 - 1.2.4 *Gateway Web Service Application*..... 1-27

1. Creating Property File for Gateway Applications

1.1 Introduction

This chapter explains the steps to create the property file for the gateway components namely, Enterprise Java Bean (EJB), Message Driven Beans (MDB), Web Services and HTTP Servlet.

1.2 Creating Property Files

Follow the steps given below:

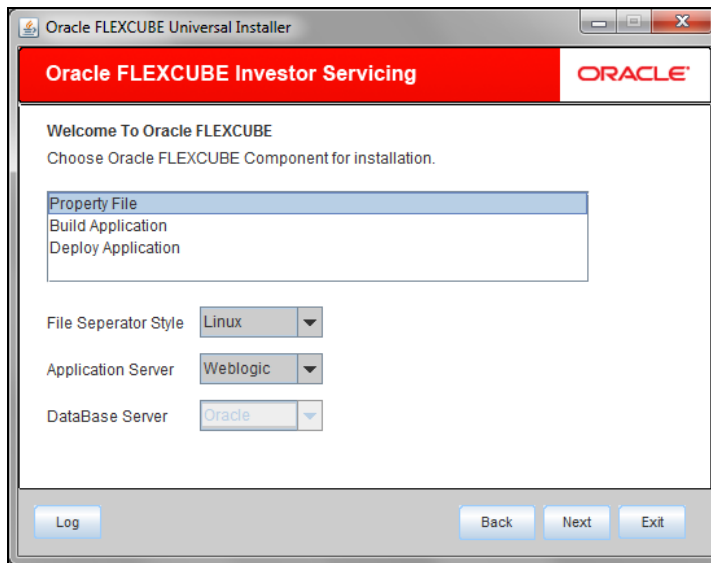

1. Start Oracle FLEXCUBE Universal Installer Welcome screen is displayed.

2. Select 'Oracle FLEXCUBE Gateway' and click 'Next'.

1.2.1 Gateway EJB Application

The following screen is displayed:

1. Choose the option 'Property File'.
2. Specify the following details:

Operating System

Specify the operating system in which you are creating the property file. Choose the appropriate one from the drop-down list.

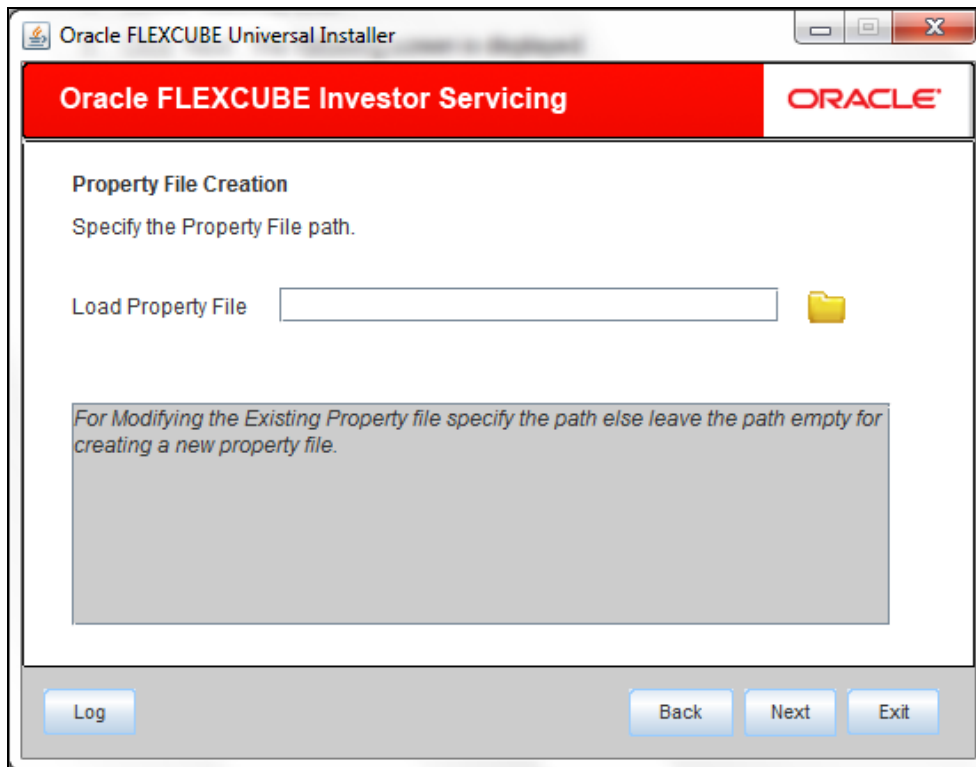

Application Server

Specify the application server in which you are creating the property file. Choose the appropriate one from the drop-down list.

3. Select 'Gateway EJB'.

4. Click 'Next'. The following screen is displayed.

5. Specify the following details:

Load Property File

If you are creating a new property file, leave the field blank. If you wish to modify an existing property file, you can manually specify the location of the property file.

Note: Before proceeding, ensure that the folder structures used in the following steps are created.

6. Click 'Next'. The following screen is displayed:

LDAP

Single sign-on (SSO) is a property of access control of multiple related, but independent software systems. With this property a user logs in once and gains access to all systems without being prompted to log in again at each of them. Conversely, Single sign-off is the property whereby a single action of signing out terminates access to multiple software systems. This screen provides an option for External Authentication. If External Authentication is not required, keep the

External User Login Required ☐ MSAD

LDAP

External Password Required: The user can login with MSAD/LDAP server password only. The user ID can be either the MSAD/LDAP user ID or FCUBS user ID.

Authentication Type: LDAP/MSAD is the type of external server used for authentication.

Log Back Next Exit

Authentication Type

Select the authentication type. This is the type of external server that is used. You can select one of the following options:

- MSAD (Microsoft Active Directory)
- LDAP (Lightweight Directory Access Protocol)

The default option is MSAD; however, you can change it

If you check the box, then the installer navigates to the following screen on clicking 'Next' button.

No.	Name	Value
1	LDAP SERVER URL	LDAP://10.10.10.10:111
2	LDAP SSL ENABLED	<input type="checkbox"/>
3	SECURITY AUTHENTICAT...	Simple
4	DOMAIN NAME	FCISTEST
5	LDAP SERVER TIMEOUT	0

8. Specify the following LDAP server details.

LDAP Server URL

Specify the URL to access the LDAP server where the external user ID and password are maintained.

LDAP SSL Enabled

Check this box if the LDAP server is SSL enabled. If you check this box, then you need to specify the SSL port also in the field LDAP SERVER URL.

By default, this check box is unchecked. However, you can change this.

Security Authentication Type

Depending on the authentication mechanism supported by the LDAP server, select one of the following:

- Simple
- Strong

Note the following:

- Different servers support different authentication mechanisms.
- By default, the security authentication type is 'Simple'; however, you can change this.

Domain Name

Specify the domain name.

LDAP Server Timeout

Specify the LDAP server timeout in milliseconds. This must be a positive integer value. For example you can specify 1000, 10000 or 5000. If it is zero or less, it indicates that no read timeout is specified. Then the wait for the response infinite until it is received.

By default, the LDAP server timeout is zero; however, you can change this.

9. Click 'Next'. The following screen is displayed:

The screenshot shows a window titled "Oracle FLEXCUBE Investor Servicing" with the Oracle logo in the top right corner. The main content area is titled "Property File Creation" and contains the text "Current screen provides an option for modifying the Gateway Properties". Below this, there are four input fields with labels to their left: "XSD Path" with the value "/Kernel11.1/GW_EJB/XSD/", "Logger File" with the value "/Kernel11.1/GW_EJB/config/gw_ejb_logger.properties", "Debug Path" with the value "/Kernel11.1/GW_EJB/log/", and "Security Key for Encryption" with the value "oraclefinancialsolutions". At the bottom of the window, there are four buttons: "Log", "Back", "Next", and "Exit".

Specify the following details.

XSD Path

Specify the path to the XSD file. File name is not required. File separator must be '/'. There must be a '/' at the end. All the relevant XSD files must be manually copied to this location.

E.g.:

For Windows: D:\GW_EJB\XSD\

For Linux: /GW_EJB/XSD/

Logger File

Specify the path to the 'gw_ejb_logger.properties' file with the file name. The file must be manually copied to the specified location.

E.g.:

For windows: D:\GW_EJB\config\gw_ejb_logger.properties

For Linux: /GW_EJB/config/gw_ejb_logger.properties

Debug Path

Specify the path to the folder where the application creates the logs. There must be a '/' at the end. You need to manually create the specified folder structure.

E.g.:

For windows: D:\GW_EJB\log\

For Linux: /GW_EJB/log/

Security Key for Encryption

Specify the security key for the Encryption, here in this case it is 'Oraclefinancialsolutions'.

10. Click 'Next'.

Note: The Installer creates two files viz. 'gw_ejb_logger.properties' and 'GW_EJB_Prop.properties' in the path provided to save the files.

Authentication Type

Select the authentication type from the adjoining drop-down list. This is the type of external server that is used. You can select one of the following options:

- MSAD (Microsoft Active Directory)
- LDAP (Lightweight Directory Access Protocol)

By default, 'MSAD' is selected; however, you can change it.

7. Click 'Next'. The following screen is displayed.

No.	Name	Value
1	LDAP SERVER URL	LDAP://10.10.10.10:111
2	LDAP SSL ENABLED	<input type="checkbox"/>
3	SECURITY AUTHENTICAT...	Simple
4	DOMAIN NAME	
5	LDAP SERVER TIMEOUT	0

8. Specify the following LDAP server details.

LDAP Server URL

Specify the URL to access the LDAP server where the external user ID and password are maintained.

LDAP SSL Enabled

Check this box if the LDAP server is SSL enabled. If you check this box, then you need to specify the SSL port also in the field LDAP SERVER URL.

By default, this check box is unchecked. However, you can change this.

Security Authentication Type

Depending on the authentication mechanism supported by the LDAP server, select one of the following:

- Simple
- Strong

Note the following:

- Different servers support different authentication mechanisms.
- By default, the security authentication type is 'Simple'; however, you can change this.

Domain Name

Specify the domain name.

LDAP Server Timeout

Specify the LDAP server timeout in milliseconds. This must be a positive integer value. For example you can specify 1000, 10000 or 5000. If it is zero or less, it indicates that no read timeout is specified. Then the wait for the response infinite until it is received.

By default, the LDAP server timeout is zero; however, you can change this.

Click 'Next'. The following screen is displayed:

The screenshot shows a web application window titled "Oracle FLEXCUBE Investor Servicing" with the Oracle logo in the top right corner. The main heading is "Property File Creation" with a subtext: "Current screen provides an option for modifying the Gateway Properties". Below this, there are four input fields:

- XSD Path: /GW_MDB/XSD/
- Logger File: /GW_MDB/config/gw_mdb_logger.properties
- Debug Path: /GW_MDB/log/
- Security Key for Encryption: oraclefinancialsolutions

At the bottom of the window, there are three buttons: "Log", "Back", and "Next".

9. Specify the following details.

XSD Path

Specify the path to the XSD file. File name is not required. File separator must be '/'. There must be a '/' at the end. All the relevant XSD files must be manually copied to this location.

E.g.:

For Windows: D:\GW_MDB\XSD\

For Linux: /GW_MDB/XSD/

Logger File

Specify the path to the 'gw_ejb_logger.properties' file with the file name. The file must be manually copied to the specified location.

E.g.:

For windows: D:\GW_MDB\config\gw_mdb_logger.properties

For Linux: /GW_MDB/config/gw_mdb_logger.properties

Debug Path

Specify the path to the folder where the application creates the logs. There must be a '/' at the end. You need to manually create the folder structure.

E.g.:

For windows: D:\GW_MDB\log\

For Linux: /GW_MDB/log/

Security Key for Encryption

Specify the security key for the Encryption, here in this case it is 'Oraclefinancialsolutions'.

10. Click 'Next'.

Note: The Installer creates two files viz. 'gw_ejb_logger.properties' and 'GW_EJB_Prop.properties' in the path provided to save the files.

Note: The Installer creates two files namely, 'gw_ws_logger.properties' and 'GW_WS_Prop.properties' in the path provided to save the files.

The following screen is displayed.

The screenshot shows a window titled "Oracle FLEXCUBE Universal Installer". The main header is "Oracle FLEXCUBE Investor Servicing" with the ORACLE logo on the right. The section is "Property File Creation" with the instruction "Specify the EJB Application Name". There is a text input field labeled "EJB Application Name" containing the text "GWEJB". Below the input field is a grey box with the text: "Please remember the EJB Application name , the same name has to be used while deploying the EJB." At the bottom, there are four buttons: "Log", "Back", "Next", and "Exit".

8. Specify the following details:

EJB Application Name

Specify the name of the EJB application deployed.

E.g.: GWEJB

Click 'Next'. The following screen is displayed.

The screenshot shows a window titled "Oracle FLEXCUBE Universal Installer" with a red header bar containing "Oracle FLEXCUBE Investor Servicing" and the "ORACLE" logo. The main content area is titled "Gateway Property File Creation" and includes the text "Current screen provides an option for modifying WebServices Properties". Below this is a table with 3 columns: "No.", "Name", and "Value".

No.	Name	Value
1	EJB JNDI Name	#com.ofss.fcubs.gw.ejb.GWEJBRemote
2	Application Server URL	http://10.10.10.10:7001
3	User Name	infra
4	Password	*****
5	EJB Look Up	REMOTE

At the bottom of the window, there are four buttons: "Log", "Back", "Next", and "Exit".

9. Specify the following details:

EJB JNDI Name

This is the reference name of the EJB by which it has been deployed. This should be '<EJB_APPLICATION_NAME>_GW_EJB_Bean'

E.g.: GWEJB_GW_EJB_Bean

If you build the EJB application with GWEJB name, this should be the name with which the EJB EAR file is built.

If you select EJB Call Type as REMOTE, this should be '<EJB_APPLICATION_NAME #com.ofss.fcubs.gw.ejb.GWEJBRemote'.

E.g.:

Weblogic: GWEJB #com.ofss.fcubs.gw.ejb.GWEJBRemote

Or

Websphere: ejb/GWEJB/GWEJB.jar/GWEJB#com.ofss.fcubs.gw.ejb.GWEJBRemote

If you build the EJB application with GWEJB name, this should be the name the EJB EAR file which is built.

Application Server URL

Specify the URL of the application server where the webservice application is hosted.

E.g.:

Weblogic: <t3://10.10.10.10:7001>

Or

Websphere: <iiop://10.10.10.10:2815>

User Name

Specify the user name to access the application server where the EJB application is deployed.

E.g.: infra

Password

10. Specify the password for the above user name.

ELB Look Type

Select from the drop box, REMOTE/LOCAL.

Note: When REMOTE is selected, it is mandatory that a ejb ear has to be built, a web service ear has to be built and both to be deployed

When LOCAL is selected, new option in EAR build is provided where gateway ejb and web services are packaged in the same project. That single is deployed will suffice the web services.

Note: The Installer creates two files viz. 'gw_WS_logger.properties' and 'GW_WS_Prop.properties' in the path provided to save the files.

Click 'Next'. The following screen is displayed.

The property file will be created in a temporary folder.

11. Click 'Property File' to view the created property file.
12. Click 'Save' to save the created property file in desired location.
13. Click 'Continue' to continue the installation process with gateway application type.
14. Click 'Next' to navigate to the installer home screen.

This completes the property file creation for Gateway.

Setting up Property File
