1. Preparing for Upgrade

This section provides an overview of the upgrade process. It also lists the pre-requisites for upgrading Oracle Revenue Management and Billing from one version to another.

1.1 Upgrade Overview

The following figure provides an overview of the steps that need to be taken for upgrading Oracle Revenue Management and Billing.

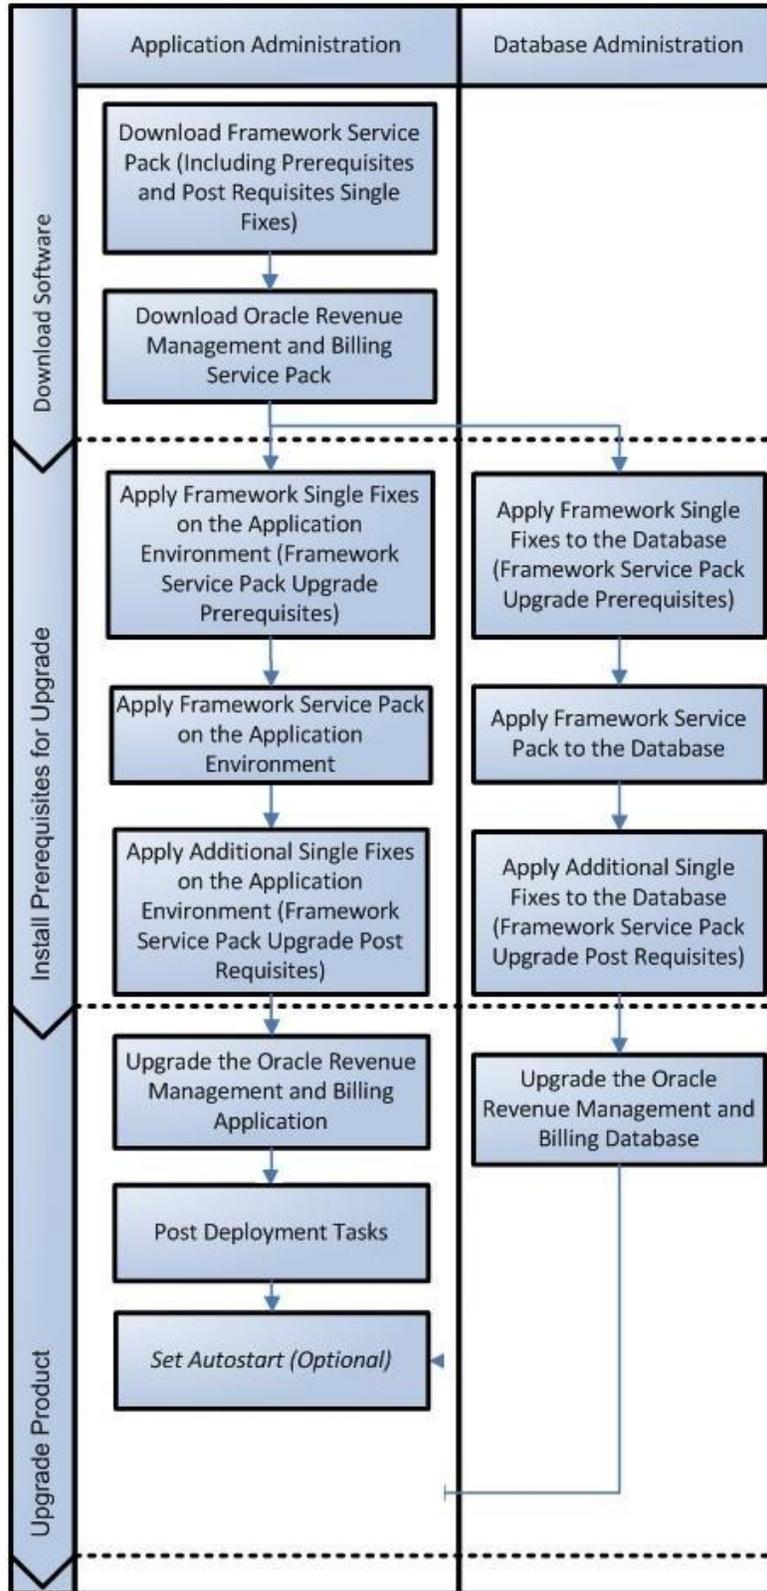

Figure 1: Upgrade Process

1.2 Upgrade Pre-requisites

Before you upgrade Oracle Revenue Management and Billing, you need to upgrade the application framework as mentioned in the *Oracle Revenue Management and Billing Upgrade Path Guide*. While upgrading the application framework, you might have to apply some patches (additional single fixes) as pre-requisites or post-requisites.

Also, before you upgrade the application framework, you might have to upgrade some of the third party software. For more information, refer to the **Upgrade Prerequisites** section in the *Oracle Revenue Management and Billing Upgrade Path Guide*.

1.3 Supported Upgrades

In this release, we support the following upgrades:

- Upgrade from Oracle Revenue Management and Billing Version 2.9.0.0.0 to 2.9.0.1.0

2. Upgrading from ORMB Version 2.9.0.0.0 to 2.9.0.1.0

This section explains how to upgrade from Oracle Revenue Management and Billing Version 2.9.0.0.0 to 2.9.0.1.0. The high-level steps include:

1. [Downloading the ORMB Packages and Patches](#)
2. [Upgrading Framework on the Database](#)
3. [Installing Framework on the Application Environment](#)
4. [Installing the Oracle Revenue Management and Billing Application](#)
5. [Upgrading the Oracle Revenue Management and Billing Database](#)
6. [Migrating Data](#)

Note: Before you upgrade the application, you must take a backup of the application and the database.

2.1 Prerequisites

If you are already using the Transaction Feed Management feature and want to upgrade to Oracle Revenue Management and Billing Version 2.9.0.1.0, then you need to ensure the following (before upgrading):

- All bills generated in the system are in the **Complete** status. In other words, there should not be any bills in the **Pending** status. If there are any bills in the **Pending** status or if any billable charge (generated through TFM) is not yet billed, disaggregation and cancellation of transactions which are uploaded using 2.9.0.0.0 will not happen successfully.
- Transactions which are uploaded using 2.9.0.0.0 must not be in the **Initial Product Determined (INPD)** status. They can be in the **Uploaded (UPLD)**, **Invalid (INVL)**, **Error (EROR)**, **Completed (COMP)**, or **Cancelled (CNCL)** status.
- Equal to (=) or tilde (~) symbol is not used in any existing price item parameter code or value. Otherwise, erroneous results might occur.

Also, ensure that no data exists in the CI_BCHG_TEMP table before you start the upgrade process. If there is data in the CI_BCHG_TEMP table, it means all billing batches are not yet executed for a set of bills. We recommend you to either complete the billing process for such bills by executing all the billing batches or delete the data from the CI_BCHG_TEMP table. Otherwise erroneous results might occur when you execute the billing batches after the upgrade.

2.2 Downloading the ORMB Packages and Patches

For upgrading from Oracle Revenue Management and Billing Version 2.9.0.0.0 to 2.9.0.1.0, you must download the following packages from the Oracle Revenue Management and Billing 2.9.0.1.0 media pack which is available on [Oracle Software Delivery Cloud](#):

- Oracle Utilities Application Framework V4.4.0.2.0 Single Fix Prerequisite Rollup for RMB V2.9.0.1.0
- Oracle Revenue Management and Billing V2.9.0.1.0 Multiplatform
- Oracle Revenue Management and Billing V2.9.0.1.0 Oracle Database

You must also download the following package from the Oracle Utilities Customer Care and Billing 2.7.0.3.0 media pack which is available on [Oracle Software Delivery Cloud](#):

- Oracle Utilities Application Framework 4.4.0.2.0

In addition, you must download the following patch from [My Oracle Support](#):

- UPGRADE FROM 2.9.0.0.0 TO 2.9.0.1.0 (Patch Number: 32359347)

The downloaded files will be in the ZIP format.

2.3 Upgrading Framework on the Database

While upgrading from Oracle Revenue Management and Billing Version 2.9.0.0.0 to 2.9.0.1.0, you need to install the following on the database:

1. [Oracle Utilities Application Framework \(OUAF\) Version 4.4.0.2.0](#)
2. [Rollup Pack for Oracle Utilities Application Framework \(OUAF\) Version 4.4.0.2.0](#)

To install the framework and its service packs on the database, you must have ability to connect to the database.

2.3.1 Installing OUAF Version 4.4.0.2.0

To install Oracle Utilities Application Framework (OUAF) Version 4.4.0.2.0:

1. Login to the database server using the administrator's credentials.
2. Create a temporary folder (for example, `TEMPDIR`) on the database server using the following command:

mkdir TEMPDIR
```

3. Copy the **Oracle Revenue Management and Billing V2.9.0.1.0 Oracle Database** package to the `TEMPDIR` folder using the following command:

AIX, Linux:

```
cp <PATH>/<filename>.zip <PATH>/TEMPDIR
```

Windows:

```
copy <PATH>\<filename>.zip <PATH>\TEMPDIR
```

Note: You can also use File Transfer Protocol (FTP) to transfer the downloaded file from one host to another. You must use the binary mode while copying files through FTP.

unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_1>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_1> folder. The contents include the following sub-folders:

- FW
- RMB

6. Set the `JAVA_HOME` environment variable using the following command:

AIX, Linux:

```
export JAVA_HOME=<JAVA_HOME_PATH>
```

Windows:

```
SET JAVA_HOME=<JAVA_HOME_PATH>
```

Note: The <JAVA_HOME_PATH> is the location where Java Development Kit Version 8.0 is installed.

7. Set the `JAR_PATH` environment variable using the following command:

AIX, Linux:

```
export JAR_PATH=<DESTINATION_FOLDER_1>/FW/FW44020/jarfiles
```

Note:

The above command is applicable only for AIX and Linux platforms.

The <DESTINATION_FOLDER_1> folder is the location where you have extracted the contents of the **Oracle Revenue Management and Billing V2.9.0.1.0 Oracle Database** package.

8. Set the `CLASS_PATH` environment variable using the following command:

AIX, Linux:

```
export CLASS_PATH=${JAR_PATH}/commons-cli-1.3.1.jar:${JAR_PATH}/commons-codec-1.9.jar:${JAR_PATH}/commons-collections-3.2.2.jar:${JAR_PATH}/jackson-annotations-2.8.5.jar:${JAR_PATH}/jackson-core-2.8.5.jar:${JAR_PATH}/jackson-databind-2.8.5.jar:${JAR_PATH}/log4j-api-2.11.0.jar:${JAR_PATH}/log4j-core-2.11.0.jar:${JAR_PATH}/ojdbc8-12.2.0.1.jar:${JAR_PATH}/oradbi.jar:${JAR_PATH}/spl-shared-4.4.0.2.0.jar
```

Windows:

```

9. Change to the `Install-Upgrade` folder using the following command:

AIX, Linux:

```
cd <DESTINATION_FOLDER_1>/FW/FW44020/Install-Upgrade
```

Windows:

```
cd <DESTINATION_FOLDER_1>\FW\FW44020\Install-Upgrade
```

10. Execute the OraDBI (Java) utility using the following command:

AIX, Linux:

```
java -cp ${CLASS_PATH} com.oracle.ouaf.oem.install.OraDBI -d
jdbc:oracle:thin: @<DB_SERVER_NAME>:<DB_PORT>/<DB_NAME>,

```

The contents are extracted in the `dbpatch_tools` folder. The contents include the following three sub-folders:

- `bin`
- `config`
- `lib`

12. Set the `TOOLSBIN` environment variable using the following command:

2.4 Installing Framework on the Application Environment

Once you install the framework and its rollup pack on the database, you need to install the following on the application environment:

1. [Oracle Utilities Application Framework \(OUAF\) Version 4.4.0.2.0](#)
2. [Rollup Pack for Oracle Utilities Application Framework \(OUAF\) Version 4.4.0.2.0](#)

You must not perform these steps on the existing environments. Instead, you must create new development and production/UAT environments on the application server and then perform the steps listed in this section.

2.4.1 Installing OUAF Version 4.4.0.2.0

To install Oracle Utilities Application Framework (OUAF) Version 4.4.0.2.0 on the application environment:

1. Login to the application server using the administrator's credentials.
2. Create a temporary folder (for example, `TEMPDIR`) on the application server using the following command:

```
mkdir TEMPDIR
```

3. Copy the **Oracle Utilities Application Framework 4.4.0.2.0** package to the `TEMPDIR` folder using the following command:

AIX, Linux:

```
cp <PATH>/<filename>.zip <PATH>/TEMPDIR
```

Windows:

```
copy <PATH>\<filename>.zip <PATH>\TEMPDIR
```

Note: You can also use File Transfer Protocol (FTP) to transfer the downloaded file from one host to another. You must use the binary mode while copying files through FTP.

4. Change to the `TEMPDIR` folder using the following command:

AIX, Linux:

```
cd <PATH>/TEMPDIR
```

Windows:

```
cd <PATH>\TEMPDIR
```

- Unzip the **Oracle Utilities Application Framework 4.4.0.2.0** package using the following command:

AIX, Linux:

```
unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_1>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_1>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_1> folder. The contents include `FW-V4.4.0.2.0-MultiPlatform.jar` file.

- Decompress the `FW-V4.4.0.2.0-MultiPlatform.jar` file using the following command:

```
jar -xvf FW-V4.4.0.2.0-MultiPlatform.jar
```

The contents of the JAR file include a folder named `FW-V4.4.0.2.0-SP2`.

- Install and configure the required third-party software for the application server.

Note: You must install the prerequisite third party software depending on the platform on which you want to install Oracle Utilities Application Framework. For more details, refer to the **Installing Application Server Prerequisite Software** section in the *Oracle Revenue Management and Billing Installation Guide*.

- Set the `Java_Home` path using the following command:

```
export PATH=/<Java_Home>/bin:$PATH
```

Note:

The <Java_Home> is the location where you have installed Java 1.8.

The above command is applicable only for AIX and Linux platforms.

The utility contains default values for some of the menu options. If required, you can change their values. While executing the `install` utility, you must set the value for the required menu options. Otherwise, the installation process will not be completed successfully.

You will be warned if you did not edit a section. You may proceed if you want to keep the default settings.

Once the installation process is completed, the following utilities are automatically executed in the specified order:

1. `initialSetup` - The `initialSetup` utility updates the configuration files including the WAR files on the system. On the UNIX machine, this utility is available in the `$SPLEBASE/bin` folder. And, on the Windows machine, this utility is available in the `%SPLEBASE%\bin` folder.

2. `splenviron` - The `splenviron` utility sets the environment variables using the `ENVIRON.INI` file. On the UNIX machine, this utility is available in the `$SPLEBASE/bin` folder. And, on the Windows machine, this utility is available in the `%SPLEBASE%\bin` folder. The following are some of the key environment variables that are set using the `splenviron` utility:

- `$PATH`
- `$SPLEBASE (%SPLEBASE%)` - Indicates the `<SPLDIR>/<SPLENVIRON>` folder
- `$SPLOUTPUT (%SPLOUTPUT%)` - Indicates the `<SPLDIROUT>/<SPLENVIRON>` folder

```
$SPLEBASE/bin/splenviron.sh -e $SPLENVIRON
```

Windows:

```
%SPLEBASE%\bin\splenviron.cmd -e %SPLENVIRON%
```

You need to execute this script each time you want to be connected to the specific environment before performing manual operations such as shutdown, startup or performing an additional application product installation.

When you have finished the install process, your current online session will be connected to the new environment.

2.4.2 Installing Rollup Pack for OUAF Version 4.4.0.2.0

```

Windows:

```
cd <DESTINATION_FOLDER_5>\V2.9.0.1.0-<PATCH_NUMBER>_MultiPlatform
```

Note: The <DESTINATION_FOLDER_5> directory is the location where you have extracted the contents of the MultiPlatform.zip file.

The contents include a file named CCB.V2.9.0.1.0-<PATCH_NUMBER>.jar and a directory named database.

2.5.3 Accessing the ORMB Application

The following table lists the URLs that you can use to access the application on various application servers:

Application Server	URL
WebLogic	https://<hostname>:<WebLogic_Port_Number>/ouaf/loginPage.jsp

2.6 Upgrading the ORMB Database

This section explains how to upgrade the database. When you upgrade the database, the system overwrites the database schema and the metadata present in the database. However, the transactional data is not affected.

While upgrading from Oracle Revenue Management and Billing Version 2.9.0.0.0 to 2.9.0.1.0, you need to install the following on the database:

1. [Oracle Revenue Management and Billing \(ORMB\) Version 2.9.0.1.0](#)
2. [Apply the ORMB Patches](#) or [Apply the ORMB Rollup Packs](#)

Note:

To view the list of patches that you need to apply on the database, refer to *ORMB V29010 Patch Guide (Doc ID: 2749067.1)* on [My Oracle Support](#).

Alternatively, instead of individually applying the patches, you can download and install the rollup packs, if available, to apply a set of patches at once. For more information about the rollup packs, refer to [Appendix J: ORMB V2.9.0.1.0 Rollup Packs](#).

There might be situations when you do not want to recreate one or more table indexes. You can skip the recreation process of one or more table indexes by adding the following line in the <DESTINATION_FOLDER_1>/RMB/Upgrade/Oracle/Install-Upgrade/CDXSchUpg.inp file:

```
-INDEX: 'INDEX1', 'INDEX2', 'INDEX3'
```

For example, -INDEX: 'XXT033P0', 'XXT034P0', 'XXT035P0'

Note: The <DESTINATION_FOLDER_1> folder is the location where you have extracted the contents of the **Oracle Revenue Management and Billing V2.9.0.1.0 Oracle Database** package.

Note:

Before you upgrade the database, you must take a backup of the existing database.

When you upgrade the database, any metadata with the Owner flag set to CM is not overridden during the upgrade process.

Pre-requisites:

Before installing Oracle Revenue Management and Billing Version 2.9.0.1.0 on the database, you need to set the MAX_STRING_SIZE parameter to EXTENDED. If you have a non-container database, you need to perform the following steps to set the MAX_STRING_SIZE parameter to EXTENDED:

1. Set the ORACLE_HOME and ORACLE_SID environment variables.

Note: You need to connect as system administrator while executing the below steps.

2. Shutdown the target database using the following command:

```
shutdown immediate
```

3. Start the database in the Upgrade mode using the following command:

```
startup upgrade
```

4. Set the MAX_STRING_SIZE parameter to EXTENDED using the following command:

```
alter system set max_string_size=extended scope=both;
```

5. Execute the utl32k.sql file using the following command:

```
@?/rdbms/admin/utl32k.sql;
```

6. Restart the database in the Normal mode using the following commands:

```
shutdown immediate
```

```
startup
```

However, if you have a container database, you need to perform the following steps to set the MAX_STRING_SIZE parameter to EXTENDED:

1. Set the ORACLE_HOME and ORACLE_SID environment variables.

Note: You need to connect as system administrator while executing the below steps.

2. Set the MAX_STRING_SIZE parameter to EXTENDED using the following command:

```
alter system set max_string_size=extended scope=spfile;
```

3. Start all pluggable databases in the Upgrade mode using the following command:

```
shutdown immediate
```

```
startup upgrade
```

```
alter pluggable database all open upgrade;
```

```
exit
```

4. Create the `utl32k_cdb_pdb_output` folder to store the log files using the following command:

```
mkdir /scratch/mydir/utl32k_cdb_pdb_output
```

5. Execute the `utl32k.sql` from the `catcon.pl` file for all pluggable databases using the following command:

```
cd $ORACLE_HOME/rdbms/admin
$ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u
SYS -d $ORACLE_HOME/rdbms/admin -l
'/scratch/mydir/utl32k_cdb_pdb_output' -b
utl32k_cdb_pdb_output utl32k.sql
```

6. Restart the database in the Normal mode using the following commands:

```
shutdown immediate

2.6.2 Apply the ORMB Patches

Once you install Oracle Revenue Management and Billing Version 2.9.0.1.0, you need to apply all patches listed in *ORMB V29010 Patch Guide (Doc ID: 2749067.1)*. You can apply a patch from a Windows machine and UNIX Standalone server.

To apply a patch:

1. Download the patch from [My Oracle Support](#). A zip file is downloaded.
2. Unzip the downloaded file using the following command:

AIX, Linux:

```
unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_3>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_3>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_3> folder. The contents include three files - README.txt, MultiPlatform.zip, and Bug_<PATCH_NUMBER>_Product_Fix_Design.pdf.

3. Unzip the MultiPlatform.zip file using the following command:

AIX, Linux:

```
unzip <DESTINATION_FOLDER_3>/MultiPlatform.zip -d  
<PATH>/<DESTINATION_FOLDER_4>
```

Windows:

```
unzip <DESTINATION_FOLDER_3>\MultiPlatform.zip -d  
<PATH>\<DESTINATION_FOLDER_4>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_4> folder. The contents include the V2.9.0.1.0-<PATCH_NUMBER>_MultiPlatform folder.

4. Change to the V2.9.0.1.0-<PATCH_NUMBER>_MultiPlatform folder using the following command:

AIX, Linux:

```
cd <DESTINATION_FOLDER_4>/V2.9.0.1.0-<PATCH_NUMBER>_MultiPlatform
```

Windows:

```
cd <DESTINATION_FOLDER_4>\V2.9.0.1.0-<PATCH_NUMBER>_MultiPlatform
```

Note: The <DESTINATION_FOLDER_4> folder is the location where you have extracted the contents of the MultiPlatform.zip file.

The contents include a file named CCB.V2.9.0.1.0-<PATCH_NUMBER>.jar and a folder named database.

5. Change to the ORACLE folder using the following command:

AIX, Linux:

```
cd database/ORACLE
```

Windows:

```
cd database\ORACLE
```

The contents include a zip file named CDXPatch.

6. Unzip the CDXPatch.zip file using the following command:

AIX, Linux:

```
unzip CDXPatch.zip -d <PATH>/<DESTINATION_FOLDER_5>
```

Windows:

```
unzip CDXPatch.zip -d <PATH>\<DESTINATION_FOLDER_5>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_5> folder. The contents include utility files and a folder named <PATCH_NUMBER>.

7. Execute the `ouafDatabasePatch` utility using the following command:

Windows:

```
ouafDatabasePatch.cmd
```

AIX, Linux:

```
ouafDatabasePatch.sh
```

2.7 Migrating Data

Once you upgrade the database, you can migrate the data from Oracle Revenue Management and Billing Version 2.9.0.0.0 to 2.9.0.1.0 using the `PostProcessingScript` query which is available in the **UPGRADE FROM 2.9.0.0.0 TO 2.9.0.1.0** patch.

To migrate the data from ORMB Version 2.9.0.0.0 to 2.9.0.1.0:

1. Copy the **UPGRADE FROM 2.9.0.0.0 TO 2.9.0.1.0** patch to the `TEMPDIR` folder using the following command:

AIX, Linux:

```
cp <PATH>/<filename>.zip <PATH>/TEMPDIR
```

Windows:

```
copy <PATH>\<filename>.zip <PATH>\TEMPDIR
```

Note: You can also use File Transfer Protocol (FTP) to transfer the downloaded file from one host to another. You must use the binary mode while copying files through FTP.

2. Change to the `TEMPDIR` folder using the following command:

AIX, Linux:

```
cd <PATH>/TEMPDIR
```

Windows:

```
cd <PATH>\TEMPDIR
```

3. Unzip the **UPGRADE FROM 2.9.0.0.0 TO 2.9.0.1.0** patch using the following command:

AIX, Linux:

```
unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_6>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_6>
```

The contents of the zip file are extracted in the `<DESTINATION_FOLDER_6>` folder. The contents include two files - `README.txt` and `deploy.zip`.

4. Unzip the `deploy.zip` file using the following command:

AIX, Linux:

```
unzip <DESTINATION_FOLDER_6>/deploy.zip -d  
<PATH>/<DESTINATION_FOLDER_7>
```

Windows:

```
unzip <DESTINATION_FOLDER_6>\deploy.zip -d  
<PATH>\<DESTINATION_FOLDER_7>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_7> folder. The contents include a folder named `deploy`.

5. Change to the `deploy` folder using the following command:

```
cd <DESTINATION_FOLDER_7>\deploy
```

The contents include a folder named `Migration_From_V2.9.0.0.0_To_V2.9.0.1.0`. This folder contains one file named `PostProcessingScript.sql`.

6. Change to the `Migration_From_V2.9.0.0.0_To_V2.9.0.1.0` folder using the following command:

```
cd  
<DESTINATION_FOLDER_7>\deploy\Migration_From_V2.9.0.0.0_To_V2.9.0  
.1.0
```

7. Connect to the ORMB database using a utility named SQL*Plus and the administrator's (for example, `CISADM`) credentials.
8. Execute the following query from the `Migration_From_V2.9.0.0.0_To_V2.9.0.1.0` folder:

```
PostProcessingScript.sql
```

Note: For more information about the query, refer to the [PostProcessingScript.sql](#) section in Appendix K: SQL Statements for 2.9.0.0.0 to 2.9.0.1.0 Data Migration.

3. Additional Tasks

This section describes the following tasks that you need to perform after upgrading the application:

1. [Generating the Application Viewer](#)
2. [Starting the Thread Pool Worker](#)
3. [Building Javadoc Index](#)

3.1 Generating the Application Viewer

Once you upgrade the application, you need to regenerate the application viewer. To regenerate the application viewer:

1. Login to the application server using the administrator's credentials.
2. Initialize the application environment (on which you want to regenerate the application viewer) using the following command:

AIX, Linux:

```
$SPLEBASE/bin/splenviron.sh -e $SPLENVIRON
```

Windows:

```
%SPLEBASE%\bin\splenviron.cmd -e %SPLENVIRON%
```

Where, `$SPLEBASE` or `%SPLEBASE%` is the path where the application environment is installed, and `$SPLENVIRON` or `%SPLENVIRON%` is the name of the application environment for which you want to set the environment variables.

3. Set the `ANT_OPTS` environment variable using the following command:

Windows:

```
Set ANT_OPTS= -Xms512m -Xmx1024m -XX:PermSize=256M
```

Note: This command helps to process some tasks which require more memory. This command is only applicable for Windows and not for Linux machine.

4. Execute the `genappvieweritems` utility using the following command:

AIX, Linux:

```
$SPLEBASE/bin/genappvieweritems.sh
```

Windows:

```
%SPLEBASE%\bin\genappvieweritems.cmd
```

If the application viewer is generated successfully, the response code is set to 0. However, if you get any other response code other than 0, it means an error has occurred while generating the application viewer. A log file is created in the `$SPLEBASE/logs` folder.

5. Execute the `initialSetup` utility using the following command:

AIX, Linux:

```
$SPLEBASE/bin/initialSetup.sh
```

Windows:

```
%SPLEBASE%\bin\initialSetup.cmd
```

Where, `$SPLEBASE` or `%SPLEBASE%` is the path where the application environment is installed.

The `initialSetup` utility updates the configuration files including the WAR files on the system.

3.2 Starting the Thread Pool Worker

Once you upgrade the application, you need to start the thread pool worker. The thread pool worker is required when you execute batches either online or through batch scheduler.

You can use the **Distributed Thread Pool** property of the thread pool worker to set the number of threads that can run concurrently. By default, 5 threads run concurrently. You can change the default value by editing the following line in the `threadpoolworker.properties` file:

```
com.splwg.grid.distThreadPool.threads.DEFAULT=5
```

To start the thread pool worker, use the following command once you initialize the application environment:

AIX, Linux:

```
$SPLEBASE/bin/threadpoolworker.sh
```

Windows:

```
%SPLEBASE%\bin\threadpoolworker.cmd
```

Where, `$SPLEBASE` or `%SPLEBASE%` is the path where the application environment is installed.

3.3 Building Javadoc Index

Once you upgrade the application, you may want to regenerate the index file of Javadoc documentation. You must regenerate the Javadoc index file only when some modifications are made to the Java code.

To regenerate the Javadoc index file, use the following command:

AIX, Linux:

```
$SPLEBASE/bin/buildJavadocsIndex.sh
```

Windows:

```
%SPLEBASE%\bin\buildJavadocsIndex.cmd
```

Where, `$SPLEBASE` or `%SPLEBASE%` is the path where the application environment is installed.

2. Perform the following steps on the application environment:
 - a. Change the DB Name using the `configureEnv` command.
 - b. Execute the `initialSetup` utility using the following command:

AIX, Linux:

```
$SPLEBASE/bin/initialSetup.sh
```

Windows:

```
%SPLEBASE%\bin\initialSetup.cmd
```

- c. Execute the `invokeDBUpdatePatch` utility to change the database user name and password using the following command:

AIX, Linux:

Appendix J : ORMB V2.9.0.1.0 Rollup Packs

Instead of individually applying the patches, you can download and apply the release-specific rollup packs. To view the list of rollup packs that you need to apply on the application environment and database, refer to *ORMB V29010 Patch Guide (Doc ID: 2749067.1)* on [My Oracle Support](#).

J.1 Applying a Rollup Pack on the Application Environment

Once you install Oracle Revenue Management and Billing Version 2.9.0.1.0, you need to apply the rollup packs listed in *ORMB V29010 Patch Guide (Doc ID: 2749067.1)*. To apply a rollup pack on the application environment:

1. Download the rollup pack from [My Oracle Support](#). A zip file is downloaded.
2. Unzip the rollup pack using the following command:

AIX, Linux:

```
unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_1>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_1>
```

The contents of the zip file are extracted in the <DESTINATION_FOLDER_1> folder. The contents include the `README.txt` file and three folders named `RMB_V2.9.0.1.0_App_Rollup`, `RMB_V2.9.0.1.0_DB_Rollup`, and `RMB_V2.9.0.1.0_PFDs`.

3. Initialize the application environment (on which you want to install the patch) using the following command:

AIX, Linux:

```
$(SPLEBASE)/bin/splenvron.sh -e $(SPLENVIRON)
```

Windows:

```
%SPLEBASE%\bin\splenvron.cmd -e %SPLENVIRON%
```

Where,

`$(SPLEBASE)` or `%SPLEBASE%` is the path where the application environment is installed and `$(SPLENVIRON)` or `%SPLENVIRON%` is the name of the application environment.

4. Change to the `RMB_V2.9.0.1.0_App_Rollup` folder using the following command:

AIX, Linux:

```
cd <DESTINATION_FOLDER_1>/RMB_V2.9.0.1.0_App_Rollup
```

Windows:

```
cd <DESTINATION_FOLDER_1>\RMB_V2.9.0.1.0_App_Rollup
```

Note: The `<DESTINATION_FOLDER_1>` folder is the location where you have extracted the contents of the rollup pack.

5. Install the patch using the following command:

AIX, Linux:

```
./installSFgroup.sh
```

Windows:

```
installSFgroup.cmd
```

J.2 Applying a Rollup Pack on the Database

unzip <filename>.zip -d <PATH>/<DESTINATION_FOLDER_1>
```

Windows:

```
unzip <filename>.zip -d <PATH>\<DESTINATION_FOLDER_1>
```

The contents of the zip file are extracted in the `<DESTINATION_FOLDER_1>` folder. The contents include the `README.txt` file and three folders named `RMB_V2.9.0.1.0_App_Rollup`, `RMB_V2.9.0.1.0_DB_Rollup`, and `RMB_V2.9.0.1.0_PFDs`.

3. Change to the `RMB_V2.9.0.1.0_DB_Rollup` folder using the following command:

AIX, Linux:

```
cd <DESTINATION_FOLDER_1>/RMB_V2.9.0.1.0_DB_Rollup
```

Windows:

```
cd <DESTINATION_FOLDER_1>\RMB_V2.9.0.1.0_DB_Rollup

Appendix K : SQL Statements for 2.9.0.0.0 to 2.9.0.1.0 Data Migration

This section describes the `PostProcessingScript` query which is used for migrating data from Oracle Revenue Management and Billing Version 2.9.0.0.0 to 2.9.0.1.0.

K.1 PostProcessingScript.sql

The `PostProcessingScript.sql` query does the following:

- Moves those terms and conditions associated with a price item or hierarchy entity which are not yet used in any deal from the **C1_DEAL_PRICE_ASGN_TC** table to the newly introduced tables named **C1_PRICEITEM_TC_MAP** and **C1_PRICEITEM_TC_DTLS**.
- Sets the rule type category for the existing rule types.
- Updates the CLOB data of those pricing rule types where the pricing rule type category is set to **Age Based** or **Tier Based**.
- Updates those terms and conditions associated with a price item or hierarchy entity which are used in a deal.

It updates the following column values of the records in the respective table:

Table Name	Column Name	Column Value After Data Migration
C1_PRICEITEM_TC_MAP	PRICEITEM_TC_ID	The column value is set to the value stored in the DEAL_PRI_TC_ID column corresponding to the record in the C1_DEAL_PRICE_ASGN_TC table.
	TC_MAP_ENTITY_TYPE_FLG	The column value is set to either of the following: <ul style="list-style-type: none"> • PRTM – When the terms and conditions is associated with a price item • PPTM - When the terms and conditions is associated with a non-root level hierarchy entity • PRTG - When the terms and conditions is associated with a root level hierarchy entity

Table Name	Column Name	Column Value After Data Migration
	TC_MAP_ENTITY_CD	If the TC_MAP_ENTITY_TYPE_FLG column is set to PRTM , the TC_MAP_ENTITY_CD column is set to the value stored in the PRICEITEM_CD column corresponding to the record in the C1_DEAL_PRICE_ASGN_TC table. However, If the TC_MAP_ENTITY_TYPE_FLG column is set to PPTM or PRTG , the TC_MAP_ENTITY_CD column is set to the value stored in the PRICE_ITEM_GRP_CD column corresponding to the record in the C1_DEAL_PRICE_ASGN_TC table.
	BUS_OBJ_CD	The column value is set to C1-PRCITM_TC_BO .
C1_PRICEITEM_TC_DTLS	PRICEITEM_TC_ID	The column value is set to the value stored in the DEAL_PRI_TC_ID column corresponding to the record in the C1_DEAL_PRICE_ASGN_TC table.
	TC_TYPE_CD	The column value is set to the value stored in the TC_TYPE_CD column corresponding to the record in the C1_DEAL_PRICE_ASGN_TC table.
	START_DT	The column value is set to 01-JAN-1950 .
	DEFAULT_SW	The column value is set to the value stored in the DEFAULT_SW column corresponding to the record in the C1_DEAL_PRICE_ASGN_TC table. The column value can be either Y or N .
C1_PRICEITEM_TC_MAP_K	PRICEITEM_TC_ID	The column value is set to the value stored in the DEAL_PRI_TC_ID column corresponding to the record in the C1_DEAL_PRICE_ASGN_TC table.
	ENV_ID	The column value is set to 999999 .
CI_RULE_TYPE	RULE_TYPE_CAT_FLG	If the column value is NULL, it is set to FILD .
C1_PRC_RULE_TYPE	BO_DATA_AREA	If the PRC_RULE_TYPE_CAT column value is set to AGE or TIER , then add 'primaryFlag to true' to the CLOB data stored in the BO_DATA_AREA column corresponding to the record.
CI_TC	BO_STATUS_CD	The column value is set to C1AC (i.e. Active).
	TC_PURPOSE_FLG	The column value is set to BOTH (i.e. Invoice and Deal).

Table Name	Column Name	Column Value After Data Migration
	TC_MAPPING_LVL_FLG	If the terms and conditions is associated with a price item, the column value is set to PRTM . If the terms and conditions is associated with a non-root level hierarchy entity, the column value is set to PPTM . And, if the terms and conditions is associated with a root level hierarchy entity, the column value is set to PRTG .
