business object for Specific Stop-Loss Pricing Rule Type.
- **C1-PricingRuleTypeFlatFees** business object for One-Time Flat Fee, Bill Period Based Recurring Flat Fee, Frequency Based Recurring Flat Fee Pricing Rule Types.

The **C1-GetPrcRuleTypeRateOpt** business service returns the list of rate options associated with a pricing rule type and selected price item. The **C1-GetPrcRuleTypeProd** business service returns the list of products associated with the pricing rule type.

This screen consists of the following zones:

- [Pricing Rule Type List](#) on page 2459
- [Pricing Rule Type](#) on page 2462

## Pricing Rule Type List

The **Pricing Rule Type List** zone lists the pricing rule types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description of the pricing rule type.
Pricing Rule Type Category	Indicates the category to which the pricing rule type belongs. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Specific Stop-Loss</li> <li>• Aggregate Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> <li>• Ancillary</li> <li>• Discount Arrangement</li> <li>• Level Funded</li> <li>• Age Based</li> <li>• Tier Based</li> <li>• Pass-Through Billable Charge</li> <li>• Benefit</li> <li>• Additional Charge</li> </ul>

Column Name	Column Description
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Claim Pricing Rule Type</b> , <b>Specific Stop-Loss (SSL) Pricing Rule Type</b> , <b>Aggregate Stop-Loss (ASL) Pricing Rule Type</b> , <b>Retention Type Claim Based Pricing Rule Type</b> , <b>Retention Type Enrollment Based Pricing Rule Type</b> , <b>Flat Fees Pricing Rule Type</b> , <b>Ancillary Pricing Rule Type</b> , <b>Discount Arrangement Pricing Rule Type</b> , <b>Level Funded Pricing Rule Type</b> , <b>Age Based Pricing Rule Type</b> , <b>Tier Based Pricing Rule Type</b> , <b>Pass-Through Billable Charge Pricing Rule Type</b> , <b>Benefit Pricing Rule Type</b> , or <b>Additional Charge Pricing Rule Type</b> screen appears, based on the pricing rule type category, where you can edit the details of the respective pricing rule type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the pricing rule type.
	<b>Note:</b> You can delete a pricing rule type when it is not yet used in the system.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a pricing rule type, the **Pricing Rule Type** zone appears with the details of the respective pricing rule type.

You can filter the list using the **Pricing Rule Type Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Pricing Rule Type

The **Pricing Rule Type** zone displays the details of the pricing rule type for claim, aggregate stop-loss, specific stop-loss, retention type enrollment based, retention type claim based, one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee. This zone contains the following sections:

- **Main** – This section provides basic information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description for the pricing rule type.
Detailed Description	Displays additional information about the pricing rule type category.

Field Name	Field Description
Pricing Rule Business Object	<p>Indicates the pricing rule business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Business Object	<p>Indicates the pricing rule type business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are:</p> <ul style="list-style-type: none"> <li>• Claim Pricing Rule Type</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule Type</li> <li>• Specific Stop-Loss (SSL) Pricing Rule Type</li> <li>• Retention Type Claim Based Pricing Rule Type</li> <li>• Retention Type Enrollment Based Pricing Rule Type</li> <li>• Flat Fee Pricing Rule Type</li> </ul> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Status	<p>Indicates the status of the pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Primary	Displays whether the pricing rule type is primary or not.
Pricing Rule Type Category	<p>Indicates the pricing rule type category for the pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>

- **Related Pricing Rule Types** – This section lists the pricing rule types which are related to the parent pricing rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order in which pricing rule type is executed.
Pricing Rule Type	Displays the related pricing rule type for the parent rule type.  <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule Type</b> screen appears where you can view the details of the respective pricing rule type.

**Note:** This section appears when the pricing rule type is a primary pricing rule type.

- **Transaction Field Mapping** – This section displays the transaction related data mapped to the pricing rule type. It contains the following fields:

Field Name	Field Description
Source System	Displays the external system from where the transaction data is mapped.
Parameter 1 ... Parameter 4	Displays the parameters mapped for the transactions.
Incurred Date	Displays the date incurred for transaction.
Paid Date	Displays the transaction paid date.
Source of Funds	Displays the source of funds used to make the payment.
Composite	Displays the composite transaction data.
Claim Disposition	Displays the disposition of the claims transaction.
Provider's Tax Identification Number	Displays the tax identification number of the provider.
Member ID	Displays the member ID.
Main Subscriber ID	Displays the customer ID.
Run-in Identifier	Displays the run-in identifier.
Runout Identifier	Displays the runout identifier.
Coverage Start Date	Displays the transaction coverage start date.
Coverage End Date	Displays the transaction coverage end date.
Retroactivity Indicator	Displays information of the retroactivity indicator.

**Note:** This section appears when the pricing rule type is a primary pricing rule type.

- **Algorithms** – This section displays the algorithms used for the pricing rule type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm must be executed. The valid values are: <ul style="list-style-type: none"> <li>Account and Price Item Derivation</li> <li>Bill After Date Determination</li> <li>Bill Group Derivation</li> <li>Pricing Rule Post Processing</li> <li>Transaction Validation</li> </ul>
Sequence	Displays the order in which the algorithms for each system event must be executed.
Algorithm	Displays the algorithm.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears with the details of the respective algorithm.

- **Additional Data** – This section displays the additional information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Indicates whether the pricing rule type is eligible for level funding or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>
Eligible for Specific Stop-Loss	Indicates whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <p><b>Note:</b> This field appears when the option selected for the <b>Pricing Rule Type Category</b> is <b>Claim, Retention Type Claim Based, or Retention Type Enrollment Based</b>.</p>
Run-in Identifier Value	Displays the value for run-in identifier.
Runout Identifier Value	Displays the value for runout identifier.

**Note:** This section does not appear when the pricing rule type category is flat fees.

- **Price Items** – This section displays the price items assigned to the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item information.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.

Column Name	Column Description						
Rate Option	<p>On clicking the <b>Add</b>  icon, the following column appears:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td>Indicates the rate option for the price item.</td> </tr> </tbody> </table> <p><b>Note:</b> This column does not appear when the pricing rule type category is flat fees.</p>	Column Name	Column Description	Rate Option	Indicates the rate option for the price item.		
Column Name	Column Description						
Rate Option	Indicates the rate option for the price item.						
Bill To Account	<p>On clicking the <b>Add</b>  icon, the following columns appear:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Priority</td> <td>Displays the order in which the invoice type was considered while defining a price item.</td> </tr> <tr> <td>Invoice Type</td> <td>Displays the invoice type for the price item.</td> </tr> </tbody> </table>	Column Name	Column Description	Priority	Displays the order in which the invoice type was considered while defining a price item.	Invoice Type	Displays the invoice type for the price item.
Column Name	Column Description						
Priority	Displays the order in which the invoice type was considered while defining a price item.						
Invoice Type	Displays the invoice type for the price item.						

- **Price Item Parameters** – This section displays the price item parameters in the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item Parameter	<p>Displays the parameter associated with the price item.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the respective parameter.</p>
Transaction Field	<p>Displays the additional transaction data.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective transaction field. This column does not appear when the pricing rule type category is flat fees.</p>
Eligible for Specific Stop-Loss	<p>Displays the parameter eligible for Specific Stop-Loss when the eligibility checkbox was checked.</p> <p><b>Note:</b> This field appears only when the option selected for the <b>Pricing Rule Type Category</b> is <b>Claim, Retention Type Claim Based, or Retention Type Enrollment Based</b>.</p>
Eligible for Level Funding	<p>Displays the parameter eligible for level funding when the eligibility checkbox was checked.</p>

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Event Management** – This section displays the audit event details. It contains the following columns:

Column Name	Column Description
Audit Event Type	Displays the audit event type which you can use while adding elements for audit in a fully-insured benefit pricing rule type.
Element Type	Indicates the type of audit element for a fully-insured benefit pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Business Object Status</li> <li>• Characteristic</li> <li>• Field</li> </ul>
Element Name	Displays the element name for a fully-insured benefit pricing rule type.
Element Value	Displays the value for an element name.

- **Claim Templates** – This section list the pricing rule type for claim template. It contains the following field:

Field Name	Field Description
Claim Template	Indicates the claim template.

**Note:** This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Claim-Specific Additional Data** – This section displays the claim specific additional data. It contains the following fields:

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not.
	<b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not.
	<b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

**Note:** This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **ASL-Specific Additional Data** – This section displays the Aggregated Stop-Loss specific additional data. It contains the following fields:

Field Name	Field Description
ASL Billable Charge Line Type	Displays the Aggregated Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.

Field Name	Field Description
ASL Limit Price Item	Displays the Aggregated Stop-Loss limit price item.
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not.
	<b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not.
	<b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

**Note:** This section appears when the **Business Object** is **Aggregate Stop-Loss (ASL) Pricing Rule Type**.

- **Enrollment-Specific Additional Data** – This section displays the enrollment specific additional data. It contains the following fields:

Field Name	Field Description
Retroactivity Indicator Value	Displays the value for the retroactivity indicator.

**Note:** This section appears when the **Business Object** is **Retention Type Enrollment Based Pricing Rule Type**.

- **Claim Disposition Details** – This section displays the details of claim disposition. It contains the following columns:

Column Name	Column Description
Claim Disposition	Indicates the claim disposition.
Disposition Mode	Indicates the claim disposition mode. The valid values are: <ul style="list-style-type: none"> <li>• Align Signage</li> <li>• Zero Out</li> </ul>

**Note:** This section appears when the **Business Object** is **Retention Type Claim Based Pricing Rule Type**.

- **SSL-Specific Additional Data** – This section displays the Specific Stop-Loss additional data. It contains the following fields:

Field Name	Field Description
SSL Billable Charge Line Type	Displays the Specific Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. <b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

**Note:** This section appears when the **Business Object** is **Specific Stop-Loss (SSL) Pricing Rule Type**.

- **Billable Charge Line Types** – This section list the billable charge line type. It contains the following column:

Column Name	Column Description
Billable Charge Line Type	Indicates the billable charge line type.

**Note:** This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

- **Flat Fees - Specific Additional Data** – This section displays the recurring flat fee that is specific and considered as additional data. It contains the following fields:

Field Name	Field Description
Bill Segment Cancel Reason	Indicates the reason for cancelling the bill segment.
Recurring Fee	Displays whether the recurring flat fee is required or not.
Recurring Method	Indicates the recurring method if recurring fee is required. The valid values are: <ul style="list-style-type: none"> <li>• Bill Period</li> <li>• Frequency</li> </ul> <b>Note:</b> This field appears when the checkbox for <b>Recurring Fee</b> field is selected.

**Note:** This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

This section contains the following sub-section:

- **Bill Periods** – This section displays the bill period for the recurring flat fee. It contains the following column:

Column Name	Column Description
Bill Period	Indicates the bill period.

**Note:** This section appears when the **Recurring Method** is **Bill Period**.

- **Additional Fee Indicator** – This section displays the additional fees which are applicable to one or more line items in the claim pricing rule. It contains the following fields:

Column Name	Column Description
Fee	Indicates the charge type category for the claim pricing rule.
Claim Additional Fee Indicator	Indicates the charge type sub category for the claim pricing rule.

**Note:** This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the pricing rule type.
Delete	Used to delete the pricing rule type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the extendable lookup value for pricing rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears with the details of the respective business object.

By default, the **Pricing Rule Type** zone does not appear in the **Pricing Rule Type** screen. It appears when you click the **Broadcast** (  ) icon corresponding to the pricing rule type in the **Pricing Rule Type List** zone.

## Claim Pricing

The ASO service provider processes the claims as part of the ASO agreement and pays the claim amount to either hospital or main subscriber. The employer, in turn, reimburses the claim amount to the ASO service provider at the end of the bill period (i.e. typically, every month). Apart from charging the claim amount to the employer, the ASO service provider charges various additional fees, such as fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor, and so on.

Oracle Revenue Management and Billing allows the ASO service provider to bill the employers for the claim amount and various additional fees. You can use any custom mechanism or the file upload utility in ORMB to upload the claim transactions. The pricing for the claim transactions can be defined using the claim pricing rules. You can define a claim pricing rule at the parent customer and bill group levels. The claim pricing rule at the bill group level takes precedence over the claim pricing rule at the parent customer level. You can define claim pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a claim pricing rule using a claim pricing rule type.

It is the claim pricing rule type which helps the system to determine:

- Business object using which the claim pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types, such as specific stop-loss, aggregate stop-loss, and retention type claim based pricing rule types, will inherit the attributes.

**Note:** You must select the **Primary** option while defining a claim pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Claim Pricing Rule Type** screen.

- Pricing rule types which are related to claim pricing rule type.
- Transaction fields from where the data for claim, specific stop-loss, aggregate stop-loss, retention type claim based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1\_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define claim pricing rules using the claim pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while accumulating specific stop-loss and aggregate stop-loss and while aggregating transactions.
- Claim templates which can be used while defining claim pricing rules using the claim pricing rule type.
- Additional information, such as:
  - Whether the price items included in the claim pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
  - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
  - Billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

Once a claim pricing rule type is defined, you can create claim pricing rules using the claim pricing rule type. While defining a claim pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option and claim template which you want to use while defining the claim pricing.
- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

**Note:** You can override the default markup and markdown values which are retrieved from the claim template.

In addition, while defining a claim pricing rule for a bill group, you need to specify the status of the policy for which you want to define the claim pricing rule. You can also specify a pricing group while defining a claim pricing rule for a bill group. If you specify a pricing group while defining a claim pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Once a claim pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

## Defining a Claim Pricing Rule Type

### Prerequisites

To define a claim pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeClaim** defined for pricing rule type.
- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

### Procedure

To define a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	<b>Note:</b> You can create a claim pricing rule type using the <b>Claim Pricing Rule Type</b> business object.	

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Claim Pricing Rule Type** business object.
5. Click **OK**.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for claim template.
- **Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Indicate the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

**Note: Related Pricing Rule Types** section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

**Note: Transaction Field Mapping** section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.

13. Define characteristics for the pricing rule type, if required.
14. Add claim templates in the claim pricing rule type, if required.
15. Add the claim-specific data in the pricing rule type, if required.
16. Define claim handling fees indicator in the claim pricing rule type, if required.
17. Click **Save**.

The claim pricing rule type is defined.

## **Adding Related Pricing Rule Types in a Primary Pricing Rule Type**

### Prerequisites

To add related pricing rule types in a primary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.

### Procedure

To add related pricing rule types in a primary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a primary pricing rule type.

**Note:**

This section appears when you have chosen the **Primary** from the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Pricing Rule Type</b> field, the <b>Pricing Rule Type Search</b> window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the <b>Pricing Rule Type</b> field.	Yes (Conditional) <b>Note:</b> This field is required when the corresponding <b>Sequence</b> and <b>Eligibility Rule Type</b> field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. <b>Note:</b> The <b>Eligibility Rule Type</b> list includes only those rule-types where the rule type eligibility is <b>Related Pricing Rule Type Eligibility</b> .	No

- Enter the required details in the **Related Pricing Rule Types** section.
- If you want to define more than one related pricing rule type for the primary pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a related pricing rule type from the primary pricing rule type, click the **Delete** (🗑️) icon corresponding to the related pricing rule type.

- Click **Save**.

The related pricing rule types are added for the primary pricing rule type.

## Defining Transaction Field Mapping in a Primary Pricing Rule Type

### **Prerequisites**

To define the transaction field mapping for a primary pricing rule type, you should have:

- Transaction fields defined in the application

### **Procedure**

To define the transaction field mapping for a primary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining a primary pricing rule type.

#### **Note:**

This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description
Source System	<p>Used to specify the external system from where the transaction data is mapped.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Source System</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the source system, the description of the source system appears corresponding to the <b>Source System</b> field.</p>
Parameter 1.....Parameter 4	<p>Used to specify the parameters mapped for the transaction.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Parameter 1, Parameter 2, Parameter 3, Parameter 4</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the parameter, the description of the parameter appears corresponding to the <b>Parameter 1, Parameter 2, Parameter 3, Parameter 4</b> field respectively.</p>
Incurred Date	<p>Used to specify the date incurred for transaction.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Incurred Date</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the incurred date, the description of the incurred date appears corresponding to the <b>Incurred Date</b> field.</p>
Paid Date	<p>Used to specify the transaction paid date.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Paid Date</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the paid date, the description of the paid date appears corresponding to the <b>Paid Date</b> field.</p>
Source of Funds	<p>Used to specify the source of funds used to make the payment.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Source of Funds</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the source of funds, the description of the source of funds appears corresponding to the <b>Source of Funds</b> field.</p>

Field Name	Field Description
Composite	<p>Used to specify the composite transaction data.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Composite</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the composite, the description of the composite appears corresponding to the <b>Composite</b> field.</p>
Claim Disposition	<p>Used to specify the disposition of the claims transaction.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Claim Disposition</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the claim disposition, the description of the claim disposition appears corresponding to the <b>Claim Disposition</b> field.</p>
Provider's Tax Identification Number	<p>Used to specify the tax identification number of the provider.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Provider's Tax Identification Number</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the provider's tax identification number, the description of the provider's tax identification number appears corresponding to the <b>Provider's Tax Identification Number</b> field.</p>
Member ID	<p>Used to specify the member ID.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Member ID</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the member ID, the description of the member ID appears corresponding to the <b>Member ID</b> field.</p>
Main Subscriber ID	<p>Used to specify the customer ID.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Main Subscriber ID</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the main subscriber ID, the description of the main subscriber ID appears corresponding to the <b>Main Subscriber ID</b> field.</p>

Field Name	Field Description
Run-in Identifier	Used to specify the run-in identifier.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Run-in Identifier</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the run-in identifier, the description of the run-in identifier appears corresponding to the <b>Run-in Identifier</b> field.</p>
Runout Identifier	Used to specify the runout identifier.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Runout Identifier</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the runout identifier, the description of the runout identifier appears corresponding to the <b>Runout Identifier</b> field.</p>
Third Party Identifier	Used to specify the third party identifier to determine that the claim transaction is received from an external source system while defining a claim pricing rule type.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Third Party Identifier</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the third party identifier, the description of the third party identifier appears corresponding to the <b>Third Party Identifier</b> field.</p>
Coverage Start Date	Used to specify the transaction coverage start date.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Coverage Start Date</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the coverage start date, the description of the coverage start date appears corresponding to the <b>Coverage Start Date</b> field.</p>
Coverage End Date	Used to specify the transaction coverage end date.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Coverage End Date</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the coverage end date, the description of the coverage end date appears corresponding to the <b>Coverage End Date</b> field.</p>

Field Name	Field Description
Retroactivity Indicator	Used to specify information of the retroactivity indicator.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Retroactivity Indicator</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the retroactivity indicator, the description of the retroactivity indicator appears corresponding to the <b>Retroactivity Indicator</b> field.</p>
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Network Indicator</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the network indicator, the description of the network indicator appears corresponding to the <b>Network Indicator</b> field.</p>
Covered Charged Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Covered Charged Amount</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the covered charged amount, the description of the covered charged amount appears corresponding to the <b>Covered Charged Amount</b> field.</p>
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Discount Savings Amount</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the discount savings amount, the description of the discount savings amount appears corresponding to the <b>Discount Savings Amount</b> field.</p>

Field Name	Field Description
Accumulation Only Identifier	<p>Used to map to a transaction field which indicates that the claim transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the claim transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the claim transaction.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Accumulation Only Identifier</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the accumulation only identifier, the description of the accumulation only identifier appears corresponding to the <b>Accumulation Only Identifier</b> field.</p>
Billing Eligibility Identifier	<p>Used to specify whether the transaction is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Billing Eligibility Identifier</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the billing eligibility identifier, the description of the billing eligibility identifier appears corresponding to the <b>Billing Eligibility Identifier</b> field.</p>
Transaction Upload Date	<p>Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Transaction Upload Date</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the transaction upload date, the description of the transaction upload date appears corresponding to the <b>Transaction Upload Date</b> field.</p>
Claim Handling Fees Indicator	<p>Used to specify the claim handling fees which are applicable to one or more line items in the claim pricing rule.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Claim Handling Fees Indicator</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the claim handling fees indicator, the description of the claim handling fees indicator appears corresponding to the <b>Claim Handling Fees Indicator</b> field.</p>

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.

The transaction field mapping is defined for the primary pricing rule type.

**Associating Algorithms with a Pricing Rule Type****Prerequisites**

To associate algorithms with a pricing rule type, you should have:

- Algorithm and Algorithm Type defined in the application.
- System event defined in the application.

**Procedure**

To associate algorithms with a pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining a pricing rule type.

The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event on which the algorithm is executed. The valid values are: <ul style="list-style-type: none"> <li>Account and Price Item Derivation</li> <li>Accumulation Billable Charge Post-Processing</li> <li>Accumulation Billable Charge Pre-Processing</li> <li>Accumulation Post-Processing</li> <li>Accumulation Pre-Processing</li> <li>Bill After Date Determination</li> <li>Bill Group Derivation</li> <li>Final Settlement Derivation</li> <li>Billable Charge Creation Pre-Processing</li> <li>Billable Charge Creation Post-Processing</li> <li>Pricing Rule Post-Processing</li> <li>Pricing Rule Pre-Processing</li> <li>Premium Calculation</li> <li>Transaction Validation</li> </ul>	Yes  <b>Note:</b> This field is required when you are defining an algorithm for the pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining an algorithm for the pricing rule type.
Algorithm	Used to specify the algorithm.  <b>Note:</b> If you select the system event option, the <b>Search</b> (🔍) icon appears corresponding to the <b>Algorithm</b> field. On clicking the <b>Search</b> (🔍) icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining an algorithm for the pricing rule type.

- Enter the required details in the **Algorithms** section.
- If you want to associate more than one algorithm for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to disassociate an algorithm from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click **Save**.  
The algorithms are associated with the pricing rule type.

**Defining Additional Data for a Pricing Rule Type****Procedure**

To define additional data for a pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining a pricing rule type.

<b>Note:</b> This section does not appear when the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b> .
--

The **Additional Data** section contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Used to indicate whether the pricing rule type is eligible for level funding or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Eligible for Specific Stop-Loss	Used to whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> This field appears when the option selected for the <b>Pricing Rule Type Category</b> is <b>Claim</b>, <b>Retention Type Claim Based</b>, or <b>Retention Type Enrollment Based</b>.</p>
Run-in Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received during the run-in period of the policy.
Third Party Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received from an external source system.
Accumulation Only Identifier Value	Used to specify the identifier value to determine that the ancillary transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.
Eligible for Write-Off in Post Runout	Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which the post runout write-off adjustments must be created.
Rule Based Price Item Eligibility Field	Used to specify the price item eligibility field that satisfies the pricing rule.
Rule Based Related Pricing Rule Type Eligibility Field	Used to specify the pricing rule type eligibility field that satisfies the pricing rule.
Rule Based Eligibility Value	Used to specify the eligibility value that satisfies the pricing rule.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.

The additional data is defined for the pricing rule type.

## Adding Price Items in a Pricing Rule Type

### Prerequisites

To add price items in a pricing rule type, you should have:

- Price items defined in the application
- Rate Options defined in the application
- Invoice Type defined in the application

### Procedure

To add price items in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a pricing rule type.

The **Price Items** section contains the following columns in a grid:

Column Name	Column Description						
Price Item	<p>Used to specify the price item information.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item</b> field, the <b>Price Item Search</b> window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Price Items</b> field.</p>						
Rate Option	<p>On clicking the <b>Add</b> (+) icon, the following column appears in a grid:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Rate Option</td> <td> <p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop Loss</li> <li>• Ancillary</li> <li>• Claims</li> <li>• Discount Share</li> <li>• Enrollment Based Retention Per Member Per Month</li> <li>• Enrollment Based Retention Per Subscriber Per Month</li> <li>• Flat Dollar Per Claim - Aggregate Daily</li> <li>• Percentage of Claim - Aggregate Daily</li> <li>• Retention Claim Percentage Based Service Agreement</li> <li>• Retention - Aggregate Monthly</li> <li>• Specific Stop Loss</li> <li>• TFM Claim Weekly</li> </ul> </td> <td> <p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Price Item</b> field is present.</p> </td> </tr> </tbody> </table> <p><b>Note:</b> The <b>Rate Option</b> column does not appear when the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>.</p>	Column Name	Column Description	Mandatory (Yes or No)	Rate Option	<p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop Loss</li> <li>• Ancillary</li> <li>• Claims</li> <li>• Discount Share</li> <li>• Enrollment Based Retention Per Member Per Month</li> <li>• Enrollment Based Retention Per Subscriber Per Month</li> <li>• Flat Dollar Per Claim - Aggregate Daily</li> <li>• Percentage of Claim - Aggregate Daily</li> <li>• Retention Claim Percentage Based Service Agreement</li> <li>• Retention - Aggregate Monthly</li> <li>• Specific Stop Loss</li> <li>• TFM Claim Weekly</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Price Item</b> field is present.</p>
Column Name	Column Description	Mandatory (Yes or No)					
Rate Option	<p>Used to indicate the rate option for the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop Loss</li> <li>• Ancillary</li> <li>• Claims</li> <li>• Discount Share</li> <li>• Enrollment Based Retention Per Member Per Month</li> <li>• Enrollment Based Retention Per Subscriber Per Month</li> <li>• Flat Dollar Per Claim - Aggregate Daily</li> <li>• Percentage of Claim - Aggregate Daily</li> <li>• Retention Claim Percentage Based Service Agreement</li> <li>• Retention - Aggregate Monthly</li> <li>• Specific Stop Loss</li> <li>• TFM Claim Weekly</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Price Item</b> field is present.</p>					

Column Name	Column Description		
Bill To Account	On clicking the <b>Add</b> (+) icon, the following columns appear in a grid:		
	Column Name	Column Description	Mandatory (Yes or No)
	Priority	Used to specify the order in which the invoice type is considered for a price item.	Yes (Conditional) <b>Note:</b> This field is required when you are defining the invoice type.
Invoice Type	Used to specify the invoice type for the price item. <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Invoice Type</b> field, the <b>Invoice Type Search</b> window appears.	No	

- Enter the required details in the **Price Items** section.
- If you want to define more than one price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one rate option to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a rate option from the price item for the pricing rule type, click the **Delete** (🗑️) icon corresponding to the rate option.

- If you want to define more than one invoice types to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a invoice type from the price item for the pricing rule type, click the **Delete** (🗑️) icon corresponding to the invoice type.

- Click **Save**.

The price items are added for the pricing rule type.

## Adding a Price Item Parameter in a Pricing Rule Type

### Prerequisites

To add a price item parameter in a pricing rule type, you should have:

- Parameters defined in the application
- Transaction field defined in the application
- Price item parameter associated with the price item

### Procedure

To add a price item parameter in a pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a pricing rule type.

The **Price Item Parameters** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining the pricing for the price item.	Yes (Conditional)
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Price Item Parameter</b> field, the <b>Parameter Search</b> window appears.</p> <p>On specifying the parameter, the description of the price item parameter appears corresponding to the <b>Price Item Parameter</b> field.</p>	<p><b>Note:</b> This field is required when you are defining the pricing rule type.</p>
Transaction Field	Used to specify the transaction field from where the data should be retrieved.	Yes (Conditional)
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon corresponding to the <b>Transaction Field</b> field, the <b>Transaction Field Search</b> window appears.</p> <p>On specifying the transaction field, the description of the transaction field appears corresponding to the <b>Transaction Field</b>.</p>	<p><b>Note:</b> This field is required once the price item parameter is specified.</p>
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used in the accumulation criteria.	No
Eligible for Level Funding	Used to specify whether the price item parameter can be used in level funding or not.	No

- Enter the required details in the **Price Item Parameters** section.
- If you want to add more than one price item parameter for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.  
A price item parameter is added for the pricing rule type.

## Defining a Characteristic for a Pricing Rule Type

### Prerequisites

To define the characteristics for a pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

### Procedure

To define a characteristic for a pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining a pricing rule type.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for the pricing rule type.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the pricing rule type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the pricing rule type.

## Adding Claim Templates in a Claim Pricing Rule Type

### Prerequisites

To add claim templates in a claim pricing rule type, you should have:

- Claim templates defined in the application

### Procedure

To add claim templates in a claim pricing rule type:

1. Ensure that the **Claim Templates** section is expanded when you are defining or editing a pricing rule type.

The **Claim Templates** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Claim Template	Used to indicate the claim template.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a claim template for the pricing rule type.

2. Enter the required details in the **Claim Templates** section.
3. If you want to define more than one claim template for the pricing rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a claim template from the pricing rule type, click the **Delete (🗑)** icon corresponding to the claim template.

4. Click **Save**.

The claim templates are defined for the pricing rule type.

## Adding the Claim-Specific Data in a Pricing Rule Type

### Procedure

To add the Claim-Specific additional data in a pricing rule type:

1. Ensure that the **Claim-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Claim-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field, the <b>Field Search</b> window appears. On specifying the field, the description of the field appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field.	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not.	No
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type.	No
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge lien type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	

2. Enter the required details in the **Claim-Specific Additional Data** section.
3. Click **Save**.

The Claim-Specific Additional data is added in the pricing rule type.

## **Adding Claim Handling Fees Indicator in a Claim Pricing Rule Type**

### **Procedure**

To add claim handling fees indicator in a claim pricing rule type:

1. Ensure that the **Claim Handling Fees Indicator** section is expanded when you are defining or editing a claim pricing rule type.

The **Claim Handling Fees Indicator** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to indicate the charge type category for the claim pricing rule type.	Yes (Conditional) <b>Note:</b> This field is required while adding claim handling fees indicator in a claim pricing rule.
Fee Indicator	Used to specify the charge type sub category for the claim pricing rule type.	No

2. Enter the required details in the **Claim Handling Fees Indicator** section.
3. If you want to define more than one claim handling fees indicator for the claim pricing rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a claim handling fees indicator from the claim pricing rule type, click the **Delete (🗑)** icon corresponding to the fee.

4. Click **Save**.

The claim handling fees indicator is defined for the claim pricing rule type.

## Editing a Claim Pricing Rule Type

### Prerequisites

To edit the claim pricing rule type, you should have:

- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

### Procedure

To edit a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Claim Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for claim template.
- **Claim-Specific Additional Data** – Used to specify the claim specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for claim.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Add, edit, or remove claim templates in the claim pricing rule type, if required.
14. Modify the claim-specific data in the pricing rule type, if required.
15. Click **Save**.

The changes made to the claim pricing rule type are saved.

## Deleting a Claim Pricing Rule Type

### Procedure

To delete a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim pricing rule type that you want to delete.

A message appears confirming whether you want to delete the claim pricing rule type.

**Note:** You can delete a claim pricing rule type when it is not yet used in the system.

**Tip:** Alternatively, you can delete a claim pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

- Click **OK**.

The claim pricing rule type is deleted.

## Defining a Claim Pricing Rule for a Parent Customer

### Prerequisites

To define a claim pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

### **Procedure**

To define a claim pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. <b>Note:</b> You can create a claim pricing rule using the <b>Pricing Rule Type</b> for claim.	Yes

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees for the line items in the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for the line items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>
Parent Customer Information	Displays the parent customer information.
Pricing Rule Type	Indicates the pricing rule type.

Field Name	Field Description
Status	Indicates the status of the parent customer for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Pending</li> </ul>

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Pricing Start Date	Used to specify the pricing rule start date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy Start Date</b> .	Yes
Pricing End Date	Used to specify the pricing rule end date.  <b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy End Date</b> .	Yes
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer.  <b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define the claim handling fees for the line items in a claim pricing rule, if required.

**Note:** The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.

7. Define the markup or markdown values for the line items in a claim pricing rule, if required.

**Note:** The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.

8. Define line items in a claim pricing rule, if required.

**Note:** The **Line Items** section appears when an option from **Claim Template** field is selected.

9. Define characteristics for a claim pricing rule, if required.

**10. Click Save.**

The claim pricing rule for a parent customer is defined.

**Defining the Markup or Markdown Values For Line Items in a Claim Pricing Rule****Procedure**

To define the markup or markdown values for the line items in a claim pricing rule:

1. Ensure that the **Markup or Markdown Values** section is expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	No
	<b>Note:</b> This field is disabled when the <b>Post Run Out Claims</b> option is selected from the <b>Claim Template</b> field of the <b>Main</b> section.	
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	No
	<b>Note:</b> This field is disabled when the <b>Post Run Out Claims</b> option is selected from the <b>Claim Template</b> field of <b>Main</b> section.	

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Amount	Used to specify the markup or markdown amount.	Yes (Conditional)
	<b>Note:</b> This field is disabled when you select, <ul style="list-style-type: none"> <li>the <b>Post Run Out Claims</b> option from the <b>Claim Template</b> field of the <b>Main</b> section.</li> <li>or the <b>Percentage</b> option from the <b>Markup or Markdown Type</b> field.</li> </ul>	<b>Note:</b> This field is required when you select <b>Flat Amount</b> option from the <b>Markup or Markdown Type</b> field.
Rate Type	Indicates the minimum and maximum markup or markdown defined using the rate type.	Not applicable
Rate Value	Used to specify the value for minimum and maximum markup or markdown using the rate type.	Yes (Conditional)
	<b>Note:</b> This field is editable only when the <b>Editable</b> checkbox is selected in the <b>Rate</b> column of the <b>Additional Fees</b> section while defining or editing the <b>C1-ExtLookClaimTemplate</b> extendable lookup.	<b>Note:</b> This field is required when you select <b>Percentage</b> option from the <b>Markup or Markdown Type</b> field.

2. Enter the required details in the **Markup or Markdown Values** section.
3. Click **Save**.

The markup or markdown values for the line items are defined for the claim pricing rule.

## Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule

### Procedure

To define the markup or markdown values for line items for each rule in a claim pricing rule:

1. Ensure that sections for each rule are expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.
2. Expand the **Markup or Markdown Values** and **Line Items** sections relevant to each rule.

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	No
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.	Yes (Conditional)
	<b>Note:</b> This field is disabled when you select the <b>Flat Amount</b> option from the <b>Markup or Markdown Type</b> field.	<b>Note:</b> This field is required when you selecting <b>Percentage</b> option from the <b>Markup or Markdown Type</b> field.

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> <li>• User Defined (Default Yes)</li> <li>• User Defined (Default No)</li> </ul>	Not applicable
User Defined Billing Option	Used to specify whether the billing option is user defined, eligible or not eligible.	Yes
	<b>Note:</b> The checkbox for this field is by default checked and disabled for values <b>Eligible</b> , <b>Rule Based</b> , or <b>Not Eligible</b> in the <b>Billing Eligibility</b> field.  The checkbox for this field is enabled for values <b>User Defined (Default Yes)</b> or <b>User Defined (Default No)</b> in the <b>Billing Eligibility</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>Eligible</li> <li>Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Used to specify the percentage for markup or markdown value.  <b>Note:</b> This field is enabled when the <b>Markup or Markdown Percentage Eligibility</b> is <b>Eligible</b> and when the <b>Markup or Markdown Type</b> is <b>Percentage</b> .	Yes

- Enter the required details in the **Markup or Markdown Values** section.
- Enter the required details in the **Line Items** section.
- Click **Save**.

The markup or markdown values for line items for each rule are defined in the claim pricing rule.

## Defining a Characteristic for a Claim Pricing Rule

### Prerequisites

To define a characteristic for a claim pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define a characteristic for a claim pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the claim pricing rule.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for the claim pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the claim pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<b>Note:</b> This field is required when you are defining a characteristic for the claim pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the claim pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the claim pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the claim pricing rule.

How to edit the claim pricing rule for a parent customer	<a href="#">Editing a Claim Pricing Rule of a Parent Customer</a> on page 2508

## Editing a Claim Pricing Rule of a Parent Customer

### Prerequisites

To edit a claim pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

### Procedure

To edit a claim pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose claim pricing rule details you want to edit.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees for the lines items in the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for the lines items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Column Name	Column Description
Parent Customer Information	Displays the parent customer information
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the status of the parent customer for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Pending</li> </ul>

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
	<b>Note:</b> The pricing start date cannot be later than the pricing end date.	
		<b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	<b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a parent customer.	Yes (Conditional)
		<b>Note:</b> This field is required when you are reapplying for a claim template.

**Note:** This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Modify the details in the **Main** section, if required.
6. Modify the claim handling fees specified for the line items in a claim pricing rule, if required.
7. Modify the markup or markdown values for the line items in a claim pricing rule, if required.
8. Modify the line items in a claim pricing rule, if required.
9. Add, edit, or remove characteristics for a claim pricing rule, if required.
10. Click **Save**.

The changes made to a claim pricing rule for a parent customer are saved.

## Defining a Claim Pricing Rule for a Bill Group

### Prerequisites

To define a claim pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

### Procedure

To define a claim pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a claim pricing rule for the bill group.  <b>Note:</b> You can create a claim pricing rule using the <b>Pricing Rule Type</b> for claim.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Group	Used to indicate the pricing group for the bill group.	No
	<b>Note:</b> Select the pricing group option when the claim pricing rule has to be defined for a bill group using the pricing group.	
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes
	<b>Note:</b> Claim pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy statuses, where the policy run out end date is missing.	

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** – Used to define the claim handling fees on the lines items for the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for the line items in the claim pricing rule.
- **Line Items** – Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the bill group status for the claim pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Pending</li> </ul>

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
	<b>Note:</b> The pricing start date cannot be later than the pricing end date.	
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	<b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a bill group.	Yes (Conditional)
		<b>Note:</b> This field is required when you are reapplying for a claim template.

**Note:** This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Enter the required details in the **Main** section.
6. Define the claim handling fees for the line items in a claim pricing rule, if required.

**Note:** The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.

7. Define the markup or markdown values for the line items in a claim pricing rule, if required.

**Note:** The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.

8. Define line items in a claim pricing rule, if required.

**Note:** The **Line Items** section appears when an option from **Claim Template** field is selected.

9. Define characteristics for a claim pricing rule, if required.

10. Click **Save**.

The claim pricing rule for a bill group is defined.

**Note:** A price list and price assignment is created, the created price list is assigned to the claim pricing rule.

## Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group

### Prerequisites

To define a claim pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Claim template defined in the application.

### Procedure

To define a claim pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create a claim pricing rule using the <b>Pricing Rule Type</b> for claim.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes
	<b>Note:</b> Claim pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out End Date is missing.	

#### 4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for line items for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Start Date	Used to specify the pricing rule start date.	Yes
	<b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy Start Date</b> .	
Pricing End Date	Used to specify the pricing rule end date.	Yes
	<b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy End Date</b> .	
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a bill group.	Yes
	<b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	

- Enter the required details in the **Main** section.
- Define markup or markdown values for line items for each rule in a claim pricing rule, if required.

**Note:** The **Markup or Markdown Values** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

- Define line items for each rule in a claim pricing rule, if required.

**Note:** The **Line Items** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

- Define characteristics for a claim pricing rule, if required.
- Click **Save**.

The claim pricing rule for a bill group using a pricing group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the claim pricing rule.

- **Claim** – Displays the pricing rule claim details for a bill group. It contains the following sections:
  - **Main** – Displays the basic details of the claim pricing rule.
  - **Claim Handling Fees** – Displays the claim handling fees specified for the lines items in the claim pricing rule.
  - **Markup or Markdown Values** – Displays the markup or markdown values for the lines items in the claim pricing rule.
  - **Line Items** – Displays the associated line items eligible for billing.
  - **Characteristics** – Displays the characteristics defined for the claim pricing rule.

6. View the basic details of claim pricing rule in the **Main** section.

7. View the claim handling fees specified for the line items in the **Claim Handling Fees** section.
8. View the markup or markdown values for the line items in the **Markup or Markdown Values** section.
9. View the associated line items eligible for billing in the **Line Items** section.
10. View the characteristics of the claim pricing rule in the **Characteristics** section.

## Deleting a Claim Pricing Rule of a Bill Group

### Procedure

To delete a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the pricing rule type that you want to delete.

A message appears confirming whether you want to delete the claim pricing rule.

4. Click **OK**.

The claim pricing rule of a bill group is deleted.

## Specific Stop-Loss (SSL) Pricing

Stop-Loss coverage provides liability limits on claims for individuals and for the employer group as a whole. Specific Stop-Loss (SSL) is the form of excess risk coverage that provides protection for the employer against a high claim on any one individual. This is protection against abnormal severity of a single member claim rather than abnormal frequency of claims in total. Specific stop-loss is also known as individual stop-loss. The specific stop-loss is calculated on the claim transactions received for an individual.

You can define a specific stop-loss pricing rule at the parent customer and bill group levels. The specific stop-loss pricing rule at the bill group level takes precedence over the specific stop-loss pricing rule at the parent customer level. You can define specific stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a specific stop-loss pricing rule using a specific stop-loss pricing rule type.

It is the specific stop-loss pricing rule type which helps the system to determine:

- Business object using which the specific stop-loss pricing rule should be created in the system.

**Note:** The specific stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the specific stop-loss pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define specific stop-loss pricing rules using the specific stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

**Note:** Ideally, the price item parameters should not be specified in a specific stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating specific stop-loss.

- Additional information, such as:
  - Identifier which helps to determine whether the specific stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - SSL billable charge line type using which you want to create specific stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
  - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.

Once a specific stop-loss pricing rule type is defined, you can create specific stop-loss pricing rules using the specific stop-loss pricing rule type. While defining a specific stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss pricing rule must be used for only pricing or for pricing and billing.
- Whether the specific stop-loss must be accumulated at the member or main subscriber level.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately – If you select this option from the list, the bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
  - Never - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
  - Yearly – If you select this option from the list, the bill after date in the specific stop-loss billable charge is set to the pricing end date.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the specific stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for specific stop-loss at the member or main subscriber level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the Aggregate Specific Stop-Loss (ASSL) should be calculated during the C1-BCSSL batch run for each bill group
- The ASSL limit indicating that the aggregate specific stop-loss amount beyond this limit will be paid by the insurance company to the ASSL credit account.
- Whether any member, main subscriber, or provider is excluded during the specific stop-loss calculation Different SSL limit (i.e. lasered amount) for a member, main subscriber, or provider who are expected to have higher claim amount.

However, while defining a specific stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the specific stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the accumulation parameters and exclusion and lasering information.

**Note:** The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss

**Note:** By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

You can also specify a pricing group while defining a specific stop-loss pricing rule for a bill group. If you specify a pricing group while defining a stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss.

**Note:** By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

Once a specific stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

## Defining a Specific Stop-Loss (SSL) Pricing Rule Type

### Prerequisites

To define a specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeSSL** defined for pricing rule type.
- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss defined in the application

### Procedure

To define a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.  
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	<b>Note:</b> You can create a specific stop-loss pricing rule type using the <b>Specific Stop-Loss (SSL) Pricing Rule Type</b> business object.	

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.
5. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss related additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Indicate the pricing rule type business object for specific stop-loss.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note: Related Pricing Rule Types** section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note: Transaction Field Mapping** section appears when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the SSL-Specific data in the pricing rule type, if required.
- Click **Save**.

The specific stop-loss pricing rule type is defined.

## Adding the SSL-Specific Data in a Pricing Rule Type

### Procedure

To add the SSL-Specific additional data in a pricing rule type:

1. Ensure that the **SSL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **SSL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SSL Billable Charge Line Type	Used to specify the Specific Stop-Loss billable charge line type.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>SSL Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>SSL Billable Charge Line Type</b> field.	No

Field Name	Field Description	Mandatory (Yes or No)
Domestic Provider Claim Billable Charge Line Type	<p>Used to specify the claim billable charge line type for domestic provider.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to specify the markup or markdown billable charge line type.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	No
Rule Based Billing Eligibility Field	<p>Used to specify whether the rule based field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	<p>Used to specify whether the rule based markup or markdown field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	No
Rule Based Domestic Provider Claim Eligibility Field	<p>Used to specify the rule based domestic provider for claim eligibility field.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field.</p>	No

2. Enter the required details in the **SSL-Specific Additional Data** section.
3. Click **Save**.

The SSL-Specific Additional data is added in the pricing rule type.

### **Related Topics**

For more information on...	See...
How to define a specific stop-loss (SSL) pricing rule type	<a href="#">Defining a Specific Stop-Loss (SSL) Pricing Rule Type</a> on page 2524
How to edit the specific stop-loss (SSL) pricing rule type	<a href="#">Editing a Specific Stop-Loss (SSL) Pricing Rule Type</a> on page 2529

## **Editing a Specific Stop-Loss (SSL) Pricing Rule Type**

### **Prerequisites**

To edit the specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss (SSL) defined in the application

### **Procedure**

To edit the specific stop-loss (SSL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss (SSL) whose details you want to edit.

The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the specific stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type.
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** – Used to specify the specific stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the SSL-Specific data in the pricing rule type, if required.
14. Click **Save**.

The changes made to the specific stop-loss pricing rule type are saved.

## Deleting a Specific Stop-Loss (SSL) Pricing Rule Type

### Procedure

To delete a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the specific stop-loss pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the specific stop-loss pricing rule type.

**Note:** You can delete a specific stop-loss pricing rule type when it is not yet used in the system.

**Tip:** Alternatively, you can delete a specific stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The specific stop-loss pricing rule type is deleted.

## Viewing the Specific Stop-Loss (SSL) Pricing Rule Type Details

### Procedure

To view the details of a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Broadcast** (  ) icon corresponding to the specific stop-loss pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

- View the details of the specific stop-loss pricing rule type in the **Pricing Rule Type** zone.

### **Related Topics**

## **Defining a Specific Stop-Loss Pricing Rule for a Parent Customer**

### **Prerequisites**

To define a specific stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

### **Procedure**

To define a specific stop-loss pricing rule for a parent customer:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (  ) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create a specific stop-loss pricing rule using the <b>Pricing Rule Type</b> for specific stop-loss.	

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
- **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Pricing Start Date	Used to specify the pricing rule start date.	Yes
	<b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy Start Date</b> .	
Pricing End Date	Used to specify the pricing rule end date.	Yes
	<b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected. By default it displays the <b>Policy End Date</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option which you want to use for defining the specific stop-loss pricing rule for the price item.	Yes
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
	<b>Note:</b> This field is enabled when an option from <b>Price Item</b> field is selected.	
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> <li>• Member</li> <li>• Main Subscriber</li> </ul>	
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCSSL</b> batch is stamped on the specific stop-loss billable charge.</li> <li>• <b>Never</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCSSL</b> batch is stamped on the specific stop-loss billable charge.</li> <li>• <b>Yearly</b> – The bill after date in the specific stop-loss billable charge is set to the pricing end date.</li> </ul>	Yes
	<b>Note:</b> This field is disabled when you select <b>Pricing and Billing</b> option from the <b>Pricing Rule Usage</b> field.	

Field Name	Field Description	Mandatory (Yes or No)
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer.	Yes
	<b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	

- Enter the required details in the **Main** section.
- Define accumulation parameters in a specific stop-loss pricing rule, if required.

**Note:** The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

- Define run-in parameters in a specific stop-loss pricing rule, if required.

**Note:** The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

- Define lasering and exclusion information in a specific stop-loss pricing rule, if required.

**Note:** The **Lasering and Exclusion** section appears when an option from the **Price Item** field is selected.

- Define characteristics for a specific stop-loss pricing rule, if required.
- Click **Save**.

The specific stop-loss pricing rule for a parent customer is defined.

## **Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule**

### **Procedure**

To define accumulation parameters in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on which you want to accumulate the specific stop-loss.	Yes
	<b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
Incurred End Date	Used to specify the incurred end date based on which you want to accumulate the specific stop-loss.	Yes
	<b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
SSL Payout Limit	Used to specify the maximum limit defined for specific stop-loss at the member or main subscriber level.	Yes
Paid Start Date	Used to specify the paid start date based on which you want to accumulate the specific stop-loss.	Yes
	<b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
Paid End Date	Used to specify the paid end date based on which you want to accumulate the specific stop-loss.	Yes
	<b>Note:</b> The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date.	Yes
	<b>Note:</b> Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	
Compute Aggregate SSL (ASSL)	Used to indicate whether the aggregate specific stop-loss (ASSL) should be calculated or not during the <b>C1-BCSSL</b> batch run for each bill group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
ASSL Credit Count	Used to indicate that the aggregate specific stop-loss amount beyond the ASSL limit will be paid by the insurance company to the ASSL credit account.	Yes
	<b>Note:</b> This field is enabled when you select <b>Yes</b> option from the <b>Compute Aggregate SSL (ASSL)</b> field.	
ASSL Limit	<b>Note:</b> This field is enabled when you select <b>Yes</b> option from the <b>Compute Aggregate SSL (ASSL)</b> field.	Yes

- Enter the required details in the **Accumulation Parameters** section.
- Click **Save**.

The accumulation parameters are defined in the specific stop-loss pricing rule.

## **Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule**

### **Procedure**

To define run-in parameters in a specific stop-loss pricing rule:

- Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing	No
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the specific stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the specific stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	

Field Name	Field Description	Mandatory (Yes or No)
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the specific stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the specific stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	

- Enter the required details in the **Run-In Parameters** section.
- Click **Save**.

The run-in parameters are defined in the specific stop-loss pricing rule.

## Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule

### Prerequisites

To define lasering and exclusion information in a specific stop-loss pricing rule, you should have:

- Lasering or exclusion level defined in the application.
- Exception type defined in the application.

### Procedure

To define lasering and exclusion information in a specific stop-loss pricing rule:

- Ensure that the **Lasering and Exclusion** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

The **Lasering and Exclusion** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Level Identifier	Used to specify the lasering or exclusion level identifier.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Lasering or Exclusion Level	Used to indicate the lasering or exclusion in a specific stop-loss. The valid values are: <ul style="list-style-type: none"> <li>• Main Subscriber</li> <li>• Member</li> <li>• Provider</li> </ul>	Yes
Exception Type	Used to indicate the exception type. The valid values are: <ul style="list-style-type: none"> <li>• Lasering</li> <li>• Exclusion</li> </ul>	Yes
	<b>Note:</b> This field displays <b>Exclusion</b> option and is disabled on selection of <b>Provider</b> option from the <b>Lasering or Exclusion Level</b> column.	
Comments	Used to specify the comments.	No
Lasered Amount	Used to specify the lasered amount.	Yes (Conditional)
	<b>Note:</b> This field is disabled when <b>Exclusion</b> option is selected from the <b>Exception Type</b> column.	<b>Note:</b> This column is mandatory when <b>Lasering</b> option is selected from the <b>Exception Type</b> column.

- Enter the required details in the **Lasering and Exclusion** section.
- If you want to define more than one lasering and exclusion information in a specific stop-loss pricing rule, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a lasering and exclusion information from the specific stop-loss pricing rule, click the **Delete (🗑)** icon corresponding to the level identifier.

- Click **Save**.

The lasering and exclusion information is defined in a specific stop-loss pricing rule.

## **Defining a Characteristic for a Specific Stop-Loss Pricing Rule**

### **Prerequisites**

To define a characteristic for a specific stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### **Procedure**

To define a characteristic for a specific stop-loss pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the specific stop-loss pricing rule.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the specific stop-loss pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the specific stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the specific stop-loss pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the specific stop-loss pricing rule.

## **Editing a Specific Stop-Loss Pricing Rule of a Parent Customer**

### **Prerequisites**

To edit a specific stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

### **Procedure**

To edit a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the

**View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Lasering and Exclusion** – Used to define the lasering and exclusion information to inherit the accumulation parameters.
- **Characteristics** – Used to define the characteristics for a specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Pricing Start Date	Used to specify the pricing rule start date.	Yes
Pricing End Date	Used to specify the pricing rule end date.	Yes
Rate Option	Indicates the rate option used for defining the specific stop-loss pricing rule for the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> <li>• Member</li> <li>• Main Subscriber</li> </ul>	
Settlement Frequency	Indicates the settlement frequency to determine the bill after date. The valid values are: <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCSSL</b> batch is stamped on the specific stop-loss billable charge.</li> <li>• <b>Never</b> –</li> <li>• <b>Yearly</b> – The bill after date in the specific stop-loss billable charge is set to the pricing end date.</li> </ul> <p><b>Note:</b> This field is disabled when you select <b>Pricing and Billing</b> option from the <b>Pricing Rule Usage</b> field.</p>	Not applicable
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in a specific stop-loss pricing rule, if required.
6. Modify the run-in parameters in a specific stop-loss pricing rule, if required.
7. Add, edit, or remove the lasering and exclusion information for the specific stop-loss pricing rule, if required.
8. Add, edit, or remove characteristics for the specific stop-loss pricing rule, if required.
9. Click **Save**.

The changes made to a specific stop-loss pricing rule for a parent customer are saved.

**Viewing a Specific Stop-Loss Pricing Rule of a Parent Customer****Procedure**

To view a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule you want to view.  
The **Pricing Rule** screen appears. It contains the following zone:
  - **Specific Stop-Loss** – Displays the pricing rule specific stop-loss details for a parent customer. It contains the following sections:
    - **Main** – Displays the basic details of the specific stop-loss pricing rule.
    - **Accumulation Parameters** – Displays the accumulation parameters based on which accumulated specific stop-loss for the transactions are processed in the run-in or active period of the policy.
    - **Run-In Parameters** – Displays the run-in parameters in the run-in period of the policy.
    - **Lasering and Exclusion** – Displays the lasering and exclusion information that inherits the accumulation parameters
    - **Characteristics** – Displays the characteristics defined for the specific stop-loss pricing rule.
5. View the basic details of specific stop-loss pricing rule in the **Main** zone.
6. View the accumulated parameters in the **Accumulation Parameters** zone.
7. View the run-in parameters in the **Run-In Parameters** zone.
8. View the lasering and exclusion information in the **Lasering and Exclusion** zone.
9. View the characteristics of the specific stop-loss pricing rule in the **Characteristics** zone.

**Defining a Specific Stop-Loss Pricing Rule for a Bill Group****Prerequisites**

To define a specific stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

**Procedure**

To define a specific stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create a specific stop-loss pricing rule using the <b>Pricing Rule Type</b> for specific stop-loss.	
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes
	<b>Note:</b> Specific stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out end date is missing.	

- Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.
- Main** – Used to specify basic details about the specific stop-loss pricing rule.
- Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- Pricing Information** – Used to define stop-loss eligibility for claim line items.
- Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	<b>Note:</b> Once an option is selected for this field, the field appears disabled.	
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Yes
	<b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Not applicable
	<b>Note:</b> This field displays the <b>Policy Start Date</b> .	
Pricing End Date	Displays the pricing rule end date.	Not applicable
	<b>Note:</b> This field displays the <b>Policy End Date</b> .	
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item.	Yes
	<b>Note:</b> Rate options in this field appears for selection, when you select an option from the <b>Price Item</b> field.	

- Enter the required details in the **Main** section.
- Define accumulation criteria in a specific stop-loss pricing rule, if required.

**Note:**  
The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.  
You can also define the **Accumulation Criteria** for each rule in a specific stop-loss pricing rule.

- Define stop-loss eligibility for claim line items, if required.

**Note:**

The **Pricing Information** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in a specific stop-loss pricing rule.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

The specific stop-loss pricing rule for a bill group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

**Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule****Procedure**

To define accumulation criteria in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for a specific stop-loss.	Not applicable
Run-In Maximum Limit	Used to specify the maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.	Yes
	<b>Note:</b> This field is enabled when the start date and end date selected from the <b>Parent Customer's SSL Pricing Rules</b> field of <b>Main</b> section is greater than today's date.	

Field Name	Field Description	Mandatory (Yes or No)									
SSL Limit	Used to specify whether the SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.	Yes									
Price Item	Used to specify the price item information.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item</b> field, the <b>Price Item Search</b> window appears.	No									
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="532 611 1024 1791"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Used to specify multiple parameters based on which you want to determine the price item utilization.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.</td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td>Used to specify the value of the parameter.  <b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b> (🔍) icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.</td> <td>No</td> </tr> </tbody> </table>	Column Name	Column Description	Mandatory (Yes or No)	Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.	No	Parameter Value	Used to specify the value of the parameter.  <b>Note:</b> On selecting the <b>Price Item Parameter</b> , the <b>Search</b> (🔍) icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.	No	No
Column Name	Column Description	Mandatory (Yes or No)									
Price Item Parameter	Used to specify multiple parameters based on which you want to determine the price item utilization.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.	No									
Parameter Value	Used to specify the value of the parameter.  <b>Note:</b> On selecting the <b>Price Item Parameter</b> , the <b>Search</b> (🔍) icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.	No									

- Enter the required details in the **Accumulation Criteria** section.

- If you want to define more than one price item in the accumulation group, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑️) icon corresponding to the price item.

- If you want to define more than one price item parameters for the price item, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑️) icon corresponding to the price item parameter.

- Click **Save**.

The accumulation criteria is defined in the specific stop-loss pricing rule.

- You can define accumulation rules for each rule in a specific stop-loss pricing rule.

**Note:** You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

## Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule

### Procedure

To define the stop-loss eligibility for claim line items:

- Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
  - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating specific stop-loss.
  - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
  - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

**Note:** The **Reapply Claim Template** button appears when you are editing a specific stop-loss.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude SSL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the specific stop-loss in percentage to create domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount.  <b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is <b>Flat Amount</b> .	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for specific stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.

3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.
5. Click **Save**.

The claim line items are defined in the specific stop-loss pricing rule.

6. You can define eligibility claim line items for each rule in a specific stop-loss pricing rule.

**Note:** You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

## **Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group**

### **Prerequisites**

To define a specific stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

### **Procedure**

To define a specific stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create a specific stop-loss pricing rule using the <b>Pricing Rule Type</b> for specific stop-loss.	
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes
	<b>Note:</b> Specific stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out End Date is missing.	

#### 4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	<b>Note:</b> Once an option is selected for this field, the field appears disabled.	
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Yes
	<b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item.	Yes
	<b>Note:</b> Rate options in this field appears for selection, when you select an option from the <b>Price Item</b> field.	

5. Enter the required details in the **Main** section.
6. Define accumulation criteria for each rule in a specific stop-loss pricing rule pricing rule, if required.

**Note:** The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

7. Define stop-loss eligibility for claim line items, if required.

**Note:** The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.

The specific stop-loss pricing rule for a bill group using a pricing group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

## Editing a Specific Stop-Loss Pricing Rule of a Bill Group

### Prerequisites

To edit a specific stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.

### Procedure

To edit a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to edit.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the specific stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in a specific stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's SSL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.	Not applicable

- Modify the accumulation criteria in a specific stop-loss pricing rule, if required.

**Note:** You can add, edit, or remove price item and its price item parameters in the accumulation criteria for a specific stop-loss, if required.

- Modify the stop-loss eligibility for claim line items, if required.

**Note:** This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

- Add, edit, or remove characteristics for a specific stop-loss pricing rule, if required.
- Click **Save**.

The changes made to a specific stop-loss pricing rule for a bill group are saved.

## **Viewing a Specific Stop-Loss Pricing Rule of a Bill Group**

### **Procedure**

To view a claim pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.
- In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to the bill group whose specific stop-loss pricing rule bill group details you want to view.

- In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Specific Stop-Loss** – Displays the pricing rule specific stop-loss details for a bill group. It contains the following sections:
    - **Main** – Displays the basic details of the specific stop-loss pricing rule.
    - **Accumulation Criteria** – Displays the accumulation criteria in a specific stop-loss pricing rule.
    - **Pricing Information** – Displays the stop-loss eligibility for claim line items.
    - **Characteristics** – Displays the characteristics defined for the specific stop-loss pricing rule.
- View the basic details of specific stop-loss pricing rule in the **Main** section.
  - View the accumulation criteria in the **Markup or Markdown Values** section.
  - View the stop-loss eligibility for claim line items in the **Line Items** section.
  - View the characteristics of the specific stop-loss pricing rule in the **Characteristics** section.

## Deleting a Specific Stop-Loss Pricing Rule of a Bill Group

### Procedure

To delete a specific stop-loss pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
- Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** () icon in the **Delete** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule you want to delete.  
A message appears confirming whether you want to delete the specific stop-loss pricing rule.
- Click **OK**.

The specific stop-loss pricing rule is deleted.

## Aggregate Stop-Loss (ASL) Pricing

---

ASL provides a ceiling on the eligible expenses that an employer would pay, in total for all members or subscribers, during a contract period. The amount that exceeds this limit will be paid by the insurance company.

You can define an aggregate stop-loss pricing rule at the parent customer and bill group levels. The aggregate stop-loss pricing rule at the bill group level takes precedence over the aggregate stop-loss pricing rule at the parent customer level. You can define aggregate stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an aggregate stop-loss pricing rule using an aggregate stop-loss pricing rule type. It is the aggregate stop-loss pricing rule type which helps the system to determine:

- Business object using which the aggregate stop-loss pricing rule should be created in the system.

**Note:** The aggregate stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the aggregate stop-loss pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

**Note:** Ideally, the price item parameters should not be specified in an aggregate stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating aggregate stop-loss.

- Additional information, such as:
  - Identifier which helps to determine whether the aggregate stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - ASL billable charge line type using which you want to create aggregate stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
  - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

- Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.
- ASL limit price item whose effective retention type enrollment based pricing should be used to calculate the enrollment based limit when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field is set to Enrollment Based Limit, Enrollment Based or Minimum ASL Limit (Whichever is Greater), or Percentage of Enrollment Based Limit in the aggregate stop-loss pricing rule which is defined for a parent customer.

Once an aggregate stop-loss pricing rule type is defined, you can create aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type. While defining an aggregate stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the settlement frequency, settlement days, accumulation parameters (such as incurred start date, incurred end date, paid start date, and paid end date).

**Note:** The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss and aggregate stop-loss pricing rules for a parent customer should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately – If you select this option from the list, the bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Monthly - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Yearly – If you select this option from the list, the bill after date in the aggregate stop-loss billable charge is set to the pricing end date.
- Account in which the aggregate stop-loss amount should be credited.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the aggregate stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for aggregate stop-loss at the parent customer level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the ASL limit should be set to either of the following during the policy period:
  - Policy Based Limit
  - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
  - Enrollment Based Limit
  - Percentage of Enrollment Based Limit
- Whether the ASL limit should be set to either of the following during the settlement period:
  - Policy Based Limit
  - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
  - Enrollment Based Limit

However, while defining an aggregate stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the aggregate stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's ASL pricing rule from which you want to inherit the pricing date range.

**Note:** The pricing date range is derived from the parent customer's aggregate stop-loss pricing rule because the aggregate stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

**Note:** By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

You can also specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group. If you specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

**Note:** By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

Once an aggregate stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

## Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type

### Prerequisites

To define an aggregate stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeASL** defined for pricing rule type.
- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss defined in the application

### Procedure

To define an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.  <b>Note:</b> You can create an aggregate stop-loss pricing rule type using the <b>Aggregate Stop-Loss (ASL) Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.
- Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- Algorithms** – Used to define the algorithms used for the pricing rule type.
- Additional Data** – Used to specify the additional information about the pricing rule type.
- Price Items** – Used to define the price items assigned to the pricing rule type.
- Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- Characteristics** – Used to define the characteristics for the pricing rule type.
- ASL-Specific Additional Data** – Used to specify the aggregate stop-loss related additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>Claim Pricing Rule</li> <li>Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>Specific Stop-Loss (SSL) Pricing Rule</li> <li>Retention Type Claim Based Pricing Rule</li> <li>Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note: Related Pricing Rule Types** section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note: Transaction Field Mapping** section appears when the pricing rule type is primary.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.
- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Add the ASL-Specific additional data in the pricing rule type, if required.
- Click **Save**.

The aggregate stop-loss pricing rule type is defined.

## Adding the ASL-Specific Data in a Pricing Rule Type

### Procedure

To add the ASL-Specific additional data in a pricing rule type:

1. Ensure that the **ASL-Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **ASL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
ASL Billable Charge Line Type	Used to specify the Aggregate Stop-Loss billable charge line type.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>ASL Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.  On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>ASL Billable Charge Line Type</b> field.	No

Field Name	Field Description	Mandatory (Yes or No)
Domestic Provider Claim Billable Charge Line Type	<p>Used to specify the claim billable charge line type for domestic provider.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Domestic Provider Claim Billable Charge Line Type</b> field.</p>	No
Markup or Markdown Billable Charge Line Type	<p>Used to specify the markup or markdown billable charge line type.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field, the <b>Billable Charge Line Type Search</b> window appears.</p> <p>On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Markup or Markdown Billable Charge Line Type</b> field.</p>	No
Rule Based Billing Eligibility Field	<p>Used to specify whether the rule based field is eligible for billing or not.</p> <p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Billing Eligibility Field</b> field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not.	No
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Markup or Markdown Eligibility Field</b> field.</p>	
Rule Based Domestic Provider Claim Eligibility Field	Used to specify the rule based domestic provider for claim eligibility field.	No
	<p><b>Note:</b></p> <p>On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field, the <b>Field Search</b> window appears.</p> <p>On specifying the field, the description of the field appears corresponding to the <b>Rule Based Domestic Provider Claim Eligibility Field</b> field.</p>	
ASL Limit Price Item	Used to specify the Aggregated Stop-Loss limit price item.	No

- Enter the required details in the **ASL-Specific Additional Data** section.
- Click **Save**.

The ASL-Specific Additional data is added in the pricing rule type.

For more information on...	See...
How to define an aggregate stop-loss (ASL) pricing rule type	<a href="#">Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type</a> on page 2560
How to edit the aggregate stop-loss (ASL) pricing rule type	<a href="#">Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type</a> on page 2565

## Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type

### Prerequisites

To edit the aggregate stop-loss (ASL) pricing rule type, you should have:

- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss (ASL) defined in the application

### Procedure

To edit the aggregate stop-loss (ASL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss (ASL) whose details you want to edit.

The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **ASL-Specific Additional Data** – Used to specify the aggregate stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the ASL-Specific data in the pricing rule type, if required.
14. Click **Save**.

The changes made to the aggregate stop-loss pricing rule type are saved.

## Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type

### Procedure

To delete an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type that you want to delete.  
A message appears confirming whether you want to delete the aggregate stop-loss pricing rule type.

**Note:** You can delete an aggregate stop-loss pricing rule type when it is not yet used in the system.

**Tip:** Alternatively, you can delete an aggregate stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.  
The aggregate stop-loss pricing rule type is deleted.

## Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details

### Procedure

To view the details of an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Broadcast** () icon corresponding to the aggregate stop-loss pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

5. View the details of the aggregate stop-loss pricing rule type in the **Pricing Rule Type** zone.

## **Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer**

### **Prerequisites**

To define an aggregate stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.

### **Procedure**

To define an aggregate stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create an aggregate stop-loss pricing rule using the <b>Pricing Rule Type</b> for aggregate stop-loss.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregation stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.	Yes
	<b>Note:</b> This field is enabled when you select an option from the <b>Price Item</b> field.	
Pricing Start Date	Displays the pricing rule start date.	Not applicable
	<b>Note:</b> By default it displays the <b>Policy Start Date</b> .	
Pricing End Date	Displays the pricing rule end date.	Not applicable
	<b>Note:</b> This field displays date when you select the date range from <b>Parent Customer's SSL or ASL Pricing Rules</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option which you want to use for defining the aggregate stop-loss pricing rule for the price item.	Yes
	<b>Note:</b> Options appears in this field when you select an option from the <b>Price Item</b> field.	
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Monthly</b> – The bill after date specified in the <b>Manual Settlement Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Yearly</b> – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date.</li> </ul>	Yes
	<b>Note:</b> This field is enabled when you select an option from the <b>Price Item</b> field.	
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> This field is enabled when you select an option from the <b>Price Item</b> field.	

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in an aggregate stop-loss pricing rule, if required.

**Note:** The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

7. Define run-in parameters in an aggregate stop-loss pricing rule, if required.

**Note:** The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.

The aggregate stop-loss pricing rule for a parent customer is defined.

## Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule

### Procedure

To define accumulation parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregation stop-loss pricing rule.

The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for an aggregation stop-loss.	Not applicable
ASL Credit Account	Used to indicate the account in which the aggregate stop-loss amount should be credited.  <b>Note:</b> This field becomes read when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b> .	Not applicable
Incurred Start Date	Displays the incurred start date based on which you want to accumulate the aggregate stop-loss.  <b>Note:</b> The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b> . <b>Incurred Start Date</b> is equal to the pricing rule start date.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Incurred End Date	<p>Displays the incurred end date based on which you want to accumulate the aggregate stop-loss.</p> <p><b>Note:</b></p> <p>The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b>.</p> <p><b>Incurred End Date</b> is equal to the pricing rule end date.</p>	Not applicable
ASL Payout Limit	Used to specify the maximum limit defined for aggregated stop-loss at the member or main subscriber level.	Yes
Paid Start Date	<p>Used to specify the paid start date based on which you want to accumulate the aggregate stop-loss.</p> <p><b>Note:</b></p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b>.</p> <p><b>Paid Start Date</b> is equal to the pricing rule start date.</p>	Yes
Paid End Date	<p>Used to specify the paid end date based on which you want to accumulate the aggregate stop-loss.</p> <p><b>Note:</b></p> <p>The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.</p> <p>This field displays date when you select a date range from the <b>Parent Customer's SSL or ASL Pricing Rules</b>.</p> <p><b>Paid End Date</b> is equal to the pricing rule end date.</p>	Yes
Settlement Days	<p>Used to indicate the settlement days which helps to calculate the settlement date.</p> <p><b>Note:</b> Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
ASL Limit (During Policy Period)	Used to indicate the aggregate stop-loss limit set during the policy period. The valid values are: <ul style="list-style-type: none"> <li>• Policy Based Limit</li> <li>• Enrollment Based Limit</li> <li>• Percentage of Enrollment Based Limit</li> <li>• Enrollment Based or Minimum ASL Limit (Whichever is Greater)</li> </ul>	Yes
ASL Limit (During Settlement Period)	Used to indicate the aggregate stop-loss limit set during the settlement period. The valid values are: <ul style="list-style-type: none"> <li>• Policy Based Limit</li> <li>• Enrollment Based Limit</li> <li>• Enrollment Based or Minimum ASL Limit (Whichever is Greater)</li> </ul>	Yes
Minimum ASL Limit	Used to specify the minimum ASL limit.	Yes (Conditional)
	<b>Note:</b> This field is enabled when you select the <b>Enrollment Based or Minimum ASL Limit (Whichever is Greater)</b> option from the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> field.	<b>Note:</b> This field is required when the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> is <b>Enrollment Based or Minimum ASL Limit (Whichever is Greater)</b> .
Percentage of Enrollment Based Limit	Used to specify the percentage of enrollment based limit.	Yes (Conditional)
	<b>Note:</b> This field is enabled when you select the <b>Percentage of Enrollment Based Limit</b> option from <b>ASL Limit (During Policy Period)</b> field.	<b>Note:</b> This field is required when the <b>ASL Limit (During Policy Period)</b> is <b>Percentage of Enrollment Based Limit</b> .
Policy Based Limit	Used to specify the policy based limit.	Yes (Conditional)
	<b>Note:</b> This field is enabled when you select the <b>Policy Based Limit</b> option from the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> field.	<b>Note:</b> This field is required when the <b>ASL Limit (During Policy Period)</b> or <b>ASL Limit (During Settlement Period)</b> is <b>Policy Based Limit</b> .

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.

The accumulation parameters are defined in the aggregated stop-loss pricing rule.

**Related Topics**

For more information on...	See...
How to define an aggregated stop-loss pricing rule for a parent customer	<a href="#">Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer</a> on page 2569
How to edit an aggregated stop-loss pricing rule of a parent customer	<a href="#">Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group</a> on page 2591

**Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule****Prerequisites**

To define run-in parameters in an aggregate stop-loss pricing rule, you should have:

- Settlement days defined in the application.
- ASL limit during the policy period defined in the application.
- ASL limit during the settlement period defined in the application.

**Procedure**

To define run-in parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregate stop-loss pricing rule.

The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing	No
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for an aggregate stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	

Field Name	Field Description	Mandatory (Yes or No)
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the aggregate stop-loss.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	
Run-In Maximum Limit	Used to specify the maximum limit of the run-in parameters.	Yes
	<b>Note:</b> This field is enabled when you select the checkbox for the <b>Run-In</b> field.	

- Enter the required details in the **Run-In Parameters** section.
- Click **Save**.

The run-in parameters are defined in the aggregate stop-loss pricing rule.

## Defining a Characteristic for an Aggregate Stop-Loss Pricing Rule

### Prerequisites

To define a characteristic for an aggregate stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define a characteristic for an aggregate stop-loss pricing rule:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the aggregate stop-loss pricing rule.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<b>Note:</b> This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the aggregate stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the aggregate stop-loss pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the aggregate stop-loss pricing rule.

## Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

### Prerequisites

To edit an aggregate stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

### Procedure

To edit an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you v

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** – Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** – Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** – Used to define the characteristics for an aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option used for defining the aggregate stop-loss pricing rule for the price item.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	<p>Indicates the settlement frequency to determine the bill after date. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Immediately</b> – The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle.</li> <li>• <b>Manually (At Required Intervals)</b> – The bill after date specified in the <b>Manual Settlement Bill After Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Monthly</b> – The bill after date specified in the <b>Manual Settlement Date</b> parameter while executing the <b>C1-BCASL</b> batch is stamped on the aggregate stop-loss billable charge.</li> <li>• <b>Yearly</b> – The bill after date in the aggregate stop-loss billable charge is set to the pricing end date.</li> </ul>	Yes
Underwriter Review	<p>Used to indicate whether the underwriter settlement review flag is on or off. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in an aggregate stop-loss pricing rule, if required.
6. Modify the run-in parameters in an aggregate stop-loss pricing rule, if required.
7. Add, edit, or remove characteristics for the aggregate stop-loss pricing rule, if required.
8. Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a parent customer are saved.

## Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group

### Prerequisites

To define an aggregate stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

### Procedure

To define an aggregate stop-loss pricing rule for a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create an aggregate stop-loss pricing rule using the <b>Pricing Rule Type</b> for aggregate stop-loss.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes
	<b>Note:</b> Aggregate stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out end date is missing.	

#### 4. Click OK.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	<b>Note:</b> Once an option is selected for this field, the field appears disabled.	

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Yes
	<b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Not applicable
	<b>Note:</b> This field displays the <b>Policy Start Date</b> .	
Pricing End Date	Displays the pricing rule end date.	Not applicable
	<b>Note:</b> This field displays the <b>Policy End Date</b> .	
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.	Yes
	<b>Note:</b> Rate options in this field appears for selection, when you select an option from the <b>Price Item</b> field.	

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in an aggregate stop-loss pricing rule, if required.

**Note:**  
The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.  
You can also define the **Accumulation Criteria** for each rule in an aggregate stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

**Note:**  
The **Pricing Information** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.  
You can also define the **Pricing Information** for each rule in an aggregate stop-loss pricing rule.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.

The aggregate stop-loss pricing rule for a bill group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

## Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule

### Procedure

To define accumulation criteria in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Accumulation Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for an aggregate stop-loss.	Not applicable
Price Item	Used to specify the price item information.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item</b> field, the <b>Price Item Search</b> window appears.	No

Field Name	Field Description	Mandatory (Yes or No)									
Price Item Parameters	<p>This field contains the following columns:</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> <th>Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td> <p>Used to specify multiple parameters based on which you want to determine the price item utilization.</p> <p><b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.</p> </td> <td>No</td> </tr> <tr> <td>Parameter Value</td> <td> <p>Used to specify the value of the parameter.</p> <p><b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b> (🔍) icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.</p> </td> <td>No</td> </tr> </tbody> </table>	Column Name	Column Description	Mandatory (Yes or No)	Price Item Parameter	<p>Used to specify multiple parameters based on which you want to determine the price item utilization.</p> <p><b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.</p>	No	Parameter Value	<p>Used to specify the value of the parameter.</p> <p><b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b> (🔍) icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.</p>	No	No
Column Name	Column Description	Mandatory (Yes or No)									
Price Item Parameter	<p>Used to specify multiple parameters based on which you want to determine the price item utilization.</p> <p><b>Note:</b> On clicking the <b>Search</b> (🔍) icon that appears corresponding to the <b>Price Item Parameter</b> field, the <b>Price Item Parameter Search</b> window appears.</p>	No									
Parameter Value	<p>Used to specify the value of the parameter.</p> <p><b>Note:</b> On selecting the <b>Price Item Parameter</b>, the <b>Search</b> (🔍) icon appears corresponding to this field, and on clicking the icon, the <b>Parameter Value Search</b> window appears.</p>	No									

2. Enter the required details in the **Accumulation Criteria** section.
3. If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑️) icon corresponding to the price item.

4. If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑️) icon corresponding to the price item parameter.

5. Click **Save**.

The accumulation criteria is defined in the aggregate stop-loss pricing rule.

6. You can define accumulation rules for each rule in an aggregate stop-loss pricing rule.

**Note:** You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

## Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule

### Procedure

To define claim pricing rules in an aggregate stop-loss pricing rule:

1. Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

The **Pricing Information** section contains the following section:

- **Claim Pricing Rule** – Used to indicate the claim pricing rule. It contains the following sub-sections:
  - **Domestic Provider Claims** – Used to specify the domestic provider claim while calculating aggregate stop-loss.
  - **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line.
  - **Line Items** – Used to associate line items eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

**Note:** The **Reapply Claim Template** button appears when you are editing an aggregate stop-loss.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude ASL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage to create domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> <li>• Markdown</li> <li>• Markup</li> <li>• None</li> </ul>	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. <b>Note:</b> This field displays amount when <b>Markup or Markdown Type</b> field is <b>Flat Amount</b> .	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for aggregate stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> <li>• Eligible</li> <li>• Not Eligible</li> </ul>	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.

5. Click **Save**.

The claim line items are defined in the aggregate stop-loss pricing rule.

## 6. You can define eligibility claim line items for each rule in an aggregate stop-loss pricing rule.

**Note:** You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

**Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group****Prerequisites**

To define an aggregate stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

**Procedure**

To define an aggregate stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create an aggregate stop-loss pricing rule using the <b>Pricing Rule Type</b> for aggregate stop-loss.	
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes
	<b>Note:</b> Aggregate stop-loss pricing rule cannot be created for <b>Runout</b> or <b>Post Runout</b> policy status where the policy run out End Date is missing.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group using pricing group.
- **Main** – Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** – Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** – Used to associate line items eligible for billing for each rule.
- **Characteristics** – Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
	<b>Note:</b> Once an option is selected for this field, the field appears disabled.	
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Yes
	<b>Note:</b> This field is enabled for selection when an option from <b>Price Item</b> field is selected.	
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.	Yes
	<b>Note:</b> Rate options in this field appears for selection, when you select an option from the <b>Price Item</b> field.	

- Enter the required details in the **Main** section.
- Define accumulation criteria for each rule in an aggregate stop-loss pricing rule pricing rule, if required.

**Note:** The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define stop-loss eligibility for claim line items, if required.

**Note:** The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

- Define characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The aggregate stop-loss pricing rule for a bill group using a pricing group is defined.

**Note:** A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

## Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group

### Prerequisites

To edit an aggregate stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.

### Procedure

To edit an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to view.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the aggregate stop-loss pricing rule.
- **Accumulation Criteria** – Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** – Used to define stop-loss eligibility for claim line items.
- **Characteristics** – Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.	Not applicable

- Modify the accumulation criteria in an aggregate stop-loss pricing rule, if required.

**Note:** You can add, edit, or remove price item and its price item parameters in the accumulation criteria for an aggregate stop-loss, if required.

- Modify the stop-loss eligibility for claim line items, if required.

**Note:** This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

- Add, edit, or remove characteristics for an aggregate stop-loss pricing rule, if required.
- Click **Save**.

The changes made to an aggregate stop-loss pricing rule for a bill group are saved.

## **Viewing an Aggregate Stop-Loss Pricing Rule of a Bill Group**

### **Procedure**

To view an aggregate stop-loss pricing rule of a bill group:

- Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to the bill group whose aggregate stop-loss pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule bill group you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Aggregate Stop-Loss** – Displays the pricing rule aggregate stop-loss details for a bill group. It contains the following sections:
    - **Main** – Displays the basic details of the aggregate stop-loss pricing rule.
    - **Accumulation Criteria** – Displays the accumulation criteria in an aggregate stop-loss pricing rule.
    - **Pricing Information** – Displays the stop-loss eligibility for claim line items.
    - **Characteristics** – Displays the characteristics defined for the aggregate stop-loss pricing rule.
6. View the basic details of aggregate stop-loss pricing rule in the **Main** section.
  7. View the accumulated criteria in the **Accumulation Criteria** section.
  8. View the stop-loss eligibility for claim line items in the **Pricing Information** section.
  9. View the characteristics of the aggregate stop-loss pricing rule in the **Characteristics** section.

## Deleting an Aggregate Stop-Loss Pricing Rule of a Bill Group

### Procedure

To delete an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule you want to delete.  
A message appears confirming whether you want to delete the aggregate stop-loss pricing rule.
4. Click **OK**.  
The aggregate stop-loss pricing rule is deleted.

## Retention Type Claim Based Pricing

The ASO service provider provides claim administrative services and pays the claim amount on behalf of the employer. Different charges, such as administration fees, network fees, managed care fees, are typically charged as retention type claim based fees. The system enables you to charge a flat or percentage based retention type claim based fee. The rate schedule defined in the respective rate option indicates whether the retention type claim based fee is a flat fee or percentage based fee. The system considers the claim line items for calculating the percentage based retention type claim based fee when the **Retention Claim Based Percentage Calculation** field is set to **Yes**.

You can define a retention type claim based pricing rule at the parent customer and bill group levels. The retention type claim based pricing rule at the bill group level takes precedence over the retention type claim based pricing rule at the parent customer level. You can define retention type claim based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type claim based pricing rule using a retention type claim based pricing rule type. It is the retention type claim based pricing rule type which helps the system to determine:

- Business object using which the retention type claim based pricing rule should be created in the system.
- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event. The **C1\_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Algorithm which should be triggered while determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type claim based pricing rules using the retention type claim based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type claim based pricing rules.
- Additional information, such as:
  - Whether the price items included in the retention type claim based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
  - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.

- Indicates how the claim must be disposed. If the **Claim Disposition** field in the transaction is set to Yes, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

**Note:** If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

Once a retention type claim based pricing rule type is defined, you can create retention type claim based pricing rules using the retention type claim based pricing rule type. While defining a retention type claim based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type claim based pricing.
- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

In addition, while defining a retention type claim based pricing rule for a bill group, you need to specify the status of the policy for which you want to define the retention type claim based pricing rule. You can also specify a pricing group while defining a retention type claim based pricing rule for a bill group. If you specify a pricing group while defining a retention type claim based pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat or percentage based fee for different set of price item parameters combination. For example, you can define one flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper and another flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper.

Once a retention type claim based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

## Defining a Retention Type Claim Based Pricing Rule Type

### Prerequisites

To define a retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Business Object **C1-PricingRule** defined for pricing rule.
- Pricing rule type category for the retention type claim defined in the application.

### Procedure

To define a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

- Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type claim based pricing rule type  <b>Note:</b> You can create a retention type claim based pricing rule type using the <b>Claim Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

- Select the **Retention Type Claim Based Pricing Rule Type** business object.
- Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the retention type claim based pricing rule type.
- Algorithms** – Used to associate the algorithms with the retention type claim based pricing rule type.
- Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- Price Items** – Used to add the price items for which you can define the retention type claim based pricing rules using the retention type claim based pricing rule type.
- Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.
- Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- Claim Disposition Details** – Used to define the disposition details of the claims transaction.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the retention type claim based pricing rule type.	Yes
Description	Used to specify the description for the retention type claim based pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the retention type claim based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the retention type claim based pricing rule business object. The valid value is: <ul style="list-style-type: none"> <li>Retention Type Claim Based Pricing Rule</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the retention type claim based pricing rule type business object using which you are defining the retention type claim based pricing rule type.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type.	Not applicable
	<b>Note:</b> You must not select the <b>Primary</b> option while defining the retention type claim based pricing rule type.	
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: <ul style="list-style-type: none"> <li>Retention Type Claim Based</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Ensure that **Primary** option is not selected when you are defining a retention type claim based pricing rule type.
- Associate the following algorithms with the retention type claim based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Pricing Rule Post Processing	C1-PRCRETPOS	C1-PRCRETPOS	Retention Claim Based - Post Processing
Transaction Validation	C1-RETCLMVAL	C1-RETCLMVAL	Retention Claim Based - Validation

- Define additional data for the retention type claim based pricing rule type.
- Add the required price items for retention type claim based pricing rule type.
- Add price item parameters for the retention type claim based pricing rule type.
- Define characteristics for the retention type claim based pricing rule type.
- Add the claim disposition details for retention type claim based pricing rule type.
- Click **Save**.

The retention type claim based pricing rule type is defined.

## Adding Claim Based Disposition Details in a Pricing Rule Type

### Prerequisites

To add claim based disposition details in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Claim Disposition and Disposition Mode defined in the application.

### Procedure

To add claim based disposition details in a pricing rule type:

1. Ensure that the **Claim Disposition Details** section is expanded when you are defining or editing for a primary pricing rule type.

The **Claim Disposition Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Disposition	Used to specify the type of claim disposition.	No
Disposition Mode	Used to specify the mode of claim disposition.	No

2. Enter the required details in the **Claim Disposition Details** section.

#### **Note:**

If the **Claim Disposition** field in the transaction is set to **Yes**, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

3. If you want to define more than one claim disposition entry for the primary pricing rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a claim disposition entry for the primary pricing rule type, click the **Delete** () icon corresponding to the related pricing rule type.

## Editing a Retention Type Claim Based Pricing Rule Type

### Prerequisites

To edit the retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRefTypeClaim** defined for the retention type claim based pricing rule type.
- Business Object **C1-PrcRuleTypRetClaimBase** defined for the retention type claim based pricing rule type.
- Pricing rule type category for the retention type claim based pricing rule type defined in the application

### Procedure

To edit a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type claim based pricing rule type.

- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the retention type claim based pricing rule type.
- **Additional Data** – Used to specify the additional information about the retention type claim based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type claim based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type claim based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type claim based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for retention type claim based template.
- **Claim-Specific Additional Data** – Used to specify the retention type claim based specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the retention type claim based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	
Primary	Used to select the checkbox if the retention type claim based pricing rule type is primary.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type claim based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Claim</li> <li>Discounted Agreement</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Specific Stop-Loss</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type claim.

- Modify the details in the **Main** section, if required.
- Add, edit, or remove the related pricing rule types in the retention type claim based pricing rule type, if required.
- Modify the transaction field mapping in the retention type claim based pricing rule type, if required.
- Add, edit, or remove algorithms with the retention type claim based pricing rule type, if required.
- Modify the additional data for the retention type claim based pricing rule type, if required.
- Add, edit, or remove pricing items in the retention type claim based pricing rule type, if required.
- Add, edit, or remove price item parameters in the retention type claim based pricing rule type, if required.
- Add, edit, or remove characteristics for the retention type claim based pricing rule type, if required.
- Add, edit, or remove claim templates in the retention type claim based pricing rule type, if required.
- Modify the claim-specific data in the retention type claim based pricing rule type, if required.
- Click **Save**.

The changes made to the Retention Type Claim Based Pricing Rule Type are saved.

## **Deleting a Retention Type Claim Based Pricing Rule Type**

### **Procedure**

To delete a retention type claim based pricing rule type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.

- Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

- In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the retention type claim based pricing rule type that you want to delete.

A message appears confirming whether you want to delete the retention type claim based pricing rule type.

**Note:** You can delete a retention type claim based pricing rule type when it is not yet used in the system.

**Tip:** Alternatively, you can delete a retention type claim based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

- Click **OK**.

The retention type claim based pricing rule type is deleted.

## Defining a Retention Type Claim Based Pricing Rule for a Parent Customer

### Prerequisites

To define a retention type claim based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To define a retention type claim based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.  
The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.  
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.  
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.  
The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values is: <ul style="list-style-type: none"> <li>• Retention Type Claim Based Pricing Rule</li> </ul>	Yes
		<b>Note:</b> If the pricing rule type is not selected then the application displays an error message.

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays information about the parent customer for whom you are defining the retention type claim based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type claim based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type claim based pricing rule.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the retention type claim based pricing. The valid value is: <ul style="list-style-type: none"> <li>• Admin Fee</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the retention type claim based pricing will be effective for the price item.	Yes (Conditional)
	<b>Note:</b> The pricing start date cannot be later than the pricing end date.	<b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the retention type claim based pricing will be effective for the price item.	No
	<b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	

Field Name	Field Description	Mandatory (Yes or No)									
Rate Option	<p>Used to indicate the rate option that you want to use while defining the pricing for the price item. The valid value is:</p> <ul style="list-style-type: none"> <li>Flat Dollar Per Claim - Agg Daily</li> </ul> <p>On selecting an option from the <b>Rate Option</b> field, following fields appear in a grid:</p> <table border="1" data-bbox="516 453 1260 1671"> <thead> <tr> <th data-bbox="516 453 667 569">Field Name</th> <th data-bbox="667 453 1114 569">Field Description</th> <th data-bbox="1114 453 1260 569">Mandatory (Yes or No)</th> </tr> </thead> <tbody> <tr> <td data-bbox="516 569 667 1104">Price Item Parameter</td> <td data-bbox="667 569 1114 1104"> <p>Used to specify multiple price item parameters based on which you want to determine the price item utilization.</p> <div data-bbox="672 688 1109 1098" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The Search (🔍) icon appears corresponding to the <b>Price Item Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> screen appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the <b>Price Item Parameter</b> field.</p> </div> </td> <td data-bbox="1114 569 1260 1104">No</td> </tr> <tr> <td data-bbox="516 1104 667 1671">Parameter Value</td> <td data-bbox="667 1104 1114 1671"> <p>Used to specify multiple price item parameter values based on which you want to determine the price item utilization.</p> <div data-bbox="672 1255 1109 1665" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b></p> <p>The Search (🔍) icon appears corresponding to the <b>Parameter Value</b> field. ## Defining a Characteristic for a Retention Type Claim Based Pricing Rule

**Prerequisites**

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

**Procedure**

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type claim based pricing rule.

## Editing a Retention Type Claim Based Pricing Rule of a Parent Customer

### Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To edit a retention type claim based pricing rule of a parent customer:

- Search for a parent customer in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab. It consists of the following zones:

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the retention type claim based pricing rule, whose details you want to edit.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays information about the parent customer for whom the retention type claim based pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the discount arrangement pricing rule is defined.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a parent customer.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
	<b>Note:</b> The pricing start date cannot be later than the pricing end date.	
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	<b>Note:</b> The pricing end date cannot be earlier than the pricing start date.	

Field Name	Field Description	Mandatory (Yes or No)									
Rate Option	<p>Used to indicate the rate option that you want to use while defining the pricing for the price item. ## **Defining a Retention Type Claim Based Pricing Rule for a Bill Group**

### **Prerequisites**

To define a retention type claim based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PricingRuleRefTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, **C1-RETCLMVAL**, **C1-PRRTPREP**, **C1-PRCRLTY** defined for retention type claim based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### **Procedure**

To define a retention type claim based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose pricing details you want to view.  
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.  
The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.  
The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.	Not applicable
	<b>Note:</b> If you are defining the pricing rule type for the parent customer, then the person type will be <b>Parent Customer</b> .	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type claim based pricing rule.	Yes
	<b>Note:</b> Select the <b>Retention Type Claim Based Pricing Rule Type</b> option, as the pricing rule type.	<b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.	No
	<b>Note:</b> Select the pricing group option when the retention type claim based pricing rule has to be defined for a bill group using the pricing group.	
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes (Conditional)
		<b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>• Admin Fee</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
		<b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option for the price item. The valid value are: <ul style="list-style-type: none"> <li>Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.  <b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.  <b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type claim based pricing rule for a bill group is defined.

**Note:**

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

**Defining a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group****Procedure**

To define a retention type claim based pricing rule for a bill group using pricing group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul>	Yes <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
	<b>Note:</b> Select the <b>Retention Type Claim Based Pricing Rule</b> option, as the pricing rule type.	
Pricing Group	Used to indicate the pricing group for the bill group. <b>Note:</b> You must select a pricing group for the bill group on which the retention type claim based pricing rule is to be defined.	Yes
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>	Yes (Conditional) <b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.
7. Click **OK**.

The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>• Admin Fee</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
		<b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Used to specify the rate option for the price item. The valid value are: <ul style="list-style-type: none"> <li>• Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes
Pricing Group Rule Code	Displays the code of the pricing group rule.	Not applicable
Description	Displays the description of the pricing group rule.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. <p><b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.</p>	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. <p><b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.</p>	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type claim based pricing rule for a bill group using a pricing group is defined.

**Note:**

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group using a pricing group is defined, once the approval transaction is approved.

## Defining a Characteristic for a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group

**Prerequisites**

To define a characteristic for a retention type claim based pricing rule for a bill group using a pricing group, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

**Procedure**

To define a characteristic for a retention type claim based pricing rule for a bill group using a pricing group:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule for a bill group

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> <li>• Eligible for Billing</li> </ul>	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for retention type claim based pricing rule for a bill group using a pricing group.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type claim based pricing rule for a bill group using a pricing group.

## Viewing a Retention Type Claim Based Pricing Rule of a Parent Customer

### Procedure

To view a retention type claim based pricing rule for a parent customer:

- Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen appears.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Retention Type Claim Based** – Displays Retention Type Claim Based Pricing Rule of a Parent. It contains the following sections:
  - **Main** – Displays the basic details of the retention type claim based pricing rule of a parent customer.
  - **Price Item Parameters** – Displays the price item parameters defined for the retention type claim based pricing rule of a parent customer.

- **Characteristics** – Displays the characteristics defined for the retention type claim based pricing rule of a parent customer.
5. View the basic details of a retention type claim based pricing rule of a parent customer in the **Main** section.
  6. View the price item parameters of a retention type claim based pricing rule of a parent customer in the **Price Item Parameters** section.
  7. View the characteristics of a retention type claim based pricing rule of a parent customer in the **Characteristics** section.

## Retention Type Enrollment Based Pricing

Some of the charges, such as stop-loss premium, administrative fees, etc. are typically calculated based on the number of enrollments. In addition, the ASL limit can also be based on the number of enrollments for the month. These charges can be calculated using the retention type enrollment based pricing rules.

You can define a retention type enrollment based pricing rule at the parent customer and bill group levels. The retention type enrollment based pricing rule at the bill group level takes precedence over the retention type enrollment based pricing rule at the parent customer level. You can define retention type enrollment based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type enrollment based pricing rule using a retention type enrollment based pricing rule type. It is the retention type enrollment based pricing rule type which helps the system to determine:

- Business object using which the retention type enrollment based pricing rule should be created in the system.
- Whether it is the primary pricing rule type.

**Note:** You must select the **Primary** option while defining a retention type enrollment based pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Retention Type Enrollment Based Pricing Rule Type** screen. At present, the system does not allow you to define any pricing rule type which inherits the attributes from the retention type enrollment based pricing rule type.

- Transaction fields from where the data for retention type enrollment based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

**Note:** An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

**Note:** You must create an algorithm using the **C1\_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1\_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the retention type enrollment based pricing rule is derived.

**Note:** A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type enrollment based pricing rules using the retention type enrollment based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type enrollment based pricing rules.

- Additional information, such as:
  - Whether the price items included in the retention type enrollment based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
  - Retroactivity indicator which helps to determine whether the enrollment transaction is retro or non-retro transaction.

Once a retention type enrollment based pricing rule type is defined, you can create retention type enrollment based pricing rules using the retention type enrollment based pricing rule type. While defining a retention type enrollment based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type enrollment based pricing.
- Whether you want to exempt the retrospective transactions while calculating retention type enrollment based fees.
- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Price item parameters based on which you want to define the pricing.

**Note:** You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Flat fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat fee for different set of price item parameters combination. For example, you can define one flat fee for the enrollment transactions where health coverage class is set to Medical and health coverage tier is set to Family and another flat fee for the enrollment transactions where health coverage class is set to Dental and health coverage tier is set to Employee.

Once a retention type enrollment based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

## Defining a Retention Type Enrollment Based Pricing Rule Type

### Prerequisites

To define a retention type retention based pricing rule type, you should have:

- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Business Object **C1-PricingRuleRetTypeEnroll** defined for pricing rule.
- Pricing rule type category for the retention type enrollment defined in the application.

### Procedure

To define a retention type retention based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type enrollment based pricing rule type.	Yes
	<b>Note:</b> You can create a retention type enrollment based pricing rule type using the <b>Claim Pricing Rule Type</b> business object.	

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.
5. Click **OK**.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the enrollment based parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the enrollment based pricing rule type.
- **Algorithms** – Used to define the algorithms used for the enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the enrollment based pricing rule type.
- **Enrollment-Specific Additional Data** – Used to specify the enrollment specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the retention type enrollment based pricing rule type business object for the claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Claim</li> <li>Discount Arrangement</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Specific Stop-Loss</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note: Related Pricing Rule Types** section appears when the pricing rule type is primary.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note: Transaction Field Mapping** section appears when the pricing rule type is primary.

- Associate algorithms with the enrollment based pricing rule type, if required.
- Define additional data for the enrollment based pricing rule type, if required.
- Add pricing items in the enrollment based pricing rule type, if required.
- Add price item parameters in the enrollment based pricing rule type, if required.
- Define characteristics for the enrollment based pricing rule type, if required.
- Add the enrollment-specific data, if required.
- Click **Save**.

The retention type enrollment based pricing rule type is defined.

## Adding the Enrollment Specific Data in a Pricing Rule Type

### Prerequisites

To add enrollment specific data in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Bill Group Derivation Algorithm defined in the application.

### Procedure

To add enrollment specific data in a pricing rule type in a pricing rule type:

1. Ensure that the **Enrollment-Specific Additional Data** section is expanded when you are adding enrollment specific data for a primary pricing rule type.

The **Enrollment-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retroactivity Indicator Value	Used to specify that retroactivity indicator value should not be a part of enrollment based pricing rule type.	No
	<b>Note:</b> Set the retroactivity indicator value to <b>R</b> if the field should be excluded from enrollment based pricing rule types.	

2. Enter the required details in the **Enrollment-Specific Additional Data** section.
3. Click **Save**.

The enrollment-specific data has been added in the pricing rule type.

## Editing a Retention Type Enrollment Based Pricing Rule Type

### Prerequisites

To edit the retention type enrollment based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeEnroll** defined for the retention type enrollment based pricing rule type.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for the retention type enrollment based pricing rule type.
- Pricing rule type category for retention type enrollment based pricing rule type defined in the application

### Procedure

To edit a retention type enrollment based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the pricing rule type for claim whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the retention type enrollment based pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type.
- **Algorithms** – Used to define the algorithms used for the retention type enrollment based pricing rule type.
- **Additional Data** – Used to specify the additional information about the retention type enrollment based pricing rule type.
- **Price Items** – Used to define the price items assigned to the retention type enrollment based pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the retention type enrollment based pricing rule type.
- **Characteristics** – Used to define the characteristics for the retention type enrollment based pricing rule type.
- **Claim Templates** – Used to define the pricing rule type for the retention type enrollment based pricing rule type.
- **Claim-Specific Additional Data** – Used to specify the retention type enrollment based specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> </ul>	Yes
Business Object	Displays the retention type enrollment based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	
Primary	Used to select the checkbox if the retention type enrollment based pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type enrollment based pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss</li> <li>• Claim</li> <li>• Discounted Agreement</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Specific Stop-Loss</li> </ul>	Yes

**Tip:** Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type enrollment.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type enrollment based pricing rule type, if required.
7. Modify the transaction field mapping in the retention type enrollment based pricing rule type, if required.

8. Add, edit, or remove algorithms with the retention type enrollment based pricing rule type, if required.
9. Modify the additional data for the retention type enrollment based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type enrollment based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type enrollment based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type enrollment based pricing rule type, if required.
13. Modify the enrollment-specific data in the retention type enrollment based pricing rule type, if required.
14. Click **Save**.

The changes made to the Retention Type Enrollment Based Pricing Rule Type are saved.

## Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer

### Prerequisites

To define a retention type enrollment based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To define a retention type enrollment based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.  
The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** (  ) icon corresponding to the parent customer whose pricing details you want to view.  
The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.  
The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

## Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

### Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type enrollment based pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> <li>Eligible for Billing</li> </ul>	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule.

## **Editing a Retention Type Enrollment Based Pricing Rule of a Parent Customer**

### **Prerequisites**

To edit a retention type enrollment based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

**Procedure**

To edit a retention type enrollment based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the **Edit** () icon in the **Edit** column corresponding to the retention type enrollment based pricing rule, whose details you want to edit.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following zones:

- **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Parent Customer Information	Displays the parent name.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a parent customer.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
		<b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.	No
	<b>Note:</b> The Search (  ) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.	No
	<b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	
Fee	Indicates the fee for the price item parameter.	Not applicable

- **Characteristics** - Used to define the characteristics for the Retention Type Enrollment based pricing rule for parent customer. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type enrollment based pricing rule of a parent customer.	No
Characteristic Type	Used to indicate the characteristic type for the retention type enrollment based pricing rule of a parent customer. The valid values are: <ul style="list-style-type: none"> <li>• Eligible for Billing</li> </ul>	No
Characteristic Value	Used to specify the characteristic value for the retention type enrollment based pricing rule of a parent customer.	No
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the Characteristic Value field. On clicking the <b>Search</b> icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	

5. Click **Save**.

**Note:**

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type enrollment based pricing rule for a parent customer is defined, once the approval transaction is approved.

6. Click **OK**

The retention type enrollment based pricing rule of a parent customer is edited.

## Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group

### Prerequisites

To define a retention type enrollment based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

**Note:** A custom algorithm type must be created to validate a transaction.

### Procedure

To define a retention type enrollment based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

- Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer. <b>Note:</b> If you are defining the pricing rule type for the parent customer, then the person type will be <b>Parent Customer</b> .	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type enrollment based pricing rule. <b>Note:</b> Select the <b>Retention Type Enrollment Based Pricing Rule</b> option, as the pricing rule type.	Yes <b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group. <b>Note:</b> Select the pricing group option when the retention type enrollment based pricing rule has to be defined for a bill group using the pricing group.	No
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes (Conditional) <b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

- Select the appropriate fields in the **Main** section.

- Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>Administrative Services Fees</li> <li>Administrative Services Fees (No Mandatory Parameters)</li> <li>AS_RET_ENRB</li> <li>Consultant Oversight Fees</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) <b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. <b>Note:</b> If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	No
Rate Option	Used to specify the rate option for the price item. The valid values are: <ul style="list-style-type: none"> <li>Flat Dollar Per Claim - Agg Daily</li> <li>Retention - Aggregate Monthly</li> <li>Claims</li> <li>Percentage of Claim - Agg Daily</li> <li>Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the name of the pricing group rule code. <b>Note:</b> If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	No
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. <b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.	No
	<b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type enrollment based pricing rule for a bill group is defined.

**Note:**

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

## **Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group**

### **Procedure**

To define a retention type enrollment based pricing rule for a bill group using pricing group:

- Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the person whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Click the **Pricing** tab.

The **Pricing** tab appears.

- Click the **Broadcast** () icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.

The **Bill Group ASO Policy Pricing Rules** zone is displayed.

- Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>Claim Pricing Rule</li> <li>Discount Arrangement Pricing Rule</li> <li>Retention Type Claim Based Pricing Rule</li> <li>Retention Type Enrollment Based Pricing Rule</li> <li>Specific Stop-Loss (SSL) Pricing Rule</li> </ul>	Yes
	<b>Note:</b> Select the <b>Retention Type Enrollment Based Pricing Rule</b> option, as the pricing rule type.	<b>Note:</b> If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.	Yes
	<b>Note:</b> You must select a pricing group for the bill group on which a retention type enrollment based pricing rule is to be defined.	
Policy Status	Used to indicate the policy status for the bill group. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes (Conditional)
		<b>Note:</b> Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.

7. Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: <ul style="list-style-type: none"> <li>Administrative Services Fees</li> <li>Administrative Services Fees (No Mandatory Parameters)</li> <li>AS_RET_ENRB</li> <li>Consultant Oversight Fees</li> </ul>	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)
		<b>Note:</b> Pricing Start Date should be entered if Pricing End Date has been mentioned.

Field Name	Field Description	Mandatory (Yes or No)
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
	<b>Note:</b> If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	
Rate Option	Used to specify the rate option for the price item. The valid values are: <ul style="list-style-type: none"> <li>• Flat Dollar Per Claim - Agg Daily</li> <li>• Retention - Aggregate Monthly</li> <li>• Claims</li> <li>• Percentage of Claim - Agg Daily</li> <li>• Flat Dollar Per Claim - Agg Daily</li> </ul>	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the code of the pricing group rule.	Not applicable
Description	Displays the description of the pricing group rule.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.	No
	<b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.	No
	<b>Note:</b> The Search (🔍) icon does appear corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Value Search</b> screen appears.	
Fee	Used to specify the fee for the price item parameter.	No

**Note:** If you want to define more than one price item parameter information, click the **Add (+)** icon. However, if you want to remove more than one price item or price item bundle, click the **Delete (🗑)** icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.

8. Add the required details in the main and characteristics section.

9. Click **Save**.

The retention type claim based pricing rule for a bill group using a pricing group is defined.

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group using a pricing group is defined, once the approval transaction is approved.

## Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

### Prerequisites

To define a characteristic for a retention type enrollment based pricing rule for a bill group using a pricing group, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define a characteristic for a retention type enrollment based pricing rule for a bill group using a pricing group:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a retention type claim based pricing rule for a bill group using a pricing group.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: <ul style="list-style-type: none"> <li>• Eligible for Billing</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule Type</b> .	
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic, click the **Delete (🗑)** icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the retention type enrollment based pricing rule for a bill group using a pricing group.

## Viewing a Retention Type Enrollment Based Pricing Rule of a Parent Customer

### Procedure

To view a retention type enrollment based pricing rule for a parent customer:

1. Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View (🔗)** icon corresponding to the parent customer whose pricing details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.

The **Pricing Rule** screen appears. It contains the following zone:

- **Retention Type Enrollment Based** – Displays Retention Type Enrollment Based Pricing Rule of a Parent. It contains the following sections:
  - **Main** – Displays the basic details of the retention type enrollment based pricing rule of a parent customer.
  - **Price Item Parameters** – Displays the price item parameters defined for the retention type enrollment based pricing rule of a parent customer.
  - **Characteristics** – Displays the characteristics defined for the retention type enrollment based pricing rule of a parent customer.
- 5. View the basic details of a retention type enrollment based pricing rule of a parent customer in the **Main** section.
- 6. View the price item parameters of a retention type enrollment based pricing rule of a parent customer in the **Price Item Parameters** section.
- 7. View the characteristics of a retention type enrollment based pricing rule of a parent customer in the **Characteristics** section.

## Flat Fee Pricing

The Administrative Services Only (ASO) provider would like to charge one-time or recurring flat fee to the self-funded employer. Oracle Revenue Management and Billing enables you to process and bill such one-time and recurring charges to the bill group. The system enables you to define one-time or recurring flat fee for a price item. You can define recurring

flat fee based on bill period or frequency. The one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee can be defined using the respective flat fee pricing rules. You can only define one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rules for a bill group.

You can define the flat fee pricing rules for bill groups from the **Customer 360° Information** screen. You can define a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule using the respective flat fee pricing rule type. It is the flat fee pricing rule type which helps the system to determine:

- Business object using which the flat fee pricing rule should be created in the system.

**Note:** You must not select the **Primary** option while defining a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule type.

- Price items for which you can define the flat fee pricing rules.
- Rate options that you can use while defining the pricing for the price item.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional flat fee specific data, such as:
  - Bill segment cancel reason which you want to use when the one-time or recurring flat fee bill segment is canceled due to change in the flat fee amount.
  - Whether the pricing rule type is defined for one-time flat fee or recurring flat fee.
  - Recurring method which indicates that the system should create recurring flat fee charge based on bill period or frequency. This information is required when you are defining a recurring flat fee pricing rule type.
  - Bill period that you can use while defining a bill period based recurring flat fee pricing rule. This information is required when you are defining a bill period based recurring flat fee pricing rule type.

Once a one-time flat fee pricing rule type is defined, you can define one-time flat fee pricing rules using the one-time flat fee pricing rule type. While defining a one-time flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the one-time flat fee pricing rule is applicable. Note that you cannot define a one-time flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the one-time flat fee billable charge.
- Date which you want to specify as the start and end dates in the one-time flat fee billable charge.
- Billable charge line type using which you want to create the one-time flat fee billable charge.
- Bill after date which you want to stamp on the one-time flat fee billable charge.
- Flat fee amount for which you want to create the one-time flat fee billable charge.
- Override account when you want to create the one-time flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the one-time flat fee pricing rule type.

Once a bill period based recurring flat fee pricing rule type is defined, you can define bill period based recurring flat fee pricing rules using the bill period based recurring flat fee pricing rule type. While defining a bill period based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the bill period based recurring flat fee pricing rule is applicable. Note that you cannot define a bill period based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the bill period based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the bill period based recurring flat fee billable charge.
- Billable charge line type using which you want to create the bill period based recurring flat fee billable charge.

- Bill period using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the bill period based recurring flat fee billable charge.
- Override account when you want to create the bill period based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the bill period based recurring flat fee pricing rule type.

Once a frequency based recurring flat fee pricing rule type is defined, you can define frequency based recurring flat fee pricing rules using the frequency based recurring flat fee pricing rule type. While defining a frequency based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the frequency based recurring flat fee pricing rule is applicable. Note that you cannot define a frequency based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the frequency based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the frequency based recurring flat fee billable charge.
- Billable charge line type using which you want to create the frequency based recurring flat fee billable charge.
- Frequency using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the frequency based recurring flat fee billable charge.
- Override account when you want to create the frequency based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the frequency based recurring flat fee pricing rule type.

Once a one-time flat fee, bill period based recurring flat fee, or frequency based recurring flat fee pricing rule is defined for a bill group, the system creates the one-time or recurring flat fee billable charge, respectively. The system does not create any price assignment, price list, or price list assignment in case of flat fee pricing.

## Defining a One-Time Flat Fee Pricing Rule Type

### Prerequisites

To define a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

### Procedure

To define a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.  
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	<b>Note:</b> You can create a one-time flat fee pricing rule type using the <b>Flat Fee Pricing Rule Type</b> business object.	

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
	<b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b> .	
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Flat Fees</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note:**

**Transaction Field Mapping** section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Define billable charge line types in the flat fees pricing rule type, if required.
- Add the flat fees - specific additional data in the pricing rule type, if required.

**Note:** This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

**16. Click Save.**

The one-time flat fee pricing rule type is defined.

## Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type

**Procedure**

To add the one-time flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required.	No
	<b>Note:</b> This field cannot be edited.	

Field Name	Field Description	Mandatory (Yes or No)
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. The valid values are: <ul style="list-style-type: none"> <li>• Bill Period</li> <li>• Frequency</li> </ul>	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears when you select the checkbox for <b>Recurring Fee</b> field.</p> <p>This field cannot be edited.</p>	<p><b>Note:</b> This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.</p>

- Enter the required details in the **Flat Fees - Specific Additional Data** section.
- Click **Save**.

The Flat Fees - Specific Additional data is added in the pricing rule type.

How to edit a one-time flat fee pricing rule type	<a href="#">Editing a One-Time Flat Fee Pricing Rule Type</a> on page 2657

## Editing a One-Time Flat Fee Pricing Rule Type

### Prerequisites

To edit a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

### Procedure

To edit a one-time flat fee pricing rule type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the Pricing rule type whose details you want to edit.

The **Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.

- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.  <b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b> .	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a one-time flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

**Note:**

**Transaction Field Mapping** section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics of the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

**Note:** This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

15. Click **Save**.

The changes made to the one-time flat fees pricing rule type are saved.

## Defining a One-Time Flat Fee Pricing Rule for a Bill Group

### Prerequisites

To define a one-time flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

### Procedure

To define a one-time flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

- In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
- Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create a one-time flat fee pricing rule using the <b>Pricing Rule Type</b> for flat fees.	
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Yes

- Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.
- Main** – Used to specify basic details about the one-time flat fee pricing rule.
- Characteristics** – Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Charge Date	Used to specify the flat fee charge date.	Yes
	<b>Note:</b> By default this field displays the policy start date or policy runout start date.	
Billable Charge Line Type	Used to specify the billable charge line type.	No
	<b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Billable Charge Line Type Search</b> window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	
Bill After Date	Used to specify the bills after the specific date.	No
Fee	Used to specify the amount of flat fee.	Yes
	<b>Note:</b> This field appears when you select the billable charge line type in the <b>Billable Charge Line Type</b> field.	
Bill To Account Override	Used to specify the account to which the bill is override.	Yes
	<b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Account Search</b> window appears. On specifying the account, the description of the account appears corresponding to the <b>Bill To Account Override</b> field.	

5. Enter the required details in the **Main** section.
6. Define characteristics for a one-time flat fee pricing rule, if required.
7. Click **Save**.

The one-time flat fee pricing rule for a bill group is defined.

**Note:** A billable charge is created and assigned to the one-time flat fee pricing rule.

## Editing a One-Time Flat Fee Pricing Rule of a Bill Group

### Prerequisites

To edit a one-time flat fee pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.

### Procedure

To edit a one-time flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view. The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for one-time flat fee whose one-time flat fee pricing rule details you want to view.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the one-time flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Date	Used to specify the flat fee charge date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Bill After Date	Displays the bills after the specific date.	Not applicable
Fee	Used to specify the amount of flat fee.	Yes
	<b>Note:</b> This field appears when you have added the billable charge line type in the <b>Billable Charge Line Type</b> field.	
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details of the one-time flat fee pricing rule, if required.
5. Add, edit, or remove characteristics for a one-time flat fee pricing rule, if required.
6. Click **Save**.

**Note:** If **Fee** or **Charge Date** is modified then it checks whether bill segment is created, and if it is created then,

- If it is in frozen or pending cancelled status then,
  - Bill segment and billable charge is cancelled and new billable charge is created.
- If it is in any other status other than cancelled then,
  - Bill segment is deleted and existing billable charge billable charge is updated.

**Charge Date** is set to billable charge start date and end date.

When characteristics are updated, billable charge is updated with those characteristics.

The changes made to a one-time flat fee pricing rule for a bill group are saved.

**Defining a Bill Period Based Recurring Flat Fee Pricing Rule Type****Prerequisites**

To define a bill period based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

**Procedure**

To define a bill period based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.	Yes
	<b>Note:</b> You can create a bill period based recurring flat fee pricing rule type using the <b>Flat Fee Pricing Rule Type</b> business object.	

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.

- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.
  - **Bill Periods** – Used to specify the bill periods for specifying intervals for creating recurring bill segments.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>.         </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Add the related pricing rule types in the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Define the transaction field mapping in the primary pricing rule type, if required.

**Note:**

**Transaction Field Mapping** section appears when the pricing rule type is primary. This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Associate algorithms with the pricing rule type, if required.
- Define additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

- Add pricing items in the pricing rule type, if required.
- Add price item parameters in the pricing rule type, if required.
- Define characteristics for the pricing rule type, if required.
- Define billable charge line types in the flat fees pricing rule type, if required.
- Add the flat fees - specific additional data in the pricing rule type, if required.

**Note:**

This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**. Add the bill periods in the pricing rule type, if required.

- Click **Save**.

The bill period based recurring flat fee pricing rule type is defined.

## Editing a Bill Period Based Recurring Flat Fee Pricing Rule Type

### Prerequisites

To edit a bill period based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

### Procedure

To edit a bill period based recurring flat fee pricing rule type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
- Click the **Search** option from the **Pricing Rule Type** sub-menu.  
The **Pricing Rule Type** screen appears.
- In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the Pricing rule type whose details you want to edit.

The **Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.
- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.
  - **Bill Periods** – Used to specify the bill periods for specifying intervals for creating recurring bill segments.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.  <div style="border: 1px solid black; padding: 2px;"> <b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>.         </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a bill period based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

**Note:**

**Transaction Field Mapping** section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics of the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

**Note:**

This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

Define, edit or remove bill periods from the pricing rule type, if required.

15. Click **Save**.

The changes made to the bill period based recurring flat fee pricing rule type are saved.

## Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group

### Prerequisites

To define a bill period based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for bill period based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

### Procedure

To define a bill period based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

2. In the **Search Results** section, click the **View** () icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes
	<b>Note:</b> You can create a bill period based recurring flat fee pricing rule using the <b>Pricing Rule Type</b> for flat fees.	
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- Customer Information** – Displays the customer information for bill group.
- Main** – Used to specify basic details about the bill period based recurring flat fee pricing rule.
- Characteristics** – Used to define the characteristics for the bill period based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Billable Charge Line Type Search</b> window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	No
Charge End Date	Used to specify the flat fee charge end date.	No
Bill Period	Used to indicate the bill period for flat fee.	Yes
Fee	Used to specify the amount of flat fee.  <b>Note:</b> This field appears when you select the billable charge line type in the <b>Billable Charge Line Type</b> field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Account Search</b> window appears. On specifying the account, the description of the account appears corresponding to the <b>Bill To Account Override</b> field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a bill period based recurring flat fee pricing rule, if required.
7. Click **Save**.

The bill period based recurring flat fee pricing rule for a bill group is defined.

**Note:** A billable charge is created and assigned to the bill period based recurring flat fee pricing rule.

## Defining a Frequency Based Recurring Flat Fee Pricing Rule Type

### Prerequisites

To define a frequency based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

### Procedure

To define a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type.  <b>Note:</b> You can create a frequency based recurring flat fee pricing rule type using the <b>Flat Fee Pricing Rule Type</b> business object.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** – Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** – Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** – Used to define the algorithms used for the pricing rule type.
- **Additional Data** – Used to specify the additional information about the pricing rule type.
- **Price Items** – Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** – Used to define the price item parameters in the pricing rule type.

- **Characteristics** – Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** – Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** – Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: <ul style="list-style-type: none"> <li>• Claim Pricing Rule</li> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.  <b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b> .	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>• Claim</li> <li>• Aggregate Stop-Loss</li> <li>• Specific Stop-Loss</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Flat Fees</li> </ul>	Yes

6. Enter the required details in the **Main** section.

7. Add the related pricing rule types in the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define the transaction field mapping in the primary pricing rule type, if required.

**Note:**

**Transaction Field Mapping** section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

9. Associate algorithms with the pricing rule type, if required.

10. Define additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

11. Add pricing items in the pricing rule type, if required.

12. Add price item parameters in the pricing rule type, if required.

13. Define characteristics for the pricing rule type, if required.

14. Define billable charge line types in the flat fees pricing rule type, if required.

15. Add the flat fees - specific additional data in the pricing rule type, if required.

**Note:**

This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

16. Click **Save**.

The frequency based recurring flat fee pricing rule type is defined.

The valid values are: <ul style="list-style-type: none"> <li>Claim Pricing Rule</li> <li>Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>Specific Stop-Loss (SSL) Pricing Rule</li> <li>Retention Type Claim Based Pricing Rule</li> <li>Retention Type Enrollment Based Pricing Rule</li> <li>Flat Fee Pricing Rule</li> </ul>	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. <p><b>Note:</b> This field is not enabled for selection if the <b>Pricing Rule Type Category</b> is <b>Flat Fees</b>.</p>	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: <ul style="list-style-type: none"> <li>Claim</li> <li>Aggregate Stop-Loss</li> <li>Specific Stop-Loss</li> <li>Retention Type Claim Based</li> <li>Retention Type Enrollment Based</li> <li>Flat Fees</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a frequency based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

**Note:**

**Related Pricing Rule Types** section appears when the pricing rule type is primary.  
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

**Note:**

**Transaction Field Mapping** section appears when the pricing rule type is primary.  
This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

**Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics of the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

**Note:** This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

15. Click **Save**.

The changes made to the frequency based recurring flat fee pricing rule type are saved.

## Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type

### Procedure

To delete a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the frequency based recurring flat fee pricing rule type that you want to delete.

A message appears confirming whether you want to delete the frequency based recurring flat fee pricing rule type.

**Note:** You can delete a frequency based recurring flat fee pricing rule type when it is not yet used in the system.

**Tip:** Alternatively, you can delete a frequency based recurring flat fee pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.

The frequency based recurring flat fee pricing rule type is deleted.

## Viewing the Frequency Based Recurring Flat Fee Pricing Rule Type Details

### Procedure

To view the details of a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.

A sub-menu appears.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.

The **Pricing Rule Type** screen appears.

4. In the **Pricing Rule Type List** zone, click the **Broadcast** (📡) icon corresponding to the frequency based recurring flat fee pricing rule type whose details you want to view.

The **Pricing Rule Type** zone appears.

5. View the details of the frequency based recurring flat fee pricing rule type in the **Pricing Rule Type** zone.

## Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group

### Prerequisites

To define a frequency based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

### Procedure

To define a frequency based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔍) icon corresponding to the account, person, or policy whose pricing details you want to view.  
The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.  <b>Note:</b> You can create a frequency based recurring flat fee pricing rule using the <b>Pricing Rule Type</b> for flat fees.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Used to specify basic details about the frequency based recurring flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type.  <b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Billable Charge Line Type Search</b> window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the <b>Billable Charge Line Type</b> field.	No
Charge End Date	Used to specify the flat fee charge end date.	No
Frequency	Used to indicate the frequency for flat fee.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to specify the amount of flat fee.	Yes
	<b>Note:</b> This field appears when you select the billable charge line type in the <b>Billable Charge Line Type</b> field.	
Bill To Account Override	Used to specify the account to which the bill is override.	Yes
	<b>Note:</b> On clicking the <b>Search</b> (🔍) icon, the <b>Account Search</b> window appears. On specifying the account, the description of the account appears corresponding to the <b>Bill To Account Override</b> field.	

5. Enter the required details in the **Main** section.
6. Define characteristics for a frequency based recurring flat fee pricing rule, if required.
7. Click **Save**.

The frequency based recurring flat fee pricing rule for a bill group is defined.

**Note:** A billable charge is created and assigned to the frequency based recurring flat fee pricing rule.

## Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule

### Prerequisites

To define a characteristic for a frequency based recurring flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

### Procedure

To define a characteristic for a frequency based recurring flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the frequency based recurring flat fee pricing rule.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Pricing Rule</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the frequency based recurring flat fee pricing rule, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the frequency based recurring flat fee pricing rule, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the frequency based recurring flat fee pricing rule.

## **Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group**

### **Prerequisites**

To edit a frequency based recurring flat fee pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.

### **Procedure**

To edit a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

The **Account, Person, or Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (🔗) icon in the **Edit** column corresponding to the pricing rule type for frequency based recurring flat fee whose frequency based recurring flat

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** – Displays the customer information for bill group.
- **Main** – Displays the basic details of the frequency based recurring flat fee pricing rule.
- **Characteristics** – Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Runout</li> </ul>	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Charge End Date	Used to specify the flat fee charge end date.	Yes
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Frequency	Indicates the frequency for flat fee.	Not applicable
Fee	Used to specify the amount of flat fee.	Yes
	<b>Note:</b> This field appears when you have added the billable charge line type in the <b>Billable Charge Line Type</b> field.	

Field Name	Field Description	Mandatory (Yes or No)
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details of the frequency based recurring flat fee pricing rule, if required.
5. Add, edit, or remove characteristics for a frequency based recurring flat fee pricing rule, if required.
6. Click **Save**.

**Note:**

If **Fee** is modified then,

- The frequency based recurring flat fee is saved as a one time charge process.

If **Charge Start Date** is modified then it checks whether bill segment is already created for a period which is not available for the updated duration then,

- Bill segment is deleted and existing billable charge is updated.
- For recurring flat fee bill segments are not created or is in cancelled status.

**Note:** The modified charge start date should be a future date and not past date.

The changes made to a frequency based recurring flat fee pricing rule for a bill group are saved.

## Ancillary Pricing

The Administrative Services Only (ASO) provider may process some adhoc charges with respect to preventive care, vaccination, diagnostic, and so on. These adhoc charges may also occur due to some corrections in the claim transactions which are already billed to the customer. Oracle Revenue Management and Billing enables you to process and bill these ancillary transactions to the self-funded employer.

The system enables you to create an ancillary charge in either of the following ways:

- Create a pass through charge without markup or markdown (i.e. flat charge).
- Create a pass through charge with a flat or percentage based markup or markdown.
- Create a rate based charge using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge.

You can use any custom mechanism or the file upload utility in ORMB to upload the ancillary transactions. The pricing for the ancillary transactions can be defined using the ancillary pricing rules. You can define an ancillary pricing rule at the parent customer and bill group levels. The ancillary pricing rule at the bill group level takes precedence over the ancillary pricing rule at the parent customer level. You can define the ancillary pricing rules for parent customers and bill groups from the **Customer 360<sup>o</sup> Information** screen. You can define an ancillary pricing rule using an ancillary pricing rule type. It is the ancillary pricing rule type which helps the system to determine:

- Business object using which the ancillary pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types will inherit the transaction field mapping details.

**Note:** You must select the **Primary** option while defining an ancillary pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Ancillary Pricing Rule Type** screen.

- Rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.
- Transaction fields from where the data from the ancillary transaction should be stored in the respective fields (for example, the data from the **UDF\_CHAR\_1** transaction field must be stored in the **Parameter 1** field which will be used for deriving the bill group and pricing).
- Algorithm which should be triggered for validating an ancillary transaction.

**Note:** An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for an ancillary transaction.

**Note:** You must create an algorithm using the **C1\_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for deriving the account and price item for an ancillary transaction.

**Note:** You must create an algorithm using the **C1\_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for determining the bill after date.

**Note:** You must create an algorithm using the **C1\_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective ancillary pricing rule is derived.

**Note:** A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

- Additional generic information, such as:
  - Whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss and aggregate stop-loss.

- Whether the price items included in the ancillary pricing rule type are eligible for level funding.
- Whether the ancillary charges should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the ancillary pricing rule type.
- Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
- Transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs.
- Value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.
- Price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
- Rate options that you can use while defining the pricing for the ancillary price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Price item parameters based on which you want to define the price item pricing. Two price item parameters are mandatory in the ancillary pricing rule type – one which stores the billable charge line type from the ancillary transaction and another which stores the pricing arrangement from the ancillary transaction. The following pricing arrangements are supported in the ancillary pricing rule:
  - Pass Through Charge Without Markup and Markdown
  - Pass Through Charge With Markup and Markdown
  - Rate Based Charge Without Markup and Markdown
  - Rate Based Charge With Markup and Markdown

**Note:** The price item parameters (for example, BCHGLINETYPE and PRICINGARRANGEMENT) which you include in the ancillary pricing rule type must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLNG** feature configuration, respectively.

- Additional ancillary-specific information, such as:
  - Identifiers which help to determine whether the ancillary transaction is eligible for billing for not.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Billable charge line type using which you want to create billable charges for markup and markdown.
  - Rule type which indicates the rules which should be executed to determine whether the markup or markdown calculation line is eligible for billing.
  - How the system should interpret the value stored in the pricing arrangement price item parameter (i.e. whether the value means the ancillary charge should be a pass through charge without markup or markdown, pass through charge with markup or markdown, or rate based charge with or without markup or markdown). Accordingly, the system will search for the pricing in the effective ancillary pricing rule where:
    - Billable charge line type matches the one specified in the ancillary transaction
    - Line defined for the billable charge line type has the pricing arrangement as mentioned in the ancillary transaction
  - Line item which indicates the SQI using which the ancillary charge should be created. You need to specify the line item for each pricing arrangement which is defined in the ancillary pricing rule type.

Once an ancillary pricing rule type is defined, you can create ancillary pricing rules using the ancillary pricing rule type. While defining an ancillary pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the ancillary pricing.
- Whether you want to define the pricing for a pass through charge without markup or markdown. If you select the **Pass Through without Markup or Markdown** option, you cannot define the pricing for a pass through charge with markup or markdown and the pricing for rate based charge with or without markup or markdown in the ancillary pricing rule. However, if the **Pass Through without Markup or Markdown** option is not selected, you can define pricing for different billable charge line types which can be with markup or markdown or which can be rate based with or without markup or markdown. In addition, if the **Pass Through without Markup or Markdown** option is not selected, by default, the system will define the pricing for a pass through charge without markup or markdown. Depending on the billable charge line type and pricing arrangement information in the ancillary transaction, the system will accordingly fetch the appropriate pricing for billing the ancillary charge. For example, if the ancillary transaction contains BCLT1 as the billable charge line type and PASSMK as the pricing arrangement and the effective ancillary pricing rule contains the following pricing:

Ancillary Pricing	Billable Charge Line Type	Pricing Arrangement	Rate	Pricing Strategy	Markup Amount	Markdown Amount
AP1	BCLT0	Pass Through with Markup or Markdown	-	Markup	\$10	-
AP2	BCLT1	Pass Through with Markup or Markdown	-	Markdown	-	\$5
AP3	BCLT2	Rate Based without Markup or Markdown	\$5	-	-	-
AP4	BCLT3	Rate Based with Markup or Markdown	\$5	Markup	\$10	-
AP5	BCLT4	Rate Based with Markup or Markdown	\$5	Markdown	-	\$5
AP6	-	Pass Through without Markup or Markdown	-	-	-	-

In this case, the system will use the AP2 pricing defined in the ancillary pricing rule. The system will markdown the SQI with the specified amount (i.e. \$5).

- Whether the billable charge line type is eligible for billing or not. Accordingly, the system will create billable charge for the ancillary transaction.

In addition, while defining an ancillary pricing rule for a bill group, you need to indicate the policy status for which the ancillary pricing rule is applicable. You can also specify a pricing group while defining an ancillary pricing rule for a bill group. Once an ancillary pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the bill group.

## Defining an Ancillary Pricing Rule Type

### Prerequisites

To define an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

### Procedure

To define an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	<p>Used to indicate the business object using which you want to create an ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule Type</li> <li>• Ancillary Pricing Rule Type</li> <li>• Claim Pricing Rule Type</li> <li>• Discount Arrangement Pricing Rule Type</li> <li>• Flat Fee Pricing Rule Type</li> <li>• Level Funded (LF) Pricing Rule Type</li> <li>• Retention Type Claim Based Pricing Rule Type</li> <li>• Retention Type Enrollment Based Pricing Rule Type</li> <li>• Specific Stop-Loss (SSL) Pricing Rule Type</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary Pricing Rule Type</b> option from the <b>Pricing Rule Type Business Object</b> list while defining an ancillary pricing rule type.</p>	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** – Used to specify the basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** – Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:
  1. Specific Stop Loss
  2. Aggregate Stop Loss
  3. Level Funding

**Note:** You can use any of the above specified pricing rule types as the related pricing rule type in an ancillary pricing rule type.

- **Transaction Field Mapping** – Used to map the transaction fields in a ancillary transaction to the appropriate fields in the ancillary pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

**Note:** The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for an ancillary pricing rule type.

- **Algorithms** – Used to associate the algorithms with an ancillary pricing rule type.
- **Additional Data** – Used to specify additional information about the ancillary pricing rule type.
- **Price Items** – Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** – Used to add the price item parameters based on which you want to define the price item pricing.

**Note:** There are two price item parameters that are mandatory in the ancillary pricing rule type:

- A price item which stores the billable charge line type from the ancillary transaction.
- A price item which stores the pricing arrangement from the ancillary transaction.

- **Characteristics** – Used to define the characteristics for an ancillary pricing rule type.
- **Ancillary-Specific Additional Data** – Used to define the ancillary-specific additional data in an ancillary pricing rule type.

**Note:** Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

- **Billing Eligibility Identifier Value**
- **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** – Used to define the following pricing arrangements that are used while defining an ancillary pricing rule type.
  - **Pass Through (Markup or Markdown Optional)**
  - **Pass Through Without Markup or Markdown**
  - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the ancillary pricing rule type.	Yes
Description	Used to specify the description for the ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Business Object	<p>Used to indicate the business object using which you want to create the ancillary pricing rule. The valid values are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss (ASL) Pricing Rule</li> <li>• Ancillary Pricing Rule</li> <li>• Claim Pricing Rule</li> <li>• Discount Arrangement Pricing Rule</li> <li>• Flat Fee Pricing Rule</li> <li>• Level Funded (LF) Pricing Rule</li> <li>• Retention Type Claim Based Pricing Rule</li> <li>• Retention Type Enrollment Based Pricing Rule</li> <li>• Specific Stop-Loss (SSL) Pricing Rule</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary Pricing Rule</b> option from the <b>Pricing Rule Business Object</b> list while defining an ancillary pricing rule type.</p>	Yes
Business Object	Indicates the business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	<p>Used to indicate the status of the ancillary pricing rule type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Primary	Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.	No
Pricing Rule Type Category	<p>Used to indicate the category to which the ancillary pricing rule type belongs. The valid value are:</p> <ul style="list-style-type: none"> <li>• Aggregate Stop-Loss</li> <li>• Ancillary</li> <li>• Claim</li> <li>• Discount Arrangement</li> <li>• Flat Fees</li> <li>• Level Funded</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Specific Stop-Loss</li> </ul> <p><b>Note:</b> You must select the <b>Ancillary</b> option from the <b>Pricing Rule Type Category</b> list while defining an ancillary pricing rule type.</p>	Yes

6. Enter the required details in the **Main** section.

7. Select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Select the **Primary** option in the **Main** section.

The **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear.

9. Select the **Ancillary** option from the **Pricing Rule Type Category** list.
10. Add the related pricing rule types in the ancillary pricing rule type, if required.
11. Map the transaction fields of an ancillary transaction to the appropriate fields in the ancillary pricing rule type.
12. Associate the following algorithms with the ancillary pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_TXNBGDRV	C1_TXNBGDRV	Derive Bill Group
Account and Price Item Derivation	C1_ACCPRIDRV	C1_ACCPRIDRV	Account and Price Item Derivation
Bill After Date Determination	C1_BAFTDRV	C1_BAFTDRV	Bill After Date Determination

13. Define additional data for an ancillary pricing rule type, if required.
14. Add the required price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
15. Add the price item parameters based on which you want to define the ancillary pricing, if required.
16. Define the characteristics for an ancillary pricing rule type, if required.
17. Define the required ancillary-specific additional data in the ancillary pricing rule type.
18. Define the pricing arrangements for an ancillary pricing rule type, if required.
19. Click **Save**.

The ancillary pricing rule type is defined.

## Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type

The **Administrative Services Only (ASO)** feature is designed in such a way that all non-primary pricing rule types should inherit the transaction field mapping details from a primary pricing rule type. These non-primary pricing rule types are added in a primary pricing rule type as the related pricing rule types.

### Prerequisites

To add related pricing rule types in an ancillary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.
- Rule types defined in the application (where the rule type usage is set to **Related Pricing Rule Type Eligibility**)

### Procedure

To add related pricing rule type in an ancillary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an ancillary pricing rule type.

**Note:** The **Related Pricing Rule Types** section appears when the **Primary** option is selected in the **Main** section.

The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional)
		<b>Note:</b> This field is required when you are adding a related pricing rule type in the ancillary pricing rule type.

Column Name	Column Description	Mandatory (Yes or No)
