1. Preface

1.1 Intended Audience

This document is intended for the following audience:

- Customers
- Partners

1.2 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.3 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

1.4 Structure

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual.

Introduction provides brief information on the overall functionality covered in the User Manual.

The subsequent chapters provide information on transactions covered in the User Manual.

Each transaction is explained in the following manner:

- Introduction to the transaction
- Screenshots of the transaction
- The images of screens used in this user manual are for illustrative purpose only, to provide improved understanding of the functionality; actual screens that appear in the application may vary based on selected browser, theme, and mobile devices.
- Procedure containing steps to complete the transaction- The mandatory and conditional fields of the transaction are explained in the procedure. If a transaction contains multiple procedures, each procedure is explained. If some functionality is present in many transactions, this functionality is explained separately.

2. Multi Entity Implementation

Banks can have multiple implementations across different geographies or can have multiple brands within the same legal entity

Multi Entity is a mechanism through which the banks can deploy a single instance of OBAPI platform and onboard multiple entities onto the platform.

The same platform can host data of multiple entities on a single instance that runs on a set of resources. The banks can have data sharing enabled across multiple entities so that users from one entity can have access to data of other entities if required.

As part of the OBAPI Installer, there will always be default entity created along with a system administrator.

If the implementation of the bank is multi entity enabled, system administrator can create new entities with their details as part of system configuration and also edit details of the default entity.

The system administrator by default gets access to all the created as well as the default entities.

There is a parameter for multi entity enabled implementation wherein the bank can decide if data sharing across entities is required.

Note: Currently in the system, data sharing across entities is always enabled and the same cannot be disabled by the user.

Users can be mapped to more than one entity depending on the implementation requirements. User always has a default/home entity to which he/she is mapped to and can also have accessible entities to access details of other entities.

If there is a need by the bank wherein some of the users i.e. bank administrator or corporate/retail users should not get access to all of the created entities then the same can be controlled through User Management by not giving access to the required entities.

For users who have access to multiple entities, there will be an entity switcher as part of the transaction/inquiry screen wherein the user can switch the entity to the home/accessible entity and inquire details of that entity.

The system maintenances can be at an enterprise level i.e. the same maintenance/configuration being applicable for all the created entities and certain maintenances are specific to an entity i.e. each entity can have a different setup or configuration.

The classification of administrative maintenances being at an enterprise or an entity level is present below:

Sr No.	Transactions	Entity/Enterprise	Remarks
1	System Configuration	Entity	
2	Transaction Aspects	Enterprise	
3	Limits Definition	Entity	
4	Limits Package	Entity	
5	Spend Category Maintenance	Entity	
6	Goal Category Maintenance	Entity	
7	System Rules	Enterprise	Role level limits will be defined for each entity
8	Role Transaction Mapping	Enterprise	
9	Payment Purpose Mapping	Entity	
10	Payee Restrictions	Entity	
11	Biller Category Mapping	Entity	
12	Authentication	Entity	
13	Manage Security Questions	Enterprise	
14	Password Policy Maintenance	Enterprise	

Sr No.	Transactions	Entity/Enterprise	Remarks
15	User Group Subject Mapping	Entity	
16	Alerts Maintenance	Enterprise	Alerts message template are at entity level
17	Mailers	Entity	
18	Mailbox	Entity	
19	User Print Information	Enterprise	
20	User Onboarding	Entity	
21	Merchant Onboarding	Entity	
22	Transaction Blackout	Entity	
23	Working Window	Entity	
24	Manage Brand	Entity	
25	Audit Log	Entity	
26	ATM/ Branch Maintenance	Entity	
27	Product Mapping	Entity	
28	Party Preferences	Entity	
29	Party to Party Linkage	Entity	
30	Workflow Management	Entity	
31	Rules Management	Entity	
32	Party Account Access	Entity	
33	User Account Access	Entity	
34	Service Request	Entity	
35	File Identifier Maintenance	Entity	
36	User File Identifier Mapping	Entity	
37	Reports	Enterprise	
38	User Report Mapping	Entity	
39	User Group Management	Entity	

Sr No.	Transactions	Entity/Enterprise	Remarks
40	Alert Subscription	Enterprise	
41	Session Summary	Entity	
42	ATM/ Branch Locator	Entity	
43	Manage Alerts	Enterprise	

Once the OBAPI installation is complete, system administrator logs in and starts with the system configuration.

There will always be a default entity available in OBAPI i.e. one created as part of installer irrespective of whether the implementation is multi entity enabled.

3. System Configuration

System configuration is an administrative maintenance to define the details required to set up the system.

Post successful installation of OBAPI, the system administrator will have an option to define if the bank has multi entity setup enabled and whether data sharing is allowed between entities

Currently, the system supports only data sharing enabled and does not support data sharing as disabled

If multi entity is enabled, then the system administrator can create new entities along with definition of details. Once the entities are created, administrator can define system configuration details for each of the entities.

Following are the components that can be defined as part of system configuration.

- Basic Details
- Host Details
- Bank Details
- Branch Details
- Currency Payments
- SMTP
- Third Party Configurations
- Dynamic Module Details

As part of module details, the set of modules listed will be based on the host system selected.

Features supported in application

System Configuration allows the System Administrator to:

- Define System Configuration
- View System Configuration
- Edit System Configuration

How to reach here:

System Administrator Dashboard > Common Services >System Configuration

3.1 System Configuration – Entity Definition

To set-up the system configuration:

- The Administrator logs into the application using valid login credentials. The System Configuration screen to configure multi entity set up appears.

System Configuration - Entity Setup

The screenshot shows the 'System Configuration' interface for 'futura bank'. At the top right, it displays 'ATM/Branch', 'English', and 'UBS 14.3 AT3 Branch'. The user is logged in as 'Welcome, Sam David' with a last login time of '28 Apr 03:02 AM'. The main configuration area includes two toggle switches: 'Does your setup has Multi Entity?' (set to Yes) and 'Does your setup has data sharing' (set to Yes). Below these are input fields for 'Entity id', 'Entity Name', and a dropdown menu for '(GMT000) Africa/Abidjan'. There is an 'Add entity' button and 'Continue' and 'Cancel' buttons at the bottom. The footer contains copyright information: 'Copyright © 2006, 2020, Oracle and/or its affiliates. Field Description

Field Name	Description
Request Expiration in Days	Specify the number of days post which the raised Service Request data will not be available for business user. For e.g. If this field is defined as 180 days, then the business user can view his raised service requests for last 180 days.
Service Request Turnaround Time	Specify predefined processing time within which the administrator should take action on a raised Service Request. If the service request processing time has passed this turnaround time, then an exclamation flag starts appearing against the raised Service Request in Request processing screen. This flag helps administrator in understanding that these service requests have already passed the turnaround time and should be actioned at the earliest
Service Request Persistent Type	<p>This is to decide if the raised service request data has to be persisted locally in OBAPI database or it has to be sent to a third party CRM system. The options available in this field are :</p> <ul style="list-style-type: none"> • Internal – For persisting the data in OBAPI • External – For persisting the data in third party system. <p>Note: There is no out of the box integration available for a third party system for persisting the raised service request data.</p>

- In the **Request Expiration duration (in days)** field, specify the number of days post which the raised service request will not be available to business user.
- In the **Service Request Turnaround Time** field, specify the processing time within which administrator should take action on the request.
- In the **Service Request Persistent Type** field, specify if persisted data needs to locally stored or to third party system.
- Click **Next**. The System Configuration – Dynamic Module – Common screen appears.
OR
Click **Previous** to go to the previous screen.
OR
Click **Cancel** to cancel the setup process.

The dynamic modules corresponding to the selected host, which is required to run the application are defined and configured by system administrator.

The modules are included depending on the type of host selected.

Following modules are configured:

- Brand
- Payments
- Wallet
- Other Module
- File Upload
- Forex Deal
- Origination
- Service Request
- Common

4.1.9 System Configuration – Dynamic Module – Brand - View and Edit

Using this option, the system administrator maintains the Brand module configurations. These configurations once defined can be viewed and edited.

To view and edit the Brand module details:

- Click on **System Configuration** option on the dashboard and navigate to the dynamic module – Brand tab. The default option is '**View**'.

System Configuration – Dynamic Module – Brand View

The screenshot displays the Oracle System Configuration interface. At the top, there is a navigation bar with 'futurabank' and user information 'Welcome, Sam David'. Below this, a breadcrumb trail shows the current path: 'Third Party1' > 'UBS 14.3 AT3 Branch' > 'UBS 14.4 HEL Branch'. The main content area is titled 'System Configuration' and shows 'Select Host' as 'Oracle FLEXCUBE Universal Banking 1...'. The left sidebar contains a list of configuration categories, with 'Dynamic Module' expanded to show 'Brand'. The main area displays configuration details for the selected entity, including 'Content Server URL' and 'Content Publisher URL', both set to 'http://ofss310655:8003/digix/v1'. At the bottom left, there are 'Edit' and 'Cancel' buttons.

- Click **Edit** to edit the **Dynamic Module – Brand**. The **System Configuration - Dynamic Module – Brand** screen appears in editable form.

Field Description

Field Name	Description
Request Expiration duration (in days)	Specify the number of days post which the raised Service Request data will not be available for business user. For e.g. If this field is defined as 180 days, then the business user can view his raised service requests for last 180 days.
Service Request Persistent Type	<p>This is to decide if the raised service request data has to be persisted locally in OBAPI database or it has to be sent to a third party CRM system. The options available in this field are:</p> <ul style="list-style-type: none"> • Internal – For persisting the data in OBAPI • External – For persisting the data in third party system. <p>Note: There is no out of the box integration available for a third party system for persisting the raised service request data.</p>
Service Request Turnaround Time	Specify predefined processing time within which the administrator should take action on a raised Service Request. If the service request processing time has passed this turnaround time, then an exclamation flag starts appearing against the raised Service Request in Request processing screen. This flag helps administrator in understanding that these service requests have already passed the turnaround time and should be actioned at the earliest.

- In the **Request Expiration duration (in days)** field, specify the number of days post which the raised service request will not be available to business user.
- In the **Service Request Persistent Type** field, specify if persisted data needs to locally stored or to third party system.
- In the **Service Request Turnaround Time** field, specify the processing time within which administrator should take action on the request.
- Click **Next**. The System Configuration – Dynamic Module – Common screen appears.
OR
Click **Previous** to go to the previous screen.
